the Colorado, are the Painted Desert, where erosion has left colorful layers of sediment exposed, and the Petrified Forest National Park, one of the world's most extensive areas of petrified wood. South of the Grand Canyon are the San Francisco Peaks, including Humphreys Peak, the highest point (12,655 ft/3,857 m) in the state. The southern edge of the Colorado Plateau is marked by an escarpment called Mogollon Rim. The southern half of the state has desert basins broken up by mountains with rocky peaks and extending NW to SE across central Arizona. To the south, the Gila River, a major tributary of the Colorado, flows west across the entire state. This area has desert plains separated by mountain chains running north and south, in the west the plains tall to the relatively low altitude of c. 140 ft (43 m) in the region around YUMA. Arizona abounds in minerals, including copper, which has given it the name Copper State. Although some mountain peaks receive an annual rainfall of more than 30 in (76 cm), precipitation in most of the state is low, and much of Arizona's history has been shaped by the inadequate water supply. Since the early 20th cent. massive irrigation projects have been built in Arizona's valleys. Roosevelt, Horse Mesa, Mormon Flat, and Stewart Mountain dams, with reservoirs and storage lakes, irrigate the Salt River valley. The Gillespie Dam on the Gila River helps irrigate the Yuma vicinity. The Coolidge Dam, with its San Carlos reservoir, serves Indian lands and surrounding farms near CASA GRANDE in the southeast. W Arizona is irrigated by Colorado River dams, which also serve California. These include Hoover, Glen Canyon, Davis, Parker, Imperial, and Laguna dams. Most major dams in the state are associated with hydroelectric power plants as well as irrigation systems. Arizona also obtains water from groundwater pumping stations. The state's principal crops are cotton, hay, lettuce, and sorghum. Cattle, calves, and dairy products are also important farm products. Agriculture is centered in Phoenix, TUCSON, and Yuma. The state's major industries produce machinery, food products, and primary metals. Copper is still the state's most valuable mineral. Arizona produces over half or all copper mined in the United States. Other leading mineral resources are molybdenum, sand and gravel, and cement. The mountains in the north and central regions have 3,180,000 acres (1,286,900 hectares) of commercial forests, chiefly ponderosa pines and other firs, which support the state's lumber and building-materials industries. The U.S. government owns about 95% of the commercial forests in the state. National and state forests attract millions of tourists yearly. Tourism is bolstered in the N by the Grand Canyon, the Painted Desert, the Petrified Forest, meteor craters, ancient Indian ruins, and the Navaho and Hopi Indian reservations that cover nearly all of the state's northeast quadrant. SE Arizona's warm, dry climate, often recommended for people in ill health, also attracts a large tourist trade. Between 1940 and 1960 Arizona's population increased more than 100% and between 1960 and 1970 it increased another 36%. The mountainous, arid north has not shared the population growth of the southern sections of the state. In the 1960s, the population included some 85,000 Indians. In addition to

the Navaho, the largest tribe in the state, Arizona Indians include Mohave, Apache, Hopi, Paiute, Papago, Pima, Maricopa, Yavapai, Hualapai, and Havasupai. Agriculture is the basis of their economy, but the lack of water makes farming difficult, and there is much poverty. Federal and state projects have sought to support Indian education and to introduce modern farm methods on the reservations. Arizona's Indians produce many fine handicrafts, including leather goods, woven items, pottery, and the famous silver and turquoise jewelry of the Navahos. Little is known of the earliest Indian cultures in Arizona, but Indians probably lived in the region as early as 25,000 B.C. A later culture, the Hohokam (A.D. 500-1450) were pit dwellers who constructed extensive irrigation systems. Pueblo Indians flourished in Arizona between the 11th and 14th cent. and built many of the elaborate cliff dwellings that still stand. Apache and Navaho Indians came to the area in c. 1300 from Canada. Probably the first Spanish explorer to enter Arizona (c. 1536) was Cabeza de Vaca. It is certain that the Franciscan friar Marcos de Niza reached Arizona in 1539, but he encountered hostile Indians and returned to Mexico. He was followed by Francisco Vasquez de Coronado, who led an expedition from Mexico in 1540 in search of seven legendary cities of gold. Coronado's men explored far, with Pedro de Tovar reaching the Hopi villages in the northeast and Garcia Lopez de Cárdenas discovering the Grand Canyon, while an allied expedition under Hernando de Alarcon sailed the lower Colorado. Despite extensive exploration, the region was neglected by the Spanish in favor of the more fruitful area of present-day New Mexico. Antonio de Espejo and Juan de Oñate, both Spaniards, explored the Arizona region in the late 16th cent. and late in the 17th cent. Father Eusebio Kino converted the Indians of Pimeria Alta (Sonora and S. Arizona) and founded the missions of Guevavi (1692) and Tumacacori (1696), near the present-day Nogales, and San Xavier del Bac (1700), near the present-day Tucson. Father Kino, a Jesuit, not only converted the Indians to Christianity but also introduced cattle and sheep raising among them. However, Jesuits were expelled from the Spanish Empire in 1767, and those in Arizona subsequently lost their control over the Indians. Indian uprisings led the Spaniards to establish a presidio at Tubac in 1752, in 1776 it was moved to Tucson, then an Indian settlement. Also at this time, Juan Bautista de Anza and Father F. T. H. Garcés established missions in the Yuma area. The Arizona region came under Mexican control following the Mexican war of independence from Spain (1810-21). In the early 1800s, U.S. MOUNTAIN MEN, trappers and traders such as Kit Carson, trapped beaver in the area, but otherwise there were few settlers. In the Treaty of GUADALUPE HIDALGO (1848), ending the MEXICAN WAR (1846-48), Mexico relinquished control of the area N of the Gila River to the United States. This area became part of the U.S. Territory of New Mexico in 1850. The United States, wishing to build a railroad through the area S of the Gila River, bought the area between the river and the present-day S boundary of Arizona from Mexico in the GADSDEN PURCHASE (1853). Arizona's minerals, valued even by prehistoric miners, had attracted most of the early explorers, and although the area remained a relatively obscure section of the Territory of New Mexico, mining continued sporadically. Small numbers of prospectors, crossing Arizona to join the California gold rush (1849), found gold, silver, and a neglected metal, copper. By the 1870s mining was flourishing, and by the following decade the Copper Queen Company at Bisbee was exploiting one of the area's largest copper deposits. In 1877 silver was discovered at Tombstone, setting off a boom that drew throngs of prospectors to Arizona but lasted less than 10 years. Tombstone also became famous for its lawlessness; Wyatt Earp and his brothers gained their reputations during the famous gunfight (1881) at the O.K. Corral. In 1861, at the outbreak of the Civil War, conventions held at Tucson and Mesilla declared the area part of the Confederacy. In the only major battle of the war in the Arizona area, Confederate troops were defeated NW of Tucson in the battle of Picacho Pass. In 1863, Arizona was organized as a separate territory, with its first, temporary capital at Fort Whipple. Prescott became the capital in 1865. Charles D. Poston, who had worked to achieve Arizona's new status, was elected as the territory's first delegate to the U.S. Congress. The capital was moved to Tucson in 1867, back to Prescott in 1877, and finally to Phoenix in 1889. When Confederate troops were routed and Union soldiers went east to fight in the Civil War, the territory was almost abandoned to the Indians.

Settlement was resumed after the war and encouraged by the Homestead Act (1862), the Desert Land Act (1877), and the Carey Act (1894)—all of which turned land over to settlers and required them to develop it. The region had been held precariously by U.S. soldiers during the intermittent warfare (1861-86) with the Apache Indians, who were led by Cochise and later Geronimo. General George Crook waged a successful campaign against the Apaches in 1882-85, and in 1886 Geronimo finally surrendered to federal troops. Ranching, which had flourished under the Apache attacks on livestock, thrived after their defeat. Cattlemen, who had moved west to open vast grazing areas in the 1870s and 80s, established baronial ranches such as that founded (1872) by Henry Clay Hooker in Sulphur Spring Valley in S. Arizona. Sheep raising grew from solely a Navaho occupation to a major enterprise among the white settlers. Grazing land was open to all until the late 1880s, and range wars developed between sheepmen and cattlemen. After 1897, the U.S. Forestry Bureau issued grazing permits to protect public land from depletion. By 1880 the Santa Fe and Southern Pacific railroads both extended into Arizona. In 1912, Arizona, still a raw frontier territory, attained statehood. Its constitution created a storm, with such "radical" political features as initiative, referendum, and judicial recall. Only after recall had been deleted did President Taft sign the statehood bill. Once admitted to the Union, Arizona restored the recall provision. Irrigation, spurred by the Desert Land Act and by Mormon immigration, had promoted farming in the southern part of the territory. By 1900 diverted streams were irrigating 200,000 acres (80,940 hectares). With the opening of the Roosevelt Dam (1911), a federally financed project, massive irrigation projects began to transform Arizona's valleys. Although Arizona's mines were not unionized until the mid-1930s, strikes occurred at the copper mines of Clifton and Morenci in 1915 and at the Bisbee mines in 1917. In the latter strike more than 1,200 miners suspected of being union members were deported by railroad to New Mexico. During World War II defense industries were established in Arizona. Manufacturing, notably electronic industries, continued to develop after the war, especially around Phoenix and Tucson, and in the 1960s manufacturing achieved economic supremacy over mining and agriculture in Arizona. With the development of irrigation and hydroelectric projects along the Colorado River and its tributaries, water rights became a subject of litigation between Arizona and California. In 1963 the U.S. Supreme Court ruled that California's water rights on the Colorado pertained only to the main stream of the river. Arizona was given rights to a share of the water from the Colorado's main stream and sole water rights over the river's tributaries within Arizona's boundaries. The state's constitution provides for an elected governor and bicameral legislature, with a 30-member senate and a 60-member house of representatives. The governor and members of the legislature serve two-year terms. The unit of local government is the county. The state elects two Senators and four Representatives to the U.S. Congress and has six electoral votes. Until the 1950s and 60s the Democratic party predominated in Arizona politics, but Republicans have since gained. In 1964, Senator Barry M. Goldwater of Arizona was the unsuccessful Republican candidate for the U.S. presidency. Stewart L. Udall, an Arizona Democrat, served as Secretary of the Interior under presidents Kennedy and Johnson. In 1974, Raul H. Castro, a Democrat, was elected governor. Arizona's educational institutions include the Univ. of Arizona, at Tucson, Arizona State Univ., at Tempe, Northern Arizona Univ., at FLAGSTAFF, and several private institutions. See E. H. Peplow, Jr., *History of Arizona* (3 vol., 1958), Federal Writers' Project, *Arizona: A State Guide* (4th rev. ed. 1966), *Arizona and Its Heritage* (Univ. of Arizona, 2d ed. 1969), J. J. Wagoner, *Arizona Territory* (1970), and Univ. of Arizona Faculty, *Arizona: Its People and Resources* (rev. 2d ed. 1972).

Arizona, University of, at Tucson, land-grant and state supported, coeducational, chartered 1885, opened 1891. Because of the proximity of Pueblo Indian villages and rich archaeological sites, Indian archaeology and ethnology are important fields of research.

Arizona State University, at Tempe, coeducational, opened 1886 as a normal school, became 1925 Tempe State Teachers College, renamed 1945 Arizona State College at Tempe. Its present name was adopted in 1958.

ark, in the Bible 1 Boat of NOAH, which he built at God's command to preserve his family and certain

creatures from the Flood. Gen. 6-9, Luke 17:27, Heb. 11:7, 1 Peter 3:20. 2 Ark of the Covenant, the sacred wooden chest of the Hebrews, representative of God or identified with Him. It was overlaid with gold inside and out and was always heavily veiled, the high priest alone could look upon its uncovered surface. Especially guarded, it was carried about by staves thrust through rings on its side, for to touch it was a profanation punished by death. Uzza, while escorting the Ark, inadvertently broke this law and so lost his life. As its presence implied victory, it accompanied the warriors into battle, where once it was captured by the Philistines. Restored after many years, the Ark found a resting place in Solomon's Temple. Ex. 25:10-21, Num. 10:33-36, Deut. 10:1-5, Joshua 3:3-17, 1 Sam. 4-7, 2 Sam. 6, 15:24-29, 1 Kings 8:3, 9, 1 Chron. 13, 15, 16:6, 2 Chron. 5, Jer. 3:16. Heb. 9:4.

Arkansas (ar'kənsō'), state (1970 pop. 1,923,295), 53,104 sq. mi. (137,539 sq. km), central and SW United States, admitted as the 25th state of the Union in 1836. The capital and largest city is LITTLE ROCK, other important cities are FORT SMITH, NORTH LITTLE ROCK, PINE BLUFF, HOT SPRINGS, and WEST MEMPHIS. On the east the Mississippi River separates Arkansas from Tennessee and Mississippi. The state is bounded on the north by Missouri, on the west by Oklahoma and a part of Texas, and on the south by Louisiana. The Arkansas River flows southeast across the state between the Ozark plateaus and the Ouachita Mts. and runs down to the southern and eastern plains to empty into the Mississippi. The other rivers of the state also flow generally SE or S to the Mississippi; these include the Saint Francis (which forms part of the E. Missouri line), the White River, the Ouachita, and the Red River (which forms part of the Texas line). The climate of Arkansas is marked by long, hot summers and mild winters. The state's many lakes and streams and its abundant wildlife provide excellent hunting and fishing and bring thousands of sportsmen annually. The mineral springs at Hot Springs also attract many visitors to Arkansas, where tourism is an important industry. The state's transportation network is based on rivers as well as roads, railroads, and air travel. A development project to improve navigation on the Arkansas River and to expand power and flood control facilities promises to stimulate growth in river port cities. A major cotton-producing state in the 19th cent., Arkansas has since diversified its agricultural production and overall economy. Cotton is still an important crop, but it ranked second in value, below soybeans, in 1971. Rice is also important. Livestock (including chickens, cattle, and calves) and dairy products almost equal crops as a source of farm income. Arkansas's most important mineral products are petroleum, bromine and bromine compounds, natural gas, and bauxite. Arkansas is the nation's leading bauxite producer. Lumbering is important in this heavily wooded state, which has large lumbering and wood-processing plants. About three fifths of the state's land area is wooded. Arkansas's major manufactures are food products, electrical equipment, paper, lumber, and wood products, furniture, and fixtures. The state also has a fast-growing chemical industry. A people known as the Bluff Dwellers, who inhabited caves, probably lived in the Arkansas area before 500. They were followed by the MOUND BUILDERS, who received their name from the mounds they constructed, apparently for ceremonial purposes. The first white men to arrive in Arkansas (1541-42) were probably members of the Spanish expedition under Hernando De Soto. Later the French explorers Jacques Marquette and Louis Jolliet came S along the Mississippi to the mouth of

the Arkansas River Robert Cavelier, sieur de La Salle, en route to the mouth of the Mississippi in 1682, met the friendly Quapaw Indians, who lived at the mouth of the Arkansas River. The Osage and the Caddo Indians also lived in the vicinity. In 1682, La Salle's lieutenant, Henri de Tonti, established Arkansas Post, the first white settlement in the Arkansas area. La Salle claimed the Mississippi valley for France, and the region became part of the French territory of Louisiana. In 1719, John Law, a Scottish financier in France, developed the MISSISSIPPI SCHEME, a colonization plan that brought hundreds of white settlers and Negro slaves to the Arkansas Post area. When Law's financial scheme collapsed in 1720, the settlers abandoned the site. The French ceded the Louisiana territory to Spain in 1762 but regained it again before it passed to the United States with the LOUISIANA PURCHASE (1803). Arkansas became part of the Territory of Missouri in 1812. In 1819 it was made a separate territory, and the first territorial legislature met at Arkansas Post. The capital was moved to Little Rock in 1821. Arkansas achieved statehood in 1836. The cotton boom of 1818 brought the first large wave of settlers, and the Southern plantation system, moving west, fixed itself in the alluvial plains of S and E Arkansas. In the highlands farmers eked out their subsistence. As the Civil War began (1861), the poorer farmers were generally indifferent to questions of slavery and states' rights. The slaveholding planters held the most political power, however, and after some hesitation Arkansas finally seceded (May 6, 1861) from the Union. In the Civil War, Confederate defeats at Pea Ridge (March, 1862), Prairie Grove (Dec., 1862), and Arkansas Post (Jan., 1863) led to Union occupation of N Arkansas, and General Grant's VICKSBURG CAMPAIGN separated states W of the Mississippi from the rest of the Confederacy. In Sept., 1863, Federal troops entered Little Rock, where a Unionist convention in Jan., 1864, set up a government that repudiated secession and abolished slavery. Because the state refused at first to enfranchise Negroes, Arkansas was not readmitted to the Union until 1868, when a new constitution gave Negroes the right to vote and hold office. Reconstruction in Arkansas reached a turbulent climax in the struggle (1874) of two Republican claimants to the governorship, Elisha Baxter and Joseph Brooks. Baxter's apparent success in the election was not accepted by Brooks, and followers of the two men resorted to violence in what became known as the Brooks-Baxter War. After President Ulysses S. Grant declared Baxter to be governor, Baxter called a constituent assembly dominated by Democrats to frame a new state constitution. The convention adopted (1874) the constitution that, in amended form, remains in force today. During Reconstruction the regime of CARPETBAGGERS and SCALWAGS was detested by most Arkansas whites, but it brought advances in education and (at exorbitant costs caused by corruption) railroad construction. Because of high cotton prices and the failure to give the freed Negroes any economic status, the broken plantation system was replaced by sharecropping and farm tenancy. The lives of the people of the Ozarks remained largely unchanged, they retained the customs, skills, and superstitions that have given the hill folk their distinctive regional characteristics. In 1882, Arkansas farmers protested the nearly monopolistic control of money and transportation for agriculture by forming a new political party called the Agricultural Wheel. Although its gubernatorial candidate was unsuccessful in the election of 1888, most of the party's program was gradually adopted by the state Democratic party. In the late 19th cent., as railroad construction proceeded, Arkansas's population grew substantially, and bauxite and lumbering industries developed. Oil was discovered in Arkansas, near El Dorado, in 1921. Disaster struck in 1927 when the Mississippi River overflowed, flooding one fifth of the state. With the fortunes of the state pegged to the price of cotton, the depression of the early 1930s struck hard. Dispossessed tenants, black and white, formed (1939) the Southern Tenant Farmers Union, which, after trouble with the authorities, moved its headquarters to Memphis, Tenn. A strike called in 1936 spread to other regions before its strength waned. Other impoverished farmers migrated W to California as "Arkies"—like the "Okies" from neighboring Oklahoma. After World War I, blacks moved in a steady stream to the industrial North. World War II brought further loss of population as men left Arkansas for war factories elsewhere. The war, however, also created a boom for new industries in the state, notably the processing of bauxite into aluminum. The decline of industrial output after the war was offset by the vigorous ef-

forts of a state development commission formed in 1955 to attract new industry to Arkansas. Arkansas and landlocked Oklahoma have joined in a project to develop the Arkansas River basin to provide water transportation to the Mississippi. In 1957, Governor Orval Faubus of Arkansas became a center of national and world attention when he resisted the attempted desegregation of public schools in Little Rock (see INTEGRATION). The state constitution (1874) provides for an elected governor and bicameral legislature, with a 35-member senate and a 100-member house of representatives. The governor and representatives serve two-year terms, senators serve for four years. Arkansas sends two Senators and four Representatives to the U.S. Congress and has six electoral votes. Arkansas has long been dominated by the Democratic party, but in 1966 Winthrop Rockefeller was elected the state's first Republican governor since Reconstruction. Although reelected in 1968, Rockefeller lost the governorship to a Democrat, Dale Bumpers, in 1970. Bumpers was reelected in 1972, and in 1974 he succeeded J. William Fulbright as one of Arkansas's U.S. Senators. David H. Pryor, a Democrat, was elected governor in 1974. Among the institutions of higher education in the state are the Univ. of Arkansas, at Fayetteville, Arkansas State Univ., near Jonesboro, Hendrix College and the State College of Arkansas, at Conway, Ouachita Baptist College and Henderson State College, at Arkadelphia, the College of the Ozarks, at Clarksville, Arkansas College, at Batesville, and Harding College, at Searcy. See Federal Writers' Project, *Arkansas: A Guide to the State* (1941), J. G. Fletcher, *Arkansas* (1947), T. S. Staples, *Reconstruction in Arkansas, 1862-1874* (1923, repr. 1964), L. J. White, *Politics on the Southwestern Frontier: Arkansas Territory, 1819-1836* (1964).

Arkansas (ärkän'zäs, ärkän'sō'), river, c. 1,450 mi (2,330 km) long, rising in the Rocky Mts., central Colo., and flowing generally SE across the plains to the Mississippi River, SE Ark., drains 160,500 sq mi (415,700 sq km). The Canadian and Cimarron rivers are its main tributaries. It is the chief waterway for the state of Arkansas, where it drains a broad valley. The upper course of the Arkansas River has many rapids and flows through Royal Gorge, one of the deepest canyons in the United States. More than 25 dams on the river provide flood control, power, and irrigation. During the warm months, because of its extensive use for irrigation, the middle course of the Arkansas is reduced to a trickle. The John Martin dam and reservoir in Colorado is one of the largest water-storage and flood-control units in the river basin. The Arkansas River Navigation System, opened in 1971, makes the river navigable to Tulsa, Okla., c. 500 mi (800 km) upstream. The Spanish explorers Coronado and De Soto probably traveled along portions of the river in the 1540s. In 1806, Zebulon Pike, an American army officer, explored the river's upper reaches in Colorado. The Arkansas River was an important trade and travel route in the 19th cent.

Arkansas, University of, mainly at Fayetteville, land-grant and state supported, coeducational, chartered 1871, opened 1872, called Arkansas Industrial Univ. until 1899. The Graduate Institute of Technology, the schools of social work and law, and the medical center are at Little Rock.

Arkansas City (ärkän'zäs), city (1970 pop. 13,216), Cowley co., 5 Kansas, at the confluence of the Arkansas and the Walnut rivers, near the Okla. border, inc. 1872. Located in an agricultural and oil region (rich oil fields were discovered there in 1914), it has oil refineries, flour mills, and meat-packing plants. Arkansas City was the starting point for the "run" (1893) of thousands of homesteaders into the Cherokee strip, a marker south of the city commemorates the event. There is a junior college in the city.

Arkansas Indians see QUAPAW INDIANS

Arkansas Post (ärkän'sō), community on the Arkansas River, SE Ark. Founded by the French in 1686 as a trading post, it is the oldest white settlement in the state, it became the capital of the Arkansas territory in 1819. Once an important port, Arkansas Post was a Confederate stronghold during the Civil War until it was captured by Union troops in 1863. Arkansas Post National Memorial is there (see NATIONAL PARKS AND MONUMENTS, table).

Arkansas State University, near Jonesboro, coeducational, chartered 1909, named State Agricultural and Mechanical College, 1925-1933. In 1933 the school became Arkansas State College, and in 1967 it achieved university status and adopted its present name. There is a branch campus at Beebe.

Arkhangelsk (ärkhän'gīlsk) or **Archangel** (ärk'än'-jäl), city (1970 pop. 343,000), NW European USSR, on the Northern Dvina near its mouth at the White Sea. Although icebound much of the year, it is a leading Soviet port and can generally be made usable by icebreakers. Timber and wood products make up the bulk of the exports. The city has factories producing pulp and paper, turpentine, resin, cellulose, building materials, and prefabricated houses. Fishing and shipbuilding are also major industries. Once the site of a Norse settlement, the city was founded (1584) as Novo-Kholmogory, it was renamed (1613) for the monastery of the Archangel Michael (which still stands). Arkhangelsk was Russia's principal port until the founding of St. Petersburg in 1703, it regained importance after the rail line to Moscow was completed in 1898. A supply port during World War I, Arkhangelsk was occupied from 1918 to 1920 by Allied forces (including Americans) and by the White Army, it served as their base for unsuccessful campaigns against the Bolsheviks. During World War II, U.S. and British shipments landed at Arkhangelsk. The city has a maritime school (1771), a regional museum (1859), and institutes of forestry and medicine.

Arkite (är'kit), Canaanite tribe centered around Arca or Arca, a town near the E Mediterranean Sea NE of Tripoli. Gen. 10:17, 1 Chron. 1:15. Arca, called Arca Caesarea and Caesarea Libani by the Romans, was the birthplace of Alexander Severus, it was vainly besieged by the Crusaders in 1099.

Arklow, urban district (1971 pop. 6,750), Co. Wicklow, E. Republic of Ireland, on St. George's Channel at the mouth of the Avoca River. A small fishing port, it has become a popular resort. Irish rebels were defeated at Arklow in 1798. Shelton Abbey nearby is the seat of the earl of Wicklow.

Arkwright, Sir Richard, 1732-92, English inventor. His construction of a machine for spinning, the water frame, patented in 1769, was an early step in the Industrial Revolution. His machines and his gift for organization enabled him and his partner, Jedediah Strutt, to establish huge cotton mills and thus helped to start the factory system. He became very wealthy and was knighted in 1786. See R. S. Fitton and A. P. Wadsworth, *The Struts and the Arkwrights, 1758-1830* (1958, repr. 1968), The Arkwright Society, *Arkwright and the Mills at Cromford* (1971).

Arlberg (är'l'bérk), pass, 5,946 ft (1,812 m) high, W Austria, beside Arlberg peak, on the boundary between Tyrol and Vorarlberg. The Arlberg region forms the water divide between rivers flowing to the North Sea and those flowing into the Black Sea. The Arlberg Tunnel (built 1880-84) is one of the world's longest (6.2 mi/9.9 km) railway tunnels. The Arlberg district is a noted winter sports center.

Arlen, Harold, 1905-, American jazz and popular composer, b. Buffalo, N.Y. as Hyman Arluck. Arlen sang from the age of 7 in the synagogue where his father was cantor, and at 15 he left school to play jazz piano. After coming to New York City in 1925, Arlen achieved fame by writing songs for various reviews and for the Harlem Cotton Club Shows (1930-34). Many of his songs became jazz standards because of their genuine blues feeling and haunting melodies (e.g., "Ill Wind," "Stormy Weather," "Blues in the Night"). In 1939, Arlen won an Academy Award for the song "Over the Rainbow" in the film *The Wizard of Oz*. Among the other films for which he wrote scores are *Cabin in the Sky* (1943) and *A Star Is Born* (1954). He also wrote the music for several Broadway shows, notably *House of Flowers* (1954).

Arlen, Michael, 1895-1956, English novelist, b. Bulgaria as Dikran Kuyumjian. The son of Armenian parents, he was brought to England as a child. In 1922 he became a British subject and changed his name, and in 1928 he married Countess Alalanta Mercati. Arlen is best remembered for his fantastically successful novel (and play) *The Green Hat* (1924), which depicts the licentious postwar life of fashionable London society. His characters are disillusioned, cynical, and witty. Although sophisticated, the novel is ultimately sentimental. Arlen's novels depicted the mood of the 1920s, and by the 30s he was no longer read. His last novel, *Flying Dutchman*, appeared in 1939. See the biography *Exiles* (1970) by his son Michael J. Arlen.

Arles (är'l), city (1968 pop. 46,136), Bouches-du-Rhône dept., 5 central France, in PROVENCE, on the Rhône River delta. Arles is an important railroad and industrial center with varied manufactures. It was a flourishing Roman town (Arelas) and the metropolis of Gaul in the late Roman Empire. Constantine I convoked (314) a synod at Arles that condemned

ARLES, KINGDOM OF

DONATISM, Constantine II was born there. Arles was an archiepiscopal see from the 4th cent until 1790 and the seat of many synods. It became (879) the capital of Provence and (933) of the kingdom of Arles (see separate article). In the 12th cent it became a free city governed by an elected *podestà*, who appointed the consuls and other magistrates. Arles retained its special status until the French Revolution. Among its noteworthy attractions are a Roman arena (2d cent AD), seating 26,000 and now used for bullfights, a Roman theater (1st or 2d cent AD), the Aliscamps [i.e., Elysian Fields], remains of a Roman cemetery, the Church of St Trophime (11th-15th cent, formerly a cathedral), the town hall (17th cent), and the Museon Arlaten, a museum of Provençal culture and folklore, installed in a 16th-century mansion by Frederic Mistral, who was born near Arles. Arles has attracted many painters, notably Van Gogh and Gauguin.

Arles, kingdom of, was formed in 933, when Rudolf II, king of Transjura BURGUNDY, united the kingdom of PROVENCE or Cispurane Burgundy to his lands and established his capital at Arles. Holy Roman Emperor CONRAD II annexed the kingdom to the Holy Roman Empire in 1034, but few of his successors troubled to be crowned as king of Arles. The imperial rulers exercised little control, and the component parts of the realm (Provence, VIVARAIS LYONNAIS, DAUPHINÉ SAVOY, SWITZERLAND, and FRANCHE COMTÉ) gradually broke away. In 1378, Holy Roman Emperor Charles IV ceded the realm to the dauphin (later King Charles VI of France), and the kingdom for all practical purposes ceased to exist.

Arlington, Henry Bennet, 1st earl of, 1618-85, English statesman. He fought for the royalists in the English civil war and, after going into exile, served as an envoy in Spain for the future CHARLES II. After the Restoration, Charles made him a secretary of state (1662), and he became one of the king's closest advisers, a member of the CABAL. He knew of the king's secret agreement with Louis XIV in the Treaty of Dover (1670) and seems to have encouraged Charles in promulgating the Declaration of Indulgence (1672) and in instigating the third Dutch War. He was made earl of Arlington in 1672. Impeached (1674) for corruption, betrayal of trust, and pro-Catholic activities, he was acquitted, resigned, and became lord chamberlain (1674). See biography by Violet Barbour (1915).

Arlington, county (1970 pop. 174,284), N Va., across the Potomac River from Washington, D.C. A residential suburb of Washington, the county is governed as a single unit. Within its boundaries are ARLINGTON NATIONAL CEMETERY, ARLINGTON HOUSE NATIONAL MEMORIAL, the PENTAGON, Marymount College of Virginia, and Washington National Airport. Most of the residents are employed by the U.S. government. Arlington, formerly called Alexandria, was ceded to the Federal government by Virginia in 1790 and was part of the District of Columbia until 1847, when it was returned to Virginia. It was named Arlington in 1920.

Arlington 1. Town (1970 pop. 53,524), Middlesex co., E Mass., a residential suburb of Boston, settled c. 1630 as Menotomy, inc. as West Cambridge 1807, renamed Arlington 1867. Menotomy was the scene of fierce fighting after the Lexington and Concord battles in 1775. Some 17th-century buildings remain. 2. Industrial city (1970 pop. 90,643), Tarrant co., N Texas, midway between Dallas and Fort Worth, inc. 1896. The center of a rapidly growing area, it has a huge industrial park with its own railroad. There are steel and iron works, and other industries that produce automobile parts, cans and containers, rubber items, mobile homes, electronic equipment, oil-field equipment, aircraft and parts, insecticides, and paving and road equipment. Six Flags Over Texas (a huge amusement park) and the Pecan Bowl are located there. It is the seat of the Univ. of Texas at Arlington.

Arlington Heights, village (1970 pop. 64,884), Cook and Lake counties, NE Ill., a suburb of Chicago, founded 1836, inc. 1887. Its manufactures include heating and air-conditioning equipment, electronic components, radioactive drugs, and office supplies. Arlington Heights's population more than doubled during the 1960s as a result of large-scale residential construction. Arlington Park racetrack and a missile base are in the village.

Arlington House National Memorial, 3 acres (1 hectare), NE Va., in ARLINGTON NATIONAL CEMETERY, est. 1955. Formerly called the Custis-Lee Mansion, it is a memorial to the Confederate Gen. Robert E. LEE. Arlington house was the home of Lee, inherited by his wife, the daughter of George Washington Parke

Custis. It was abandoned by the Lees early in the Civil War and was later used as headquarters for the Union army. The estate was confiscated for nonpayment of taxes, and c. 200 acres (80 hectares) were set aside for a national cemetery in 1864.

Arlington Memorial Bridge, granite and concrete bridge across the Potomac River connecting the Lincoln Monument in Washington, D.C., with Arlington National Cemetery, N Va., built 1926-32.

Arlington National Cemetery, 420 acres (170 hectares), N Va., across the Potomac River from Washington, D.C., est. 1864. More than 60,000 American war dead, as well as notable Americans including Presidents William Howard Taft and John F. Kennedy, Gen. John J. Pershing, and Admiral Robert E. Peary are interred here. Burial in Arlington is limited to active, retired, and former members of the armed forces, Medal of Honor recipients, high-ranking Federal government officials, and their dependents. There are commemorative monuments, including the Tomb of the UNKNOWN SOLDIER. The cemetery is part of "Arlington," the former estate of the Custis and Lee families, and includes Arlington House, now called the ARLINGTON HOUSE NATIONAL MEMORIAL.

Arliss, George, 1868-1946, English actor. He first appeared on the stage in 1887. In 1901 he came to the United States with Mrs. Patrick Campbell to appear in the Belasco production of *The Darling of the Gods*, and thereafter he became extremely popular for his portrayals of the suave villain. His performance in *The Green Goddess* was especially noted. He also became a favorite in films, his performance in *Disraeli* won him an Academy Award (1930). See his autobiographies, *Up the Years from Bloomsbury* (1927) and *My Ten Years in the Studios* (1940).

Arlon (arlôn'), Flemish *Aarlen*, town (1970 pop. 13,745), capital of Luxembourg prov., SE Belgium, near the border with Luxembourg. A strategic point since Roman times, the town has suffered numerous attacks in its history. Of note in Arlon are Roman ruins, the Church of Saint-Donat (17th cent.), and the picturesque marketplace.

arm, upper limb in humans. Three long bones form the framework of the arm: the humerus of the upper arm, and the radius (outer bone) and ulna (inner bone) of the forearm. The radius and ulna run parallel but meet at their ends in such a manner that the radius can rotate around the ulna. This arrangement permits turning the forearm to bring the hand palm up (supination) or palm down (pronation). The radius and ulna hinge with the bones of the hand at the wrist, and with the humerus at the elbow. The BICEPS, a muscle of the upper arm, bends the arm at the elbow; the TRICEPS straightens the arm. Movement of the arm across the chest and above the head is accomplished by the pectoral muscles of the chest and deltoid muscles of the shoulder, respectively. In an adult the arm is normally five sixths as long as the leg.

Armada, Spanish (arma'da), 1588, fleet launched by PHILIP II of Spain for the invasion of England, to overthrow the Protestant Elizabeth I and establish Philip on the English throne, also called the Invincible Armada. Preparations, under the command of the marques de Santa Cruz, began in 1586 but were seriously delayed by a surprise attack on Cadiz by Sir Francis DRAKE in 1587. By the time the expedition was ready Santa Cruz had died, and command was given to the duque de MEDINA SIDONIA. The Armada consisted of 130 ships, including transports and merchantmen, and carried about 30,000 men. It was to go to Flanders and from there convoy the army of Alessandro Farnese, duke of Parma, to invade England. It set out from Lisbon in May, 1588, but was forced into Coruña by storms and did not set sail again until July. Medina Sidonia's orders were to proceed straight up the English Channel and refuse battle until he had made junction with Parma. This gave the initiative to the English, whose main fleet, commanded by Charles Howard (later earl of NOTTINGHAM), sailed out from Plymouth to achieve the windward side of the Spanish and attacked at long range. Three minor actions followed, in which the Armada was somewhat damaged but its formation unbroken. On Aug. 6, Medina Sidonia anchored off Calais, from which position he hoped to make contact with Parma. The following night the English sent fire ships into the anchorage, causing the Spanish fleet to scatter, and then attacked (Aug. 8) at close range off Gravelines. Unable to reform, the Armada was severely battered, but a sudden change in the wind enabled most of the ships to escape northward. In attempting to sail home by Scotland and the west coast of Ireland, the Spanish ships

were dispersed by storms, their provisions gave out and many of those who landed in Ireland were killed by English troops. Only about half the fleet reached home. See Garrett Mattingly, *The Armada* (1959), Alexander McKee, *From Merciless Invaders* (1964), Winston Graham, *The Spanish Armadas* (1972).

armadillo (ar'madil'ô), New World armored mammal of the order Edentata, a group that also includes the SLOTH and the ANTEATER, characterized by peglike teeth without roots or enamel. Armadillos are found from Argentina to Panama, with one species reaching the southern United States. The head and body of an armadillo are almost completely covered by an armor of plates made of bone and horny material, the plates are separated by soft skin which bears a few hairs. The body armor, or carapace, hangs down on either side of the animal's body and is divided into flexible bands across the back. Members of some armadillo species can roll into a ball for protection. Armadillos are omnivorous, although insects form the bulk of their diet. Most are nocturnal, resting during the day in burrows that they excavate with their strong front feet and enormous claws, they can dig into the ground with amazing speed when threatened. There are 21 armadillo species, classified in 9 genera. The largest is the giant armadillo, *Protonotus giganteus*, which reaches 4 ft (120 cm) in length and may weigh 100 lb (45 kg). Members of this species have almost 100 teeth, more than any other mammal. Despite their great bulk, they are able to stand on their hind feet and sometimes walk in this position. This species inhabits the Amazonian forest, most other armadillos are grasslands dwellers. The smallest armadillos are the fairy armadillos, or pichiagos, the smaller of the two pichiago species (*Chlamyphorus truncatus*) is about 6 in. (15 cm) long and bright pink in color, with plumes of white hair about the face and undersides and between the front and back portions of the shield. The nine-banded armadillo, *Dasypus novemcinctus*, is the only species found in the United States, it ranges from Argentina to Texas and Louisiana. It is about 30 in. (76 cm) long and 6 in. (15 cm) high at the shoulder, it weighs about 15 lb (6.4 kg). It normally moves about slowly, but is very swift when threatened. Each animal has several burrows. Females of this species almost always give birth to identical quadruplets. Armadillos are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Edentata, family Dasypodidae.

Armageddon (ar'maged'an), great battlefield where, at the end of the world, the powers of evil will fight the powers of good. Rev. 16:16. If the usual etymology is correct, the name alludes to the frequency of battles at MEGIDDO.

Armagh (arma'), county (1971 pop. 133,196), 489 sq mi (1,267 sq km), S Northern Ireland. The county town is Armagh. County Armagh rises from boggy, fertile lowlands in the north to barren hills in the south. It is the fruit-growing center of Northern Ireland, cattle, sheep, pigs, and poultry are also raised. Armagh is noted for its fine linen. Granite is quarried there. Other important towns are LURGAN and PORTADOWN.

Armagh, urban district (1971 pop. 12,297), county town of Co. Armagh, S Northern Ireland. Textiles are produced there. Armagh (originally Ard Macha) has been the ecclesiastical capital of all Ireland since the 5th cent., when St. Patrick founded his church there. It is the seat of both Roman Catholic and Protestant archbishops. Besides its two cathedrals, the town contains an observatory and St. Patrick Diocesan College. Armagh suffered several Danish raids; it was destroyed by Shane O'Neill in 1566 and was burned in 1642. Nearby is Navan Fort, a large elliptical mound, on the site of Emania (or Emain Macha), the legendary pre-Christian capital of Ulster.

Armagnac (armanyak'), region and former county, SW France, in GASCONY, roughly coextensive with Gers dept. Auch is the chief town. Armagnac is famous for the brandy bearing the same name. The counts of Armagnac originated in the 10th cent. as vassals of the dukes of Gascony. Their power reached its height with Count Bernard VII, who dominated France in the early 15th cent. Margaret of Angoulême, sister of Francis I of France, married the last count of Armagnac, who died without issue. Armagnac eventually passed to her second husband, Henri d'Albret, king of Navarre, whose grandson became King Henry IV. Henry added Armagnac to the royal domain in 1607.

Armagnacs and Burgundians, opposing factions that fought to control France in the early 15th cent. The rivalry for power between Louis d'ORLÉANS,

brother of the recurrently insane King Charles VI, and his cousin JOHN THE FEARLESS, duke of Burgundy, led to Louis's murder in 1407. In the conflicts that followed, the partisans of Charles d'ORLÉANS, son of Louis, were led by Charles's father-in-law, BERNARD VII, count of Armagnac, after whom they were named. The followers of the duke of Burgundy, or Burgundians, were allied with members of the lower classes, notably the CABOCHIENS, who were particularly strong in Paris. Open civil war between the two groups broke out in 1411. John the Fearless at first held control of the government, but in 1413 the Cabochiens were ousted by another Parisian faction and John was forced to flee the city. The Armagnacs came into power and conducted the defense of France against King Henry V of England, who invaded the kingdom in 1415. John gave tacit approval to the invasion. The conflict between Armagnacs and Burgundians thus became part of the HUNDRED YEARS WAR. John took advantage of French defeats to return to Paris and seize the king (1418), in the ensuing massacre of the Armagnacs, Bernard VII and numerous followers were killed. Subsequently John attempted to negotiate with Charles VI's son, the young dauphin (later King Charles VII). During the negotiations John was assassinated (1419). His son and successor, PHILIP THE GOOD of Burgundy, immediately concluded a treaty with the English (see TROYES, TREATY OF), by which he recognized the succession to the French throne of Henry V. This alliance remained in force until 1435 when Philip signed the Treaty of Arras with Charles VII. Although the terms *Armagnacs* and *Burgundians* ceased to have their original meanings, the struggle between the French crown and Burgundy continued until the death (1477) of Charles the Bold of Burgundy.

armature, in art see SCULPTURE

armature, in electricity, principal current-carrying member of the electric GENERATOR and electric MOTOR. Essentially it is a coil of wire that rotates in the magnetic field between opposite magnetic poles. In its simplest form the coil is wound around a central core of soft iron, and the whole is rotated. Armatures differ in the way in which the coil is wound about the core, in the shape of the core, and in the number of turns in the coil. Although in general the armature is the rotating part, in some cases it is held stationary and the magnetic field is rotated about it.

Armavir (armavēr, Rus armavēr'), city (1970 pop. 146,000), Krasnodar Krai, SE European USSR, on the Kuban River. An important railroad junction, it has machine and tool plants. Armavir was founded in 1848.

Armenia (armē'nēa), region and former kingdom of Asia Minor. Greater Armenia lies east of the Euphrates River, and Little, or Lesser, Armenia is west of the river. Armenia is generally understood to include NE TURKEY, the ARMENIAN SOVIET SOCIALIST REPUBLIC, and parts of Iranian AZERBAIJAN. It thus forms a continuation of the Anatolian plateau. Mt. ARARAT, the highest point, is in Turkey, as are the sources of the Euphrates, Tigris, and Aras rivers and Lake VAN. Trabzon, on the Black Sea, Erzurum, and Kars are the chief cities of Turkish Armenia, which, unlike Soviet Armenia, has no official standing. According to tradition, the kingdom was founded in the region of Lake Van by Haig, or Haik, a descendant of Noah. Modern scholars, however, believe that the Armenians crossed the Euphrates and came into Asia Minor in the 8th cent. B.C. Invading the Khaldian state called Urartu by the Assyrians, they intermarried with the indigenous peoples there and formed a homogeneous nation by the 6th cent. B.C. This state was a Persian satrapy from the late 6th cent. B.C. to the late 4th cent. B.C. Conquered (330 B.C.) by Alexander the Great, it became after his death part of the Syrian kingdom of SELEUCUS I and his descendants. After the Roman victory over the Seleucids at Magnesia in 190 B.C., the Armenians declared (189 B.C.) their independence under a native dynasty, the Artashesids. The imperialistic ambitions of King TIGRANES led to war with Rome, defeated Armenia became tributary to the republic after the campaigns of LUCULLUS (69 B.C.) and POMPEY (67 B.C.). The Romans distinguished between Greater Armenia and Lesser Armenia, respectively east and west of the Euphrates. TIRIDATES, a Parthian prince, was confirmed as king of Armenia by Nero in A.D. 66. Christianity was introduced early; Armenia is reckoned the oldest Christian state. In the 3d cent. A.D., ARDASHIR I, founder of the SASSANID, came to power in Persia and overran Armenia. The persecution of Christians created innumerable martyrs and kindled nationalism among the Armenians, particularly after the partition (387) of the kingdom between Persia

and Rome. Attempts at independence were short-lived, as Armenia was the constant prey of Persians, Byzantines, White Huns, Khazars, and Arabs. From 886 to 1046 the kingdom enjoyed autonomy under native rulers, the Bagratids; it was then reconquered by the Byzantines, who promptly lost it to the Seljuk Turks following the Byzantine defeat at the battle of Manzikert in 1071. With the Mongol invasion of the mid-13th cent., a number of Armenians, led by Prince Reuben, were pushed westward. In 1080 they established in CILICIA the kingdom of Little Armenia, which lasted until its conquest by the Mamelukes in 1375. Shortly afterward (1386-94) the Mongol conqueror Tamerlane seized Greater Armenia and massacred a large part of the population. After Tamerlane's death (1405) the Ottoman Turks, whom Tamerlane had defeated in 1402, invaded Armenia and by the 16th cent. held all of it. Under Ottoman rule the Armenians, although often persecuted and always discriminated against because of their religion, nevertheless acquired a vital economic role. Constantinople and all other large cities of the Ottoman Empire had colonies of Armenian merchants and financiers. Eastern Armenia was chronically disputed between Turkey and Persia. It was from Persia that Russia, in 1828, acquired the present Armenian SSR. There remains a considerable Armenian minority in NW Iran. The Congress of Berlin (1878, see BERLIN CONGRESS OF) also assigned the Kars, Ardahan, and Batumi districts to Russia, which restored Kars and Ardahan to Turkey in 1921. The Armenian people underwent one of the worst trials in their history between 1894 and 1915. A systematic plan for their extermination was put into action under Ottoman Sultan Abd al-Hamid II and was sporadically resumed, notably in 1915, when the Armenians were accused of aiding the Russian invaders during World War I. The Armenians rose in revolt at Van, which they held until relieved by Russian troops. The Treaty of Brest-Litovsk (1918) between Soviet Russia and Germany made Russian Armenia an independent republic under German auspices. It was superseded by the Treaty of Sevres (see SEVRES TREATY OF, 1920), which created an independent Greater Armenia, comprising both the Turkish and the Soviet Russian parts. In the same year, however, the Communists gained control of Russian Armenia and proclaimed it a Soviet republic, and in 1921 the Russo-Turkish Treaty established the present boundaries, thus ending Armenian independence. Before 1914 there were about 2.5 million Armenians in Russia, Turkey, and Iran, as of 1974 there were more than four million throughout the world. See also ARMENIAN CHURCH and ARMENIAN LITERATURE. See V. M. Kurkjian, *A History of Armenia* (1959), L. Z. Nalbandian, *The Armenian Revolutionary Movement, the Development of Armenian Political Parties through the Nineteenth Century* (1963), R. G. Hovannisian, *Armenia on the Road to Independence, 1918* (1967) and *The Republic of Armenia The First Year, 1918-1919* (1971), Sirarpie Der Nersessian, *The Armenians* (1969), D. M. Lang, *Armenia Cradle of Civilization* (1970), Charles Burney and D. M. Lang, *The Peoples of the Hills* (1971).

Armenia (ārmā nyā), city (1968 est. pop. 142,200), W central Colombia. Located in a fertile agricultural region (especially for coffee and cattle), Armenia is an industrial center and a transportation hub. It has a university.

Armenian Church, autonomous Christian church, sometimes also called the Gregorian Church. Its head, a primate of honor only, is the catholicos of Echmiadzin, in Soviet Armenia. His rule is shared by the patriarchs of Jerusalem and Constantinople and by the catholicos of Sis (Cilicia). In general, Armenian practices resemble those of other Eastern churches, the priests may marry and communion is distributed in both bread and wine, although the use of unleavened bread is a Western practice. The liturgical language is classical Armenian. Armenia became Christian at the end of the 3d cent. through the missionary work of St. Gregory the Illuminator (see GREGORY THE ILLUMINATOR, SAINT). In the next century the young church made itself autonomous, apparently because of the efforts of the metropolitan bishop of Caesarea, St. Basil the Great, to impose certain reforms. After the Council of Chalcedon the Armenians rejected the orthodox position, this adoption, at least tacit, of MONOPHYTISM completed the isolation of the Armenian Church from the rest of Christendom. Part of the Armenian Church reunited with Rome temporarily in the 13th and 14th cent., and missionary work by the Roman Church in the 14th cent. resulted in many converts.

In 1740 the Catholic Armenian rite was officially organized, in communion with the pope but under its own patriarch. See Papken Catholicos Gulesserian, *The Armenian Church* (tr. 1939, repr. 1970), Donald Attwater, *The Christian Churches of the East* (2 vol., rev. ed. 1961).

Armenian language, member of the Thracio-Phrygian subfamily of the Indo-European family of languages (see INDO EUROPEAN). There is evidence that in ancient times a distinct subfamily of Indo-European languages existed that is now called Thracio-Phrygian. To it belonged Phrygian (an ancient and now extinct Indo-European language of Anatolia) and Thracian (a now dead Indo-European tongue of the Balkans in antiquity). Modern Armenian may well be a direct descendant of Phrygian. Today Armenian is the mother tongue of more than four million people, of whom two million live in the Armenian Soviet Socialist Republic, one million live elsewhere in the Soviet Union, and the rest are in the Middle East, the Balkans, and the United States. Armenian is an old, rich, and vital language. Although spoken in antiquity, it was not recorded in writing until the early 5th cent. A.D. At that time an alphabet of 36 letters was specially designed for Armenian by St. Mesrop, who used Greek and Iranian letters as a basis. Later, two more letters were added to the alphabet. In its early, or classical, form, Armenian is called *Grabar* or *Krapar*. This was the literary language until the 19th cent. and is still the liturgical language of the Armenian Church (see ARMENIAN LITERATURE). It differed greatly from the spoken language. Grammatically, it has six cases for the noun and nine tenses for the verb, but it has lost gender. The modern form of Armenian, now used for literature as well as for speaking, dates from the 16th cent. and is known as *Ashksarhik* or *Ashksarhabar*. Its grammar is simpler than that of Classical Armenian. The history of the Armenian people is reflected in the sources of the words borrowed by their language. For example, Armenian has absorbed words from Iranian, owing to Parthian domination in the centuries immediately before and after Christ from Greek and Syriac as a result of Christian influence, from French during the Crusades and from Turkish in the course of several centuries of Turkish rule. For grammars see S. L. Kogian (1949) and K. H. Gulian (1954).

Armenian literature. The first major work of Armenian literature is a 5th-century translation of the Bible; its language became the standard of classical Armenian. The Armenian Church fostered literature from its inception, and the principal works are religious or hagiographical, most of them translations. They constituted the golden age of Armenian literature. Early Mesopotamian influence resulted in the translations from the Syriac of Aphraates and St. Ephraem Syrus. Armenia then turned westward for literary inspiration and produced fine translations of the works of many religious leaders, e.g., Athanasius, Basil the Great, Gregory of Nyssa, Gregory Nazianzen, and John Chrysostom. Among secular works are renderings of Aristotle and of the romance of Alexander. The original writings of the golden age are confined to saints' lives and histories. The 5th-century history of Moses of Khorhni contains practically all that is known of pre-Christian Armenia. Its folklore and epics. Later celebrated historians include Thomas Ardzruni (10th cent.), Matthew of Edessa, who described the Crusades, and Stephanos Orbelian (13th cent.), who wrote of the Mongol hordes. A tradition of epic poetry, nationalistic in character and influenced by Muslim form, enriched Armenian literature, the best-known example is *David of Sassoun*. In the 12th cent. many Armenians went to Cilicia to escape the Seljuk Turks, and a new literary period began. Its principal figure is Catholicos Narses IV, prelate and poet, whose literary style is unexcelled in Armenian. After the decline of Armenian cultural centers in the 14th cent. the literature of Armenians abroad was heavily influenced by their host countries. Contemporary forms of the language came into use for writing in many fields—trade, agriculture, medicine, law, and political administration. In 18th-century Constantinople, Mechitar (1676-1749), a monk of the Catholic Armenians (those in communion with the Holy See), founded a community to cultivate Armenian letters. These monks (Mechitarists) now have their headquarters in Venice and are the principal Armenian publishers. The 19th cent. saw a considerable revival of Armenian letters and the establishment of a modern literary language. The major novelists of the 19th cent. were Khachatur Abovian and Hagop Melik-Agopian (called "Raffi"). Currently there is a flourish-

ishing Armenian journalism, the chief literary genres are satire and folktales. See Z. C. Boyajian, ed., *Armenian Legends and Poems* (2d ed. 1959).

Armenian Soviet Socialist Republic, constituent republic (1970 pop. 2,493,000), 11,500 sq mi (29,785 sq km), SE European USSR, in the S Caucasus. YEREVAN is the capital. Smallest of the USSR's 15 republics, Armenia is bounded by Turkey on the west, the Azerbaijan Republic on the east, Iran on the south, and the Georgian Republic on the north. The region is one of extinct volcanoes and rugged mountains. Many peaks exceed 10,000 ft (3,048 m), perpetually snowcapped Mt. Aragats (13,432 ft/4,094 m) is the highest point in Armenia. The chief rivers are the Araks and its tributary, the Razdan, which provide hydroelectricity and irrigation water. Lake Sevan supports the important fishing industry and is another source of hydroelectric power. Armenia is rich in mineral resources, notably copper but also molybdenum, zinc, lead, iron, pyrite, manganese, gold, chromite, and mercury. These provide the basis for a flourishing chemical industry. Salts and other minerals have enabled numerous health resorts to thrive in Armenia. Food processing, nonferrous metallurgy, and the manufacture of electrical equipment, machinery, textiles, automobiles, and the famous Armenian cognacs and wines are the republic's other major industries. Agriculture holds a significant place in Armenia's economy, with wine grapes and other fruits, wheat, barley, potatoes, and sugar beets as the major food crops and cotton and tobacco as the foremost industrial crops. Armenia's main cities are Yerevan, LENINAKAN, Kirovakan, and Echmiadzin (seat of the Armenian Church). It is one of the USSR's most densely populated and ethnically homogeneous republics, and has, in addition to its predominant Armenian population, Azerbaijani, Russian, and Kurdish minorities. The republic occupies the eastern part of ancient ARMENIA. It was acquired by Russia from Persia in 1828 and made into a province. After the 1917 Bolshevik Revolution, Russian Armenia joined Azerbaijan and Georgia to form the anti-Bolshevik Transcaucasian Federation, which, however, was dissolved in May, 1918. Armenia then became an independent republic. In 1920 it was occupied by the Red Army and proclaimed a Soviet republic. Two years later, Armenia, Azerbaijan, and Georgia were combined to form the Transcaucasian Soviet Federated Socialist Republic, which became a part of the USSR. With the dissolution of the Transcaucasian SFSR in 1936, Armenia, like Azerbaijan and Georgia, became a separate constituent republic of the USSR.

Armentières (arman'tiēr', Fr. arma'ntiēr'), town (1968 pop. 28,469), Nord dept., N France, in Flanders, on the Lys River. It has foundries, boiler works, breweries, and a large textile industry. During most of World War I it was directly behind the Allied lines. It became known through the song "Mademoiselle from Armentières."

Arminianism. see ARMINIUS, JACOBUS

Arminius (armin'ēas), d. A.D. 21, leader of the Germans, called Hermann in modern German. He was a chief of the Cherusci (in an area of present-day Hanover) when the Romans were pushing E from the Rhine toward the Elbe. Arminius, who had been a Roman citizen and soldier, secretly gathered a great force of allies and set upon Publius Quinctilius Varus by surprise in the Teutoburg Forest in A.D. 9. In the ensuing battle Varus' army was utterly destroyed, and Varus, in disgrace, committed suicide. So great was the shock in Rome that it is said that Emperor Augustus afterward would start up from sleep, crying, "Varus, Varus, bring me back my legions!" The Romans never again made any real effort to absorb the territory E of the Rhine, though GERMANICUS CAESAR (called to aid the father of Arminius' wife, Thusnelda, against Arminius) badly defeated and wounded the German leader in A.D. 16. Arminius was later killed by treachery. Tacitus, the modern source for Arminius, glorified him as the noble barbarian. In the romantic period German nationalists made much of Arminius, who became a major national hero and was sometimes wrongly identified with Siegfried. F. G. Klopstock wrote a trilogy of plays about Arminius, and J. E. von Bandel erected a large monument to him near Detmold.

Arminius, Jacobus (jak'ō'bas), 1560-1609, Dutch Reformed theologian, whose original name was Jacob Harmens. He studied at Leiden, Marburg, Geneva, and Basel and in 1588 became a pastor at Amsterdam. He undertook to defend the Calvinist doctrine of predestination against the attacks of Dirck Volkertszoon Coornhert, but as a result of the controversy he changed his own views of the doctrine. He

was professor of theology at the Univ. of Leiden after 1603, and he engaged in violent theological debates, seeking to win the Dutch Reformed Church to his views. His teaching, known as Arminianism, was not yet fully developed, but he asserted the compatibility of divine sovereignty with human freedom, denied John Calvin's doctrine of irresistible GRACE, and thus modified the strict conception of predestination. In this respect his teaching resembled that of the Roman Catholic Council of Trent. Arminianism became a term of abuse among 17th-century Puritans. His ideas were formulated after his death into a definite system by his disciple, Simon Episcopius, who drew up the "Remonstrance" (see REMONSTRANTS). Arminianism later was the doctrine of Charles and John Wesley and most of the Methodist churches.

Armistead, George (ar'mistēd), 1780-1818, American artillery officer distinguished in the War of 1812, b. Virginia. He took part in the capture of Fort George on the Niagara frontier but is better remembered as the defender of FORT MCHENRY against British attack (Sept. 1814)—a defense that served as an inspiration for the STAR SPANGLED BANNER.

Armistead, Lewis Addison, 1817-63, Confederate general, b. New Bern, N.C. He was commissioned (1839) in the U.S. army from Virginia but resigned when that state seceded. In the GETTYSBURG CAMPAIGN, Armistead, commanding a brigade under G. E. PICKETT in the famous charge, accomplished the farthest penetration of the Union lines, but he was mortally wounded. A monument where he fell marks the "high tide" of the Confederacy.

Armoni (armō'ni), one of Saul's sons, killed to end the Gibeonite famine. 2 Sam. 21:1-9.

armor, apparatus for defense of persons, horses, and such objects as vehicles, naval vessels, and aircraft. Body armor developed early as protective suits made of such materials as leather, shells, wood, and basketwork. These were later replaced by metal. Such protective coverings were known to the peoples of the ancient Middle East, and out of them Greeks developed the helmet, cuirass, shin guards (greaves), and shield. The armor of the Roman legionary passed through many stages but was characteristically a cuirass and a shield. After the downfall of the Roman Empire defensive garments reinforced by metal strips and plates appeared. Soon chain mail developed and prevailed until c. 1300, when it was gradually superseded by protective covering of steel plates. The evolution of warfare, with increased mobility, diminished the importance of personal armor even before firearms speeded its disappearance. Helmets and cuirasses were worn in action as late as the 17th cent., later they were used only for ceremonial purposes. In the wars of the 20th cent., steel helmets were reintroduced, and there were some experiments with various types of protective clothing. Armor is used also to protect vehicles (see TANK, military). Armor plate forms an important part of the defense of ships and aircraft.

Armory Show, international exhibition of modern art held in 1913 at the 69th-regiment armory in New York City. It was a sensational introduction of modern art into the United States. The estimated 1,600 works included paintings representing avant-garde movements in Europe. Duchamp's *Nude Descending a Staircase* was singled out by the hostile critics as emblematic of the so-called insanity and degeneracy of the new art. One of the most important exhibitions of art ever held in the United States, the Armory Show aroused the curiosity of the public and helped to change the direction of American painting. See Milton Brown, *American Painting from the Armory Show to the Depression* (1955), and *The Story of the Armory Show* (1963).

Armour, Philip Danforth (ar'mar), 1832-1901, American meat-packer, b. Stockbridge, N.Y. Armour's Chicago meat-packing plants introduced new principles of large-scale organization, as well as refrigeration, to the industry. He is said to have been one of the first to notice the tremendous waste in the slaughtering of hogs and to take advantage of the resale value of waste products. His prestige was dimmed by the scandals of 1898-99 in which his packing-house was charged with selling tainted beef. See biography by Harper Leech and John C. Carroll (1938).

Arms, John Taylor, 1887-1953, American etcher and draftsman, b. Washington, D.C. He studied architecture, but later he devoted himself to etching and became noted for his excellent studies of medieval architecture. Arms illustrated his wife's *Churches of France and Hill Towns and Cities of Northern Italy*. His fine technique and draftsmanship won him nu-

merous awards, and his work is in many principal collections. Arms wrote an excellent *Handbook of Print Making and Print Makers* (1934).

arms, coat of: see BLAZONRY, HERALDRY

Armstrong, Edwin Howard, 1890-1954, American engineer and radio inventor, b. New York City, grad. Columbia (E.E. 1913). He was associated in research with Michael I. Pupin at Columbia and became professor there in 1934. Armstrong received numerous awards for his contributions to the development of radio, which include the invention of the regenerative circuit (1912), the superheterodyne circuit (1918), the basic circuit of nearly all modern radio receivers, the superregenerative circuit (1920), and FREQUENCY MODULATION (1925-33). In 1947 he received the Medal of Merit for his contributions to military communications during World War II. See biography by L. P. Lessing (1956).

Armstrong, Henry, 1912-, American boxer, b. Columbus, Miss. He was originally named Henry Jackson. He began his professional career in 1931, and soon became known as a strong and tireless puncher. Armstrong won the featherweight championship from Petey Sarron in 1936, the welterweight title from Barney Ross in 1938, and in his next fight (10 weeks later) he defeated Lou Ambers to win the lightweight crown. He thus held three titles simultaneously, this prompted the National Boxing Association to rule that a champion must vacate a title if he wins another. In his career (1931-45), Armstrong won 144 matches, scored 97 knockouts, and lost 19 fights. After his retirement he was ordained a minister and devoted himself to helping underprivileged youth, Youthtown at Desert Wells, Ariz., was built through his efforts. See his autobiography (1956).

Armstrong, John, 1717?-1795, American pioneer, known as the "hero of Kittanning," b. Co. Fermagh, Ireland. He laid out the town of Carlisle, Pa. In 1756 he led the expedition that destroyed Kittanning, a Delaware Indian town on the Allegheny. Later he was a major general in the American Revolution and a member of the Second Continental Congress.

Armstrong, John, 1758-1843, American army officer, U.S. Secretary of War (1813-14), b. Carlisle, Pa., son of John Armstrong, "hero of Kittanning." In the American Revolution he was on the staff of Horatio Gates. In 1783, Armstrong wrote the "Newburgh Addresses," or "Newburgh Letters," these anonymously issued appeals urged the restive Continental officers to force Congress to pay salary arrears and adjust other grievances. General Washington denounced the appeals, and the officers soon followed his lead. After marriage (1789) to Alida, sister of Robert R. Livingston, Armstrong moved to Red Hook, N.Y., and became a political supporter of George and De Witt Clinton. He was U.S. Senator (1800-1802, 1803-4), minister to France (1804-10), and then Secretary of War. In the War of 1812 he was held responsible for the disasters of 1813-14, notably the failure of the expedition to Canada and the British capture of the city of Washington. He resigned in public disfavor. Armstrong wrote *No Tides of the War of 1812* (1836-40), biographies of Richard Montgomery and Anthony Wayne, and other books.

Armstrong, Louis "Satchmo" (Daniel Louis Armstrong), 1900-71, American jazz trumpet virtuoso, singer, and bandleader, b. New Orleans. He learned to play the cornet in the band of the Waif's Home in New Orleans, and after playing with Kid Ory's orchestra he made several trips (1918-21) with a Mississippi riverboat band. He joined (1922) King Oliver's group in Chicago, where he met and married the pianist Lilian Hardin. His early playing was noted for improvisation, and his reputation as trumpeter and as vocalist was quickly established. Armstrong was a major influence on the melodic development of jazz in the 1920s, because of his solo performance attained a position of great importance in jazz. He organized several large bands, and beginning in 1932 made numerous foreign tours. Armstrong appeared in Broadway shows, at countless jazz festivals, and in several American and foreign films. See his autobiography (1954), biographies by Max Jones (1971) and H. Panassie (1971).

Armstrong, Samuel Chapman, 1839-93, American educator, philanthropist, and soldier, b. Hawaiian Islands, of missionary parents, grad. Williams, 1862. He served in the Union army in the Civil War, rising to the rank of major general. Appointed an agent of the Freedmen's Bureau in Virginia, he quickly realized the need for vocational training for emancipated slaves and persuaded the American Missionary Association to found, in 1868, the Hampton

Normal and Agricultural Institute, now the Hampton Institute. Because of Armstrong's interest, Indians were later admitted to the institution, which he headed until his death. See *Biography* by E. A. Talbot (new ed. 1969), F. G. Peabody, *Education for Life* (1918), a history of Hampton Institute.

army, armed land force, under regular military organization—distinguished from the horde, the armed mass of all able-bodied men in a tribe. The earliest known army was that of Egypt, like the later Oriental armies of Assyria and Persia, it was a professional body. The Greeks made military service obligatory for citizens, but they also employed large numbers of mercenaries and hired themselves out as such. At first the Roman army was composed of citizen soldiers, but with the growth of Roman power a professional standing army came into being, which was increasingly made up of barbarian mercenaries. The Roman army was divided into units called legions, each of which included heavy and light infantry, cavalry, and a siege train. The method employed by the Germanic tribes, e.g., the Goths, Lombards, and Franks, was the massing of all men of fighting strength into a horde. The army of the Middle Ages depended upon the feudal levy, according to which armed knights and yeomanry owed a set number of days of military service per year to a great lord, the system had limitations, since the knights would often either refuse to serve or desert before the end of the campaign. Alongside the feudal levies grew up bodies of mercenaries, and with the decline of FEUDALISM and the introduction of firearms, which ended the predominance of the knight and the castle, the mercenary became the dominant figure. The CONDOTTIERE hired mercenaries and fought under the prince who was willing and able to pay the most. German and Swiss mercenaries served all over Europe in the 14th and 15th cent. Professional soldiers were also a notable feature of the armies of the Ottoman Turks, who threatened to destroy all the forces of Western Europe in the 15th cent. After the Thirty Years War (1618–48), France emerged as the preeminent European military power. Under Louis XIV and his war minister, the marquis de LOUVOIS, that country organized a national standing army, which was the pattern for all Europe until the French Revolution. A professional body, set apart from civilian life and ruled under an iron discipline, the standing army reached its harsh perfection under Frederick II of Prussia. The introduction of CONSCRIPTION during the French Revolutionary Wars set in motion the development of mass armies built around a professional nucleus. With the advent of hard-surface highway systems and railroads it became possible, in the late 19th cent., to move large concentrations of troops, thus the nations of the world found it increasingly necessary to enlarge their manpower bases by conscription. However, Great Britain and the United States maintained their peacetime armies by voluntary enlistment. The United States traditionally relied for emergencies on its citizen militia (the NATIONAL GUARD), although conscription was used in the Civil War. In 1907, Great Britain organized a militia body, the territorials. These countries also turned to conscription in World War I and, at last, in peacetime—Great Britain in 1939, the United States in 1940. From very early times it was necessary to maintain troops whose major duty was supplying food, quarters, and the like for the troops who actually engaged in fighting—even when the armies simply lived off the land. There was, at first, no formal distinction made between service troops and combat troops, but with the creation of the great citizen armies after the French Revolution formal specialization proliferated, and quartermasters, ordnance troops, engineers, and medical specialists were organized into separate units. The term *army* is still applied to all the armed land forces of a nation, as in "the French army" or "the U.S. army," but it also has other usages. In combat the term came to be used for a self-contained force fighting in a particular region, e.g., the Army of the Potomac in the U.S. Civil War. In the modern armed forces of the United States, the division (usually about 15,000 men) is the smallest self-contained unit (having its own service and supply personnel). Two or more divisions generally form a corps, and an army, with c. 100,000 men or more and commanded by a lieutenant general, is composed of two or more corps. In World War II army groups were created, including several armies (sometimes from different allied armed forces). Above the army groups is the command of a theater of operations, which in turn is under the command of the joint chiefs of staff. See *STRATEGY AND TACTICS*. **WARFARE**. See L. L. Gordon, *Military Origins* (1971).

Army, United States Department of: see *DEFENSE*, UNITED STATES DEPARTMENT OF

armyworm, larva of a moth, *Pseudaletia unipuncta*, found in North America E of the Rocky Mts. When numerous, armyworms move in hordes, traveling by night and devouring grasses, young grains, and some leguminous crops. The full-grown larva is about 2 in. (5 cm) long, dark gray with yellow and green stripes. There are usually two generations in a season, the larvae hatching from eggs in late spring and again in late summer. Pupation (see *INSECT*) is underground. The moth is grayish brown with a white spot on each fore wing. Armyworms are sometimes serious pests, especially in the second generation of the summer, which occurs when corn and wheat are maturing. Control methods include the use of poisoned bait and toxaphene insecticide and the digging of ditches and holes as traps. Armyworms are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Noctuidae.

Arnall, Ellis Gibbs, 1907–, governor of Georgia (1943–47), b. Newnan, Ga. A lawyer, he served as a member of the state house of representatives (1933–37), assistant attorney general (1937–39), and attorney general (1939–43) before defeating Eugene TALLMADGE in the Democratic primary of 1942. The constitution of 1945 was notable among the many achievements of Arnall's liberal administration as governor. He wrote *The Shore Dimly Seen* (1946) and *What the People Want* (1948).

Arnan (är'nän), descendant of David 1 Chron. 3:21.

Arnaud, Henri (än'rë' arnô'), 1641–1721, pastor and leader of the WALDENSES. When Victor Amadeus II, duke of Savoy, in league with the French, set out to expel the Waldenses, Arnaud led (1686) a band of the Waldenses into Switzerland. In 1689 he led some of them back to their Piedmont valleys, where they withstood a combined French-Savoyard attack. In 1690, Victor Amadeus turned against the French, and Arnaud gained the favor of the duke and acted as his agent while the Waldenses fought on the side of the Savoyards and were repatriated. A new political turn sent Arnaud into exile again, and after 1699 he lived in Würtemberg. He wrote an account of the return of the Waldenses, *Histoire de la glorieuse rentrée des vaudois dans leurs vallées* (1710, tr. 1827).

Arnauld (arnô'), French family involved in Jansenism (see under JANSEN, CORNELIS). The name is also spelled Arnaut or Arnault. The leader was a nun, Marie Angélique de Sainte Madeleine, 1591–1661, abbess from early youth of PORT-ROYAL, a Cistercian house near Paris. Under the influence of St. Francis of Sales she reformed her abbey. She was interested in Jansenism by DUVERGIER DE HAURANNE, and her introduction of the ideas into Port-Royal was an important step in forwarding the movement. See biography by M. L. Trouncer (1957). Her younger brother, Antoine Arnauld, 1612–94, was a leading Jansenist controversialist. He was a priest and a member of the Sorbonne. His best-known work was an attack on the Jesuits, *De la fréquente communion* (1643). He also wrote against Calvinism and the freethinkers. In 1656 he was expelled from the Sorbonne and the faculty of theology. He lived for some years at Port-Royal-des-Champs, where he collaborated on the Port-Royal textbooks. He withdrew to Belgium in 1679. The chief controversy of his later years was with Malebranche on the theology of grace. His elder brother, Robert Arnauld d'Andilly, 1588–1674, was a translator of religious writings and a religious poet of originality. He lived for many years in retirement at Port-Royal-des-Champs.

Arndt, Ernst Moritz (ernst mō'rīts arnt), 1769–1860, German poet and historian. An ardent nationalist and opponent of Napoleon I, he was forced to flee to Sweden and Russia because of his patriotic and martial verse and his book, *Geist der Zeit* [Spirit of the times] (4 vol., 1806–18), which influenced German feelings against the French. He was (1818–20) a professor of history at the Univ. of Bonn but was dismissed because of his liberal ideas and participation in the Burschenschaften, the nationalist students' movement, he was not reinstated until 1840. In 1848, Arndt was elected to the Frankfurt Parliament, the all-German national assembly that attempted to bring about German unification. See A. G. Pundt, *Arndt and the National Awakening in Germany* (1935, repr. 1968).

Arne, Thomas Augustine, 1710–78, English composer. Arne composed the song *Rule, Britannia*, based on an ode by James Thomson. He composed new music for an adaptation of Milton's masque *Comus* (1738) and for some of the songs in Shake-

speare's plays. He also wrote operas, oratorios, including *Judith* (1761), instrumental music, and incidental music for plays.

Arnhem (ar'nəm), Ger. *Amheim*, city (1971 pop. 132,330), capital of Gelderland prov., E Netherlands, a port on the Lower Rhine. It is an industrial and transportation center. Textiles, electrical equipment, and metal goods are manufactured. First mentioned in the 9th cent., Arnhem was long the residence of the dukes of Gelderland. During World War II British airborne troops suffered (Sept., 1944) a serious defeat there (see also EINDHOVEN and NIJMEGEN).

Arnhem Land, 31,200 sq mi (80,808 sq km), N Northern Territory, Australia, on a wide peninsula W of the Gulf of Carpentaria. It contains an aboriginal reservation. Bauxite is mined in the area.

arnica (ar'nəkə), any plant of the genus *Arnica*, yellow-flowered perennials of the family Compositae (COMPOSITE family), native to north temperate and arctic regions. In North America, arnicas grow in woody areas of the plains region and the Pacific coast, northward to arctic Alaska. Medicinal preparations for the treatment of wounds and bruises are sometimes made from arnica plants, chiefly *A. montana* of the European Alps. Arnica is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Asterales, family Compositae.

Arnim, Achim or Joachim von (akh'im, yöäkh'im, fan ar'nim), 1781–1831, German writer of the romantic school. He is best remembered for his work with his brother-in-law, Clemens BRENTANO, on the folksong collection *Des Knaben Wunderhorn* [the boy's magic horn] (1806–8). Arnim's novels include *Grafen Doloros* (1810) and the unfinished *Die Kronenwächter* [the guardians of the crown] (1817). He was at his best in his historical novels, notably in *Isabella of Egypt* (1812, tr. 1927) and *Owen Tudor* (1809). Arnim had a predilection for the fantastic and the supernatural. Like Herder, he helped to create a popular German literary tradition. His wife, Bettina von Arnim, 1785–1859, whose maiden name was Elisabeth Brentano, was also a writer. She corresponded with Beethoven and Goethe and published the letters, not as historical documents but in the light of her own highly poetic imagination, as in *Goethe's Correspondence with a Child* (1835, tr. 1837). She was an ardent literary supporter of liberal Young Germany.

Arnim, Mary Annette (Beauchamp), Countess von: see RUSSELL, MARY ANNETTE RUSSELL, COUNTESS

Arno, Peter, 1904–68, American cartoonist, b. New York City. Arno's satirical cartoons appeared in the *New Yorker* magazine from 1925 until his death. He achieved a distinctive drawing style featuring heavily outlined figures. Notable among his urbane characterizations are the self-important executive and the generously endowed woman. His cartoons have been collected in *Peter Arno's Parade* (1929), *Peter Arno's Hullabaloo* (1930), *Sizzling Platter* (1949), and *Lady in the Shower* (1967).

Arno, river, c. 150 mi (240 km) long, rising in the Northern Apennines, Tuscany, central Italy, and flowing south to Arezzo where it turns northwest, it proceeds generally west, through Florence and Pisa, to empty into the Ligurian Sea. The Arno valley is fertile and densely populated. Its upper valley, the Casentino, is famous for its scenery. In 1966 a great flood on the Arno heavily damaged the art treasures of Florence.

Arnold, Benedict, 1741–1801, American Revolutionary general and traitor, b. Norwich, Conn. As a youth he served for a time in the colonial militia in the French and Indian Wars. He later became a prosperous trader. Early in the Revolution, his expedition against Fort Ticonderoga joined that of Ethan ALLEN, and the joint command took the fort. Arnold pushed on to the northern end of Lake Champlain, where he destroyed a number of ships and a British fort. In the QUEBEC CAMPAIGN, he invaded Canada (1775) by way of the Maine forests. The march proved incredibly hard, and the force was exhausted when it reached Quebec. Richard MONTGOMERY arrived from Montreal, and the two small armies launched the unsuccessful assault on Dec. 31, 1775. Arnold was wounded but continued the siege until spring, when Sir Guy Carleton forced him back to Lake Champlain. There he built a small fleet that, although defeated, halted the British advance. In Feb., 1777, Congress, despite General Washington's protests and Arnold's service, promoted five brigadier generals of junior rank to major generalships over Arnold's head. This and subsequent slights by Congress embittered Arnold and may in part have motivated his later treason. Although he soon won his promotion by his spectacular defense (1777)

against William Tryon in Connecticut, his seniority was not restored. In the SARATOGA CAMPAIGN, his relief of Fort Stanwix and his brilliant campaigning under Horatio Gates played a decisive part in the American victory. He became (1778) commander of Philadelphia, after the British evacuation, and there married Peggy Shippen, whose family had Loyalist sympathies. In 1779 he was court-martialed because of disputes with civil authorities. He was cleared of all except minor charges and was reprimanded by Washington, nevertheless he was given (1780) command of West Point. He had already begun his treasonable correspondence with Sir Henry CLINTON in New York City, and he arranged to betray West Point in exchange for a British commission and a sum of money. The plot was discovered with the capture of John ANDRE, but Arnold escaped. In 1781 in the British service he led two savage raids—one against Virginia and the other against New London, Conn.—before going into exile in England and Canada, where he was generally scorned and unrewarded. See biographies by Oscar Sherwin (1931) and Malcolm Decker (1932, repr 1969), Carl Van Doren, *Secret History of the American Revolution* (1941, repr 1968), J. T. Flexner, *The Traitor and the Spy* (1953).

Arnold, Sir Edwin, 1832–1904, English author. After serving as principal of the government college in Poona, India, he joined (1861) the staff of the London *Daily Telegraph*. He won fame for his blank-verse epic *The Light of Asia* (1879), dealing with the life of Buddha. The poem was attacked for its alleged distortion of Buddhist doctrine and for its tolerant attitude toward a non-Christian religion. Besides other volumes of poetry, he wrote a number of picturesque travel books and translated Oriental literature. See study by Brooks Wright (1957).

Arnold, Henry Harley, 1886–1950, American general, chief of the U.S. Army Air Forces (1942–46), known as "Hap" Arnold, b. Gladwyne, Pa., grad West Point, 1907. Assigned (1911) to the aviation division of the Signal Corps, Arnold later served almost entirely with the air arm. He was chief of the Air Corps from 1938 to 1940, when he became deputy chief of staff for the air. Chief of the U.S. Army Air Forces throughout World War II, Arnold was made (1944) general of the army and, after the creation of the air force as a separate department, was made (June, 1949) general of the air force, both of these were five-star ranks. He wrote a number of books, several of them with I. C. Eaker. See his autobiography, *Global Mission* (1949, repr 1972), biography by F. O. Dupre (1972).

Arnold, Matthew, 1822–88, English poet and critic, educated at Rugby, grad Balliol College, Oxford, 1844, fellow of Oriel College, Oxford, 1845. He was the son of the educator Dr. Thomas Arnold. In 1851, after a period as secretary to the 3d marquess of Lansdowne, Arnold was appointed inspector of schools, a position he held until 1886, two years before his death. During his tenure he went on a number of missions to European schools. He was impressed with some educational systems on the Continent—most particularly the concept of state-regulated secondary education—and wrote several works about them. His first volume of poems, *The Strayed Traveler*, appeared in 1849, it was followed by *Empedocles on Etna* (1852). Dissatisfied with both works, he withdrew them from circulation. *Poems* (1853) contained verse from the earlier volumes and new poems, including "The Scholar Gypsy" and "Sohrab and Rustum." *Poems Second Series* appeared in 1855 and was followed by *Merope* a Tragedy (1858) and *New Poems* (1867), the latter volume included "Thyrsis," his famous elegy on Arthur Hugh CLOUGH. His verse is characterized by restraint, directness, and symmetry. Though he believed that poetry should be objective, his verse exemplifies the romantic pessimism of the 19th cent., an age torn between science and religion. His feelings of spiritual isolation are reflected in such poems as "Dover Beach" and "Isolation." To Marguerite. Arnold was one of the most important literary critics of his age. From 1857 to 1867 he was professor of poetry at Oxford, during which time he wrote his first books of criticism, including *On Translating Homer* (1861), *Essays in Criticism* (1865, Ser. 2, 1888), and *On the Study of Celtic Literature* (1867). In *Culture and Anarchy* (1869) and *Friendship's Garland* (1871) he widened his field to include social criticism. His interest in religion resulted in *St. Paul and Protestantism* (1870), *Literature and Dogma* (1873), and *Last Essays on Church and Religion* (1877). In the 1880s he gave several lectures in the United States, which were published as *Discourses in*

America (1885). Arnold was the apostle of a new culture, a culture that would pursue perfection through a knowledge and understanding of the best that has been thought and said in the world. He attacked the taste and manners of 19th-century English society, particularly as displayed by the "Philistines," the narrow and provincial middle class. Strongly believing that the welfare of a nation is contingent upon its intellectual life, he proclaimed that the intellectual life is best served by an unrestricted, objective criticism, which is free from personal, political, and practical considerations. See various editions of his letters, his poetical works (ed. by C. B. Tinker and H. F. Lowry, 1950), his complete prose works (ed. by R. H. Super, 1960–1972, 8 vol.), his notebooks (ed. by H. F. Lowry et al., 1950), biographies by E. K. Chambers (1947, repr 1964) and Lionel Trilling (rev. ed. 1949), studies by J. D. Jump (1955), D. G. James (1961), H. C. Duffin (1963), E. Alexander (1965), A. D. Culler (1966), G. Stange (1967), and D. Bush (1971).

Arnold, Thomas, 1795–1842, English educator, b. Isle of Wight, educated at Winchester school and at Corpus Christi College, Oxford. He was a fellow of Oriel College, Oxford, from 1815 to 1819, was ordained deacon in 1818, and was from 1827 to 1842 headmaster of Rugby school, where he brought about many changes. Mathematics, modern languages, and modern history were added to the traditional classical curriculum, the monitorial system was introduced, and independent thought was encouraged. Arnold's reforms were influential beyond Rugby itself, his changes were adopted by most of the English secondary schools. Through the medium of his weekly sermons to his students in Rugby Chapel, Arnold inculcated the Christian principles and ideals that formed the core of his own religious convictions. An effective preacher, Arnold was an excellent classical scholar and historian as well. An edition of Thucydides (1835), *History of Rome* (3 vol., 1838–43, to the Punic Wars), and *History of the Later Roman Commonwealth* (pub. posthumously, 1845) are among the products of a lifetime of study. Arnold's expression of liberal political and theological views made him unpopular, however, and general recognition was not accorded him until 1841, when he was appointed regius professor of modern history at Oxford. Matthew Arnold was his son and Mary Augusta (Mrs. Humphry) Ward his granddaughter. Thomas Arnold is portrayed in *Tom Brown's Schooldays* (1857), a novel about life at Rugby by Thomas HUGHES. See A. F. Stanley, *The Life and Correspondence of Thomas Arnold*, D.D. (1844), Arnold Whitridge, *Dr. Arnold of Rugby* (1928), N. G. Wymer, *Dr. Arnold of Rugby* (1953, repr 1970), T. W. Bamford, *Thomas Arnold* (1960), Meriol Trevor, *The Arnolds* (1973).

Arnold of Brescia (brěsh'ə), c. 1090–1155, Italian monk and reformer, b. Brescia. A priest of irreproachable life, Arnold studied at Paris, where according to tradition he was a pupil of Peter Abelard. He first gained prominence in a struggle at Brescia between the bishop and the city government. Arnold became sharply critical of the church, declaring that secular powers only ought to hold property, he opposed the possession of property by the church because he believed it was being tainted by its temporal power. At the Synod of Sens (1140), dominated by St. BERNARD OF CLAIRVAUX, Arnold and Abelard were adjudged to be in error. Abelard submitted, but Arnold continued to preach. Pope Innocent II ordered Arnold exiled and his books burned. In 1145, Pope Eugene III ordered him to go to Rome in penitence. There the people had asserted the rights of the commune and had set up a republic. Arnold was attracted to their cause and became their leader, eloquently pleading for liberty and democratic rights. The republicans under Arnold forced Eugene into temporary exile (1146). Arnold was excommunicated by the pope in 1148 but continued to head the republican city-state even after Eugene III was permitted to reenter Rome. When Adrian IV became pope, however, he took stern measures. By placing Rome under an interdict in Holy Week, 1155, he forced the exile of Arnold. When Holy Roman Emperor Frederick I came to Rome, his forces at the pope's request seized Arnold, who was then tried by the Roman Curia as a political rebel (not a heretic) and executed by secular authorities. To the end he was idolized by the Roman populace. See biography by G. W. Greenaway (1931).

Arnoldson, Klas Pontus (klas pōn'təs ar'nōldson), 1844–1916, Swedish journalist and peace advocate. His untiring efforts for peace were rewarded by the 1908 Nobel Peace Prize, which he shared with Fred-

rik Bajer. A book he wrote on world peace (1900) was widely read. As a member (1882–87) of the Swedish Riksdag, he introduced a motion for permanent neutrality. In the union crisis in 1905, he opposed war with Norway. He founded several societies devoted to peace.

Arnold von Winkelried: see WINKELRIED.

Arnolfo di Cambio (ärnōl'fō dē kam'byō), b. c. 1245, d. before 1310, Italian architect and sculptor. He was Nicola Pisano's chief assistant on the Siena pulpit, but he soon began to work independently on important tomb sculpture. He designed admirable monuments to Cardinal Annibaldi (St. John the Lateran, Rome), Pope Adrian V (Viterbo), and Cardinal de Braye (c. 1282, Orvieto). These works became the model for Gothic funerary art. Arnolfo is recognized as the foremost architect of his era. In 1296 he was in charge of construction of the cathedral in Florence. He is said to have had a hand in designing other major buildings in Florence, including the baptistery, the Church of Santa Croce, and the Palazzo Vecchio. The monumental character of Arnolfo's work has left its mark on the appearance of Florence.

Arnon (ar'nōn), river of Jordan, entering the east side of the Dead Sea, called today Wadi Mojib. It is frequently mentioned in the Bible as the border between Moab (on the south) and the Amorites and later as the border between Moab and Israel. The city Aroer was on the Arnon. Num. 21 13, 14, 24, 26, 28, Deut. 2 24, 36, 3 8, 12, 16, 4 8, Joshua 12 1, 2, 13 9, 16, Judges 11 13, 18, 26, 2 Kings 10 33, Isa. 16 2, Jer. 48 20.

Arnstadt (ar'n'shtat), city (1970 pop. 28,762), Erfurt district, SW East Germany, on the Gera River. Gloves, shoes, and machinery are manufactured, and fluorspar and manganese are mined nearby. Arnstadt passed to the counts of Schwarzburg in the 14th cent. and later was the capital of the principality of Schwarzburg-Sonderhausen. Noteworthy buildings include the 13th-century Church of Our Lady and an 18th-century palace. J. S. Bach was organist (1703–5, 1706–7) at the Church of St. Boniface there.

Arnulf (ar'nālf), c. 850–899, Carolingian emperor (896–99), king of the East FRANKS (887–99), illegitimate son of Carloman of Bavaria. In 887 he led the rebellion of the kingdom of the East Franks (Germany) against his uncle, Carolingian Emperor CHARLES III, and was proclaimed their king. He repulsed the Norse invasions in 891 but campaigned less successfully against the Moravians, with whom he finally negotiated (894) a peace. At the request of Pope Formosus, he invaded (894) Italy, which was then in a state of anarchy, but went no further than Piacenza. He returned in 895, captured Rome, and was crowned (896) emperor, but he was stricken with paralysis and went home. Arnulf, whose personal appearance, energy, and bravery have often caused him to be likened to his great-great-grandfather Charlemagne, was the last Carolingian to be crowned emperor.

Arod (ār'ōd), son of Gad. Num. 26 17. He is the Arodi of Genesis 46 16.

Aroe Islands: see ARU ISLANDS, Indonesia.

Aroer (ār'ōər) 1. Border town, on the north side of the Arnon River and E of the Dead Sea, the modern Arair (Jordan). Aroer, which changed hands frequently, is mentioned in the Moabite stone. Deut. 2 36, 3 12, 4 48, Joshua 12 2, 13 9, Judges 11 26, 2 Kings 10 33, Jer. 48 19. 2. City of Gad, near Amman. Joshua 13 25, Judges 11 33. 3. City of Judah, the modern Ararah (Israel), near Beersheba. 1 Sam. 30 28. In 1 Chron. 11 44 an Aroerite is mentioned, it is not known which Aroer is meant in this passage or in Isa. 17 2.

aromatic compound, any of a large class of compounds that includes BENZENE and compounds that resemble benzene in certain of their chemical properties. Common aromatic compounds other than benzene include toluene, naphthalene, and anthracene (all of which are present in coal tar). Each of these compounds contains at least one ring that consists of six carbon atoms, each joined to at least two other carbon atoms, and each joined to adjacent carbon atoms by one single and one double bond. The resulting hexagonal structure is characteristic of many aromatic compounds. The distinguishing characteristic of this aromatic structure is that the electrons are delocalized, being shared by all the carbon atoms of the ring, this results in resonance (see CHEMICAL BONDING), the bonds between the carbon atoms being more stable than a pure double bond such as that in an ALKENE. For this reason, the bonds in the aromatic ring are less reactive than ordinary double bonds, aromatic compounds

tend to undergo ionic substitution (e.g., replacement of a hydrogen bonded to the ring with some other group) rather than addition (which would involve breaking one of the resonant bonds in the ring). Presence of the six-membered benzene ring is not essential for aromatic compounds, for example, furan, a heterocyclic compound that has a five-membered ring that includes an oxygen atom, has aromatic properties, as does pyridine, a heterocyclic compound whose six-membered ring includes a nitrogen atom.

Aroostook (arōōs'tōōk, -tīk, arōōs'-), river, c 140 mi (225 km) long, rising in N Maine and winding E to the St. John River in New Brunswick, Canada. The river gives its name to a county famous for potatoes.

Aroostook War, 19th-century border conflict between the United States and Canada. In 1838, Maine and New Brunswick both claimed territory left undetermined on the U.S.-Canadian border, including the valley of the Aroostook River. Maine farmers were interested in the valley's farmlands, and when New Brunswick sent Canadian lumbermen to do logging there, Maine authorities raised a force to eject them. New Brunswick asked for British regular troops and full-scale fighting seemed imminent, but Gen. Winfield Scott, who had been sent to the area with a small U.S. force, managed to reach an agreement (March, 1839) that prevented trouble. The boundary was later settled by the WEBSTER-ASHBURTON TREATY (1842).

Arosa (arō'za), town (1970 pop. 2,717), alt. c 6,000 ft (1,830 m), Grisons canton, E Switzerland. It is a health resort and sports center.

Arosemena Monroy, Carlos Julio (kar'lōs hōō'lyō arōsāmā'na mōn'roi), 1919-, president of Ecuador (1961-63). A lawyer and diplomat and the son and grandson of former presidents, he became vice president in 1960 and acceded to the presidency upon the ouster of President Velasco Ibarra. He instituted an austerity program and restored a favorable trade balance. Although he was criticized for his leftist leanings, real opposition to him arose from his immoderate drinking. After two unsuccessful attempts to impeach him, he was overthrown by a military junta.

Arp, Jean or Hans, 1887-1966, French sculptor and painter. Arp was connected with the BLAUE REITER in Munich, various avant-garde groups in Paris, including the surrealists, and the Dadaists in Zurich. He consistently created novel and abstract forms in various media—bas-reliefs, collages, painted cutouts, sculpture in the round, and painted wood reliefs. Often given a humorous touch, his works contain elements of organic form while retaining their essential abstraction. Arp finished a monumental wood relief for Harvard Univ. in 1950. See his *Arp on Arp*, ed. by Marcel Jean (1972), catalog of his sculpture by François Arp (1968), study by Herbert Read (1968).

Arpad (ör'pad), c 840-907?, chief of the Magyars. He led his people into Hungary c 895. The leaders of the Magyars and the first dynasty of Hungarian kings (St. Stephen I to Andrew III) were of the house of Arpad (see HUNGARY).

Arpad (ar'pād), unidentified city, probably in W central Syria. Hamath is always named with it. 2 Kings 18:34, 19:13, Isa. 10:9, Jer. 49:23. It is the Arphad of Isa. 36:19, 37:13.

Arphaxad (arfāk'sād), 1 Median king at Ecbatana, defeated by Nebuchadnezzar. He has not been definitely identified with anyone in other records. Judith 1:2. Son of Shem. It has been supposed that he was the eponym of the Chaldeans. Gen. 10:22, 24, 11:10, Luke 3:36.

Arpino, Cavaliere d' see CESARI GIUSEPPE

Arrabal, Fernando (fārnān'dō arabal'), 1932-, French playwright, b. Melilla, Morocco. He spent his youth in Spain, studying law in Madrid, but moved to Paris in 1954. His plays reflect his aversion to political repression, bourgeois complacency, and war. They are often abstract and employ ironic contrast as a dramatic device. Among his works are the volumes *Théâtre I* (1958), includes the plays *Oraison*, *Les Deux Borreaux*, and *Le Crime des voitures*; and *Théâtre II* (1961), includes *Guernica*, *Le Labyrinthe*, *Le Tricycle*, and *La Bicyclette*. A number of his plays have been translated into English.

arrack (ār'ak), strong spirits distilled chiefly in the Orient from fermented fruits, grains, or sugarcane. The introduction of European spirits led to a decline in the native industry. In the 19th cent., Ceylon became quite noted for palm toddy arrack. Primitive methods of distilling yield raw spirits injurious because of a high content of fusel oil and acids. Other names are rack or raki.

Arrah (ūr'ra), city (1971 pop. 92,670), Bihar state, NE India, on the Son Canal. It is the administrative center for a district that produces grain, sugarcane, and oilseed. There are limestone deposits in the city's outskirts. Arrah was the scene of fighting during the INDIAN MUTINY (1857).

Ar Ramadi (ar rama'dē), town (1965 pop. 28,723), provincial capital, central Iraq, on the Euphrates River. It is the eastern terminus of a highway across the desert from the Mediterranean Sea. The town was founded in 1869. The British won an important victory over the Turks there in 1917. The name also appears as Ramadi or Rumadiya.

Arran, earls of see HAMILTON, JAMES, and STUART, JAMES

Ar Raqqah (ar rak'ka) or **El Rashid** (ēl rashēd'), town (1960 pop. 14,554), capital of Ar Raqqah governorate, N Syria, on the Euphrates River. Carpets are manufactured, and the town has an agricultural experimental station. The ancient Nicephorium, Ar Raqqah was prominent during the early Abbasid caliphate. Caliph Harun ar-Rashid built a summer palace there and used the town as military headquarters against Byzantium. Ar Raqqah was destroyed by the Mongols in the early 13th cent.; some ruins survive. The modern name also appears as Raqqa and Rakka.

Arras (aras'), city (1968 pop. 53,573), capital of Pas-de-Calais dept., and historic capital of Artois, N France, on the canalized Scarpe River. It is a communications, farm, and industrial center, with oil works and factories making machinery, metal products, and esparto goods. Of Gallo-Roman origin, it became an episcopal see c 500. It was granted (1180) a commercial charter by the crown and enjoyed international importance in banking and trade. By the 14th cent. it had become a center of wealth and culture, renowned particularly for TAPESTRY. It was nearly destroyed during the wars between Burgundy and France (15th cent.), which ended with the Treaty of Arras (1435). Occupied (1492) by the Spaniards, Arras was conquered (1630) by the French; French possession was confirmed (1659) in the Peace of the Pyrenees. Heavy bombardments in World War I destroyed much of the town, and it was further damaged in World War II. Nevertheless it retains much of its old Spanish-Flemish flavor. The town square, bordered by 17th-century buildings, forms a notable ensemble of Flemish architecture. The damaged town hall (16th cent.) and the Abbey of St. Vaast (18th cent., now housing a museum) have been restored. The house where Robespierre was born still stands. A school of agriculture is there.

Arras, Treaty of 1. Treaty of 1435, between King CHARLES VII of France and Duke PHILIP THE GOOD of Burgundy. Through it, France and Burgundy became reconciled. Philip deserted his English allies and recognized Charles as king of France. In return, Philip received the Somme towns and was exempted from homage to the crown. Charles also agreed to punish the murderers of Philip's father, Duke John of Burgundy. 2. Treaty of 1482, between King LOUIS XI of France and the local governments of the Netherlands, following the death of MARY OF BURGUNDY. In 1483 Mary's widow, Archduke Maximilian of Austria (later Holy Roman Emperor MAXIMILIAN I), reluctantly accepted the treaty. The acquisition of Burgundy by France was recognized. Maximilian's infant daughter, MARGARET OF AUSTRIA, was to marry the dauphin (later King Charles VIII), bringing Artois and Franche-Comté as dowry. Maximilian's infant son (later King PHILIP I of Castile) was to do homage for Flanders to France. When Charles VIII married ANNE OF BRITTANY, Maximilian forced him to restore Margaret's dowry by the Treaty of Senlis (1493).

Arrebo, Anders (an'ərs a'rəbō), 1587-1637, Danish poet, bishop of Trondheim. His massive narrative poem, the *Hexaemeron* (written c 1630, pub. 1661), introduced the alexandrine meter to N Europe, where it became the vehicle for serious poetry.

arrest, in law, seizure and detention of a person, either to bring him before a court body or official, or to otherwise secure the administration of the law. A person may be arrested for an alleged violation of civil or criminal law. Civil arrest is most often used when one has been guilty of civil CONTEMPT of court, but in some states of the United States it is also allowed in cases where it is feared the defendant may attempt to flee the court's jurisdiction or otherwise frustrate justice. Arrest is ordinarily accomplished by a WARRANT issued by a court or officer of justice. In civil arrest a warrant must always be issued and generally anyone named may not be apprehended on Sundays or legal holidays. There are no time restrictions on making a criminal arrest. Any

person may make such an arrest without a warrant if a FELONY is committed in his presence, this is the so-called citizen's arrest. An officer of the law does not even need a warrant to arrest one whom he reasonably suspects of having recently committed a felony. In all other criminal cases there must be a warrant before the arrest. Force may be used in making an arrest, even to the extent of killing a person who resists arrest for a felony that endangers human life. If an arrest is contrary to law, the apprehended person may procure his release by HABEAS CORPUS and may bring a civil suit for FALSE IMPRISONMENT. In most cases the person detained may be released if he can post BAIL. Diplomatic personnel and members of Congress and of state legislatures during legislative sessions are exempt from arrest.

Arrhenius, Svante August (sfan'ta, arā'nēās), 1859-1927, Swedish chemist. He was a professor of physics in Stockholm in 1895 and became director of the Nobel Institute for Physical Chemistry, Stockholm, in 1905. For originating (1884, 1887) the theory of electrolytic dissociation, or ionization, he received the 1903 Nobel Prize in Chemistry. He also investigated osmosis and toxins and antitoxins. His works, translated into many languages, include *Immunochemistry* (1907), *Quantitative Laws in Biological Chemistry* (1915), *The Destinies of the Stars* (tr. 1918), and *Chemistry in Modern Life* (tr. 1925).

arrhythmia, disturbance in the rate or rhythm of the heartbeat. Various arrhythmias can be symptoms of serious heart disorders, however, they are usually of no medical significance except in the presence of additional symptoms. Tachycardia, or heartbeat faster than 100 beats per minute in the adult, can be precipitated by drugs, caffeine, anemia, shock, and emotional upset. Bradycardia, or slow heartbeat, is often present in athletes. Heart murmurs are abnormal sounds (clicks, rumbles, blowing noises) produced by the heart in addition to the normal heartbeat. Premature beats of the atria and ventricles are common and usually of no significance. Murmurs at the various valves sometimes indicate the presence of valvular deformities but also occur in normal hearts. Flutters, and the even faster fibrillations, are rapid, uncoordinated contractions of the atrial or ventricular muscles that usually accompany heart disorders. Ventricular fibrillation is a sign of the terminal stage of heart failure and is usually fatal unless defibrillation is achieved by application of electrical current or mechanical massage. The electrical impulse that is generated to stimulate the heartbeat travels from a clump of tissue on the right atrium called the sinoatrial node to the atria and then to the ventricles. In some cases where there is a disturbance in the conduction of this impulse, called sinoatrial or atrioventricular block, rhythm can be maintained by implanted electrodes that act as artificial pacemakers.

Arrian (Flavius Arrianus) (ār'ēan), fl. 2d cent. A.D., Greek historian, philosopher, and general, b. Nicomedia in Bithynia. He was governor of Cappadocia under Emperor Hadrian and in A.D. 134 repulsed a dangerous invasion of the Alans. His chief work is the *Anabasis*, the prime source on Alexander the Great. Modeled on Xenophon's famous book, the *Anabasis* relies chiefly on the writings of two of Alexander's generals (Ptolemy I and Aristobulus) for source material. Other extant works include the *Indica* (an account of a voyage of Alexander's general Nearchus to India) and parts of his edition of and commentaries on the *Discourses of Epictetus*.

Arrow, Kenneth Joseph, 1921-, American economist, b. New York City, grad. City College of New York (B.S. 1940), Columbia (M.A. 1941, Ph.D. 1951). He taught economics at the Univ. of Chicago (1947-49) and Stanford Univ. (1949-68) before serving on the faculty at Harvard (from 1968). A member of the President's Council of Economic Advisers (1962), he has been a consultant for the RAND Corp. since 1948. A specialist in welfare economics and general equilibrium theory, he shared the 1972 Nobel Memorial Prize in economics with Sir John Richard Hicks. Arrow's publications include *Social Choice and Individual Values* (2d ed. 1963), *Aspects of the Theory of Risk-Bearing* (1965), and *General Competitive Analysis* (1972).

arrowhead, any plant of the genus *Sagittaria*, widely distributed marsh or aquatic herbs of the primitive family Alismataceae (water-plantain family). The name derives from the arrowhead-shaped leaves of many species. The North American Indians prepared a potato-like food by roasting or broiling the tubers, particularly of *S. latifolia*, another species has long been cultivated in the Orient for its starchy root. Arrowheads, which have white, buttercup-like flow-

ers, are often grown in aquariums, ponds, and bog gardens. Arrowheads are classified in the division

Broad-leaved arrowhead, *Sagittaria latifolia*

MAGNOLIOPHYTA, class Liliatae, order Alismatales, family Alismataceae

Arrow Lakes, two expansions of the Columbia River, S British Columbia, Canada. Both lie in narrow valleys bounded by mountain ranges and are noted for their beauty. Upper Arrow Lake has an area of 88 sq mi (228 sq km), Lower Arrow Lake is 59 sq mi (153 sq km). Arrowhead is at the head of the upper lake.

arrowroot, any plant of the genus *Maranta*, usually large perennial herbs, of the family Marantaceae, found chiefly in warm, swampy forest habitats of the Americas and sometimes cultivated for their ornamental leaves. The term arrowroot is also used for the easily digestible starch obtained from the rhizomes of *M. arundinacea*, the true, or West Indian, arrowroot, which is naturalized in Florida. Other plants produce similar starches, e.g., East Indian arrowroot (from *Curcuma augustifolia* of the Zingiberaceae, or GINGER family), Queensland arrowroot (from a CANNA of the family Cannaceae), Brazilian arrowroot, or TAPIOCA, of the family Euphorbiaceae (SPURGE family), and Florida arrowroot, or SAGO. True arrowroot is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, family Marantaceae.

Arrowsmith, Aaron, 1750-1823, English cartographer and geographer. He founded the map-making and publishing business carried on by his sons and by his nephew John Arrowsmith, 1790-1873. John Arrowsmith's London Atlas was famous. He was one of the founders of the Royal Geographic Society. The Arrowsmith maps were among the best of that period.

arrowwood, name for several woody plants, particularly of the family Caprifoliaceae (HONEYSUCKLE family), formerly used for making arrows.

arrowworm. see CHAETOGNATHA

Arru Islands: see ARU ISLANDS, Indonesia

Arsaces (ar'sāsēz), fl. 250 B.C., founder of the Parthian dynasty of the Arsacids, which ruled Persia from c. 250 B.C. to A.D. 226. Arsaces led a successful revolt against Antiochus II of Syria, when Antiochus was engaged in war with Egypt and trying to put down a revolt in Bactria. Among the other Parthian kings were Tiridates, Mithradates I, Mithradates II, and Phraates IV. Their empire became a formidable rival of the Roman power, but began to decay in the 2d cent. A.D. after Emperor ALEXANDER SEVERUS had invaded the country. The Arsacids were overthrown by a revolt of the Persians under ARDASHIR I, who in A.D. 226 slew Artabanus IV (Ardawan IV), the last of the Arsacids.

arsenic (ar'sānik), a semimetallic chemical element, symbol As, at no 33, at wt 74.9216, sublimation point 613°C, sp. gr. (stable form) 5.73, valence -3, 0, +3, or +5. Arsenic appears in several allotropic forms (see ALLOTROPY); the stable form is a silver-gray, brittle crystalline solid that tarnishes rapidly in air, and at high temperatures burns to form a white cloud of arsenic trioxide. A yellow crystalline form and a black amorphous form are also known. Arse-

nic is a member of group Va of the PERIODIC TABLE. It combines readily with many elements with hydrogen to form arsine, an extremely poisonous gas, with oxygen to form a pentoxide and the above-mentioned trioxide (As_2O_3 or As_2O_5), a deadly poison also called arsenic (III) oxide, arsenious oxide, white arsenic, or, simply, arsenic, with the halogens, and with sulfur. The element is used with other metals to make hard, strong, corrosion-resistant alloys. Its compounds are used in pigments, animal poisons, insecticides (e.g., PARIS GREEN), and POISON GASES (such as lewisite) for chemical warfare. They are also used in glassmaking, in calico and indigo printing, in tanning and taxidermy (as preservatives), and in pyrotechnics. Small quantities of arsenic added to lead in the manufacture of shot assure perfectly spherical pellets by delaying the solidification of the molten lead, and thereby allowing it to flow more readily; the arsenic also contributes hardness. A small amount of arsenic is added to germanium in the production of semiconductor devices such as transistors and integrated circuits. A number of organic compounds of arsenic are used in medicine, the best known is Salvarsan, formerly used extensively in the treatment of syphilis and yaws. On the other hand, many arsenic compounds are strong poisons. One delicate test for the presence of even microscopic quantities of arsenic in compounds is the MARSH TEST. Arsenic occurs in many ores, including REALGAR, orpiment, and ARSENOPYRITE, the chief commercial source. When it is prepared commercially from sulfide ores, e.g., arsenical pyrites, the ores are roasted (heated in the absence of air), the arsenic sublimes (passes directly from the solid to the gaseous state) and is condensed. In another method, white arsenic is reduced with carbon. Although realgar, orpiment, and other arsenic minerals were known to the Greeks of Aristotle's time, the element itself was not. The "arsenic" so called by them and by the later alchemists was not true arsenic, but probably arsenic trioxide. The element was first described by Albertus Magnus in the 13th cent.

arsenopyrite (ar'sīnōpī'rīt, ar'sēn'ō-) or **mispickel** (mīs'pīkal), silver-white to steel-gray mineral with the metallic luster characteristic of a PYRITE. It is a sulfarsenide of iron, $FeAsS$, crystallizing in the orthorhombic system and occurring also in massive form. It is widely distributed and is an important source of arsenic. Often it is found associated with other minerals and ores of lead and tin. Saxony, Sweden, Cornwall, and various parts of the United States have important deposits.

arson, at COMMON LAW, the malicious and willful burning of the house of another. Originally, it was an offense against the security of habitation rather than against property rights. Thus, a tenant could not be convicted of arson for burning the house that he rented from his landlord. Although this rule still holds in some states of the United States, in many others statutes have changed the meaning of the offense. Its application has been extended to buildings, structures, and vehicles that are not dwelling places, and greater stress has been placed on protection of property rights. Some statutes distinguish several degrees of arson, e.g., arson committed at night is considered more serious than arson committed in the daytime. In most states setting fire to one's own property to defraud an insurance company is specified as arson.

Arsenal, Arsène d' (ar'sēn' darsōnval'), 1851-1940, French physicist and physician. He worked under Claude Bernard and under C. E. Brown-Sequard (whom he succeeded in 1897 at the Collège de France) and was professor at the Sorbonne from 1894 to 1932. The D'Arsenal galvanometer is named for him. A pioneer in electrotherapy, he studied the medical application of high-frequency currents. He was also involved in the industrial application of electricity.

art The major general surveys on topics in the fine arts are PAINTING, SCULPTURE, DRAWING, still PHOTOGRAPHY, and ARCHITECTURE. These articles contain numerous cross-references to specific related subjects. There are articles about individual artists in many fields and about art critics and art historians. The various movements, schools, styles, and particular eras are covered in articles such as ART NOUVEAU, FOLK ART, MANNERISM, MODERN ART, SCHOOL OF PARIS, BAROQUE, and BYZANTINE ART AND ARCHITECTURE. The art of individual countries and peoples is discussed in articles such as DUTCH ART, SPANISH COLONIAL ART AND ARCHITECTURE, and NORTH AMERICAN INDIAN ART. The many types of subject matter are given separate treatment under such headings as CHILDREN'S BOOK ILLUSTRATION, GENRE LANDSCAPE PAINTING, PORTRAITURE

STILL LIFE, and WATERCOLOR PAINTING. Examples of articles on art media and techniques include TRESCO GLASS, ILLUMINATION, ILLUSTRATION, METALWORK, PLASTER CASTING, PORCELAIN, RELIEF, STAINED GLASS, and TEPA COTTA. For the graphic media, see under GRAPHIC ARTS. Topics related to art subjects are also treated. See, for example, MUSEUMS OF ART and articles about individual museums, e.g., LOUVRE. Other related topics include ACADEMIES OF ART, SALON, ART HISTORY, ART CONSERVATION AND RESTORATION, ICONOGRAPHY, ILLUSIONISM, PERSPECTIVE, COMPOSITION, PASSION CYCLE, and FORGERY.

Arta (ar'tā), formerly **Ambracia** (āmbrā'shā), city (1971 pop. 19,498), capital of Arta prefecture, W Greece, in Epirus, near the mouth of the Arachthos River. It is a trading and shipping center for agricultural goods including cotton, grain, citrus fruits, almonds, and olives. There is a large fishing industry, and leather goods and cotton and woolen textiles are manufactured. Known as Ambracia, the city was founded (7th cent. B.C.) by Corinthian colonists. It was ceded in 294 B.C. by Macedon to Pyrrhus, who made it the capital of Epirus. It was conquered by Rome in 189 B.C.

Artagnan, Charles de Batz-Castelmore d' (sharl də bāts-kastōlmōr' dārtanyān'), c. 1620-1673, French soldier under King Louis XIV. He fell at the siege of Maastricht. Dumas pere used memoirs attributed to him for *The Three Musketeers* and other novels.

Artaphernes (ar'tāfūr'nēs) see PERSIAN WARS

Artaud, Antonin (āntōnān' artō'), 1896-1948, French poet, actor, and director. During the 1920s and 30s he was associated with various experimental theater groups in Paris, and he cofounded the Théâtre Alfred Jarry. He was afflicted with mental illness from his childhood, and in 1936 he was declared insane, he spent much of the rest of his life in mental institutions. Artaud's theories of drama, particularly his concept of the "theater of cruelty," greatly influenced 20th-century theater. He related theater to the plague because both destroy the veneer of civilization, revealing the ugly realities beneath and returning man to a primitive state, in which he lacks morality and reason. The aim of the "theater of cruelty" was to disturb the audience and reveal the forces of nature. To achieve this end he emphasized the nonverbal aspects of theater such as color and movement and stressed the importance of violence as a theatrical device. Artaud's most important work is *Le Théâtre et son double* (1938 tr. 1958). His influence can be seen in the works of Jean GENET, Peter WEISS, Peter BROOK, and Julian BECK and Judith Malina. See his *Selected Writings* ed. by Susan Sontag (1971).

Artaxerxes I (ar'tāzūrksēz), d. 425 B.C., king of ancient Persia (464-425 B.C.), of the dynasty of the Achaemenidae. Artaxerxes is the Greek form of the name Ardāshir the Persian. He succeeded his father, XERXES I, in whose assassination he had no part. The later weakness of the Persian Empire is commonly traced to the reign of Artaxerxes, and there were many uprisings in the provinces. The revolt of Egypt, aided by the Athenians, was put down (c. 455 B.C.) after years of fighting, and Bactria was pacified. The Athenians sent a fleet under CIMON to aid a rebellion of Cyprus against Persian rule. The fleet won a victory, but the treaty negotiated by CALLIAS was generally favorable to Persia. Important cultural exchanges occurred between Greece and Persia during Artaxerxes' reign. He was remembered warmly in the books of Ezra and Nehemiah because he authorized their revival of Judaism. He also befriended the exiled Themistocles. He was succeeded by XERXES II.

Artaxerxes II, d. 358 B.C., king of ancient Persia (404-358 B.C.), son and successor of DARIUS II. He is sometimes called in Greek Artaxerxes Mnemon [the thoughtful], his Persian name is Ardāshir. Early in his reign CYRUS THE YOUNGER attempted to assassinate him and seize the throne. Artaxerxes finally crushed Cyrus' rebellion at the battle of Cunaxa (401 B.C.), where Cyrus was killed. The story of the Greek contingent in the battle was made famous by Xenophon. Artaxerxes was ruled by the will of his wife and mother and relied heavily upon his officials; in addition, the satraps PHARNABAZUS and TISSAPHERNES had real ruling power. They managed by liberal distribution of Persian gold to gain great influence in Greece, and the Peace of ANTALCIDAS (386 B.C.) marked the imposition of Persian control of the Greek city-states. The provinces of the empire eventually became restless. EVAGORAS made himself independent as a ruler of Cyprus but finally (c. 381) submitted to the king. Pharnabazus and Iphicrates, sent to reduce Egypt, disagreed and accomplished

nothing A formidable and longlasting revolt of the satraps (among them Mausolus) against the king was put down just before his death He was eventually succeeded by ARTAXERXES III The reign of Artaxerxes II also saw a revival of the cult of MITHRA

Artaxerxes III, d 338 B.C., king of ancient Persia (358-338 B.C.), son and successor of Artaxerxes II He was originally named Ochus and is sometimes called Artaxerxes Ochus, his Persian name is Ardashir He gained the throne by a general massacre of his brother's family, and throughout his reign he continued a policy of terror An early expedition against Egypt failed (351 B.C.), but he set out again (c 342) and, having destroyed Sidon on his way, reduced Egypt by bloody conquest He also put down the unruly satraps and centralized and strengthened the empire One of his ministers, the eunuch Bagoas, finally poisoned the king, put Artaxerxes' son Arses on the throne in 338, then deposed him in 336 in favor of OARIUS III

art conservation and restoration. Works of art are subject to a variety of disfiguring ills, many of them caused by environmental effects, particularly temperature and humidity changes and pollution Much modern conservation effort is directed toward producing a stable, favorable situation for the display of art works and maintaining regular inspection and diagnostic procedures to combat deterioration Techniques for this inspection have become increasingly sophisticated, they currently involve photographic, X-ray, infra red, and other radiation examination, as well as complex chemical analysis The support (such as wood panel, canvas, paper), the ground (gesso, chalk), and the surface treatment (wax, varnish) of a painting all undergo some form of decay over the years Frescoed walls absorb moisture from the atmosphere The moisture carries to the wall surface soluble salts that effloresce and injure the fresco pigments To halt such injury, water-permeable fixatives may be applied to help stabilize the pigment and prevent it from flaking off A more drastic treatment is transfer, by which the mural and upper layer of plaster are cut away from the wall altogether and made fast to a new support A major instance of successful transfer was carried out on many frescoes unearthed at Pompeii Wood-panel paintings undergo much swelling and shrinking with humidity variations Wood-boring insects and the dry rot of fungus also attack them The painting may be transferred to a new support, or the old one may be strengthened by impregnation with a consolidating medium (including several plastics) or given auxiliary support Insecticides and fungicides may suffice to combat woodworms and dry rot, in cases of advanced destruction, reinforcement by impregnation may be necessary Canvas supports also absorb and lose moisture, swelling and shrinking, and thereby much pigment is lost In addition, canvases may be weakened or torn with comparative ease A method of lining (restretching on a second undercanvas) may be effected whereby the old canvas is attached to the new by means of an adhesive This may be a thermoplastic wax-resin combination or a water-base glue The painted surface becomes impregnated with the adhesive and is consequently stabilized Irregular staining, called foxing, is the bane of print and drawing collectors In humid conditions, foxing attacks the adhesives and mounts of paper-based art, including watercolors, by producing the nutrients favored by molds present in the atmosphere The work may sometimes be sterilized and remounted on a support chosen for its mold-repellent quality It may be further treated with a fungicide Some foxing stains may be removed by careful bleaching and washing, but this is a difficult technique requiring considerable knowledge of materials The restorer's greatest problems concern the surface coating of the painting A decayed or badly discolored varnish may be removed painstakingly by mechanical means or regelled with the judicious use of solvent, often applied as a delicate spray In other cases, the old varnish may be powdered by rubbing and removed by hand or, more commonly, chemically dissolved Such techniques are beset by dangers inherent in the variable nature of the original pigments and varnish, and the risk of injury increases with the age of the painting Repainting and retouching are means by which a damaged work may be restored, but both largely depend for success upon the personal judgment and aesthetic capability of the restorer Repairs may be necessary where the results of overzealous cleanings of the past have produced injury or revealed a **PENITENTINO** that disrupts the composition Much restorative work of the 19th cent shows a tendency to "improve" the work of art with

arbitrary additions and distortions Sculpture, especially that which stands out-of-doors, is particularly vulnerable to environmental changes Placing the sculpture in a temperature- and humidity-controlled situation is the best means by which to preserve it Stone sculpture requires periodic washing, either steam, spray, or trickled water is used, depending on the porosity of the stone Soap, but not detergent, may also be applied Broken sculptures may be mended with clear, cold-setting adhesives, sometimes mixed with a suitably colored filler, or by means of dowelling Large pieces of sculpture are held together with metal dowels, usually of copper, stainless steel, or brass Broken wood sculpture is also dowelled, as is ivory Special cements may also be used to fill cracks Wood sculpture is also vulnerable to woodworm and dry rot and may be treated with insecticide and fungicide Badly decayed wood works may sometimes be preserved by means of impregnation with a plastic medium Metal sculpture may be waxed to protect it from atmospheric corrosives Bronze acquires a patina, or irregular surface pattern caused by deposits of sulfides and oxides, that is widely considered aesthetically pleasing, patina on lead objects results in eventual decay Cracks in metal sculpture may be filled with special adhesives Corrosion may be halted by electrolytic reduction, which, however, destroys patina Various chemical solvents and mechanical techniques are used to remove specific incrustations The flood in Florence in Nov, 1966, was among the greatest disasters in modern history in terms of the destruction of works of art Conservators and restorers from all over the world applied emergency treatment to the treasures of painting, sculpture, and architecture that could be saved Among those were five panels from the bronze doors of the Baptistery by Ghiberti, which had been ripped apart and ruined by the furious oily waters In replacing them, experts made use of an exact replica of the doors in San Francisco In 1972, Michelangelo's *Pieta* in St Peter's, Rome, was attacked and mutilated by a madman with a hammer The most delicate restoration work was required to make unobtrusive repairs on this masterpiece of sculpture All effective art conservation and restoration ultimately depends upon the restorer's understanding of materials, technical craftsmanship, and aesthetic and historical awareness See also **CRAQUELURE** See H J Plenderleith and A E Werner, *The Conservation of Antiquities and Works of Art* (2d ed 1971), Francis Kelly, *Art Restoration* (1972)

art deco, style of popular design during the 1920s and 30s Art deco is characterized by long, thin forms and straight lines The practitioners of the style attempted to describe the sleekness they thought expressive of modern technology The style has undergone a resurgence of popularity in the 1970s

Artem (ärtyöm'), city (1969 est pop 65,000), Primorsky Krai (Maritime Territory), Far Eastern USSR It is a coal-mining center and has an important thermoelectric station that utilizes local coal deposits

Artemas (ar'timas), companion of Paul Titus 3 12

Artemidorus of Ephesus (artēm'idōr'əs, ēf'əsəs), fl 103 B.C., Greek geographer quoted by Strabo He wrote 11 books on his Mediterranean travels Only fragments remain of his work

Artemis (ar'temis), in Greek religion, Olympian goddess, daughter of Zeus and Leto and twin sister of Apollo Artemis' early worship, especially at Ephesus, identified her as an earth goddess, similar to Astarte In later legend, however, she was primarily a virgin huntress, goddess of wildlife and patroness of hunters Of the many animals sacred to her, the bear was most important Artemis valued her chastity so highly that she took terrible measures against anyone who even slightly threatened her (e.g., **ACTAEON**) She was attended by nymphs, whose virginity she guarded as jealously as her own She was also an important goddess in the life of women, concerned with marriage and with the young of all creatures As the complement to Apollo, she was often considered a moon goddess and as such was identified with Selene and Hecate In ancient Greece, the worship of Artemis was widespread The Romans identified her with Diana

Artemisia (är'tēmish'ēə), fl 4th cent B.C., ruler of the ancient region of Caria She was the sister, wife, and successor of MAUSOLUS and erected the MAUSOLEUM at Halicarnassus in his memory A strong ruler, she conquered Rhodes She also patronized the arts An earlier Artemisia ruled part of Caria under Xerxes I of Persia

artemisia: see **WORMWOOD**

Artemisium (är'tēmish'ēəm), cape, N Euboea (now Évvoia), Greece, named for a great temple of Arte-

mis Off the cape in 480 B.C. was fought a naval battle of the Persian Wars The delay won by the defense of Thermopylae under LEONIDAS helped make it possible for the Greeks to ward off the Persian fleet, although the fighting was indecisive and the Greeks were eventually forced to withdraw

Artemovsk (ärtyöm'əfsk), Ukr *Artemivsk*, city (1969 est pop 81,000), S European USSR, in the Ukraine An industrial center of the Donets Basin, it produces metals, mining equipment, glass, bricks, and chemicals Nearby are salt and dolomite deposits that are utilized in the Donets iron and steel and chemical industries

arteriosclerosis (ärtir'ēōsklärō'sis), general term for a condition characterized by thickening, hardening, and loss of elasticity of the walls of the blood vessels These changes are frequently accompanied by accumulations inside the vessel walls of lipids, e.g., cholesterol, this condition is frequently referred to as atherosclerosis The deposition of calcium in the fatty material hardens the walls of the vessels As the vessel walls thicken, the passageways through the vessels narrow, decreasing the blood supply to the affected region Constriction of the coronary arteries may affect the heart (see **HEART DISEASE**) Cerebral arteriosclerosis is often responsible for senility in elderly persons If the leg vessels are affected, there may be loss of movement of the extremities and an onset of gangrene When there is total clotting of a vessel (**THROMBOSIS**) the result may be a heart attack (if it occurs in the coronary arteries) or **APOPLEXY** (if in cerebral arteries) While there is no specific preventive or cure for arteriosclerosis, reduction of body cholesterol to normal levels through a restricted-fat diet, with the substitution of vegetable fats for animal fats is usually prescribed, although the relationship between the level of cholesterol in the bloodstream and arteriosclerosis is not yet fully understood

artery, blood vessel that conveys blood away from the heart Except for the pulmonary artery, which carries deoxygenated blood from the heart to the lungs, arteries carry oxygenated blood from the heart to the tissues The largest arterial trunk is the AORTA, branches of which divide and subdivide into ever-smaller tubes, or arterioles, until they terminate as minute CAPILLARIES, the latter connecting with the VEINS (see **CIRCULATORY SYSTEM**) Other important arteries are the subclavian and brachial arteries of the shoulder and arm, the carotid arteries that lead to the head, the coronary arteries that nourish the heart itself, and the iliac and femoral arteries of the abdomen and lower extremities The walls of the large arteries have three layers a tough elastic outer coat, a layer of muscular tissue, and a smooth, thin inner coat Arterial walls expand and contract with each heartbeat, pumping blood throughout the body The pulsating movement of blood, or PULSE, may be felt where the large arteries lie near the body surface

Artesia (ärtēzh'ə) 1 City (1970 pop 14,757), Los Angeles co., S Calif., founded 1875, inc 1959 Chiefly residential, it serves the surrounding farm area and was named for the many artesian wells in the vicinity 2 City (1970 pop 10,315), Eddy co., SE N Mex., just W of the Pecos River, in an oil, gas, farm, and livestock area, laid out 1903, inc 1939 Artesian wells, under tremendous pressure from the nearby Sacramento Mts., irrigate a large area The city's manufactures include petroleum products and fiberglass and plastic pipes

artesian well, deep drilled WELL through which water is forced upward under pressure The water in an artesian well flows from an aquifer, which is a layer of very porous rock or sediment, usually sandstone, capable of holding and transmitting large quantities of water The geologic conditions necessary for an artesian well are an inclined aquifer sandwiched between impervious rock layers above and below that trap water in it Water enters the exposed edge of the aquifer at a high elevation and percolates downward through interconnected pore spaces The water held in these spaces is under pressure because of the weight of water in the portion of the aquifer above it If a well is drilled from the land surface through the overlying impervious layer into the aquifer, this pressure will cause the water to rise in the well In areas where the slope of the aquifer is great enough, pressure will drive the water above ground level in a spectacular, permanent fountain Artesian springs can occur in similar fashion where faults or cracks in the overlying impervious layer allow water to flow upward Water from an artesian well or spring is usually cold and free of organic contaminants, making it desirable for drinking In

North America, the Dakota sandstone provides aquifers for an artesian system that underlies parts of the Dakotas, Montana, Wyoming, Kansas, Nebraska, and Saskatchewan and supplies great quantities of water to the dry Great Plains region. Many East Coast cities derive their water supplies from aquifers that are exposed along the edge of the Piedmont and dip downward toward the Atlantic coast. The largest artesian system in the world underlies nearly all of E and S Australia. Other important artesian systems serve London, Paris, and E Algeria.

Artevelde, Jacob van (ya'kôp van ar'tavêlda), c1290-1345, Flemish statesman, of a wealthy family of Ghent. In 1337 the Flemish cloth industry underwent a severe crisis. The pro-French policy of the count of Flanders in the conflict between Edward III of England and Philip VI of France cut off English wool imports and thus ruined the Flemish merchants and weavers. Ghent rebelled, and Artevelde was given dictatorial powers as head of the city government. He negotiated (1338) a commercial treaty with England and obtained recognition of Flemish neutrality. The other towns of Flanders followed his lead, the count fled to France, and trade revived and prospered. In 1340, Artevelde had Edward III recognized as king of France (and thus suzerain of Flanders) by the Flemish towns. Artevelde's firm leadership and wealthy origin inevitably aroused resentment. Enemies accused him of proposing the lordship of Flanders to Edward the Black Prince (of England). In 1345 a riot broke out in Ghent, and Artevelde was killed by the mob.

Artevelde, Philip van, 1340-82, Flemish popular leader, captain general of Ghent, son of Jacob van Artevelde. In the struggle between the so-called "Goods" (the propertied classes supported by the count of Flanders) and the "Bads" (the workers, led by the weavers), he put himself (1381) at the head of the rebellious weavers. He captured (1382) Bruges and most of Flanders but was defeated and killed at Roosebeke by the French under Olivier de Clisson.

art galleries see MUSEUMS OF ART

art history, the study of works of art and architecture. In the mid-19th cent., art history was raised to the status of an academic discipline by the Swiss Jacob BURCKHARDT, who related art to its cultural environment, and the German idealists Alois Riegl, Heinrich WOLFFLIN, and Wilhelm Worringer. The latter three saw art history as the analysis of forms and viewed art apart from any function it serves in expressing the spirit of its age. Major 20th-century art historians include Henri Focillon, Bernard BERENSON, Aby Warburg, Émile MAËL, Erwin PANOFSKY, and Ernst GOMBRICH. Modern art history is a broad field of inquiry embracing formal questions of stylistic development as well as considerations of the social function of art. See Arnold Hauser, *The Social History of Art* (4 vol., 1958-60), H. W. Janson, *History of Art* (rev. ed. 1969), Kenneth Clark, *Civilization* (1970).

arthritis, painful inflammation of a joint or joints of the body, usually producing heat and redness. In its various forms, arthritis disables more people than any other chronic disorder. The condition can be brought about by nerve impairment, increased or decreased function of the endocrine glands, or degeneration due to age. Less frequently, it is caused by infection (tuberculosis, gonorrhea, rheumatic fever). The cause of rheumatoid arthritis, the most common and most crippling form, is not known. Women are much more susceptible to it than men. Although rheumatoid arthritis usually appears between the ages of 25 and 50, it also occurs in children. Osteoarthritis, another common type, occurs commonly in those over 50. It tends to be more severe when the joints have been strained by obesity or overwork. GOUT, the third most common form of arthritis, affects men almost exclusively. Aspirin is the usual treatment for the pain of arthritis. Gold salts, cortisone, and adrenocorticotrophic hormone (ACTH) are used in treating arthritis but often have undesirable side effects. Hydrocortisone and phenylbutazone, both chemical relatives of cortisone, are among other drugs that have been used. See S. P. Blau and Dodi Schultz, *Arthritis* (1974).

Arthropoda (arthrôp'ôda) [Gr., =jointed feet], largest and most diverse invertebrate animal phylum, including over 80% (about 800,000) of all known animal species. The arthropods include the fossil TRILOBITES, HORSESHOE CRABS, SCORPIONS, SPIDERS, TICKS, MITES, SEA SPIDERS, CRUSTACEANS, INSECTS, CENTIPEDES, MILLIPEDES, symphylans, and pauropods. Arthropods are characterized by a segmented body covered by a jointed external skeleton (exoskeleton), with paired jointed appendages on each seg-

ment, a complex nervous system with a dorsal brain, connective nerves passing around the upper end of the digestive tract, and a ventral nerve cord with a ganglion in each body segment, an open circulatory system with a dorsal heart into which blood flows through paired openings (ostia), and a greatly reduced body cavity (coelom). Because the jointed exoskeleton blocks growth of the organism, it must be shed periodically. This phenomenon, called molting, or ecdysis, is a characteristic feature of the phylum; it permits rapid growth in size and significant change in body form until the new exoskeleton, secreted by the animal, has hardened. Arthropods are mainly terrestrial, but aquatic representatives are well known. There are three subphyla, comprising nine classes.

Subphylum Trilobita The trilobites comprise a wholly extinct, primitive group of marine animals. They were extremely abundant in the Cambrian and Ordovician geologic periods, becoming extinct in the Permian. The flattened, oval body was composed of a head covered by a dorsal shield, a trunk (thorax), and a terminal segment (pygidium). Most of the 4,000 fossil species ranged in length from 1 to 4 in. (2.5-10 cm), some planktonic forms were smaller, and some species were as long as 2½ ft (76 cm). *Triarthrus eatoni* is a fossil trilobite common in the Ordovician seas.

Subphylum Chelicerata There are three classes of chelicerates, including the living horseshoe crabs (class Merostomata), the arachnids (class Arachnida), and the sea spiders (class Pycnogonida). Chelicerates are characterized by the absence of antennae and jaws and the presence of feeding structures (cheliceræ), which are modified pincerlike appendages used mainly for grasping and fragmenting food. Nearly all the merostomates are extinct, the only living representative being *Limulus*, the horseshoe crab (subclass Xiphosura), which inhabits the soft bottom mud of shallow, coastal seas. Merostomates have five or six gills, which have been modified from body appendages, and a giant tail (telson) lacking appendages. The extinct giant water scorpions (subclass Eurypterida) belong to this class. Members of class Pycnogonida are commonly known as sea spiders. These exclusively marine carnivores are spiderlike in appearance and range in length from 1 mm to ½ in. (13 cm). Some are as large as 2 in. (5 cm), the leg spread is sometimes over 2 ft (61 cm). Sea spiders have four pairs of legs. They are found in oceans all over the world. The largest class of chelicerates, class Arachnida, includes orders Araneae (spiders), Acarina (ticks and mites), Opiliones (daddy longlegs, or harvestmen), and Scorpionida (scorpions), among the most important. Arachnids are predominantly terrestrial, and most are carnivorous, with the digestion of prey starting outside the body. The body is composed of an unsegmented anterior region (prosoma), with a pair of cheliceræ, a pair of leglike appendages (pedipalps), four pairs of walking legs, and a posterior region (opisthosoma), equipped with book lungs or tracheae, for respiration. Arachnids are an ancient group, their fossil records dating back to the Carboniferous period.

Subphylum Mandibulata The mandibulates constitute the largest and most varied arthropod group and are characterized by the presence of modified appendages (mandibles) flanking the mouth and used as jaws. There are six classes, all characterized by various aspects of body form. Members of class Crustacea are characterized by having two pairs of antennae and two pairs of modified appendages (maxillae) used for food handling. There are over 26,000 species of crustaceans, including lobsters, shrimps, crayfish, crabs, copepods, barnacles, and a large number of minute forms making up part of the plankton. Crustaceans are the only arthropods that are mainly aquatic, and most of them are marine. Some have spread to humid areas near water. They bear gills for respiration. The thoracic region typically bears walking legs (pereopods), also used for capturing prey. The abdominal region often is equipped with swimmerets (pleopods) and a tail fan made up of a pair of appendages (uropods) and the telson. Their excretory organs are modified nephridia, as a rule producing a dilute urine that contains a great deal of ammonia. Crustaceans are herbivores, carnivores, or scavengers and are often vital elements of the food chain. Some are important economically as shellfish, such as lobsters, shrimp, and crayfish. Barnacles are important as fouling organisms of ship bottoms and harbor installations. Some crustaceans are significant parasites of other aquatic organisms. As a rule they pass through a complex set of molts during development, involving

a series of larval stages. The characteristic larva is called a nauplius, with three pairs of appendages. More appendages are added as the organism passes through its developmental molts. The cuticle of crustaceans, unlike that of other arthropods, contains calcium deposits. The most familiar subclasses are the Branchiopoda—which includes the orders Notostraca (tadpole shrimps), Diplostraca (clam shrimps and water fleas), Ostracoda (ostracods), Copepoda (copepods), and Cirrhipedia (barnacles)—and the Malacostraca, which includes the orders Stomatopoda (mantis shrimps), Mysidacea (opossum shrimps), Isopoda (isopods), Amphipoda (amphipods), and Decapoda (crayfish, lobsters, shrimps, and crabs). Class Chilopoda includes the 5,000 species of centipedes, all of which are terrestrial. Centipedes are carnivorous and predacious, immobilizing their prey, usually consisting of smaller arthropods, with the aid of their fangs. The body is composed of a head region, bearing a pair of antennae, a pair of mandibles, and two pairs of maxillae, and a trunk region, with one pair of legs on each segment. The anterior pair of trunk appendages (maxillipeds) is equipped with poison glands. Juveniles have fewer appendages than adults, new segments are added during developmental molts. Chilopods are found throughout the globe in tropical as well as temperate climates. There are about 8,000 species belonging to class Diplopoda, which comprises the millipedes and is found worldwide. The head region has a pair of antennae, a pair of mandibles, and two pairs of maxillae that are usually fused into a single mouthpart, the chilognatharium. Millipedes possess a tracheal system for respiration. They are herbivores or scavengers on dead plant material. Many are protected by stink glands that produce toxic or unpleasant compounds. There are about 60 known species belonging to class Pauropoda. Pauropods are soft-bodied, small (0.5-2.0 mm long), soil-inhabiting arthropods which are distributed worldwide. They are elongated and have many pairs of legs, but they have no trachea and no heart. Members of class Symphyla are rapid runners that range in length from 1 to 4 in. (2.5-10 cm). The class includes some 60 species. They are mainly scavengers on decayed vegetation, but one species, *Scutigera immaculata*, is a serious pest of certain crops. Symphylans have twelve pairs of legs and resemble the centipedes. Class Insecta is the largest of the arthropod classes, containing hundreds of thousands of species. Except for a few primitive or highly modified forms, insects are characterized by having one or two pairs of wings attached to the thorax. The head region bears a pair of antennae, a pair of mandibles, and two pairs of modified maxillae forming the mouthparts. The abdomen is well set off from the thorax and has no appendages except reduced ones that are modified as reproductive organs. The typical insect head bears compound eyes and one or more simple eyes and is covered by a continuous exoskeletal armor. The thorax is made up of three segments, each bearing a pair of legs. The last two segments usually bear a pair of wings. Insects are predominantly terrestrial and have tracheae for air-breathing. Insects are also characterized by having unique excretory organs, known as Malpighian tubules, which are useful in conserving water. Members of the class are extremely varied. They have adapted to many different kinds of feeding and play a variety of important roles in their ecological communities. Mouthparts may be adapted to chewing either plant or animal food, for sucking plant sap or blood, or for lapping or swabbing moisture such as fruit juices or animal body fluids. Some burrow and feed in soil or plant tissue, some are runners or jumpers that feed at or near the ground level, and others feed on the wing. Most primitive insects are wingless and have a relatively weak exoskeleton. These are forced to seek humid, protected habitats. Juveniles of primitive insects closely resemble the parents and undergo little change other than growth after hatching. This is called ametabolism. Many of the winged insects undergo paurometabolous development, hatching as nymphs that resemble the parent in many ways but that have small buds instead of wings. With each molt these juveniles change somewhat, and the wings increase in size as the young gradually assume the form of the adult. Some insects have adapted to an aquatic life to a certain extent, and in their juvenile stages they are found in ponds and streams. Some of these are hemimetabolous, the juveniles are naiads, i.e., they resemble the nymphs of paurometabolous insects, but their wings do not grow during the juvenile molts, even though other body changes occur. Instead, the last molt before

the adult stage is reached involves full development of the wings, after which the insect takes up a terrestrial existence. The least primitive of the insects are termed holometabolous. In holometaboly, the eggs hatch to release the usually wormlike larvae, which are often equipped with false legs in the abdominal region to aid in locomotion. Wing buds are entirely lacking. Although the larvae grow at each molt, they do not begin to resemble the adult until later. At the end of the larval stage the young insect enters into a quiescent pupal stage. At the end of this stage a major metamorphosis occurs, and the insect emerges with all the adult organs. Insects often cause great losses in agriculture, attack stored products, parasitize humans and domesticated animals and plants, and serve as important carriers of disease organisms. They are also beneficial, producing honey and silk and pollinating the flowers of the majority of flowering plants. A great many important insect orders are recognized, including Collembola (SPRINGTAILS), Thysanura (SILVERFISH), Ephemera (MAYFLIES), Odonata (DRAGONFLIES), Orthoptera (GRASSHOPPERS, LOCUSTS, KATYDIDS, COCKROACHES, MANTIDS, WALKING STICKS), Dermaptera (EARWIGS), Isoptera (TERMITES), Corrodentia (booklice), Mallophaga (chewing lice, see LOUSE), Anoplura (sucking lice), Thysanoptera (THRIPS), Hemiptera (true BUGS), Homoptera (CICADAS, SCALE INSECTS, LEAFHOPPERS), Neuroptera (lacewings), Hymenoptera (ANTS, BEES, WASPS), Coleoptera (BEETLES), Trichoptera (CADDIS FLIES), Lepidoptera (MOTHS, BUTTERFLIES), Diptera (FLIES), and Siphonaptera (FLEAS). See W. R. Horsfall, *Medical Entomology* (1962), J. D. Carthy, *Behavior of Arthropods* (1965), R. E. Snodgrass, *A Textbook of Arthropod Anatomy* (1952, repr. 1965).

Arthur, king of Britain. see ARTHURIAN LEGEND

Arthur I, 1187-1203?, duke of Brittany (1196-1203?), son of Geoffrey, fourth son of Henry II of England and Constance, heiress of Brittany. Arthur, a posthumous child, was proclaimed duke in 1196, and an invasion by his uncle King Richard I of England was repulsed with French aid. Subsequently, Arthur was brought up at the court of King Philip II of France. On Richard's death (1199), Arthur's claim to the English crown was passed over in favor of his uncle JOHN, youngest son of Henry II. Arthur allied himself with Philip II, who invested him with all of Richard's fiefs in France. The nobles of Anjou, Maine, and Touraine recognized Arthur as their ruler, but the young duke was captured (1202) by John while attempting to subdue Poitou. He was imprisoned in Rouen, his fate is uncertain, although John was suspected of murdering him in 1203. His story is told in Shakespeare's *King John*. Arthur's sister and heir married Pierre Mauclerc, who later became duke of Brittany as PETER I.

Arthur III, 1394-1458, duke of Brittany (1457-58), known before 1457 as comte de Richemont, constable of France in the Hundred Years War. He led the coalition that overthrew Georges de LA TRÉMOILLE, and by the Treaty of Arras (1435) he reconciled Philip the Good, duke of Burgundy and England's former ally, with King Charles VII of France. He captured Paris from the English in 1436 and later helped to regain Normandy for France. His nephew, Francis II, succeeded him.

Arthur, Chester Alan, 1830-86, 21st President of the United States (1881-85), b. Fairfield, VT. He studied law and before the Civil War practiced in New York City. In the war he was (1861-63) quartermaster general of New York state. In 1871, President Grant appointed him collector of the port of New York. Although Arthur was a loyal party man and a believer in the spoils system, he administered this office honestly and efficiently. President Hayes, bent on civil service reform, displaced Arthur in 1878, thus defying Senator CONKING and the New York Republican machine. At the Republican national convention of 1880, Garfield was nominated for President, and the Conkling "Stalwarts," who had supported Grant, were placated by the nomination of Arthur for Vice President. Garfield's assassination soon after his inauguration made Arthur President. He came into office handicapped by a record in machine politics and grave doubt as to his ability and integrity, but his administration proved honest, efficient, and dignified. He effectively supported the civil service reform act of 1883, vetoed a Chinese exclusion bill that violated a treaty with China, and vigorously prosecuted the STAR ROUTE trials. Serious illness kept Arthur from actively seeking renomination in 1884. See biography by George F. Howe (1957).

Arthur, Timothy Shay, 1809-85, American editor and moralist, b. near Newburgh, NY. His only successful editorial venture was *Arthur's Home Magazine*, which he edited (1853-85) while producing a

stream of books and moral tracts in the cause of temperance. His novel *Ten Nights in a Barroom and What I Saw There* (1854) was successfully dramatized by William W. Pratt in 1858.

Arthurian legend, the mass of legend, popular in medieval lore, concerning King Arthur of Britain and his knights. The battle of Mt. Badon—in which, according to the *Annales Cambriae* (c.1150), Arthur carried the Cross of Jesus Christ on his shoulders—but not Arthur's name, is mentioned (c.540) by Gildas. The earliest apparent mention of Arthur in any known literature is a brief reference to a mighty warrior in the Welsh poem *Gododdin* (c.600). Arthur next appears in Nennius (c.800) as a Celtic warrior who fought (c.600) 12 victorious battles against the Saxon invaders. These and several subsequent references indicate that his legend had already developed into a considerable literature before GEOFFREY OF MONMOUTH wrote his *Historia* (c.1135), in which he elaborated on the feats of King Arthur, representing him as the conqueror of Western Europe. After Geoffrey's *Historia* came Wace's *Roman de Brut* (c.1155), which infused the legend with the spirit of chivalric romance. The *Brut* (c.1200) of Layamon, modeled on Wace's work, gives one of the best pictures of Arthur as a national hero. CHRÉTIEN DE TROYES, a 12th-century French poet, wrote five romances dealing with the knights of Arthur's court. His *Perceval* contains the earliest extant literary version of the quest of the Holy Grail (see GRAIL, HOLY). Two medieval German poets important in the development of Arthurian legend are WOLFRAM VON ESCHENBACH and GOTTFRIED VON STRASSBURG. The latter's *Tristan* was the first great literary treatment of the TRISTRAM AND ISOLDE story. After 1225 no significant medieval Arthurian literature was produced on the Continent. In England, however, the legend continued to flourish. *Sir Gawain and the Green Knight* (c.1370), one of the best Middle English romances, embodies the ideal of chivalric knighthood. The last important medieval work dealing with the Arthurian legend is the *Morte d'Arthur* of Sir Thomas MALORY, whose tales have become the source for most subsequent Arthurian material. Many writers have used Arthurian themes since Malory, notably Tennyson in his *Idylls of the King*. Swinburne, William Morris, and Edwin Arlington Robinson also wrote poetic works based on the legend. T. H. White's trilogy *The Once and Future King* (1958) is a charming and decidedly 20th-century retelling of the Arthurian story. It was thought formerly that the Arthurian legend was the work of inventive poets and romancers of the Middle Ages. The generally accepted theory now is that Arthurian legend developed out of stories of Celtic mythology. The most archaic form in which these occur in British sources is the Welsh MABINOGION, but much of Irish mythology is palpably identical with Arthurian romance. It is probable that traditional Irish hero stories fused in Britain with those of the Welsh, the Cornish, and the Celts of North Britain. The resultant legend with its hero, Arthur, was transmitted to their Breton cousins on the Continent probably by the year 1000. The Bretons, famous as wandering minstrels, followed Norman armies over Western Europe and used for their repertory the stories of the legend. By 1100 therefore, Arthurian stories were well known even in Italy.

The Story. Although there are innumerable variations of the Arthurian legend, the basic story has remained the same. Arthur was the illegitimate son of Uther Pendragon, king of Britain, and Igraine, the wife of Gorlois of Cornwall. After the death of Uther, Arthur, who had been reared in secrecy, won acknowledgment as king of Britain by successfully withdrawing a sword from a stone. MERLIN, the court magician, then revealed the new king's parentage. Arthur, reigning in his court at Camelot, proved to be a noble king and a mighty warrior. He was the possessor of the miraculous sword EXCALIBUR, given him by the mysterious LADY OF THE LAKE. Of his several enemies, the most treacherous were his sister Morgan le Fay and his nephew Mordred. Morgan le Fay was usually represented as an evil sorceress, scheming to win Arthur's throne for herself and her lover Mordred (or Modred) was variously Arthur's nephew or his son by his sister Morgause. He seized Arthur's throne during the king's absence. Later he was slain in battle by Arthur, but not before he had fatally wounded the king. Arthur was borne away to the isle of AVALON, where it was expected that he would be healed of his wounds and that he would someday return to his people. Two of the most invincible knights in Arthur's realm were Sir Tristram and Sir Lancelot of the Lake. Both of them, however, were involved in illicit and tragic love

unions—Tristram with Isolde, the queen of Tristram's uncle, King Mark, SIR LAUNCELOT with GUINEVERE, the queen of his sovereign, King Arthur. Other knights of importance include the naive Sir Pelleas, who fell helplessly in love with the heartless Ettarre (or Ettard), Sir Gawain, Arthur's nephew, who appeared variously as the ideal of knightly courtesy and as the bitter enemy of Lancelot, Sir Balin and Sir Balan, two devoted brothers who unwittingly slew one another, Sir Galahad, Lancelot's son, who was the hero of the quest of the Holy Grail, Sir Kay, Arthur's villainous foster brother, Sir Percivale (or PARSIFAL), Sir Gareth, Sir Geraint, Sir Bedivere, and other knights of the ROUND TABLE. To modern readers, Arthurian legend has become the mirror of the ideal of medieval knighthood and chivalry. See studies by R. H. Fletcher (2d ed. 1966), R. L. Loomis (1949, 1956, 1927, repr. 1969, 1963, repr. 1970), Leslie Alcock (1972), John Morris (1973), and R. W. Barber (1973), J. L. Weston, tr., *Arthurian Romances Unrepresented in Malory's Morte d'Arthur* (8 vol., 1907, repr. 1971).

artichoke, name for two different plants of the family Compositae (COMPOSITE family), both having edible parts. The French, or globe, artichoke (*Cynara scolymus*) is a thistlelike plant of which the globular flower heads are used in the immature state as a salad or vegetable, only the lower part of the fleshy bracts ("leaves") and the center ("heart") are eaten. The cultivation of this S. European plant is now a considerable industry in California. A large part of the yearly crop is canned for export to South America. The edible blanched leaves and leafstalks are called chard. The other artichoke plant is the JERUSALEM ARTICHOKE. Artichokes are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Asterales, family Compositae.

artificial elements. see SYNTHETIC ELEMENTS

artificial insemination, technique of artificially injecting sperm-containing semen from a male into a female to cause pregnancy. The technique is widely used in the propagation of cattle, especially to produce many offspring from one prize bull. The prepared semen can be preserved for more than a year by refrigeration, and it is frequently shipped over great distances. Artificial insemination is sometimes used in humans when normal fertilization cannot be achieved.

artificial languages, languages that are invented by one or more human beings as opposed to languages that develop naturally among peoples. Examples of artificial languages are Volapuk, Esperanto, and Ido. See INTERNATIONAL LANGUAGE.

artificial limb, mechanical replacement for a missing limb. An artificial limb, called a prosthesis, must be light and flexible to permit easy movement, but must also be sufficiently sturdy to support the weight of the body or to manipulate objects. The materials used in artificial limbs include willow wood, laminated fibers and plastics, and various metallic alloys. One model of artificial leg is made of layers of stockinette cloth coated with plastic, it has duraluminum joints at the knee and ankle, rubber soles on the feet, and a leather cuff cushioning the stump. The cuff fits around the thigh like a corset, holding the artificial leg firmly in place, and connects to a leather belt around the waist. Often, spring joints are employed on foot pieces to give natural-looking movements. Artificial legs may also be secured by suction between socket and stump. Artificial arms, not having to support the weight of the body, may be made of lighter metals and plastics. They are usually strapped to the trunk and controlled by a shoulder harness. Artificial hands vary in structure and utility, research and development has resulted in devices that are both cosmetic and functional. For example, an artificial hand has been devised that utilizes a split hook resembling a lobster claw, this is enclosed within a flexible plastic glove that can be made remarkably lifelike, even having fingerprints. The biceps muscle can be attached to the prosthesis by a surgical procedure called cineplasty, which permits grasping in the terminal device while dispensing with shoulder harnesses.

artificial respiration, any measure that causes air to flow in and out of a person's lungs when natural breathing is inadequate or ceases, as in respiratory paralysis, drowning, electric shock, choking, gas or smoke inhalation, or poisoning. Respiration can be taken over by mechanical appliances such as the artificial lung (especially in respiratory paralysis), the pulmotor, or any other type of mechanical respirator. See RESUSCITATOR. In emergency situations, however, when no professional help is available, rescuers should undertake the mouth-to-mouth or

mouth-to-nose method of artificial respiration (which have been proven far superior to manual methods). First, any foreign material should be swept out of the mouth with the hand, wrapped in a cloth if possible. The victim should be placed on his back, with his head tilted backward and chin pointing upward so that the tongue does not block the throat. The reviver's mouth is then placed tightly over the victim's mouth, with the latter's nostrils kept tightly shut. Alternatively, the reviver's mouth may be placed over the victim's nose, with the victim's mouth kept closed. For a small child or infant, the reviver places his mouth firmly over the mouth and nose. The reviver takes a deep breath and blows into the victim's mouth (or nose). If there is no exchange of air, the reviver should check the position of the head. If there is still no exchange, the victim should be turned on his side and rapped between the shoulder blades to dislodge any foreign matter that may be blocking the air passages. A child can be held by the ankles and rapped between the shoulder blades. The reviver stops blowing when the chest expands, turns his head away, and listens for exhalation. If the victim is an adult, blowing should be vigorous, at the rate of about 12 breaths per minute. For a child the breaths should be shallower, about 20 per minute. For an infant, breaths should come in short puffs. If the victim begins to vomit, the reviver must quickly turn him on his side and wipe out his mouth before continuing artificial respiration. If the victim has had the larynx removed, the above method is used, but the reviver must breathe into the stoma (surgical opening made in front of neck for breathing). Breathing into the subject should be continued until natural breathing resumes or until professional help arrives.

Artigas, José Gervasio (hōsā' hārva'syō artē'gas), 1764-1850, national hero of Uruguay, first leader in the movement toward independence. A typical gaucho of the BANDA ORIENTAL, he joined the revolution against Spain in 1811 and became the leader of the Orientales. In 1813 he instructed the delegates from the Banda Oriental to the Buenos Aires constituent assembly to work for a federation of autonomous La Plata provinces, but they were denied admission to the assembly by the centralist military junta. Artigas then championed Uruguayan independence. After an initial setback in 1813 by Buenos Aires and subsequently the restoration of Spanish power (1816), he still managed to rule much of the territory as protector against Spain, Brazil, and Buenos Aires. Finally in 1820, when Artigas had once again renounced the United Provinces of La Plata (Argentina), the Portuguese captured the territory and annexed it to Brazil. Artigas spent his remaining years in exile in Paraguay. See John Street, *Artigas and the Emancipation of Uruguay* (1959).

artillery, term originally applied to any weaponry (including such ancient engines of war as catapults and battering rams) but later applied only to heavy FIREARMS as opposed to SMALL ARMS. Types of artillery include antiaircraft and antitank guns (which fire at high muzzle velocity through long barrels at flat trajectories) and howitzers (with shorter barrels, lower velocities, and parabolic trajectories). Modern artillery came into use in the mid-14th cent. with the invention of gunpowder. At first used mainly against fortifications, artillery was extensively employed in the field during the Thirty Years War (1618-48), thereafter it played an increasingly important role until the advent of aircraft. Now that few pieces of fixed artillery (e.g., coastal defense guns) still survive, artillery is generally classified as either towed or self-propelled, in Western countries the latter type predominates. Artillery was characteristically smoothbore and muzzle-loaded, firing solid, round shot, until the latter part of the 19th cent., when breech-loaded, rifled, and shell-firing artillery became standard. See study by John Batchelor and Ian Hogg (1972).

Art Institute of Chicago, museum and art school, in Grant Park, facing Michigan Ave. It was incorporated in 1879, George Armour was the first president. Since 1893 the Institute has been housed in its present building, designed in the Italian Renaissance style by Shepley, Rutan, and Coolidge. Among its famous collections are those of early Italian, Dutch, Spanish, and Flemish paintings, including works by El Greco, Rembrandt, and Hals. The Institute is rich in 19th-century American and French paintings, particularly well known is *La Grande Jatte* by Seurat. Modern American and European paintings are also well represented. Other collections include prints and drawings, dating from the 15th cent., and sculpture. The section on decorative arts has porcelains, textiles, glass, and rooms of period furniture. The

Institute also has a fine collection of Chinese art. Other features include the Ryerson library for research and a school of drama.

art nouveau (ar' nōvō'), decorative-art movement centered in Western Europe. It began in the 1880s as a reaction against the historical bombast of mid-19th-century art, but did not survive World War I. Art nouveau originated in London and was variously called *Jugendstil* in Germany, *Sezessionsstil* in Austria, and *Modernismo* in Spain. In general it was most successfully practiced in the decorative arts: furniture, jewelry, and book design and illustration. The style was richly ornamental and asymmetrical, characterized by a whiplash linearity reminiscent of twining plant tendrils. Its exponents chose themes fraught with symbolism, frequently of an erotic nature. They imbued their designs with dreamlike and exotic forms. Stylistic descendants of William Blake and of the PRE-RAPHAELITES, the outstanding designers of art nouveau in England include the graphic artist Aubrey Beardsley, A. H. Mackmurdo, Charles Rickers, Walter Crane, and the Scottish architect Charles R. Mackintosh, in Belgium the architects Henry Van de Velde and Victor Horta, in France the architect and designer of the Paris metro entrances, Hector Guimard, and the jewelry designer René Lalique, in Austria the painter Gustav Klimt, in Spain the architect Antonio Gaudí, whose fantastic buildings reveal him to be one of the most original geniuses of the entire movement, in Germany the illustrator Otto Eckmann and the architect Peter Behrens, in Italy the originator of the ornamental Floreale style, Giuseppe Sommaruga, and in the United States Louis Sullivan, whose architecture was dressed with art nouveau detail, and the designer of elegant glassware Louis C. Tiffany. The aesthetics of the movement were disseminated through various illustrated periodicals including *The Century Guild Hobby Horse* (1894), *The Dial* (1889), *The Studio* (begun, 1893), *The Yellow Book* (1894-95), and *The Savoy* (1896-98). Liberty, the Regent St. store in London, popularized the style in fabrics. In the 1960s there was a general resurgence of interest in art nouveau masters, in the United States the works of Beardsley and Tiffany were especially popular. See definitive studies by R. Schmutzler (1964), M. Rheims (1966), P. Selz and M. Constantine (1960), N. Pevsner's, *Pioneers of Modern Design* (1960).

Artois (artwa'), region and former province, in Pas-de-Calais dept., N France, near the English Channel, between Picardy and Flanders. Arras is the chief city. Slightly hilly, it is largely agricultural and occupies part of the rich Franco-Belgian coal basin. Owned in the Middle Ages by the counts of Flanders, Artois was annexed (1180) to France by Philip II through marriage. Burgundy gained (14th cent.) the territory, also through marriage. Later it was under Austrian rule, and from 1493 until its conquest (1640) by Louis XIII it was under Spanish rule. Confirmation of French possession was made by the Peace of the Pyrenees (1659) and the Treaty of Nijmegen (1678). Renowned for its états (assembly), which met until the 18th cent., it declined in political importance thereafter. Of strategic significance in World War I, it was the scene of heavy fighting. The region gives its name to the ARTESIAN WELL, known there for centuries.

arts and crafts, term for that general field of applied designing in which hand fabrication is dominant. The term was invented in England in the late 19th cent. as a label for the current movement directed toward the revivifying of the decorative arts. The chief influence behind this movement was William MORRIS. By the mid-19th cent., factory processes had almost entirely driven handicraftsmen from their ancient trades and obliterated the techniques by which beautiful objects of utility could be produced. The GOTHIC REVIVAL, however, had brought into existence a great body of knowledge concerning the arts of the Middle Ages, and Morris, together with the Pre-Raphaelite painters and a small group of architects and designers, eagerly returned to these arts as a rich source of inspiration. The pupils and followers of Morris multiplied, and numbers of proficient craftsmen developed. Their methods aimed at a practical demonstration not only of Morris's aesthetic creed but also of his ideas concerning socialism and the moral need for integrating beauty with the accessories of daily life. The revival of folk arts has prospered, especially in remote communities and among American Indians of the Southwest (see NORTH AMERICAN INDIAN ART). Handicrafts are widely taught in schools, have been adopted by hobbyists, and are valued in occupational therapy.

Artzybasheff, Boris (artsība'shēf), 1899-1965, American draftsman, illustrator, writer, and cartoon-

ist, b. Kharkov, Russia, son of Mikhail Petrovich ARTZYBASHEV. In 1919 he went to New York City, where he worked in an engraving shop. Later he became noted for his brilliant and imaginative work as an advertising artist and illustrator of books and periodicals, including many covers for *Time* magazine. Grotesque and weirdly humorous drawings appear in his *As I See* (1955).

Artzybashev, Mikhail Petrovich (mēkhayē' pētrō'vich artsība'shēf), 1878-1927, Russian novelist, playwright, and essayist. Artzybashev's early works were short stories in the manner of Tolstoy. His novel *Sanine* (1907, tr. 1914) created a sensation and was proscribed as pornographic in many countries. When the *Sanine* cult subsided, he tried to maintain his popularity with similar works, e.g., the novel *Breaking-Point* (1912, tr. 1915). Artzybashev bitterly attacked the Bolsheviks from abroad.

Aruba, island (1970 pop. 60,734), 69 sq mi (179 sq km), in the Leeward Islands group of the Netherlands Antilles. Oranjestad is the capital. Tourism and the refining of oil brought in from nearby Venezuela are the major industries.

Aruboth (ār'yōbōth), part of Solomon's kingdom. Arubboth RSV 1 Kings 4:10.

Aru Islands or Aroe Islands (both ā'rōō), group of about 95 low-lying islands (1961 pop. 29,604), 3,306 sq mi (8,563 sq km), E Indonesia, in the Moluccas, in the Arafura Sea, SW of New Guinea. The largest island is Tanahbesar, Dobo, the chief port of the group, is on Wamar, just off Tanahbesar. Products include sago, coconuts, tobacco, mother-of-pearl, trepang, tortoise shell, and bird of paradise plumes. The inhabitants are of a mixed Papuan and Malay stock. The islands were discovered by the Dutch, who colonized them after 1623. Arru is another spelling.

arum, common name for the Araceae, a plant family mainly composed of species of herbaceous terrestrial plants found in swampy and muddy habitats of the tropics and subtropics, some are native to temperate zones, and a few are epiphytic. The family is characterized by an inflorescence consisting of a single spadix (a fleshy spike bearing small flowers) and a usually showy and flowerlike bract (modified leaf) called a spathe, which surrounds the spadix. The krubi (*Amorphophallus titanum*) of Sumatra, sometimes grown in greenhouses, has the largest plant inflorescence known—the spadix reaches a height of 15 ft (4.6 m) and the spathe a height and upper diameter of some 8 ft (2.5 m). Commonly cultivated for their showy inflorescences are the arum lilies, or callas (genus *Zantedeschia*), native to tropical and S Africa, the common florists' white-spathed calla lily is *Z. aethiopica*. The wild calla, or water arum (*Calla palustris*), of E North America and other northern regions is similar to the calla lily but smaller and is not usually cultivated. Several plants of the arum family are grown (often as house plants).

Jack-in-the-pulpit, *Arisaema triphyllum*, a member of the arum family

for their ornamental foliage, e.g., species of the genera *Monstera*, *Philodendron*, and *Caladium*, all native to the American tropics. *Monstera* is a vine popular for its perforated and deeply lobed leaves. *Philodendron*, usually a climbing shrub in the tropics, is now one of the most popular house plants. *Caladium*, noted for its multicolored foliage, is sometimes mistakenly called elephant's-ear, a name properly applied to *Colocasia esculenta* because of the shape of its large, decorative leaves. *C. esculenta*, with its large, starchy corms or rootstocks (characteristic of the arum family) is a major source of food in the Pacific islands and the Far East; in Hawaii it is the main ingredient of Poi. It is now cultivated in many warm regions, including the United States, in some 1,000 varieties, as a food plant it is known by many local names, the most common being taro and dasheen. Plants of the arum family native to the United States are found chiefly in the eastern and central states, all species are bog or aquatic plants except *Arisaema*, which grows in moist woodlands. The jack-in-the-pulpit, or Indian turnip (*A. triphyllum*), has a spadix (jack) enveloped by a purplish-striped spathe (the pulpit). Its starchy corms were eaten by the American Indians, as were those of the TUCKAHOE or Indian bread, sweet flag (*Acorus calamus*), and skunk cabbage (*Symplocarpus foetidus*). The latter two and the jack-in-the-pulpit are also sources of medicinal substances. Sweet flag, found in many north temperate regions, yields flavorings and calamus, a perfume oil. Skunk cabbage, found in both E Asia and E North America, is one of the most abundant and earliest-blooming northern wild flowers. The unpleasant odor noticeable when the plant is bruised is produced by the acrid sap, which contains needle-shaped crystals of calcium oxalate, called raphides, that are formed as a metabolic by-product. This acidity, characteristic of the arum family, is removed from the corms by cooking. The family is classified in the division MAGNOLIOPHYTES, class Liliatae, order Arales.

Arumah (arōō'ma), town of Palestine. Judges 9:41.

Arunachal Pradesh (ar'anachal prādēsh'), union territory (1971 pop. 444,744), 31,438 sq mi (81,424 sq km), NE India, bordered on the N by the Tibet region of China and on the E by Burma. The capital is ZIRO. Formerly the North-East Frontier Agency special territory, Arunachal Pradesh became a union territory in 1972. A remote region, it includes part of the E Himalayas and extends through mountainous highlands to the plains of Assam. Its border with Tibet, disputed by China, is known as the MacMahon line. It was established by the British, with the agreement of Tibet, in the early 20th cent.; the Chinese claim more than 90% of the territory. In Oct., 1962, after tentative probes, the Chinese launched a massive offensive against the area, and by November they had advanced far into Indian territory, even threatening the tea plantations and oil fields of the rich Assam plain. On Nov. 21, however, the Chinese proclaimed a unilateral cease-fire, and they soon withdrew behind the disputed MacMahon line. Arunachal Pradesh is inhabited by tribesmen of Mongoloid stock, most of whom practice animism. The territory is administered by the home minister in the central government of India but has an elected advisory council. The states of Assam, Nagaland, Meghalaya, Manipur, and Tripura and the union territories of Mizoram and Arunachal Pradesh have a common governor appointed by the president of India.

Arundel, Henry Fitzalan, 12th earl of (ār'endəl), 1517?-1580, English statesman. Lord chamberlain under Henry VIII, he was a member of the council appointed by Henry to govern during the minority of Edward VI. After Edward's death (1553), he helped bring Mary I to the throne, foiling the duke of Northumberland's attempt to crown Lady Jane Grey. Arundel was prominent in Mary's reign and remained powerful, though always under suspicion because he was a Catholic, after the accession (1558) of Elizabeth I.

Arundel, Thomas Howard, earl of, 1585-1646, first great English art collector and patron of arts. Educated at Trinity College, Cambridge, he married a goddaughter of Queen Elizabeth and was always closely connected with the court. He held many high offices; in 1616 he was appointed privy councillor and later made earl marshal of England. Both Rubens and Van Dyck painted portraits of Arundel of himself and his wife in addition to other works. Inigo Jones, long in his service, accompanied him to Rome, where Arundel excavated some Roman statues, which with other ancient sculptures, including

the *Parian Chronicle*, or *Marmor Chironicon*, were given to Oxford University in 1667 and became known as the Arundel Marbles. Most of his sculpture collection is in Oxford's Ashmolean Museum. His collections also included Flemish, Dutch, German, and Italian paintings of the 16th cent.; Dürer and Holbein were particularly well represented. His library was given to the Royal Society, the manuscripts known as the Arundel Collection were later transferred (1831) to the British Museum. The Arundel Society (1848-97) reproduced works by famous artists in order to promote public interest in art. In 1904 the Arundel Club began to print reproductions of works in private collections. See study by Mary F. Hervey (1921, repr. 1969).

Arusha (arōō'sha), city (1967 pop. 32,452), capital of Arusha prov., NE Tanzania. It is an industrial and administrative center, connected by rail with Tanga on the Indian Ocean and with Kenya. Manufactures include textiles, beverages, processed foods, plastics, and electronic equipment. The city is also the headquarters of the East African Community (founded 1967), which regulates aspects of the economy, runs transportation and communications facilities, and sponsors research for Tanzania, Kenya, and Uganda. In Jan., 1967, President Julius Nyerere of Tanzania issued the influential Arusha Declaration, which called for socialism, hard work, and self-reliance in Tanzania. The city is the site of an institute devoted to research in tropical pesticides.

Arvad (ar'vād), variant of ARADUS.

Arvada (arvād'a), city (1970 pop. 46,814), Jefferson and Adams counties, N central Colo., a suburb of Denver, inc. 1904. Primarily residential, Arvada manufactures processed foods, beer, chemicals, and wood and metal products.

Arval Brothers, in Roman religion, college of 12 priests chosen from the most distinguished senatorial families. It was said that the original brothers were sons of ACCA LARENTIA. Theirs was chiefly an agricultural cult, but they were also concerned with the well-being of the imperial house. The Roman emperor was necessarily a member of the college. Their most important ceremony, held in May, was in honor of Dea Dia, a goddess of fields and crops.

Arvida (arv'dā), city (1971 pop. 18,448), S Que., Canada, on the Saguenay River. It has a large aluminum smelter.

Arvika (ar'vē'ka), city (1970 pop. 15,509), Värmland co., W Sweden, on Lake Glänsfjorden. It is a commercial and industrial center, with a lake port. Arvika was mentioned in a 13th-century Norse saga.

Aryabhata (ār'yābhū'ta), c. 476-550, Hindu mathematician and astronomer. He is one of the first known to have used algebra; his writings include rules of arithmetic and of plane and spherical trigonometry, and solutions of quadratic equations.

Aryan [Sanskrit, = noble], term formerly used to designate the Indo-European race or language family or its Indo-Iranian subgroup. Originally a group of nomadic tribes, the Aryans were part of a great migratory movement that spread in successive waves from S Russia and Turkistan during the 2d millennium B.C. Throughout Mesopotamia and Asia Minor, literate urban centers fell to their warrior bands. Archaeological evidence corroborates the text of the VEDA by placing the invasion of India by the Aryans at c. 1500 B.C. They colonized the Punjab region of NW India, and absorbed much of the indigenous culture. The resulting Indo-Aryan period saw the flourishing of a pastoral-agricultural economy that utilized bronze objects and horse-drawn chariots. Before the discovery of the Indus valley sites in the 1920s, Hindu culture had been attributed solely to the Aryan invaders. The idealization of conquest pictured in the Vedic hymns was incorporated into Nazi racist literature, in which German descent was supposedly traced back to Aryan forebears.

Aryana see ARIANA.

Arya Samaj: see SARASWATI, DAYANANDA.

aryl group (ār'il), in chemistry, group of atoms derived from BENZENE or from a benzene derivative by removing one hydrogen that is bonded to the benzene ring (see RADICAL). The simplest aryl group is phenyl, C₆H₅; it is derived from benzene. The tolyl group, CH₃C₆H₄, is derived from TOLUENE (methylbenzene). The xylil group, (CH₃)₂C₆H₃, is derived from xylene (dimethylbenzene). Just as several different ALKYL GROUPS may be derived from certain alkanes, so may several aryl groups be derived from certain aromatic compounds, for example, three different tolyl groups can be formed from toluene by removing hydrogen from different locations relative to the methyl group. When a FUNCTIONAL GROUP is joined with an aryl group, replacing the hydrogen

that had been removed, a compound is formed whose characteristics depend largely on the functional group.

Arza (ār'zā), steward at Tirzah. 1 Kings 16:9.

Arzamas (ar'zamas'), city (1970 pop. 62,000), E European USSR, on the Tyosha River. A rail junction, it has food-processing plants and industries that produce leather and felt goods and farm implements. An ancient Mordvinian settlement, Arzamas became a fortress after Czar Ivan IV captured it from the Kazan Tatars in 1552.

Aš or Asch (both ash), city (1970 pop. 11,539), W Czechoslovakia, in Bohemia, near the Bavarian border. It is a textile center and also manufactures lace, woollens, embroidery, and carpets.

As, chemical symbol of the element ARSENIC.

Asa (ās'a) 1 King of Judah, son and successor of Abijah. He was a good king, zealous in his extirpation of idols. When Baasha of Israel took Ramah (a few miles N of Jerusalem), Asa bought the help of Benhadad of Damascus and recaptured Ramah. His son Jehoshaphat succeeded him. 1 Kings 15:8-24, 2 Chron. 14:16-26. 2 Chron. 1:16.

Asada Goryu (āsād'ā gōryōō), 1734-99, Japanese astronomer who helped to introduce modern astronomical instruments and methods into Japan. Asada spent much of his career in the flourishing commercial city of Osaka, where he practiced medicine for a living. Because of the Japanese government's policy of seclusion, Western scientific theory was generally available only through obsolete Chinese works edited by Jesuit missionaries in China. Yet Asada managed to construct sophisticated mathematical models of celestial movements and is sometimes credited with the independent discovery of Kepler's third law.

Asahel (ās'sahēl, ās'ā-) 1 David's nephew. Murdered by Abner, he was avenged by his brother Joab. 2 Sam. 2:18-32, 3:27, 30, 1 Chron. 11:26, 27, 2, 3 Levites 2: Chron. 17:8, 31:13. 4 Priest. Ezra 10:15.

Asahiah (ās'sahī'a, ās'ā-), the same as ASAIAH 1.

Asahigawa (asahē'gawa), city (1970 pop. 288,490), W central Hokkaido, Japan, on the Ishikari River. Asahigawa is the commercial, industrial, and rail center of a great agricultural region. Pulp, paper, cotton yarn, lumber, wood products, and sake are among the city's industrial products.

Asaiah (ās'sā'i'a, ās'ā-) 1 One of Josiah's deputation to Huldah. 2 Chron. 34:20-22. Asahiah. 2 Kings 22:12-14. 2 Simeonite. 1 Chron. 4:36. 3 Levite. 1 Chron. 6:30, 15:6, 11. 4 Shilonite. 1 Chron. 9:5. Maseiah. Neh. 11:5.

Asaka (asa'ka), city (1970 pop. 67,938), Saitama prefecture, central Honshu, Japan. It is an industrial and residential suburb of Tokyo. There is an important metalworks industry in the city.

Asama, Mount (asa'ma), or **Asama-yama** (-ya'ma), peak, 8,340 ft (2,542 m) high, central Honshu, Japan, near Komoro. One of the largest and most active volcanoes in Japan, it erupted violently in 1783.

asana: see YOGA.

Asansol (āsānsōl'), city (1971 pop. 157,388), West Bengal state, NE India. It is an industrial center in a coal-mining area.

Asaph (ās'sāf) 1 Choirmaster of David's time, or the eponym of a corps of singers. His name is attached to a little collection of psalms. Ps. 50, 73-83. 1 Chron. 6:39, 9:15, 25:1, 2 Chron. 20:14, 29:30, Neh. 11:17, 12:46. 2 The same as ABIASAPH. 3 Father of a chronicler. 2 Kings 18:37, Isa. 36:3, 22. 4 King's forester. Neh. 2:8.

Asareel (āsār'ēēl), son of Jehaleleel. 1 Chron. 4:16.

Asarelah (ās'ārē'lā), Asaphite. 1 Chron. 25:2. Jesarelah. 1 Chron. 25:14.

Asbestos, town (1971 pop. 9,749), SE Que., Canada. Asbestos is mined in the area and asbestos products are made in the town.

asbestos, common name for any of a group of silicate minerals that are fibrous in structure and more or less resistant to acid and fire. The name was originally given to fibrous forms of actinolite and tremolite, varieties of amphibole. Chrysotile asbestos, a form of SERPENTINE, is the chief commercial asbestos. Important varieties of amphibole are amosite, which is not as strong or as easy to spin as chrysotile but is used in insulating materials, crocidolite, known also as blue asbestos, used because of its high strength for making asbestos-cement products, and tremolite, used in laboratories for filtering acids and other chemicals because of its resistance to chemical action. Varieties of amphibole of lesser commercial importance include anthophyllite and actinolite. Asbestos is usually found comprising veins in other

rock, in most cases it appears to be the product of METAMORPHISM. By far the chief asbestos-producing country is Canada, other important producers are the USSR, Rhodesia, Swaziland, the Republic of South Africa, Cyprus, and the United States. Canadian asbestos is mostly chrysotile. South African asbestos, found chiefly in Cape Prov., is largely amosite and crocidolite. In the United States, chrysotile asbestos is produced mainly in Arizona and Vermont. Asbestos is mined both in open quarries and underground. After being crushed, dried, and screened to remove the fibers from the ore, it is graded and sold to manufacturers. The chief products made from it include asbestos yarns and ropes, pipe covering, brake linings, fire-fighting equipment, cloth, shingles, millboard, and plaster and plasterboard. Particles of asbestos are released into the atmosphere by human activity—e.g., when brakes are applied, microscopic asbestos particles are rubbed off the brake linings, larger, visible particles of asbestos are released when asbestos insulation is applied by a spray gun during building construction. Studies have shown that asbestos particles may be carcinogenic. See D. V. Rosato, *Asbestos: Its Industrial Applications* (1959); J. L. Gillson, *Industrial Minerals and Rocks* (1960).

Asbjørnsen, Peter Christian (pā'tar krēs'tyan ās'-byōrnsen), 1812-85, Norwegian folklorist, writer, and naturalist. *Norwegian Folk Stories* (4 vol., 1841-44), which he collected with the poet Jørgen Moe, his friend from school days, was acclaimed throughout Europe for its contribution to comparative folklore and literature. In 1845 he published the first series of his *Norwegian Fairy Stories and Folk Legends*. English translations of his works include *Popular Tales from the Norse* (tr. 1858) and *Fairy Tales from the Far North* (tr. 1897). Asbjørnsen was a forester for many years and wrote numerous scholarly papers on the natural sciences.

Asbury, Francis (āz'barē, -bē-), 1745-1816, Methodist bishop in America, b. England. The Wesleyan conference in London sent him in 1771 as a missionary to America, where he promoted the growth of the CIRCUIT RIDER system that proved so eminently suited to frontier conditions. His powerful preaching, his skill in winning converts, and his mastery of organization had, by the end of the Revolution, established Asbury as the leader of American Methodism. In 1784, John Wesley ordained Dr. Thomas Coke as superintendent of the societies in America; Asbury was to be associate superintendent. At the American conference held that year, however, Asbury was the dominating figure and was made superintendent. He then assumed the title of bishop and took steps to institute a centralized church government. Although tormented by ill health, he maintained personal supervision of the expanding church, traveling on horseback over 5,000 mi (8,047 km) each year and strongly entrenching Methodism over the entire area of the new nation. His journal is valuable for its account of contemporary society as well as of his personal life. See his *Rudolf and Letters* (3 vol., 1958), biography by L. C. Rudolf (1966).

Asbury Park, city (1970 pop. 16,533), Monmouth co., N.J., on the Atlantic coast, inc. 1897. It is a popular resort with a noted beach, boardwalk, convention hall, and auditorium. The steamship *Morro Castle*, which caught fire at sea in Sept., 1934, was grounded there and continued to burn, with the loss of 125 lives.

Ascalon see ASHQELON, Israel

Ascension, island, 34 sq mi (88 sq km), in the S Atlantic, NW of St. Helena and belonging to the British St. Helena colony. Ascension is volcanic and rocky with little vegetation, but it supports considerable livestock (sea turtles, rabbits, wild goats, and partridges), much of which was brought in by the nonindigenous population. The United States maintains a missile and satellite tracking station. Discovered by the Portuguese João da Nova in 1501, Ascension was taken by the British in 1815 and used as a naval station. In 1922 it was made a dependency of St. Helena. Georgetown is the main settlement on the island.

Ascension, name usually given to the departure of Jesus from earth as related in the Gospels according to Mark (16) and Luke (24) and in Acts 1:1-11. The annual commemoration of this is one of the principal feasts in most Christian churches. Ascension Day, as it is called, occurs on the 40th day after Easter, being the Thursday of the sixth week of Easter. In early English usage this festival was known as Holy Thursday.

Ascension Island, Caroline Islands see PONAPE

Ascensius, Jodocus Badius see BADIUS JODOCUS

asceticism (asē'tisizəm), rejection of the world and bodily pleasures through sustained self-denial and self-mortification, with the objective of strengthening spiritual life. Asceticism has been common in Hinduism, Islam, Judaism, and Christianity. All of these have special ascetic cults. It is also known in Buddhism and in other religions. The most common and least severe ascetic practice is prolonged FASTING, used for many purposes—to produce visions, as among the Crow Indians, to mourn the dead, as among various African peoples, and to sharpen spiritual awareness, as among the early Christian saints, such as St. Simeon Stylites. More extreme forms have been flagellation (see FLAGELLANTS) and self-mutilation, usually intended to propitiate or reach accord with a god. Thus the priests of Cybele practiced self-castration. Asceticism has been associated with taboo in primitive societies and in such well-developed religions as Zoroastrianism and Manichaeism. In Greece the Cynics preached the ascetic life. The imposed rules of self-denial in MONASTICISM, both Eastern and Western, are considered rules of austerity rather than asceticism, although individuals may adopt ascetic practices beyond the monastic rules. See ESENES FAKIR, HERMIT, RECHABITES. See Owen Chadwick, ed., *Western Asceticism* (1958).

Asch, Sholem or Shalom (shō'lam āsh, shā'lam), 1880-1957, Jewish novelist and playwright, b. Poland. He first came to the United States in 1909, was naturalized in 1920, and lived in various parts of Europe and the United States. He settled in Israel in 1956. One of the most widely known Yiddish writers, he won his first success with the play *The God of Vengeance*, produced by Max Reinhardt in Berlin in 1910 and given in many languages and places since then. Among his works available in English translations are the novels *Motke the Thief* (1917), *Uncle Moses* (1920), *Three Cities* (1933), *The War Goes On* (1935), *The Nazarene* (1939), *The Apostle* (1943), *One Destiny* (1945), *East River* (1946), *Mary* (1949), *Salvation* (1951), *Moses* (1951), *A Passage in the Night* (1953), and *The Prophet* (1955). His two collections of short stories and novelettes are *Children of Abraham* (1942) and *Tales of My People* (1948). Asch's writings often depict Jewish life in Europe and in the United States, and later works reflect the common spiritual heritage of Jews and Christians. Several of his plays were very successful in the Yiddish theater in New York City.

Asch see AS, Czechoslovakia

Aschaffenburg (āshā'fānbōrk), city (1970 pop. 55,193), Bavaria, S central West Germany, on the Main River. Its manufactures include clothing, machinery, precision and optical instruments, and colored paper. Once the location of a Roman garrison and later of a Frankish castle, Aschaffenburg passed to the archbishopric of Mainz in the 10th cent. The imperial diet met there in 1474. It changed hands several times during the Thirty Years War (1618-48) and was stormed in 1672 by the French marshal Henri Turenne. It passed to Bavaria in 1814. Noteworthy buildings include a 12th-century church and a 17th-century castle.

Ascham, Roger (ās'kām), 1515-68, English humanist and scholar, b. Yorkshire. Ascham was a major intellectual figure of the early Tudor period. His *Toxophilus* (1545), an essay on archery, proved him a master of English prose, in it he urged the importance of physical recreation for students and scholars. The essay won him the favor of Henry VIII, and Ascham became tutor (1548-50) to Princess Elizabeth. He seems to have been largely responsible for her love of the classics and her proficiency in Greek. As a member of a diplomatic mission Ascham spent several years on the Continent, in contact with other scholars, and in 1553 was appointed Latin secretary to Queen Mary. He continued as secretary and private tutor to Elizabeth I after Mary's death. *The Scholemaster* (1570), his treatise on the teaching of Latin, urged the use of the double translation method. Dr. Johnson's life of Ascham (1761), included in many editions of Ascham's collected works, is a classic. See W. F. Phelps, *Roger Ascham and John Sturm* (1879), study by L. V. Ryan (1963).

Aschelminthes (āsk-hēlmīn'thēz), large phylum of loosely related, wormlike organisms of extremely varied structure and habits. All are covered by a noncellular coat, or cuticle, and have a pseudocoelom, i.e., a fluid-filled cavity separating the body wall from the gut but lacking a peritoneal lining. In many species the digestive, excretory, and reproductive systems join in a cloaca, or discharge chamber, near the posterior end. Many aschelminthes also show cell constancy, a condition in which each or-

gan of the adult contains the precise number of cells characteristic of the species.

Internal anatomy of a female rotifer, representative of the phylum Aschelminthes

Class Rotifera Rotifers are predominantly free-living microscopic, aquatic or semiterrestrial organisms. Each has a head bearing a crown of cilia, the corona at the anterior end, most rotifers feed with the aid of currents generated by the coronal cilia. A posterior foot, often equipped with two or three toes, contains adhesive glands permitting temporary attachment to objects. Unique grinding jaws are found in the pharynx, and an esophagus, stomach and intestine can be distinguished. The excretory system consists of ciliated cells, called flame cells that move collected liquids into two coiled tubes called protonephridia, these tubes open into a contractile bladder. The reproductive system is simple consisting in the female of ovary, yolk gland, and oviduct, and in the male of testis and sperm duct. The intestine, bladder, and reproductive ducts unite to form a cloaca. Rotifers, of which there are about 2,000 known species, are widely distributed in fresh water and marine habitats, they also live in the soil, in mosses, and associated with lichens on rocks and trees. A few are parasitic. Most feed on bacteria, algal cells, small protozoa, or organic detritus. As a rule, only female rotifers are seen, in some species the males have never been observed. Eggs develop parthenogenetically, i.e., without fertilization, to produce only females. When conditions are unfavorable, haploid male and female eggs are produced, these can unite to form fertilized eggs that have heavy shells and remain dormant until more favorable conditions occur. Many species can survive in a dry form for long periods of time, emerging from a dormant state and becoming active when moisture is available.

Class Gastrotricha Gastrotrichs are microscopic organisms that live in ponds, lakes, or seashore sands. Most have a definite head, a narrower neck, and a trunk that ends in a pair of projections, or rami, containing adhesive glands. The external surface is covered with bristles or plates except on the ventral (under) surface, which is ciliated. The digestive tract consists of a muscular pharynx and a straight stomach-intestine. In freshwater forms flagellated cells called solenocytes open into two protonephridial (excretory) tubules. Details of the reproductive system are not well known, but the excretory, reproductive, and digestive systems do not unite to form a cloaca. Although some gastrotrichs are hermaphroditic, all freshwater forms are females. They produce eggs that develop without fertilization, and some produce thin-walled and thick-walled eggs much like rotifers. Most gastrotrichs have a low reproductive potential, since they are never very abundant, they are not influential in their habitats. They feed on bacteria, algae, protozoa, and organic detritus.

Class Kinorhyncha Containing about 100 species of tiny worms, the class Kinorhyncha is widely distributed in tidal mudflats or shallow, muddy-bottomed marine habitats. The kinorhynch body is divided into 13 or 14 segments, each covered with a heavy cuticle and equipped with characteristic spines. The first segment is a bristly head that can be protruded or withdrawn. Using its head as an anchor, the creature ploughs through the mud pulling its body after it. Kinorhynchs have a relatively complex digestive system, a protonephridial (excretory) system, and a relatively simple reproductive system, no cloaca is formed. Sexes are separate, and the young hatch with three segments, new ones being added as they

grow. They feed on mud, extracting its organic content. Nothing is known of their ecological importance.

Class Nematoda Largest of the aschelminths, the class Nematoda contains thousands of known species, and many more predicted species. Nematodes live in the soil and in other terrestrial habitats as well as in freshwater and marine environments. Many are parasites of plants and animals, including man. The elongated, unsegmented nematode body is covered by a cuticle. The head is poorly developed, either mouth or pharynx may contain parts used to pierce or wound plant or animal tissues. The straight stomach-intestine ends in a short rectum. Nematodes have a unique excretory system consisting, in simpler species, of one or two one-celled glands called renette cells and, in more highly specialized forms, of longitudinal excretory ducts. The excretory physiology of the class is not well understood. The reproductive system is complex, and many parasitic species have a very high reproductive potential. Some nematodes produce live young, the eggs having matured in the female reproductive tract, but most release eggs, the larvae of which molt one or more times before reaching maturity. Nematodes, found in the soil as well as in decaying vegetable and animal matter, are often very abundant. Many of the soil-inhabiting types attack plant roots, making them economically significant. Nematodes are among the most successful of invertebrates in terms of their individual numbers and the number of species. Among the important human parasites are *Ascaris* (roundworms), hookworms, microfilaria, which live in the blood or in the lymphatic system, and *Trichinella*, whose larvae invade muscle tissue. **Class Nematomorpha** The nematomorphs, or horsehair worms, are very slender, elongated creatures found in ponds and streams, whose larvae live as parasites. They emerge as adults for a brief time, then mate and die. Adults are simplified externally and internally, they have no excretory or circulatory systems and only a vestigial digestive tract. The female produces long strings of eggs. After hatching, the larva penetrates any convenient aquatic animal, but its development stops until it has found its way into an appropriate host, typically an insect. The adult nematomorph emerges when the host is in or near water, it molts once after emerging and takes up its brief adult existence. A few species are marine and live as larvae in crabs or shrimps.

Aschersleben (a'shærslā'ban), city (1970 pop. 37,196), Halle district, W East Germany. An industrial city, it manufactures machine tools, chemicals, iron and steel, and woolen goods. There are lignite, salt, and potash mines nearby. Aschersleben was probably founded in the 11th cent. and passed to Prussia in 1813.

ascidian: see CHORDATA, TUNICATE

Asclepius (äsklē'pēās), Lat. *Aesculapius* (ēs'kālā-pēās), legendary Greek physician, son of Apollo and Coronis. His first teacher was the wise centaur Chiron. When he became so skillful in healing that he could revive the dead, Zeus killed him. Apollo persuaded Zeus to make Asclepius the god of medicine. The worship of Asclepius is believed to have originated in Thessaly. Temples were built to him at Epidaurus, Cos, Pergamum, and many other places, where treatments, including massage and baths, were given to the sick. The serpent and the cock were sacred to Asclepius. People who claimed descent from him and those who followed his teachings were known as Asclepiads.

Ascoli Piceno (a'skölē pēchē'nō), city (1971 pop. 55,053), capital of Ascoli Piceno prov., Marche region, central Italy, at the confluence of the Castellano and Tronto rivers. It is the market for a rich agricultural area. A Roman settlement with extensive Roman remains, the city became a free republic in the 12th cent. and passed to papal control in the 15th cent.

Ascomycete: see FUNGI

ascorbic acid: see VITAMIN

Ascot (ä'skät), village, Berkshire, S central England. The famous horse races instituted by Queen Anne in 1711 are held annually in June on Ascot Heath.

Asculum (ä'skyööləm), ancient town, Apulia, SE Italy, 18 mi (29 km) S of Foggia, on a branch of the Appian Way. Here Pyrrhus won a hard-fought battle against the Romans in 279 B.C. Modern Ascoli Satriano is in the region. The name also appears as Ausculum.

Asenath (äs'anäth), Poti-pherah's daughter, the Egyptian wife of Joseph, mother of Manasseh and Ephraim. Gen. 41:45, 50-52, 46:20. Her marriage is the subject of Joseph and Asenath, one of the PSEUD-EPICRAPH.

Asenovgrad (äsänöw'grät), city (1968 est. pop. 38,100), S central Bulgaria. It is a commercial center, with wineries and tobacco manufactures. An ancient Bulgarian stronghold, it became a trade center under Turkish rule (15th-19th cent.). Asenovgrad has several 16th-century churches and the ruins of a 13th-century castle. The city was formerly known as Stanimaka.

asepsis: see ANTISEPTIC

Aser (ä'sar), variant of ASHER

Asfa Wossen (as'fa wöös'sän), 1916-, Ethiopian crown prince. He was proclaimed crown prince and heir shortly after his father, Haile Selassie, became emperor of Ethiopia in 1930. In Dec., 1960, he was placed on the throne briefly during a coup against his father aimed at establishing a constitutional monarchy. He was absolved of all connection with the coup, which was immediately put down. Partially paralyzed by a stroke in 1972, he was living in Switzerland when Haile Selassie was deposed by the military in 1974.

Asgard (äs'gard), in Norse mythology, home of the gods, also known as Aesir. It consisted of luxurious palaces and halls, in which the gods (whose chief was Odin) dwelled, conferred, and banqueted. One of the most beautiful of these halls was VALHALLA. Entrance to Asgard could be gained only by crossing the rainbow bridge Bifrost, which was guarded by Heimdall, the watchman of the gods. See also GERMANIC RELIGION.

Ásgiersson, Ásgeir (as'kēr as'kērsōn), 1894-1972, Icelandic statesman, president of Iceland (1952-68). He was a member of the Icelandic parliament from 1923 to 1952, headed the government bureau of education (1926-31, 1934-38), and served as minister of finance (1931-34) and prime minister (1932-34). He was (1946-52) governor of the International Monetary Fund. In 1952 he was elected president of Iceland and was reelected in 1956, 1960, and 1964.

ash, in botany, any plant of the genus *Fraxinus* of the family Oleaceae (OLIVE family), trees and shrubs mainly of north temperate regions. The ashes are characterized by small clusters of greenish flowers and by fruits with long "wings" to aid in wind dispersal. The most valuable of the species used for hardwood timber is the white ash (*F. americana*), ranging from Nova Scotia to Minnesota and Texas. Its strong, durable wood is used for sporting goods, furniture, tool handles, and oars. The bark of the blue ash (*F. quadrangulata*) yields a blue dye, the Mediterranean flowering ash (*F. ornus*) is the source of commercial MANNA. The name flowering ash is also applied to a shrubby species (*F. cuspidata*) of the California canyon chaparral and to the fringe tree (genus *Chionanthus* of the same family) of North America and China. The MOUNTAIN ASH and PRICKLY ASH are not true ashes. Ashes are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Scrophulariales, family Oleaceae.

ash, in chemistry, solid residue of combustion. The chemical composition of an ash depends on that of the substance burned. Wood ash contains metal carbonates (e.g., potassium carbonate) and oxides formed from metals originally compounded in the wood. Coal ash usually has a high content of minerals and is sometimes contaminated with rock, during combustion the mineral matter may become partially fused, forming cinders or clinker. Bone ash is largely made up of calcium phosphate. Seaweed ash (called kelp or varec) contains sodium carbonate, potassium carbonate, and iodine that can be extracted. Fly ash is very fine ash produced during the combustion of many materials.

Ashan (ä'shän), unidentified town of S Palestine, perhaps the same as CHOR-ASHAN, Joshua 15:42, 19:7, 1 Chron. 4:32, 6:59.

Ashanti (ashan'tē) or **Asante**, historic and present-day administrative region, central Ghana, W Africa. The region is the source of much of Ghana's cocoa. It is inhabited by the Ashanti, an Akan, matrilineal people, who constitute one of Ghana's major ethnic groups. Before the 13th cent., Akan peoples migrated into the forest belt of present-day Ghana and established small states in the hilly country in the neighborhood of modern Kumasi. By the late 17th cent. the states had been welded by the Oyoko clan into the Ashanti confederation, with the capital at Kumasi and the Oyoko chieftain as king. After subduing neighboring states the confederation came into conflict with the British settlements on the coast, although treaties of friendship had been negotiated in 1817 and 1820. A series of Anglo-Ashanti wars in the 19th cent. culminated in the defeat of the confederation (1896) and the annexation of

Ashanti (1901) to the British Gold Coast colony. The British exiled the ruling king, Pempeh I, to the Seychelles and, in spite of great resistance, broke up the confederation. It was restored in 1935. In 1945 the Ashanti were given representation in the executive and legislative councils of the Gold Coast. They supported an unsuccessful attempt to give Ghana a federal constitution in 1954 and resisted the centralizing measures of the Nkrumah government. The Ashanti are noted for the quality of their gold work and their colorful kente cloth, and were long famous for the gold-encrusted stool that was the symbol of their sovereignty. See R. A. Lystad, *The Ashanti* (1958, repr. 1968).

Ashbea (äshbē'a), name of either a person or a place. 1 Chron. 4:21.

Ashbel (äsh'bēl), son of Benjamin. Gen. 46:21, Num. 26:38, 1 Chron. 8:1.

Ashbery, John, 1927-, American poet and art critic, b. Rochester, N.Y., grad. Harvard, 1949, M.A. Columbia, 1950. His poems are experimental, with logical narrative and a strong visual sense. Among his volumes of poetry are *Some Trees* (1956), *The Double Dream of Spring* (1970), and *Three Poems* (1972). He has also written a play, *The Compromise* (1960). Since 1960, Ashbery has been art critic for the Paris edition of the *Herald Tribune*. He is also editor of the quarterly *Art and Literature*.

Ashchenaz: see ASHKENAZ

Ashdod [Heb. =stronghold], city (1972 pop. 40,500), SW Israel, on the Mediterranean Sea. It is Israel's leading port after Haifa. Construction is Ashdod's main industry; its manufactures include synthetic fibers, woolen yarn, and knitted goods. Nearby is the site of ancient Ashdod, which was settled as early as the Bronze Age. Conquered by the Philistines in the 12th cent. B.C., it became an important city of the Philistine Pentapolis and a center for the worship of Dagon. The city was later ruled by Judah, Egypt, and Assyria. The Jews of Ashdod had been considered idolatrous by other Jews since the time of the return to Jerusalem (6th cent. B.C.), but they were cleansed by Judas Maccabeus in 163 B.C. Jonathan (see JONATHAN 15), the brother of Judas Maccabeus, took the city in 148 B.C. and destroyed the temple of Dagon. Ashdod was revived by the Romans and was an early Christian center (1 Sam. 5:1, Joshua 15:47, 2 Chron. 26:6, Neh. 4:7, 13:23, Isa. 20:1, Jer. 25:20, 1 Mac. 5:68, 10:84, Acts 8:40). The first modern Israeli settlement in Ashdod was made in 1955, and in 1965 the deepwater port was completed.

Ashdodth-pisgah (äsh'döth-piz'gä), unidentified portion of Mt. Pisgah. The term occurs three times in AV, translated in RV "slopes of Pisgah." Deut. 3:17, Joshua 12:3, 13:20. The same Hebrew expression is translated in Deut. 4:49 "springs of Pisgah" in AV, but RV translates it again as "slopes of Pisgah."

Ashe, Arthur Robert, 1943-, American tennis player, b. Richmond, Va. The first black American male to reach prominence in tennis, Ashe received a tennis scholarship from UCLA in 1962. In 1968 he was the first black U.S. Open champion, and in 1970 he won the Australian Open. Denied a visa by South Africa on racial grounds in 1970, Ashe forced the issue, appearing before the United Nations and urging the World Tennis Union to expel South Africa because of its apartheid policy. Ashe ultimately competed in South Africa in 1973.

Ashe, John, c. 1720-1781, American Revolutionary general, b. Brunswick co., N.C. Speaker of the colonial assembly (1762-65) and a leader of the opposition to the Stamp Act, he was important to the patriot cause in North Carolina. On March 3, 1778, Ashe, a major general commanding North Carolina troops, was defeated by British regulars at Briar Creek, a tributary of the Savannah. The British hold on Georgia was thereby strengthened.

Asheboro (äsh'bära), town (1970 pop. 10,797), seat of Randolph co., central N.C., in the Piedmont, inc. 1796. Its manufactures include hosiery, textiles, clothing, furniture, flashlight batteries, and electric blankets. A prehistoric Keyauwee Indian burial ground is nearby.

Ashendene Press, founded in 1895 at Ashdene, Hertfordshire, England, by Sir C. H. St. John Hornby and moved in 1899 to Chelsea, London. It was a leader (with the KELMSCOTT PRESS and the DOWS PRESS) in the 19th-century revival of fine English printing. Its edition of Dante (1909) is considered an

achievement comparable to the Kelmscott Chaucer by William MORRIS. The Subiaco type used by the Ashendene Press was designed by Sir Emery Walker and S C Cockerell from an early Italian typeface. The Ashendene Press, which set all of its editions by hand, issued 40 books in the years from 1895 to 1915 and from 1920 to 1935. See Will Ransom, *Kelmscott, Doves, and Ashendene* (1952).

Asher (ăsh'ər) [Heb. = happy, Gen. 30:12,13]. 1 Tribe of Israel. Its eponym was Jacob's eighth son. It occupied the northwestern part of Palestine, and its position laid Asher open to influence from other nations and attacks by them. It seems to have become insignificant early in Jewish history. The name occurs in Egyptian inscriptions. Gen. 30, Deut. 33:24, Joshua 19:24-31, Judges 5:17,18. Aser. Luke 2:36, Rev. 7:6. 2 Unidentified place near Shechem. Joshua 17:7.

Asherah (ăsh'ərə) or **Asheroth** (-rōth), Canaanite fertility goddess and the symbol that represented her. After the prophets denounced her cult, it was abolished among the Hebrews. By an ancient mistake AV translates the name as "groves." Judges 3:7, 1 Kings 15:13-14, 18:19, 2 Kings 21:7, 23:4, 2 Chron. 15:16, Jer. 17:2.

Asheville, city (1970 pop. 57,681), seat of Buncombe co., W. N.C., on the French Broad and the Swannanoa rivers and on a plateau in the Blue Ridge Mts., inc. 1797. Located near Great Smoky Mountains National Park and Pisgah National Forest, Asheville is a popular mountain resort. Tourism is a major business. The city is also a financial, distribution, transportation, and retail center for W. North Carolina; tobacco is processed and marketed, and lumber, electronic equipment, textiles, clothing, and paper, food, and glass products are made in Asheville. Local artisans weave wool and make pottery. Asheville's many points of interest include the magnificent Vanderbilt estate, Biltmore, Colburn Mineral Museum, and numerous recreational and scenic attractions. The writer Thomas Wolfe was born and lived in Asheville; his home is a public memorial. The Univ. of North Carolina at Asheville is in the city.

Ashi or **Asser**, **Rab** (a'shē, as'ər), 352-428, Hebrew scholar of Babylon. He headed the Jewish academy at Sura and devoted his life to editing the Talmud, aided by many of the distinguished scholars he had attracted to Sura. The work was completed by his pupil Rabina II c. 500.

Ashikaga (a'shēka'ga), city (1970 pop. 156,004), Tochigi prefecture, central Honshu, Japan. An old silk-weaving center, it is famous for its spinning and silk textile industries. The city is also the ancestral home of the Ashikaga shoguns (1336-1568). It has an ancient school (probably founded 9th cent.), which is known for its vast library of Chinese classics. Ashikaga's 12th-century temple is treasured by the Japanese.

Ashima (ăsh'īma, ăsh'īma), god whose cult flourished in Hamath. 2 Kings 17:30.

Ashingdon, battle of: see ASSANDUN, BATTLE OF.

Ashiya (ăshē'ya), city (1970 pop. 70,938), Hyogo prefecture, W. central Honshu, Japan, on Ōsaka Bay. It is a residential and industrial suburb of Ōsaka.

Ashkelon: see ASHQELON, Israel.

Ashkenaz (ăsh'kēnăz'), eponym of a people perhaps localized in Armenia. He was grandson of Japheth. Gen. 10:3. Ashkenaz. 1 Chron. 16, Jer. 51:27. In modern times the term *Ashkenazim* refers to the German Jews as distinguished from the Sephardim, the Jews of Spain and Portugal.

Ashkhabad (ăsh'kăbăd', ăsh'kăbăd', Rus. ăshkăbăd'), city (1970 pop. 253,000), capital of the Turkmen Soviet Socialist Republic, 5 Central Asian USSR, on the Trans-Caspian RR. The city has textile, motion picture, and machine-building industries. Ashkhabad was founded in 1881 as a fortress. An earthquake in 1948 virtually destroyed the city, which stands in a major fault zone. The Turkmen Academy of Sciences is in Ashkhabad.

Ashland. 1 Uninc. town (1970 pop. 14,810), Alameda co., W. Calif. 2 Industrial city (1970 pop. 29,245), Boyd co., E. Ky., on terraces along the Ohio River near the influx of the Big Sandy, settled 1786, inc. 1854. In a region yielding coal, clay, natural gas, and timber, it is a river and railroad shipping point, with large repair yards. The city is part of a tri-state metropolitan area (embracing also Ironton, Ohio, and Huntington, W. Va.) that is known for its metallurgical industries. In addition to iron and steel, Ashland's many manufactures include coke, refined oil, chemicals, leather products, clothing, and mining equipment. A junior college is located there. 3 City (1970 pop. 19,872), seat of Ashland co., N.

Ohio, in a farm area, inc. 1844. Pumps, spray equipment, rubber products, adhesives, printed materials, animal medications, and machine tools are among its manufactures. Ashland College is there. 4 City (1970 pop. 12,342), Jackson co., SW Oregon, near the Calif. line, inc. 1874. A lumbering center and a processing and shipping point for an irrigated dairy, farm, and orchard area, it is also a resort with mineral springs. It is surrounded on three sides by the Rogue River National Forest. Southern Oregon College, a college of art, and a museum of natural history are located in the city. A Shakespeare festival is held each spring and summer.

Ashley, Anthony Ashley Cooper, Baron: see SHAFTESBURY, ANTHONY ASHLEY COOPER, 1ST EARL OF.

Ashley, William Henry, c. 1778-1838, American fur trader and politician, b. Virginia. In 1820 he was elected lieutenant governor of Missouri. He sent fur-trading expeditions up the Missouri River to the Yellowstone in 1822 and 1823; the parties included Jedediah Smith and other MOUNTAIN MEN. A detachment of the second party under Thomas Fitzpatrick went through South Pass to the Green River valley. In 1825, Ashley accompanied another expedition that crossed from the upper Platte to Green River and began its exploration. In its valley he held the first rendezvous of the mountain fur traders and trappers. In 1826 he led an expedition that reached the vicinity of Great Salt Lake. Having acquired an ample fortune, he retired from the fur trade and devoted himself to politics. He was defeated for the governorship of Missouri in 1824 and 1836, but from 1831 to 1837 was U.S. Representative and an able advocate of measures favorable to Western development. See H. C. Dale, *The Ashley-Smith Explorations* (1918), Bernard De Voto, *Across the Wide Missouri* (1948).

Ashmodai (ăsh'mōdă'ī), DEMON, probably ASMODEUS.

Ashmole, Elias (ăsh'mōl'), 1617-92, English archaeologist and antiquary. He made exhaustive antiquarian studies, especially *The Institution, Laws and Ceremonies of the Order of the Garter* (1672) and *The Antiquities of Berkshire* (3 vol., 1719). In 1677 he donated to Oxford Univ. a collection of curiosities, including his own contributions and those bequeathed to him by a friend. His gift formed the nucleus of the Ashmolean Museum (ăshmō'lēən), the first such public institution in England. He later donated his library to Oxford, and the whole was housed in a building erected by Sir Christopher Wren. The collection is now in a 19th-century building and includes European works of art from medieval to present times as well as Oriental works. See his *Autobiographical and Historical Notes and Correspondence*, ed. by C. H. Josten (1967).

Ashmun, Jehudi, 1794-1828, U.S. agent to Liberia, b. Champlain, N.Y. After entering the Congregationalist ministry and spending a few years in teaching and editorial work, he was sent by the AMERICAN COLONIZATION SOCIETY to Liberia. He found the colony ridden with fever, short of supplies, and threatened by native attack. Ashmun with a handful of men repulsed the attacks, and for the next six years, despite severe hardships, he built up the colony. He wrote *History of the American Colony in Liberia from December 1821 to 1823* (1826). See biography by R. R. Gurley (1835, repr. 1971).

Ashmunayn, Egypt: see HERMOPOLIS MAGNA.

Ashnah (ăsh'nă), two unidentified towns of Palestine, W. of Jerusalem. Joshua 15:33,43.

Ashokan Reservoir (ăshō'kən), 13 sq mi (34 sq km), SE N.Y., completed 1912. It is supplied by the Esopus and Schoharie watersheds and provides part of New York City's water supply. Water is carried to the city via the 92-mi-long (148-km) Catskill Aqueduct. Completed in 1917, the aqueduct delivers water to Kensico Reservoir near White Plains and Hillview Reservoir in Yonkers, from where it is distributed to parts of New York City through tunnels cut in solid rock. The aqueduct passes 1,114 ft (340 m) under the Hudson River at Storm King Mt. A steel pipe under the Narrows of New York Bay carries water to Silver Lake, Staten Island, 120 mi (193 km) from Ashokan Reservoir.

Ashpenaz (ăsh'pēnăz), Nebuchadnezzar's chief eunuch. Dan. 1:3.

Ashqelon (ăsh'kəlōn), city (1972 pop. 43,100), SW Israel, on the Mediterranean Sea. It is a beach resort in an area of citrus groves and cotton plantations. Ashqelon's industries process agricultural products and manufacture cement, wood products, automobile parts, electronic equipment, and watches. Nearby is the site of ancient Ashqelon, or Ashkelon, whose history dates back to the 3d millennium B.C. It

was a trade center and port and a seat of worship of the goddess Astarte. Ancient Ashqelon was conquered by the PHILISTINES in the late 12th cent. B.C., completely rebuilt, and made one of the cities of the Philistine pentapolis (Judges 14:19, Jer. 25:20, Amos 1:8. Askalon. 1 Sam. 6:17. Eshkalon. Joshua 13:3). Ashkelon flourished under the Greeks and Romans, HEROD, believed to have been born there, greatly enlarged the city. It was taken by the Arabs in A.D. 638, conquered by the Crusaders in 1153 and occupied by RICHARD I in 1191, and completely destroyed by Muslims in 1270. An Israeli settlement was established there in 1948. In 1955 the modern city of Ashqelon was founded when Afridar, a town established by South African Jews in 1952, and Migdal, a former Arab town, were merged. A national park in Ashqelon includes Greek and Roman ruins and the remains of ancient synagogues. A Roman tomb (3d cent.) decorated with frescoes, the ruins of a Byzantine church, and a wall built by Crusaders are also in the city.

Ashtabula (ăsh'tabyōō'la), city (1970 pop. 24,313), Ashtabula co., NE Ohio, on Lake Erie at the mouth of the Ashtabula River, settled c. 1801 by New Englanders, inc. as a village 1831, as a city 1891. It is a port of entry on the St. Lawrence Seaway and receives large amounts of iron ore bound for Pittsburgh. Coal is also shipped. Ashtabula manufactures automobile parts, chemicals, fiberglass products, farm tools, clothing, and electric motors. A campus of Kent State Univ. is in the city.

Ashtaro (ăsh'tārōth), 1 Hebrew form of the name of the goddess ASTARTE. 2 City of Bashan, the modern Tell Ashtarh (Syria), E. of the Jordan. Joshua 9:10, 12:4, 13:12,31, 1 Chron. 6:71. Ashtaroth. Deut. 14:8. Esch-terah, an otherwise unidentified town, was probably the same. Joshua 21:27.

Ashteroth Karnaim (ăsh'tērōth karnă'im), place, E. of the Jordan. Gen. 14:5. It is possibly the same as Carnaim in 1 Mac. 5:43,44, and Carnion in 2 Mac. 12:21.

Ashton, Sir Frederick, 1906-, British choreographer and dancer, b. Guayaquil, Ecuador. He studied dance in England with Leonide Massine and Marie Rambert and staged his first work there in 1926. He joined what was later to become the Sadler's Wells Ballet (now the Royal Ballet) in 1935 as chief choreographer, and later became associate director and then director of the company. His mature works are noted for their lyricism, quiet charm, and precision. They include abstract ballets, such as *Symphonic Variations* (1946), short dramatic works, such as *Daphnis and Chloe* and *Tiresias* (both 1951), and full-length traditional ballets, such as *Cinderella* (1948), *Sylvia* (1952), *Ondine* (1958), and *The Dream* (1964). He has also appeared as a dancer in comedy and character roles.

Ashton-under-Lyne, municipal borough (1971 pop. 48,865), Lancashire, NW England, on the Tame River. Its industries include cotton spinning, weaving, and dyeing, coal mining, and the manufacture of diesel, gas, and oil engines. In 1974, it became part of the new metropolitan county of Greater Manchester.

Ashton-Warner, Sylvia, 1905-, British teacher and novelist, b. Stratford, New Zealand. For years a teacher of Maori children, Ashton-Warner developed many stimulating educational methods about which she wrote in the treatise *Teacher* (1963) and her autobiography *Myself* (1967). Her success as a teacher was the result of her thorough commitment to her work and to her conviction that communication, mutual response, is the most important aspect of teaching. *Spearpoint Teacher in America* (1972) recounts her experiences teaching in an experimental school in the United States. Ashton-Warner's novels are written in an exotic, rather florid style and usually concern strong, passionate women. They include *Spinster* (1958), *Incense to Idols* (1960), *Bell Call* (1964), *Greenstone* (1967), and *Three* (1970).

Ashtoreth (ăsh'tōrēth), Hebrew form of ASTARTE.

Ashur (ăsh'ər), founder of Tekoa. 1 Chron. 2:24, 4:5.

Ashur (ăsh'ōor), chief god of Assyria. Important as a god of war, he became the omniscient king of the pantheon, replacing the Babylonian Marduk. His name appears variously as Asur, Assur, Ashshur, Ashshur, and Ashir.

Ashurbanipal: see ASSURBANIPAL.

Ashurites (ăsh'ərīts), unidentified people mentioned in the Bible. 2 Sam. 2:9. There are two possible interpretations: (1) the Geshurites, as the Vulgate indicates, or (2) the house of Asher.

Ashurnasirpal II (ā'shōōrnā'zīrpāl), d. 860? B.C., king of ancient Assyria (884-860? B.C.), also called Ashurnazirpal II and Assurnasirbal II. One of the earliest of the Assyrian conquerors, he gained territory as far west as the Mediterranean. In initiating a system of installing Assyrian governors in conquered lands, Ashurnasirpal helped to create a centralized state. Excavations of the palace and temple built by Ashurnasirpal at CALAH revealed many bas-reliefs portraying the king's conquests in a narrative style. He was succeeded by his son Shalmaneser III.

Ashvath (āsh'vāth), Asherite 1 Chron 7:33

Ash Wednesday, in the Western Church, the first day of LENT, being the seventh Wednesday before Easter. On this day ashes are placed on the foreheads of the faithful to remind them of death, of the

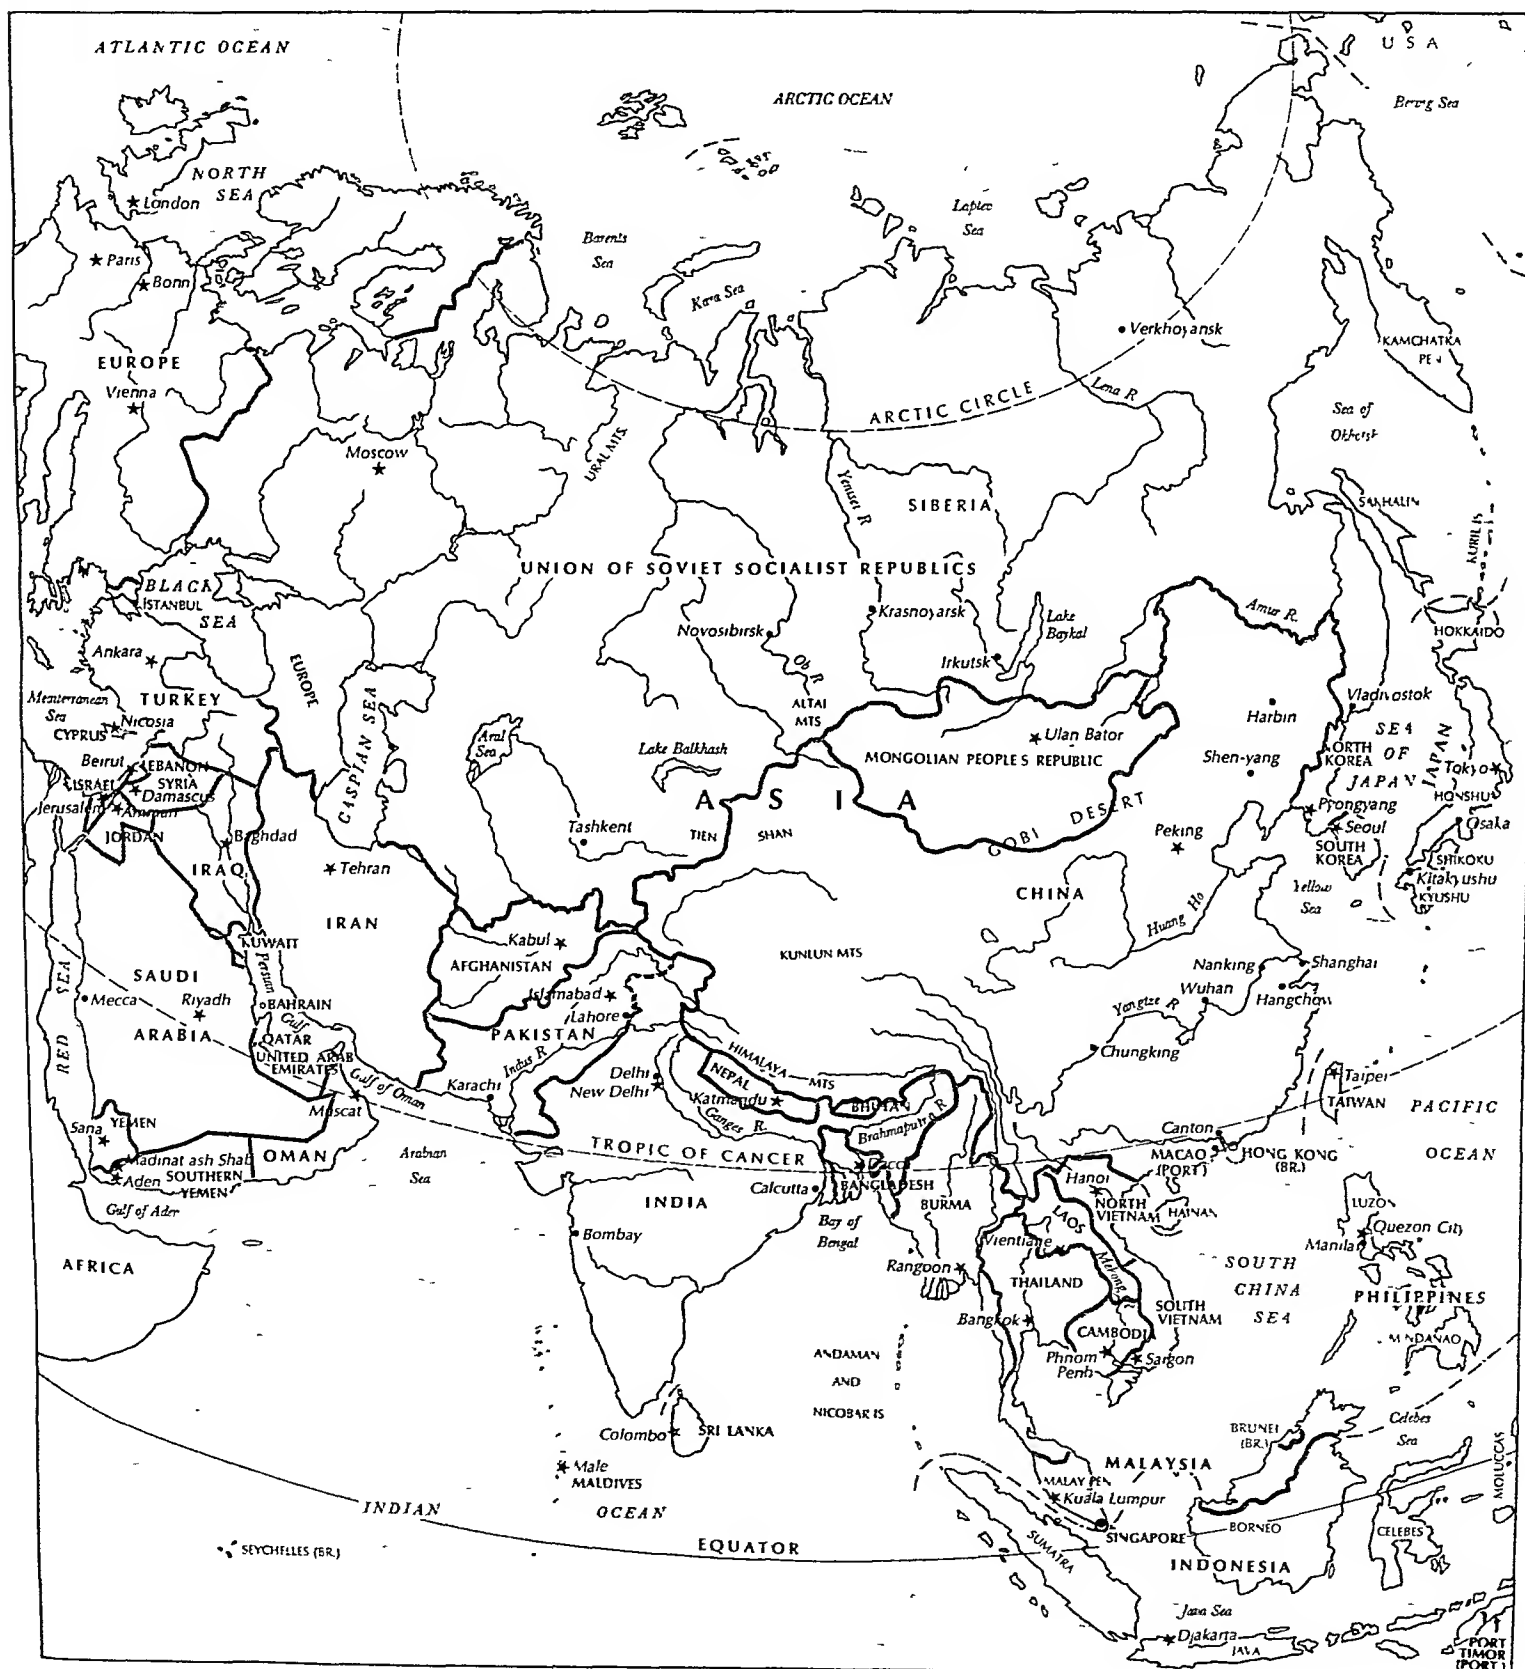

sorrow they should feel for their sins, and of the necessity of changing their lives. This practice dates from the early Middle Ages.

Asia, the world's largest continent, 17,139,000 sq mi (44,390,000 sq km), with about 2,044,000,000 people, more than half the world's total population.

Boundaries Asia's border with Europe—which, geographically, may be regarded as a peninsula of the Eurasian landmass—lies approximately along the Urals, the Ural River, the Caspian Sea, the Caucasus, the Black Sea, the Bosphorus and Dardanelles straits, and the Aegean Sea. The connection of Asia with Africa is broken only by the Suez Canal between the Mediterranean Sea and the Red Sea. In the far northeast of Asia, Siberia is separated from North America by the Bering Strait. The continent of Asia

is washed on the S by the Gulf of Aden, the Arabian Sea, and the Bay of Bengal, on the E by the South China Sea, East China Sea, Yellow Sea, Sea of Japan, Sea of Okhotsk, and Bering Sea, and on the N by the Arctic Ocean.

Physical Environment Geologically, Asia consists essentially of ancient Precambrian rocks—the Arabian and Indian peninsulas in the south and the central Siberian plateau in the north—which enclose a central zone of folded ridges. In accordance with this underlying structure, Asia falls into the following major physiographic structures: the northern lowlands covering W central Asia and most of Siberia, the vast central highland zone of high plateaus, rising to c. 15,000 ft (4,570 m) in Tibet and enclosed by some of the world's greatest mountain ranges (the

Himalayas, the Karakorum, the Kunlun, the Tien Shan, and the Hindu Kush), the southern peninsular plateaus of India and Arabia, merging, respectively, into the Ganges and Tigris-Euphrates plains, and the lowlands of E Asia, especially in China, which are separated by mountain spurs of the central highland zone. Mt Everest (29,028 ft/8,848 m), in Nepal, is the world's highest peak, the DEAD SEA (1,292 ft/394 m below sea level) is the world's lowest point. Great peninsulas extend out from the mainland, dividing the oceans into seas and bays, many of them protected by Asia's numerous offshore islands. Asia's rivers, among the longest in the world, generally rise in the high plateaus and break through the great chains toward the peripheral lowlands. They include the Ob, Yenisei, and Lena of Siberia, the Amur, Huang Ho, Yangtze, Si, Mekong, Salween, and Irrawaddy of E and SE Asia, and the Ganges-Brahmaputra, Indus, and Tigris-Euphrates of S and SW Asia. Central Asia has vast areas of interior drainage, including the Amu Darya, Syr Darya, Ili, and Tarim rivers, which empty into inland lakes or disappear into desert sands. The Aral Sea, Lake Balkhash, and Lake Baikal are among the world's largest lakes. Climatically, the continent ranges through all extremes, from torrid heat to arctic cold and from torrential rains (the product of monsoons) to extreme aridity (as in the Tarim Basin).

Regions. Asia can be divided into five regions, each possessing distinctive physical, cultural, economic, and political characteristics. Southwest Asia (Iran and the nations of ASIA MINOR, the FERTILE CRESCENT, and the ARABIAN PENINSULA), long a strategic crossroads, is characterized by an arid climate and irrigated agriculture, great petroleum reserves, and the predominance of Islam. South Asia (Afghanistan and the nations of the Indian subcontinent) is isolated from the rest of Asia by great mountain barriers and was once entirely under British rule. Southeast Asia (the nations of the southeastern peninsula and the East Indian archipelago) is characterized by monsoon climate, maritime orientation, the fusion of Indian and Chinese cultures, and a great diversity of ethnic groups, languages, religions, and politics. East Asia (China, Mongolia, Korea, and the islands of Taiwan and Japan) is located in the mid-latitudes on the Pacific Ocean, has a strong indigenous culture, and forms the most industrialized region of Asia. Soviet Asia (in the W central and northern third of the continent) accounts for about 75% of the area of the USSR and is the largest section of Asia controlled by one nation. Nomadic tribes have been settled and united under Soviet rule, and agricultural settlement and industrialization are progressing steadily.

Population, Economy, and Culture. The distribution of Asia's huge population is governed by climate and topography, with the monsoons and the fertile alluvial plains determining the areas of greatest density. Such are the Ganges plains of India and the Yangtze and northern plains of China, the small alluvial plains of Japan, and the fertile volcanic soils of Java and Indonesia. Urbanization, a concomitant of industrialization, is greatest in Japan, India, China, and Soviet Asia. Primitive hunting and fishing economies prevail in the forest regions of N and S Asia, and nomadic pastoralism in the central and southwestern regions, while industrial complexes are found in the coastal plains and rivers of S and E Asia. Because of extremes in climate and topography, less than 10% of Asia is under cultivation. Rice, by far the most important food crop, is grown for local consumption in the heavily populated countries (e.g., China, India, Bangladesh, and Japan), while countries with smaller populations (Burma, Thailand, Cambodia, and South Vietnam) are generally rice exporters. Other important crops are wheat, soybeans, peanuts, sugarcane, cotton, jute, silk, rubber, and tea. Asia's economy is predominantly agricultural, but regions where power facilities, trained labor, modern transport, and access to raw materials are available have developed industrially. Japan, China, Soviet Asia, India, North and South Korea, Taiwan, and Turkey are distinguished for their industrialization. In most of these countries, an iron and steel industry has grown on the basis of local coal and iron resources. Japan, the world's third largest steel producer, is the major exception. Contributing greatly to the income of Asian countries are vital mineral exports—petroleum in SW Asia, Soviet Asia, and Indonesia and tin in Malaysia, Thailand, and Indonesia. Asia's other valuable mineral exports include manganese from India and chromite from Turkey and the Philippines. China produces great amounts of tungsten and antimony.

The development of railroads is greatest in the industrialized countries, with Japan, India, China, and Soviet Asia having the greatest track mileage. Almost two thirds of Asia's indigenous population belongs to the Mongoloid groups. Major religions are Hinduism (in India), Buddhism (in Sri Lanka, Burma, Thailand, Cambodia, and Laos in its purest form, in Tibet and Mongolia as Lamaism, or Tibetan Buddhism, in China as an eclectic mixture with Confucianism and Taoism, in Japan as a mixture with Confucianism and Shinto), Islam (in SW and S Asia, W central Asia, and Indonesia), and Roman Catholicism (in the Philippines and South Vietnam).

Outline of History. Asia was the site of some of the world's oldest civilizations. The empires of Sumeria, Babylonia, Assyria, Media, and Persia and the civilizations of Islam flourished in SW Asia, while in the east the ancient civilizations of India, China, and Japan prospered. Later, nomadic tribes (Huns, Tatars, and Turks) in N and central Asia gave rise to great westward migration. Their tribal, military-state organizations reached their highest form in the 13th–14th cent. under the Mongols, whose court was visited by early European travelers, notably the Italian Marco Polo. The Portuguese explorer Vasco da Gama reached India by sea in 1498, and in N Asia Russian Cossacks crossed Siberia and reached the Pacific by 1640. With the formation of English, French, Dutch, and Portuguese trading companies in the 17th cent., great trade rivalry developed along the coasts of India, SE Asia, and China and resulted in increasing European colonial control of Asian lands. In the 19th cent. China and Japan opened their doors to foreign trade, with Japan rapidly rising to a world industrial and military power. World War II and the conflicts of its aftermath hit Asia heavily. In the postwar years, the center of gravity in international affairs tended to shift from Europe, the focus of both World Wars, to Asia, where the decolonization process resulted in the creation of many unstable nations. The Arab-Israeli conflict, the Korean War, and the emergence of Communist-ruled China, North Korea, and North Vietnam, were among the events that heightened tensions in Asia. In the 1950s the Western powers built up military alliances (the Baghdad Pact—later the Central Treaty Organization—in the Middle East, and the Southeast Asia Treaty Organization—SEATO) to help contain Soviet and Chinese domination of Asia. In the 1960s, however, the Sino-Soviet rift appeared to lessen the possibility of joint Communist efforts in Asia. At the end of World War II the United States, Britain, France, and the Netherlands were the chief outside influences in Asia, but in the postwar period India, Japan, and other Asian nations sought a more independent role on the world scene. In the 1960s the British decision to withdraw "east of Suez" and the U.S. determination in the wake of the Vietnam War to decrease its military presence in Asia foreshadowed new power alignments in the area. China's growing strength and increasing involvement in Asian affairs and the Soviet drive to expand relations with Asian states (particularly India and the Middle East Arab nations) became increasingly evident in the early 1970s. Among the conditions determining Asia's political future are the outcome of the long-simmering Arab-Israeli conflict in the Middle East, the relationships in the Indian subcontinent among India, Pakistan, and the new nation of Bangladesh, the resolution of the Vietnam War, with its implications for all Indochina, and the foreign policies of the United States, the USSR, China, Japan, and other countries with large stakes in Asia. See G. B. Cressey, *Asia's Lands and Peoples* (3d ed. 1963), W. Bingham, *A History of Asia* (1964), J. Romein, *The Asian Century* (1965), L. D. Stamp, *Asia: A Regional and Economic Geography* (rev. ed. 1967), C. A. Buss, *Asia in the Modern World* (1968), G. Wint, *Asia: A Handbook* (1967), R. G. Wilson, *Asia Awakes* (1970), W. G. East, O. K. Spate, and C. A. Fisher, ed., *The Changing Map of Asia* (5th ed. 1971), R. Grousset, *The Empire of the Steppes: A History of Central Asia* (1971), J. K. Fairbank, E. D. Reischauer, and A. M. Craig, *East Asia: Tradition and Transformation* (1973).

Asia Minor, great peninsula, c. 250,000 sq mi (647,500 sq km), extreme W Asia, generally coterminous with Asian Turkey, and usually synonymous with Anatolia. It is washed by the Black Sea in the north, the Mediterranean Sea in the south, and the Aegean Sea in the west. The Black and Aegean seas are linked by the Sea of Marmara and the two straits of the Bosphorus and the Dardanelles. Near the southern coast of Asia Minor are the Taurus Mts.,

the rest of the peninsula is occupied by the Anatolian plateau, which is crossed by numerous mountains interspersed with lakes. In ancient times most Oriental and Occidental civilizations intersected in Asia Minor, for it was connected with Mesopotamia by the Tigris and Euphrates rivers and with Greece by the Aegean and Mediterranean seas. The Hittites established the first major civilization in Asia Minor about 1800 B.C. Beginning in the 8th cent. B.C. Greek colonies were established on the coast lands, and the Greeks thus came into contact with Lydia, Phrygia, and Troy. The conquest (6th cent. B.C.) of Asia Minor by the Persians led to the Persian Wars. Alexander the Great incorporated the region into his empire, and after his death, in the wars of the Diadochi, it was divided into small states. It was reunified (2d cent. B.C.) by the Romans, but was subject to repeated attacks by invaders, notably the Arabs and the Seljuk Turks, while under the Byzantine Empire. After being held by the Crusaders for a short time in the early 13th cent., Asia Minor was gradually (13th–15th cent.) conquered by the Ottoman Turks. It remained part of the Ottoman Empire until the establishment of the Republic of Turkey after World War I.

Asiel (ä'së'ël), Simeonite 1 Chron. 4:35

Asimov, Isaac (äz'äm'öf), 1920–, American scientist and author, b. USSR, grad. Columbia (B.S., 1939, M.A., 1941, Ph.D., 1948). He became professor of biochemistry at Boston Univ. in 1955 and gained note with serious scientific works, but he reached wider audiences with his much-admired science-fiction stories such as *I, Robot* (1950, repr. 1970), *The Caves of Steel* (1954), and *The Gods Themselves* (1973). Asimov also received high praise for his popular introductions to science written for the layman, among them are *The Intelligent Man's Guide to Science* (2 vol., 1960, rev. ed. 1965), which surveys the fields of modern science, *Wellsprings of Life* (1960), which concerns evolutionary theory, and *The Stars in Their Courses* (1971). *Inside the Atom* (1961) is representative of his books for high school students.

Aske, Robert: see PILGRIMAGE OF GRACE

Askia Muhammad. see SONGHAI

Askja (as'kya), volcano, c. 4,950 ft (1,510 m) high, E central Iceland, one of the highest in Europe. Its great eruption of 1875 devastated a large area; Askja last erupted in 1961. Askja caldera, surrounded by mountains of tuff, contains Öskjuvatn, a crater lake c. 550 ft (170 m) deep.

Asmara (asma'ra, az-), city (1971 est. pop. 218,360), capital of Eritrea prov., N Ethiopia, at an altitude of c. 7,300 ft (2,225 m). A commercial and industrial center, it is connected by rail with the Red Sea port of Massawa. Textiles and clothing, processed meat, beer, shoes, and ceramics are the major industrial products. Asmara was a small village until the 1880s, when it became an Ethiopian regional administrative center. Occupied by the Italians in 1889, it became (1900) the capital of the Italian colony of Eritrea. In the 1930s, Asmara was rapidly developed as a base for the Italian invasion (1935–36) of Ethiopia; later, in 1941, the city was taken by British forces. It is the site of the Univ. of Asmara (1958).

Asmodeus (äs'mōdë'äs), DEMON of Hebrew story. He plays an important role in the book of Tobit. Tobit 3:8.

Asmoneans: see MACCABEES

Asnah (äs'na), head of a family that returned with Zerubbabel. Ezra 2:50.

Asnappar. see ASSURBANIPAL

Asnieres-sur-Seine (anyär'-sur-sën), formerly **Asnieres**, industrial suburb of Paris (1968 pop. 80,530). Hauts-de-Seine dept., N central France, on the Seine River. Boats and perfumes are the major manufactures.

Asoka (asō'kə), d. c. 232 B.C. Indian emperor (c. 273–c. 232 B.C.) of the MAURYA dynasty, grandson of CHANDRAGUPTA. One of the greatest rulers of ancient India, he brought nearly all India, together with Baluchistan and Afghanistan, under one sway for the first time in history. However, after his bloody conquest (c. 261 B.C.) of the state of Kalinga, Asoka was remorseful for the suffering he had inflicted, he converted from Brahmanism to BUDDHISM and abandoned wars of conquest. Thenceforth he proclaimed his belief in ahimsa, or nonviolence. Although tolerant of all faiths, he made Buddhism the state religion of India and erected numerous monasteries and stupas, regulated the slaughter of animals, and softened the harsh laws of his predecessors. He sent Buddhist missionaries throughout India and its adjacent lands and as far as Syria.

Egypt, and Greece His own son or brother headed the mission to Ceylon It is said that under his auspices a great Buddhist convocation was held at his capital, Pataliputra, its purpose was probably to suppress heresy and to confirm the Buddhist canon Knowledge of Asoka's rule is obtained chiefly from the many boulders and pillars inscribed with his pious exhortations, a notable example is at SARNATH India prospered and art flourished under the reign of Asoka, who, beyond his many imperial accomplishments, is most celebrated for his elevation of Buddhism from a simple Indian sect to a world religion After his death the Mauryan empire swiftly declined See studies by V A Smith (1909, repr 1964), Romila Thapar (1961), R D Mookerji (3d ed 1962), and B G Gokhale (1966), N A Nikam and R P McKeon, *Asoka, King of Magadha Edicts* (1958)

Asopus (as'op'as), in Greek mythology, river god He tried to prevent Zeus from abducting his daughter Aegina, but Zeus drove him off with a thunderbolt

Aso-san (ä'sō-sän), volcanic mountain, central Kyushu, Japan Aso-san is topped by one of the world's largest calderas (circumference 75 mi/121 km) that contains five volcanic cones Taka-dake (5,225 ft/1,593 m) is the highest cone, Naka-dake (4,340 ft/1,323 m) is an active volcano Cable cars carry people over the caldera Aso-san is part of Aso National Park (282 sq mi/730 sq km, est 1934), which also includes Kuju-san (5,866 ft/1,788 m), the highest peak of Kyushu

asp, popular name for several species of VIPER, one of which, the European asp (*Vipera aspis*), is native to S Europe It is also a name for the Egyptian COBRA (*Naja haje*) It is believed that the asp Cleopatra used to commit suicide was either that cobra or the horned viper (*Cerastes comutus*) of N Africa

Aspadana, Iran see ESFAHAN

asparagine (äspär'äjën), organic compound, one of the 22 α -AMINO ACIDS commonly found in animal proteins Only the L-stereoisomer participates in the biosynthesis of mammalian proteins Its structure is identical to that of the amino acid ASPARTIC ACID, except that the latter compound's acidic side-chain carboxyl group has been coupled with ammonia, yielding an amide Like GLUTAMINE, asparagine is im-

portant in the metabolism of toxic ammonia in the body

genus *Smilax* Asparagus is classified in the division MAGNOLIOPHYTA, class Liliatae, order Liliales, family Liliaceae

aspartic acid, organic compound, one of the 22 α -AMINO ACIDS commonly found in animal proteins Only the L-stereoisomer participates in the biosynthesis of proteins Its acidic side chain often adds a

negative charge and hence a greater degree of water-solubility to proteins in neutral solution and has been shown to be near the active sites of some enzymes (see PEPsin) Aspartic acid is not essential to the human diet It was discovered in protein in 1868

Aspatha (äs'pātha, äspā'-), one of the sons of Haman Esther 9:7

Aspen, city (1970 pop 2,437), alt 7,850 ft (2,390 m), seat of Pitkin co, S central Colo, on the Roaring Fork River, founded c 1879 by silver prospectors from Leadville, inc 1881 Once a booming silver camp (there is still some mining), it has been transformed by the private capital of a Chicago industrialist into a popular, modern, cosmopolitan ski resort The Aspen Institute for Humanistic Studies and the Aspen Music School (which holds an annual festival) are there

aspen: see WILLOW

Aspen Music Festival, annual summer event, held in Aspen, Colo A former silver-mining boom town, Aspen fell into decline and was culturally revived by Walter Paepcke, who formed the Aspen Institute for Humanistic Studies The Aspen Music Festival and Music School were founded under the auspices of the Institute in 1949 The Music Festival is held for nine weeks every summer Artists from all over the world come to teach and to perform in recitals, concerts, and operas In 1970 the festival presented a Beethoven retrospective concert series under the direction of Jorge Mester

asperges (äspür'jes), ceremonial sprinkling of the people with holy water by the priest before the Sunday High Mass in the Roman Catholic Church The accompanying antiphon begins, *Asperges me, Domine, hyssopo et mundabor* [Thou shalt sprinkle me with hyssop, O Lord, and I shall be cleansed] At Easter time the antiphon is different, beginning, *Vidi aquam* [I saw water], this is based on Ezek 47:2

asphalt (äs'fölt, -fält), brownish-black substance used commonly in road making, roofing, and waterproofing Chemically, it is a natural mixture of hydrocarbons It varies in consistency from a solid to a semisolid, has great tenacity, melts when heated, and when ignited will burn with a smoky flame leaving very little or no ash It is found in nature in deposits called asphalt lakes Natural asphalt was probably formed by the evaporation of petroleum Asphalt is obtained as a residue in the distillation or refining of petroleum This is its important commercial source It occurs also in asphalt rock, a natural mixture of asphalt with sand and limestone, which when crushed is used as road-building material Asphalt is also used in the manufacture of paints and varnishes, giving an intensely black color

asphodel (äs'fädäl'), name for plants of several genera of the family Liliaceae (LILY family) The true asphodels belong to two small and very similar genera (*Asphodelus* and *Asphodeline*) of the Mediterranean region and India The showy flower spike of the former is usually white, of the latter, yellow Both are stemless, hardy herbs The asphodel (or king's spear) of the ancients, sacred to Persephone and associated with the fields of the dead, was *Asphodeline lutea*, the asphodel of the early French and English poets was a narcissus The false asphodel is *Tofieldia*, represented in North America by *T. glutinosa* and a few other species The turkeybeard (*Xerophyllum asphodeloides*) of the Atlantic coastal plains is also called mountain asphodel Asphodels are classified in the division MAGNOLIOPHYTA, class Liliatae, order Liliales, family Liliaceae

asphyxia (äs'fik'sēa), deficiency of oxygen and excess of carbon dioxide in the blood and body tissues Asphyxia, often referred to as suffocation, usually

results from an interruption of breathing due to mechanical blockage of the breathing passages, paralysis of the respiratory muscles following electric shock, inundation of the lungs as may occur with pneumonia or drowning, or substitution of carbon monoxide for oxygen in the red blood cells Symptoms of asphyxia vary but may include light-headedness, nausea, and gasping, followed by unconsciousness and death An area quickly affected is the cerebral cortex, the brain center for speech and other conscious behavior, it can be irreparably damaged by as little as five minutes of oxygen deprivation Damage to the medulla may result in interference with the heartbeat or other involuntary processes ARTIFICIAL RESPIRATION is the most practical first-aid procedure for asphyxia Trained personnel can provide oxygen and employ techniques to maintain the heart rate and respiration (see RESUSCITATOR)

Aspida (äspē'dä, -thä) [Gr, =shield, an acronym formed by the Greek initials for *Officers, Save the Country, Ideals, Democracy, Meritocracy*], secret organization of Greek left-wing junior army officers founded in the 1960s, it allegedly aimed at deposing King Constantine II, purging the government of rightists and royalists, and establishing a leftist regime Charges that Aspida members—reportedly led by Andreas PAPANDREOU—had penetrated the Greek army contributed to the downfall of Premier George Papandreu's Central Union government in July, 1965

Aspinwall: see COLÓN, Panama

aspirin, acetyl derivative of salicylic acid that is commonly used to lower fever, relieve pain, and reduce inflammation (see SALICYLATE) Aspirin is believed to act by interfering with the synthesis of specific PROSTAGLANDINS in the body It is used to relieve headache, muscle and joint pain, and the inflammation caused by rheumatic fever and arthritis Normal dosage may cause nausea, vomiting, diarrhea, or gastrointestinal bleeding Large doses cause acid-base imbalance and respiratory disturbances Acetaminophen (Tylenol), which does not cause gastric irritation but does lower fever and relieve pain, is often substituted for aspirin See ANALGESIC

Asplund, Erik Gunnar (ä'rīk göön'när as'pländ), 1885-1940, Swedish architect He designed the central library of Stockholm (completed 1928), but he is best known for the group of pavilions that he planned for the Stockholm Exhibition of 1930 There Asplund employed the forms of the new architecture but added a dynamic line and a dignity of proportion

Aspropotamos: see AKHELOOS, river, Greece

Asquith, Margot: see under OXFORD AND ASQUITH, HERBERT HENRY ASQUITH, 1ST EARL OF

Asriel (äs'rēel), descendant of Manasseh Joshua 17:2, Num 26:31 Asriel 1 Chron 7:14

ass, hoofed, herbivorous mammal of the genus *Equus*, closely related to the HORSE It is distinguished from the horse by its small size, large head, long ears, and small hooves There are two living species *Equus hemionus*, the Asian ass, and *E. asinus*, the African ass The latter species includes the domesticated variety, *E. asinus asinus*, commonly known as the donkey A male ass is called a jackass and a female, a jenny Wild asses are swift desert animals that may attain speeds of up to 40 mi (60 km) per hr They live in herds of up to 1,000 animals The Asian wild ass typically has a sandy-colored coat with lighter-colored legs and belly, a short erect black mane, a black spinal stripe, and a black tail tuft Its neigh is shrill Different races of this species vary in size, but all are smaller than the African ass They were once widely distributed across Asia, but they have been crowded out of their grazing lands by domestic livestock and have been hunted for their flesh and hides Each race is now restricted to a very limited territory Among them are the Persian ass, or ONAGER, of central Asia, the Mongolian ass, or kulan, of NE Asia, the Tibetan ass, or kiang, presently the most numerous Asian wild ass, and the Indian ass, or ghorkhar All are considered endangered, and the continued survival of the onager and the kulan is particularly threatened The Syrian wild ass, of SW Asia, is probably already extinct The two wild races of the African species, called Nubian and Somali wild asses, are also becoming rare They are found in the mountains and deserts of NE Africa The African ass averages about 4½ ft (135 cm) in shoulder height, it is grayish in color, with longer ears and mane than the Asian ass, and with a char-

portant in the metabolism of toxic ammonia in the body The relatively unreactive, neutral amide group on the side chain of asparagine confers no special properties upon this amino acid once it is included within a protein by two peptide bonds Asparagine is not essential to the human diet, since it can be synthesized from aspartic acid The first amino acid to be isolated from a natural source, asparagine was purified from asparagus juice in 1806, proof of the occurrence of this amino acid in proteins was finally obtained in 1932

asparagus, perennial garden vegetable (*Asparagus officinalis*) of the family Liliaceae (LILY family), native to the E Mediterranean area and now naturalized over much of the world As in the other species of this Old World genus of succulent plants, the stems are green and function as leaves, while the leaves themselves are reduced to small scales The tender shoots of asparagus are cut and eaten in the spring It grows wild in the salt marshes of Europe and Asia, where it has also been under cultivation from antiquity In early times it was regarded as a panacea Cato in his *On Farming* gave directions for growing asparagus similar to those in a modern manual of agriculture The San Joaquin valley is the main asparagus-growing area of the United States, over half the crop is processed, i.e., canned or frozen The feathery sprays of the mature garden asparagus are sometimes used by florists, but more popular for decorative purposes are other plants of the same genus—the asparagus fern (*A. plumosus*, not a true fern) and the florists' smilax (*A. asparagoides*), both climbing vines native to S Africa The wild smilax, usually called greenbrier, belongs to the

acteristic loud, harsh bray. Its descendant, the donkey, is the oldest domestic beast of burden, it is believed to have been domesticated in Egypt by c 4000 B.C. A variety of the Asian ass was used in ancient Mesopotamia but did not survive as a domestic animal, all modern domestic donkeys are descended from the African species. The donkey is still used widely as a pack and draft animal in underdeveloped regions of the world. Although not as swift or powerful as the horse, it is strong for its size and has great powers of endurance. Donkeys are more surefooted than horses in mountainous country and are cheaper to maintain, as they feed on dry scrub. They may live up to 47 years, about twice as long as a horse. In some regions the donkey is crossbred with the horse to produce a MULE. The donkey was once widely used in Mexico and the SW United States, where it was known by its Spanish name of *burro*. A large population of feral donkeys (wild descendants of domesticated animals) now exists in the deserts of that region. Feral donkeys are also found in the Old World, where they have given rise to some confusion about the number of true wild asses left in existence. Asses are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Perissodactyla, family Equidae.

Assab (asab'), town (1970 est. pop. 15,000), Eritrea prov., E Ethiopia, a port on the Red Sea. Exports include salt, coffee, oilseeds, and hides and skins. The town has a petroleum refinery. Once the terminus of caravans from the interior of Ethiopia, Assab was acquired by a private Italian shipping company in 1869. In 1882 it was taken over by the Italian government, and in 1890 Assab was included in the colony of Eritrea. The name also is spelled Aseb.

Assad, Hafez al- (hafēz' al-as-sad'), 1928-, president of Syria. He graduated (1953) from the Syrian Military Academy and advanced through the ranks to become a general. He served (1965-70) as Syria's Minister of Defense and commander in chief of the air force. Using that position, Assad was able to become the most powerful figure in Syria, and in 1965 he became the country's president after leading a coup d'état. He is considered a militant anti-Zionist and a strong supporter of Palestinian commando groups.

As Salamiya (as-sālām'ēya), town, W central Syria. It is a transportation center situated in a fertile plain where cereals, vegetables, and cotton are grown. As Salamiya was conquered by the Arabs in the 7th cent. and built up under the early Abbasid caliphate. The Ismailis chose the town as their center c 860. It was later destroyed (903) by the Karmathians and then came under Fatimid control. Taken by the Ottoman Empire in the 16th cent., the town declined until it was resettled by Ismailis in the 19th cent. The name also appears as Selemyia.

Assam (āsām'), state (1971 pop. 14,630,422), c 30,000 sq mi (77,700 sq km), extreme NE India. SHILLONG is the capital. Almost completely separated from India by Bangladesh (formerly East Pakistan), Assam is bordered by Burma on the east and China and Bhutan on the north. The terrain consists largely of hill ranges running generally from northeast to southwest and separated by streams and rivers that flow southwest. The river valleys, particularly those of the Brahmaputra and Surma, contain the richest soil and support more than half of the population. The rainfall is often excessive, Cherrapunji in the southwest reputedly has the heaviest precipitation in the world (c 430 in /1,092 cm annually). Tea, grown on large plantations, is by far the principal crop. Rice, citrus fruit, sugarcane, sesame, cotton, and jute are also grown. Industry is mainly limited to the processing of agricultural products. The hills produce abundant timber and some coal and limestone. Assam is an important oil-producing region, there are refineries at Digboi and Nunmati. Rail and road transportation is limited. Calcutta, in West Bengal state, is the nearest large Indian city. Assam has a highly heterogeneous population. Tribal peoples, such as the Nagas, Lushais, and Garos, constitute a large part of the populace. Assamese, a dialect related to Bengali, is the predominant language. The Ahom dynasty (from which the name Assam derives) established its rule in Assam c 1400 and held it intermittently for four centuries. Aurangzeb, the Mogul emperor, conquered Assam in 1661-62 but ruled it for only a short time. The British assisted the Assamese several times in expelling Burmese invaders. By the Treaty of Yandabo (1826), ending an Anglo-Burmese war, Great Britain acquired Assam, it was administered as part of Bengal until 1919, when it became a governor's province. It was made a self-governing province in

1937. A southwest section was incorporated in 1947 into East Pakistan. Education, particularly for the tribal peoples, has been expanded. Assam's first university was opened in 1948. There were serious riots in 1959-60 when Hindu refugees, fleeing from Muslim East Pakistan, settled in Assam. More refugees fled to Assam from East Pakistan in 1971. In 1959 the Chinese invaded the North-East Frontier Agency (now the union territory of Arunachal Pradesh), which is N of Assam, and overran a large part of the area, threatening the tea plantations and oil fields of Assam. To improve its defenses, India then embarked on a vast road-construction program in Assam. Assam is governed by a chief minister and cabinet responsible to an elected unicameral legislature. The states of Assam, Nagaland, Meghalaya, Manipur, and Tripura and the union territories of Mizoram and Arunachal Pradesh have a common governor appointed by the president of India.

Assamese (ās'āmēz'), language belonging to the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See INDO-IRANIAN LANGUAGES.

Assandun, battle of (ā'sandən), a victory by the Danes under CANUTE over the English led by EDMUND IRONSIDE. The battle was fought Oct. 18, 1016, at what is now Ashington, in SE Essex.

Assassin (āsās'īn) [Arab, =user of hashish], European name for the member of a secret order of the Ismaili sect of ISLAM. They are known as Nizaris after Nizar ibn al-Mustansir, whom they supported as caliph. The members of the order were distinguished by their blind obedience to their spiritual leader and by their use of murder to eliminate foes. The order was founded by Hasan ibn al-Sabbah when he gained control (c 1090) of the mountain fortress of Alamut, located S of the Caspian Sea. The order spread over Persia and Syria, gaining control of many strongholds, and it soon inspired terror throughout the Muslim world. The founder took the title Sheikh al-Jabal and was known in Western Europe as the Old Man of the Mountain. Under him members were organized into strict classes, according to degree of initiation into the secrets of the order. The most important of the classes were the devotees, who sought martyrdom and were the instruments of assassination. It is generally believed that they were given hashish and treated to great sensual pleasures in their strongholds as a foretaste of the pleasures of paradise that they were promised if they died at their duties. Hasan and the grand masters who ruled the order after him wielded great political power until the coming of the Mongols. Hulagu Khan attacked and destroyed (1256) their fortresses and massacred most of the Persian branch of the sect. The Syrian branch, with which the Crusaders came in contact, suffered a similar fate at the hands of Baybars, the Mameluke sultan of Egypt. Only scattered groups of the order survived, they are said to persist today, particularly in N Syria. Tales of the Crusaders and the writings of Marco Polo brought the Assassins and the Old Man of the Mountain into European folklore. The term *assassin* came into English and is used today to mean murderer and particularly one who kills for political motives. See Bernard Lewis, *The Assassins* (1967), Enno Franzius, *History of the Order of Assassins* (1969).

assassin bug, common name for members of the family Reduviidae, one of the largest and most varied groups belonging to the order Hemiptera (suborder Heteroptera). Assassin bugs are generally brownish to black, medium-sized to large insects, with heads that are elongate and narrow compared to the thorax. The predaceous front legs are used for grasping prey. Most assassin bugs are found on foliage, and some occasionally enter houses. The majority of species are predaceous on other insects, but a few are bloodsucking and will bite humans if carelessly handled. The bite of some species is painless, while the bite of others is extremely painful, resulting from a venom produced by the bug, the effect of which lasts for months. A painful biter is the common, black, wheel bug (*Ariulus cristatus*), easily identified by the semicircular crest resembling a cogwheel on the top of its prothorax. Another is the masked hunter (*Reduvius personatus*), often found in houses where it preys on bedbugs and other insects. The adults often bite humans around the mouth, hence its other common name, the kissing bug. In the Southwest assassin bugs of the genus *Triatoma* are common. Called conenoses or Mexican bedbugs, they also invade houses and may bite man. In Central and South America certain species of this genus are the vectors for a highly fatal TRYPA-

NOSOME disease known as Chagas' disease. Assassin bugs are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera, family Reduviidae.

Assateague Island National Seashore: see NATIONAL PARKS AND MONUMENTS (table).

assault, in law, any unlawful attempt to use violence with the intent and the apparent ability to do bodily harm to another. If there is actual violence, the offense is BATTERY. Every criminal assault is a TORT, for which the party assaulted may sue for damages. At common law, assault was a MISDEMEANOR. Under modern criminal statutes, certain degrees of assault (e.g., assault with intent to kill, to do great bodily harm, to rape) are recognized as aggravated assaults and are felonies, though simple assault is still a misdemeanor. Malevolence and recklessness (e.g., driving a car in reckless disregard of human life) have come to constitute felonious assault in most jurisdictions. See W. L. Prosser, *Handbook of the Law of Torts* (3d ed. 1964).

assaying (āsā'yīng, ās'āyīng), in metallurgy, process of determining the specific metallic content of an ore, alloy, or other substance, especially one containing precious metals. It consists, in some cases, of subjecting the substance to complete chemical analysis and, in others, of simply determining the quantity present of one or more of the metal constituents. An accurate assay depends first upon procuring a representative sample of the ore in question. Since distribution of the ore's components is not uniform, a common method employed in obtaining this sample is to procure several samples, crush and mix them together, and from the final mass take the sample to be assayed. Assays are said to be gravimetric when the weight of the metal is determined and volumetric when the analysis involves the volume of the metal in solution as compared to that in a standardized solution. A wet assay (one which involves the use of liquid reagents) is generally used in a determination of weight. In a dry assay the ore is fused and the metal is finally obtained in a pure state. The U.S. government has assay offices in many cities.

assemblage: see COLLAGE.

Assemblies of God, religious sect, the largest Pentecostal organization in the United States, founded at Hot Springs, Ark., in April, 1914. In doctrine the Assemblies of God affirm the basic teachings of PENTECOSTALISM (i.e., baptism with the Holy Spirit as evidenced through GLOSSOLALIA and divine healing, and the daily presence of the charismatic gifts basic to the early church) and of FUNDAMENTALISM, emphasizing the premillennial belief in a return of Jesus Christ and his saints to reign over a period of peace and righteousness. The U.S. membership, numbering nearly 600,000, is organized into over 8,500 local autonomous churches with a general council and a general presbytery formulating and administering policies respectively. The sect maintains some 900 missions in 75 countries, the largest number being in Brazil. See Klaude Kendrick, *Promise Fulfilled: A History of the Modern Pentecostal Movement* (1961), W. W. Menzies, *Anointed to Serve* (1971).

assembly, unlawful: see RIOT, ROUT, AND UNLAWFUL ASSEMBLY.

assembly line, manufacturing technique in which a product is carried by some form of mechanized conveyor between stations at which the various operations necessary to its assembly are performed. It is used to assemble quickly large numbers of a uniform product. When its output is high, the cost per unit is relatively low. However, it is somewhat inflexible, as it must be designed and installed for a particular product. Also, the operations on the product must be performed in a sequence that is strictly ordered or very nearly so. A malfunction or shortage of parts that shuts down a single assembly station necessitates shutdown of the entire line. Some automobile manufacturers have found that if full crews are used to assemble cars unit by unit, the decrease in errors and the consequent decrease in rejects more than counterbalance the cost penalty involved in abandoning the assembly line.

Assen (as'an), city (1971 pop. 40,471), capital of Drenthe prov., NE Netherlands. It is an administrative and industrial center. Its main growth began in 1945.

Asser (ās'ar), d. 909, Welsh clergyman, monk of St David's Abbey, Pembrokeshire. He went c 884 to the court of King Alfred, helped Alfred learn Latin, and later was made a bishop. He is remembered for his biography of Alfred to 893, apparently modeled on that of Charlemagne by Einhard. He combined a

translation of some text of the Anglo-Saxon Chronicle with his original observations on Alfred's life

Asser, Rab: see ASHI, RAB

Asser, Tobias Michael Carel (tōbē'ās mē'khāl kārāl ās'ar), 1838-1913, Dutch jurist. He was a delegate to many international conferences, including the Hague Conference of 1899, and he wrote on international law. A proponent of international arbitration, he shared the 1911 Nobel Peace Prize with Alfred Fried.

Asshurim (āshōō'rīm), unidentified Arabian tribe, whose eponym is named in Gen. 25:3.

Assideans: see HASIDIM

assignats (ās'ignāts, āsēnyā'), paper currency issued during the FRENCH REVOLUTION. To redeem the huge public debt and to counterbalance the growing deficit, the revolutionary constituent assembly issued (Dec., 1789) treasury notes, called assignats, to the amount of 400 million livres at 5% interest. These were intended as short-term obligations pending the sale of confiscated crown and church land. They were made legal tender in April, 1790, and subsequent issues bore no interest. Inflation resulted, and early in 1796 the assignats in circulation amounted to less than 1% of their original value, their value did not even cover the cost of printing them. *Mandats territoriaux* [land notes], adopted in 1796 as a new currency also based on confiscated lands, were also soon depreciated. Inflation stopped only when all paper currency was demonetized and redeemed at the rate of 3,000 livres in assignats or 100 francs in land notes to one franc in gold. On May 21, 1797, all unredeemed assignats were declared void. See study by S. E. Harris (1930, repr. 1969).

Assiniboine (āsīn'abōin), river, 590 mi (950 km) long, rising in S. Sask., Canada, and flowing SE into Man. then E to the Red River at Winnipeg, named for the Assiniboin Indians. The Qu'Appelle and Souris rivers are its chief tributaries. The Assiniboine valley is one of Canada's leading wheat growing areas. The river was discovered by the Verendrye family in 1736, and forts were built at its mouth and near the site of Portage la Prairie. Settlement spread westward along the river from the Red River valley to the plains.

Assiniboine, Mount, 11,870 ft (3,618 m) high, on the British Columbia-Alta. line, Canada, on the Continental Divide in the Rocky Mts. It is the focal point of Mt. Assiniboine Provincial Park (20 sq mi/52 sq km, est. 1922).

Assiniboin Indians (āsīn'abōin'), North American Indians whose culture is that of the N. Great Plains, their language belongs to the Siouan branch of the Hokan-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). At the time of the first contact with European settlers they had no permanent village sites, they moved about as their search for food required. They were a branch of the Yanktonai Dakota, who moved north and westward prior to the 17th cent. to the region of Lake Winnipeg, later they went to the upper Saskatchewan and the upper Missouri rivers. After the acquisition of horses and firearms in the 18th cent. they became a typical Plains tribe. They were allied with the Cree against the Blackfoot. The Assiniboin in the United States now live in the Fort Belknap and Fort Peck reservations in Montana, where they number more than 4,000, another 1,000 live in Canada. See M. S. Kennedy, ed., *The Assiniboines* (new ed. 1961), Dan Kennedy, *Recollections of an Assiniboine Chief*, ed. by J. R. Stevens (1972).

Assinie (āsēnē'), town, SE Ivory Coast, on a lagoon off the Gulf of Guinea. Because of its location on the coast and its contacts with the interior, Assinie became an early stopping place for European traders who sought gold and ivory. Portuguese merchants came to Assinie in the late 16th cent. French missionaries established a temporary post there in 1637, and a French fort and merchant community were maintained from 1701 to 1703. French traders returned in the early 19th cent. In 1842-43 the French gained treaty rights in the town and built a new fort. Assinie became a center of the palm oil trade, and coffee plantations were established nearby. The first European school in the Ivory Coast was opened there in 1887. In the 20th cent. the town declined as trade shifted to nearby Abidjan.

Assir (ās'ir) 1 Son of Korah. Ex. 6:24, 1 Chron. 6:22. 2 Ancestor of Samuel. 1 Chron. 6:23, 37. 3 Son of Jeconiah, according to AV and RV, translated as "Jeconiah, the Captive" in RSV. 1 Chron. 3:17.

Assis, Joaquim Maria Machado de: see MACHADO DE ASSIS, JOAQUIM MARIA.

Assisi (ās-sē-zē), town (1971 pop. 23,777), Umbria, central Italy. A religious and tourist center, it is situ-

ated on a hill in the Apennines with a magnificent view of the plains below. Although a well-known town in Roman times and throughout the Middle Ages, it owes its modern fame chiefly to St. Francis of Assisi (see FRANCIS, SAINT), who was born there in 1182 and died there in 1226. Above the saint's tomb are two Gothic churches (both consecrated 1253)—the lower church and the upper church, they are decorated with frescoes depicting the life of St. Francis and other scenes, executed by Cimabue, Giotto, Martini, and others. The Franciscan convent nearby has a valuable library. Other landmarks in Assisi are the Cathedral of San Rufino (begun 1140), the Church of Santa Chiara (1257-65), and a 14th-century castle. In the plain below the town is the imposing late-Renaissance Church of Santa Maria degli Angeli (1569-1679), built around the little chapel of Porziuncola, where St. Francis relinquished active leadership of his order. Also near the town are the Carceri Hermitage (15th cent.) and the Convent of San Damiano (begun 11th cent.).

Associated Press: see NEWS AGENCY

association, in psychology, a connection between two sensations, feelings, or ideas by virtue of their previous occurrence together in experience. When an association has been formed, one member of the pair tends to remind an individual of its partner. The concept of association, developed by Plato and Aristotle, entered contemporary psychology through the empiricist philosophers Locke, Berkeley, Hume, and Hartley, and the British associationist school of psychology of James Mill, J. S. Mill, and others (see ASSOCIATIONISM). Translated into the stimulus-response terms of BEHAVIORISM, association has been thought of as the basis of learning, conditioning, and creative thinking. The frequency of occurrence of paired experience and the principle of reinforcement are often invoked to explain associative learning, however, GESTALT psychologists, who believe that association between items is dependent on the relation of the items to each other, interpret association as an aftereffect of perceptual organization. In a basic technique in psychoanalysis known as free association, the patient voices his thoughts exactly as they occur to him, even though they may seem trivial, absurd, or shocking. This procedure is designed to reveal the areas of basic conflict in the patient and to bring into consciousness traumatic events and desires that have been repressed. It rests on the assumption that the originally repressed material and distorted derivatives may be brought to awareness by relating contemporary thoughts to earlier experiences.

associationism, theory that all consciousness is the result of the combination, in accordance with the law of ASSOCIATION, of certain simple and ultimate elements derived from sense experiences. It was developed by David HARTLEY and advanced by James MILL. Associationist principles continue to be important in the psychology of learning.

Association of Producing Artists—Phoenix (APA-Phoenix), a coalition of a theatrical touring company (APA) and a producing organization (Phoenix) formed to present theater classics off-Broadway. The APA was founded by Ellis Rabb in New York City in 1960. Two years later it became affiliated with the Professional Theatre Program of the Univ. of Michigan. Among the major productions mounted by the APA-Phoenix were *Pantagloize*, *The Misanthrope*, and *You Can't Take It with You*.

associative law, in mathematics, law holding that for a given operation combining three quantities, two at a time, the initial pairing is arbitrary, e.g., using the operation of addition, the numbers 2, 3, and 4 may be combined $(2+3)+4=5+4=9$ or $2+(3+4)=2+7=9$. More generally, in addition, for any three numbers a , b , and c the associative law is expressed as $(a+b)+c=a+(b+c)$. Multiplication of numbers is also associative, i.e., $(a \times b) \times c = a \times (b \times c)$. In general, any binary operation, symbolized by \circ , joining mathematical entities A , B , and C obeys the associative law if $(A \circ B) \circ C = A \circ (B \circ C)$ for all possible choices of A , B , and C . Not all operations are associative. For example, ordinary division is not, since $(60 \div 12) \div 3 = 5 \div 3 = 5/3$, while $60 \div (12 \div 3) = 60 \div 4 = 15$. When an operation is associative, the parentheses indicating which quantities are first to be combined may be omitted, e.g., $(2+3)+4=2+(3+4)=2+3+4$.

assonance: see RHYME

Assos (ās'ōs) or **Assus** (–ās), ancient city, Mysia, NW Asia Minor, on the Gulf of Adramyttium E of Point Lectum, westernmost point of Asia. St. Paul passed through Assos (Acts 20:13,14).

Assuan: see ASWAN, Egypt

Assumption of the Virgin: see MARY

Assur: see ASSYRIA

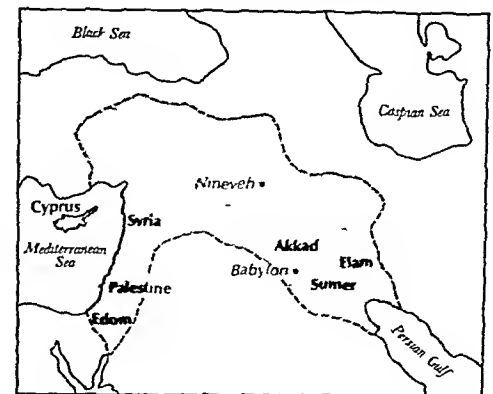

assurance: see INSURANCE

Assurbanipal (ā'sōōrbā'nēpāl) or **Ashurbanipal** (ā'shōōr–), d. 626? B.C., king of ancient Assyria (669-633 B.C.), son and successor of ESAR-HADDON. The last of the great kings of Assyria, he drove Taharka out of Egypt and firmly established NECHO in power there only to have Necho's son PSAMTIK revolt in 660 B.C. and wrest Egypt permanently from Assyria. The uprising took place during a campaign by Assurbanipal against the Elamites and Chaldeans. His brother, in command at Babylon, also headed a serious revolt by the enemies of the king. This insurrection was suppressed, though not without difficulty, and in retaliation, Assurbanipal took Babylon and slaughtered (648 B.C.) many of the inhabitants. He then defeated Elam and sacked Susa, Elamite power disappeared. Under Assurbanipal, Assyria reached the height of sumptuous living. The famous lion-hunt reliefs in the royal palace at Nineveh date from his reign and are among the finest examples of ancient sculpture. Assurbanipal was interested in learning, excavations at Nineveh have uncovered 22,000 clay tablets from his library—the chief sources of knowledge of ancient Mesopotamia. Among the tablets were found copies of the Babylonian flood and creation stories as well as historical and scientific literature. His reign ended the greatness of the empire (although two of his sons ruled briefly after his death), and Assyria succumbed to the Medes and the Persians only a few years later. His great expenditures in wars to preserve the state contributed somewhat to its collapse. Assurbanipal is probably the Assnapper or Osnapper of Ezra 4:10. He is identified with, but only faintly resembles, the SARDANAPALUS of the Greeks.

Assurnasirbal II: see ASHURNASIRPAL II

Assus, variant of ASSOS

Assyria (ās'irēā), ancient empire of W. Asia. It developed around the city of Ashur, or Assur, on the upper Tigris River and south of the later capital, Nineveh. The nucleus of a Semitic state was forming by the beginning of the 3d millennium B.C., but it was overshadowed by the greatness of Sumer and Akkad. Ashur was Assyria's chief god, but the gods of the Babylonians and Hittites were also honored. In the 17th cent. B.C., Assyria expanded briefly, but it soon relapsed into weakness. The 13th cent. B.C. saw Assyria threatening the surrounding states, and under TIGLATHPILESER I Assyrian soldiers entered the kingdom centered about Urartu (Ararat, see ARMENIA), took Babylonia, and crossed N. Syria to reach the Mediterranean. This empire was, however, only ephemeral, and Assyrian greatness was to wait until the 9th cent., when ASHURNASIRPAL II came into power. He was not only a vigorous and barbarously cruel conqueror who pushed his conquests N. to Urartu and W. to Lebanon and the Mediterranean, but he was also a shrewd administrator. Instead of merely making conquered kings pay tribute, he installed Assyrian governors so that he could have more control over the empire. Shalmaneser III (see under SHALMANESER I) attempted to continue this policy, but, although he exacted heavy tribute from Jehu of Israel and claimed many victories, he failed to establish hegemony over the Hebrews and their Aramaic-speaking allies. The basalt obelisk, called the Black Obelisk (British Mus.), describes the expeditions and conquests of Shalmaneser III. Raids from Urartu were resumed and grew more destructive after the death of Shalmaneser. CALAH, the capi-

Assyrian Empire (c. 650 B.C.)

tal of Assyria during the reigns of Ashurnasirpal II and Shalmaneser III, has been excavated. In the 8th cent B C conquest was pushed by TIGLATHPILESER III. He subdued Babylonia, defeated the king of Urartu, attacked the Medes, and established control over Syria. As an ally of Ahaz of Judah (who became his vassal), he defeated his Aramaic-speaking enemies centering at Damascus. His successor, Shalmaneser V, besieged Samaria, the capital of Israel, in 722-721 B C, but it was SARGON, his son, who completed the task of capturing Israel. Sargon's victory at Raphia (720 B C) and his invasions of Armenia, Arabia, and other lands made Assyria indisputably one of the greatest of ancient empires. His son SENNACHERIB devoted himself to retaining the gains his father had made. He is particularly remembered for his warfare against his rebellious vassal, Hezekiah of Judah. Sennacherib's successor, ESAR-HADDON, defeated the Chaldeans, who threatened Assyria, and carried his conquests (673-670) to Egypt, where he deposed Tirhakah and established Necho in power. Under ASSURBANIPAL, Assyria reached its zenith and approached its fall. When Assurbanipal was fighting against the Chaldeans and Elamites, an Egyptian revolt under Psamtik I was successful. The rapid decline of Assyria had begun, but the reign of Assurbanipal saw the Assyrian capital of NINEVEH at its height of splendor. The library of cuneiform tablets he collected ultimately proved to be one of the most important historical sources of antiquity. The magnificent Assyrian bas-reliefs reached their peak. The royal court was luxurious. Assyrian culture owed much to earlier Babylonian civilization, and in religion Assyria seems to have taken much from its southern neighbor and subject (see MIDDLE EASTERN RELIGIONS). The military aspect of the empire was its most prominent feature, for Assyria was prepared for conflict from beginning to end. Because of the ever-present need for men to fight the incessant battles, agriculture suffered and ultimately the Assyrians had to import food. The division of society into a fairly rigid three-class system was not unlike that of other early western Asiatic peoples (see BABYLONIA), but it did not supply a solid base for the overgrown Assyrian state. The lavish expenditures of Assurbanipal on warfare and building drained the resources of the empire and contributed to its weakness. The king of the Medes, Cyaxares, and the Babylonian ruler Nabopolassar, joined forces and took Nineveh in 612 B C. Under the son of Nabopolassar, NEBUCHADNEZZAR, Babylonia was renewed in power, and the great-grandson of Cyaxares, Cyrus the Great, was to establish the Persian Empire, which owed much to the earlier Assyrian state. See A. T. E. Olmstead, *History of Assyria* (1923, repr 1960), D. D. Luckenbill, *Ancient Records of Assyria and Babylonia* (2 vol., 1926-7, repr 1968).

Assyrian art. An Assyrian artistic style distinct from that of Babylonian art (see SUMERIAN and BABYLONIAN ART), which was the dominant contemporary art in Mesopotamia, began to emerge c 1500 B C and lasted until the fall of NINEVEH in 612 B C. The characteristic Assyrian art form was the polychrome carved stone relief. The precisely delineated reliefs concern royal affairs, chiefly hunting and war making. Predominance is given to animal forms, particularly horses and lions, which are magnificently represented in great detail. Human figures are comparatively rigid and static but are also minutely detailed, as in triumphal scenes of sieges, battles, and individual combat. Among the best known of Assyrian reliefs are the lion-hunt alabaster carvings showing Assurnasirpal II (9th cent B C) and Assurbanipal (7th cent B C), both of which are in the British Museum. Guardian animals, usually lions and winged beasts with bearded human heads, were sculpted partially in the round for fortified royal gateways, an architectural form common throughout Asia Minor. At Nimrud carved ivories and bronze bowls were found that are decorated in the Assyrian style but were produced by Phoenician and Aramaean craftsmen. Exquisite examples of Assyrian relief carving may be seen at the British and Metropolitan museums. See C. J. Gadd, *The Stones of Assyria* (1936), R. D. Barnett, *Assyrian Palace Reliefs* (1960), Andre Parrot, *The Arts of Assyria* (1961), T. A. Madhloom, *The Chronology of Neo-Assyrian Art* (1970).

Assyrian Church see NESTORIAN CHURCH

Assyrian language, Northeast Semitic dialect that evolved from AKKADIAN after 1500 B C. The term Assyrian is sometimes incorrectly used for the Akkadian language as a whole because the first inscriptions in Akkadian to be found in modern times were discovered in the region that was Assyria in antiquity.

Assyrian religion: see MIDDLE EASTERN RELIGIONS

Astacus* see NICOMEDIA

Astaire, Fred, 1899-, American dancer, actor, and singer, b. Omaha, Neb. His original name was Frederick Austerlitz. After 1911 he and his sister Adele formed a successful Broadway vaudeville team. After his sister retired, Astaire became a film actor (1933). He became known as a debonair song-and-dance man, particularly in the films he made with Ginger Rogers, which elevated the tap dance to an elegant, disciplined art. Among his most notable films are *The Gay Divorcee* (1934), *Top Hat* (1935), *Swing Time* (1936), *Funny Face* (1956), and *On the Beach* (1959). See his autobiography, *Steps in Time* (1959).

Astaroth (ās'tarōth), variant of ASHTAROTH

Astarte (āstar'tē), Semitic goddess of fertility and love. She was the most important goddess of the Phoenicians and corresponds to the Babylonian Ishtar and the Greek Aphrodite. She took a dominant place in Eastern religions, and the Jews strictly forbade use of her name. In the Bible she is referred to (with condemnation) first as Ashtaroth and later as Ashtoreth (Judges 2:13, 10:6, 1 Sam 12:10, 31:10, 1 Kings 11:5, 33, 2 Kings 23:13).

astatine (ās'tatēn, -tīn) [Gr. = unstable], semimetallic radioactive chemical element, symbol At, at no 85, at wt of most stable isotope 210, m p, b p, and density unknown, valence believed to be +1, +3, +5, or +7. Astatine is the heaviest known HALOGEN (group VIIa of the PERIODIC TABLE). Its chemical properties are believed to be similar to those of IODINE. The most stable isotope, astatine-210, has a half-life of 8.3 hr. More than 20 isotopes of astatine have been identified. Small amounts of astatine exist in equilibrium with uranium and thorium in the earth's crust, but the total amount of astatine is probably less than 1 oz. Astatine-211 (half-life 7.2 hr) is sometimes used as a radioactive tracer, like iodine, it collects in the thyroid gland. The discovery of astatine (first called alabamine) was announced in 1931 by Fred Allison and E. J. Murphy. In 1940, Emilio Segre, D. R. Corson, and K. R. Mackenzie produced astatine-211 by bombarding bismuth-209 with alpha particles in the cyclotron at the Univ. of California.

Astell, Mary (ās'təl), 1666-1731, English author and feminist. Her *Serious Proposal to the Ladies* (2 parts, 1694-97) offered a scheme for a women's college, an idea far in advance of the time. The project was not realized, and her ideas were ridiculed in the *Tatler*, possibly by Swift and Addison. See study by Florence M. Smith (1916).

aster [Gr. = star], in North America, name for plants of the genus *Aster*, sometimes called wild asters, and for a related plant more correctly called China aster (*Callistephus chinensis*), all members of the family Compositae (COMPOSITE family). In North America, where most species are native, plants of the genus *Aster* are regarded as wild flowers, but in Europe they are cultivated as garden flowers and often called Michaelmas daisy (they usually bloom at Michaelmas). Most species of *Aster* are perennial and fall-blooming. They have small daisylike or starlike flower heads on leafy, often tall, stems. Their colors vary from white to pink, blue, and purple. Among the more showy native species cultivated in North American gardens are the purple New England aster (*A. novae-angliae*) and the violet or blue New York aster (*A. novi-belgii*). The New England aster was used by Shakers as an application for skin disorders. The China aster is the common aster of florists and flower gardens. It is an Asian plant that in cultivation has a very full head of ray flowers, varying from white and pink to deep purple. Other related genera with similar flowers are sometimes called asters, e.g., the golden asters (*Chrysopsis*). Asters are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

Asterabad. see GORGAN, Iran

Asteria (āstēr'ēa), in Greek mythology, daughter of the Titans Coeus and Phoebe, mother of Hecate by Perseus. To escape Zeus' amorous advances, she turned into a quail, jumped into the sea, and became the isle of Orygia (quail island).

asteroid, planetoid, or minor planet, small body orbiting the sun. More than 2,000 asteroids have been tracked and cataloged, thousands more exist. Most asteroids are irregularly shaped, unlike the major planets, which are spherically shaped. The largest asteroid, CERES, has a diameter of c 470 mi (750 km),

the three next largest are PALLAS, VESTA, and JUNO. Only Vesta can be seen with the naked eye. The other asteroids are so small that their sizes cannot

The asteroid belt lies between the orbits of Mars and Jupiter. Gaps where no asteroids are found are called Kirkwood gaps. The Trojan asteroids share Jupiter's orbit with the planet.

be measured directly by telescope, in many cases their sizes have been estimated from their brightnesses and distances. The ORBITS of most asteroids lie at least partially between the orbits of Mars and Jupiter, the orbit of ICARUS is most eccentric, and that of Hidalgo has the greatest inclination to the plane of the ecliptic. The average orbital distance of the asteroids from the sun is about 2.9 astronomical units (or A.U., 1 A.U. is the mean distance from the earth to the sun). Toward the end of the 18th cent astronomers were searching for a planet whose orbit should, according to BODE'S LAW, have an average distance from the sun of 2.8 A.U. On Jan. 1, 1801, G. Piazzi discovered Ceres while studying the sky in the constellation Taurus. Ceres was later found to have an orbit very near that predicted by Bode's law. Pallas was discovered in 1802, Juno in 1804, and Vesta in 1807. Astrea, discovered in 1845, was the fifth asteroid to be found, its discovery followed 15 years of searching by K. Hencke. By 1890 more than 300 asteroids had been discovered by visual means. In 1891, Max Wolf introduced the method of identifying an asteroid by the record of its path on an exposed photographic plate; it appears as a short line in a time exposure, rather than the sharp point of a star. Brucia was the first asteroid discovered by this method. Asteroids sometimes come very close to the earth. HERMES, discovered in 1937, comes within 485,000 mi (780,000 km), and EROS comes within 14 million mi (22 million km). The TROJAN ASTEROIDS, two groups of asteroids in Jupiter's orbit, are interesting as a phenomenon predicted by one solution of the three-body problem of mathematics. The origin of asteroids is unclear, one theory claims that they are fragments of a planet that occupied approximately their present position and met with some disaster in the remote past, another theory proposes that the asteroids were formed from material that, because of perturbation effects, could not condense into a single planet, a third theory suggests that they are material from the nuclei of old comets.

asthenosphere (āsthēn'əsfēr), region in the upper mantle of the earth's interior, characterized by low density, semiplastic rock material with little strength. The upper part of the asthenosphere, called the plastic layer, at a depth of 60 to 100 km, is believed to be the zone upon which the great lithospheric plates of the earth's crust move about (see PLATE TECTONICS). Although its presence was suspected as early as 1926, the worldwide occurrence of the plastic zone was confirmed by analyses of earthquake waves from the Chilean earthquake of May 22, 1960. Because earthquakes caused by faulting do originate in this zone and deeper, it is thought that the semiplastic rocks of the asthenosphere behave in a brittle fashion when subjected to sudden forces, yet yield by flowage to long-term stresses. It may also be that crustal plates sinking into the mantle are responsible for earthquakes originating in the asthenosphere. See LITHOSPHERE.

asthma, chronic respiratory disorder characterized by wheezy breathing that may be continuous and paroxysmal. A cough producing sticky mucoid sputum is symptomatic. Asthma usually results from an allergic reaction, and in many cases exhibits a hereditary pattern (see ALLERGY). Such psychogenic factors as mental or emotional stress may precipitate an attack. Reactions to specific allergens (commonly pollen, house dust, animal dander, common food-stuffs) is characteristic of childhood asthma, also known as extrinsic asthma. In adults asthma is often related to respiratory infections, and there is sometimes no clear-cut allergen. This form of the disease is called intrinsic asthma. Treatment of asthma usually includes an attempt at identifying and avoiding contact with the specific allergen. Injections of epinephrine bring immediate relief, ACTH and cortisone injections provide longer-lasting relief in chronic cases, especially when there is no response to other measures.

Asti (a'stè), city (1971 pop. 76,048), capital of Asti prov., in Piedmont, NW Italy, on the Tanaro River. It is a commercial and industrial center, noted for its sparkling wine (Asti spumante). The city, which retains its medieval appearance, has a fine Gothic cathedral (14th cent.).

astigmatism, type of faulty vision caused by a non-uniform curvature in the refractive surfaces—usually the cornea, less frequently the lens—of the eye. As a result, light rays do not all come to a single focal point on the retina. Instead, some focus on the retina while others focus in front of or behind it. The condition may be congenital, or it may result from disease or injury; it can occur in addition to NEARSIGHTEDNESS or FARSIGHTEDNESS. The spherical lenses used to correct nearsightedness and farsightedness must be specially adapted to correct the out-of-focus plane of vision of the astigmatic eye. When the patient observes a pattern of straight lines placed at various angles, those running in one direction appear sharp while those in other directions (particularly at right angles to the sharp lines) appear blurred. A special cylindrical lens is placed in the out-of-focus axis to correct the condition. In many cases contact lenses are the most effective means of correcting astigmatism.

Aston, Francis William, 1877–1945, English physicist and chemist. He was affiliated with the Cavendish Laboratory, Cambridge, from 1910. In 1922 he received the Nobel Prize in Chemistry mainly for his discovery, by means of a mass spectrograph of his own invention, of a number of isotopes in nonradioactive elements. His writings include *Isotopes* (1922) and *Mass-Spectra and Isotopes* (1933).

Astor, John Jacob, 1763–1848, American merchant, b. Waldorf, near Heidelberg, Germany. At the age of 16 he went to England, and five years later, in 1784, he arrived in Baltimore, penniless. He later went to New York City, where in a few years he entered into business with a small shop for trade in musical instruments and furs. Shrewdness, driving ambition, and stolid concentration brought him to a commanding position in the burgeoning economy of the United States. He became a leader of the China trade and was an astute investor in lands, principally in and around New York City, but he is perhaps best remembered as a fur trader. He chartered the AMERICAN FUR COMPANY (1808) and founded subsidiary companies—the Pacific Fur Company (see ASTORIA, Oregon) and the South West Company (operating around the Great Lakes). His firm exercised a virtual monopoly of the trade in U.S. territories in the 1820s and still did when he retired from it in 1834. The wealthiest man in the United States at his death, he left a fortune that has continued to make the family name prominent. Part of his money went to found the Astor Library (see NEW YORK PUBLIC LIBRARY). His Astor House was a forerunner of family hotel properties that much later included the Astor Hotel and the Waldorf-Astoria. See biographies by J. U. Terrell (1963) and K. W. Porter (1936, repr. 1966).

Astor, John Jacob, 1822–90, American financier, b. New York City, educated at Columbia and Göttingen universities and at Harvard law school, son of William Backhouse Astor (1792–1875). The third Astor in the United States, he served in the Peninsular campaign in the Civil War and later took a minor part in New York civic and political affairs. His son was William Waldorf Astor.

Astor, John Jacob, 1864–1912, American financier, b. Rhinebeck, N.Y., son of William Backhouse Astor (1829–92). The fourth of the name in the United States, he served in the Spanish-American War. Drowned in the Titanic disaster, he left two sons, Vincent, the son of his first marriage, and John Jacob

Astor, fifth of the name in America, the son of his second marriage.

Astor, Nancy Witcher (Langhorne) Astor, Viscountess, 1879–1964, British politician, b. Virginia. She was first married to Robert Gould Shaw, and after her divorce (1903) from him she went to England. There she was married (1906) to Waldorf Astor. When he succeeded his father as viscount and had to give up his seat in the House of Commons as member for Plymouth, she was elected in his place and became the first woman to sit in Parliament. In her years as a Conservative member (1919–45) her sharp tongue in debate, her passionate espousal of temperance and of reforms in woman and child welfare, and her cheerful lack of reverence for any and all won respect and attention. In the 1920s she and her husband were leaders in the "gradual" reform program of "Tory democracy." In the late 1930s their pleas for settlement and peace with the fascist powers in Europe were interpreted as treasonable by their enemies. At their country house, Cliveden (given to the government in 1942), the Astors brought together great literary figures and leaders of all political persuasions. See biographies by Maurice Collis (1960) and Christopher Sykes (1972), Elizabeth Langhorne, Nancy Astor and Her Friends (1974).

Astor, William Backhouse, 1792–1875, American financier, b. New York City, son of John Jacob Astor (1763–1848). Educated in Germany, he was associated with his father in business after 1818. Later called the landlord of New York, he also inherited money from his uncle Henry Astor and left an immense fortune.

Astor, William Backhouse, 1829–92, American financier and sportsman, b. New York City. The son of William Backhouse Astor (1792–1875), he was a retiring man, notable principally for his wealth and for his marriage to Caroline Schermerhorn. With the assistance of Ward McAlister, she became famous as the Mrs. Astor of modern folklore, queen of New York City society's legendary Four Hundred. Their son was John Jacob Astor (1864–1912).

Astor, William Waldorf Astor, 1st Viscount, 1848–1919, American-British financier, b. New York City, educated in Germany and in Italy and at the Columbia law school, son of John Jacob Astor (1822–90). He served as a state assemblyman and senator, but his political career was halted by his failure to win an election to the U.S. Congress. He was then appointed minister to Italy (1881–85). In 1890 he moved to England, where he acquired control of a newspaper and several magazines. He also founded—mainly to forward the literary ambition he had shown in two mediocre novels—*Pall Mall Magazine*. His estates, Cliveden and Hever Castle, were magnificent, his entertainments extravagant, his contributions to public causes—especially in World War I—munificent. He was made a baron in 1916 and a viscount in 1917. His elder son, Waldorf Astor (1879–1952), succeeded him as viscount and was a leader of "Tory democracy." His wife was Nancy, Lady Astor. The younger son, John Jacob Astor (1886–1971), bought a major share of *The Times* of London and was made 1st Baron Astor of Hever.

Astoria (ä'stôr'ëä), 1 Commercial, industrial, and residential section of NW Queens borough of New York City, SE N.Y., settled in the 17th cent. as Hallett's Cove. It was renamed for John Jacob Astor in 1839. Several 18th-century houses remain. 2 City (1970 pop. 10,244), seat of Clatsop co., NW Oregon, on the Columbia River estuary, inc. 1876. A port of entry, Astoria is the trading center for the lower Columbia basin. Its principal industries are fishing and fish processing, lumbering, and tourism, agriculture and shipbuilding are also important. The LEWIS AND CLARK EXPEDITION spent the winter of 1805–6 at a nearby encampment, Fort Clatsop (rebuilt in 1955 and now a national memorial). Fort Astoria, a fur-trading post established in 1811 by John Jacob Astor's Pacific Fur Company, was the first permanent U.S. settlement on the Pacific coast. Although the post was sold to the British in 1813, its vigorous activities helped to establish American claims to the Oregon country and contributed much to the exploration of the continent. Fort Astoria was formally restored to the United States in 1818, but trade remained in British hands until the mid-1840s, when American pioneers followed the Oregon Trail to the fort. In the late 18th cent., Astoria grew as a coastal and river port, it later attracted Scandinavian settlers, whose descendants make up most of its present-day population. Points of interest include the Astoria Column, 125 ft (38 m) high, built in 1926 to commemorate the region's early history. A junior college is in the city.

Astrabad: see GORGAN, Iran

Astraea (ä'strë'ä), in Greek religion, goddess of justice, daughter of Zeus and Themis. Because of the wickedness of man, she withdrew from the earth at the end of the Golden Age and was placed among the stars as the constellation Virgo.

Astraeus (ä'strë'as) see EOS

Astrakhan (ä'strāk'än, Rus. a'strākhan'ä), city (1970 pop. 411,000), capital of Astrakhan oblast, SE European USSR. A Caspian Sea port on the Volga River's southern delta, it is a center for river transport and has shipyards, repair docks, and fish-processing plants. Astrakhan is also an important rail junction and a major transshipment center for oil, fish, grain, and wood. The capital of the khanate of Astrakhan (see TATARS) from the 1460s, it was conquered by Ivan the Terrible in 1556. Astrakhan had a flourishing trade with Persia, Khiva, and Bukhara until 1917. It has a kremlin (1587–89) and a cathedral (1700–1710).

astrakhan (ä'strāk'än) [from Astrakhan], pelt of the newborn Persian lamb, used like fur in garments, and also the woolen fabric woven to resemble real astrakhan. The cloth is woven on a cotton base entirely covered by a pile of closely curled mohair. Before being woven the mohair is wound on spindles and steamed to produce a tight, permanent curl.

astrigent (ä'strī'jant), substance that shrinks body tissues. Astrigent medicines cause shrinkage of mucous membranes or exposed tissues and are often used internally to check discharge of serum or mucous secretions in sore throat, hemorrhage, diarrhea, or peptic ulcer. Externally applied astrigents, which cause mild coagulation of skin proteins, dry, harden, and protect the skin. Mildly astrigent solutions are used in the relief of such minor skin irritations as those resulting from superficial cuts, allergies, insect bites, or athlete's foot. Astrigent preparations include silver nitrate, zinc oxide, calamine lotion, tincture of benzoin, and vegetable substances such as tannic and gallic acids, catechu, and oak bark. Some metal salts and acids have also been used as astrigents.

astrobleme, large, circular geologic structure ranging from c. 1/2 mi to 40 mi (8–64 km) in diameter. Astroblemes are found at numerous places on the earth's surface, e.g., Barringer Crater in Arizona, Brent Crater in Ontario, and Vredefort Ring in South Africa. The presence of meteor fragments, strange conical fracture patterns (called shatter cones), and coesite (a superdense, high-pressure form of quartz) in the rocks at astroblemes suggest an impact, rather than volcanic, origin to these circular structures.

astrolabe (ä'sträläb), instrument probably used originally for measuring the altitudes of heavenly bodies and for determining their positions and movements. Although its origin is ancient and obscure, its invention is frequently ascribed either to Hipparchus or to Apollonius of Perga. For many centuries it was used by both astronomers and navigators. A simple astrolabe consisted of a disk of wood or metal with the circumference marked off in degrees. It was suspended by an attached ring. Pivoted at the center of the disk was a movable pointer called by Arabian astronomers the alidade. By sighting with the alidade and taking readings of its position on the graduated circle, angular distances could be determined. Mariners, if sufficiently skilled in navigation, could use the astrolabe to determine latitude, longitude, and time of day and as an aid in making other calculations. It was much used on voyages of discovery in the 15th cent. and was important until the invention of the sextant in the 18th cent. The more elaborate astrolabes bore a star map (the planisphere, a circular map, was added by Hipparchus), a zodiacal circle, and various other useful or decorative devices.

astrology, form of DIVINATION based on the theory that the movements of the celestial bodies—the stars, the planets, the sun, and the moon—influence human affairs and determine the course of events. Celestial phenomena have been the object of religious sentiment since earliest times (see MOON WORSHIP, SUN WORSHIP). The Chaldeans and the Assyrians were the first to discard their sky gods in favor of a nondeistic system of divination founded upon astronomy and numerology. They saw the heavenly bodies as exerting an influence upon the lives of individuals and the destinies of empires. Generally, all future events were believed determined beforehand by a universal order that was a result of the motions of the planets and stars. The practices of astrology spread throughout the ancient Middle

East, Asia, and Europe, but with the rise of Christianity, which emphasized divine intervention and free will, interest in astrology subsided, although astrologers continued to flourish. During the European Renaissance astrology as a form of divination regained popularity, due in part to the rekindled interest in science and astronomy. The European astrologer, considered a scholar exploring the mysteries of the universe through science and reason, was held in high esteem in the community for many centuries. However, in the 16th and 17th cent., Christian theologians waged an all-out war against astrology. In 1585 astrology was officially condemned in a bull of Pope Sixtus V, and in 1631, Pope Urban VIII reinforced this with another bull. At the same time the astronomical work of such men as Copernicus, Tycho Brahe, Kepler, and Galileo was undermining the tenets of astrology. Astrology, however, continued to be practiced. All of the aforementioned scientists remained practicing astrologers, as did other great thinkers such as Descartes and Newton, moreover, Copernican theory did not find sudden and widespread acceptance. Gradually, however, astrology declined, although this form of divination is still very much alive, especially in India. One's horoscope is a map of the heavens at the time of one's birth, showing the position of the heavenly bodies in relation to the 12 "houses" or signs through which they pass (see ZODIAC) and their positions in relation to each other. Each house has as its "lord" one of the heavenly bodies, the one in the "ascendant" is the one of greatest significance to the inquirer, supposedly endowing him with his temperamental qualities, his tendencies to particular diseases, and his liability to certain fortunes or calamities. See Ellen McCaffery, *Astrology: Its History and Influence in the Western World* (rev. ed. 1942), Lynn Thorndike, *History of Magic and Experimental Science* (rev. ed. 1958), Michel Gauquelin, *The Cosmic Clocks* (1967), Christopher McIntosh, *The Astrologers and their Creed* (1969).

astrometry. see ASTRONOMY

astronaut, crew member on a U.S. manned spaceflight mission, the Soviet term is cosmonaut. Candidates for manned spaceflight are carefully screened to meet the highest physical and mental standards, and they undergo rigorous training. The early astronauts had all previously been test pilots, but later astronauts have included scientists and physicians. As far as is possible, all conditions to be encountered in space are simulated in ground training. Astronauts are trained to function effectively in cramped quarters while wearing restrictive space suits, they are accelerated in giant centrifuges to test their reactions to the inertial forces experienced during liftoff, they are prepared for the physiological disorientation they will experience in space arising from WEIGHTLESSNESS, and they spend long periods in isolation chambers to test their psychological reactions to solitude. Using trainers and mock-ups of actual spacecraft, astronauts rehearse every maneuver from liftoff to recovery, and every conceivable malfunction and difficulty is anticipated and prepared for. In addition to flight training, astronauts are required to have thorough knowledge of all aspects of SPACE SCIENCE, such as celestial mechanics and rocketry. Concurrent with all other preparation, astronauts must maintain a physical condition equal to that of first-class athletes. Manned spaceflight began on April 8, 1961, when the Soviet cosmonaut Yuri Gagarin orbited the earth. Other prominent cosmonauts included Vladimir Komarov, commander of the first Voskhod spacecraft, Alexis Leonov, first man to walk in space, and Valentina Terechkova, first woman cosmonaut. American astronauts participated in four major programs between 1960 and 1973: Mercury, Gemini, Apollo, and Skylab (see SPACE EXPLORATION). Many astronauts participated in more than one program. The first American astronaut was Alan B. Shepard, Jr., who made a suborbital flight on May 5, 1961. John H. Glenn, Jr., was the first American to orbit the earth, and Edward H. White, 2d, was the first American to walk in space. The first lunar landing was accomplished by the crew of Apollo 11: Neil A. Armstrong, Jr., Edwin E. Aldrin, Jr., and Michael Collins, in 1969. See D. C. Knight, ed., *American Astronauts and Spacecraft* (1972), Michael Collins, *Carrying the Fire* (1974).

astronautics: see SPACE SCIENCE

astronomical coordinate systems. A coordinate system is a method of indicating positions. Each coordinate is a quantity measured from some starting point along some line or curve, called a coordinate axis. There are four basic systems of astronomical coordinates: the EQUATORIAL COORDINATE SYSTEM, the

altazimuth or HORIZON COORDINATE SYSTEM, the celestial or ECLIPTIC COORDINATE SYSTEM, and the GALACTIC COORDINATE SYSTEM. These systems are based on three common principles: (1) all stars are considered to be located on the inner surface of the CELESTIAL SPHERE, the imaginary sphere centered on the earth and representing the entire sky, (2) each coordinate axis is a great circle on the celestial sphere, and (3) coordinate measurements of an object to be located are made along two great circles, one a coordinate axis and the other perpendicular to it and passing through the object. Measurements are made either in degrees or in hours. Since there are 24 hours or 360 degrees in a circle, 1 hour is equal to 15 degrees ($1^h = 15^\circ$). The stars are so distant that their apparent annual motion relative to one another is very small. In a coordinate system that is constructed so that it ignores the daily rotation and annual revolution of the earth, the coordinates of any star remain nearly constant. However, it is impossible to construct a coordinate system, centered at the earth, that gives constant coordinates for another body that orbits the sun.

Astronomical Ephemeris. see EPHEMERIS

astronomical unit (A.U.), mean distance between the earth and sun, one A.U. is c. 92,960,000 mi (149,604,970 km). The astronomical unit is the principal unit of measurement within the solar system, e.g., Mercury is just over $\frac{1}{2}$ A.U. and Pluto is about 39 A.U.

astronomy, branch of SCIENCE that studies the motions and natures of celestial bodies, such as PLANETS, STARS, and GALAXIES, more generally, the study of MATTER and ENERGY in the UNIVERSE at large. Astronomy is perhaps the oldest of the pure sciences. It is difficult to fix the exact date when systematic observations of the heavens began. In many primitive civilizations the regularity of celestial motions was recognized, and attempts were made to keep records and predict future events. The first practical function of astronomy was to provide a basis for the CALENDAR, the units of month and year being determined by astronomical observations. Later, astronomy served in navigation and timekeeping. The Chinese had a working calendar as early as the 13th cent. B.C. About 350 B.C., Shih Shen prepared the earliest known star catalog, containing 800 entries. Chinese astronomy is best known today for its observations of SUPERNOVAS, or "guest stars," as they were called. The Babylonians, Assyrians, and Egyptians were also active in astronomy. The earliest astronomers were priests, and no attempt was made to separate astronomy from the pseudoscience of ASTROLOGY. In fact, an early motivation for the detailed study of planetary positions was the preparation of horoscopes. The highest development of astronomy in the ancient world came with the Greeks in the period from 600 B.C. to A.D. 400. The methods employed by the Greek astronomers were quite distinct from those of earlier civilizations, such as the Babylonian. The Babylonian approach was numerical and ad hoc, best suited for studying the complex lunar motions that were of overwhelming interest to the Mesopotamian peoples. The Greek approach, on the contrary, was geometric and schematic, best suited for complete cosmological models. Thales, an Ionian philosopher of the 6th cent. B.C., is credited with introducing geometrical ideas into astronomy. Pythagoras, about a hundred years later, imagined the universe as a series of concentric spheres in which each of the seven "wanderers" (the sun, the moon, and the five known planets) were embedded. The spheres rotated independently, producing the "music of the spheres." Eudoxus developed the idea of rotating spheres by introducing extra spheres for each of the planets to account for the observed complexities of their motions. This was the beginning of the Greek aim of "saving the appearances," that is, providing a theory that would account for all observed phenomena. The theoretical models of the universe did not necessarily correspond to absolute truth or reality, which, according to Plato, was inaccessible to man and could only be approached or approximated. This Greek attitude toward scientific knowledge mirrors modern positivism. Aristotle (384-322 B.C.) summarized much of the Greek work before him and remained absolute authority until late in the Middle Ages. Although his belief that the earth does not move was to have a retarding effect on astronomical progress, he gave the correct explanation of lunar eclipses and a sound argument for the spherical shape of the earth. The apex of Greek astronomy was reached in the Hellenistic period by the Alexandrian school. Aristarchus (c. 310-c. 230 B.C.) determined the sizes and distances of the moon and sun

relative to the earth and advocated a heliocentric (sun-centered) cosmology. Although there were errors in his assumptions, his approach was truly scientific, his work was the first serious attempt to make a scale model of the universe. The first accurate measurement of the actual (as opposed to relative) size of the earth was made by Eratosthenes (284-192 B.C.). His method was based on the angular difference in the sun's position at the high noon of the summer SOLSTICE in two cities whose distance apart was known. The greatest astronomer of antiquity was Hipparchus (190-120 B.C.). He developed TRIGONOMETRY and used it to determine astronomical distances from the observed angular positions of celestial bodies. He recognized that astronomy requires accurate and systematic observations extended over long time periods. He therefore made great use of old observations, comparing them to his own. Many of his observations, particularly of the planets, were intended for future astronomers. He devised a geocentric system of cycles and epicycles (a compounding of circular motions) to account for the movements of the sun and moon. Ptolemy (A.D. 85-165) applied the scheme of epicycles to the planets as well. The resulting PTOLEMAIC SYSTEM was a geometrical representation of the SOLAR SYSTEM that predicted the motions of the planets with considerable accuracy. Among his other achievements was an accurate measurement of the distance to the moon by a PARALLAX technique. His 13-volume treatise, the *Almagest*, summarized much of ancient astronomical knowledge and, in many translations, was the definitive authority for 14 centuries. During this period European astronomy was largely dormant, and the only significant work was carried out by the Muslims and the Hindus. It was by way of Moorish Spain that Greek astronomy reached medieval Europe. One of the great landmarks of the revival of learning in Europe that brought about the scientific revolution of the 16th and 17th cent. was the publication (1543) by Nicolaus Copernicus (1473-1543) of his *De revolutionibus orbium coelestium* (*On the Revolutions of the Celestial Spheres*). According to the COPERNICAN SYSTEM, the earth rotates on its axis and, with all the other planets, revolves around the sun. The assertion that the earth is not the center of the universe was to have profound philosophical and religious consequences. Copernicus's principal claim for his new system was that it made calculations easier. He still retained the epicycles and uniform circular motion of the Ptolemaic system, but by placing the sun at the center, he was able to reduce the number of epicycles. Copernicus also determined the sidereal periods (time for one revolution around the sun) of the planets and their distance from the sun relative to the sun-earth distance (see ASTRONOMICAL UNIT). The next great astronomer, Tycho Brahe (1546-1601) was principally an observer, a conservative in matters of theory, he rejected the notion that the earth moves. Under the patronage of King Frederick II, Tycho established Uraniborg, a superb observatory on the Danish island of Hven. Over a period of 20 years (1576-97), he and his assistants compiled the most accurate and complete astronomical observations the world had seen. At his death his records passed to Johannes Kepler (1571-1630), who had been his last assistant, in Prague. Kepler spent nearly a decade trying to fit Tycho's observations, particularly of Mars, into an improved system of heliocentric circular motion. At last, he conceived the idea that the orbit of Mars was an ellipse with the sun at one focus. This discovery led him to the three laws of planetary motion that bear his name (see KEPLER'S LAWS). Galileo Galilei (1564-1642) made fundamental discoveries in both astronomy and physics; he is perhaps the single man best described as the founder of modern science. Galileo was the first to make astronomical use of the TELESCOPE. His discoveries of the four largest moons of Jupiter and the phases of Venus were persuasive evidence for the Copernican cosmology. His discoveries of craters on the moon and blemishes on the sun (SUNSPOTS) discredited the ancient belief in the perfection of the heavens. These findings were announced in *The Sidereal Messenger*, a small book published in 1610. Galileo's *Dialogue on the Two Chief Systems of the World* (1632) was an eloquent argument for the Copernican system over the Ptolemaic. However, the new astronomical ideas had fallen into increasing disfavor with the church. Galileo was called before the Inquisition and forced to abjure all doctrines considered contrary to Scripture. His writings joined those of Kepler and Copernicus on the Papal Index. Isaac Newton (1642-1727), possibly the greatest scientific genius of all time, succeeded in uniting the

sciences of astronomy and PHYSICS. His laws of motion and theory of universal GRAVITATION provided a physical, dynamic basis for the merely descriptive laws of Kepler. Until well into the 19th cent., all progress in astronomy was essentially an extension of Newton's work. Among the many triumphs of Newtonian theory was the beginning of an adequate theory of the TIDES. In the 18th cent. the work of many astronomers vindicated the Newtonian world system, which became the basis of all physical science. In 1728, James Bradley measured the periodic shifts in stellar positions due to the ABERRATION of light. Edmund Halley's prediction that the comet of 1682 would return in 1758 was refined by A. C. Clairault, who included the perturbing effects of Jupiter and Saturn on the orbit to calculate the nearly exact date of the return of the comet. Nevil Maskelyne measured the earth's mean density, which was essential for computing the masses of the earth and other bodies in the solar system. In 1781, William Herschel accidentally discovered a new major planet, eventually named Uranus. Discrepancies between the observed and theoretical orbits of Uranus indicated the existence of a still more distant planet that was affecting Uranus's motion. J. C. Adams and U. J. J. Leverrier independently calculated the position where the new planet, Neptune, was actually discovered (1846). (Similar calculations led in 1930 to the discovery of the most distant known planet, Pluto.) By the early 19th cent., the science of CELESTIAL MECHANICS had reached a highly developed state at the hands of Leonhard Euler, L. Lagrange, P. S. Laplace, and others. Powerful new mathematical techniques allowed solution of most of the remaining problems in classical gravitational theory as applied to the solar system. It was demonstrated that the present configuration of the planetary orbits will remain stable for the indefinite future. In 1801, Giuseppe Piazzi discovered Ceres, the first of many ASTEROIDS. When Ceres was lost to view, C. F. Gauss applied the advanced gravitational techniques to compute the position where the asteroid was subsequently rediscovered. In 1838, F. W. Bessel made the first measurement of the distance to a star, using the method of parallax with the earth's orbit as a baseline; he determined the distance of the star 61 Cygni to be 60 trillion mi (about 10 LIGHT-YEARS), a figure later shown to be 40% too large. Astronomy was revolutionized in the second half of the 19th cent. by the introduction of techniques based on photography and SPECTROSCOPY. Interest shifted from determining the positions and distances of stars to studying their physical composition (see STELLAR STRUCTURE and STELLAR EVOLUTION). The dark lines in the solar SPECTRUM that had been observed by W. H. Wollaston and Joseph von Fraunhofer were interpreted in an elementary fashion by G. R. Kirchhoff on the basis of classical physics, although a complete explanation came only with the QUANTUM THEORY. Between 1911 and 1913, Ejnar Hertzsprung and H. N. Russell studied the relation between the colors and luminosities of typical stars (see HERTZSPRUNG-RUSSELL DIAGRAM). With the construction of ever more powerful telescopes (see OBSERVATORY), the boundaries of the known universe constantly increased. Harlow Shapley determined the size and shape of our galaxy, the MILKY WAY. E. P. Hubble's study of the distant galaxies led him to conclude that the universe is expanding (see HUBBLE'S LAW). Various rival theories of the origin and overall structure of the universe, e.g., the big bang and steady state theories, were formulated (see COSMOLOGY). Albert Einstein's theory of RELATIVITY plays a central role in all modern cosmological theories. Most recently, the frontiers of astronomy have been expanded by SPACE EXPLORATION and observations in new parts of the spectrum (see SATELLITE, ARTIFICIAL, RADIO ASTRONOMY, X RAY ASTRONOMY). The new observational techniques have led to the discovery of strange new astronomical objects, such as PULSARS, QUASARS, and BLACK HOLES. See Arthur Berry, *Short History of Astronomy* (1961); John L. Dreyer, *History of Astronomy from Thales to Kepler* (2d ed. 1953); G. O. Abell, *Exploration of the Universe* (2d ed. 1969); Nigel Calder, *Violent Universe* (1970); Lloyd Motz and Annetta Duveen, *Essentials of Astronomy* (1971); Zdeněk Kopal, *Man and His Universe* (1972); Robert Jastrow and M. H. Thompson, *Astronomy* (1972); Alexandre Koyre, *The Astronomical Revolution* (1973).

astrophysics, application of the theories and methods of physics to the study of STELLAR STRUCTURE, STELLAR EVOLUTION, the origin of the SOLAR SYSTEM, and related problems of COSMOLOGY.

Asturias, Miguel Ángel (mēgēl' āng'hēl āstōō'ryās), 1899–1974, Guatemalan novelist, short-story writer,

and poet. He worked as a journalist, foreign correspondent, and diplomat, serving as ambassador to El Salvador and later to France. His best-known works include *Las leyendas de Guatemala* [the legends of Guatemala] (1930), dealing with the early legends and folklore of Guatemala, *El señor presidente* (1946, tr. 1963), a novel about a Latin American dictatorship, *Viento fuerte* (1950, tr. *Strong Wind*, 1968), *El papa verde* (1954, tr. *The Green Pope*, 1971), and *Los ojos de los enterrados* (1955, tr. *The Eyes of the Interred*, 1973), a grim trilogy about banana exploitation in the Caribbean. Among his other works are *Week-end in Guatemala* (1956), a collection of short stories, *Mulata de tal* (1963, tr. *Mulata*, 1967), a mystical novel about the Guatemalan Indians, *The Talking Machine* (tr. 1971), a book for children about a frog, and *The Bejeweled Boy* (tr. 1972), a complex allusive novel replete with mysticism and Guatemalan legends. In 1967, Asturias was awarded the Nobel Prize in Literature. See study by R. J. Gallan (1970).

Asturias (āstōō'ryās), region (1970 pop. 1,045,635) and former kingdom, NW Spain, S of the Bay of Biscay and E of Galicia, and coextensive with Oviedo prov. Drained by numerous swift rivers, it is crossed by the Cantabrian Mts. The coal mines, exploited since Roman times, are the richest in Spain. Iron, zinc, lead, and manganese are also mined. The steel mills and metallurgical industries have been important since the late 19th cent., although production and transportation costs are high. Cattle are raised on the broad mountain pastures. The extensive forests are favored by abundant rainfall. Along the coast, apple orchards are the source of a world-famous cider. Gijón is the chief port, and fishing is a major occupation. Most of the population, however, is engaged in mining. The name Asturias is derived from an Iberian people that lived there before the Roman conquest (2d cent. B.C.). When the Moors overran the peninsula, Christian nobles fled into the Asturian mountains. They created the first Christian kingdom of Spain (see RELAYO) and defended themselves at the battle of COVADONGA. From Asturias came the Christian reconquest of Spain, as the successors of King Alfonso I extended their control over Asturias, Galicia, Leon, and parts of Castile, Navarre, and Vizcaya. Astorga was one of the chief cities of the Asturian kingdom in the 9th cent. In the 10th cent. the capital was moved from Oviedo to León, and the kingdom of Asturias became the kingdom of Asturias and Leon, which three centuries later was united with the kingdom of Castile. In 1388, John I of Leon and Castile made his son prince of the Asturias—the title borne from that time on by the heir to the throne. The Asturians are noted for their stubborn courage and independence—traits shown in the warfare against Napoleon, in various uprisings against the Spanish government, in the civil war of 1936–39, and in the general strike of 1962.

Astyages (āsī'ājēz), fl. 6th cent. B.C., king of the Medes (584–c. 550 B.C.), son and successor of Cyaxares. His rule was harsh, and he was unpopular. His daughter is alleged to have married the elder Cambyses and was said to be the mother of CYRUS THE GREAT, who rebelled against Astyages and overthrew him (c. 550 B.C.), thus creating the Persian Empire.

Astyanax (āsī'ānāks), in Greek mythology, son of Hector and Andromache. When the Greeks captured Troy, they killed him out of fear that he would avenge his father and his city. He was also known as Scamandrius.

Asunción (asōōnsyōn'), city (1970 est. pop. 437,000), S Paraguay, capital of Paraguay, on the Paraguay River. It is the principal port and chief industrial and cultural center of Paraguay. Meat-packing is the main industry. From the east bank of the river, the city spreads out on gentle hills in a pattern of rectangular blocks. Asunción is one of the oldest cities in South America and has a decidedly colonial aspect, enhanced by red-tiled roofs, colorful patios, and flowering trees. Its outstanding structures are the government buildings, the Godoi Museum, the Church of La Encarnación, and the Panteón Nacional, a smaller version of Les Invalides in Paris, where many of the nation's heroes are entombed. The city's botanical gardens are notable. The site of the city may have been visited by the conquistador Juan de Ayolas, but the town, called Nuestra Señora de la Asunción [Our Lady of the Assumption], was founded in Aug. 1536 or 1537, by Juan de Salazar and Gonzalo de Mendoza. It became a trading post on the route to Peru and flourished under the governorship of Domingo Martínez de Irala, who founded there the first cabildo in South America. As

the most important town in the Rio de la Plata region, Asunción became the center of the Jesuits' activities in converting the Indian population. The city developed further under the great Creole governor Hernando Arias de Saavedra (first elected 1592). In 1731 the uprising of *comuneros* under Jose de Antequera y Castro was one of the first major rebellions against Spanish colonial rule. The eminence of Asunción was ended by the growth of Buenos Aires, which was separated from Asunción's jurisdiction in 1617. After the War of the Triple Alliance (1865–70), Asunción was occupied by Brazilian troops until 1876. The National Univ. and several colleges are in the city.

Asuppim (āsūp'im) KJV in 1 Chron. 26:15 reads "the house of Asuppim"; RSV reads more correctly "the storehouse."

Aswan or Assuan (both āswān', āswān'), city (1970 est. pop. 206,000), capital of Aswan governorate, S Egypt, on the Nile River at the First Cataract. Long famous as a winter resort and commercial center, the city has become an important industrial center since the start nearby of hydroelectricity production in 1960. A chemical fertilizer plant is the largest of the new industries. Iron ore and hematite are mined in the vicinity. The city was called Syene or Seveneh in the Bible and is described as the southern limit of Egypt. It was a trade center, serving as the gateway to the Sudan and Ethiopia, and was the place where the annual Nile flood was first sighted in Egypt. From the syenite quarries nearby came stone for the temples and statuary of the Pharaohs. ON ELEPHANTINE island, in the Nile opposite Aswan, and PHILAE island (submerged by the Aswan High Dam complex), south of the city, are found ancient Egyptian and Roman ruins. Aga Khan III (1877–1957), leader of the Muslim ISMA'ILIS, is buried in Aswan. The Aswan Dam, 3 mi (4.8 km) south of the city, was built by the British and completed in 1902. It and the barges at Asyut in central Egypt were the chief means of storing irrigation water for the Nile valley before the completion of the Aswan High Dam (see below). After being enlarged in 1934, the dam added c. 1 million acres (404,700 hectares) of cropland along the Nile. In 1960 a hydroelectric station with an annual capacity of 2 million kilowatt hours was opened at the dam. The Aswan High Dam, about 4 mi (6.4 km) S of the Aswan Dam, was constructed from 1960 to 1970, and was dedicated in 1971. Plans for the dam as the cornerstone of Egyptian President Gamal Abdal Nasser's economic development program were announced in 1953. Construction was delayed, however, until 1960 by disputes with Sudan over water rights and by the withdrawal in 1956 of U.S. and British financial aid. After 1956 the Soviet Union took over much of the financing (contributing ultimately about one third of the total cost of more than \$1 billion) and technical supervision of the project. Built of earth and rock fill with a core of clay and cement, the High Dam is 375 ft (114 m) high and 11,811 ft (3,600 m) long. Lake Nasser (c. 2,000 sq mi/5,180 sq km), the dam's reservoir and one of the world's largest artificial lakes, has a storage capacity of c. 204 billion cu yd (157 billion cu m). The water of Lake Nasser has a potential for expanding agriculture in Egypt by c. 2 million acres (809,400 hectares)—two thirds of which would be former desert land and one third of which would be former one-crop land planted with two crops yearly. By 1970, c. 650,000 acres (263,000 hectares) of land had been reclaimed. In addition, water from Lake Nasser has a potential for increasing cropland in the Sudan by 5 million acres (2 million hectares). There are plans for a large fishing industry based on Lake Nasser. The High Dam's 12 turbines have an annual hydroelectricity capacity of 10 billion kilowatt hours, more than enough to satisfy Egypt's current needs, and enough to power considerable industrial expansion in the country. The creation of Lake Nasser required the relocation of 90,000 people, most of whom lived in Sudan, and of many archaeological treasures. Under UNESCO auspices, the Nubian temples at ABU SIMBEL were moved (1963–68) to a cliff 200 ft (61 m) above the old site and reconstructed. In return for its financial assistance in this project, the United States was given the Roman temple of Dendur, which was disassembled and shipped to the Metropolitan Museum of Art in New York City for reconstruction.

asylum (āsī'lām), extension of hospitality and protection to a fugitive and the place where such protection is offered. The use of temples and churches for this purpose in ancient and medieval times was known as SANCTUARY. In modern international law, the granting of asylum to refugees from other lands is the right of a state by virtue of its territorial sover-

eightly A fugitive, however, has no right to demand asylum from the state to which he flees, that state makes its own determination in each case. Between most nations there are treaties of EXTRADITION providing for the mutual surrender of fugitives from justice, and there is a tendency to confine the granting of asylum to political refugees and victims of apparent discrimination and intolerance. A situation causing many international disputes is the use of embassies and legations, by virtue of their status of EXTRATERRITORIALITY, as places of refuge in times of disorder and conflict. Most countries do not offer this type of asylum except when it seems necessary for the preservation of human life.

asymmetric carbon atom: see ISOMER

Asyncritus (əsin'krītəs), Roman Christian. Rom 16:14

Asyut (asyōt'), city (1970 est. pop. 175,700), E central Egypt, on the Nile. An industrial and trading center and also the seat of a university, it is famed for its pottery, carved ivory and wood, leatherwork, and silk shawls. Nearby is the Asyut barrage, which helps to regulate the flow of the Nile and impounds water for irrigational use. Asyut was the ancient Greek city of Lycopolis and later a station of the caravan trade. The city has a large Coptic Christian population.

At, chemical symbol of the element ASTATINE

Atabrine: see QUINACRINE

Atacama, Desert of (atāka'ma), arid region, c 600 mi (970 km) long, N Chile, extending south from the border of Peru. The desert itself, c 2,000 ft (610 m) above sea level, is a series of dry salt basins flanked on the W by the Pacific coastal range, averaging c 2,500 ft (760 m) high, and on the E by the Andes. There is practically no vegetation, rain has virtually never been recorded in some localities. Of the streams descending from the Andes only the Loa River reaches the Pacific. Antofagasta and other regional ports are without protected anchorages and are subject to frequent and severe earthquakes. The Atacama has been a source of great nitrate and copper wealth. The first European to cross the forbidding waste was Diego de Almagro, the Spanish conquistador, in 1537. From then until the middle of the 19th cent. it was largely ignored, but with the discovery of the use of sodium nitrate as a fertilizer and later with the invention of smokeless powder using nitroglycerin, the desert had a mining boom. Although the southern half of Atacama belonged to Bolivia, the companies exploiting the deposits were Chilean. Differences arose, and in the ensuing war (see PACIFIC WAR OF THE), Chile won the entire area. When synthetic nitrates were developed after World War I, the boom collapsed. Economically, the Atacama is declining, as reserves are depleted and the desert expands southward into once arable land.

Atad (ā'tād), name of the unidentified threshing floor where Joseph and his brethren mourned the death of Jacob. Gen. 50:10,11

Atahualpa (atawal'pa), d. 1533, favorite son of Huayna Capac, Inca of Peru. At his father's death (1525) he received the kingdom of Quito while his half brother, the legitimate heir HUASCAR, inherited the rest of the Inca empire. Shortly before the arrival (1532) of Francisco PIZARRO, Atahualpa invaded the domains of Huascar, whom he defeated and imprisoned, and made himself Inca. On Nov. 16, 1532, Pizarro met Atahualpa at Cajamarca. Invited into the city, Atahualpa was seized and imprisoned. He offered a room full of gold as ransom and at the same time secretly ordered the death of Huascar. He was tried for his brother's murder and for plotting against the Spanish and was executed. He is also known as Atabalipa.

Atalanta (atālän'tə), in Greek mythology, huntress famous for her speed and skill. She took part in the Calydonian hunt and was rewarded by Meleager with the pelt of the boar. Later, warned by an oracle not to marry, she demanded that each suitor run a race with her, on the condition that the winner would marry her and the losers would die. Hippomenes won the race by dropping three golden apples which Atalanta stopped to retrieve. Later, because Hippomenes and Atalanta made love in a temple sacred to Cybele, they were turned into lions and yoked to Cybele's chariot. Another version of the legend makes Milanion Atalanta's successful suitor.

Atami (ata'mē), city (1970 pop. 51,281), Shizuoka prefecture, central Honshu, Japan. It is a major resort, famed for its scenery and its hot springs. Atami was once the site of a geyser which, according to tradition, wrought destruction until moved by Bud-

dhist prayers. After an earthquake in 1923 the geyser stopped erupting.

Atarah (āt'arə), one of Jerahmeel's wives. 1 Chron. 2:26

Atargatis (ātargā'tīs), ancient Syrian goddess. Of obscure origin, she probably belongs to the general pattern of mother goddesses that were worshiped throughout W Asia and Greece. In Rome she was called Dea Syria.

Ataroth (āt'arōth) 1 Town of Gilead. Num. 32:3,34. 2 Unidentified place, E central Palestine. Joshua 16:7. 3 See ATAROTH ADAR. 4 Place or family of Judah. 1 Chron. 2:54.

Ataroth-adar (āt'arōth-ā'dar), unidentified town, N of Jerusalem. Joshua 18:13. Ataroth. Joshua 16:2. Ataroth-adar. Joshua 16:5.

Ataroth-addar, the same as ATAROTH ADAR.

Atascadero (atāskādār'ō), uninc. town (1970 pop. 10,290), San Luis Obispo co., SW Calif., on the Salinas River, founded 1913 as a model community. It is a residential and farming town. A state mental hospital is located there.

Ataturk, Kemal (kēmal' ataturk'), 1881-1938, Turkish leader, founder of modern Turkey. He took the name in 1934 in place of his earlier name, Mustafa Kemal, when he ordered all Turks to adopt a surname, it is made up of the Turkish words Kemal [the perfect] and Ataturk [father of the Turks]. Born at Thessaloniki, he secretly applied to a military academy, where his excellence at mathematics won him the surname Kemal. As a military officer he joined the Young Turks, a liberal movement that sought to establish a constitutional government for the Ottoman Empire (Turkey). However, he disagreed with its pro-German policy, because he considered Turkish interests to be paramount. In 1908 he took part in the successful Young Turk revolution as chief of staff of ENVER PASHA, whom he later opposed over the German issue. He served in Libya (1911-12) and in the Second Balkan War (1913). In World War I his efficient work in the Dardanelles, on the Armenian front, and in Palestine, though it merely helped to postpone disaster, won him the title pasha. After the Ottomans capitulated to the Allies, Sultan MUHAMMAD VI sent Kemal to E Anatolia in an effort to curb his influence. Arriving in May, 1919, Kemal organized the Turkish Nationalist party and began to form an army. When the Turks were aroused by the Greek landing at Smyrna (now IZMIR) he convoked nationalist congresses at Erzurum (July, 1919) and Sivas (Sept.). Outlawed by the sultan, who was in the hands of the Allies in Constantinople, he set up a rival government at Ankara. The signing of the Treaty of SEVRES by the Constantinople government made the split with Ankara final. With the tacit consent of Soviet Russia, Kemal retook Kars and Ardahan from Armenia (1920). Then, taking advantage of disagreements among the Allies, he expelled the Greeks from Anatolia in a brilliant campaign (1921-22). For his victory he received the official name Ghazi [victorious]. On Nov. 1, 1922, Kemal proclaimed the abolition of the sultanate, and Sultan Muhammad VI fled to a British warship. The Treaty of Lausanne (1923, see LAUSANNE, TREATY OF) was a triumph for the nationalist cause, an independent and sovereign Turkey was recognized by the European powers. Kemal was elected president (1923) of the newly founded Turkish republic and reelected in 1927, 1931, and 1935—all four times by a unanimous parliament. With astounding energy he set out on a program of internal reform and "Westernization"; 15 years of his rule changed Turkey profoundly in the most essential as well as the most minute aspects of its life (see TURKEY). Although a dictator, Kemal was prepared to tolerate limited opposition, but he was ruthless toward those he considered extremists. Regarding Islam as a conservative influence, he abolished (1924) the CALIPHATE (thereby in effect disestablishing Islam as the state religion) and broke all religious opposition to reform. Abroad, he pursued a policy of conciliation and neutrality. He established friendly relations with all neighbors, particularly Russia, helped to bring about the BALKAN ENTENTE, and freed Turkey from foreign influence, even though he had to refuse capital for industrialization of the country. On his death he was succeeded as president by Ismet Inönü. In 1953 his remains were transferred to a new mausoleum in Ankara. See biographies by Dagobert von Mikusch (tr. 1931), H. E. Wortham (1931), Hanns Froemberg (tr. 1937), and Lord Kinross (1966), D. E. Webster, *Turkey of Ataturk* (1939).

Ataulf (āt'ālf), d. 415, Visigothic king (410-15). Succeeding his brother-in-law, ALARIC I, he abandoned Alaric's scheme of southward expansion and led the

Visigoths out of Italy into S Gaul (France) in 412. He sought the alliance of the Western emperor, HONORIUS, whose sister GAILA PLACIDIA he married in 414. However, the general Constantius (later Emperor CONSTANTIUS III), jealous of Ataulf, turned Honorius against him. Constantius blockaded the Gallic ports, and Ataulf, cut off from supplies, led his people into N Spain (see VISIGOTHS). He was assassinated at Barcelona.

atavism (āt'avīzəm), the appearance in an individual of a characteristic not apparent in the preceding generation. Originally this phenomenon was thought to be a reversion to a hypothetical ancestral prototype. Mendelian law and the findings of GENETICS demonstrate that abnormal characteristics result from random recombinations of the recessive traits (masked in the intervening generations) that determined the characteristics of the earlier individual. So-called reversion to type may also be produced by disease or by aberrations in embryonic development.

ataxia (atāk'sēə), lack of coordination of the voluntary muscles resulting in irregular movements of the body. Ataxia can be brought on by any injury, infection, or degenerative disease of the central nervous system, e.g., syphilis, encephalitis, brain tumor, or multiple sclerosis. The term is also used to designate a specific type of CEREBRAL PALSY.

Atbara (āt'bara), river, NE Africa, rising in NW Ethiopia and flowing c 500 mi (800 km) to the Nile in Sudan. There are few permanent settlements along its banks. The Atbara's water level is very low, except during the rainy season (from June to October). The river is called the Takazze in its early stages in Ethiopia and the Setit in W Ethiopia and E Sudan.

Atbarah (āt'barə), town (1969 est. pop. 53,000), NE Sudan, at the junction of the Atbara and Nile rivers. An important rail junction, it is also the headquarters of the Sudan railway system and has large railroad workshops. Most of the town's workers are connected with service and maintenance jobs on the rail lines. Sudanese trade unionism originated in Atbarah in 1946 with the founding of a workers' association among railroad employees.

Atchafalaya (əchā'fālī'ə), navigable river, c 170 mi (270 km) long, S central La. The Atchafalaya meanders south, in a former channel of the Mississippi, to the Gulf of Mexico. A distributary of the Red and Mississippi rivers, the Atchafalaya flows to the Gulf through an extensive system of guide levees and floodways. The system serves as a flood control for the lower Mississippi, especially around New Orleans.

Atchison, David Rice, 1807-86, U.S. Senator, b. Froggton, Ky. A lawyer and politician in Missouri, he served in the Senate from 1843 to 1855. As a proslavery Democrat, Atchison was instrumental in having the KANSAS NEBRASKA ACT passed. After his defeat for reelection in 1855, he was a leader of the border ruffians in the raids into Kansas (1855-56). He supported the Confederacy in the Civil War. Atchison, Kansas, is named for him. See biography by W. E. Parrish (1961).

Atchison, city (1970 pop. 12,565), seat of Atchison co., NE Kansas, on the Missouri River, inc. as a city 1881. It is a trade and industrial center in a rich farm area. Steel castings and grain products are produced there. Atchison was founded (1854) near a military post, established (1818-19) on Cow Island in the Missouri River. The Atchison, Topeka & Santa Fe RR was chartered there in 1859, and the city boomed as an important wagon-train, river, and railroad terminal, one of the outfitting points for westward travel. Benedictine College is located in the city.

Ate (ā'tē), in Greek mythology, personification of the rash temper that leads men to folly and misfortune. She was the daughter of Zeus, who, angered by her mischief, cast her from Olympus. In Greek tragedy she was an avenger of evil deeds and thus was similar to Nemesis and the Furies.

Ater (āt'ar) 1 Ancestor of a family that returned with Zerubbabel. Ezra 2:16, Neh. 7:21, 10:17. 2 Ancestor of a family of porters. Ezra 2:42, Neh. 7:45.

Atget, Eugene (ozhēn' atzhē'), 1857-1927, French photographer. After working as a sailor and then as an actor for many years, Atget became a photographer at the age of 42. He began at once to produce his detailed visual record of Paris and its environs, particularly St. Cloud and Versailles. Atget made his living by selling his images of the city to painters for use as source material, and later to the Parisian historical monuments society. In making his photographs of the parks, lakes, shop windows, vendors, prostitutes, ragpickers, buildings, flower markets,

sculpture gardens, doorways, bridges, and street scenes of Paris. Atget went beyond documentation. His quiet, reflective, and poetic images are dramatic with the force of time gone by. A large number of his many thousands of pictures are in the Museum of Modern Art, New York City. Atget's work was published and brought to international attention by the photographer Berenice ABBOTT. See A. D. Trottenberg, ed., *A Vision of Paris: The Photographs of Eugene Atget* (1963), Berenice Abbott, *The World of Atget* (1964).

Athabasca (äthabäs'ka), river, 765 mi (1,231 km) long, rising in the Columbia snowfield of the Canadian Rockies near the Alta-British Columbia line and flowing N through Jasper National Park, then NE and N across central Alta to Lake Athabasca. It is the southernmost headstream of the Mackenzie River. Its chief tributaries are the Pembina, Lesser Slave, and Clearwater rivers. The Athabasca River has long been the main route to the Mackenzie valley. There are extensive deposits of oil-bearing sand along the river near McMurray.

Athabasca, Lake, fourth largest lake of Canada, c 3,120 sq mi (8,100 sq km), c 200 mi (320 km) long and from S to 35 mi (8-56 km) wide, NE Alta, and SW Sask., at the edge of the Canadian Shield. A part of the Mackenzie River system, the lake receives the Athabasca River from the south and drains N into Great Slave Lake by way of the Slave River. Gold and uranium are found nearby. Fort Chipewyan was built (1788) at the west end of the lake by Roderick McKenzie of the North West Company and has been maintained. Steamers of the Hudson's Bay Company ply the lake in summer between Chipewyan and Fond du Lac, from where the canoe route runs by way of Wollaston and Reindeer lakes to the Churchill River. Philip Turnor, the British surveyor, surveyed and mapped the lake between 1790 and 1792.

Athabasca, Mount, 11,452 ft (3,491 m) high, W Alta, Canada, in the Canadian Rockies at the headwaters of the Athabasca River. It is on the edge of the Columbia snowfield, and the Saskatchewan and Athabasca glaciers flow around it.

Athabaskan (äthabäs'kən), **Athapaskan**, or **Athapaskan** (both -päs'-), group of related North American Indian languages forming a branch of the Nadene linguistic family or stock. In the precontact period, Athabaskan was a large and extensive group of tongues. Its speakers lived in what are now Canada, Alaska, Oregon, California, Arizona, New Mexico, Texas, and parts of Mexico. Today the surviving Athabaskan languages include Chipewyan, Kutchin, Carrier, and Sarsi (all in Canada), Chasta-Costa (in Oregon), Hoopa or Hupa (in California), Navaho (in New Mexico, Arizona, and Utah), and Apache (in Oklahoma, Arizona, New Mexico, Texas, and Mexico). These and other Athabaskan languages are the mother tongues of about 100,000 Indians. The speech communities of most Athabaskan languages today are small, with the exception of Navaho, which has roughly 80,000 speakers, most of whom can also speak English. The Navaho is one of the largest Indian tribes in the United States. A feature of the Navaho language, perhaps the best-known tongue in the Athabaskan group, is its tonal quality. There are high tones, low tones, rising tones, and falling tones. Another important Athabaskan tongue, Apache, is spoken in its various dialects by about 5,000 Indians. According to some authorities, the Athabaskan languages face extinction relatively soon. See AMERICAN INDIAN LANGUAGES. See Harry Hoijer et al., *Studies in the Athapaskan Languages* (1963).

Athabasca Pass, 5,736 ft (1,748 m) high, W Alta and E British Columbia, Canada, leading from the headwaters of the Athabasca River across the Continental Divide to the Columbia River. It was discovered by David Thompson, a Canadian fur trader, or one of his agents c 1811, and for the next 50 years it was the chief route of the Hudson's Bay men on their journeys to and from the Columbia River country.

Athach (äthä'k), place in S Palestine, visited by David 1 Sam 30:30.

Athaiah (äthä'yä), Judahite Neh 11:4. Uthai 1 Chron 9:4.

Athaliah (äth'älä) 1 The only queen to occupy the throne of Judah, daughter of Ahab of Israel, wife of JEHOAM 2 of Judah, and mother of AHAZIAH 2 of Judah, whom she succeeded. She had the males of the royal family murdered, but her stepdaughter Jehosheba hid away a baby son of Ahaziah. Some years later, Jehosheba and her husband JEHOIADA 1 effected a coup d'état in favor of this baby, JEHOASH 2. Athaliah they killed. These events are the subject

of Racine's *Athalie*. 2 Kings 11, 2 Chron 22-23. 2 Benjaminite 1 Chron 8:26. 3 Father of one who returned with Ezra. Ezra 8:7.

Athamas (äth'amäs), in Greek mythology, king of Boeotia. He married Nephele, who bore him Phrixus and Helle, but he later fell in love with Ino, who bore him Learchus and Melicertes. According to one legend, Athamas went mad, killed Learchus and forced Ino, who was fleeing with Melicertes, to leap to her death in the sea.

Athanagild (athän'ägild), d 567, Visigothic king of Spain (554-67). Having deposed his predecessor, Agila, with the aid of an army sent by Byzantine Emperor Justinian I, he ceded a large portion of S Spain to the Byzantines and was unable to prevent them from further extending their territory. Although throughout his rule he had to fight the Byzantines, the Franks, and the Basques, Athanagild strengthened his kingdom internally by conciliating the Catholics, whom his Arian predecessors had oppressed. His court at Toledo was famed for its splendor. Athanagild was the father of the Frankish queens Brunhilda and Galswintha. He was succeeded by his brothers Liuva and Leovigild.

Athanaric (athän'ärík), d 381, Visigothic chieftain. He led the VISIGOTHS against Emperor VALENS and negotiated a favorable peace in 369. A pagan, he persecuted the Christians, and, possibly for that reason, he was involved in a civil war with FRITIGERN. Defeated by the Huns in 376, he fled to Transylvania and later (381) to Constantinople. There he was received with royal honors by Theodosius I, but he died two weeks later.

Athanasian Creed (äthänä'zhan), exact, elaborate Roman Catholic statement on the Trinity and the Incarnation. It is no longer believed to have been written by Athanasius, but rather by an unknown Western author of the 6th cent. An English translation appears in the English Book of Common Prayer. It is sometimes called *Quicumque* or *Quicunque Vult* [whoever wishes (to be saved)].

Athanasius, Saint (äthanä'zhas), c 297-373, patriarch of Alexandria (328-73), Doctor of the Church, great champion of orthodoxy during the Arian crisis of the 4th cent. (see ARIANISM). In his youth, as secretary to Bishop Alexander, he took part in the christological debate against Arius at the Council of Nicaea (see NICAEA, FIRST COUNCIL OF), and thereafter became chief protagonist for Nicene orthodoxy in the long struggle for its acceptance in the East. He defended the formula known as *homoousion*, which holds that Christ is of the same substance as the Father, against the various Arian parties who held that Christ was not identical in substance with the Father. The term itself, however, is not particularly his. Made bishop of Alexandria upon the death of his superior, he faced a conspiracy led by EUSEBIUS OF NICOMEDIA to return the condemned Arius to Egypt. When Athanasius refused, a pro-Arian council held at Tyre (335) found him guilty of sacrilege, the practice of magic, dishonest grain dealings, and even murder. Athanasius appealed to Constantine who demanded a retrial, then unaccountably ordered Athanasius into exile—the first of five. Reinstated (337) and exiled again (339), he fled to the West where, under Pope JULIUS I, the Council of Sardica vindicated him (343). To placate his Catholic brother Constans, the Arian Constantius permitted Athanasius to return to his see in 346. There he reigned, a beloved pastor, for ten fruitful years, strengthening orthodoxy in Egypt and composing some of his greatest works, including his *Defense Against the Arians* (348). When Constans died, Constantius procured the condemnation of Athanasius (Arles, 357), again forcing him into exile. It was during this period of hiding with the hermit monks of the Egyptian desert, whom he admired greatly, that he wrote his best exposition of Nicene christology, *Discourses Against the Arians*, attacking both the Arians and the views of MARCELLUS OF ANCYRA. By now a conservative reaction in the East issued in the strongly anti-Arian Lucianic creed promulgated at the Council of Seleucia (359), a step which led to the final victory of Nicene orthodoxy at the Council of Constantinople in 381. Athanasius was restored briefly in 362, only to be quickly exiled by Julian and again by Valens (365). The climate was changing, however, and by 366 Athanasius was secure in his see, where he remained the spokesman for orthodoxy until his death. After him, ST BASIL THE GREAT secured the victory of orthodoxy in the East. Selected works appear in collections of patristic literature—particularly his *De Incarnatione* (c 318). Feast May 2.

Athapascan or **Athapaskan**: see ATHABASCAN, AMERICAN INDIAN LANGUAGES.

Atharva-Veda (äth'va-vä'dä,-vë-) see VEDA.

atheism, denial of the existence of God or gods and of any supernatural existence, to be distinguished from AGNOSTICISM, which holds that the existence cannot be proved. The term *atheism* has been used as an accusation against all who attack established orthodoxy, as in the trial of Socrates. There were few avowed atheists from classical times until the 19th cent., when popular belief in a conflict between religion and science brought forth preachers of the gospel of atheism, such as Robert G. Ingersoll. There are today many individuals and groups professing atheism.

Athelney, Isle of (äth'alnë), small area formerly surrounded by marshland, Somerset, SW England. King Alfred took refuge from the Danes there in 878 and founded a Benedictine abbey in 888. Relics have been found, including the Alfred Jewel, now in the Ashmolean Museum at Oxford.

Athelstan or **Æthelstan** (both äth'alstan, äth'elstan), d 939, king of Wessex (924-39), son and successor of Edward the Elder. As a youth he lived in the household of his aunt, Æthelflæd, Lady of the Mercians. After coming to the throne, he vigorously built up his kingdom on the foundations laid by his grandfather ALFRED. He made himself overlord of all England, establishing his hegemony firmly by victory over a coalition of his enemies at BRUNANBURH in 937. He was popular as well as able, was generous to the church, and issued laws that attempted to impose royal authority on customary law. Athelstan married his sisters to Charles III of France, the French duke Hugh the Great, Otto I of Germany, and Louis, king of Arles. He was succeeded by his brother Edmund. See F. M. Stenton, *Anglo-Saxon England* (2d ed 1947).

Athena (ath'na), or **Pallas Athena** (päl'äs), in Greek religion, one of the most important Olympian deities. According to myth, after Zeus seduced Metis he learned that any son she bore would overthrow him, so he swallowed her alive. Later Hephaestus split Zeus' skull with an ax, and out sprang Athena, fully armed. Athena was a deity of diverse functions and attributes. Her most conspicuous role was perhaps that of a goddess of war, the female counterpart of Ares. However, she was also a goddess of peace, noted for her compassion and generosity. Like Minerva, with whom the Romans identified her, she was a patron of the arts and crafts, especially spinning and weaving. In later times she was important as a goddess of wisdom. Athena was also a guardian of cities, notably Athens, where the Parthenon was erected as her temple. In a contest with Poseidon concerning dominion over Attica, Athena made an olive tree grow on the Acropolis while Poseidon caused a saltwater stream to gush from the Acropolis. The other Olympians, asked to judge the contest, decided in favor of Athena. Her statue, the PALLADIUM, was supposed to protect the city that possessed it. It was said that because she accidentally killed PALLAS she set the name Pallas before her own. Although a virgin goddess, she was concerned with fertility, and at Athens and Elis her worship was notably maternal. Athena is represented in art as a stately figure, armored, and wielding the AEGIS. Her most important festival was the PANATHENAEA.

Athenaeus (äth'anë'äs), fl c 200, Greek writer, b Naucratis, Egypt. His anthological work, the *Deipnosophistae* (Banquet of the Sophists), is valuable because of the wealth of information it contains on Greek manners and customs.

Athenodorus: see LAOCOON.

Athens (äth'inz), Gr *Athinaí*, city (1971 pop 867,023), capital of Greece, E central Greece, on the plain of Attica, between the Kifisos and Ilissos rivers, near the Saronic Gulf. Mt. Agialeos (1,534 ft/468 m), Mt. Parnis (4,633 ft/1,412 m), Mt. Pendelikon (3,638 ft/1,109 m), and Mt. Hymettus (3,370 ft/1,027 m) rise in a semicircle around the city. The capital of Attica prefecture, Athens is Greece's largest city and its administrative, economic, and cultural center. Greater Athens, which includes the port of PIRAEUS and numerous suburbs, has a population of more than 2.5 million and accounts for most of Greece's industrial output. Manufactures include silk, wool, and cotton textiles, machine tools, steel, ships, food products, beverages, chemicals, pottery, printed materials, and carpets. Greater Athens is a transportation hub, served by rail lines, major roads, airlines, and ocean-going vessels. There is a large tourist industry. Water for the city is supplied by the Marathon reservoir (1931), formed by a dam made of Pentelic marble.

The cultural legacy of ancient Athens to the world is incalculable, to a great extent the references to the Greek heritage that abound in the culture of Western Europe are to Athenian civilization. Athens, named after its patron goddess Athena, was inhabited in the Bronze Age. Its citizens later proudly claimed that their ancestors had lived in the city even before the settlements of Attica were molded into a single state (according to legend, by THESEUS). According to tradition, Athens was governed until c 1,000 B C by Ionian kings, who had gained suzerainty over all Attica. After the Ionian kings Athens was rigidly governed by its aristocrats through the archontate (see ARCHONS), until SOLON began to enact liberal reforms in 594 B C. Solon abolished serfdom, modified the harsh laws attributed to DRACO (who had governed Athens c 621 B C), and altered the economy and constitution to give power to all the propertied classes, thus establishing a limited democracy. His economic reforms were largely retained when Athens came under (560-511 B C) the rule of the tyrant PISISTRATUS and his sons HIPPIAS and HIPPARCHUS. During this period the city's economy boomed and its culture flourished. Building on the system of Solon, CLEISTHENES then established (c 506 B C) a democracy for the freemen of Athens, and the city remained a democracy during most of the years of its greatness. THE PERSIAN WARS (500-449 B C) made Athens the strongest Greek city-state. Much smaller and less powerful than SPARTA at the start of the wars, Athens was more active and more effective in the fighting against Persia. The Athenian heroes MILTIADES, THEMISTOCLES, and CIMON were largely responsible for building the city's strength. In 490 B C the Greek army defeated Persia at MARATHON. A great Athenian fleet won a major victory over the Persians off the island of Salamis (480 B C). The powerful fleet also enabled Athens to gain hegemony in the DELIAN LEAGUE, which was created in 478-477 B C through the confederation of many city-states, in succeeding years the league was transformed into an empire headed by Athens. The city arranged peace with Persia in 449 B C and with its chief rival, Sparta, in 445 B C, but warfare with smaller Greek cities continued. During the time of PERICLES (443-429 B C) Athens reached the height of its cultural and imperial achievement. Under Pericles, the philosopher SOCRATES and the dramatists AESCHYLUS, SOPHOCLES, and EURIPIDES were active. The incomparable Parthenon was built, and sculpture and painting flourished. Athens became a center of intellectual life, probably never again in the history of the West (unless perhaps in Renaissance Florence) was so much creative genius gathered in one place. However, the rivalry with Sparta had not ended, and in 431 B C the PELOPONNESIAN WAR between Sparta and Athens began. It went badly for Athens from the start. The Long Walls built to protect the city and its port of Piraeus saved the city itself as long as the fleet was paramount, but the allies of Athens fell away and the land empire Pericles had tried to build already had crumbled before his death in 429 B C. The war dragged on under the leadership of CLEON and continued even after the collapse of the expedition against Sicily, urged (415 B C) by ALICIBIADES. The Peloponnesian War finally ended in 404 B C with Athens completely humbled, its population cut in half, and its fleet reduced to a dozen ships. Under the dictates of Sparta, Athens was compelled to tear down the Long Walls and to accept the government of an oligarchy called the THIRTY TYRANTS. However, the city recovered rapidly. In 403 B C the Thirty Tyrants were overthrown by THRASYBULUS, and by 376 B C Athens again had a fleet, had rebuilt the Long Walls, had re-created the Delian League, and had won a naval victory over Sparta. Sparta also lost power as a result of its defeat (371 B C) by Thebes at LEUCTRA, and, although Athens did not again achieve hegemony over Greece, it did have a short period of great prosperity and comfort. However, the growth of Macedon's power under Philip II heralded the demise of Athens as a major power. Despite the pleas by DEMOSTHENES to the citizens of Athens to stand up against Macedon, Athens was decisively defeated by Philip at Chaeronea in 338 B C. The city did not dare dispute the mastery of Philip's son and successor, Alexander the Great. After his death Athens revolted (323-322 B C) against control by Macedon, but the revolt was quashed, and Athens lost its remaining dependencies and declined into a provincial city. Its last bid for greatness (266-262 B C) was firmly suppressed by ANTIGONUS II, king of Macedon. Through the troubled times of the Peloponnesian War and the wars against Philip, Athenian achievements in philosophy, drama, and art had continued. ARISTOPH-

ANES wrote comedies, PLATO taught at the Academy, ARISTOTLE compiled an incredible store of information, and Thucydides wrote a great history of the Peloponnesian War. As the city's glory waned in the 3d cent B C, its earlier contributions were spread over the world in Hellenistic culture. Athens became a minor ally of growing Rome, and a period of stagnation was broken only when the city unwisely chose to support Mithridates VI of Pontus against Rome. As a result, Athens was sacked by the Roman general Sulla in 86 B C. Nevertheless, Athens sent out many teachers to Rome and retained a certain faded glory as a moderately prosperous small city in the backwash of the empire. It remained so until the time when the Eastern Empire began to fall to the barbarians. Athens was captured in A D 395 by the Visigoths under Alaric I. It became a provincial capital of the Byzantine Empire and a center of religious learning and devotion. Following the creation (1204) of the Latin Empire of Constantinople (see CONSTANTINOPE, LATIN EMPIRE OF), Athens passed (1205) to Othon de la Roche, a French nobleman from Franche-Comte, who was made *megaskyr* [great lord] of Athens and Thebes. His nephew and successor, Guy I, obtained the ducal title, and the duchy of Athens, under Guy I and his successors, enjoyed great prosperity while becoming thoroughly French in its institutions. In 1311 the duchy was captured by a band of Catalan soldier-adventurers who offered (1312) the ducal title to King Frederick II of Sicily, a member of the house of Aragón. Members of the house of Aragón carried the title, but Athens was in fact governed by the "Catalan Grand Company," which also acquired (1318) the neighboring duchy of Neopatra. The French feudal culture disappeared, and Athens sank into insignificance and poverty, particularly after 1377, when the succession was contested in civil war. Peter IV of Aragón assumed sovereignty in 1381, but ruled from Barcelona. On his initiative, the devastated duchy was settled by Albanians. Athens again prospered briefly after its conquest in 1388 by Nerio I Acciajuoli, lord of Corinth, a Florentine noble. Under the Acciajuoli family's rule numerous Florentine merchants established themselves in Athens. However, the fall of the Acropolis to the Ottoman Turks in 1458 marked the beginning of nearly four centuries of Ottoman rule, and Athens once more declined. Venice, which had held Athens from 1394 to 1402, recovered it briefly from the Turks in 1466 and besieged it in 1687-88. During the siege the Parthenon, used by the Turks as a powder magazine, was largely blown up in a bombardment. Modern Athens was constructed only after 1834, when it became the capital of a newly independent Greece. OTTO I, first king of the Hellenes (1832-62), rebuilt much of the city, and the first modern Olympic games were held in Athens in 1896. The population of Athens grew rapidly in the 1920s, when Greek refugees arrived from Turkey. The city's inhabitants suffered extreme hardships during the German occupation (1941-44) in World War II, but the city escaped damage in the war and in the country's civil troubles of 1944-50. The main landmark of Athens is the ACROPOUS (412 ft/126 m), which dominates the city and on which stand the remains of the PARTHENON, the PROPYLEAE, and the ERECHTHEUM. Occupying the southern part of Athens, the Acropolis is ringed by the other chief landmarks of the ancient city—the Pnyx, where the citizens' assemblies were held, the AREOPAGUS, the Theseum of Hephaestum, a well-preserved Doric temple of the 5th cent B C, the old Agora and the Roman forum, the temple of Zeus or Olympieum (begun under Pisistratus in the 6th cent B C and completed in the 2d cent A D under Hadrian, whose arch stands nearby), the theatre of Dionysius (oldest in Greece), and the Odeum of HERODES ATTICUS. There are many Roman remains in the "new" quarter, built east of the original city walls by Emperor Hadrian (1st cent A D), there the modern royal palace and gardens also stand. The STADIUM is E of the Ilissus River. Parts of the ancient city walls are still visible, particularly at the Dipylon, the sacred gate on the road to Eleusis (Eleusis), however, the Long Walls connecting Athens and Piraeus have almost entirely disappeared. The most noteworthy Byzantine structures are the churches of St. Theodora and of the Holy Apostles, both built in the 12th cent. Athens is the see of an archbishop who presides over the Synod of the Greek Orthodox Church. The city is the seat of the National and Capodistrian University (1837), a polytechnic institute, an academy of sciences, several schools of archaeology, and many museums and libraries. A nuclear research center is nearby, at Aghia Paraskevi. The Greek geographer PAUSANIAS wrote an extensive

description of Greece. HERODOTUS, THUCYDIDES, XENOPHON, and POLYBIUS were great Greek historians. Modern general works on ancient Greece include those of J. B. BURY and Michael ROSTOVITZ. See A. H. M. Jones, *Athenian Democracy* (1957), C. A. Robinson, *Athens in the Age of Pericles* (1959), P. L. MacKendrick, *The Athenian Aristocracy* (1967), J. C. Hill, *The Ancient City of Athens, Its Topography and Monuments* (rev. ed. 1969), G. Giannelli, *The World of Classical Athens* (1970), C. M. Bowra, *Persian Athens* (1971), Russell Meiggs, *The Athenian Empire* (1972). See also bibliography under GREECE.

Athens. 1 City (1970 pop 14,360), seat of Limestone co., N Ala., near the Tenn. line, in a farm area, inc. 1818. It has food-processing industries and plants that make textiles, thermostats, stoves, and chemicals. Sacked and occupied by Federals in 1862, it was recaptured by Gen. N. B. Forrest in 1864. Fine antebellum buildings remain. Athens College is there, and a nuclear power plant is nearby. 2 City (1970 pop 44,342), seat of Clarke co., NE Ga., on the Oconee River, in a piedmont area, inc. 1806. The city was founded as the site of the Univ. of Georgia. Its industries include poultry processing and the manufacture of clocks, watches, radios, and textiles. Numerous Georgia statesmen have lived in Athens, and some of their houses are among the city's many fine examples of classic revival style—the Howell Cobb house (1850), the T. R. Cobb house (1830-43), and the Joseph H. Lumpkin house (c. 1845). 3 City (1970 pop 23,310), seat of Athens co., SE Ohio, on bluffs overlooking the Hocking River, in a coal-mining area of the Appalachian foothills, inc. 1811. There are diverse industries in the city. Athens was surveyed in 1795-96 by the Ohio Company of Associates as the site of a university and was settled shortly thereafter. It is the seat of Ohio Univ. and of a state mental hospital. Wayne National Forest is to the north. 4 City (1970 pop 11,790), seat of McMinn co., E Tenn., in a farm and resort area, inc. 1829. Furniture, plastics, farm implements, dairy products, and insecticides are made. Tennessee Wesleyan College is there.

atherosclerosis (ăth'ərōsklārō'sīs) see ARTERIOSCLEROSIS

Atherton, Gertrude Franklin (Horn), 1857-1948, American writer, b. San Francisco. She wrote a series of historical novels about California, which include *The Californians* (1898), *Rezanov* (1906), and *The Ancestors* (1907). Her most popular books are *The Conqueror* (1902), which is a fictionalized biography of Alexander Hamilton, and the sensational novel *Black Oxen* (1923), concerning a woman who is rejuvenated by a glandular operation and based on Atherton's own experience of glandular therapy. See her autobiography *The Adventures of a Novelist* (1932).

Athlai (ăth'lī, ăthlāt'), Israelite. Ezra 10:28

athlete's foot: see RINGWORM

athlete's heart, common term for an enlarged HEART associated with repeated strenuous exercise. As a result of the increased workload required of it, the heart will stretch, or hypertrophy, enlarging the size of the chambers and increasing the volume of blood pumped per stroke. Consequently, the heart has to contract less frequently and at rest will beat as few as 40 times per minute as compared with an average number of 70 beats in a normal heart. The condition is not pathological, and there is probably no danger of cardiac disability arising from it.

Athlone, Godart van Ginkel, 1st earl of: see GINKEL, GODART VAN

Athlone (ăthlōn'), urban district (1971 pop 9,821), Co. Westmeath, central Republic of Ireland, on the Shannon River. It is an important road and rail junction and a busy inland port, reached by the river and two canals. Industries include the production of cotton textiles, woolens, mineral water, and furniture. The English occupied the town in the 13th cent. and built Athlone Castle. Possession of the town was disputed during succeeding centuries, and the castle was often besieged. Athlone fell to the forces of William III of Great Britain in 1691. It is an important military station and the main transmitting station of the Irish National Radio.

Athol (ăth'əl), town (1970 pop 11,185), Worcester co., N. Mass., inc. 1762. Its manufactures include tools, drills, shoes, and toys. The area was settled in 1735.

Atholl (ăth'əl), successively an earldom, a marquessate, and a dukedom of Scotland. See STUART, JOHN, and MURRAY, JOHN.

Athor: see HATHOR

Athos (āth'ōs, ā'thōs) or **Akte** (āk'tā), easternmost of the three peninsulas of KHALKIDHIKI, c 130 sq mi (340 sq km), NE Greece, in Macedonia. At the southern tip of the peninsula is the virtually independent state of the monks of Mount Athos, also called Hagion Oros [Gr. = Holy Mountain], which rises to c 6,670 ft (2,030 m). Mount Athos is a community of about 20 monasteries of the Order of St. Basil of the Orthodox Eastern Church and includes c 30 sq mi (80 sq km) of territory. The first monastery was founded c 963. The community of monks (see MONASTICISM) enjoyed administrative independence under the Byzantine and Ottoman empires and under the modern Greek government. In 1927 it was made a theocratic republic under Greek suzerainty, ruled by the patriarch of Constantinople. Karyai, the chief town of Athos, is the seat of the Holy Community, a committee made up of one representative from each monastery, which governs the monks of Mount Athos. No woman or female animal is allowed in the religious community. The icons from Mount Athos are celebrated, the libraries contain a great wealth of Byzantine manuscripts.

Atitlán (ātētlan'), volcanic lake, 53 sq mi (137 sq km), 17 mi (27.3 km) long and 11 mi (17.7 km) wide, SW Guatemala. One of the most magnificent lakes of Central America, it is set among lofty mountains with three inactive volcanoes nearby. Atitlán volcano (11,565 ft/3,525 m) is the tallest. The fertile lakeshore is densely populated by subsistence farmers. Through the principal towns on the lake, Santiago Atitlán, San Lucas Tolimán, and Panajachel, the Indians, paddling dugouts, transport produce to and from the Pacific coast and the highlands.

Atkinson, Brooks (Justin Brooks Atkinson), 1894–, American journalist, b. Melrose, Mass. He began his career as a reporter for the *Springfield, Mass., Daily News* and later worked for the *Boston Transcript*. After serving as an editor for the *New York Times*, he became its drama critic in 1925. Except for his service as a foreign correspondent during World War II, he held the position as critic until 1960. His critical opinion had much influence on the success or failure of Broadway plays. Upon his retirement as drama critic, a New York theater was named for him. Atkinson's books include *Henry Thoreau, the Cosmic Yankee* (1927), *Broadway Scrapbook* (1947), and *Broadway* (1970). An ardent naturalist and conservationist, he wrote *This Bright Land: A Personal View* (1972).

Atkinson, Henry, 1782–1842, American army officer, b. North Carolina. After service as a colonel in the War of 1812, he was a commander in the West and led two expeditions (1819, 1825) to the Yellowstone River. He was general commander of forces in the BLACK HAWK WAR and later supervised removal of the Winnebago Indians to Iowa. Jefferson Barracks (near St. Louis) and Fort Leavenworth were begun under his direction. See biography by R. L. Nichols (1965).

Atlanta (atlán'tā, āt-), city (1970 pop. 497,421), state capital and seat of Fulton co., NW Ga., near the Appalachian foothills, inc. as a city 1847. It is the largest city and the cultural, industrial, transportation, financial, and commercial center of the state, a port of entry, a busy air traffic hub, and one of the leading cities of the South. Manufactures include textiles, furniture, chemicals, glass, paper, lumber, steel, and leather, electrical, and aluminum products. There are flour mills, automobile and aircraft assembly plants, and printing and publishing houses. Hardy Ivy, the first settler, built a cabin there (1833) on what had been Creek Indian land. The town, founded (1837) as Terminus, the end of a railroad line, was incorporated as Marthasville in 1843 and renamed Atlanta in 1845. It became a railroad and marketing hub and in the Civil War was an important communication and supply center; it fell to Gen. W. T. Sherman on Sept. 2, 1864 (see ATLANTA CAMPAIGN). Most of the city was burned on Nov. 15, before Sherman began his march to the sea. The city was rapidly rebuilt and thrived as a commercial and industrial center. It was chosen temporary state capital in 1868 and became permanent capital following a popular vote in 1877. A number of conventions and expositions in the 19th and 20th cent. drew attention to Atlanta's strategic distributive position. Points of interest include the capitol (1889), housing the state library, the city hall (1929), the High Museum of Art, the state archives building, containing an historical museum and library, the building housing the huge *Cyclorama of the Battle of Atlanta*, Oakland Cemetery, containing Civil War dead. "Underground Atlanta," a four-block tract covered for 50 years by a vast viaduct system, now

being restored, the grave of Martin Luther King, Jr., and Grant Park, with the municipal zoo and Confederate Fort Walker (restored). The Federal penitentiary there (est. 1899) is one of the most widely known prisons in the United States. Many departments of the Federal government have branches in Atlanta, also there are Fort McPherson, headquarters of the US 3d Army, and a naval air station. The city's numerous parks are famous for their dogwood blooms, and in the area are Stone Mountain Park, with enormous relief carvings of Confederate figures, and Kennesaw Mountain National Battlefield Park (see NATIONAL PARKS AND MONUMENTS, table). Atlanta is the seat of Emory Univ., Georgia Institute of Technology, Georgia State Univ., Oglethorpe Univ., Beulah Heights College, the Atlanta School of Art, and Atlanta Univ., with its adjacent and affiliated schools, Clark College, Morehouse College, Morris Brown College, and Spelman College. There is a symphony orchestra, and the Atlanta stadium is home for the city's professional football and baseball teams.

Atlanta campaign, May–Sept. 1864, of the U.S. Civil War. In the spring of 1864, Gen. W. T. Sherman concentrated the Union armies of G. H. Thomas, J. B. McPherson, and J. M. Schofield around Chattanooga. On May 6 he began to move along the railroad from Chattanooga to Atlanta against Dalton, Ga., c 30 mi (48 km) southeast, where Gen. J. E. Johnston had a smaller Confederate force. Sherman had a twofold objective: the destruction of Johnston's army and the capture of Atlanta, c 140 mi (225 km) southeast. Since Johnston was strongly entrenched, Sherman turned his left flank, forcing him back to Resaca, c 12 mi (19 km) south. The campaign continued in this way—Sherman outflanking Johnston, who withdrew to previously fortified positions—until June 27, when Sherman tried a direct attack at Kennesaw Mt., c 25 mi (40 km) NW of Atlanta, and was repulsed. He then reverted to flank operations. By July, Johnston had withdrawn to the south bank of the Chattahoochee River, where he prepared to fight on his own terms. On July 17, the day Sherman crossed the Chattahoochee, John Bell Hood replaced Johnston. Following Johnston's plan, Hood unsuccessfully attacked Sherman's divided army (July 20) as it crossed Peach Tree Creek, a small tributary of the Chattahoochee. In the battles of Atlanta (July 22) and Ezra Church (July 28), Hood again failed to stop the Union advance, he then retired behind the strong works of Atlanta, which Sherman soon had under bombardment. The Union lines were gradually extended until the Confederate line of communications south of the city was broken on Sept. 1. Hood abandoned Atlanta that night and Sherman occupied it on Sept. 2, 1864. See A. A. Hoehling, *Last Train from Atlanta* (1958), Samuel Carter, *The Siege of Atlanta, 1864* (1973).

Atlanta University Center, at Atlanta, Ga., coeducational. It was organized in 1929 when Atlanta Univ. (chartered 1867), Morehouse College (1867), and Spelman College (1881) became affiliated in a university plan, in which Atlanta Univ. was to be devoted exclusively to graduate education, with the other two colleges providing undergraduate programs. In 1947 the Atlanta Univ. School of Social Work (1920) merged with Atlanta Univ. Later Clark College (chartered 1877), Interdenominational Theological Center, and Morris Brown College (1885) also joined the university center's affiliation agreement.

atlantes (ātlan'téz) [Latin plural of ATLAS], sculptured male figures serving as supports, or apparent supports, in place of a column or pier. The earliest (c 480–460 B.C.) and most important example from antiquity is in the Greek temple of Zeus at Agrigento, Sicily. The baroque architecture of the 17th cent. made considerable use of atlantes, and they were a frequent decorative motif in mantelpieces and doorways of the classical revival in the early 19th cent.

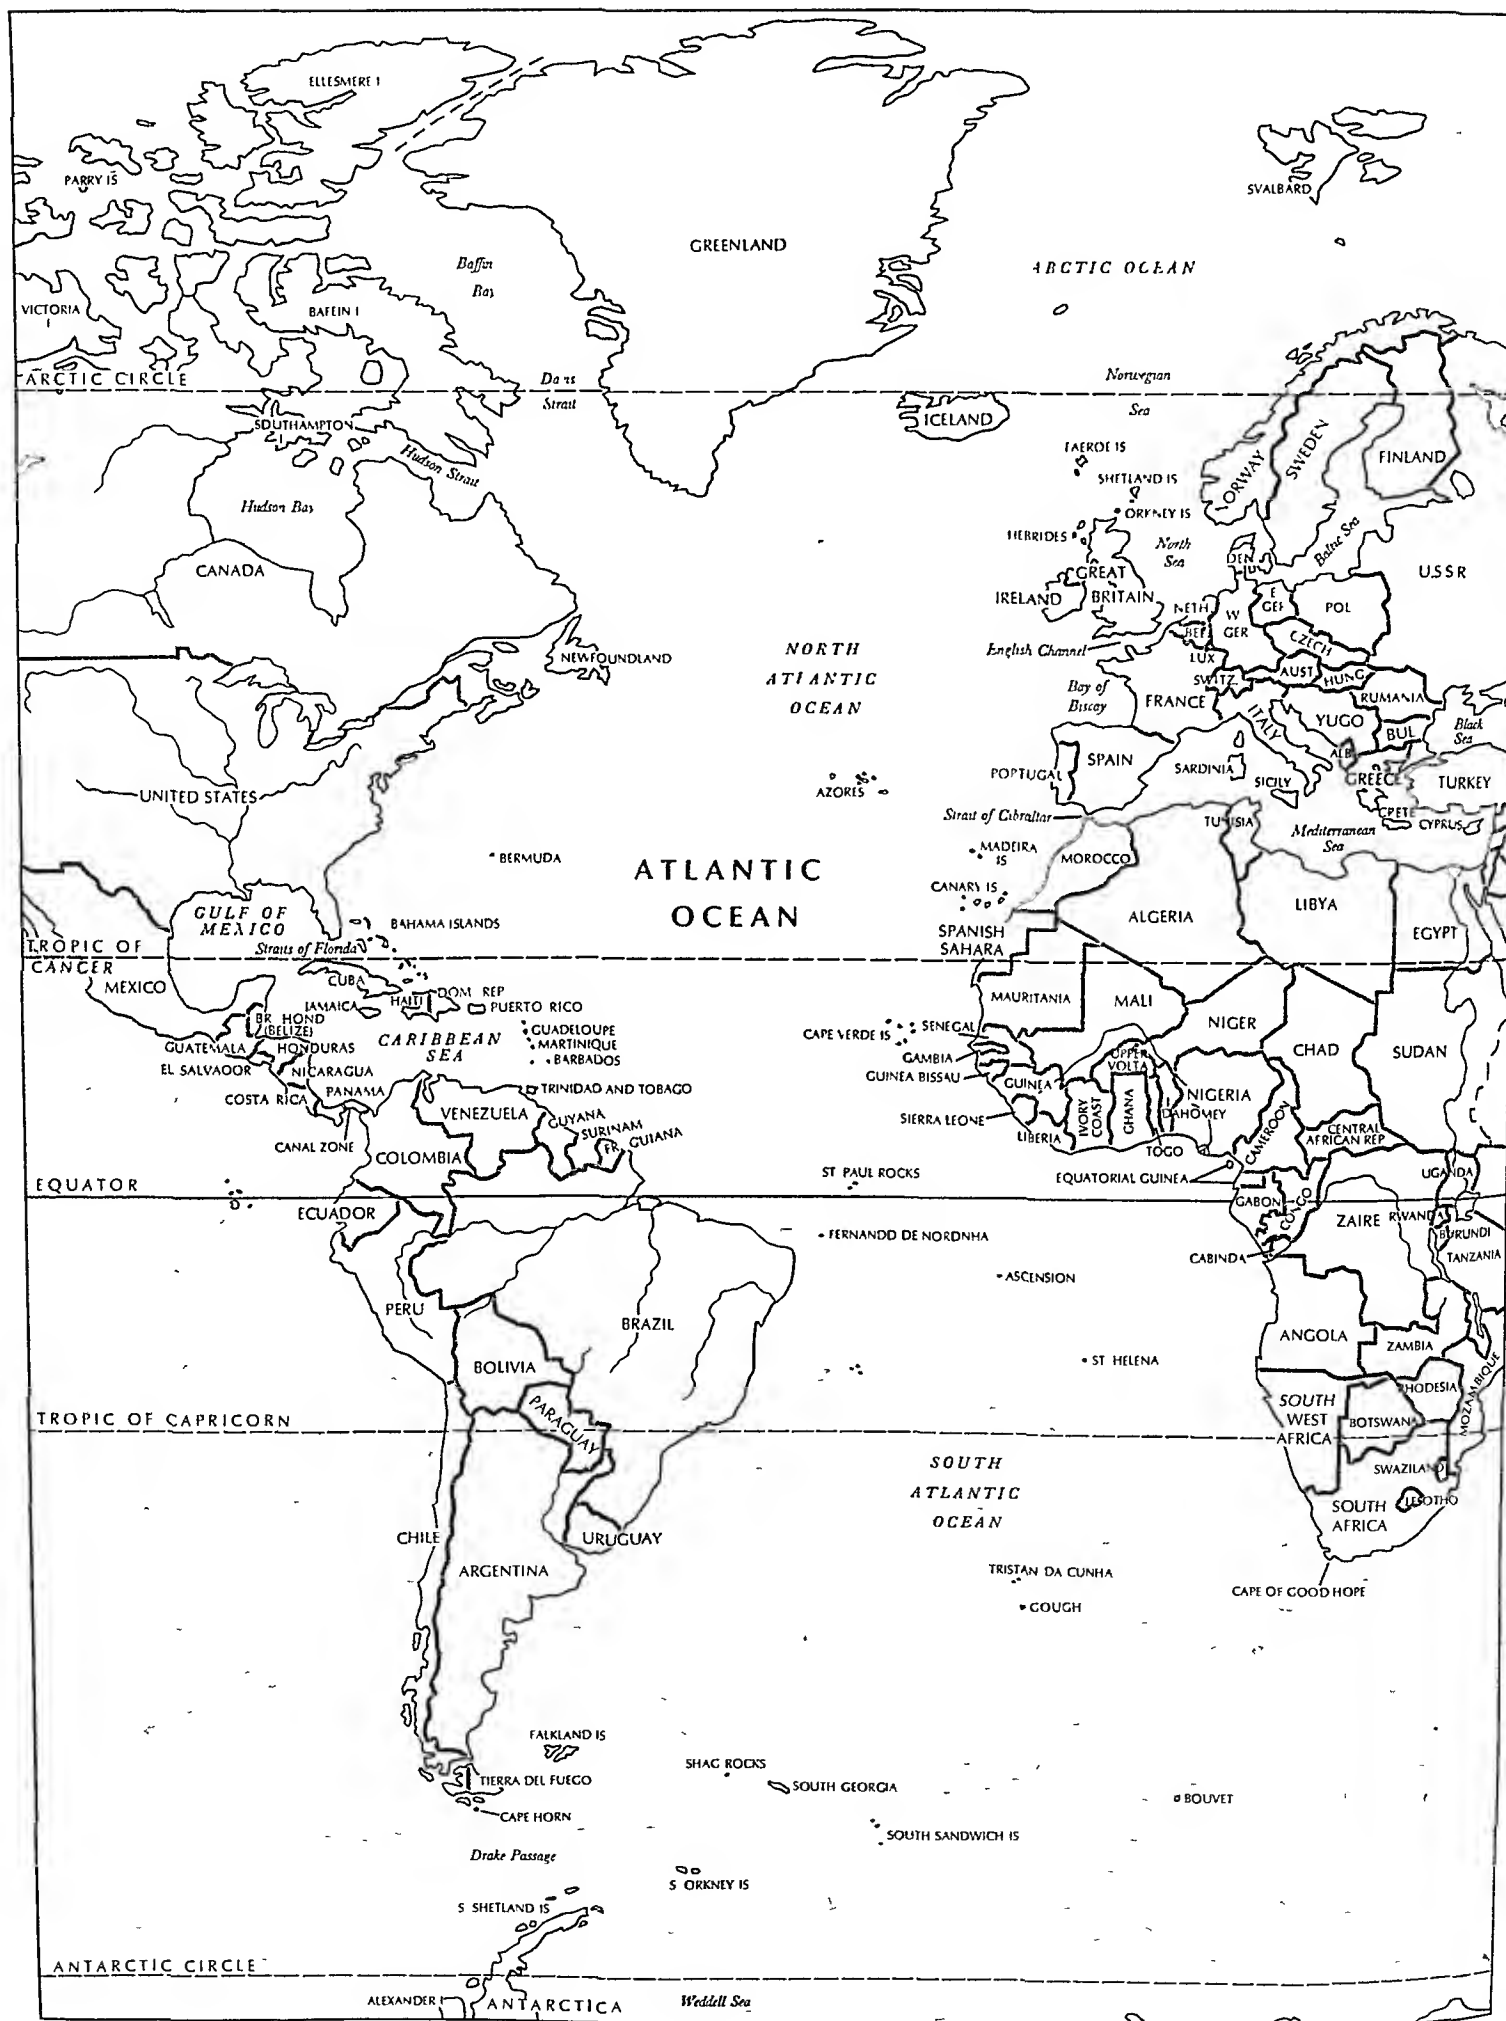

Atlantic cable· see CABLE

Atlantic Charter, joint program of peace aims, enunciated by Prime Minister Winston Churchill of Great Britain and President Franklin Delano Roosevelt of the United States on Aug. 14, 1941. Britain at that time was engaged in World War II, and the United States was to enter the war four months later. The statement, which was not an official document, was drawn up at sea, off the coast of Newfoundland. It supported the following principles and aims: renunciation of territorial aggrandizement, opposition to territorial changes made against the wishes of the people concerned, restoration of sovereign rights and self-government to those forc-

ibly deprived of them, access to raw materials for all nations of the world and easing of trade restrictions, world cooperation to secure improved economic and social conditions for all, freedom from fear and want, freedom of the seas, and abandonment of the use of force, as well as disarmament of aggressor nations. In the United Nations declaration of Jan. 1, 1942, the signatory powers pledged adherence to the principles of the charter.

Atlantic City, city (1970 pop. 47,859), Atlantic co., SE N.J., an Atlantic resort and convention center, settled c 1790, inc. 1854. Situated on Absecon Island, a sandbar that is 10 mi (16.1 km) long, Atlantic City was a fishing village until the construction of a railroad in 1854, when it became a fashionable resort for Philadelphians and New Yorkers. The first boardwalk was built in 1870. Atlantic City's chief industry is tourism, about 15 million visitors come annually. The present boardwalk, lined with hotels, shops, and amusements, is 6 mi (9.7 km) long and from 40 to 60 ft (12.2–18.3 m) wide. Rolling chairs, introduced in 1884, provide pleasant rides along the boardwalk. Five amusement piers, including the famous Steel Pier (1898), run out to sea from the boardwalk. Atlantic City has a large convention hall, football games are played in its main arena and the Democratic national convention took place there in 1964. The Miss America Pageant is held in Atlantic City every September. Absecon Lighthouse, in operation from 1854 to 1932, is now a tourist attraction. The first Ferris wheel was built in Atlantic City in 1869. The board game Monopoly, which makes use of the city's street names, was invented there in 1930. Saltwater taffy, developed in Atlantic City, is the chief manufacture.

Atlantic Ocean [Lat. = of Atlas], second largest ocean (c 31,800,000 sq mi/82,362,000 sq km, c 36,000,000 sq mi/93,240,000 sq km with marginal seas), extending in an S shape from the arctic to the antarctic regions between North and South America on the west and Europe and Africa on the east. It is connected with the Arctic Ocean by the Greenland Sea and Smith Sound, with the Pacific Ocean by Drake Passage, the Straits of Magellan, and the Panama Canal, and with the Indian Ocean by the Suez Canal and the expanse between Africa and Antarctica. The shortest distance across the Atlantic Ocean (c 1,600 mi/2,575 km) is between SW Senegal, W Africa, and E Brazil, E South America. The principal arms of the Atlantic Ocean are (in the west) Hudson and Baffin bays, the Gulf of Mexico, and the Caribbean Sea, (in the east) the Baltic, North, Mediterranean, and Black seas, the Bay of Biscay, and the Gulf of Guinea, and (in the south) Weddell Sea. The continental shelf of the Atlantic Ocean is generally narrow, with the widest sections found off NE North America, SE South America, and NW Europe. The Atlantic has relatively few islands, with the greatest concentration found in the Caribbean region. Most of the islands are structurally part of the continents, such as the British Isles, Falkland Islands, Canary Islands, and Newfoundland Islands such as Iceland, the Azores, the Cape Verde Islands, Ascension, the South Sandwich Islands, the West Indies, and Bermuda are exposed tops of submarine ridges. The Bahamas are low coral islands, while the Madeiras are high volcanic islands. The floor of the Atlantic has an average depth of c 12,000 ft (3,660 m). It is separated from that of the Arctic Ocean by a submarine ridge extending from SE Greenland to N Scotland, part of the floor (c 3,000 ft/910 m deep) is known as "telegraph plateau" because of the network of cables laid there. A shallow submarine ridge across the Strait of Gibraltar separates the Mediterranean basin from the Atlantic and limits the exchange of water between the two bodies. The Mid-Atlantic Ridge (c 300–600 mi/480–970 km wide), a submarine mountain range extending c 10,000 mi (16,100 km) from Iceland to near the Antarctic Circle, generally follows the trend of the coastlines of the continents. It rises to an average height of c 10,000 ft (3,050 m), and a few peaks emerge as islands. The ridge, which is the center of volcanic activity and earthquakes, has a great rift that is constantly widening (see SEA-FLOOR SPREADING) and filling with molten rock from the earth's interior. As a result the Western Hemisphere and Europe and Africa are moving away from each other. The Mid-Atlantic Ridge divides the floor of the Atlantic Ocean into eastern and western sections that are composed of a series of deep-sea basins (abyssal plains). The greatest depth (c 28,000 ft/8,530 m) is the Milwaukee Deep, in the Puerto Rico Trench, N of Puerto Rico. More large rivers, including the Mississippi, the Congo, and the Amazon, drain into the

Atlantic than into any other ocean. The surface waters in the Atlantic's trade wind belts attain the highest salinity known in ocean water. Because of its shape, the Atlantic may be divided into two basins—North Atlantic Ocean and South Atlantic Ocean—each with a distinct circulation system. The clockwise-moving currents of the North Atlantic (North Equatorial Current, Antilles Current, Gulf Stream, North Atlantic Drift, Canaries Current) and the counterclockwise-moving currents of the South Atlantic (South Equatorial Current, Brazil Current, West Wind Drift, Benguela Current) are separated from each other by the Equatorial Counter Current, the Guinea Current off W Africa is a link between the two systems. At the Grand Banks off Newfoundland heavy fogs form along the front where the warm Gulf Stream meets the cold Labrador Current. The Grand Banks along with the Dogger Banks of the North Sea contain some of the world's best commercial fishing grounds. The North Atlantic Ocean has the world's busiest shipping lanes, the northern lanes are patrolled for icebergs. Commerce between the Mediterranean Sea and the NE Atlantic Ocean was initiated by the Carthaginians. From the 7th cent. A.D., Scandinavians navigated the Atlantic, they probably reached North America c 1000. Trade routes along the coast of Africa were opened by Portugal in the 15th cent. and to the Western Hemisphere by Spain after the voyages of Columbus. Scientific knowledge of the ocean floor dates from the CHALLENGER EXPEDITION (1872-76). See A. J. Villiers, *Wild Ocean: The Story of the North Atlantic and the Men Who Sailed It* (1957), B. C. Heezen et al., *The Floors of the Ocean: The North Atlantic* (1959), John Murray and Johan Hjort, *The Depths of the Ocean* (1912, repr. 1965), M. V. Klenova, ed., *Oceanographic Research in the Atlantic* (tr. 1967), V. H. Cassidy, *The Sea Around Them: The Atlantic Ocean*, A.D. 1250 (1968).

Atlantic Provinces, term used since 1949 to designate the Canadian provinces of Newfoundland, Nova Scotia, New Brunswick, and Prince Edward Island.

Atlantis, in Greek legend, large island in the western sea. Plato, in his dialogues the *Timaeus* and the *Critias*, tells of the high civilization that flourished there before the island was destroyed by an earthquake. The legend has persisted, and societies for the discovery of Atlantis are perennially active. Plato described Atlantis as an ideal state, and the name is considered synonymous with UTOPIA. Francis Bacon called his account of the ideal state *The New Atlantis*. See N. F. Zhirov, *Atlantis* (tr. 1970), J. S. Bowman, *The Quest for Atlantis* (1971).

Atlas (ä'tlās), in Greek mythology, a Titan, son of Iapetus and the nymph Clymene and the brother of Prometheus. He joined with Cronus and led the Titans in their defense against the Olympians. (See TITAN.) When the Titans were defeated, Atlas was condemned to hold the sky on his shoulders for all eternity—a mythical explanation of why the sky does not fall. He is identified with the Atlas mountains in NW Africa.

atlas, in geography, collection of maps or charts. It usually includes data on various features of a country, e.g., its topography, natural resources, climate, and population, as well as its agriculture and main industries. In astronomy, a star atlas is a collection of maps or photographs covering much or all of the celestial sphere and showing the locations of stars and other objects. Although the first known atlas was compiled by the Greek geographer Ptolemy in the 2d cent. A.D., its modern form was introduced in 1570 with the publication of *Theatrum orbis terrarum* by the Flemish geographer Abraham Ortelius. In 1595 his close friend Gerardus Mercator published *Atlas sive cosmographicae*. Its frontispiece was a figure of the titan Atlas holding a globe on his shoulders. The name *Atlas* subsequently came to be applied to volumes of maps and information in this format.

Atlas Mountains, system of ranges and plateaus in NW Africa, extending c 1,500 mi (2,410 km) from SW Morocco, through N Algeria, to N Tunisia, Jebel Toubkal (13,671 ft/4,167 m), in SW Morocco, is the highest peak. The Atlas Mts., predominantly folded mountains of sedimentary rock, were uplifted during the late Jurassic period. Geologically related to the Alpine system of Europe, they are separated from the Sierra Nevada of Spain by the Strait of Gibraltar and from Sicily and the Apennines of Italy by the Mediterranean Sea, the Canary Islands are a westward extension. The Atlas system is most rugged in Morocco, where, from north to south, the Rif Atlas, Middle Atlas, High or Grand Atlas (the highest

part of the system), and Anti-Atlas are found, fertile lowlands separate the ranges. In Algeria the system becomes a series of plateaus, with the Tell Atlas and the Saharan Atlas rimming the extensive Plateau of the Chotts before converging in Tunisia. The Atlas Mts. are a climatic barrier between the Mediterranean basin and the Sahara Desert. The slopes facing north are generally well watered and have important farmland and forests, on these slopes are the headwaters of many streams used for irrigation. The slopes facing south and the drier areas of the system are generally covered with shrub and grasses and have salt lakes and salt flats, sheep grazing is important there. The Atlas Mts. are rich in minerals, especially phosphates, coal, iron, and oil.

atlatl (at'lātāl), throwing stick used to give a spear greater propulsion. Archaeological evidence indicates that it was employed extensively by Indians of North and South America prior to A.D. 1200, when it was superseded by the bow and arrow.

Atli: see ETZEL.

Atlin Lake (ä'tlīn), long, irregular mountain lake, c 300 sq mi (780 sq km), NW British Columbia, Canada, touching the Yukon Territory boundary. It is the source of the Yukon River. The town of Atlin is on the east shore and is the headquarters of the Atlin dist., a region in which there is both placer and quartz gold mining. The region is noted for its scenery and its hunting.

atmometer: see EVAPORIMETER.

atmosphere [Gr., =sphere of air], the mixture of gases surrounding a celestial body with sufficient gravity to maintain it. Although some details about the atmospheres of Mars and Venus are known, and various remote measurements have hinted at the atmospheric properties of other planets, a complete description is available only for the earth's atmosphere, the study of which is called meteorology. The gaseous constituents of the atmosphere are not chemically combined, and thus each retains its own characteristic properties. Within the first 40 to 50 mi (64-80 km) above the earth the mixture is of uniform composition, except for a high concentration of ozone at 30 mi (50 km). This whole region contains more than 99% of the total mass of the earth's atmosphere. Calculated according to their relative volumes, the gaseous constituents are nitrogen, 78.09%, oxygen, 20.95%, argon, 0.93%, carbon dioxide, 0.03%, and minute traces of neon, helium, methane, krypton, hydrogen, xenon, and ozone. Above this well-mixed region is a narrow layer extending to about 72 mi (120 km) and containing nitrogen and oxygen. It is covered by an atmosphere consisting primarily of oxygen, extending to an altitude of about 600 mi (970 km). Helium predominates in the next higher region, which reaches to an altitude of about 1,500 mi (2,400 km). The outermost layer of atmosphere is composed mainly of hydro-

Atmosphere

gen The diffusion of these gases into such distinct layers is caused by the floating of lighter gases to the outer layers of the atmosphere. The lower atmosphere also contains varying amounts of water vapor, which determine its HUMIDITY. Condensation and sublimation within the atmosphere cause clouds or fog, and the resulting liquid water droplets or ice crystals may precipitate to the ground as rain, sleet, snow, hail, dew, or frost. The air also carries many kinds of DUST, including some of meteoric as well as terrestrial origin, and microorganisms, pollen, salt particles, and various gaseous and solid impurities resulting from human activity (see POLLUTION). The earth's atmosphere is the environment for most of its biological activity and exerts a considerable influence on the ocean and lake environment, where the remainder of biological activity occurs (see BIOSPHERE). WEATHER consists of the day-to-day fluctuations of environmental variables, and CLIMATE is the normal or long-term average state of the atmospheric environment (as determined in spans of about 50 years). Because of the pull of gravity the density of the atmosphere and the pressure exerted by air molecules are greatest near the earth's surface (about 1 gram per 10^3 cc and about 10^6 dynes per sq cm, respectively). Air pressure decreases quickly with altitude, reaching one half of its sea-level value at about 18,000 ft (5,500 m). The instrument used to measure air pressure is called a BAROMETER. The earth's atmosphere is composed of certain distinct regions. The troposphere extends upward from the earth to a height of about 5 mi (8.1 km) at the poles, to about 7 mi (11.3 km) in mid-latitudes, and to about 10 mi (16.1 km) at the equator. The air in the troposphere is in constant motion, with both horizontal and vertical air currents (see WIND). Throughout the troposphere temperature decreases with altitude at an average rate of about 3.6°F per 1,000 ft (2°C per 305 m), reaching about -70°F (-57°C) at its apex, the tropopause. Above the troposphere is the STRATOSPHERE, which extends upward to about 30 mi (50 km), in this region temperature changes little with altitude. Above the stratosphere the mesosphere extends to about 50 mi (80 km), the temperature rises sharply to a maximum of about 170°F (77°C) at the mesopause—about 30 mi (50 km) in altitude—and then decreases to about 28°F (-2°C) toward the top of the mesosphere. The thermosphere extends upward from the mesosphere to about 400 mi (640 km), its temperature reaches several thousand degrees, although, because of the thinness of the air, very little heat energy is available. Certain layers of the atmosphere within the main regions described above exhibit other characteristic properties. The ozonosphere is in the region that includes the mesopause, its high concentration of ozone absorbs much of the solar ultraviolet radiation that otherwise might penetrate into the lower atmosphere and present a hazard to biological activity. The region where solar energy triggers chemical reactions is called the chemosphere. The IONOSPHERE is in the range (50–400 mi/80–640 km) that contains a high concentration of electrically charged particles (ions), these particles are responsible for reflecting radio signals. The uppermost region of the atmosphere is called the exosphere, the atmosphere is so attenuated at this altitude that the average distance air molecules travel without colliding is equal to the radius of the earth. Although some gas molecules and particles out to about 40,000 mi (64,400 km) are trapped by the earth's gravitational and magnetic fields, the density of the atmosphere at an altitude of about 6,000 mi (9,700 km) is comparable to that of interplanetary space. The atmosphere protects the earth from harmful radiation and cosmic debris by absorbing and scattering the radiation and causing the solid matter (see METEOR) to burn from the heat generated by air friction. See AURORA BOREALIS, VAN ALLEN RADIATION BELTS.

atoll: see CORAL REEF

atom [Gr. = uncuttable (indivisible)], basic unit of MATTER, more properly, the smallest unit of a chemical ELEMENT having the properties of that element. The atomic theory, which holds that matter is composed of tiny, indivisible particles in constant motion, was proposed in the 5th cent. B.C. by the Greek philosophers Leucippus and Democritus and was adopted by the Roman Lucretius. However, Aristotle did not accept the theory, and it was ignored for many centuries. Interest in the atomic theory was revived during the 18th cent. following work on the nature and behavior of gases (see GAS LAWS). Modern atomic theory begins with the work of John Dalton, published in 1808. He held that all the atoms of an element are of exactly the same size

and weight (see ATOMIC WEIGHT) and are in these two respects unlike the atoms of any other element. He stated that atoms of the elements unite chemi-

Bohr-Rutherford atom

cally in simple numerical ratios to form compounds. The best evidence for his theory was the experimentally verified LAW OF SIMPLE MULTIPLE PROPORTIONS, which gives a relation between the weights of two elements that combine to form different compounds. Evidence for the theory also came from Michael Faraday's law of ELECTROLYSIS. A major development was the PERIODIC TABLE, devised simultaneously by Dmitri Mendeleev and J. L. Meyer, which arranged atoms of different elements in order of increasing atomic weight so that elements with similar chemical properties fell into groups. By the end of the 19th cent. it was generally accepted that matter is composed of atoms that combine to form molecules. In 1911, Ernest Rutherford developed the first coherent explanation of the structure of an atom. Using alpha particles emitted by radioactive atoms, he showed that the atom consists of a central, positively charged core, the NUCLEUS, and negatively charged particles called ELECTRONS that orbit the nucleus. Almost the entire mass of the atom is concentrated in the nucleus, which occupies only a tiny fraction of the atom's volume. There was one serious obstacle to acceptance of the nuclear atom, however. According to classical theory, as the electrons orbit about the nucleus, they are continuously being accelerated (see ACCELERATION), and all accelerated charges radiate electromagnetic energy. Thus, they should lose their energy and spiral into the nucleus. This difficulty was solved by Niels Bohr (1913), who applied the QUANTUM THEORY developed by Max Planck and Albert Einstein to the problem of atomic structure. Bohr proposed that electrons could circle a nucleus without radiating energy only in orbits for which their orbital angular MOMENTUM was an integral multiple of Planck's constant h divided by 2π . The discrete spectral lines (see SPECTRUM) emitted by each element were produced by electrons dropping from allowed orbits of higher energy to those of lower energy, the frequency of the PHOTON of light emitted being proportional to the energy difference between the orbits. Around the same time, experiments on x-ray spectra (see X RAY) by H. G. J. Moseley showed that each nucleus was characterized by an atomic number, equal to the number of unit positive charges associated with it. By rearranging the periodic table according to atomic number rather than atomic weight, a more systematic arrangement was obtained. The development of quantum mechanics during the 1920s resulted in a satisfactory explanation for all phenomena related to the role of electrons in atoms and all aspects of their associated spectra. With the discovery of the NEUTRON in 1932 the modern picture of the atom was complete. The nucleus of an atom was seen to consist of neutrons and protons, the neutron being an uncharged particle and the PROTON a positively charged one. Their masses are almost equal. The atomic number of an atom is simply the number of protons in its nucleus. The atomic weight of an atom is given in most cases by the mass number of the atom, equal to the total number of protons and neutrons combined. Atoms containing the same number of protons but different numbers of neutrons represent different forms, or ISOTOPES, of the same element. An atom may be conveniently symbolized by its chemical symbol with the atomic number and mass number written as subscript and

superscript, respectively. For example, the symbol for uranium is U (atomic number 92), the isotopes of uranium with atomic weights 235 and 238 are indicated by $^{235}_{92}\text{U}$ and $^{238}_{92}\text{U}$. Surrounding the nucleus of an atom are its electrons, for a neutral atom, the number of electrons is equal to the atomic number. The outermost electrons of an atom determine its chemical and electrical properties. An atom may combine chemically with another atom in various ways, either by giving up or receiving electrons, thus setting up an electrical attraction between the atoms (see ION), or by sharing one or more pairs of electrons (see CHEMICAL BOND). Because metals have few outermost electrons and tend to give them up easily, they are good conductors of electricity or heat (see CONDUCTION). The electrons are often described as revolving about the nucleus as the planets revolve about the sun. However, this picture is misleading. The quantum theory has shown that all particles in motion also have certain wave properties. For a particle the size of an electron, these properties are of considerable importance. As a result, the electrons in an atom cannot be pictured as localized in space but rather should be viewed as smeared out over the entire orbit so that they form a cloud of charge. The electron clouds around the nucleus represent regions in which the electrons are most likely to be found. The shapes of these clouds can be very complex, in marked contrast to the simple elliptical orbits of planets. Another discovery is that the sizes of all atoms are comparable, in spite of the large differences in the number of electrons they contain. With many of the problems of individual atomic structure and behavior now solved, attention has turned to both smaller and larger scales. On a smaller scale, the nucleus itself is being studied in order to determine the details of its structure and to develop sources of energy from nuclear fission and fusion (see NUCLEAR ENERGY), for the atom is not at all indivisible, as the ancient philosophers thought, but can undergo a number of possible changes. On a larger scale, new discoveries about the behavior of large groups of atoms are being made (see SOLID STATE PHYSICS). The question of the basic nature of matter has been carried beyond the atom and now centers on the nature of and relations between the hundreds of ELEMENTARY PARTICLES that have been discovered in addition to the proton, neutron, and electron. Some of these particles have been used to make new types of "atoms" such as positronium (see ANTIPARTICLE) and muonium (see MUON). See George Gamow, *The Atom and Its Nucleus* (1961), H. A. Boorse and Lloyd Motz, ed., *The World of the Atom* (2 vol., 1966).

atomic bomb, weapon deriving its explosive force from the release of atomic energy through the fission (splitting) of heavy nuclei (see NUCLEAR ENERGY). The first atomic bomb was produced at the Los Alamos, N. Mex., laboratory and successfully tested near Alamogordo, N. Mex., on July 16, 1945. This test was the culmination of a mammoth program of U.S. scientific research and technological development that began in 1940, soon after the discovery of fission in uranium in 1939 by the German scientists Otto Hahn and Fritz Strassman. On Aug. 6, 1945, an atomic bomb was dropped on Hiroshima with an estimated equivalent explosive force of 20,000 tons of TNT, followed three days later by a second, more powerful, bomb on NAGASAKI. Both caused widespread death, injury, and destruction. Atomic weapons were developed also by the USSR (1949), Great Britain (1952), France (1960), China (1964), and India (1974), with other nations also engaged in nuclear research. Practical fissionable nuclei for atomic bombs are the isotopes uranium 235 and plutonium 239, which are capable of undergoing CHAIN REACTION. If the mass of the fissionable material exceeds the critical mass (a few pounds), the chain reaction multiplies rapidly into an uncontrollable release of energy. An atomic bomb is detonated by bringing together very rapidly (e.g., by means of a chemical explosive) two subcritical masses of fissionable material, the combined mass exceeding the critical mass. An atomic bomb explosion produces, in addition to the shock wave accompanying any explosion, intense neutron and gamma radiation, both of which are very damaging to living tissue. The neighborhood of the explosion becomes contaminated with radioactive fission products. Some radioactive products are borne into the upper atmosphere as dust or gas and may subsequently be deposited partially decayed as radioactive FALLOUT far from the site of the explosion. The proliferation of nuclear weapons has been an increasing cause of concern throughout the world. Treaties have been signed

limiting certain aspects of nuclear testing and development, and there have been continued efforts to negotiate additional restraints. See also *DISARMAMENT, NUCLEAR*. See Stephane Groueff, *Manhattan Project* (1967), Michael Blom, *The History of the Atomic Bomb* (1968).

atomic clock, electric or electronic timekeeping device that is controlled by atomic or molecular oscillations. A timekeeping device must contain or be connected to some apparatus that oscillates at a uniform rate to control the rate of movement of its hands or the rate of change of its digits. Mechanical clocks and watches use oscillating balance wheels, pendulums, and tuning forks. Much greater accuracy can be attained by using the oscillations of atoms or molecules. Because the frequency of such oscillations is so high, it is not possible to use them as a direct means of controlling a clock. Instead, the clock is controlled by a highly stable crystal oscillator whose output is automatically multiplied and compared with the frequency of the atomic system. Errors in the oscillator frequency are then automatically corrected. Time is usually displayed by an atomic clock with digital or other sophisticated readout devices. The error between a pair of atomic clocks, i.e., the difference in indicated time if both are started at the same instant and later compared, is typically about one part in one trillion. This extremely low error has allowed their use in an experiment confirming an important prediction of Einstein's theory of relativity. The first atomic clock, invented in 1948, utilized the vibrations of ammonia molecules.

atomic energy: see *NUCLEAR ENERGY*

Atomic Energy Agency, International, intergovernmental organization established in 1957 under the aegis of the United Nations to promote the peaceful uses of atomic energy. Its headquarters are in Vienna. The agency is authorized to purchase and sell fissionable materials and to offer nuclear fuels, technical assistance, and other services for the peaceful application of nuclear energy. It may establish and administer safeguards designed to ensure that its services do not further military purposes or endanger public health. The organization is made up of a general conference, consisting of representatives of all member states, a board of governors of 25 members, and a secretariat headed by a director general. In 1973 there were 103 members.

Atomic Energy Commission (AEC), U.S. government commission created by the Atomic Energy Act of 1946 and charged with the development and control of the U.S. atomic energy program. The explosion of the atomic bombs at the end of World War II demonstrated the cataclysmic possibilities of the use of atomic energy. To channel that use to peaceful rather than destructive ends became a national problem. The U.S. Congress set about creating a national control body, with debate centering around the question of whether it should be a predominantly military or civilian commission. A special committee on atomic energy, chaired by Senator Brien McMahon, conducted an investigation and prepared the McMahon Bill in Dec., 1945. This bill, which provided for a full-time commission whose members were to have no conflicting military or business interests, became the basis of the Atomic Energy Act of 1946. Amendments provided for a military liaison committee, which the AEC was directed to advise and consult with on all atomic energy matters that related to military applications. The act provided for a five-member commission appointed by the President with the advice and consent of the Senate, and it further provided for a permanent joint Congressional committee on atomic energy that was to be kept advised of the commission's activities. Finally, it created the General Advisory Committee (GAC), composed of nine members appointed from civilian life by the President to advise the commission on scientific and technical matters relating to materials, production, and research. From 1946 to 1952 the chairman of the GAC was J. Robert Oppenheimer, who had directed the development of the atomic bomb but who opposed the manufacture of the hydrogen bomb. The AEC became the center of a nation-wide controversy in 1954 as a result of Oppenheimer's suspension (1953) as a consultant to the commission on the alleged grounds that he was a security risk. The activities of the AEC include the production of fissionable materials, the manufacture and testing of nuclear weapons, the development of nuclear reactors for military and civilian use, and research in biological, medical, physical, and engineering sciences. The Atomic Energy Act of 1954 provided for private par-

ticipation in such programs as research, development, and production of atomic energy and nuclear materials, and the commission is responsible for the licensing and regulation of such civilian activities. Although the bulk of the AEC's work has been in the field of atomic weaponry, projects relating to the peaceful uses of atomic energy (e.g., the development of atomic power plants for the production of electricity) have become increasingly prominent in the commission's activities. See G. E. Dean, *Report on the Atom* (2d ed. 1957), R. G. Hewlett and O. E. Anderson, Jr., *A History of the United States Atomic Energy Commission* (2 vol., 1962-69), Harold Orlans, *Contracting for Atoms* (1967), Corbin Allardice and Edward Trapnell, *The Atomic Energy Commission* (1974).

atomic mass, the mass of a single atom, usually expressed in atomic mass units (amu). Most of the mass of an atom is concentrated in the protons and neutrons contained in the nucleus. Each proton or neutron weighs about 1 amu, and thus the atomic mass is always very close to the mass number (total number of protons and neutrons in the nucleus). Atoms of an isotope of an element all have the same atomic mass. Atomic masses are usually determined by mass spectrography (see *MASS SPECTROGRAPHY*). They have been determined with great relative accuracy, but their absolute value is less certain.

atomic mass unit or amu, in chemistry and physics, unit defined as exactly $1/12$ the mass of an atom of carbon-12, the isotope of carbon with six protons and six neutrons in its nucleus. One amu is equal to approximately 1.66×10^{-24} grams. Before the adoption of the carbon-12 standard, two different definitions of the amu existed. The discrepancy arose for historic reasons. Before the 20th cent., atomic theory held that all atoms of an element have the same mass, and when naturally occurring oxygen was chosen as the basis for the scale of atomic weights it was assigned an atomic weight of exactly 16. Isotopes of radioactive elements were discovered early in the 20th century, and in 1929 oxygen was shown to have three isotopes. Physicists subsequently chose oxygen-16 as the basis of a scale of atomic weights. Under this definition, the atomic weight of oxygen was 16.0045 amu, since naturally occurring oxygen is a mixture of oxygen-16 (over 99%) and traces of oxygen-17 and oxygen-18. Chemists, however, continued to use the older scale. The discrepancy was eliminated when the International Union of Pure and Applied Physics, in 1960, and the International Union of Pure and Applied Chemistry, in 1961, decided to adopt the carbon-12 scale. The scale went into effect on Jan. 1, 1962.

atomic number, often represented by the symbol *Z*, the number of protons in the nucleus of an atom. Atoms with the same atomic number make up a chemical element. Atomic numbers were first assigned to the elements c. 1913 by H. G. J. Moseley, he arranged the elements in an order based on certain characteristics of their X-ray spectra and then numbered them accordingly. The elements are now arranged in the periodic table in the order of their atomic numbers. Mendeleev's periodic law was originally based on atomic weights. See *MASS NUMBER*.

atomic weight, mean (weighted average) of the masses of all the naturally occurring isotopes of a chemical element, as contrasted with atomic mass, which is the mass of any individual isotope. Atomic weight is usually expressed in atomic mass units. Most naturally occurring elements have one principal isotope and only insignificant amounts of other isotopes. The atomic mass of any isotope is very nearly a whole number, so most atomic weights are nearly whole numbers, e.g., hydrogen has atomic weight 1.00797 and nitrogen has atomic weight 14.007. However, some elements have more than one principal isotope, and the atomic weight for such an element is not close to a whole number. The two principal isotopes of chlorine have atomic masses very nearly 35 and 37 and occur in the approximate ratio 3 to 1, so the atomic weight of chlorine is about 35.5. Some other common elements whose atomic weights are not nearly whole numbers are antimony, barium, boron, bromine, cadmium, copper, germanium, lead, magnesium, mercury, nickel, strontium, tin, and zinc. Atomic weights were formerly determined directly by chemical means, now a mass spectrograph is usually employed. The atomic mass and relative abundance of the isotopes of an element can be measured very accurately and with relative ease by this method, whereas chemical determination of the atomic weight of an element requires a careful and

precise quantitative analysis of as many of its compounds as possible.

History J. L. Proust formulated (1797) what is now known as the law of definite proportions, which states that the proportions by weight of the elements forming any given compound is definite and invariable. John Dalton proposed (c. 1810) an atomic theory in which all atoms of an element have exactly the same weight. He made many measurements of the combining weights of the elements in various compounds. By postulating that simple compounds always contain one atom of each element present, he assigned relative atomic weights to many elements, assigning a weight of 1 to hydrogen as the basis of his scale. He thought that water had the formula HO, and since he found by experiment that 6 weights of oxygen combine with 1 weight of hydrogen, he assigned an atomic weight of 6 to oxygen. Dalton also formulated the law of multiple proportions, which states that when two elements combine in more than one proportion by weight to form two or more distinct compounds, their weight proportions in those compounds are related to one another in simple ratios. Dalton's work sparked an interest in determining atomic weights, even though some of his results were soon shown to be incorrect. While Dalton was working on weight relationships in compounds, J. L. Gay-Lussac was experimenting with the chemical reactions of gases, and he found that when under the same conditions of temperature and pressure, gases react in simple whole-number ratios by volume. Avogadro proposed (1811) a theory of gases that holds that equal volumes of two gases at the same temperature and pressure contain the same number of particles, and that these basic particles are not always single atoms. This theory was rejected by Dalton and many other chemists. P. L. Dulong and A. T. Petit discovered (1819) a specific-heat method for determining the approximate atomic weight of elements. Among the first chemists to work out a systematic group of atomic weights (c. 1830) was J. J. Berzelius, who was influenced in his choice of formulas for compounds by the method of Dulong and Petit. He attributed the formula H₂O to water and determined an atomic weight of 16 for oxygen. J. S. Stas later refined many of Berzelius's weights. Stanislaw Cannizzaro applied Avogadro's theories to reconcile atomic weights used by organic and inorganic chemists. The availability of fairly accurate atomic weights and the search for some relationship between atomic weight and chemical properties led to J. A. R. Newlands's table of "atomic numbers" (1865), in which he noted that if the elements were arranged in order of increasing atomic weight "the eighth element, starting from a given one, is a kind of repetition of the first." He called this the law of octaves. Such investigations led to the statement of the periodic law, which was discovered independently (1869) by D. I. Mendeleev in Russia and J. L. Meyer in Germany. T. W. Richards did important work on atomic weights (after 1883) and revised some of Stas's values. After the discovery of isotopes by F. Soddy (c. 1913), the atomic mass of many individual isotopes was determined, leading eventually to the adoption of the current atomic mass unit.

atomism, philosophic concept of the nature of the universe, holding that the universe is composed of invisible, indestructible material particles. The theory was first advanced in the 5th cent. B.C. by Leucippus and was elaborated by Democritus. Epicurus restated the doctrine, giving the atoms weight. Atomism, nearly forgotten in later antiquity and the Middle Ages, was revived in the 17th cent. by Pierre Gassendi and was given consideration by Robert Boyle, Isaac Newton, and John Locke.

atom smasher: see *PARTICLE ACCELERATOR*

atonality, in music, systematic avoidance of reference to tonal centers by harmonies and melodies that imply a keynote (see *KEY*). The term *atonality*, like *modality* (see *MODE*), has been used in contrast to *tonality*. Often the term has been applied in an aesthetic sense to 20th-century music in which the user of the term is unable to distinguish the tonal centers that are present. A precise technical use of the term designates a method of composition in which the composer has deliberately rejected a principle of musical organization. This principle is tonality, and it involves a clear distinction between consonance and dissonance, a definite classification of harmonic results as more and less dissonant, and arrangement of tones in a scale which implies harmonic and melodic functions. The gradual rejection of this principle has been apparent since the mid-19th cent., when greatly increased use of chromatic harmonies in the music of Wagner and Richard

Strauss and the use of nonfunctional harmonies in the music of Debussy almost completely obscured whatever basic tonalities are present in their music. The abandonment of the principle of tonality in the early 20th cent. by SCHOENBERG, Ives, and many other composers was the next logical step in the evolution of musical style. To compensate for this lack of one principle of order, another had to be substituted. The most successful one proposed thus far is that of dodecaphony, or 12-tone music (see SERIAL MUSIC). See Rudolph Reti, *Tonality in Modern Music* (1962), Graham George, *Tonality and Musical Structure* (1970), George Perle, *Serial Composition and Atonality* (3d ed. 1972), Allen Forte, *The Structure of Atonal Music* (1973).

atonement, in Christian theology, the reconciliation of sinful man with God. The conception of the atonement most widely held in traditional theology is often called vicarious atonement. It was first explicitly stated by St. ANSELM in *Cur Deus Homo?* His doctrine, slightly altered or elaborated, has become part of Roman Catholic theology and of that of many Protestant churches. God, desiring the reconciliation of man, offers man pardon for his sins if man will make satisfaction for them. But man's offense to God's majesty is greater than any conceivable satisfaction he can give. Therefore, God sent Jesus Christ to earth to reconcile man. As God, Jesus Christ can satisfy God, and as man He can take on the sins of man. By His life on earth, by His sufferings, and especially by His death on the cross, He satisfied God for the sins of man, and man, accepting His Redeemer, may enjoy the atonement. Christ has bought. In modern Catholic and Protestant theology this understanding has been superseded by one that places emphasis on God's mercy and on a gradual growth toward union with God and the overcoming of sin. The juridical concept has been replaced by an organic and social concept.

Atonement, Day of, Heb. *Yom Kippur*, the most sacred Hebrew holy day, falling at the end of September or the beginning of October (on the 10th day of the 7th month, Tishri). It is a day of prayer for forgiveness for sins committed during the year. The Jews gather in synagogues on the Eve of Yom Kippur, when the fast begins, and return the following morning to continue confessing, doing penance, and praying for forgiveness. The most solemn of the prayers, Kol Nidre, is chanted on the Eve of Yom Kippur.

ATP. see ADENOSINE TRIPHOSPHATE

Atrato (atratō), river, c. 375 mi (600 km) long, rising in the Cordillera Occidental, W Colombia. It meanders north, across the base of the Isthmus of Panama, to the Gulf of Uraba. Quibdo is the head of navigation. The Atrato drains a region of rain forests. Its headwaters are in Colombia's chief platinum-producing area. Cartagena is the chief outlet for the products of the valley.

Atreus (ātrēās), in Greek mythology, the son of Pelops and the father of Agamemnon and Menelaus. He vied with his brother Thyestes for the throne of Mycenae. When Thyestes seduced Atreus' wife, Aerope, in order to attain the golden ram whose possession signified kingship, Atreus, in retaliation, murdered the sons of Thyestes and served them to him at a feast. Thyestes thereupon laid a curse upon the house of Atreus. Thyestes' son Aegisthus, who was not involved in the mass murder, killed Atreus and restored the kingdom to Thyestes.

atrium (ātrēām), term for an interior court in Roman domestic architecture and also for a type of entrance court in early Christian churches. The Roman atrium was an unroofed or partially roofed area with rooms opening from it. In early times its center held a cooking hearth. After the 2d cent. B.C., when the hearth was placed elsewhere, the center of the atrium held a tank (impluvium) to receive rain water falling through the opening, which also furnished light to the surrounding rooms. In more luxurious and complex Roman dwellings, the private apartments had a court of their own, called the peristyle, and the atrium served merely as a semipublic reception hall. The ruins of Pompeii contain remains of atria in their various forms. In early Christian churches, the atrium was a large arcaded or colonnaded open court, serving as a general meeting place, in front of the church itself, with a fountain used for ablutions in its center. The basilican churches of Sant'Ambrogio, Milan, and San Clemente, Rome, have noteworthy atria. This type of large forecourt is also a characteristic element of the Muslim mosque.

Atropatene: see AZERBAIJAN, region, Iran

atrophy (ātrōfē), diminution in the size of a cell, tissue, or organ from its fully developed normal size. Temporary atrophy may occur in muscles that are not used, as when a limb is encased in a plaster cast. Interference with cellular nutrition, as through starvation, diseases affecting the nerve supply of tissues, e.g., poliomyelitis and muscular dystrophy, and prolonged disuse may cause a permanent wasting away of tissue. Atrophy may also follow HYPERTROPHY.

atropine (ātrāpēn, -pīn), alkaloid drug derived from BELLADONNA and other plants of the family Solanaceae (nightshade family). Available either as the tincture or extract of belladonna, or as the pure substance atropine sulfate, it is a DEPRESSANT of the parasympathetic NERVOUS SYSTEM. It has some chemical similarity to the body substance ACETYLCHOLINE and interferes with nerve impulses transmitted by that substance. Atropine produces rapid heart rate, dilated pupils, dry skin, and anesthetizes the nerve endings in the skin. Because it relaxes smooth muscle and suppresses gland and mucous secretions, it is widely used to treat peptic ulcer by reducing the production of stomach acid. Atropine is given before general anesthesia to keep the air passages clear and is an ingredient in various preparations for symptomatic relief of colds and asthma. It also acts as an antidote in poisoning from such agents as mushrooms, morphine, prussic acid, and nerve gas, but overdosage causes delirium, convulsions, and coma. A related alkaloid, SCOPOLAMINE, is used mainly as a SEDATIVE.

Atropos (ātrāpōs'), see FATES

Atroth (ātrōth), unidentified town, E of the Jordan. Num. 32:35. Atroth should probably be spelled with the name, Shophan, thus, RV has Atroth-shophan.

Atsina Indians: see GROS VENTRE INDIANS

Atsugi (āt'sōō'gē), city (1970 pop. 82,888), Kanagawa prefecture, E central Honshu, Japan, on the Sagami River. It is an industrial and agricultural center. An air force base is nearby.

Attai (āt'āi) 1 Descendant of Jerahmeel. 1 Chron. 2:35,36. 2 One of David's Gadite warriors. 1 Chron. 12:11. 3 Son of Rehoboam. 2 Chron. 11:20.

Attaleia or **Attalia**, Turkey. see ANTALYA

Attar: see FARID AD-DIN ATTAR

attar of roses or **rose oil**, fragrant essential oil obtained from roses and used in making perfume. It is one of the most valuable of the volatile oils. Rose water is water in which a small amount of the oil is dissolved.

Attawapiskat (āt'awāpīskāt), river, c. 465 mi (750 km) long, flowing E from Attawapiskat Lake, N Ontario, Canada, then N and E into James Bay. The trading posts of Attawapiskat and Lansdowne House are on the river.

Attica (āt'īka), region of ancient Greece, a triangular area at the eastern end of central Greece, around ATHENS. According to Greek legend, the four Attic tribes were founded by Ion, in later legend Theseus combined 12 townships into a single state. This process of unification, which probably occurred over a period of time, was in all likelihood completed c. 700 B.C. Cleisthenes (fl. 510 B.C.) reclassified the people into 10 tribes. By the 5th cent. B.C. Athens was dominant, and thereafter the history of Attica was that of its chief city.

Atticus Herodes: see HERODES ATTICUS

Attila (āt'il'a, āt'āla), d. 453, king of the HUNS (445-53). After 434 he was coruler with his brother, whom he murdered in 445. In 434, Attila obtained tribute and great concessions for the Huns in a treaty with the Eastern Roman emperor Theodosius II, but, taking advantage of Roman wars with the Vandals and Persians, he invaded the Balkans in 441. Peace was made and Attila's tribute was tripled. In 447 he again attacked the empire, and the following three years were spent negotiating a new peace. In 450, however, the new Eastern emperor, MARCIAN, refused to render further tribute as did VALENTINIAN III, emperor of the West. In a bid for power, and without her brother's knowledge, Valentinian's ambitious sister, Honoria, jeopardized his peaceful relations with Attila by attempting an alliance with the Hun. Attila took her proposal as a marriage offer and made a demand of half of the Western Empire as a dowry, a demand that was refused. Leaving Hungary with an army of perhaps half a million Huns and allies, Attila invaded Gaul but was defeated (451) by AETIUS at Maunaca. Attila turned back and invaded (452) N Italy but abandoned his plan to take Rome itself. His withdrawal, often ascribed to the eloquent diplomacy of Pope Leo I, appears instead to have been motivated largely by a shortage of provisions and the outbreak of pestilence in the Hun army. Soon afterward in Hungary, Attila died of a nasal hemor-

rhage suffered while celebrating his marriage to Ildico. The fear Attila inspired is clear from many accounts of his savagery but, though undoubtedly harsh, he was a just ruler to his own people. He encouraged the presence of learned Romans at his court and was far less bent on devastation than other conquerors before and after him. Often called the Scourge of God, he appears in many legends, particularly as Etzel in the Nibelungenlied (see under NIBELUNGEN). See E. A. Thompson, *History of Attila and the Huns* (1948), C. D. Gordon, *The Age of Attila* (1960), Otto Manchen-Helfen, *The World of the Huns* (1973).

Attis (āt'is) or **Atys** (ā'-), in Phrygian religion, vegetation god. When Nana ate the fruit of the almond tree, which had been generated by the blood of either Agdistis or of CYBELE, she conceived Attis. Later, Agdistis or Cybele fell in love with Attis, and so that none other would have him, she caused him to castrate himself. Like Adonis, Attis came to be worshipped as a god of vegetation, responsible for the death and rebirth of plant life. Each year at the beginning of spring his resurrection was celebrated in a festival. In Roman religion he became a powerful celestial deity. See Sir J. G. Frazer, *Adonis, Attis, Osiris* (1907, new ed. 1961).

Attleboro (āt'albārə), industrial city (1970 pop. 32,907), Bristol co., SE Mass., near the R.I. line, settled 1634, inc. as a city 1914. Its jewelry industry began in 1780, silverware, scientific instruments, and fabricated metal products are also made.

Attlee, Clement Richard Attlee, 1st Earl (āt'lē), 1883-1967, British statesman. Educated at Oxford, he was called to the bar in 1905. His early experience as a social worker in London's East End led to his decision to give up law and devote his life to social improvement through politics. In 1907 he joined the Fabian Society and soon afterward the Independent Labour party. He was a lecturer in social science at the London School of Economics, and, after service in World War I, he became (1919) the first Labour mayor of Stepney. He entered Parliament in 1922. In 1927 he visited India as a member of the Simon commission and was converted to views that strongly favored Indian self-government. He joined the Labour government in 1930 but resigned in 1931 when Ramsay MacDonald formed the National government. As leader of the Labour party from 1935, Attlee was an outspoken critic of Conservative foreign policy, objecting particularly to the government's failure to intervene in the Spanish civil war. During World War II he served (1940-45) in Winston Churchill's coalition cabinet, and on Labour's electoral victory in 1945 he became prime minister. Under Attlee's leadership, the Bank of England, the gas, electricity, coal, and iron and steel industries, and the railways were nationalized. His government also enacted considerable social reforms, including the National Health Service. Independence was granted to Burma, India, Pakistan, Ceylon, and Palestine, and Britain allied itself closely with the United States in the cold war confrontation with the Soviet Union. The postwar economic crisis required stringent economic and financial controls, which reduced support for the government. Labour won the 1950 general election by a narrow margin, but in 1951, Attlee decided to go to the country again and was defeated. He was leader of the opposition until his retirement in 1955, when he received the title of Earl Attlee. See his autobiography, *As It Happened* (1954), and his memoirs, as recorded by Francis Williams, *Twilight of Empire* (1962).

attorney, agent put in place of another to manage particular affairs of the principal. An attorney in fact is an agent who conducts business under authority that is controlled and limited by a written document called a letter, or power, of attorney granted by the principal. An attorney at law is an officer of a court of law authorized to represent the person employing him (the client) in legal proceedings. England retains the distinction between the attorney as agent, the SOLICITOR, who deals directly with the client but does not act as an advocate in court, and the attorney as pleader, the barrister (called advocate in Scotland), who presents the case in court. Most senior and distinguished barristers are designated King's (Queen's) counsel. The distinction between agent and pleader also exists in Europe. In the United States, a similar distinction was formerly made in some states between a counselor at law, who argued the case in court, and an attorney, who prepared the case but did not argue it, but that distinction has now generally disappeared. Today an attorney at law is authorized to exercise all the functions of a practicing lawyer. The growth of large

business corporations, beginning in the 19th cent., has brought into existence a large group of attorneys who rarely or never act as trial lawyers yet are among the most influential members of the profession. They work directly for corporations or are members of large law firms and specialize in areas of commercial law. All of them must, however like the ordinary attorney, be admitted to the bar. The term *attorney* is also used for county, state, and Federal prosecuting officers, as county attorney, district attorney, and Attorney General (see JUSTICE, UNITED STATES DEPARTMENT OF). See Albert Blaustein and C. O. Porter, *The American Lawyer* (1954), Martin Mayer, *Lawyers* (1967).

Attu, island see ALEUTIAN ISLANDS

Atuona (atwō'nā) or **Atuana**, town, in the MARQUESE ISLANDS, South Pacific, in FRENCH POLYNESIA. Situated on the southern coast of the island of HIVA OA, Atuona overlooks the Bay of Traitors. GAUGUIN lived in Atuona Valley and is buried there.

Atwater, Wilbur Olin, 1844-1907, American agricultural chemist, b. Johnsburg, N.Y. He was professor at several American universities and helped to set up and later became director of the first state agricultural experiment station (in Connecticut) in the United States. Along with Edward Bennett Rosa, he developed the respiration calorimeter, determined the caloric value of many foods, and prepared calorie tables widely used today. In 1888 he founded and headed the Office of Experiment Stations for the U.S. Dept. of Agriculture.

Atwater, city (1970 pop. 11,640), Merced co., central Calif., in the San Joaquin valley, inc. 1922. It is the processing and commercial center of an irrigated farming area. Castle Air Force Base and a state park are nearby.

Atys see ATTIS

Au, chemical symbol of the element GOLD

Aub, Max (maks oup), 1903-72, Spanish author, b. Paris. He was educated in Spain where he lived until 1942, when he emigrated to Mexico. His style combines realism with fantasy. He used the Spanish civil war and its consequences as the theme for his most important work, a trilogy of novels—*Campo cerrado* [closed field] (1943), *Campo de sangre* [bloody field] (1945), and *Campo abierto* [open field] (1951). His other works include *José Torres Campalans* (1958) and *La calle de Valverde* [Valverde street] (1961).

Aube (ōb), department (1968 pop. 270,325), NE France, in Champagne. TROYES is the capital.

Auber, Daniel François Esprit (dānyēl' frānswā' ēsprē' ōbēr'), 1782-1871, French operatic composer. His greatest successes resulted from his collaboration with the librettist Scribe. Their first success together was *Le Maçon* (1825), and among the long succession that followed were *Fra Diavolo* (1830), *Le Domino noir* (1837), and *La Part du diable* (1843), witty, tuneful, sophisticated works that were very popular in their time. *La Muette de Portici* (1828, also known as *Masaniello*) was the model of the French grand opera of the 1830s.

Auberjonois, René Victor (rənā' vēktōr' ōbāzhōn-wā'), 1872-1957, Swiss artist. Auberjonois settled in Lausanne in 1914 and created costumes for Stravinsky's *Histoire du Soldat* (1917). His paintings, characterized by muted colors and geometric forms, reveal an independent spirit influenced by CUBISM.

Aubert de Gaspé, Philippe. see GASPÉ, PHILIPPE AUBERT DE

Aubervilliers (ōbervēlyā'), town (1968 pop. 73,808), Seine-Saint Denis dept., N central France, NE of Paris. It is an important industrial center where chemicals, pharmaceuticals, metals, and leather goods are produced. Aubervilliers was a pilgrimage site from the 14th cent. onward. The Church of Notre-Dame-des-Vesous dates from the 15th to the 16th cent.

Aubigné, Jean Henri Merle d': see MERLE D'AUBIGNÉ, JEAN HENRI

Aubigné, Théodore Agrippa d' (tāōdōr' āgrēpā' dōbēnyā'), 1552-1630, French poet and Huguenot soldier. A devoted follower of Henry of Navarre (Henry IV) from 1568, he was later associated with Henri de Rohan in an abortive plot and fled (1620) France to live in Geneva. His *Histoire universelle* (1616-18) is an account of the Huguenots from 1553-1602. D'Aubigné's reputation rests on *Les Tragiques* (1616), a long poem on many subjects—astrology, magic, natural science, mathematics, military tactics, and political theory.

Aubrey, John, 1626-97, English antiquary and miscellaneous writer, b. Kingston, Wiltshire, educated at Trinity College, Oxford. He knew most of the fa-

mous people of his day and left copious memorandums as well as letters. His most celebrated work, *Lives of Eminent Men*, was originally compiled for the use of Anthony Wood in his *Athenae Oxonienses*. The *Lives* first appeared in print in 1813. Only his *Miscellanies* (1696), a collection of stories and folklore, was published in his lifetime. Extremely interested in antiquities, he wrote the *Natural History of Wiltshire* (ed. by John Britton, 1847) and *Perambulation of Surrey*, which was included in the *Natural History and Antiquities of Surrey* (1719). See study by Anthony Powell (1948, 2d ed. 1964).

Aubry de Montdidier (ōbrē' dā mōNdēdyā'), in French legend, a French courtier of King Charles V, murdered c.1371 near Montargis by one Macaire. The animosity of Aubry's dog toward Macaire was so great that the king ordered trial by combat between the dog and Macaire, armed with a cudgel. The dog won, Macaire confessed and was hanged. It is thought that the account of this event in medieval works was based on an older story.

Auburn. 1 City (1970 pop. 22,767), Lee co., E Ala., inc. 1839. The city's economy centers around Auburn Univ. Lumber products are also made. 2 City (1970 pop. 24,151), seat of Androscoggin co., SW Maine, on the Androscoggin River (there crossed by several bridges) opposite Lewiston, settled 1765 on the site of an Indian village, inc. 1842. It is a major shoe-manufacturing center, its huge shoe industry dates from c.1835. With Lewiston, Auburn forms one of the most important industrial complexes in Maine, abundant water power has spurred a great variety of manufactures. Nearby Mt. Apatite is a source of apatite and feldspar. 3 Town (1970 pop. 15,347), Worcester co., S central Mass., inc. 1778. Its industries include warehousing and the manufacture of electronic equipment, motors, cement products, plastics, and musical instruments. 4 City (1970 pop. 34,599), seat of Cayuga co., W central N.Y., in the Finger Lakes region, on the outlet of Owasco Lake, settled 1793, inc. 1848. Its manufactures include diesel engines, rope, shoes, rugs, electronic parts, and air conditioners. It is the site of Auburn State Prison (built 1816), in which Thomas Mott Osborne, the prison reformer (who was born in Auburn), served a voluntary term. The city's museum has collections of historical documents and Indian relics. The houses of William H. Seward and Harriet Tubman are preserved, and a junior college is in the city. 5 City (1970 pop. 21,817), King co., W Wash., on the Green and White (Stuck) rivers, between Seattle and Tacoma, settled 1855, inc. 1914. It is a railroad junction and farm trade center, with large aircraft industries. Wood products are also made. A junior college is there.

Auburn University, main campus at Auburn, Ala., land-grant and state supported, opened 1859 as East Alabama Male College, reorganized 1872 as the Agricultural and Mechanical College of Alabama, became coeducational 1892, renamed Alabama Polytechnic Institute 1899, Auburn University 1960. It has technical and engineering schools as well as a liberal arts college. A large agricultural experiment station system is maintained by the university. In 1967 the Nuclear Science Center was completed.

Aubusson, Pierre d' (pyēr dōbusōn'), 1423-1503, French soldier, a cardinal of the Roman Catholic Church, and grand master of the KNIGHTS HOSPITALERS (1476-1503). In 1480 he valiantly defended Rhodes against Ottoman Sultan Muhammad II. After the accession (1481) of Sultan BAYAZID II, Aubusson gave shelter to Jem, Bayazid's brother. However, he soon sent Jem to France as a virtual prisoner and obtained a truce and a large annual pension from Bayazid in exchange for keeping Jem confined. In 1489 Aubusson ceded his valuable hostage to Pope Innocent VIII, who made Aubusson a cardinal and granted new privileges to his order.

Aubusson (ōbūsōn), town (1968 pop. 6,761), Creuse dept., central France, in the former province of Marche, on the Creuse River. Its famous tapestry and carpet manufactures date from the 15th cent. Aluminum, electric lamps, and rubber goods are also made. Aubusson is the seat of a school of decorative arts and a museum of tapestry.

Auch (ōsh), town (1968 pop. 23,718), capital of Gers dept., SW France, in Gascony, on the Gers River. It is a farm market and commercial center with a variety of manufactures and an important trade in Armagnac brandy, and in wine and grain. One of the chief towns of Roman Gaul, it was an archiepiscopal see, the capital of Armagnac (10th cent.), and the capital of Gascony (17th cent.). The old part of town, steep and hilly, is topped by a flamboyant-style Gothic cathedral (15th-16th cent.).

Auchincloss, Louis (ō'kīnkłōs), 1917-, American novelist, b. New York City. A practicing lawyer, Auchincloss writes polished novels of manners about the white, Anglo-Saxon, Protestant, American upper class. His fictional works include *Venus in Sparta* (1958), *Portrait in Brownstone* (1962), *The Rector of Justin* (1965), *The Embezzler* (1966), and *The Partners* (1974). He has also written *Reflections of a Jacobite* (1961), on Henry James, *Edith Wharton: A Biography* (1971), and *Richelieu* (1972).

Auchinleck, Sir Claude John Eyre (ār ō'kīnlēk', ō'khīn-), 1884-, British field marshal. A long army career led to command of the 1933 and 1935 operations based in the North-West Frontier Prov., India. In World War II he commanded briefly (1940) at Narvik, Norway, then in building defenses in England and in India (1940-41). After succeeding (July, 1941) Gen. Sir Archibald P. Wavell in the Middle East Command, he launched, in Nov., 1941, a campaign into Libya, but in June, 1942, his forces were thrust back into Egypt. In June, 1943, he once more became commander in chief in India, remaining so until 1947. He was made field marshal in 1946. See biography by J. H. Robertson (1959), Correlli Barnett, *The Desert Generals* (1960).

Auchmuty, Sir Samuel (ōkmyōō'tē, ōk-, ā'matē), b. 1758 (not, as commonly stated, 1756) in New York City, d. 1822, British general. A Loyalist soldier in the American Revolution, he went to England at the end of the war. Successful service in India (1783-97) and in Egypt (1801-3) brought him popularity and a knighthood (1803). He served under John WHITELOCKE in the unsuccessful attack (1807) on Buenos Aires. He became (1810) commander in chief at Madras and captured (1811) Java from the Dutch. In 1821 he was appointed commander in chief in Ireland. See Annette Townsend, *The Auchmuty Family of Scotland and America* (1932).

Auckland (ōk'lānd), city (1971 pop. 151,580, urban agglomeration pop. 698,400), NW North Island, New Zealand. It is situated on an isthmus and is the largest city and chief port of the country. The chief exports are frozen meats, dairy products, wool, hides, and wood pulp. Petroleum, iron and steel, wheat, sugar, and fertilizers are the leading imports. Auckland is also New Zealand's leading industrial center. The chief industries are engineering (including shipbuilding and boilermaking), automobile and chemical manufacturing, and food processing. It is also a fishing port and the chief base of the New Zealand navy. Auckland was founded in 1840 and was formerly (1841-65) the capital of New Zealand. Educational institutions include the Univ. of Auckland and the Auckland Technical Institute. There are Anglican and Roman Catholic cathedrals. The War Memorial Museum has a collection of Maori art. In the area of the city are many extinct volcano cones, including Mt. Eden (within the city) and Rangitoto (offshore).

Auckland Islands, small uninhabited group (234 sq mi/606 sq km), S Pacific, c. 300 mi (480 km) S of South Island, New Zealand, to which they belong. There is some sealing. The islands were discovered in 1805.

auction bridge: see BRIDGE

Aude (ōd), department (1968 pop. 278,323), S central France, in Languedoc. CARCASSONNE, its capital, and NARBONNE are the chief cities.

Auden, W. H. (Wystan Hugh Auden), (ō'dān), 1907-73, Anglo-American poet, b. York, England, educated at Oxford. A versatile, vigorous, and technically facile poet, Auden ranks among the major literary figures of the 20th cent. Often written in everyday language, his poetry ranges in subject matter from politics to modern psychology to Christianity. During the 1930s he was the leader of a left-wing literary group, which included Christopher Isherwood and Stephen Spender. With Isherwood he wrote three verse plays, *The Dog beneath the Skin* (1935), *The Ascent of F6* (1936), and *On the Frontier* (1938), and also *Journey to a War* (1939), a record of their experiences in China. Auden lived in Germany during the early days of Nazism, and he was a stretcher-bearer for the Republicans during the Spanish Civil War. His first volume of poetry appeared in 1930. Later volumes include *Spain* (1937), *New Year Letter* (1941), *For the Time Being*, a Christmas Oratorio (1945), *The Age of Anxiety* (1947, Pulitzer Prize), *Nones* (1951), *The Shield of Achilles* (1955), *Homage to Clio* (1960), *About the House* (1965), *Epistle of a Godson and Other Poems* (1972), and *Thank You, Fog* (1974). His other works include *Letters from Iceland* (with Louis MacNeice, 1937), librettos, with Chester Kallman, for Stravinsky's opera *The Rake's Progress* (1953) and Mozart's *Magic*

Flute (1957), and *A Certain World. A Commonplace Book* (1970). In 1939, Auden moved to the United States, and he became a citizen in 1946. Subsequently he lived in various places, including Italy and Austria, and in 1971 he returned to England. From 1956 to 1961 he was professor of poetry at Oxford. He was awarded the National Medal for Literature in 1967. See his *Collected Poetry* (1945), *Collected Shorter Poems, 1927-1957* (1967), and *Collected Longer Poems* (1969), studies by M. K. Spears (1968), John Fuller (1970), and Francois Du-chene (1972), bibliography by B. C. Bloomfield and Edward Mendelson (2d ed 1972).

Audenarde: see OUDENAARDE, Belgium

audiencia (oudyān'sya), royal court of justice in Spain and the Spanish Empire, varying greatly in its form and function but having some administrative as well as judicial capacity. Use of the term also extended to the court's jurisdictional area. Originally a court of appeal primarily, the audiencia had evolved by the late 15th cent. into a tribunal of two chambers, one for civil and the other for criminal jurisdiction. Generally at least four *oidores* (judges or auditors) exercised judicial power within a district. The system of territorial and regional audiencias was instituted in Spanish America in the early 16th cent. to help counterbalance the independence and haphazard administration of the conquistadors. The colonial *audiencia pretorial*, however, differed widely from its peninsular counterpart in exercising executive and legislative, as well as judicial functions, and serving in a sense as the core of Spanish colonial government. As a chief organ of royal authority with the right of appeal to the Council of the Indies, it kept close watch on the acts of the civil administrators. The courts were at first powerful enough to uphold the rights of private individuals, but in the course of the 17th and 18th cent. they became corrupt and inefficient.

audio frequency, frequency at which a longitudinal mechanical wave is audible to the human ear as sound. The range of audio frequencies is not the same for every individual, but is approximately from 15 to 20,000 HERTZ. See SOUND, RADIO.

audio-visual education, term denoting the use of nonverbal materials to enrich learning experiences. It applies particularly to pictures, sounds, and other materials that develop sense perception. The successful use of visual aids in the U.S. armed forces during World War II demonstrated the effectiveness of this medium as a tool of instruction. The use of nonverbal materials—formerly confined to maps, graphs, textbook illustrations, and museum and field trips—now includes all the developments of the photographic and film industries as well as radio, sound and video-tape recordings, and television. The field of PROGRAMMED INSTRUCTION also employs computers and other types of audio-visual teaching machines. Many local school systems in the United States have their own film libraries that are often supplemented by films rented from universities and government offices. The growth of educational television has been exceedingly rapid. In 1952 the Federal Communications Commission reserved over 240 channels for educational purposes. By the end of the 1960s approximately 185 such channels were in operation. The Public Broadcasting Act (1967) set up the Corporation for Public Broadcasting, an independent agency responsible for the distribution and support of educational television programs. Another important aspect of educational television has been the development of closed-circuit and cable television systems. By using coaxial cables, such systems allow for simultaneous communication between the teacher in a studio and students receiving a program at home. See W. A. Wittich and C. F. Schuller, *Audio-Visual Materials: Their Nature and Use* (4th ed 1967), Paul Saettler, *A History of Instructional Technology* (1968), Caleb Gattegno, *Towards a Visual Culture: Educating Through Television* (1969), Sloan Commission on Cable Communications, *On the Cable: The Television of Abundance* (1971).

auditing, examination and statement of accounts and of other documents connected with accounts by persons who have had no part in their preparation. Systems of financial inspection have long been used, especially in connection with public accounts. In Italy the elaboration of commerce considerably increased the duties of an auditor in the late Middle Ages, but the auditing of business accounts did not become common until the 19th cent., when there were an increasing number of businesses continually growing in size and complexity. Corporate charters usually came to be granted only on condition

that licensed experts conduct annual audits. Such audits are particularly useful to the owners (partners or stockholders), executives (managers, officers, and directors), creditors or prospective creditors (investors, note brokers, and commercial and investment bankers), and receivers, trustees, and creditors' committees of a business. Audits are also useful to the vendors of a firm's merchandise, the owners of patents and other recipients of profit shares or royalties, governmental regulatory bodies, and prospective donors to institutions. An audit settles certain categories of questions. It must determine whether all assets and liabilities shown are actual, and that they are properly incurred, valued, and recorded. A check must be made of the surplus, income, and capital-stock accounts, verified by the examination of the authorizations for stock issues and by comparing the amounts issued with the amounts authorized. Finally, auditing constitutes an independent check on the tendency to overstate assets and understate liabilities. The duties of auditors have even expanded into a comprehensive survey and analysis of the entire conduct of the financial and accounting branches of an enterprise. Thus the auditor needs, in addition to his knowledge of ACCOUNTING, a broad understanding of business and finance. The accountant records the facts of a business, the auditor must determine whether or not such recording has been accurately and honestly done and then interpret and judge the facts, perhaps adding to his report recommendations for the future conduct of the business. In many countries, auditors are now established as a separate profession, requiring government licensing. In the United States, private audits are usually performed by certified public accountants, auditing of the federal government's accounts is conducted by the General Accounting Office (established 1921). The Internal Revenue Service periodically audits individual and corporate tax returns. See W. A. Staub, *Auditing Developments during the Present Century* (1942), H. F. Stettler, *Auditing Principles* (3d ed 1970), A. W. Holmes, *Auditing Principles and Procedure* (7th ed 1971).

Audley of Walden, Thomas Audley, Baron, 1488-1544, lord chancellor of England (1533-44) under Henry VIII. He was made speaker of the House of Commons in 1529 and lord keeper of the great seal in 1532. A loyal servant of Henry VIII, he supported the king's divorce (1533) from Katharine of Aragón and as chancellor presided (1535) over the trials of Sir Thomas More and John Fisher. He also aided in the prosecution of Anne Boleyn (1536), Sir Thomas Cromwell (1540), and other notables. He was created baron in 1538.

Audubon, John James (ô'dəbŏn), 1785-1851, American ornithologist, b. Les Cayes, Santo Domingo (now Haiti). The son of a French naval officer and a Creole woman, he was educated in France and in 1803 came to the Audubon estate, "Mill Grove," near Philadelphia. There he spent much time observing birds and making the first American bird-banding experiments. In 1808 he married Lucy Bakewell, whose faith and support were factors in his eventual success. Between 1808 and 1820 he lived mostly in Kentucky, frequently changing his occupation and neglecting his business to carry on his bird observations. He began painting portraits for a livelihood and descended the Mississippi to New Orleans, where for a time he taught drawing. From 1823 to 1828 his wife conducted a private school, in which he taught for a short time, in West Feliciana parish, La. In 1826 he went to Great Britain in search of a publisher and subscribers for his bird drawings, meeting with favorable response in Edinburgh and London. *The Birds of America*, in elephant folio size, was published in parts between 1827 and 1838, with engravings by Robert Havell, Jr. The accompanying text, called the *Ornithological Biography* (5 vol., 1831-39), was prepared largely in Edinburgh in collaboration with the Scottish naturalist William MacGillivray, who was responsible for its more scientific information. Extracts from Audubon's contributions, edited in 1926 by F. H. Herrick as *Delineations of American Scenery and Character*, reveal his stylistic qualities and furnish many pictures of American frontier life. Audubon worked on a smaller edition of his great work and also, in collaboration with John Bachman, began *The Viviparous Quadrupeds of North America*, which was completed by his sons Victor Gifford Audubon and John Woodhouse Audubon (plates, 30 parts, 1842-45, text, 3 vol., 1846-54). During these years his home was on the Hudson River in the northern part of Manhattan island. While his drawings and paintings of bird life may not wholly satisfy both the critical artist and the meticulous scientist, their

achievement in both areas is considerable. They remain one of the great achievements of American intellectual history and have gained wide popularity, having been reprinted many times. See his journal (1929) and letters (1930, repr 1969), both ed. by Howard Corning, studies by A. J. Tyler (1937), S. C. Arthur (1937), A. E. Ford (1964), A. B. Adams (1966), F. H. Herrick (2d ed 1938, repr 1968), and K. H. Proby (1974).

Audubon, borough (1970 pop. 10,802), Camden co., SW N.J., a suburb of Camden, inc. 1905. Audubon is mostly residential. It was named after John James Audubon, the ornithologist, who studied the birds of the area in 1829.

Audubon Society, National, one of the oldest and largest organizations in the Americas devoted to the conservation of wildlife and the natural environment, founded 1905 by George Bird Grinnell and named for John James Audubon. The society, a non-profit organization with a membership of over 325,000, maintains numerous wildlife sanctuaries, a few of which are open to the public, as well as camps and nature centers and provides various forms of educational services. The organization is actively at work on a wide range of critical issues affecting the natural environment, including strip mining, land use control, resource (land, water, and air) conservation, and, on an international level, protection of endangered species. Its publications include *American Bird* and *Audubon* (formerly *Bird Lore*), the society's official magazine.

Aue, Hartmann von: see HARTMANN VON AUE

Auenbrugger, Leopold (lä'öpŏlt ou'änbröögər), 1722-1809, Viennese physician. His findings on the use of percussion in diagnosing chest diseases were published in 1761 (tr. *On Percussion of the Chest*, 1936). Although ignored for some 40 years, his method, revived by Jean Nicolas Corvisart, was ultimately generally adopted.

Auer, Leopold (ou'ər), 1845-1930, Hungarian violinist and teacher, studied at the conservatories of Budapest and Vienna and with Joseph Joachim in Hanover. He taught at the St. Petersburg Conservatory, 1868-1917. Among his pupils were Mischa Elman, Jascha Heifetz, and Nathan Milstein. In 1918 he came to the United States, where he taught at the Institute of Musical Art, New York City, and the Curtis Institute of Music, Philadelphia. He became an American citizen in 1926. He was tremendously successful as a concert violinist and conductor. See his autobiography (1923).

Auerbach, Berthold (bĕrt'hŏlt ou'ərbakh), 1812-82, German novelist. He fought in the Revolution of 1848 and in the Franco-Prussian War. As a result of his *Schwarzwalder Dorfgeschichten* (1843-53, tr. *Vol. I Village Tales from the Black Forest*, 1846-47), somewhat stylized pictures of peasant life that were much imitated, he became the virtual founder of the peasant-story genre in German. Typical of his use of the novel are *Die Frau Professorin* (1846, tr. *The Professor's Wife*, 1850), *Die Helm von Buchenberg* (1852), and *Barfüßel* (1856, tr. *The Barefooted Maiden*, 1857). Of his longer works (some of them stories of Jewish life), the best known is *Auf der Höhe* (1865, tr. *On the Heights*, 1867). A dramatization of *Die Frau Professorin* by Charlotte Pfeiffer held the stage for 50 years in Germany.

Auerstedt (ou'ərshĕt), village, Erfurt dist., SW East Germany. At Auerstedt on Oct. 14, 1806 (the same day Napoleon I triumphed at Jena), French Marshal Louis Nicholas Davout defeated the Prussians under Duke Charles of Brunswick.

Augeas (ôjĕ'ās), in Greek mythology, son of Helios and king of Elis. He kept his huge herds of cattle in the Augean Stables. As his sixth labor, Hercules cleaned the stables in one day by diverting the course of a river (possibly the Alpheus) through them.

auger (ô'gər) see DRILL

Augereau, Pierre François Charles (pyĕr fraŋswa' sharl ôzhərô'), 1757-1816, marshal of France. He fought in the French Revolutionary and Napoleonic wars and was a principal in the coup d'état of 18 FRUCTIDOR (Sept. 4, 1797). For his heroism in the Italian campaign he was made duke of Castiglione. After the restoration of the Bourbons in 1814, Augereau rallied to Louis XVIII.

Aughrim or **Aghrim** (ôg'rĭm, ôkh-), village, Co. Wicklow, SW Republic of Ireland. It was the scene of a battle (July 12, 1691) in which the forces of William III of Great Britain won a decisive victory over those of James II.

Augier, Émile (Guillaume Victor Émile Augier) (gĕyôm' vĕktôr' âmĕl' ôzhyă'), 1820-89, French dra-

matist His plays, early examples of realism, satirize the social foibles of his time and uphold the values of bourgeois family life His chief work, *Le Gendre de M Poirier* (1854, tr 1915), was written with Jules Sandeau

Augsburg (ouks'bōrk), city (1970 pop 211,566), capital of Swabia, Bavaria, 5 West Germany, an industrial center on the Lech River The major industries include the manufacture of textiles, clothing, machinery, motor vehicles, and airplanes The city is an important rail junction Augsburg was founded (c 14 B C) by Augustus as a Roman garrison called *Augusta Vindelicorum* In early medieval times it was controlled by the Frankish kings It was made a free imperial city in 1276 and was later a powerful member of various Swabian leagues, including the SWABIAN LEAGUE of 1488-1534 Augsburg was one of Europe's most important commercial and banking centers in the 15th and 16th cent and was a rallying point of German science and art The city was the home of the FUGGER and WELSER families and was the birthplace of Hans Holbein the Elder, Hans Holbein the Younger, and Hans Burgkmair Several important agreements, including the Augsburg Confession (1530), were concluded there during the Reformation Augsburg suffered greatly in the Thirty Years War (1618-48) In 1806 it became part of Bavaria Augsburg's many noteworthy structures include the cathedral (begun in the 9th cent), the 16th-century Fuggerei, an enclosed settlement for poor persons founded by the Fugger family, and the 17th-century town hall Bertolt Brecht was also born in Augsburg

Augsburg, League of, defensive alliance formed (1686) by Holy Roman Emperor Leopold I with various German states, including Bavaria and the Palatinate, and with Sweden and Spain so far as their German interests were concerned It was an acknowledgment of a community of German feeling against French expansion The war that broke out after the French attack on the Palatinate in Oct, 1688, is sometimes designated the War of the League of Augsburg In 1689 a new coalition against the French, the Grand Alliance, was formed by Austria, England, and the Netherlands Savoy and Spain later joined the Alliance and the war of 1688-97 is more properly known as the War of the Grand Alliance (see GRAND ALLIANCE, WAR OF THE)

Augsburg, Peace of, 1555, temporary settlement within the Holy Roman Empire of the religious conflict arising from the REFORMATION Each prince was to determine whether Lutheranism or Roman Catholicism was to prevail in his lands (*cuius regio, eius religio*) Dissenters were allowed to emigrate, and the free cities were obligated to allow both Catholics and Lutherans to practice their religions Calvinists and others were ignored Under a provision termed the ecclesiastical reservation, the archbishops, bishops, and abbots who had become Protestant after 1552 were to forfeit their offices and incomes

Augsburg Confession: see CREED 4

Augsburg Interim: see REFORMATION

Augur, Hezekiah, 1791-1858, American sculptor After a business failure he devoted himself to art and was encouraged by Samuel F B Morse His bust of Washington and the statuette group *Jephtha and His Daughter* (Yale Univ) are among his best-known works

augur: see OMEN

August: see MONTH

Augusta (ougō'stā), city (1971 pop 34,709), E Sicily, Italy, on an island (formerly a peninsula) in the Ionian Sea, connected by bridge with the Sicilian mainland It is an important port and a fishing and industrial center Manufactures include refined petroleum, chemicals, textiles, and fertilizer The city was a Greek settlement and then a Roman military base It was refounded by Emperor Frederick II in 1232 and later (15th-early 16th cent) was a thriving banking town Augusta was badly damaged by earthquakes in 1693 and 1848 Of note is Frederick II's castle (now a penitentiary)

Augusta (ōgūs'tā, āgūs'-), 1 City (1970 pop 59,864), seat of Richmond co, E Ga, inc 1798 At the head of navigation on the Savannah River and protected by levees, Augusta is the trade center for a broad band of counties in Georgia and South Carolina known as the Central Savannah River Area It is also an important industrial center, manufacturing textiles, chemicals, bricks and tiles, fertilizers, cleansers, hospital supplies, tools, and wood, paper, metal, and plastic products The city is a popular resort, noted especially for its golf tournaments Augusta grew from an old river trading post existing as early as 1717 and was named by James Oglethorpe in 1733

after the mother of George III In the American Revolution, Augusta changed hands several times and was finally taken by Continental forces in 1781 under Andrew Pickens and Light-Horse Harry Lee It was the capital of Georgia from 1785 to 1795, and the U S Constitution was ratified there Augusta boomed after the American Revolution, during the rapid expansion of the tobacco industry, followed by the growth of the cotton industry By 1820 the city was the terminus for river boats, wagon trains, and traders, all carrying the produce of the interior to the sea Manufacturing began in 1828, when Augusta's first textile plant began operation with machinery brought laboriously from Philadelphia During the Civil War, Augusta housed the largest Confederate powder works The city's historical attractions include a boyhood home of Woodrow Wilson, a U S arsenal (1815-1955), whose surviving buildings are now part of Augusta College, and old homes of Georgian and classic-revival styles Paine College, Georgia Medical College, and two large veterans hospitals are also in Augusta Nearby is Fort Gordon, with training schools for military police, the signal corps, and the corps of engineers 2 City (1970 pop 21,945), state capital and seat of Kennebec co, 5W Maine, on the Kennebec River, inc as a town 1797, as a city 1849 Shoes, fabrics, and paper products are manufactured there Traders visited the site, long known as Cushnoc, even before 1628, when the Plymouth Company established a trading post Fort Western was built in 1754, and Benedict Arnold's expedition to Quebec gathered at the fort in 1775 (The garrison house was restored as a museum in 1921) The settlement around the fort developed with the shipping and shipbuilding on the Kennebec, and manufacturing began in 1837, when a dam was built across the river The capitol building (1829) was designed by Charles Bulfinch but has been considerably enlarged and remodeled James G Blaine's early 19th-century home is the governor's mansion A junior college (a branch of the Univ of Maine), a veterans hospital, and a U S arsenal are also in Augusta

Augustenburger, Christian Augustus, Herzog von: see SCHLESWIG-HOLSTEIN

Augustine, Saint (ō'gastēn, -tīn, ōgūs'tīn), Lat *Aurelius Augustinus*, 354-430, Doctor of the Church, one of the four Latin fathers, bishop of Hippo (near present-day Annaba, Algeria), b Tagaste (c 40 mi/60 km S of Hippo) His mother, St Monica, was a great influence in his life She brought him up as a Christian, but he gave up his religion when he went to school at Carthage There he became adept in rhetoric In his *Confessions* he repents of his wild youth in Carthage, during which time he fathered an illegitimate son At some time in his youth he became a convert to Manichaeism After 376 he went to Rome, where he taught rhetoric with success, in 384, at the urging of the Manichaeans, he went to Milan to teach His years at Milan were the critical period of his life Already distrustful of Manichaeism, he came to renounce it after a deep study of Platonism and skepticism Augustine, troubled in spirit, was greatly drawn by the eloquent fervor of St Ambrose, bishop of Milan After two years of great doubt and mental disquietude, Augustine suddenly decided to embrace Christianity He was baptized on Easter, 387 Soon afterward he returned to Tagaste, where he lived a monastic life with a group of friends In 391, while he was visiting in Hippo, he was chosen against his will to be priest of the Christians there For the rest of his life he remained in Hippo, where he became auxiliary bishop in 395 and bishop soon after He died in the course of the siege of Hippo by the Vandals St Augustine's influence on Christianity is thought by many to be second only to that of St Paul, and theologians, both Roman Catholic and Protestant, look upon him as the founder of theology His *Confessions* is considered a classic of Christian mysticism This work (c 400), the prime source for St Augustine's life, is a beautifully written apology for the Christian convert Next to it his best-known work is the *City of God* (after 412)—a mammoth defense of Christianity against its pagan critics, and famous especially for the uniquely Christian view of history elaborated in its pages Augustine regarded all history as God's providential preparation of two mystical cities, one of God and one of the devil, and to one or the other of which all mankind will finally belong His greatest purely dogmatic work is *On the Trinity*, a systematization of Christian doctrine, but much of his theological teaching comes from his polemic writings His works against the Manichaeans, especially *Against Faustus* (his Manichaean teacher), are important for the light they throw on this religion Against DONA-

TISM St Augustine directed two works, *On Baptism* and *On the Correction of the Donatists*, in which he formulated the idea, since then become part of Roman Catholicism, that the church's authority is the guarantee of the Christian faith, its own guarantee being the APOSTOLIC SUCCESSION The most spectacular controversy in which St Augustine was involved was his battle against PELAGIANISM The Pelagians denied original sin and the fall of man The implication of this, that God's grace was unnecessary for the first step toward salvation, aroused Augustine, who held that man was corrupt and helpless He wrote many treatises in this controversy and continued to elaborate his ideas afterward From his writings the great controversies on grace proceed, and as professed followers of Augustine, John Calvin and the Jansenists developed predestinarian theologies Though revering Augustine, many theologians have refused to accept his more extreme statements on grace itself Another of St Augustine's important treatises, *On the Work of Monks*, has been much used by monastics He also composed works on biblical exegesis One of his most interesting treatises is called *Retractions*, composed late in life, a kind of review of his works, in which he revised some of his views He was a master of style His letters are numerous and revealing His most important works are available in translation Feast Aug 28 See biographies by Jacques Chabannes (tr 1962) and P R L Brown (1967), R W Battenhouse, ed, *A Companion to the Study of St Augustine* (1955), H A Deane, *The Political and Social Ideas of St Augustine* (1963), R A Markus, *Saeculum History and Society in the Theology of St Augustine* (1970), Eugene Teselle, *Augustine the Theologian* (1970)

Augustine of Canterbury, Saint, d c 605, Italian missionary, called the Apostle of the English, first archbishop of Canterbury (from 601) A Roman Benedictine monk, he was sent to England, as the head of some 40 monks, by Pope St Gregory I Arriving in 597, they were well received by King ÆTHELBERT, who was converted by Augustine, thus making him the first Christian king in Anglo-Saxon England Æthelbert gave the monks land at Canterbury, and a church was built on the site of the present cathedral A monastery was also founded Augustine's mission, introducing the more indulgent Roman ways, was resented by Celtic monks of the British isles, whose austerities were more severe and who kept a different date of Easter Their differences were eventually settled in 663 at the Synod of Whitby, when England abandoned Celtic practices Feast May 28 (May 26 in England and Wales) See Bede's *Ecclesiastical History*, biographies by F van der Meer (1961) and J Gnallor (1965), studies by R W Battenhouse (1955) and T Prosper (1963)

Augustinians, religious orders in the Roman Catholic Church The name is derived from the Rule of St Augustine, an old, rather generalized monastic rule The canons regularly adopted this rule in the 11th cent and became known as Augustinian, or Austun, canons Subsequent orders of canons regular, such as the Premonstratensians, are outgrowths The Austin friars are an entirely different group of religious, dating from the 13th cent (see FRIAR) Officially known as Hermits of St Augustine, they now exist in three independent branches—the Calced Augustinian Hermits, the more austere and less numerous Discalced Augustinian Hermits, and the Recollects of St Augustine There are also congregations of women corresponding to both canons and friars

Augustus (ōgūs'tas, āgūs'-), 63 B C -A D 14, first Roman emperor, a grandson of the sister of Julius CAESAR Named at first Caius Octavius, he became an adoption by the Julian gens (44 B C) Caius Julius Caesar Octavianus (Octavian), Augustus was a title of honor granted (27 B C) by the senate When Octavian was a youth, Caesar took a great interest in his education and made him his heir without the boy's knowledge Octavius was in Illyricum when Caesar was killed, and he promptly set out for Rome to avenge the dictator's death Before he reached the city, he heard that he was Caesar's heir At Rome, ANTONY was in control, and Octavian was recognized by Cicero and the senate as a leader against him Antony went north to take Gaul and was defeated (43 B C) at Mutina (modern Modena) Octavian, now dominant in Rome, secured the consulship and made an alliance with Antony and LEPIDUS (d 13 B C) as the Second Triumvirate Having proscribed the enemies of the triumvirate, Octavian and Antony went east and defeated (42 B C) the army of Marcus Junius BRUTUS and Caius CASSIUS Longinus at Philippi Octavian's forces then attacked Sextus POMPEIUS, who controlled Sicily and

Sardinia, and Marcus Vipsanius AGRIPPA defeated (36 B C) Pompeius at Mylae. Meanwhile, at Rome, Octavian had been consolidating his power. He was helped by the growing impatience of Rome with Antony's intrigue with Cleopatra, and he had himself appointed (31 B C) general against Antony. After the naval battle off ACTIUM, which Agrippa won over Antony and Cleopatra, Octavian controlled all Roman territories. He set about at once to reform the city and the provinces. He purged the senate of unworthy members, restored and built temples, and fostered a revival of Roman tradition. Augustus had no court, and he considered himself, at least publicly, not the ruler, but rather the first citizen, of the republic. The senate delighted to honor him. In 29 B C he was made imperator [Lat., =commander, from it is derived *emperor*], in 28 B C princeps [leader, from it is derived *prince*], in 27 B C augustus [august, reverend], in 12 B C pontifex maximus [high priest], and a month (Sextilis) was renamed Augustus (August) in his honor. His reforms were prudent and far-reaching, and he was responsible for Rome's return from a military dictatorship to a constitutional rule. He divided the provinces into two classes—senatorial, ruled by a proconsul chosen by the senate with a term of one year, and imperial, in charge of a governor solely responsible to Augustus with an indefinite term. To control the provinces Augustus spread the army throughout the empire, before this Italy had been burdened with a huge standing army. Augustus desired no further conquest, and his consequent policy was to hold the borders set by Caesar. His attempt to make a buffer state of the German territory between the Rhine and the Weser (or the Elbe) led to a rebellion by ARMINIUS in which Varus was defeated, this was the only real reverse Augustus suffered. Augustus studied the plans of Caesar for colonization throughout the empire. He made taxation more equitable and had general censuses taken. Knowing that the roads were the arteries of the empire, he lavished expenditures on them. He built a new forum, beautified the streets, improved housing conditions, and set up adequate police and fire protection. He was munificent to arts and letters, and he was a close friend of MAECENAS and a patron of Vergil, Ovid, Livy, and Horace. Augustus established the concept of the Pax Romana [Roman peace], which strengthened the imperial government. He was succeeded by his stepson TIBERIUS. See Victor Ehrenberg and A. H. M. Jones, *Documents Illustrating the Reigns of Augustus and Tiberius* (2d ed., 1955), H. T. Rowell, *Rome in the Augustan Age* (1962), G. W. Bowersock, *Augustus and the Greek World* (1965), A. H. M. Jones, *Augustus* (1971).

Augustus II, 1670-1733, king of Poland (1697-1733) and, as Frederick Augustus I, elector of Saxony (1694-1733). He commanded the imperial army against the Turks (1695-96), but had no success and was replaced by Prince Eugene of Savoy as soon as he competed for the Polish throne, left vacant by the death of John III. By becoming a Catholic and granting the Polish nobility unprecedented privileges he was elected king with the support of the Holy Roman emperor and the pope. With help from PATKUL, Augustus allied himself (1699) with PETER I of Russia and FREDERICK IV of Denmark for an attack on young CHARLES XII of Sweden. In the resulting conflict (see NORTHERN WAR) Augustus invaded LIVONIA with his Saxon troops but was defeated (1702) by Charles XII. The Treaty of Altranstadt (1706) forced him to renounce the Polish crown in favor of STANISLAUS I and to give up his alliance with Russia. After Charles's defeat by the Russians at Poltava (1709), Augustus revived the alliance and recovered Poland. In Poland, where he kept a Saxon force, Augustus was highly unpopular. After his death, the ascension of his son and successor in Saxony, Augustus III, to the Polish throne was unsuccessfully contested by Stanislaus I, who was backed by France. Among Augustus's many mistresses was Maria Aurora KÖNIGSMARK, her son, Maurice de SAXE, was one of Augustus's innumerable illegitimate offspring. A patron of the arts, Augustus greatly embellished Dresden and created the MEISSEN china manufactures. He is also called Augustus the Strong.

Augustus III, 1696-1763, king of Poland (1735-63) and, as Frederick Augustus II, elector of Saxony (1733-63), son of Augustus II, whom he succeeded in Saxony. Elected king of Poland by a minority, he allied himself with Empress Anna of Russia and Holy Roman Emperor CHARLES VI in the War of the POLISH SUCCESSION (1733-35) and secured the throne from STANISLAUS I. In the War of the AUSTRIAN SUCCESSION (1740-48), Augustus at first offered to support Maria Theresa in return for a corridor between Poland and

Saxony. He was refused and entered the coalition against her, claiming rights as a son-in-law of her uncle, Holy Roman Emperor Joseph I. He changed sides in 1742. When the SEVEN YEARS WAR began (1756) with a surprise attack on Saxony, Augustus fled to Poland; he returned to Dresden only after the war was over (1763). He was a patron of the arts, and his indolence and sensuality kept him from state affairs, which he left to his ministers, notably Count BRÜHL. Augustus's death ended the union of Saxony and Poland. His grandson became elector of Saxony (and later, as FREDERICK AUGUSTUS I, king), but STANISLAUS II was elected king of Poland with Russian support.

auk (ôk), common name for a member of the family Alcidae (alcid family), swimming and diving birds of the N Atlantic and Pacific, which includes the guillemots and puffins. Their legs are set far back on their bodies, making them clumsy on land, where they seldom venture except to nest. The extinct, flightless great auk, *Pinguinus impennis*, or garefowl, represents the largest species. It was about the size of a goose, black above and grayish white below, and was formerly abundant in the N Atlantic. Slaughtered in its breeding grounds for its flesh, feathers, and oil, it became extinct c 1844. The least auklet (about 6½ in /16.3 cm), common in the Bering Sea region, is the smallest of the family, and the razor-billed auk, *Alca torda* (16-18 in /40-45 cm), is the largest surviving member. The Eskimos hunt the dovekie (*Plautus alle*), or little auk, for food and use its feathered skin for clothing. Auks return to the same breeding grounds every year, and each individual goes to the very same nesting site. The single egg is laid on bare rock on cliff ledges, and incubation duties are shared by both parents. Auks are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Charadriiformes, family Alcidae.

Aukrust, Olav (ô'lav ou'krööst'), 1883-1929, Norwegian lyric poet. Aukrust's work, which contains strong religious and nationalist sentiment, draws much of its inspiration from Norway's peasant life, traditions, and majestic landscape. His best-known volumes of poetry include *Himmelvarden* [the mountain cairn] (1916) and *Solrenning* [sunrise] (1930). Aukrust writes symbolically of the individual's struggle against dark, elemental powers and his redemption through Christian faith. He uses this theme as a metaphor for Norwegian national development.

Aulard, Alphonse (alfôn's ôlar'), 1849-1928, French historian. He was the first professional historian of the French Revolution, and he devoted his life to this study. A professor at the Univ of Paris, he founded the Société de l'Histoire de la Révolution and the monthly review *Revue française*. Aulard regarded the conservative interpretation of Taine as prejudiced, nevertheless, he himself clearly represented the republican, bourgeois, and anticlerical concept of the Revolution. He concentrated on political history. Some of his students, notably Albert MATHIEZ, broke with his emphasis and turned to social and economic issues. Aulard's works include *Études et leçons sur la Révolution française* (9 vol., 1893-1924), *Histoire politique de la Révolution française* (1901, tr. *The French Revolution: A Political History*, 4 vol., 1910, repr. 1965), *Les Grands Orateurs de la Révolution*, Mirabeau, Vergniaud, Danton, Robespierre (1914), and *La Révolution française et le régime féodal* (1919).

Aulis (ô'lis), small port of ancient Greece, in Boeotia, E central Greece. From there the Greek fleet sailed against Troy after the sacrifice of IPHIGENIA. Its ancient temple of Artemis is in ruins.

Aulus Gellius: see GELLIUS, AULUS.

Aunis (ônēs'), small region and former province, W France, on the Atlantic coast. It is now part of the Charente-Maritime and Deux-Sevres depts and includes the islands of Re and Oleron. La Rochelle, the historic capital and one of the leading ports of the region, and Rochefort are the chief cities. A part of Aquitaine, it was recovered from England in 1373 and incorporated into the French crown lands.

aura. see SPIRITISM.

Aurangabad (ourûng'gabad'), town (1971 pop. 150,514), Maharashtra state, W India. A district administrative center, it also carries on trade in cotton and wheat. Silverware is produced. Aurangabad, founded in 1610, is the home of Marathwada Univ. Nearby is the great mausoleum (1711) of Aurangzeb's empress.

Aurangzeb (ô'rângzëb') or **Aurangzib** (-zîb'), 1618-1707, Mogul emperor of India (1658-1707), son and successor of SHAH JAHAN. He served (1636-44,

1653-58) as viceroy of the Deccan but was constantly at odds with his father and his eldest brother, Dara Shikoh, the heir apparent. When Shah Jahan fell ill in 1658, Aurangzeb seized the opportunity to fight and defeat Dara and two other brothers in a battle for succession. He imprisoned his father for life and ascended the throne of Delhi with the reign title Alamgir [world-shaker]. A scholarly, austere man, fanatically devoted to Islam, he persecuted the Hindus, destroying their temples and monuments. He executed the guru of the SIKHS when he refused to embrace Islam. Such measures produced a fierce Hindu reaction. Thus, although the Mogul empire reached its greatest extent under Aurangzeb, it was also fatally weakened by revolts of the Sikhs, Rajputs, and Jats in the north and the rebellion of the Mahrattas in the Deccan. From 1682, Aurangzeb concentrated all his energies on crushing the Mahrattas, but his costly campaigns were only temporarily successful and further weakened his authority in the north. The Mogul empire fell apart soon after his death. His name also appears as Aurungzebe, Aurungzeb, and Aureng-Zebe. See biography by Sir J. Dunath Sarkar (5 vol., 1912-24), study by Stanley Lane-Poole (1964).

Auray (ôrá'), town (1968 pop. 8,639), Morbihan dept., NW France, in Brittany, on the Auray River estuary. Oysters are bred, food is canned, and there is some light manufacturing. Nearby the decisive battle of the War of the BRETON SUCCESSION took place (1364). On the Champ des Martyrs, also near Auray, some 800 royalists, who had landed at Quiberon, were massacred (1795). North of the town is the famous Basilica of Sainte-Anne-d'Auray, built in Renaissance style in the 19th cent. Pilgrimages to the shrine have occurred every July 26 since the 17th cent., when a peasant, Yves Nicolazic, claimed to have seen a vision of St. Anne.

Aurelian (Lucius Domitius Aurelianus) (ôré'léan), c 212-275, Roman emperor (270-75). Rising in the ranks, he became consul under Valerian. He succeeded CLAUDIUS II, whose victory over the Goths had begun the territorial rehabilitation of the empire. Aurelian conceded Dacia to the Goths but consolidated the Danubian provinces and held the barbarians beyond the Rhine in check. His most brilliant exploits were in the East—especially in Palmyra, where he captured ZENOBIA and destroyed her kingdom. Aurelian went to Gaul, where he received the submission of the independent "emperor," Tetricus. One of Rome's greatest emperors, Aurelian regained Britain, Gaul, Spain, Egypt, Syria, and Mesopotamia and removed for a while the barbarian threat to the eastern provinces. He fortified Rome with a wall some 12 mi (19 km) in circumference, averaging more than 40 ft (12.2 m) in height. Much of it still remains. Aurelian was murdered, and Marcus Claudius TACITUS succeeded him.

Aurelius, Marcus: see MARCUS AURELIUS.

aureole (ôr'êôl'), in art. see NIMBUS.

aureole, in physics, luminous circle seen when the sun or other bright light is observed through a diffuse medium, i.e., smoke, thin cloud, fog, haze, or mist. It sometimes occurs as a series of concentric circles. The aureole results from the dispersion of light by particles of dust or water. Because of the refraction of the light waves, it exhibits color in varying intensity.

Aureomycin (ôr'êômi'sîn), trade name for chlorotetracycline, a broad spectrum ANTIBIOTIC. See TETRACYCLINE.

Auriga (ôri'gä) [Lat., =the charioteer or wagoner], northern CONSTELLATION traditionally represented as a man, possibly Vulcan, carrying a goat on his shoulder while driving a chariot. It lies E of Perseus and N of Gemini and Taurus. Auriga contains CAPELLA, a bright, yellow giant star, and Epsilon Aurigae, an eclipsing binary in which a small star orbits a cool supergiant star. The constellation reaches its highest point in the evening sky in early February.

Aurignac (ôrënyak'), village (1968 pop. 1,149), Haute-Garonne dept., S France, at the foot of the Pyrenees. Its caves, excavated in 1860, contain relics of prehistoric man of the Aurignacian period (see PALEOLITHIC PERIOD).

Aurigny: see ALDERNEY, island, England.

Aurillac (ôrëyak'), town (1968 pop. 31,143), capital of Cantal dept., 5 central France, in Auvergne, on the Jordanne River. An industrial, communications, and market center, it is noted for its furniture, foot wear, umbrellas, and Cantal cheese. It has an 18th century church and picturesque old houses.

Auriol, Vincent (vân'san' ôryôl'), 1884-1966, French statesman, first president (1947-54) of the Fourth Republic. A Socialist deputy after 1914, he was finance

minister under Leon BLUM (1936–37) and minister of justice in the cabinet of Camille CHAUTEMPS (1937–38). He refused (1940) to vote plenary powers to Marshal PÉTAIN and was held in custody by the Vichy government. Released in 1941, he worked in the French underground and in 1943 left France to join Gen. Charles de Gaulle. A member of the provisional government (1945), he was elected (1946) president of the national assembly. He was president of the republic from 1947 to 1954. In 1958 he aided de Gaulle's return to power, but he later protested (1960) against what he considered de Gaulle's arbitrary rule. He resigned from the Socialist party in 1959.

Aurobindo, Sri: see GHOSE, AUROBINDO

urochs (ô'rôks), extinct European wild ox, *Bos primigenius*, believed to be the chief ancestor of European domestic cattle. Also called urus, it was a large, horned, dark brown animal, standing up to 7 ft (2 m) at the shoulder. It existed in the Pleistocene period and was apparently domesticated by Neolithic (New Stone Age) man. It is mentioned in the writings of Julius Caesar. Hunting and the clearing of forests resulted in its extermination; the last known survivor died in 1627 in Poland. The animal now commonly called aurochs in Europe is actually the WISENT, or European bison. The aurochs is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Aurora, in mythology see EOS

Aurora. 1 City (1970 pop. 74,974), Adams and Arapahoe counties, N central Colo., a residential suburb of Denver, inc. 1903. It is the trade center for a large farming and livestock-raising area. Electrical products, aircraft parts, and oil field equipment are manufactured. Tourism and construction are also important. Nearby are Lowry Air Force Base and Fitzsimmons Army General Hospital. 2 City (1970 pop. 74,182), Kane co., NE Ill., on the Fox River, inc. 1837. It has large railroad yards and a great variety of manufactures, including construction and highway equipment, electric tools, pumps, and heavy steel products. It was one of the first cities to use electricity for street lighting (1881). It is the seat of Aurora College and of a notable historical museum in a 20-room house built in 1857.

aurora borealis (bôr'êäl'is) and **aurora australis** (ôstrâ'l'is), luminous display of various forms and colors seen in the night sky. The aurora borealis of the Northern Hemisphere is often called the northern lights, and the aurora australis of the Southern Hemisphere is known as the southern lights. Each is visible over an area centering around the geomagnetic pole of its own hemisphere. The aurora borealis is said to occur with greatest frequency along a line extending through N Norway, across central Hudson Bay, through Point Barrow, Alaska, and through N Siberia. It is often visible in Canada and the N United States and is seen most frequently at the time of the EQUINOXES. Among the most magnificent of natural phenomena, auroral displays appear in shades of red, yellow, green, blue, and violet and are usually brightest in their most northern latitudes. The aurora is seen in a variety of forms, e.g., as patches of light, in the form of streamers, arcs, bands, rays, or resembling hanging draperies. The aurora occurs between 35 mi and 600 mi (56 km–970 km) above the earth. It is thought to be caused by high-speed electrons and protons from the sun, which are trapped in the Van Allen radiation belt high above the earth and then channeled toward the polar regions by the earth's magnetic field. These electrically charged particles enter the atmosphere and collide with air molecules (chiefly oxygen and nitrogen), thus exciting them to luminosity; near the 600-mile level, the light may be given off by electrons and protons combining to form hydrogen atoms. The auroras coincide with periods of greatest sunspot activity and with magnetic storms (disturbances of the ionosphere which interfere with long-distance radio communication). Much was learned about the aurora during the 1957–58 International Geophysical Year, when it was studied intensively by means of balloons, radar, rockets, and satellites.

Aurungzebe: see AURANGZEB

Ausable Chasm (ôsä'bäl), gorge, 2 mi (3.2 km) long, from 20 to 50 ft (6–15 m) wide, from 100 to 200 ft (30–61 m) deep, NE N.Y. The chasm, with its rapids, waterfalls, and curious rock formations, is a popular tourist attraction. Rainbow Falls, 75 ft (23 m) high, is at the southern end of the gorge. The Ausable, a river rising in the Adirondack Mts. and flowing NE to Lake Champlain, continues to carve out the gorge as it passes over the sandstone bedrock.

Auschwitz: see OŚWIĘCIM, Poland

Ausonius (Decimus Magnus Ausonius) (ôsô'nêēs), c. 310–c. 395, Latin poet and man of letters, b. Bordeaux. He tutored Gratian, who, when he ascended the throne, made Ausonius prefect of Gaul, Italy, and Africa, and finally consul (379). When Gratian died, Ausonius returned to Bordeaux. His work gives a detailed picture of contemporary people and places. *Mosella*, a description of his journey on the Moselle River, contains his best verse. Among his other works are *Parentalia*, verse sketches of dead relatives, and *Ordo nobilium urbium*, a description of 20 leading cities of the Roman world. Ausonius was nominally a Christian, although his works reveal many pagan beliefs. See T. R. Glover, *Life and Letters in the Fourth Century* (1901, repr. 1968).

Aussig: see ÚSTÍ NAD LABEM, Czechoslovakia

Aust-Agder (oust'-ag'dar), county (1972 est. pop. 82,000), 3,610 sq mi (9,350 sq km), S Norway, bordering on the Skagerrak in the east. Arendal is the capital. The SETESDAL comprises the county's northern section. The Otra is the main river. Major industries include fishing, shipping, agriculture, tourism, and forestry. The county was formerly called Nedenes.

Austen, Jane, 1775–1817, English novelist. The daughter of a clergyman, she spent the first 25 years of her life at "Steventon," her father's Hampshire vicarage. Here her first novels, *Pride and Prejudice*, *Sense and Sensibility*, and *Northanger Abbey*, were written, although they were not published until much later. On her father's retirement in 1801, the family moved to Bath for several years and then to Southampton, settling finally at Chawton Cottage, near Alton, Hampshire, which was Jane's home for the rest of her life. *Northanger Abbey*, a satire on the GOTHIC ROMANCE, was sold to a publisher for £10 in 1803, but as it was not published, was bought back by members of the family and was finally issued posthumously. The novels published in Austen's lifetime were *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), and *Emma* (1816). *Persuasion* was issued in 1818 with *Northanger Abbey*. The author's name did not appear on any of her title pages, and although her own friends knew of her authorship, she received little public recognition in her lifetime. Jane Austen's novels are comedies of manners that depict the self-contained world of provincial ladies and gentlemen. Most of her works revolve around the delicate business of providing husbands for marriageable daughters. She is particularly noted for her vivid delineations and lively interplay of character, her superb sense of comic irony, and her moral firmness. She ridicules the silly, the affected, and the stupid, ranging in her satire from light portraiture in her early works to more scornful exposures in her later novels. Her writing was subjected to the most careful polishing. She was quite aware of her special excellences and limitations, comparing herself to a miniaturist. Today she is regarded as one of the great masters of the English novel. Her minor works include her *Juvenilia*, the novel *Lady Susan*, and the fragments *The Watsons* and *Sanditon*. See her letters (ed. by R. W. Chapman, 2d ed. 1965), biographies by Elizabeth Jenkins (1939) and J. A. Hodge (1972), studies by Mary Lascelles (1939), A. H. Wright (1953), A. W. Litz (1965), F. W. Bradbrook (1966), A. M. Duckworth (1971), K. Kroeber (1971), F. B. Pinion (1973), and S. M. Tave (1973).

Austerlitz (ô'stôr'lits, Ger. ou'-), Czech Slavkov u Brna, town, S Czechoslovakia, in Moravia. An agricultural center, the town has sugar refineries and cotton mills. It became a seat of the Anabaptists in 1528. At Austerlitz, in the "battle of the three emperors," Napoleon I won (Dec. 2, 1805) his most brilliant victory by defeating the Russian and Austrian armies under Czar Alexander I and Emperor Francis II. The "sun of Austerlitz" (it was a cloudless day) became synonymous with the peak of Napoleon's fortunes. An armistice with Austria, concluded (Dec. 4) at Nikolsburg (now Mikulov), was followed by the Treaty of Pressburg. Russia continued the war but had to withdraw all troops from Austria. There is a famous description of the battle in Tolstoy's *War and Peace*. The town has an 18th-century castle, a 13th-century church, the Renaissance Church of the Resurrection, and the Monument of Peace (built 1910–11).

Austin, Alfred, 1835–1913, English author, b. Leeds. Originally trained for a legal career, he eventually turned to writing and politics. From 1883–95 he edited the *National Review*. Although in 1896 he succeeded Tennyson as poet laureate, his poetry is negligible, and he was the butt of many critics who attacked his snobishness, tastelessness, and lack of

poetic talent. His best work is *A Garden That I Love* (1894, 1907), a miscellany in diary form. See his autobiography (1911, repr. 1973), study by N. B. Crowell (1953).

Austin, John, 1790–1859, English jurist. He served (1826–32) as professor of jurisprudence at the Univ. of London, and his lectures were published (with additional material) as *The Province of Jurisprudence Determined* (1832, repr. 1967, 3 vol.) and *Lectures on Jurisprudence* (1869, 5th ed. 1911). These books presented a comprehensive analysis of the principles underlying all legal systems. Austin argued that law was the expression of the will of the sovereign authority and was not to be confused with the dictates of religion and ethics. Austin's work—in part stemming from that of Jeremy BENTHAM—had a strong influence on many later legal theorists, including John Stuart MILL. His wife, Sarah Taylor Austin, was a well-known translator. See Jethro Brown, ed., *The Austinian Theory of Law* (1906).

Austin, John Langshaw, 1911–60, British philosopher. A graduate of Oxford, he was a fellow of All Souls (1933–35) and Magdalen (1935–52) colleges before he became White's professor of moral philosophy (1952–60) also at Oxford. He strongly influenced analytic philosophy, urging that the use of words be closely examined and holding that the distinctions of ordinary language are more subtle than is usually realized. His writings include *Philosophical Papers* (1961), *Sense and Sensibilia* (1962), and *How to Do Things with Words* (1962). See studies by Mats Furberg (1971) and Sir Isaiah Berlin et al. (1973).

Austin, Moses, 1761–1821, American pioneer, b. Durham, Conn. After developing lead mines in SW Virginia, he went to inspect (1796–97) prospects in Missouri, then Spanish territory. In 1798 he founded Potosi, Mo. and became a miner and trader there. Hard times caused him to go to Texas in 1820 and get the Spanish governor's permission to settle 300 families in Texas. The grant was confirmed in 1821, but Moses Austin died without realizing his settlement plans. His son, Stephen F. Austin, took up the plans.

Austin, Stephen Fuller, 1793–1836, American leader of colonization in Texas, known as the Father of Texas, b. Wythe co., Va., son of Moses Austin. He grew up in Missouri, studied at Transylvania Univ. in Kentucky, served (1814–20) in the Missouri territorial legislature, and was studying law in New Orleans when his father died. Stephen took up the plans to colonize Texas and on a journey there (1821) selected the area between the Brazos and Colorado rivers. In January, 1822, he planted the first legal settlement of Anglo-Americans in Texas. He later went to Mexico City to have his grant cleared and confirmed by the newly independent Mexican government. Austin's settlements, with the towns of San Felipe de Austin and Brazoria, prospered. Other American colonists poured in. As friction developed over the years with the Mexican government, Austin opposed illegal efforts at Texan independence. He was sent in 1833 to Mexico City to present the settlers' grievances, to ask that Texas be separated from Coahuila, and to get the Mexican immigration law modified. He was accused of treason and imprisoned. On his return to Texas in 1835 he opposed the government of SANTA ANNA and so forwarded the Texas Revolution. He was sent as one of the commissioners (1835–36) of the provisional government to obtain aid in the United States, was defeated (1836) by Samuel HOUSTON for the presidency of Texas, and served briefly until his death as secretary of state. See *The Austin Papers, 1765–1837* (1924–28), biographies by S. Glasscock (1951) and E. G. Barker (1925, repr. 1968).

Austin. 1 City (1970 pop. 25,074), seat of Mower co., SE Minn., on the Cedar River, near the Iowa line, inc. 1868. The industrial and commercial center of a rich farm region, it has a large meat-packing industry. Shipping and metal containers are also made. In Austin are a junior college and an arboretum and nature center. 2 City (1970 pop. 251,808), state capital and seat of Travis co., S central Texas, on the Colorado River and two of the Highland Lakes, inc. 1839. It is the commercial heart of a large ranching, poultry, dairy, cotton, and grain area, with a great variety of manufactures. It is also a major convention city and an educational center—the main campus of the Univ. of Texas, St. Edward's Univ., Huston-Tillotson College, two theological seminaries, and a junior college, as well as numerous electronic and scientific research firms, are located there. The site was selected in 1839 for the capital of the independent Texas republic and named by the legisla-

ture in honor of Stephen F. Austin. Fear of the Mexicans and the Indians drove government officials to Houston in 1842; they returned in 1845 when Texas was admitted to the Union, and in 1870, following a referendum, Austin was made permanent capital. It remained a small commercial, governmental, and educational center until its industrial growth was spurred by the development of power and flood control projects on the Colorado River (beginning in the 1930s) and by the urgencies of World War II. The massive capitol (completed 1888), set on a hill, is the most prominent of the many state buildings; on its grounds are the state library, the old land office (1857), and two state historical museums. Also of interest are the governor's mansion (1856), the old French embassy (1840, dating from the republic), the house in which O. Henry lived, and the former studio of Elisabeth Ney. A state mental hospital is in Austin. In the hills outside the city are many scenic and recreational areas, notably Barton Springs. Bergstrom Air Force Base adjoins the city.

Austin canons: see AUGUSTINIANS

Australasia (ōstrālā'zhā, -shā), islands of the South Pacific, including AUSTRALIA, NEW ZEALAND, NEW GUINEA, and adjacent islands. The term is sometimes used to include all of Oceania.

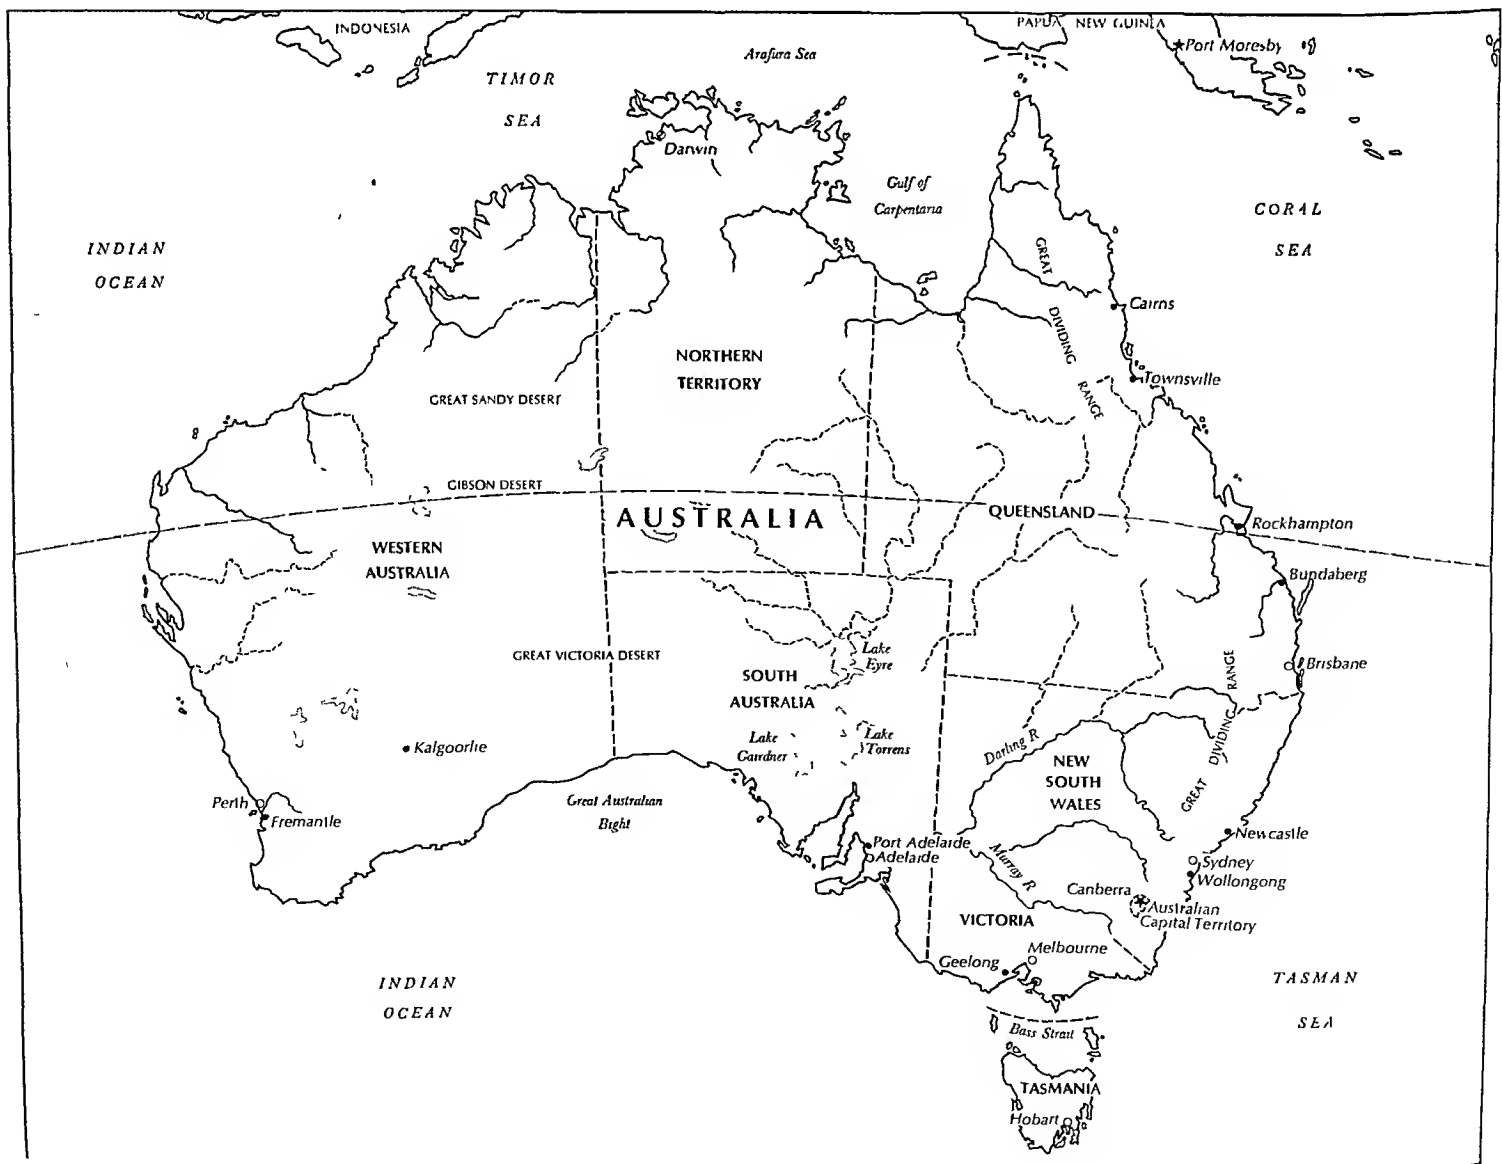

Australia, smallest continent, between the Indian and Pacific oceans. It extends from east to west some 2,400 mi (3,860 km) and from north to south nearly 2,000 mi (3,220 km). With the island state of TASMANIA to the south, the continent makes up the Commonwealth of Australia (1973 est. pop. 13,100,000), 2,967,877 sq mi (7,686,810 sq km). There are five continental states (QUEENSLAND, NEW SOUTH WALES, VICTORIA, SOUTH AUSTRALIA, and WESTERN AUSTRALIA) as well as the NORTHERN TERRITORY and the AUSTRALIAN CAPITAL TERRITORY (an enclave within New South

Wales, containing CANBERRA, the federal capital). Australia's external territories include Norfolk Island, Christmas Island, the Cocos (Keeling) Islands, and the Australian Antarctic Territory.

Geography. The Australian continent is on the whole exceedingly flat and dry. Less than 20 in. (50.8 cm) of precipitation falls annually over 70% of the land area. From the narrow coastal plain in the west the land rises abruptly in what, from the sea, appear to be mountain ranges but are actually the escarpments of a rough plateau that occupies the western half of the continent. It is generally from 1,000 to 2,000 ft (305–610 m) high but several mountain ranges rise to nearly 5,000 ft (1,520 m); there are no permanent rivers or lakes. In the southwest corner of the continent there is a small moist and fertile area, but the rest of Western Australia is arid, with large desert areas. The northern region fronts partly on the Timor Sea, separating Australia from Indonesia; it also belongs to the plateau, with tropical temperatures and a winter dry season. Its northernmost section, Arnhem Land (principally given over to reservations for aborigines), faces the Arafura Sea in the north and the huge Gulf of Carpentaria on the east. On the eastern side of the Gulf is the Cape York Peninsula, which is largely covered by rainforest. Off the coast of NE Queensland is the Great Barrier Reef, the world's largest coral reef. In E Australia are the mountains of the Eastern Highlands, which run down the entire east and southeast coasts. The rivers on the eastern and southeastern slopes run to the Coral Sea and the Tasman Sea through narrow but rich coastal plains; the rivers on the western slopes flow either N to the Gulf of Carpentaria or W and SW to the Indian Ocean. The longest of all Australian river systems, the Murray River and its tributaries, drains the southern part of the interior basin that lies between the mountains and the great pla-

teau. The rivers of this area are used extensively for irrigation and hydroelectric power. Australia, remote from any other continent, has many distinctive forms of plant life—notably species of giant eucalyptus—and of animal life, including the kangaroo, the koala bear, the flying opossum, the wallaby, the wombat, the platypus, and the spiny anteater; it also has many unusual birds. Foreign animals, when introduced, have frequently done well. Rabbits, brought over in 1788, have done entirely too well, multiplying until by the middle of the 19th cent. they became a distinct menace to sheep raising. In 1907 a fence 1,000 mi (1,610 km) long was built from the north coast to the south to prevent the rabbits from invading Western Australia.

Economy and People. Most of the rich farmland and good ports are in the east and particularly the south east, except for the area around PERTH in Western Australia. MELBOURNE, SYDNEY, BRISBANE, and ADELAIDE are the leading industrial and commercial cities. Australia is highly industrialized, and manufactured goods account for about two thirds of the total value of production. The leading manufactures are iron and steel products, transportation equipment, and machinery. Australia is one of the world's great trading nations, with one quarter to one third of its export income derived from the sale of wool, meat, and wheat. Other leading exports are flour, iron ore, and nonferrous ores. The leading imports are metals and metal products, petroleum, machinery, and textiles. The country is self-sufficient in food, and the raising of sheep and cattle and the production of grain have long been staple occupations. Tropical and subtropical produce—citrus fruits, sugarcane, and tropical fruits—are also important, and there are numerous vineyards and dairy and tobacco farms. Some lumbering is done in the east and southeast. Australia has valuable mineral resources, including

coal, iron, bauxite, uranium, and gold. The country is highly urbanized: about three fifths of the population live in cities of more than 100,000. Since World War II the government has been encouraging immigration, and permanent arrivals have been averaging more than 100,000 annually. The population has increased by more than 60% since the end of World War II. In the 19th cent., Australia enacted strong measures to prevent immigration by non-whites. Although laws and attitudes have been liberalized somewhat in recent years, the disposition against nonwhite immigration remains. The indigenous population, the aborigines, estimated to number as many as 350,000 at the time of the Europeans' arrival, now numbers about 100,000, although the decline has been reversed in the past few decades. Most live on reservations. In Tasmania the aboriginal population was wiped out in the 19th cent. There is no state religion in Australia. The largest denominations are the Anglican, Roman Catholic, Methodist, and Presbyterian.

History. The groups comprising the aborigines are thought to have migrated from Southeast Asia c. 20,000 years ago. They spread throughout Australia and remained isolated from outside influences until the arrival of the Europeans. It seems probable that Australia was first sighted by a Portuguese, Manuel Godinho de Eredia, in 1601 and may have been sighted by a Spaniard, Luis Vaez de Torres around 1605-6. It was later visited by the Dutch, who named it New Holland. In 1688 the Englishman William Dampier landed at King Sound on the northwest coast. Little interest was aroused, however, until the fertile east coast was observed when Capt. James Cook reached Botany Bay in 1770 and sailed N to Cape York, claiming the coast for Great Britain. In 1788 the first British settlement was made—a penal colony on the shores of Port Jackson, where Sydney now stands. By 1829 the whole continent was a British dependency. Exploration, begun before the first settlement was founded, was continued by such men as Matthew Flinders (1798), Count Paul Strzelecki (1839), Ludwig Leichhardt (1848), and John McDouall Stuart (first to cross the continent, 1862). Australia was long used as a dumping ground for criminals, bankrupts, and other undesirables from the British Isles. Sheep raising was introduced early, and before the middle of the 19th cent. wheat was being exported in large quantities to England. A gold strike in Victoria in 1851 brought a rush to that region. Other strikes were made later in the century in Western Australia. With minerals, sheep, and grain forming the base of the economy, Australia developed rapidly. By the mid-19th cent. systematic, permanent colonization had completely replaced the old penal settlements. Confederation of the separate Australian colonies did not come until a constitution, drafted in 1897-98, was approved by the British Parliament and was put into operation in 1901, under its terms the colonies of New South Wales, Victoria, Queensland, South Australia, Western Australia, and Tasmania, all of which by then had been granted self-government, were federated. The Northern Territory was added to the federation in 1911. Australia fought on the side of Great Britain in both world wars. Darwin, Port Jackson, and Newcastle were bombed or shelled by the Japanese in World War II. The Allied victory in the battle of the Coral Sea (1942) probably averted a full-scale attack on Australia. After the war Australia became increasingly active in world affairs, particularly in defense and development projects with its Asian neighbors; it furnished troops to aid the U.S. war effort in South Vietnam in the 1960s and early 70s. Australia is a member of the Commonwealth of Nations, the United Nations, and the Southeast Asia Treaty Organization.

Government. The executive power of the Commonwealth is vested in a governor general (representing the British sovereign) and a cabinet, presided over by the prime minister, which represents the party, or a coalition, holding a majority in the lower house of Parliament. The Parliament consists of two houses. The distribution of federal and state powers is roughly like that in the United States. From its early years the federal government has been noted for its liberal legislation, such as woman suffrage (1902), old-age pensions (1909), and maternity allowances (1912). There are four main political parties: Liberal, Labor, Country, and Democratic Labor. The Liberal and Country parties usually form a coalition. In parliamentary elections in 1974, the Labor party under Prime Minister Gough Whitlam won a narrow victory over the Liberal party. Although education is not a federal concern, government grants have aided in the establishment of state universities in-

cluding the Univ. of Sydney (1852), the Univ. of Melbourne (1854), the Univ. of Adelaide (1874), and the Univ. of Queensland (in Brisbane, 1909). See D. J. Mulvaney, *The Prehistory of Australia* (1969), R. M. Crawford, *Australia* (3d rev. ed. 1970), E. H. Feeken et al., *The Discovery and Exploration of Australia* (1970), J. D. Miller and Brian Jinks, *Australian Government and Politics* (4th ed. 1971), Frederick Alexander, *Australia Since Federation* (2d ed. 1972), M. K. Morcombe, *Wild Australia* (1972), Sir Archibald Price, *Island Continent Aspects of the Historical Geography of Australia and its Territories* (1972), A. G. Shaw, *The Story of Australia* (4th ed. 1972), A. M. Larnmonth, *The Australians* (1973).

Australian aborigines, native people of Australia whose origin is uncertain. At present about 125,000 aborigines, 45,000 of pure stock and 80,000 of mixed stock, live on the Australian mainland. In the semi-desert northern region they maintain much of their original culture. The largest reservation is ARNHEM LAND. The dark-skinned aborigines are a physically homogeneous group, with regional variations. They have been classified as a distinct stock, the Australoid, and are related to ethnic groups in S India and Sri Lanka. It is probable that they migrated to Australia from S Asia thousands of years ago. Before the European colonization of Australia, the aboriginal population was about 300,000. Contact with white settlers has led to cultural and genetic change, depopulation, and extinction for some groups of aborigines. Many of the natives have been assimilated into rural and urban Australian society, mostly as low-paid laborers with limited economic and legal rights. The aboriginal material culture is adapted to hunting and gathering food and includes the noted boomerang. The religious and social structure of the aborigines is very complex, involving totemic rituals and an intricate classification system defining kinship relations and regulating marriages. The best-known tribes are the Aranda, or Arunta, the Murngin, and the Kariera. See W. L. Warner, *A Black Civilization* (rev. ed. 1958, repr. 1964), A. P. Elkin, *The Australian Aborigines* (4th ed. 1964), Daisy Bates, *The Passing of the Aborigines* (2d ed. 1967), R. M. and C. H. Berndt, *The World of the First Australians* (1967), A. A. Abbie, *The Original Australians* (1969), N. B. Tinsdale, *Aboriginal Tribes of Australia* (1974).

Australian Alps, chain of mountain ranges, SE Australia, making up the southern part of the Eastern Highlands and forming the watershed between the Murray River system and streams flowing into the Tasman Sea. It is the site of the Snowy Mts. hydroelectric project. Mt. Kosciuszko (7,316 ft/2230 m) in the Australian Alps is the highest peak in Australia.

Australian bear: see KOALA.

Australian Capital Territory (1971 pop. 143,843), 939 sq. mi. (2,432 sq. km), SE Australia, an enclave within New South Wales, containing CANBERRA, capital of Australia. It was called the Federal Capital Territory until 1938. Most of the territory consists of an area formerly known as Yass-Canberra, which was ceded to the commonwealth by New South Wales in 1911. The remainder was added in 1915, when New South Wales ceded a part of the JERVIS BAY area, providing a potential port for Canberra. The federal government is the largest employer in the territory, and nearly all of the population lives in Canberra. The Royal Australian Naval College is located in the territory.

Australian cattle dog, breed of medium-sized herding dog developed in Australia. It stands from 18 to 20 in. (45.7-50.8 cm) high at the shoulder and weighs about 33 lb (15 kg). Its double coat consists of a soft, dense underlayer and a moderately short, straight topcoat that forms a fringe of slightly longer hair on the back of the forelegs and thighs. The coat may be blue, blue mottle, or red speckled in color. Believed to be the product of crosses among the Australian kelpie, the dingo, and the smooth collie, the Australian cattle dog ranks among the world's best herding dogs. It is sometimes called the Australian heeler, a name derived from the dog's habit of nipping at the heels of stray cattle to direct them back to the herd. The breed is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club. See DOG.

Australian football: see under FOOTBALL.

Australian kelpie, breed of medium-sized sheep-herding dog originating in Australia c. 1870. It stands from 17 to 20 in. (43.2-50.8 cm) high at the shoulder and weighs from 25 to 30 lb (11.3-13.6 kg). Its short, dense, straight coat is harshly textured and may be any of a variety of colors, e.g., black, black and tan, red, red and tan, fawn, chocolate, or smoke blue. It has generally been accepted that the border collie

and probably the dingo were ancestors of the kelpie. Trained to respond both to hand signal and whistle, this rugged sheep dog is equally adept in pens or on the open plain and has proven indispensable to the Australian herder. The kelpie is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club. See DOG.

Australian languages, aboriginal languages spoken on the continent of Australia. The Australian languages do not appear to be related to any other linguistic family. The exact number of these languages is not known and has been variously estimated at 100 to 600. Perhaps 200,000 persons speak them. Many of the Australian languages have already died out, and the rest appear to be on the way to extinction. Although their respective grammars exhibit a great degree of variation, the Australian languages show a number of similarities. All of them inflect the noun, some having as many as nine cases. The verb lacks a passive voice. Postpositions are used instead of the prepositions typical of Indo-European languages. Most of the Australian languages have three numbers: singular, dual, and plural. Word order tends to follow a similar pattern in the different tongues. They also show considerable similarity phonetically and have a small common vocabulary. Because of so many shared phonetic and grammatical characteristics some scholars believe that the Australian languages have all evolved from a single ancestor language and therefore belong to the same linguistic family. Others, however, feel that the term "Australian languages" constitutes a geographical rather than a linguistic classification. To date, few of these languages have been studied intensively; classification and other matters remain uncertain. Recent studies seem to indicate that there are six major groups of Australian languages, possibly all branches of a single family. The Australian languages have no writing of their own. See Arthur Capell, *Linguistic Survey of Australia* (1963), S. A. Wurm, *Languages of Australia and Tasmania* (1972).

Australian literature. Australian literary works of the early 19th cent. were colonial offshoots of English literature and were written for an English audience. The work of such early poets as W. C. Wentworth, author of *Australasia, an Ode* (1823), is minor and imitative. Australian literature of some consequence can be said to have begun with the interpretive nature poetry of Charles Harpur (1813-68) and Henry Kendall (1839-82) and with the novels of Henry Kingsley (brother of Charles Kingsley), who wrote about pioneer life. The bush ballad, begun by Adam Lindsay Gordon, flowered in the work of Henry Lawson (1867-1922) and A. B. ("Banjo") Paterson (1864-1941), whose *Man from Snowy River and Other Verses* (1895) is famous and whose song "Waltzing Matilda" was nominated, in 1973, to replace "God Save the Queen" as the Australian national anthem. A classic Australian novel is *For the Term of His Natural Life* (1874), a compelling account of life in a penal colony written by Marcus Clarke. Less powerful, but true to life in the bush, were the novels of Rolfé Boldrewood (pseud. of Thomas A. Browne). Other important 19th-century novelists were Miles Franklin (1879-1954), whose *My Brilliant Career* (1901) is often designated the first authentically Australian novel, and diarist-novelist Tom Collins (pseud. of Joseph Furphy, 1843-1912). Poets of note include Hugh McCrae (1876-1958), and Dame Mary Gilmore (1865-1962). The increasing industrialization of the early 20th cent. rendered the pastoral nature of most Australian literature anachronistic, and it eventually produced greater sophistication and diversity among writers. Probably the most important Australian writer of the early 20th cent. was Henry Handel Richardson (pseud. of Ethel Richardson Robertson), whose autobiographical trilogy *The Fortunes of Richard Mahoney* (1930) presents a compelling portrait of Australian life. Richardson's reputation was matched at mid-century by Patrick White, whose strong, somber novels, Australian in setting yet universal in theme, reveal the author's ambivalence toward his native land. Other notable 20th-century novelists are Brian Penton, Leonard Mann, Christina Stead, Arthur William Upfield (1888-1964), John O'Grady, and Morris West. After emigrating to Australia in 1950, the English novelist Nevil Shute subsequently produced novels with Australian settings and themes. Major Australian poets include C. J. Brennan, R. D. Fitzgerald, Judith Wright, J. P. McAuley, Kenneth Slessor, Vance Palmer, and Max Harris. A controversial Australian with an international reputation as a feminist is Germaine Greer, author of *The Female Eunuch* (1971). The Swedish Academy's awarding of the 1973 Nobel Prize in Literature to Patrick White was

perhaps the best evidence that Australian literature has become worthy of world attention. See H. M. Green, *A History of Australian Literature* (2 vol., 1961, repr. 1968), Charles Higham, ed., *Australian Writing Today* (1968), Grahame Johnston, *Annals of Australian Literature* (1970), T. I. Moore, *Social Patterns in Australian Literature* (1972), Barry Argyle, *An Introduction to the Australian Novel, 1830-1930* (1972).

Australian terrier, breed of small, hardy TERRIER perfected in Australia c 1885. It stands about 10 in. (25.4 cm) high at the shoulder and weighs from 12 to 14 lb (5.5-6.4 kg). Its weather-resistant double coat consists of a soft, short underlayer and a straight, harsh outercoat about 2.5 in. (6.4 cm) long. It is silver black or blue black in color with rich tan markings on the head and legs. The Australian terrier is descended from the now extinct broken-hair, or rough-coated, terrier, a dog of widespread popularity in the early 18th cent. and believed to be the progenitor of many terrier breeds. For show purposes the rough-coated terrier was crossed with several British sporting terriers, probably the cairn, Dandie Dinmont, Irish, and Skye, producing the Australian terrier of today. Originally used to guard mines and herd sheep, it is now primarily raised as a pet. See DOG.

Austral Islands (ô'stral), volcanic island group, South Pacific, part of FRENCH POLYNESIA. They are sometimes known as the Tubuai Islands. The group comprises seven islands, with a total land area of c 115 sq mi (300 sq km). Tubuai, the largest island (c 17 sq mi/44 sq km), was visited by Capt. James COOK in 1777 and was annexed by France in 1880. European diseases and slavers had very nearly wiped out the native Polynesian population of the islands, especially on Rapa, when French authorities imposed strict regulations (1938) on immigration and tourism. Coffee, arrowroot, tobacco, and copra are produced on the islands.

Australopithecus (ô'strâ-'lôpîth'âkas, -pâthê'kas), an extinct genus of the hominid family, generally considered to be a relative or possible ancestor of modern man. *Australopithecus* fossils have been discovered at various sites in South Africa since 1925 by the anthropologists Raymond Dart, Robert Broom, J. T. Robinson and others. Fossils have also been uncovered at several E. African sites since 1959, when the husband and wife team L. S. B. and Mary LEAKEY found a fossil that they termed *Zinjanthropus* at Olduvai Gorge, Tanzania. Fossils that are probably early *Australopithecines* were discovered in the 1960s in the Omo basin of Ethiopia by an international team of anthropologists led by F. C. Howell. Most *Australopithecus* fossils are from 1 million to 2.5 million years old, but remains found in the mid-1960s in Kenya by Bryan Patterson may be 4 million and 5 million years old. The genus *Australopithecus* now generally includes fossil species previously classified *Paranthropus*, *Plesianthropus* and *Zinjanthropus*, but there is some uncertainty and disagreement whether such fossils as *Homo habilis* and *Telanthropus* of Africa and *Meganthropus* of Java should be included with *Australopithecus* or the later genus *Homo erectus*. *Australopithecus* was under 5 ft tall and could stand and walk erect, although with less dexterity than later predecessors of modern man. The skeletal features of *Australopithecus* fossils have many similarities to modern man, but the size and shape of the skull indicate that the *Australopithecine* brain was less developed than in the later genus *Homo*. *Australopithecus* may have used simple stone tools. See MAN, PREHISTORIC. See R. A. Dart, *Adventures with the Missing Link* (1959), W. E. LeGros Clark, *Man-Apes or Ape-Men?* (1967).

Austrasia (ô'strâ'zha), eastern portion of the Merovingian kingdom of the FRANKS in the 6th, 7th, and 8th cent., comprising, in general, parts of E. France, W. Germany, and the Netherlands, with its capital variously at Metz, Rheims, and Soissons. It originated in the partition (511) of the realm of the Frankish king CLOVIS I among his sons. Austrasia was constantly troubled by dynastic rivalries between its rulers and those of the neighboring kingdom of NEUSTRIA. These struggles reached their climax in the fierce fights between Queen BRUNHILDA of Austrasia and Queen FREDEGUNDE of Neustria. During the reigns of CLOTAIRE I, CLOTAIRE II, and DAGOBERT I, Austrasia was temporarily reunited with Neustria. With the decline of the royal power in Austrasia, the office of mayor of the palace developed into the real seat of power and finally became hereditary in the family of the CAROLINGIANS. Austrasia became part of the Carolingian empire.

Austrât (oust'rôt), castle at the mouth of the Trondheimsfjord, central Norway. It was built (1611-74) by Ove Bjelke, chancellor of the kingdom. It is the setting of Henrik Ibsen's historic play *Lady Inger of Ostrat*.

Austria, Ger. *Österreich* [eastern march], federal republic (1973 est. pop. 7,550,000), 32,374 sq mi (83,849 sq km), central Europe. It is bounded by Yugoslavia and Italy in the south, Switzerland and Liechtenstein in the west, West Germany and Czechoslovakia in the north, and Hungary in the east. Its nine provinces (Ger. *Bundesländer*) are: VORARLBERG, TYROL, SALZBURG, CARINTHIA, STYRIA, UPPER AUSTRIA, LOWER AUSTRIA, BURGENLAND, and the capital, VIENNA. The Alps traverse Austria from west to east and occupy three fourths of the country. The highest peak in Austria is the Grossglockner (12,460 ft/3,798 m) in the Hohe Tauern group. The scenic beauty of Tyrol, the Salzkammergut, and Salzburg city, and the attractions of Vienna and other cultural centers have made Austria one of the major tourist centers of Europe. The country is drained by the Danube River and its tributaries, the Inn, the Enns, the Mur, and the Mur. Forestry, cattle raising, and dairying are the main sources of livelihood in the alpine provinces; Vorarlberg has an ancient textile industry. In Upper and Lower Austria and in Burgenland, tillage agriculture predominates; the chief crops are potatoes, sugar beets, barley, wheat, rye, and oats. Manufacturing and mining employ nearly half of the labor force. More than half of the industries are concentrated in the Vienna basin, LINZ, STEYR, GRAZ, LEOBEN, INNSBRUCK, and Salzburg are the other chief industrial centers. Many of the country's industries were nationalized after World War II, together with the largest commercial banks. The chief manufactures are chemicals, foodstuffs, textiles, machinery, iron and steel, and metal goods. Many minerals necessary for industry (graphite, iron, magnesium, copper, zinc, and lignite) are found in Austria. The country also has deposits of natural gas, salt, and uranium, and is rich in hydroelectric power. Austria is governed under the revised 1929 constitution. It has a mixed presidential-parliamentary form of government. The president, elected by popular vote for a six-year term, may issue decrees. The cabinet, headed by the prime minister, is responsible to the lower house (Nationalrat) of parliament, which is popularly elected according to proportional representation. The upper house (Bundesrat) is chosen by the provincial assemblies. The main parties are the People's party and the Socialist party. The population is predominantly Roman Catholic and German-speaking. Since 1945, Austria has received nearly 1.5 million refugees from elsewhere in Europe. There are universities in Vienna, Salzburg, Innsbruck, and Graz.

History During the past 10 centuries, the term Austria has designated a variety of geographic and political concepts. In its narrowest sense Austria has included only the present-day provinces of Upper and Lower Austria, including Vienna, in its widest meaning the term has covered the far-flung domains of the imperial house of Hapsburg. Its present connotation—German-speaking Austria—dates only from 1918. This article deals mainly with the history of German-speaking Austria. For wider historical background, see HOLY ROMAN EMPIRE, HAPSBURG, AUSTRO-HUNGARIAN MONARCHY, HUNGARY, BOHEMIA, and NETHERLANDS, AUSTRIAN AND SPANISH.

The Rise of Austria Austria is located at the crossroads of Europe, Vienna is at the gate of the Danubian plain, and the Brenner Pass in W. Austria links Germany and Italy. From earliest times Austrian territory has been a thoroughfare, a battleground, and a border area. It was occupied by Celts and Suebi when the Romans conquered (15 B.C.-A.D. 10) and divided it among the provinces of Raetia, Noricum, and Upper Pannonia. After the 5th cent. A.D., Huns, Ostrogoths, Lombards, and Bavarians overran

and devastated the provinces. By c 600, Slavs from the east had occupied all of modern Styria, Lower Austria, and Carinthia. In 788, Charlemagne conquered the area and set up the first Austrian (i.e., Eastern) March in the present Upper and Lower Austria, to halt the inroads of the Avars. Colonization was encouraged, and Christianity (which had been introduced under the Romans) was again spread energetically. After Charlemagne's death (814) the march soon fell to the Moravians and later to the Magyars, from whom it was taken (955) by Emperor OTTO I. Otto reconstituted the march and attached it to BAVARIA, but, in 976, Otto II bestowed it as a separate fief on Leopold of BABENBERG, founder of the first Austrian dynasty. Emperor Frederick I raised (1156) Austria to a duchy, and, in 1192, Styria also passed under Babenberg rule. The 11th and 12th cent. saw the height of Austrian feudalism and also witnessed the marked development of towns as the Danube was converted to a great trade route. After the death (1246) of the last Babenberg, King OTTO CAR II of Bohemia acquired (1251-69) Austria, Styria, Carinthia, and CARNIOLA. Fearing his power, the German princes elected (1273) Rudolf of Hapsburg German king. RUDOLF I asserted (1282) his royal prerogative to reclaim the four duchies from Ottocar and incorporate them in his domains. After the murder (1308) of Rudolf's son, ALBERT I, the German princes balked at electing another member of the ambitious family. Albert's ducal successors enlarged the Hapsburg holdings by acquiring Tyrol (1363) and Trieste (1382) and extended their influence over the ecclesiastical states of Salzburg, TRENT, and Brixen (see BRESANONE), which, however, remained independent until 1803. Marriage brought ALBERT II to the position of being elected German king in 1438. Beginning with Albert II, the rulers of the Holy Roman Empire were always chosen from the Hapsburg dynasty. Despite their vast imperial preoccupations, the emperors always considered German Austria the prized core of their dominions. During the long reign of Frederick III (1440-93), the protracted Hapsburg wars with France began. In 1526, Austria, Bohemia, and Hungary were united under one crown (see FERDINAND I, emperor). In the same year Vienna was besieged for two weeks by troops of the Ottoman Empire under Sulayman the Magnificent, who had made a forceful advance into Europe. The Turkish threat to Austria ebbed and then climaxed again in the second siege of Vienna in 1683. The patterns of medievalism were weakening in Austria, especially as a money economy spread, and in the 16th cent. the COMMERCIAL REVOLUTION diminished the importance of Austrian trade routes and of the ancient gold and silver mines of Tyrol and Carinthia. Economic and political instability in the 16th cent. precipitated the spread of the Protestant Reformation, which the Hapsburg rulers attempted to counter by nurturing the Catholic Reformation. The alliance then formed between church and state continued throughout the history of the monarchy. The Austrian peasantry, especially in Tyrol, had gained some advantages in the PEASANTS' WAR of 1524-26, in general, however, the rising, backed by some Protestants but not by Luther, was defeated. Suppression of Protestantism was at first impossible, and, under Maximilian II, Lutheran nobles were granted considerable toleration. Rudolph II and Matthias pursued policies of partial Catholicization, and, under Ferdinand II, anti-Protestant vigor helped to precipitate the THIRTY YEARS' WAR (1618-48). Protestant Bohemia and Moravia, defeated by the Austrians at the White Mt. (1620), became virtual Austrian provinces. Austria proper remained relatively unscathed in the long holocaust, after the Peace of Westphalia the Hapsburg lands emerged as a distinct empire, whereas the Holy Roman Empire drifted into a mere shadow existence.

The Austrian Empire The monarchy, although repressive of free speech and worship, was far from absolute; taxation and other powers rested with the provincial estates for a further century. Emperor CHARLES VI (1711-40), whose dynastic wars had drained the state, secured the succession to the Hapsburg lands for his daughter, MARIA THERESA, by means of the PRAGMATIC SANCTION. Maria Theresa's struggle with FREDERICK II of Prussia in the War of the Austrian Succession (see AUSTRIAN SUCCESSION, WAR OF THE) and the SEVEN YEARS' WAR opened a long struggle for dominance in the German lands. Except for the loss of Silesia, Maria Theresa held her own. The provincial estates were reduced in power, and an efficient centralized bureaucracy was created, as the nobles were attracted to bureaucratic service; their power as a class was weakened. Maria Theresa's husband, FRANCIS I, became emperor in 1745, but his position

was largely titular. The major event of Maria Theresa's later reign was the first partition of Poland (1772, see POLAND, PARTITIONS OF), in that transaction and in the third partition (1795) Austria renewed its eastward expansion. JOSEPH II, who succeeded her, impetuously carried forward the reforms which his mother had cautiously begun. His attempts to further centralize and germanize his scattered and disparate dominions met stubborn resistance, his project to consolidate his state by exchanging the Austrian Netherlands for Bavaria was balked by Frederick II. An exemplar of "benevolent despotism" and a disciple of the ENLIGHTENMENT, Joseph also decreed a series of revolutionary agrarian, fiscal, religious, and judicial reforms, however, opposition, especially from among the clergy and the landowners, forced his successor, LEOPOLD II, to rescind many of them. In Joseph's reign the Austrian bourgeoisie began to emerge as a social and cultural force. Music and architecture (see VIENNA) flourished in 18th-century Austria, and modern Austrian literature (see GERMAN LITERATURE) emerged early in the 19th cent. In the reign of FRANCIS II, Austria was drawn (1792) into war with revolutionary France (see FRENCH REVOLUTIONARY WARS) and with NAPOLEON I. The treaties of CAMPO FORMIO (1797) and Luneville (1801) preluded the dissolution (1806) of the Holy Roman Empire, and in 1804, Francis II took the title "Francis I, emperor of Austria." His rout at Austerlitz (1805) led to the severe Treaty of Pressburg (see PRESSBURG, TREATY OF). An upsurge of patriotism resulted in the renewal of war with Napoleon in 1809, Austria's defeat at Wagram led to the even more humiliating Peace of Schonbrunn (see under SCHONBRUNN). Austria was forced to side with Napoleon in the Russian campaign of 1812, but in 1813 it again joined the coalition against Napoleon, an Austrian, Prince Karl Philipp von Schwarzenberg, headed the allied forces. The Congress of Vienna (1814-15, see VIENNA, CONGRESS OF) did not restore to Austria its former possessions in the Netherlands and in Baden but awarded it Lombardy, Venetia, Istria, and Dalmatia. As the leading power of both the GERMAN CONFEDERATION and the HOLY ALLIANCE, Austria under the ministry of METTERNICH dominated European politics. Conservatism and the repression of nationalistic strivings characterized the age. Nevertheless, the Metternich period was one of great cultural achievement, particularly in music and literature. The REVOLUTIONS OF 1848 shook the Hapsburg empire but ultimately failed because of the conflicting economic goals of the middle and lower classes and because of the conflicting nationalist aspirations that set the revolutionary movements of Germans, Slavs, Hungarians, and Italians against each other. Revolts were at first successful throughout the empire (see RISORGIMENTO, GALICIA, BOHEMIA, HUNGARY), in Vienna the revolutionists drove out Metternich (March, 1848). Emperor FERDINAND granted (April) a liberal constitution, which a constituent assembly replaced (July) with a more democratic one. After a new outbreak Vienna was bombarded, and the revolutionists were punished by troops under General WINDISCHGRATZ. Prince Felix zu SCHWARZENBERG became premier and engineered the abdication of Ferdinand in favor of FRANCIS JOSEPH. Absolutism returned with the dissolution of the constituent assembly. Austrian leadership in Germany was reasserted at the Convention of Olmutz in 1850. Alexander BACH intensified (1852-59) Schwarzenberg's centralizing policy, thus heightening national tensions within the empire. But economic prosperity was promoted by the lowering of internal tariff barriers, and several reforms dating from 1848 were upheld, notably the complete abolition of feudal dues. The military and political weakness of the empire was demonstrated by the Austrian loss of Lombardy in the Italian War of 1859. Attempts to solve the nationalities problem—the "October Diploma" (1860), which created a central legislature and gave increased powers to the provincial assemblies of nobles, and the "February Patent," which transferred many of these powers to the central legislature—failed. Prussia seized the opportunity to drive Austria out of Germany. After involving Austria in the war over SCHLESWIG-HOLSTEIN in 1864, BISMARCK found an easy pretext for attacking. Overwhelmingly defeated by Prussia at Sadowa (Sadowa) in 1866 (see AUSTRO-PRUSSIAN WAR), Austria was forced to cede Venetia to Italy. With this debacle Austria's political role in Germany came to an end. A reorganization of the government of the empire became inevitable, and in 1867 a compromise (Ger. *Ausgleich*) with Hungarian moderate nationalists established a dual state, the AUSTRO-HUNGARIAN MONARCHY. But the realm, a land of diverse peoples ruled

by a German-Magyar minority, increasingly became an anachronism in a nationalistic age. Failure to provide a satisfactory status for the other nationalities, notably the Slavs, played a major role in bringing about WORLD WAR I. Important developments in Austrian society during this period were the continued irresponsibility of the nobility and the backwardness of the peasantry, the growth of a socialist working class, widespread anti-Semitism stimulated by the large-scale movement to Austria of poor Jews from the eastern provinces, and extraordinary cultural creativity in Vienna. The disastrous course of the war led to the breakup of the monarchy. In 1918 CHARLES I renounced power, after a peaceful revolution staged by the Socialist and Pan-German parties, German Austria was proclaimed (Nov. 12) a republic and a part of Greater Germany.

Modern Austria. The Treaty of SAINT-GERMAIN (1919) fixed the present Austrian borders and forbade (as did the Treaty of Versailles) any political or economic union (Ger. *Anschluss*) with Germany. Observation of these clauses was insisted upon by France, Italy, and Czechoslovakia. This left Austria a small country with some 7 million inhabitants, one third of whom lived in a single large city (Vienna) that had been geared to be the financial and industrial hub of a large state. The Dual Monarchy had been virtually self-sufficient economically, its breakup and the consequent erection of tariff walls deprived Austria of raw materials, food, and markets. In the postwar period, starvation and influenza exacted a heavy toll, especially in Vienna. These ills were followed by currency inflation, ended only in 1924 by means of League of Nations aid, following upon chronic unemployment, financial scandals and crises, and growing political unrest. "Red" Vienna, under the moderate socialist government of Karl SEITZ, became increasingly opposed by the "Black" (i.e., clericalist) rural faction, which won the elections of 1921. The cabinet of Social Democrat Karl RENNER was succeeded by Christian Socialist and Pan-German coalitions under SCHOBER, SEIPEL, and others. Unrest culminated, in 1927, in violent riots in Vienna, two rival private militias—the *Heimwehr* of the monarchist leader E. R. von STARHEMBERG and the *Schutzbund* of the socialists—posed a threat to the authority of the state. Economic crisis loomed again in the late 1920s. NATIONAL SOCIALISM, feeding in part on anti-Semitism, gained rapidly and soon absorbed the Pan-German party. Engelbert DOLLFUSS, who became chancellor in 1932, though irreconcilably opposed to *Anschluss* and to National Socialism, tended increasingly toward corporative FASCISM and relied heavily on Italian support. His stern suppression of the socialists precipitated a serious revolt (1934), which was bloodily suppressed by the army. Soon afterward a totalitarian state was set up, and all independent political parties were outlawed. In July, 1934, the National Socialists assassinated Dollfuss but failed to seize the government. Kurt von SCHUSCHNIGG succeeded Dollfuss. German pressure on Austria increased, Schuschnigg was forced to legalize the operations of the National Socialists and to appoint members of that party to cabinet posts. Schuschnigg planned a last-minute effort to avoid *Anschluss* by holding a plebiscite, but Hitler forced him to resign. In March, 1938, Austria was occupied by German troops and became part of the Reich. ARTHUR SEYSS-INQUART became the Nazi governor. In 1943, the Allies agreed to reestablish an independent Austria at the end of World War II. In 1945, Austria was conquered by Soviet and American troops, and a provisional government was set up under Karl Renner. The pre-Dollfuss constitution was restored with revisions, the country was divided into separate occupation zones, each controlled by an Allied power. Economic recovery was hindered by the decline of trade between Western and Eastern Europe and by the division into zones. Austria was formally recognized by the Western powers in 1946, but because of Soviet disagreement with the West over reparations, the occupation continued. On May 15, 1955, a formal treaty between Great Britain, France, the United States, the USSR, and Austria restored full sovereignty to the country. The treaty prohibited the possession of major offensive weapons and required Austria to pay heavy reparations to the USSR. Austria proclaimed its permanent neutrality. In 1955 it was admitted to the United Nations. By the 1960s unprecedented prosperity had been attained. Austria had joined the European Free Trade Association in 1959, but association with the Common Market was held back by Soviet opposition. Politically, a nearly equal balance of power between the conservative People's party and the Socialist party resulted in successive coalitions

until 1966, when the People's party won a clear majority. They were ousted by the socialists in the 1970 elections and Bruno KREISKY became chancellor. A long-standing dispute with Italy over the German-speaking population of the TRENTINO-ALTO ADIGE region of Italy was dealt with in a treaty ratified in 1971. See R. A. Kann, *The Multinational Empire. Nationalism and National Reform in the Habsburg Monarchy, 1848-1918* (1950, repr. 1970); K. R. Stadler, *Austria* (1971); V. L. Tapie, *The Rise and Fall of the Habsburg Monarchy* (tr. 1971); F. R. Bridge, *From Sadowa to Sarajevo* (1972); W. M. Johnston, *The Austrian Mind. Austrian literature. see GERMAN LITERATURE

Austrian Succession, War of the, 1740-48, general European war that broke out when, on the strength of the PRAGMATIC SANCTION of 1713, the Austrian archduchess MARIA THERESA succeeded her father, Holy Roman Emperor Charles VI, as ruler of the Hapsburg lands. The elector of Bavaria, Charles Albert, advanced counterclaims to the succession while PHILIP V of Spain and AUGUSTUS III of Poland and Saxony advanced weak claims of their own. FREDERICK II of Prussia, who on even less tenable grounds claimed part of SILESIA, began the war by invading and rapidly occupying that province. His cynical offer of support to Maria Theresa if she would cede Silesia was rejected. Victorious at Mollwitz (1741), Frederick obtained the alliance of France, Spain, Bavaria, and Saxony. Charles Albert of Bavaria, who was promised the imperial election, advanced on Vienna. In Oct., 1741, however, Prussia agreed to a truce in exchange for most of Silesia. This armistice was soon broken but gave the Austrians an opportunity to regroup their forces. The French were unwilling to permit the Bavarians too much power and ordered them to attack Bohemia, which was relatively unimportant, instead of Vienna. Joined by France and Saxony, Bavaria took Prague (Nov., 1741), and Charles Albert was elected emperor as CHARLES VII. Meanwhile Maria Theresa had obtained full support from the Hungarian diet and the promise of aid from Great Britain, which had been at war with Spain since 1739 (see JENKINS'S EAR, WAR OF). Early in 1742 Austrian troops overran Bavaria and laid siege to Prague, and in July, Maria Theresa made peace with Prussia by ceding most of Silesia (Treaty of Berlin). This ended what is sometimes called the First Silesian War. Saxony also made peace and joined Austria as an ally in 1743. The epic retreat from Prague of the French under Marshal BELLE-ISLE (winter, 1742-43) was followed by the victory of GEORGE II of Britain over the French at Dettingen (1743). In 1744 Frederick II, fearing the rising power of Austria, started the Second Silesian War by invading Bohemia, but he was soon expelled by Austrian and Saxon forces. On the death (1745) of Emperor Charles VII, Bavaria, once more overrun by Austrian troops, was forced out of the war. These Austrian successes were balanced by the great French victory (1745) of Fontenoy, where Maurice de SAXE defeated the British. Anxious for peace, George II concluded (1745) the Convention of Hanover with Frederick II, who promised to support the imperial candidacy of Maria Theresa's husband (shortly afterward elected as Francis I) in return for her cession of Silesia guaranteed by Europe. Defeated at Hohenfriedberg and at Kesselsdorf, Maria Theresa accepted the compromise in the Treaty of Dresden with Prussia (Dec., 1745). The war continued in N. Italy, in the Low Countries, in North America (see FRENCH AND INDIAN WARS), and in India. The chief belligerents (Austria, Britain, Holland, and Sardinia on the one side, France and Spain on the other) grew weary of the war. Although Maria Theresa secured (1748) the alliance of Russia, the other nations were determined to restore peace, and late in 1748 the Treaty of Aix-la-Chapelle (see AIX LA CHAPPELLE, TREATY OF, 2) was signed. Prussia gained Silesia and thus emerged as a major European power, the Hapsburgs thenceforth looked to the east for resources to develop their state. See biography by Edward Crankshaw, *Maria Theresa* (1970); C. A. Macartney, *Maria Theresa and the House of Austria* (1969).

Austro-Hungarian Monarchy or Dual Monarchy, the Hapsburg empire from 1867 until its fall in 1918. The reorganization was made possible by the *Ausgleich* [compromise] of 1867, a constitutional

compromise between Hungarian aspirations for independence and Emperor Francis Joseph's desire for a strong, centralized empire as a source of power after Austria's defeat in the AUSTRO-PRUSSIAN WAR of 1866. The Hungarians gained control of their internal affairs in return for agreeing to a centralized foreign policy and continued union of the Austrian and Hungarian crowns in the Hapsburg ruler. The agreement, which was worked out primarily by the Austrian foreign minister, Count BÜST, and two Hungarians, the elder Count ANDRÁSSY and Francis DEAK, divided the Hapsburg empire into two states: Cisleithania [Lat. = the land on this side of the Leitha River] comprised Austria proper, Bohemia, Moravia, Austrian Silesia, Slovenia, and Austrian Poland; it was to be ruled by the Hapsburg monarchs in their capacity as emperors of Austria. Transleithania [Lat. = the land on the other side of the Leitha River] included Hungary, Transylvania, Croatia, and part of the Dalmatian coast; it was to be ruled by the Hapsburg monarchs in their capacity as kings of Hungary. Croatia was given a special status and allowed some autonomy but was subordinated to Transleithania, which also nominated the Croatian governor. Austria-Hungary was the greatest recent example of a multinational state in Europe, however, of the four chief ethnic groups (Germans, Hungarians, Slavs, and Italians) only the first two received full partnership. The Hapsburg-held crown of Bohemia was conspicuously omitted in the reorganization. Both Cisleithania and Transleithania elected independent parliaments to deliberate on internal affairs and had independent ministries. A common cabinet, composed of three ministers, dealt with foreign relations, common defense, and common finances. It was responsible to the emperor-king and to the delegations of 60 members each (chosen by the two parliaments), which met to discuss common affairs. The regular armed forces were under unified command and currency was uniform throughout the empire, but there were separate customs regimes. The strength of the Dual Monarchy lay in its vastness, its virtual economic self-sufficiency, its opportunities for commercial intercourse from the Swiss border to the Carpathians. Its weakness was less in its ethnic diversity than in the unequal treatment accorded to its minorities in the spirit of the maxim, "Divide and rule." Of the Slavic elements the Czechs and Serbs were the most disaffected. The efforts of the TAAFFE ministry to satisfy Czech demands failed. The Italian minority was won to the Italian nationalist cause (see IRREDENTISM). The Rumanians of Transylvania had bitter grievances against their Hungarian masters. As nationalist movements gained within the empire they enlarged their demands from cultural autonomy to full independence and ultimately broke up the monarchy. These movements existed not only in the oppressed provinces, but also among Hungarian extremists, who desired total independence, and among Austrian Pan-Germans, who advocated the union of German-speaking Austria with Germany. The greatest danger to the monarchy probably was PAN-SLAVISM, spreading from Serbia and encouraged by Russia among the South Slavs. Archduke FRANCIS FERDINAND, heir to the throne, apparently had a project by which Croatia was to become the nucleus of a third, South Slavic, partner in the monarchy, his assassination (1914) at Sarajevo cut short this hope and precipitated World War I. In external policy, Austria-Hungary early became reconciled with Germany and joined the THREE EMPERORS' LEAGUE. At the Congress of Berlin (1878, see BERLIN, CONGRESS OF) Count Andrassy, the foreign minister, secured a mandate over BOSNIA AND HERCEGOVINA. In 1879 he entered an alliance with Germany, joined also by Italy in 1882 (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). The formation of the Triple Entente (France, England, Russia) to oppose this alliance led to the tense diplomatic situation that preceded WORLD WAR I. The foreign policy of Graf von Aehrenthal led to the Bosnian crisis of 1908-9, and the reckless demands that his successor, Graf von BERTHOLD, made on Serbia after the assassination of Francis Ferdinand helped to precipitate the cataclysm. The internal weakness of the empire became immediately obvious. Czech regiments deserted wholesale from the beginning, Italy and Rumania, eyeing their respective minorities in Austria and Hungary, joined the Allies, Croats and Slovenes, won by Serbian propaganda, joined (1917) in agreement with the Serbs to found a South Slavic state (see YUGOSLAVIA). Abroad, the Czechs under Thomas Masaryk were the best known of several legions fighting on the Allied side, and in Oct., 1918, Poland, Czechoslovakia, and Hungary proclaimed their independence. The Austrian defeat

at VITTORIO VENETO was followed by unconditional surrender, on Nov. 11, Emperor CHARLES I abdicated, on Nov. 12, German Austria was proclaimed a republic. The treaties of Versailles, Trianon, and Saint-Germain fixed the boundaries of the successor states. The breakup of the Dual Monarchy fulfilled the 19th-century liberal ideal of national self-determination, at the same time, the creation of small, strongly nationalist states, cut off from each other by tariff walls, has been criticized as representing a "Balkanization of Europe." See O. J. J. Dissolution of the Habsburg Monarchy (1929, repr. 1961), H. Kohn, *The Hapsburg Empire 1804-1918* (1961), A. J. May, *The Passing of the Hapsburg Monarchy, 1914-1918* (2 vol., 1966) and *The Hapsburg Monarchy, 1867-1914* (1951, repr. 1968), Z. A. B. Zeman, *The Twilight of the Hapsburgs* (1970), Leo Valiani, *The End of Austria-Hungary* (1973).

Austronesian (ôs'trônē'zhən, -shən), name sometimes used for the MALAYO-POLYNESIAN LANGUAGES.

Austro-Prussian War or Seven Weeks War, June 15-Aug. 23, 1866, between Prussia, allied with Italy, and Austria, seconded by Bavaria, Württemberg, Saxony, Hanover, Baden, and several smaller German states. It was deliberately provoked by BISMARCK, over the objections of his king, in order to expel Austria from the GERMAN CONFEDERATION as a step toward the unification of Germany under Prussian dominance. The pretext for precipitating the conflict was found in the dispute between Prussia and Austria over the administration of SCHLESWIG-HOLSTEIN. When Austria brought the dispute before the German diet and also decided to convene the Holstein diet, Prussia, declaring that the Gastein Convention (see under GASTEIN) had thereby been nullified, invaded Holstein. When the German diet responded by voting for a partial mobilization against Prussia, Bismarck declared that the German Confederation was ended. With an efficient military machine that amazed Europe, Prussia overran the German states allied with Austria and crushed (July 3) the Austrians at Sadowa (Königgratz), in E. Bohemia. However, Bismarck had no intention of weakening Austria, a potential ally, more than necessary. The preliminary treaty of Nikolsburg (July 26) was followed (Aug. 23) by the Treaty of Prague. Against Italy, the Austrians had won victories on the land, at Custoza, and on the sea, at Lissa. Nevertheless, the peace treaty forced Austria to cede Venetia to Italy. Prussia, satisfied with the exclusion, acknowledged in the treaty, of Austria from German affairs, demanded no territory from Austria, but annexed Hanover, Hesse, Nassau, and Frankfurt, in addition to Schleswig-Holstein. The German Confederation was replaced by the Prussian-led NORTH GERMAN CONFEDERATION. Thus the war paved the way for the establishment (1871) of the German Empire and the reorientation of Austria (reorganized in 1867 as the Austro-Hungarian Monarchy) toward the east. The moderate peace terms facilitated the Austro-German alliance of 1879. See Heinrich Friedjung, *The Struggle for Supremacy in Germany, 1859-1866* (10th ed. abr., tr. 1935, repr. 1966), G. A. Craig, *The Battle of Königgratz* (1964), E. A. Pottinger, *Napoleon III and the German Crisis, 1865-66* (1966).

Auteuil (ôtô'yā), old town between the Seine and the Bois de Boulogne, absorbed (1860) into Paris, France. A favorite resort for writers (Molière, La Fontaine, Boileau) in the 17th cent., it is now the site of a popular steepplechase track.

Authari (ô'thârî), d. 590, Lombard king (584-90). Elected by the Lombard dukes to end the anarchy that prevailed in Italy after the murder (572?) of Alboin (see LOMBARDS), Authari consolidated Lombard power in N. Italy and repelled several Frankish invasions instigated by the popes.

authentic modes: see MODE, in music.

autism (ô'tizəm), in psychology, a form of PSYCHOSIS characterized by an inability to relate to and perceive the environment in a realistic manner. Autistic thinking is characterized by withdrawal and detachment from reality, fantasies, delusions, and hallucinations. Childhood, or infantile, autism, which begins during infancy, is characterized by delay in the acquisition of speech, withdrawal from normal activity, abnormalities in the use of language, resistance to changes of any kind, and obsessive and stereotyped body movements. Authorities do not always agree on the distinction between infantile autism and forms of SCHIZOPHRENIA. Evidence suggests that infantile autism arises in association with a perceptual disorder, frequently a disorder in language comprehension (i.e., thoughts do not correspond to reality). Treatment for autism is still experimental, and relatively few autistic children show

significant remission of symptoms. Shaping the child's behavior by operant conditioning has had some success (see LEARNING).

autobiography: see BIOGRAPHY.

autogiro (ôtôj'irô) or **gyroplane** (jî'rāplān), type of aircraft supported in the air by a horizontally mounted airfoil similar to that of a helicopter but unpowered. Invented by the Spaniard Juan de la Cierva, it was first flown successfully in Jan., 1923, in Spain. Most of the lift is supplied by large airfoils which are mounted horizontally above the craft and rotated by the airflow created by the craft's forward movement. The autogiro has fixed wings that are smaller than those of an ordinary airplane, the body and tail assembly is of conventional design. Thrust is supplied by an ordinary engine and propeller and control is maintained by a rudder, elevators, and ailerons. In one type, fixed wings are absent, and the rotor provides all the lift. Control of pitch and roll are accomplished by tilting the rotor forward, backward, or to either side. Some advantages of the machine are that its descent will be slowed by the turning of the rotor if the engine fails, that it becomes airborne with a very short takeoff run and can land in small areas, and that with a moderate headwind it can virtually hover with zero ground speed. However, it cannot match the vertical climbing performance of the helicopter. Although its development was halted at one point, interest in it has renewed because of its ability to make short takeoffs and landings.

autograft: see TRANSPLANTATION, MEDICAL.

autoimmune disease, any of a number of abnormal conditions caused when the body produces ANTIBODIES to its own substances. In rheumatoid ARTHRITIS, a group of antibody molecules called collectively RF, or rheumatoid factor, is complexed to the individual's own gamma globulin blood proteins, the circulating complex apparently causes tissue inflammation and muscle and bone deformities. In Hashimoto's thyroiditis, an inflammatory disease of the thyroid gland, antibodies are produced against the thyroid protein thyroglobulin. In some blood disorders, antibodies may be produced against the body's own red and white blood cells. Myasthenia gravis, a disease characterized by weakened muscles, is thought to have an autoimmune origin. In systemic lupus erythematosus it has been shown that individuals have antibodies to certain of their own body substances that for some reason are acting as antigens; these substances include the individual's own nucleic acids and cell organelles such as ribosomes and mitochondria. Lupus can cause dysfunction of many organs, including the heart, kidneys, and joints. Because lupus and certain diseases of probable autoimmune origin, e.g., scleroderma and dermatomyositis, result in pathological changes in COLLAGEN, they are often called connective tissue, or collagen, diseases. In rheumatic fever, the individual produces antibodies to antigens of streptococcal bacteria; it is believed that the streptococcal antigens are structurally similar to antigens of the heart and that antistreptococcal antibodies, combining with antigenic sites on the heart, damage the muscle. Diseases of the immune system are currently treated by a variety of nonspecific IMMUNOSUPPRESSIVE DRUGS and STEROIDS.

Autolycus (ôtôl'ikəs), fl. 4th cent. B.C., astronomer and mathematician of Pitane in Aeolis. Of his two extant works, that on the revolving sphere is said to be the oldest completely preserved Greek treatise on a mathematical subject. The other deals with the apparent rising and setting of the fixed stars.

Autolycus, in Greek mythology, celebrated rogue. He was the son of Hermes, from whom he received special powers in thieving and trickery. According to one legend Autolycus stole from Sisyphus, who revenged himself by seducing Autolycus' daughter Anticlea.

automatic direction finder: see RADIO RANGE.

automatic frequency control: see AUTOMATIC TUNING CONTROL.

automatic pilot: see AIR NAVIGATION.

automatic tuning control, method or device applied to a radio or television receiver by means of which it is automatically kept tuned to a desired frequency or channel. Usually the system is called automatic frequency control (AFC) when applied to frequency modulation (FM) receivers and automatic tuning control (ATC) when applied to television receivers. In either case the operation is similar. Assuming that the receiver is at least approximately tuned to the desired frequency, a circuit in the receiver develops an error voltage proportional to the

degree to which the receiver is mistuned. This error voltage is then applied to some component in the tuning circuit whose value depends on applied voltage in such a way that the tuning error is reduced. In most FM detectors an error voltage of this type is easily available, in television receivers extra circuits may be used to develop it. In an FM receiver AFC may make it difficult to receive a weak signal located near in frequency to a strong one. If sufficient care is taken in tuner design, such devices can often be made unnecessary.

automation, automatic operation and control of machinery or processes by devices that can make and execute decisions without human intervention. The principal feature of such devices is their use of self-correcting CONTROL SYSTEMS that employ FEED-BACK, i.e., they use part of their output to control their input. Human participation involves little more than maintenance and repair of the equipment. In a typical automated manufacturing process, the feeding in of materials, the machine operation, the transfers from one machine to another, the final assembly, the removal, and the packing are all done automatically. At various stages in the operation are inspection devices that reject substandard products and adjust the machinery to correct any malfunction. Since electronic COMPUTERS are able to store, select, record, and present data systematically, they are widely employed to direct automated systems. For example, information recorded on tape and fed to a computer activates a series of tooling operations to produce a complex machined metal part. Automation is applied in industry to the manufacture of foodstuffs, chemicals, and pharmaceuticals and is used in steel mills, automobile plants, and coal mines. Another application is its use in the launching, aiming, and guidance of military rockets. Automation has also been applied to information handling, resulting in automatically prepared bills and reports. It offers high quality products together with great savings in costs. See G. H. Amber and P. S. Amber, *Anatomy of Automation* (1962), E. M. Grabbe et al., ed., *Handbook of Automation: Computation and Control* (3 vol., 1958-61), H. R. Bowen and G. L. Mangum, ed., *Automation and Economic Progress* (1966), Otto Mayr, *The Origins of Feedback Control* (1970).

automaton: see ROBOT

automobile, self-propelled vehicle used for travel on land. The modern automobile is usually driven by the water-cooled, piston-type INTERNAL-COMBUSTION ENGINE, mounted in the front of the vehicle, its power is transmitted to the rear wheels by means of a drive shaft. Some automobiles use air-cooled engines, but these are generally less efficient than the liquid-cooled type. In some models the engine is carried at the rear and in some at the middle of the vehicle. This latter arrangement, while wasteful of space, gives advantages of weight distribution. Diesel engines are employed chiefly for heavy vehicles, i.e., trucks and buses. Other engines are also being studied and developed as possibly superior to the conventional piston type. Steam engines, which were once more common than gasoline engines, are being experimented with now because they give off few noxious emissions. However, the major American auto manufacturers show little enthusiasm for mass producing them, claiming they are too bulky and complicated. Some electric motors have recently been designed for experimental cars. However, these motors restrict the cars to short trips at low speed because of limitations of the storage batteries that power the motors. Also, their widespread use might generate more air pollution than the gasoline engines that they would replace, because additional electric power plants would be needed to recharge their batteries. Two of the most promising replacements for conventional auto engines are the gas turbine and the Wankel engine. The gas turbine has drawn interest because of its low output of noxious emissions. However, problems of excessive fuel consumption, high initial costs, and uncertain durability under stop-and-go driving conditions must be solved before the gas turbine can be mass-produced. A rotary engine developed (c. 1954) by a team of engineers headed by Felix Wankel of Germany appears very promising because of its low exhaust emissions and feasibility for mass production. In this engine a three-sided rotor revolves within an epitrochoidal drum (combustion chamber) in which the free space contracts or expands as the rotor turns. Fuel is inhaled, compressed, and fired by the ignition system. The expanding gas turns the rotor and the spent gas is expelled. The Wankel engine has no valves, pistons, connecting rods, reciprocating parts, or crankshaft. It develops a high horse-

power per cubic inch and per pound of engine weight, and it is essentially vibrationless. Automotive pollutants have begun to pose environmental problems of considerable magnitude. It has been calculated, for example, that 60% to 70% of the air pollution in the United States can be traced directly or indirectly to automobile exhausts. In addition, asbestos, ground from brakes in normal use, and rubber, which wears away from tires, accumulate on roadways and are washed into streams, with effects nearly as serious as those of untreated sewage. A problem also exists in disposing of the automobiles themselves when they are no longer operable. In an effort to improve the situation, the U.S. government has enacted severe regulations on the use of the constituents of automobile exhaust gas that are known to cause air pollution. These constituents fall roughly into three categories: hydrocarbons that pass through the engine unburned and escape from the crankcase, carbon monoxide, also a product of incomplete combustion, and nitrogen oxides, which are formed when nitrogen and oxygen are in contact at high temperatures. Besides their own toxic character, hydrocarbons and nitrogen oxides undergo reactions in the presence of sunlight to form noxious SMOG. Carbon monoxide and hydrocarbons are rather easily controlled by the use of high combustion temperatures, leaner fuel mixtures, and lower compression ratios in engines. Unfortunately, the conditions that produce minimum emission of hydrocarbons tend to raise emission of nitrogen oxides. To some extent this difficulty is solved by adding recycled exhaust gas to the fuel mixture, thus avoiding the oversupply of oxygen that favors formation of nitrogen oxides. The use of reaction chambers external to the engine may provide a technique for burning off hydrocarbon and carbon monoxide emissions. However, effective operation of such reactors appears to depend on the use of expensive catalysts that are easily rendered inactive by the lead compounds used in gasoline to prevent engine knock. The Wankel engine has advantages in

this direction, as it runs easily on low-lead fuel and produces a minimum of nitrogen oxides. However, its fuel consumption is somewhat high under these conditions, although not as high as that of the turbine. The problem of automotive pollution is largely unsolved, progress has been made, but it is still an area requiring much research. Unfortunately, all currently practicable solutions tend to increase consumption of fuel, placing increasing burdens on energy supplies. Fatalities due to automobile accidents have stimulated automotive safety design. Safety design requires a wide-ranging systematic approach, many seemingly obvious solutions to safety problems either compound the problems or move them elsewhere. For example, one approach to passenger safety involves increasing the mass and rigidity of the vehicle, but this makes the vehicle so designed a hazard to light vehicles. The use of heavily padded interiors, collapsing steering columns, and other means of lessening the impact between passengers and the vehicle during a collision have met with some success, but one of the most effective systems, involving seat belts and harnesses to hold occupants in place, is largely ineffective because frequently they are not worn. Therefore attention has been turned to devices that either require no attention or disable the vehicle if they are not correctly deployed. Various systems have been devised whereby electronic sensors indicate if any passenger is not wearing a belt and either sound a warning or prevent the vehicle from starting. Another system simply envelops each passenger in a harness as his door is closed. More controversial is a system in which a sensor detects a collision, and rapidly, in a few hundredths of a second, inflates an air bag in front of each passenger to cushion his impact. Subsequently the bag deflates. The defects in the system are two. The bag, if falsely triggered, may cause an accident where one would not have occurred, and the system does not prevent contact with the vehicle roof in case of a rollover. Other aspects of vehicle safety include making it difficult for a driver to start a car

Automobile chassis

Two views of a six-cylinder automobile engine

while under the influence of alcohol (over half of all vehicle fatalities involve at least one driver who has used alcohol) and designing vehicles so that they are capable of emergency maneuvers. The French engineer Nicolas Joseph Cugnot is generally conceded to have built the first self-propelled vehicle (Paris, 1789), a heavy, three-wheeled, steam-driven carriage with a boiler that projected in front, its speed was c 3 mi per hr (5 km per hr). In 1801 the English engineer Richard Trevithick also built a three-wheeled steam-driven car, the engine drove the rear wheels. Many more vehicles were developed in England, and attempts were made to operate them on regular schedules. However, they were banned from the road, and development was retarded for decades by excessive road and bridge tolls and short-sighted legislation, e.g., speed was limited to 4 mi per hr (6.4 km per hr). In accordance with the Red Flag Act, which was in effect from 1836 to 1896, a man was required to walk in front of a self-propelled vehicle, carrying a red flag by day and a red lantern by night. The development of the automobile was accelerated by the introduction of the internal-combustion engine. Probably the first vehicle of this type was the three-wheeled car built in 1885 by the engineer Karl Benz in Germany. Another German engineer, Gottlieb Daimler, built an improved internal-combustion engine c 1885. The Panhard car, introduced in France by the Daimler company in 1894, had many features of the modern car. In the United States, internal-combustion cars of the horseless buggy type were manufactured in the 1890s by Charles Duryea and J. Frank Duryea, Elwood Haynes, Henry Ford, Ransom E. Olds, and Alexander Winton. Many of the early engines had only one cylinder, with a chain-and-sprocket drive on wooden carriage wheels. The cars generally were open, accommodated two passengers, and were steered by a lever. The Stanley brothers of Massachusetts, the most well-known American manufacturers of steam-driven autos, produced their Stanley Steamers from 1897 until after World War I. The free growth of the automobile industry in the early 20th cent was threatened by the American inventor George Selden's patent issued in 1895. Several early manufacturers licensed by Selden formed an association in 1903 and took over the patent in 1907. Henry Ford, the leader of a group of independent manufacturers who refused to acknowledge the patent, was engaged in litigation with Selden and the association from 1903 until 1911, when the U.S. Circuit Court of Appeals ruled that the patent, although valid, covered only the two-cycle engine, most cars, including Ford's, used a four-cycle engine. For operation and technical features of automobiles, see CARBURETOR, COOLING SYSTEM, DIFFERENTIAL, IGNITION, LUBRICATION, MUFFLER, ODOMETER, SHOCK ABSORBER, SPEEDOMETER, STEERING SYSTEM, SUSPENSION, TACHOMETER, TIRE, TRANSMISSION. See 8 G. Elliott and E. L. Consoliver, *The Gasoline Automobile* (5th ed 1939), F. R. Donovan, *Wheels for a Nation* (1965), J. B. Rae, *The American Automobile: A Brief History* (1965), G. N. Georgano, ed., *The Complete Encyclopedia of Motorcars 1885-1968* (1968), J. J. Flink, *America Adopts the Automobile, 1895-1910* (1970), William Crouse, *Automobile Emission Control* (1971).

automobile racing, sport in which high-speed automobiles are raced on an outdoor or indoor course. Primarily, the sport involves cars of special racing design. Automobile racing originated in France in 1894 and appeared in the United States the following year. It has since grown into one of the most popular spectator sports in the world. There are basically five forms of automobile-racing competition. The most prestigious involves the grand prix automobiles. These are usually hand-made cars with low-slung bodies and very large engines. A number of countries sponsor grand prix races, all of which contribute to the designation of a world champion driver. The grand prix of Monaco, France, Great Britain, Canada, and the United States (held at Watkins Glen, N.Y.) are among those events that make up the championship. In the United States the best-known automobile race is that held at the Indianapolis Speedway and known as the "Indianapolis 500." Although the "500" involves grand prix type cars, strictly speaking it is not a grand prix event because it does not contribute points toward the world championship. First held in 1911, the race attracts from 150,000 to 200,000 spectators annually, making it the largest single sporting event in the United States. The other types of automobile competition are stock car racing (using standard-made cars with special equipment), midget car racing, sports car racing, and drag racing. The racing of sports cars developed after World War II, and the

major races now include Sebring (Florida), Monza (Italy), and the 24-hour endurance event at Le Mans (France). Drag racing, which grew out of the often illegal races held among American teenagers during the mid-20th cent, involves acceleration tests among extremely powerful cars over 1/4-mi (402.5-km) tracks. A number of organizations supervise the various types of automobile competition, including the U.S. Automobile Club, the Sports Car Club of America, and the International Automobile Federation, the governing body for world automobile racing. See studies by Richard Hough (1961 and 1965), Griffith Borgeson (1966), and A. R. Bochroch (1974), Robert Cutter and Bob Fendell, *Encyclopedia of Auto Racing* (1973).

autonomic nervous system: see NERVOUS SYSTEM

autonomy (ôtdn'âmē) [Gr., =self-rule], in a political sense, limited self-government, short of independence, of a political state or, more frequently, of some subdivision of a political state. The term is also used for other self-governing units, such as a parish, a corporation, or a religious sect. The objective test of any autonomy is the recognition that the group may legislate or make the rules governing its internal affairs. Political autonomy is frequently based on cultural and ethnic differences. Autonomy within empires has frequently been a prelude to independence, as in the case of the evolution of the British Empire into the Commonwealth of Nations, containing both autonomous and completely sovereign states. The USSR includes among its political units several "autonomous regions." This autonomy is meant to allow groups along the borders to retain their ethnic and cultural distinctiveness, while at the same time they are brought under the political control of the Soviet government.

autopsy: see POST-MORTEM EXAMINATION

autotroph, in biology, an organism capable of synthesizing its own organic substances from inorganic compounds. Autotrophs produce their own sugars, lipids, and amino acids using carbon dioxide as a source of carbon, and ammonia or nitrates as a source of nitrogen. Organisms that use light for the energy to synthesize organic compounds are called photosynthetic autotrophs, organisms that oxidize such compounds as hydrogen sulfide (H₂S) to obtain energy are called chemosynthetic autotrophs, or chemotrophs. Photosynthetic autotrophs include the green plants, certain algae, and the pigmented sulfur bacteria. Chemotrophs include the iron bacteria, the nitrifying bacteria, and the nonpigmented sulfur bacteria. HETEROTROPHS are organisms that must obtain their energy from organic compounds.

autumn crocus: see MEADOW SAFFRON

Autun (ôtdn'), town (1968 pop 20,002), Saône-et-Loire dept., E central France, on the Arroux River. It is an industrial center producing metals, machinery, leather, cloth, carpets, and timber. An important market town in ancient times, Autun was a residence of the prefects of Gaul and was the seat of an important Gallic university. Between the 5th and 9th cent Autun was often attacked by barbarians. Among the Roman ruins are the remains of the town wall, an amphitheater, and the 3d-century gates of SS. Andre and Arroux. The Hotel Rolin (15th cent.), with the 12th-century sculpture of Eve, is now a museum. The Cathedral of St. Lazare (12th cent.) is also famous for its medieval sculpture. The town has other museums as well as a bishop's palace.

Auvergne (ôvër'nyä), region and former province, S central France. The area is now occupied chiefly by the departments of Puy-de-Dôme and Cantal. The Auvergne mts., a chain of extinct volcanoes (see MASSIF CENTRAL), run north to south forming unusual and beautiful scenery. There are also hot mineral springs, deep river gorges, and rolling pastureland in the region. Auvergne is largely agricultural (cattle, wheat, and grapes), with cheese and many wine manufactures. Industry is concentrated in Clermont-Ferrand, Aurillac, Riom, and Thiers. The Arvernis, an ancient people, occupied Auvergne when the Romans arrived. They had one of the most brilliant civilizations of Gaul, and their chieftain, Vercingetorix, led the resistance to Caesar. Auvergne was a part of Roman Aquitaine. It passed to the English in 1154. In the 14th cent it was divided into the county of Bourbon, and duchy of Auvergne. The duchy and dauphiny, which were united under the dukes of Bourbon, were confiscated (1527) by Francis I after the treason of Constable Charles de Bourbon. The county came into the royal domain in 1615. The reunited region was put under the Parlement of Paris. In some areas a local dialect is still spoken. There are many folk fetes, and much Romanesque architecture remains.

Aux Cayes (ô kä), Cayes, or Les Cayes (lä kä), town (1971 pop 22,065), SW Haiti, on the Caribbean Sea. Haiti's chief southern port, it handles exports, mainly sugar and coffee. There are liquor distilleries in the town.

Auxerre (ôsër'), town (1968 pop 38,066), capital of Yonne dept., N central France, in Burgundy, on the Yonne River. A commercial and industrial center, it has a great variety of manufactures and an important trade in Chablis wines. Auxerre gave its name to the medieval county of Auxerrois. It became part of Burgundy with the Treaty of Arras (1435). St. Germainus of Auxerre was bishop there in the 5th cent. The former abbatical church of St. Germain (13th cent.) is built on crypts dating back to the 6th cent. The abbey (now a hospital) has a fine Romanesque clock tower. The cathedral (13th-16th cent.) is in the Gothic flamboyant style. An air force school was established at Auxerre in 1965.

auxin (ôk'sin), plant hormone that regulates the amount, type, and direction of plant growth. Auxins include both naturally occurring substances and related synthetic compounds that have similar effects. Auxins are found in all members of the plant kingdom. They are most abundantly produced in growth areas (meristem), e.g., root and shoot tips, but are also produced elsewhere, e.g., in the stems and leaves. The method of dispersal throughout the plant body is not yet fully understood. Auxins, through their amount of concentration, affect numerous plant processes, e.g., cell division and elongation, autumnal loss of leaves, and the formation of buds, roots, flowers, and fruit. They are also responsible for many forms of TROPISM. It is known that phototropism is due to the inhibition of auxins by light, the cells on that side of a plant exposed to light do not divide or grow as quickly as those on the shaded side, and thus the plant grows toward the light source. Auxins are widely used commercially to produce more vigorous growth, to promote flowering and fruiting and also root formation in plants not easily propagated by stem cuttings, to retard fruit drop, and to produce seedless varieties (e.g., of tomatoes) by parthenogenetic fruiting. Only minute amounts of auxins occur naturally, and synthetic auxins (e.g., 2,4-D) must be administered in carefully prescribed doses, since excessive concentration produces usually fatal abnormalities. However, different species of plants react to different amounts of auxins, a fact used to advantage as a method of weed control. The principal natural auxin is indoleacetic acid, other common but less frequent plant hormones include the gibberellins, lactones, and kinins.

Ava (ä'vā), in the Bible, unidentified city of Mesopotamia, perhaps the same as IVAH. 2 Kings 17:24. Its inhabitants are called Avites. 2 Kings 17:31.

Ava (a'vā), village, central Burma, on the Irrawaddy River, 10 mi (16 km) S of Mandalay. Founded in 1364, it was the capital of a dynasty of Burmese kings until 1783 (when it was replaced by Amaraapura) and again from 1823 to 1837. Only ruins remain of its former greatness.

Avacha (ävä'cha) or **Avachinskaya Sopka** (ävä'chinskä sôp'kä), active volcano, 8,965 ft (2,733 m) high, Far Eastern USSR, on S Kamchatka peninsula. It has a permanent snow cap.

Avadana: see PALI LITERATURE

Aval: see BAHRAIN

avalanche, rapidly descending mass of snow and ice loosened from mountain slopes. Loose debris, such as soil and rock, and trees or other vegetation may be picked up as the mass roars downslope. Avalanches result from the addition of a heavy snowfall to an insecure mass of ice and snow, from the removal of part of the base of the mass, which is caused by melting and eroding, or from sudden shocks such as those caused by explosions or earth tremors. The action of an avalanche is often destructive, since it is sudden, unanticipated, and violent.

Avalon (äv'älön), in Celtic mythology, the blissful otherworld of the dead. In medieval romance it was the island to which the mortally wounded King Arthur was taken, and from which it was expected he would someday return. Avalon is often identified with Glastonbury in Somerset, England.

Avalon Peninsula, 3,579 sq mi (9,270 sq km), SE N.F., Canada. It is nearly divided at its center by Conception Bay and St. Mary's Bay. The peninsula is the most densely populated part of Newfoundland. St. John's is the chief town. A lighthouse and radio direction-finding station are at Cape Race.

Avalos, Ferdinando Francesco d': see PESCARA, FERDINANDO FRANCESCO D'AVALOS, MARCHESE DI

Avars (ā'vārz), mounted nomad people who in the 4th and 5th cent. dominated the steppes of central Asia. Dislodged by stronger tribes, the Avars pushed west, increasing their formidable army by incorporating conquered peoples into it. Reaching their greatest power in the late 6th cent., they plundered all of present S Russia and the Balkans. Their siege (626) of Constantinople was unsuccessful, but they continued to dominate the Hungarian plain until Charlemagne defeated them. The Avars were not mentioned after the 9th cent. The modern Avars, a pastoral, Muslim people of the Dagestan Autonomous Soviet Socialist Republic, number about 280,000. It is doubted that they are descended from remnants of the old Avars.

avatara (āv'atāra) [Skt., =descent], incarnations of Hindu gods, especially VISHNU. The doctrine of avatara first occurs in the BHAGAVAD GITA, where KRISHNA declares: "For the preservation of the righteous, the destruction of the wicked, and the establishment of dharma [virtue], I come into being from age to age." Vishnu is believed to have taken nine avatara, in both animal and human form, with a tenth yet to come. The avatara of SHIVA are imitations of those of Vishnu.

Avdira, Greece. See ABDERA.

Avebury, John Lubbock, 1st Baron: see LUBBOCK, SIR JOHN.

Avebury (ā'bərē), village, Wiltshire, S central England. The village, with a medieval church and Elizabethan manor house, lies within Avebury Circle, a Neolithic circular group of upright stones that are older and larger than STONEHENGE but not so well preserved. The village and the circle have belonged to the nation since 1943 and are administered by the National Trust.

Aveiro (āvārō), town (1960 pop. 16,430), capital of Aveiro dist., NW Portugal, on the lagoon of Aveiro and at the mouth of the Vouga River, in Beira Litoral. Intersected by numerous canals, one of which connects with the Atlantic, the town is a fishing port and salt-producing center. João Alfonso, one of the discoverers of the Newfoundland fisheries, was born there. A convent (now a museum) contains the tomb of the daughter of Alfonso V, St. Joana.

Avellaneda, Alonso Fernández de (ālōn'sō fārnan'dāth dā avēlyanā'thā), pen name used by the unknown Spanish writer who published a spurious second part of *Don Quixote* in 1614, before Cervantes's own second part appeared (1615). The book is usually referred to as *El Quijote apócrifo* [the spurious *Don Quixote*], and its author is unidentified, although various attributions have been made.

Avellaneda, Gertrudis Gómez de: see GÓMEZ DE AVELLANEDA, GERTRUDIS.

Avellaneda, Nicolás (nēkōlas' āvāyanā'thā), 1837-85, Argentine statesman, president of the republic (1874-80). As minister of justice, religion, and public instruction under Domingo F. SARMIENTO (1868-74), he introduced many reforms. After his election as president, he suppressed a revolt led by Bartolome Mitre, the defeated candidate. His administration was notable for economic growth and for the conquest of the Indian frontier southwest of Buenos Aires. An expedition under Gen. Julio A. Roca (1878-79) drove the Indians beyond the Rio Negro, opening the territory of Patagonia for colonization. Much of the new land, however, went in large tracts to speculators, influential politicians, and the great landowners. Avellaneda was chiefly responsible for the plan, approved in 1880, by which the city of Buenos Aires was federalized, thereby settling the political tensions that had long existed between the city and Buenos Aires prov.

Avellaneda (āvāyanā'thā), city (1970 pop. 337,538), Buenos Aires prov., E central Argentina, across the Riachuelo River from the Buenos Aires federal district. It is one of the most important industrial, commercial, and transportation centers in the country. The city, which grew in the first half of the 19th cent., was formerly called Baracas al Sud but was renamed (1904) after Nicolás Avellaneda, an Argentine president.

Avellino (avāl-lē'nō), city (1971 pop. 52,576), capital of Avellino prov., Campania, S Italy. It is an agricultural and manufacturing center. Although damaged by an earthquake in 1930, the city has retained much of its medieval aspect. Of note are the 12th-century cathedral and the ruins of a castle (9th-10th cent.). Near Avellino is the Benedictine convent and pilgrimage shrine of Monte Vergine (founded early 12th cent.).

Ave Maria (ā'vā mārē'ā) [Latin, =hail, Mary], prayer to the Virgin Mary universal among Roman Catho-

lics, also called the Ave, the Hail Mary, and the Angelic Salutation. The words in English are: "Hail Mary, full of grace, the Lord is with thee, blessed art thou amongst women, and blessed is the fruit of thy womb, Jesus, Holy Mary, Mother of God, pray for us sinners now and at the hour of our death. Amen." The first part is from Luke 1:28, 42. The prayer is much used in private as well as in public devotions, e.g., in the ROSARY. It has many musical settings, the compositions by Franz Schubert and Charles Gounod being especially popular.

Avempace (āv'vāpās, ā'vēmpā'thā), Arabic *Ibn Bajja*, d. 1138, Spanish-Arabian philosopher. Little is known of his life, but he was born in Saragossa and died in Fez, Morocco. He was an outstanding representative of the Islamic Aristotelian-Neoplatonic tradition. This tradition had been established in the east by al-FARABI on whose commentaries Avempace depended. He is important for his influence on AVERROES and for his concept of the solitary mystic as opposed to the more social concept of Islam held by al-GHAZALI.

Aven (ā'vən), in the Bible, abusive name applied to towns to Bethel (see BETH-AVEN), to Heliopolis in Egypt in Ezek. 30:17, and to some other place, traditionally Baalbek, in Amos 1:5.

Avenasar: see FARABI AL-

Avenches (āvānsh'), anc. *Aventicum*, town (1970 pop. 2,235), Vaud canton, W Switzerland. During the 1st and 2d cent. A.D., Avenches flourished under the Romans as the chief town of HELVETIA.

Aventine, hill. See *Rome before Augustus* under ROME.

average, number used to represent or characterize a group of numbers. The most common type of average is the arithmetic MEAN. See MEDIAN, MODE.

Averescu, Alexander (avērēs'kōō), 1859-1938, Rumanian general and political leader. He served as a volunteer in the 1877-78 war against the Ottoman Empire and rose to become minister of war in 1907. He distinguished himself as a commander in World War I, especially in the 1916 Dobruja campaign, and gained a great popular following. In late Jan., 1918, he was chosen to form a cabinet to negotiate peace with the Central Powers. Averescu founded (1918) the People's League (later the People's party), which sought moderate land reform and suppression of the left. He was premier in 1920-21 and again in 1926-27 and was made a marshal in 1930.

Averno (āvēr'nō), anc. *Avernus* (āvūr'nās) [from Gr., =without bird], small crater lake, 6 mi (9 km) wide, Campania, S Italy, between Cuma and Puteoli, near the Tyrrhenian Sea. Its intense sulphuric vapors, caused by volcanic activity (now extinguished), supposedly killed the birds flying over it, hence its name. The ancient Romans, impressed by its vapors and its gloomy aspect, regarded it as the entrance to hell; later the name was used for hell itself. Near the lake its personification, the *deus Avernus*, was worshiped.

Averroes (avēr'ōēz), Arabic *Ibn Rushd*, 1126-98, Spanish-Arabian philosopher. He was far more important and influential in Jewish and Christian thought than in Islam. He was a lawyer and physician of Cordoba and lived for some time in Morocco in favor with the caliphs. He was banished for a period, probably for suspected heresy. Averroes's greatest work was his commentaries on Aristotle. The Averroistic interpretation of Aristotle remained influential long after his death and was a matter of intellectual speculation well into the Renaissance. He attempted to delimit the separate domains of faith and reason, pointing out that the two need not be reconciled because they did not conflict. He declared philosophy the highest form of inquiry. He had the same Neoplatonic cast to his metaphysics as Avempace, to whom he was certainly indebted for his ideas on the intellect. Averroist doctrines on personal immortality and the eternity of matter were condemned by the Roman Catholic Church. St. Thomas Aquinas was respectful of Averroes, but he attacked the Averroist contention that philosophic truth is derived from reason and not from faith. See SCHOLASTICISM. Averroes's works in English translation include *Incoherence of the Incoherence*, ed. by Simon Van Den Bergh (1955), *On Aristotle's De Generatione et Corruptione*, ed. by Samuel Kurland (1958), *Commentary on Plato's Republic*, ed. by E. J. Rosenthal (1956, repr. 1966), and *On the Harmony of Religion and Philosophy*, ed. by G. F. Hourani (1961).

Aversa (āvēr'sā), city (1971 pop. 47,366), Campania, S Italy. It is an agricultural and transportation center, noted for its sparkling white wine. In the early 11th

cent. the county of Aversa became the first possession of the Normans in Italy; it later was made part of the kingdom of Naples.

Avery, Milton, 1893-1965, American painter, b. Altmar, N.Y. Avery moved to New York City in 1925. Bold massing of forms is characteristic of his figurative work, such as *Poetry Reading* (1957, Munson-Williams-Proctor Inst., Utica, N.Y.). His landscapes, including *Green Sea* (1954, Metropolitan Mus.), verge on complete abstraction. Avery's paintings display qualities of fantasy and poetic gaiety within the tradition of Matisse. See study by Hilton Kramer (1962), exhibition catalog ed. by A. D. Breeskin (1969).

Avery Island, salt dome, c. 200 ft (60 m) high and 2 mi (3.2 km) in diameter, S La., in an area of sea marshes and swamps. The island's former owner, Edward Avery McIlhenny, author of *Bird City*, created Jungle Gardens, which contains many rare plants, trees, and flowers. The island also has a bird sanctuary. All the cayenne peppers grown in the United States are produced on Avery Island. Rock salt has been mined there since 1791.

Avesta: see ZOROASTRIANISM.

Avesta (ā'vəstā'), city (1970 pop. 10,191), Kopparberg co., S central Sweden, on the Dalälven River. Aluminum and high quality steel are manufactured there. Formerly a copper mining and refining center, Avesta was the seat of copper mining in Sweden from 1644 to 1831.

Avestan (āvēs'tən), language belonging to the Iranian group of the Indo-Iranian subfamily of the Indo-European family of languages. One of the earliest forms of the Iranian languages to survive, Avestan is also the tongue of the *Avesta*, or scriptures of ZOROASTRIANISM. See INDO-IRANIAN LANGUAGES. See A. V. W. Jackson, *An Avestan Grammar in Comparison with Sanskrit* (1968).

Aveyron (āvārōn'), department (1968 pop. 281,568), S central France, in Guienne. RODEZ is the capital. **aviary** (āvē'ārē), structure for confining birds. It usually refers to an outdoor screened area within which environmental conditions are suitable to the birds. Aviaries must provide food, shelter, perches and flying space, nesting sites and materials, as well as protection against vermin and predators. For tropical species, heated indoor quarters are often provided for the winter. Aviaries are maintained privately as well as for public exhibit, research, and the breeding of wild birds. The construction of aviaries for exhibition, known since early Roman times, was spurred by the collection of unusual bird specimens by 15th-century explorers and the introduction of the canary into Europe. Aviaries are now found chiefly in public gardens, on private estates, and in many zoological parks. Among the aviaries in the United States are the Parrot Jungle, Miami, the Tracy Aviary, Salt Lake City, and the World of Birds, New York Zoological Park, New York City. Wild birds may be observed in their natural habitat in sanctuaries and on wildlife refuges.

aviation, operation of heavier-than-air aircraft and related activities. Aviation can be conveniently divided into military aviation, air transport, and general aviation. Military aviation includes all aviation activity by the armed services, such as combat, reconnaissance, and military air transport. Air transport consists mainly of the operation of commercial airlines, which handle both freight and passengers. General aviation consists of agricultural, business, charter, instructional, and pleasure flying; it includes such activities as the operation of air taxis, as well as aerial surveying and mapping. The detailed observations, explanations, and drawings preserved in the notebooks of Leonardo da Vinci mark the beginning of scientific studies of FLIGHT. Leonardo's work in this field centered around studies of birds, with observations of bats and other flying creatures. Flight was first successfully accomplished (1783) in a lighter-than-air device (see BALLOON). A number of investigators contributed to an early understanding of the principles involved in achieving flight in heavier-than-air machines. Among them were the Englishman W. S. Henson, who patented (1842) a design for a machine that closely foreshadowed the modern monoplane, the Englishman John Stringfellow, who developed a model plane said to be the first power-driven machine to fly, and F. H. Wenham, who in England devised the first wind-tunnel experiments. Alphonse Penaud, in France, made successful flying models of airplanes and wrote on the theory of flight. Clement Ader, a French engineer, achieved flight (over a distance of about 150 ft/46 m in 1890 and about 300 yd/280 m in 1897) in

while under the influence of alcohol (over half of all vehicle fatalities involve at least one driver who has used alcohol) and designing vehicles so that they are capable of emergency maneuvers. The French engineer Nicolas Joseph Cugnot is generally conceded to have built the first self-propelled vehicle (Paris, 1789), a heavy, three-wheeled, steam-driven carriage with a boiler that projected in front, its speed was c 3 mi per hr (5 km per hr). In 1801 the English engineer Richard Trevithick also built a three-wheeled steam-driven car, the engine drove the rear wheels. Many more vehicles were developed in England, and attempts were made to operate them on regular schedules. However, they were banned from the road, and development was retarded for decades by excessive road and bridge tolls and short-sighted legislation, e.g., speed was limited to 4 mi per hr (6.4 km per hr). In accordance with the Red Flag Act, which was in effect from 1836 to 1896, a man was required to walk in front of a self-propelled vehicle, carrying a red flag by day and a red lantern by night. The development of the automobile was accelerated by the introduction of the internal-combustion engine. Probably the first vehicle of this type was the three-wheeled car built in 1885 by the engineer Karl Benz in Germany. Another German engineer, Gottlieb Daimler, built an improved internal-combustion engine c 1885. The Panhard car, introduced in France by the Daimler company in 1894, had many features of the modern car. In the United States, internal-combustion cars of the horseless buggy type were manufactured in the 1890s by Charles Duryea and J. Frank Duryea, Elwood Haynes, Henry Ford, Ransom E. Olds, and Alexander Winton. Many of the early engines had only one cylinder, with a chain-and-sprocket drive on wooden carriage wheels. The cars generally were open, accommodated two passengers, and were steered by a lever. The Stanley brothers of Massachusetts, the most well-known American manufacturers of steam-driven autos, produced their Stanley Steamers from 1897 until after World War I. The free growth of the automobile industry in the early 20th cent. was threatened by the American inventor George Selden's patent issued in 1895. Several early manufacturers licensed by Selden formed an association in 1903 and took over the patent in 1907. Henry Ford, the leader of a group of independent manufacturers who refused to acknowledge the patent, was engaged in litigation with Selden and the association from 1903 until 1911, when the U.S. Circuit Court of Appeals ruled that the patent, although valid, covered only the two-cycle engine, most cars, including Ford's, used a four-cycle engine. For operation and technical features of automobiles, see CARBURETOR, COOLING SYSTEM, DIFFERENTIAL, IGNITION, LUBRICATION, MUFFLER, ODOMETER, SHOCK ABSORBER, SPEEDOMETER, STEERING SYSTEM, SUSPENSION, TACHOMETER, TIRE, TRANSMISSION. See B. G. Elliott and E. L. Consoliver, *The Gasoline Automobile* (Sth ed. 1939), F. R. Donovan, *Wheels for a Nation* (1965), J. B. Rae, *The American Automobile: A Brief History* (1965), G. N. Georgano, ed., *The Complete Encyclopedia of Motorcars 1885-1968* (1968), J. J. Flink, *America Adopts the Automobile, 1895-1910* (1970), William Crouse, *Automobile Emission Control* (1971).

automobile racing, sport in which high-speed automobiles are raced on an outdoor or indoor course. Primarily, the sport involves cars of special racing design. Automobile racing originated in France in 1894 and appeared in the United States the following year. It has since grown into one of the most popular spectator sports in the world. There are basically five forms of automobile-racing competition. The most prestigious involves the grand prix automobiles. These are usually hand-made cars with low-slung bodies and very large engines. A number of countries sponsor grand prix races, all of which contribute to the designation of a world champion driver. The grand prix of Monaco, France, Great Britain, Canada, and the United States (held at Watkins Glen, N.Y.) are among those events that make up the championship. In the United States the best-known automobile race is that held at the Indianapolis Speedway and known as the "Indianapolis 500." Although the "500" involves grand prix type cars, strictly speaking it is not a grand prix event because it does not contribute points toward the world championship. First held in 1911, the race attracts from 150,000 to 200,000 spectators annually, making it the largest single sporting event in the United States. The other types of automobile competition are stock car racing (using standard-made cars with special equipment), midget car racing, sports car racing, and drag racing. The racing of sports cars developed after World War II, and the

major races now include Sebring (Florida), Monza (Italy), and the 24-hour endurance event at Le Mans (France). Drag racing, which grew out of the often illegal races held among American teenagers during the mid-20th cent., involves acceleration tests among extremely powerful cars over $\frac{1}{4}$ -mi (4025-km) tracks. A number of organizations supervise the various types of automobile competition, including the U.S. Automobile Club, the Sports Car Club of America, and the International Automobile Federation, the governing body for world automobile racing. See studies by Richard Hough (1961 and 1965), Griffith Borgeson (1966), and A. R. Bochroch (1974), Robert Cutter and Bob Fendell, *Encyclopedia of Auto Racing* (1973).

autonomic nervous system: see NERVOUS SYSTEM
autonomy (ōtōn'ōmē) [Gr., =self-rule], in a political sense, limited self-government, short of independence, of a political state or, more frequently, of some subdivision of a political state. The term is also used for other self-governing units, such as a parish, a corporation, or a religious sect. The objective test of any autonomy is the recognition that the group may legislate or make the rules governing its internal affairs. Political autonomy is frequently based on cultural and ethnic differences. Autonomy within empires has frequently been a prelude to independence, as in the case of the evolution of the British Empire into the Commonwealth of Nations, containing both autonomous and completely sovereign states. The USSR includes among its political units several "autonomous regions." This autonomy is meant to allow groups along the borders to retain their ethnic and cultural distinctiveness, while at the same time they are brought under the political control of the Soviet government.

autopsy: see POST-MORTEM EXAMINATION

autotroph, in biology, an organism capable of synthesizing its own organic substances from inorganic compounds. Autotrophs produce their own sugars, lipids, and amino acids using carbon dioxide as a source of carbon, and ammonia or nitrates as a source of nitrogen. Organisms that use light for the energy to synthesize organic compounds are called photosynthetic autotrophs, organisms that oxidize such compounds as hydrogen sulfide (H_2S) to obtain energy are called chemosynthetic autotrophs, or chemotrophs. Photosynthetic autotrophs include the green plants, certain algae, and the pigmented sulfur bacteria. Chemotrophs include the iron bacteria, the nitrifying bacteria, and the nonpigmented sulfur bacteria. HETEROTROPHS are organisms that must obtain their energy from organic compounds.

autumn crocus. see MEADOW SAFFRON

Autun (ōtōn'), town (1968 pop. 20,002), Saône-et-Loire dept., E central France, on the Arroux River. It is an industrial center producing metals, machinery, leather, cloth, carpets, and timber. An important market town in ancient times, Autun was a residence of the prefects of Gaul and was the seat of an important Gallic university. Between the 5th and 9th cent. Autun was often attacked by barbarians. Among the Roman ruins are the remains of the town wall, an amphitheater, and the 3d-century gates of SS. Andre and Arroux. The Hotel Rolin (15th cent.), with the 12th-century sculpture of Eve, is now a museum. The Cathedral of St. Lazare (12th cent.) is also famous for its medieval sculpture. The town has other museums as well as a bishop's palace.

Auvergne (ōvēr'nyā), region and former province, S central France. The area is now occupied chiefly by the departments of Puy-de-Dôme and Cantal. The Auvergne mts., a chain of extinct volcanoes (see MASSIF CENTRAL), run north to south forming unusual and beautiful scenery. There are also hot mineral springs, deep river gorges, and rolling pastureland in the region. Auvergne is largely agricultural (cattle, wheat, and grapes), with cheese and many wine manufactures. Industry is concentrated in Clermont-Ferrand, Aurillac, Riom, and Thiers. The Arvernis, an ancient people, occupied Auvergne when the Romans arrived. They had one of the most brilliant civilizations of Gaul, and their chieftain, Vercingetorix, led the resistance to Caesar. Auvergne was a part of Roman Aquitaine. It passed to the English in 1154. In the 14th cent. it was divided into the countyship, dauphiny, and duchy of Auvergne. The duchy and dauphiny, which were united under the dukes of Bourbon, were confiscated (1527) by Francis I after the treason of Constable Charles de Bourbon. The countyship came into the royal domain in 1615. The reunited region was put under the Parlement of Paris. In some areas a local dialect is still spoken. There are many folk fetes, and much Romanesque architecture remains.

Aux Cayes (ō kā), Cayes, or Les Cayes (lā kā), town (1971 pop. 22,065), SW Haiti, on the Caribbean Sea. Haiti's chief southern port, it handles exports, mainly sugar and coffee. There are liquor distilleries in the town.

Auxerre (ōsēr'), town (1968 pop. 38,066), capital of Yonne dept., N central France, in Burgundy, on the Yonne River. A commercial and industrial center, it has a great variety of manufactures and an important trade in Chablis wines. Auxerre gave its name to the medieval county of Auxerrois. It became part of Burgundy with the Treaty of Arras (1435). St. Germainus of Auxerre was bishop there in the 5th cent. The former abbatial church of St. Germain (13th cent.) is built on crypts dating back to the 6th cent. The abbey (now a hospital) has a fine Romanesque clock tower. The cathedral (13th-16th cent.) is in the Gothic flamboyant style. An air force school was established at Auxerre in 1965.

auxin (ōk'sin), plant hormone that regulates the amount, type, and direction of plant growth. Auxins include both naturally occurring substances and related synthetic compounds that have similar effects. Auxins are found in all members of the plant kingdom. They are most abundantly produced in growth areas (meristem), e.g., root and shoot tips, but are also produced elsewhere, e.g., in the stems and leaves. The method of dispersal throughout the plant body is not yet fully understood. Auxins, through their amount of concentration, affect numerous plant processes, e.g., cell division and elongation, autumnal loss of leaves, and the formation of buds, roots, flowers, and fruit. They are also responsible for many forms of TROPISM. It is known that phototropism is due to the inhibition of auxins by light, the cells on that side of a plant exposed to light do not divide or grow as quickly as those on the shaded side, and thus the plant grows toward the light source. Auxins are widely used commercially to produce more vigorous growth, to promote flowering and fruiting and also root formation in plants not easily propagated by stem cuttings, to retard fruit drop, and to produce seedless varieties (e.g., of tomatoes) by parthenogenetic fruiting. Only minute amounts of auxins occur naturally, and synthetic auxins (e.g., 2,4-D) must be administered in carefully prescribed doses, since excessive concentration produces usually fatal abnormalities. However, different species of plants react to different amounts of auxins, a fact used to advantage as a method of weed control. The principal natural auxin is indoleacetic acid, other common but less frequent plant hormones include the gibberellins, lactones, and kinins.

Ava (ā'vā), in the Bible, unidentified city of Mesopotamia, perhaps the same as IVAH. 2 Kings 17:24. Its inhabitants are called Avites. 2 Kings 17:31.

Ava (ā'vā), village, central Burma, on the Irrawaddy River, 10 mi (16 km) S of Mandalay. Founded in 1364, it was the capital of a dynasty of Burmese kings until 1783 (when it was replaced by Amarapura) and again from 1823 to 1837. Only ruins remain of its former greatness.

Avacha (āvā'chā) or **Avachinskaya Sopka** (āvā'chinskā sōp'kā), active volcano, 8,965 ft (2,733 m) high, Far Eastern USSR, on S Kamchatka peninsula. It has a permanent snow cap.

Avadana. see PALI LITERATURE

Aval. see BAHRAIN

avalanche, rapidly descending mass of snow and ice loosened from mountain slopes. Loose debris, such as soil and rock, and trees or other vegetation may be picked up as the mass roars downslope. Avalanches result from the addition of a heavy snowfall to an insecure mass of ice and snow, from the removal of part of the base of the mass, which is caused by melting and eroding, or from sudden shocks such as those caused by explosions or earth tremors. The action of an avalanche is often destructive, since it is sudden, unanticipated, and violent.

Avalon (āv'ālōn), in Celtic mythology, the blissful otherworld of the dead. In medieval romance it was the island to which the mortally wounded King Arthur was taken, and from which it was expected he would someday return. Avalon is often identified with Glastonbury in Somerset, England.

Avalon Peninsula, 3,579 sq mi (9,270 sq km), SE N.F., Canada. It is nearly divided at its center by Conception Bay and St. Mary's Bay. The peninsula is the most densely populated part of Newfoundland. St. John's is the chief town. A lighthouse and radio direction-finding station are at Cape Race.

Avalos, Ferdinando Francesco d'. see PESCARA, FERDINANDO FRANCESCO D' AVALOS, MARCHESE DI

Avars (a'varz), mounted nomad people who in the 4th and 5th cent. dominated the steppes of central Asia. Dislodged by stronger tribes, the Avars pushed west, increasing their formidable army by incorporating conquered peoples into it. Reaching their greatest power in the late 6th cent., they plundered all of present S Russia and the Balkans. Their siege (626) of Constantinople was unsuccessful, but they continued to dominate the Hungarian plain until Charlemagne defeated them. The Avars were not mentioned after the 9th cent. The modern Avars, a pastoral, Muslim people of the Dagestan Autonomous Soviet Socialist Republic, number about 280,000. It is doubted that they are descended from remnants of the old Avars.

avatara (āv'atāra) [Skt., =descent], incarnations of Hindu gods, especially VISHNU. The doctrine of avatara first occurs in the BHAGAVAD-GITA, where KRISHNA declares: "For the preservation of the righteous, the destruction of the wicked, and the establishment of dharma [virtue], I come into being from age to age." Vishnu is believed to have taken nine avatara, in both animal and human form, with a tenth yet to come. The avatara of SHIVA are imitations of those of Vishnu.

Avidra, Greece. See ABDERA.

Avebury, John Lubbock, 1st Baron: see LUBBOCK, SIR JOHN.

Avebury (ā'vērē), village, Wiltshire, S central England. The village, with a medieval church and Elizabethan manor house, lies within **Avebury Circle**, a Neolithic circular group of upright stones that are older and larger than STONEHENGE but not so well preserved. The village and the circle have belonged to the nation since 1943 and are administered by the National Trust.

Aveiro (avā'rō), town (1960 pop. 16,430), capital of Aveiro dist., NW Portugal, on the lagoon of Aveiro and at the mouth of the Vouga River, in Beira Litoral. Intersected by numerous canals, one of which connects with the Atlantic, the town is a fishing port and salt-producing center. João Alfonso, one of the discoverers of the Newfoundland fisheries, was born there. A convent (now a museum) contains the tomb of the daughter of Alfonso V, St. Joana.

Avellaneda, Alonso Fernandez de (alōn'sō fārnān'dāth dā avēlyanā'tha), pen name used by the unknown Spanish writer who published a spurious second part of *Don Quixote* in 1614, before Cervantes's own second part appeared (1615). The book is usually referred to as *El Quijote apócrifo* [the spurious *Don Quixote*], and its author is unidentified, although various attributions have been made.

Avellaneda, Gertrudis Gómez de: see GÓMEZ DE AVELLANEDA, GERTRUDIS.

Avellaneda, Nicolás (nēkōlas' avāyanā'tha), 1837-85, Argentine statesman, president of the republic (1874-80). As minister of justice, religion, and public instruction under Domingo F. Sarmiento (1868-74), he introduced many reforms. After his election as president, he suppressed a revolt led by Bartolome Mitre, the defeated candidate. His administration was notable for economic growth and for the conquest of the Indian frontier southwest of Buenos Aires. An expedition under Gen. Julio A. Roca (1878-79) drove the Indians beyond the Rio Negro, opening the territory of Patagonia for colonization. Much of the new land, however, went in large tracts to speculators, influential politicians, and the great landowners. Avellaneda was chiefly responsible for the plan, approved in 1880, by which the city of Buenos Aires was federalized, thereby settling the political tensions that had long existed between the city and Buenos Aires prov.

Avellaneda (avāyanā'tha), city (1970 pop. 337,538), Buenos Aires prov., E central Argentina, across the Riachuelo River from the Buenos Aires federal district. It is one of the most important industrial, commercial, and transportation centers in the country. The city, which grew in the first half of the 19th cent., was formerly called Baracas al Sud but was renamed (1904) after Nicolás Avellaneda, an Argentine president.

Avellino (avāl-lē'nō), city (1971 pop. 52,576), capital of Avellino prov., Campania, S Italy. It is an agricultural and manufacturing center. Although damaged by an earthquake in 1930, the city has retained much of its medieval aspect. Of note are the 12th-century cathedral and the ruins of a castle (9th-10th cent.). Near Avellino is the Benedictine convent and pilgrimage shrine of Monte Vergine (founded early 12th cent.).

Ave Maria (ā'vā marē'ā) [Latin, =hail, Mary], prayer to the Virgin Mary universal among Roman Catho-

lics, also called the Ave, the Hail Mary, and the Angelic Salutation. The words in English are "Hail Mary, full of grace, the Lord is with thee, blessed art thou amongst women, and blessed is the fruit of thy womb, Jesus. Holy Mary, Mother of God, pray for us sinners now and at the hour of our death. Amen." The first part is from Luke 1:28, 42. The prayer is much used in private as well as in public devotions, e.g., in the ROSARY. It has many musical settings, the compositions by Franz Schubert and Charles Gounod being especially popular.

Avempace (ā'vəmpās, ā'vəmpā'thā), Arabic *Ibn Bajja*, d. 1138, Spanish-Arabian philosopher. Little is known of his life, but he was born in Saragossa and died in Fez, Morocco. He was an outstanding representative of the Islamic Aristotelian-Neoplatonic tradition. This tradition had been established in the east by al-FARABI on whose commentaries Avempace depended. He is important for his influence on AVERROES and for his concept of the solitary mystic as opposed to the more social concept of Islam held by al-GHAZALI.

Aven (ā'vən), in the Bible, abusive name applied to towns to Bethel (see BETH AVEN), to Heliopolis in Egypt in Ezek. 30:17, and to some other place, traditionally Baalbek, in Amos 1:5.

Avenasar: see FARABI, AL-

Avenches (avā'nsh'), anc. *Aventicum*, town (1970 pop. 2,235), Vaud canton, W Switzerland. During the 1st and 2d cent. A.D., Avenches flourished under the Romans as the chief town of HELVETIA.

Aventine, hill. See *Rome before Augustus* under ROME.

average, number used to represent or characterize a group of numbers. The most common type of average is the arithmetic MEAN. See MEDIAN, MODE.

Averescu, Alexander (avērēs'kōō), 1859-1938, Rumanian general and political leader. He served as a volunteer in the 1877-78 war against the Ottoman Empire and rose to become minister of war in 1907. He distinguished himself as a commander in World War I, especially in the 1916 Dobruja campaign, and gained a great popular following. In late Jan., 1918, he was chosen to form a cabinet to negotiate peace with the Central Powers. Averescu founded (1918) the People's League (later the People's party), which sought moderate land reform and suppression of the left. He was premier in 1920-21 and again in 1926-27 and was made a marshal in 1930.

Averno (avēr'nō), anc. *Avernus* (āvūr'nās) [from Gr., =without bird], small crater lake, 6 mi (9 km) wide, Campania, S Italy, between Cuma and Puteoli, near the Tyrrhenian Sea. Its intense sulphuric vapors, caused by volcanic activity (now extinguished), supposedly killed the birds flying over it, hence its name. The ancient Romans, impressed by its vapors and its gloomy aspect, regarded it as the entrance to hell; later the name was used for hell itself. Near the lake its personification, the *deus Avernus*, was worshiped.

Averroes (āvēr'ōēs), Arabic *Ibn Rushd*, 1126-98, Spanish-Arabian philosopher. He was far more important and influential in Jewish and Christian thought than in Islam. He was a lawyer and physician of Cordoba and lived for some time in Morocco in favor with the caliphs. He was banished for a period, probably for suspected heresy. Averroes's greatest work was his commentaries on Aristotle. The Averroistic interpretation of Aristotle remained influential long after his death and was a matter of intellectual speculation well into the Renaissance. He attempted to delimit the separate domains of faith and reason, pointing out that the two need not be reconciled because they did not conflict. He declared philosophy the highest form of inquiry. He had the same Neoplatonic cast to his metaphysics as Avempace, to whom he was certainly indebted for his ideas on the intellect. Averroist doctrines on personal immortality and the eternity of matter were condemned by the Roman Catholic Church. St. Thomas Aquinas was respectful of Averroes, but he attacked the Averroist contention that philosophic truth is derived from reason and not from faith. See SCHOLASTICISM. Averroes's works in English translation include *Incoherence of the Incoherence*, ed. by Simon Van Den Bergh (1955), *On Aristotle's De Generatione et Corruptione*, ed. by Samuel Kurland (1958), *Commentary on Plato's Republic*, ed. by E. J. Rosenthal (1956, repr. 1966), and *On the Harmony of Religion and Philosophy*, ed. by G. F. Hourani (1961).

Aversa (avēr'sa), city (1971 pop. 47,366), Campania, S Italy. It is an agricultural and transportation center, noted for its sparkling white wine. In the early 11th

cent. the county of Aversa became the first possession of the Normans in Italy, it later was made part of the kingdom of Naples.

Avery, Milton, 1893-1965, American painter, b. Altmar, N.Y. Avery moved to New York City in 1925. Bold massing of forms is characteristic of his figurative work, such as *Poetry Reading* (1957, Munson-Williams-Proctor Inst., Utica, N.Y.). His landscapes, including *Green Sea* (1954, Metropolitan Mus.), verge on complete abstraction. Avery's paintings display qualities of fantasy and poetic gaiety within the tradition of Matisse. See study by Hilton Kramer (1962), exhibition catalog ed. by A. D. Breeskin (1969).

Avery Island, salt dome, c. 200 ft (60 m) high and 2 mi (3.2 km) in diameter, S La., in an area of sea marshes and swamps. The island's former owner, Edward Avery McIlhenny, author of *Bird City*, created Jungle Gardens, which contains many rare plants, trees, and flowers. The island also has a bird sanctuary. All the cayenne peppers grown in the United States are produced on Avery Island. Rock salt has been mined there since 1791.

Avesta: see ZORASTRIANISM.

Avesta (a'vasta'), city (1970 pop. 10,191), Kopparberg co., S central Sweden, on the Dalälven River. Aluminum and high quality steel are manufactured there. Formerly a copper mining and refining center, Avesta was the seat of copper minting in Sweden from 1644 to 1831.

Avestan (āvēs'tān), language belonging to the Iranian group of the Indo-Iranian subfamily of the Indo-European family of languages. One of the earliest forms of the Iranian languages to survive, Avestan is also the tongue of the *Avesta*, or scriptures of ZORASTRIANISM. See INDO-IRANIAN LANGUAGES. See A. V. W. Jackson, *An Avestan Grammar in Comparison with Sanskrit* (1968).

Aveyron (avārō'n'), department (1968 pop. 281,568), S central France, in Guienne. RODEZ is the capital.

aviary (ā'vēārē), structure for confining birds. It usually refers to an outdoor screened area within which environmental conditions are suitable to the birds. Aviaries must provide food, shelter, perches and flying space, nesting sites and materials, as well as protection against vermin and predators. For tropical species, heated indoor quarters are often provided for the winter. Aviaries are maintained privately as well as for public exhibit, research, and the breeding of wild birds. The construction of aviaries for exhibition, known since early Roman times, was spurred by the collection of unusual bird specimens by 15th-century explorers and the introduction of the canary into Europe. Aviaries are now found chiefly in public gardens, on private estates, and in many zoological parks. Among the aviaries in the United States are the Parrot Jungle, Miami, the Tracy Aviary, Salt Lake City, and the World of Birds, New York Zoological Park, New York City. Wild birds may be observed in their natural habitat in sanctuaries and on wildlife refuges.

aviation, operation of heavier-than-air aircraft and related activities. Aviation can be conveniently divided into military aviation, air transport, and general aviation. Military aviation includes all aviation activity by the armed services, such as combat, reconnaissance, and military air transport. Air transport consists mainly of the operation of commercial airlines, which handle both freight and passengers. General aviation consists of agricultural, business, charter, instructional, and pleasure flying; it includes such activities as the operation of air taxis, as well as aerial surveying and mapping. The detailed observations, explanations, and drawings preserved in the notebooks of Leonardo da Vinci mark the beginning of scientific studies of FLIGHT. Leonardo's work in this field centered around studies of birds, with observations of bats and other flying creatures. Flight was first successfully accomplished (1783) in a lighter-than-air device (see BALLOON). A number of investigators contributed to an early understanding of the principles involved in achieving flight in heavier-than-air machines. Among them were the Englishman W. S. Henson, who patented (1842) a design for a machine that closely foreshadowed the modern monoplane, the Englishman John Stringfellow, who developed a model plane said to be the first power-driven machine to fly, and F. H. Wenham, who in England devised the first wind-tunnel experiments. Alphonse Penaud, in France, made successful flying models of airplanes and wrote on the theory of flight. Clement Ader, a French engineer, achieved flight (over a distance of about 150 ft/46 m in 1890 and about 300 yd/280 m in 1897) in

his power-driven monoplane fashioned after a bat. In 1894 a plane built in England by Sir Hiram S. Maxim, operated by steam engines and carrying a crew of three, rose into the air from the track on which it was being tested. In the United States, S. P. Langley, Octave Chanute, and Otto Lilienthal made notable contributions to the early development of the airplane. The first successful flight in a man-carrying airplane powered by a motor was near Kitty Hawk, N.C., on Dec. 17, 1903, by Orville Wright, later on the same day his brother Wilbur bettered the length of flying time. Glenn H. Curtiss made improvements in the design of airplanes and engines and constructed the first successful flying boat or seaplane (1911-12). Stimulated by awards of trophies and prizes of money, aviators demonstrated, during the early 1900s, the feasibility of air travel to various parts of the world. World War I provided additional motivation for aviation research and development (see AIR FORCES and AIR POWER). During the first decade after the war, progress in air transport in Europe far outstripped that in the United States, but later the United States forged ahead. The cessation of hostilities made available a large number of aircraft that could be bought cheaply. This surplus occasioned a great deal of aviation activity, barnstorming and stunt-flying were the order of the day. The result was a more airplane-conscious public. Private companies in America were permitted to contract for carrying AIRMAIL after 1925, they thus obtained funds for expansion. During the 1930s aviation continued to expand. Technological improvements in wind-tunnel testing, engine and airframe design, and maintenance equipment combined to provide faster, larger, and more durable airplanes. The transportation of passengers became profitable, and routes were extended to include several foreign countries. Transpacific airmail service, begun by the Pan American Airways (later Pan American World Airways) system in 1934, was followed by the first transoceanic aviation service for passengers, on the *China Clipper*, from San Francisco to Manila (to Hong Kong in 1937). In 1939 the first transatlantic service to carry both mail and passengers was inaugurated. World War II interrupted much commercial air service, but with the cessation of the war air transportation was gradually resumed until air routes penetrated to all parts of the globe. The late 1940s saw the development of JET PROPULSION and a corresponding major change in aviation development. In the United States, design and construction of jet aircraft was speeded up by the Korean War, during which a majority of combat missions were flown by jet aircraft. The application of jet propulsion to commercial air transportation began in 1952 when British Overseas Airways Company opened the world's first regular jet passenger service with a flight from London to Johannesburg. Despite the fact that this service was short-lived, several major airlines began to show interest in commercial jet aircraft and today virtually all long-distance commercial air routes are flown by jet-powered aircraft. While jet propulsion has been a boon to the aviation industries it has created some major problems. The jet plane uses more fuel than conventional aircraft and requires longer runways, and its speed makes necessary more durable construction materials and creates special problems of air-traffic control. In addition, the takeoff and landing of jet aircraft over populated areas has created locally dangerous levels of noise POLLUTION. See AIR NAVIGATION, AIRPLANE, AIRSHIP, AIR, LAW OF THE. See Antoine de Saint Exupéry, *Wind, Sand, and Stars* (tr. 1939), J. L. Naylor, *Aviation: Its Technical Development* (1965), J. W. Benkert, *Introduction to Aviation Science* (1971), N. D. van Sickle, ed., *Modern Airman-ship* (1971), Enzo Angelucci, *Airplanes from the Dawn of Flight to the Present Day* (1973), J. W. R. Taylor and Kenneth Munson, *History of Aviation* (1973).

aviation medicine, scientific study of the biological effects of aviation, especially on human beings. Although aviation medicine is concerned with such problems as the spread of diseases by persons traveling by air and the harmful effects of noise and air pollution, its principal concern is with stresses applied to the passengers or crew of aircraft in flight. These stresses can include exposure to extreme temperatures, large inertial forces occurring when an aircraft undergoes acceleration, oxygen deprivation, and air sickness, as well as pilot fatigue and psychological disturbances. As the biological problems of space flight exceed considerably those of atmospheric flight, aviation medicine has become a special branch of SPACE MEDICINE, the latter study having largely absorbed the former.

Avicenna: see IBN GABIROL, SOLOMON BEN JUDAH

Avicenna (āvisēn'a), Arabic *Ibn Sina*, 980-1037, Islamic philosopher and physician, of Persian origin, b. near Bukhara. He was the most renowned philosopher of medieval Islam and the most influential name in medicine from 1100 to 1500. His medical masterpiece was the *Canon of Medicine*. Avicenna's interpretation of Aristotle followed to some extent that of the Neoplatonists. He saw God as emanating the universe from himself in a series of triads formed of mind, soul, and body. This process terminated in the Aristotelian "active intellect," which governs directly all earthly regions and transmits to all things their appropriate forms. Man's soul is also derived from it and is immortal. He was not an absolute pantheist as he believed matter to exist independently of God. Avicenna fixed the classification of sciences used in the medieval schools of Europe. See S. M. Afnan, *Avicenna, His Life and Works* (1958), Henry Corbin, *Avicenna and the Visionary Recital* (tr. 1960), Parviz Morewedge, *The Metaphysics of Avicenna* (1973).

Avignon (avēnyōn'), city (1968 pop. 88,958), capital of Vaucluse dept., SE France, on the Rhône River. It is a farm market with a wine trade and a great variety of manufactures. Located in (but never a part of) the Comtat Venaissin, it was the papal see during the Babylonian captivity, from 1309 to 1378 (see PAPACY), and the residence of several antipopes from 1378 to 1408 (see SCHISM, GREAT). Pope Clement VI bought (1348) full title to Avignon from the countess of Provence. After the Great Schism, Avignon was nominally ruled by papal legates, but the citizens actually governed themselves. The city became an archiepiscopal see in 1475. In 1791, after a plebiscite, it was incorporated into France. One of the loveliest of French cities, Avignon is surrounded by ramparts (12th and 14th cent.) and has many old churches. The beautiful Gothic papal palace was built (14th cent.) atop a hill to serve as residence, fortress, and church. A fragment of a 12th-cent. bridge across the Rhône remains. Avignon was celebrated by Petrarch, who resided at the court of Clement VI.

Ávila, Gil González de: see GONZÁLEZ DE ÁVILA

Ávila (a'vêla), town (1970 pop. 30,983), capital of Ávila prov., central Spain, in Old Castile, on the upper Adaja River. It attracts many tourists. One of the great religious centers of Spain, Ávila has preserved much medieval architecture. Up against its turreted wall (built 11th cent.) is the imposing Cathedral of San Salvador. The Basílica of San Vicente is one of the finest Romanesque buildings in Spain. In the convent of Encarnación lived St. Theresa, who was born at Ávila.

Ávila Camacho, Manuel (manwél' a'vêla kama'chō), 1897-1955, president of Mexico (1940-46). As a young man, Ávila Camacho joined the revolutionary forces. Later he became brigadier general. Under Lázaro Cárdenas he became (1938) minister of national defense. As president he followed a middle-of-the-road policy based on the agricultural, industrial, and educational reforms begun by Cárdenas. During World War II, he cooperated with the United States in programs of hemisphere defense, reciprocal trade, and agricultural labor exchange and sent (1945) a token Mexican air squadron to fight in the Pacific.

Avilés (avēlās'), town (1970 pop. 81,710), Oviedo prov., NW Spain, in Asturias, on the Bay of Biscay. Coal is exported, and there are metalworks and textile mills.

Avim (ā'vīm), unidentified town of Benjamin. Joshua 18:23.

Avims (ā'vīmz), the same as AVITES 1.

Avites (ā'vīts) 1. People of SW Palestine, probably assimilated by the Philistines. Joshua 13:3. Avims. Deut. 2:23. 2. People of AVA.

Avith (ā'vīth), city of unknown site, E of the Dead Sea. Gen. 36:35, 1 Chron. 1:46.

Avitus (āvītās), d. 456?, Roman emperor of the West (455-56). He was proclaimed emperor in Gaul with the support of the Visigoths but was deposed by RICIMER. He was elected bishop of Placentia but died soon afterward.

Aviz (avēzh'), village, Portalegre dist., central Portugal, in Alentejo. The Castilian order of the Knights of Calatrava assisted in driving the Moors from Portugal and in 1166 settled at EVORA. Alfonso II granted (1211) them Aviz, and this branch of the order became separate and was known as the Order of Aviz, a strictly Portuguese organization. The knights played an important part in Portuguese history. After the death of Ferdinand I in 1383, his illegitimate brother, John, who was master of the Order of Aviz, led a revolution to prevent the crown from going to Beatriz of Castile. He himself became king as John I. Thus the house of Aviz was established on the throne. It was the most distinguished of Portuguese dynasties, reigning until 1580, when Portugal passed for a time under Spanish rule (see PORTUGAL). Aviz is sometimes spelled Avis.

Avoca or Ovoca (both āvō'kə), river, c. 15 mi (24 km) long, formed by the union of the Avonmore and Avonbeg rivers, in Co. Wicklow, E. Republic of Ireland. It flows SE to the Irish Sea at Arklow. The river is celebrated by Thomas Moore's poem "Meeting of the Waters."

avocado (ā'vəka'do, āv'-), tropical American broad-leaved evergreen tree of the genus *Persea* of the family Lauraceae (LAUREL family). The fruit, called avocado, alligator pear, or, in Spanish, aguacate, has a high oil content. It is eaten fresh, chiefly in salads. The avocado was cultivated by the Aztecs. Avocados are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Magnoliales, family Lauraceae.

avocet (āv'əsēt), common name for a long-legged wading bird about 15 to 18 in. (37 S.-45 cm) long, related to the snipe and belonging to the same family as the stilt. The American avocet, *Homantopus mexicanus*, and the Australian avocet have black and white bodies and brown heads, the African and Eurasian species are black and white and are strikingly visible at distances. Avocets, like stilts, are wetland inhabitants. By sweeping their long, thin, upwardly curved bills through shallow water and mud, they capture small water animals, such as crustaceans, mollusks, amphibians, fishes, and insects; other insects are caught on the wing. Avocets have shrill calls, but also have a soft flute-like song. They breed gregariously. The female lays from three to five eggs per clutch in a shallow depression in the ground, which may be lined with small stones and grass. Avocets are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Charadriiformes, family Recurvirostridae.

Avogadro, Amadeo, conte di Quaregna (amadā'ō kōn'tā dē kwārā'nya avōga'drō), 1776-1856, Italian physicist, b. Turin. He became professor of physics at the Univ. of Turin in 1820. In 1811 he advanced the hypothesis, since known as Avogadro's law, that equal volumes of gases under identical conditions of pressure and temperature contain the same number of molecules. Since then, through the work of other physicists, the number of molecules in the gram molecular volume has been determined and found to be the same for all gases. This number (6.02 × 10²³) has been called AVOGADRO'S NUMBER. Avogadro's hypothesis, though not accepted for some fifty years after its introduction, is now one of the fundamental concepts of the atomic theory of matter.

Avogadro's number [for Amedeo Avogadro], number of particles contained in one MOLE of any substance, it is equal to 602,252,000,000,000,000,000, or in scientific notation, 6.02252 × 10²³. For example, 12.011 grams of carbon (one mole of carbon) contains 6.02252 × 10²³ carbon atoms, and 180.16 grams of glucose, C₆H₁₂O₆, contains 6.02252 × 10²³ molecules of glucose. Avogadro's number is determined by calculating the spacing of the atoms in a crystal line solid through X-ray methods and combining this data with the measured volume of one mole of the solid to obtain the number of molecules per molar volume.

avoirdupois weights (āv'ərdəpōiz') see ENGLISH UNITS OF MEASUREMENT.

Avon, 1st earl of: see EDEN, SIR ANTHONY.

Avon, nonmetropolitan county (1972 est. pop. 902,000), SW England, created under the Local Government Act of 1972 (effective 1974). It is composed of the county boroughs of BATH and BRISTOL and parts of the former counties of Gloucestershire and Somerset.

Avon (ā'vən, āv'ən) [Celtic, = river], name of several rivers in England. 1. Also called Bristol Avon or Lower Avon, rising in SW England at Tetbury, Gloucestershire, and flowing 75 mi (121 km) E, S, and then NW through Bath and Bristol to the Severn River at Avonmouth. It is navigable for large vessels to Bristol, an important port. 2. Also called East Avon, rising at Devizes, Wiltshire, S. England, and flowing 48 mi (77 km) S past Salisbury to the English Channel at Christchurch. It is navigable for small craft below Salisbury. 3. Also called Upper Avon, the most famous of the Avon rivers, sometimes known as Shakespeare's Avon. It rises near Naseby, Northamp-

tonshire, S central England, and flows 96 mi (154 km) SW to the Severn River near Tewkesbury, passing Rugby, Warwick, and Stratford-upon-Avon

Avon Lake, city (1970 pop 12,261), Lorain co., NE Ohio, on Lake Erie, inc 1917 It is chiefly a residential suburb of the Cleveland-NE Ohio industrial area The city has an electric power plant and factories that make plastics and aluminum castings Several beaches are there

Avranches (āv'rāNsh'), town (1968 pop 11,102), Manche dept., NW France, in Normandy, on the English Channel Because of its proximity to the rocky island of MONT-SAINT-MICHEL, Avranches has a large tourist trade A Roman town, it became an intellectual center in the early Middle Ages, Lanfranc taught there It was devastated in the Hundred Years War, the Wars of Religion, and World War II

Awaji-shima (āwā'jē-shē'mā), island, 32 mi (52 km) long and from 3 to 17 mi (4.8-27 km) wide, Hyogo prefecture, Japan, in the Inland Sea Sumoto, on Osaka Bay, is the chief city and port A relatively flat, fertile island, it produces grain and flowers and has commercial fisheries It was to Awaji-shima that the Empress Shotoku banished (764) the Emperor Junnin

Awami League, political organization in Pakistan and Bangladesh It was founded in 1949 as an opposition party in Pakistan and had a moderately socialist ideology The Awami [people's] League, with co-founder Sheikh MUJIBUR RAHMAN as its leader from 1953, called in 1966 for a federation of East and West Pakistan, an arrangement that would have given much greater autonomy to East Pakistan The league's candidates won a majority in the 1970 elections, but the central government in West Pakistan banned the league after war between East and West Pakistan erupted in early 1971 When Bangladesh (formerly East Pakistan) won its independence in late 1971, the league was the nation's dominant political force

Awe, Loch (lōkh ō), lake, 25 mi (40 km) long, Argyllshire, W Scotland, 118 ft (36 m) above sea level The hydroelectric power facility at Cruachan (completed 1967) has a 400,000-kw capacity

awl: see DRILL

Awolowo, Obafemi (ōbāfā'mē āwōlō'wō), 1909-, Nigerian statesman, a Yoruba chief, commonly known as "Awo" His first political activity (1940) was in the Nigerian Youth Movement, and he was one of the founders (1943) of the Nigerian Trades Union Congress In 1950 he founded a new political party, the Action Group Elected (1959) to the house of representatives of Nigeria, he became leader of the opposition Awolowo and other Action Group officials were placed (1962) under restriction but he later regained influence and became chancellor of the Univ of Ife and commissioner of finance

Axel: see ABSALON

Axel Heiberg Island (āk'sal hīb'arg), 13,583 sq mi (35,180 sq km), in the Arctic Ocean, N Northwest Territories, Canada, W of Ellesmere Island It was named by the Norwegian explorer Otto Sverdrup (who explored it 1898-1902) for one of his patrons The island's plateau surface (3,000-5,000 ft/915-1,830 m high) is deeply indented by fjords A McGill University expedition has carried out glaciological studies there since 1959

axiom, in mathematics and logic, general statement accepted without PROOF as the basis for logically deducing other statements (theorems) Examples of axioms used widely in mathematics are those related to equality (e.g., "Two things equal to the same thing are equal to each other," "If equals are added to equals, the sums are equal") and those related to operations (e.g., the ASSOCIATIVE LAW and the COMMUTATIVE LAW) A postulate, like an axiom, is a statement that is accepted without proof, however, it deals with specific subject matter (e.g., properties of geometrical figures) and thus is not so general as an axiom It is sometimes said that an axiom or postulate is a "self-evident" statement, but the truth of the statement need not be evident and may in some cases even seem to contradict common sense Moreover, a statement may be an axiom or postulate in one deductive system and may instead be derived from other statements in another system A set of axioms on which a system is based is usually assumed to be independent, i.e., no one of its members can be deduced from any combination of the others (Historically, the development of non-Euclidean geometry grew out of attempts to prove or disprove the independence of the parallel postulate of Euclid) The axioms should also be consistent, i.e., it should not be possible to deduce contradic-

tory statements from them Completeness is another property sometimes mentioned in connection with a set of axioms, if the set is complete, then any true statement within the system described by the axioms may be deduced from them

Axis, coalition of countries headed by Germany, Italy, and Japan, 1936-45 (see WORLD WAR II) The expression "Rome-Berlin axis" originated in Oct., 1936, with an accord reached by HITLER and MUSSOLINI The Axis was solidified by an Italo-German alliance in May, 1939 This was extended (Sept., 1940) by a military alliance among Germany, Italy, and Japan—the so-called Berlin Pact, to which Hungary, Rumania, Bulgaria, Slovakia, and Croatia adhered later The related Anti-Comintern Pact (see COMINTERN), originally concluded between Germany and Japan in 1936, later had as adherents, besides the Berlin Pact nations, Spain, Denmark, Finland, and the puppet governments of Manchukuo and Nanking

axolotl (āk'sālōt'əl), a SALAMANDER, *Siredon mexicanum*, found in certain lakes in the region of Mexico City, which reaches reproductive maturity without losing its larval characteristics This phenomenon is called neoteny, in salamanders it is apparently caused by certain environmental conditions, particularly a low level of iodine in the water, which affect the functioning of the thyroid gland Axolotls are permanently aquatic, never undergoing the metamorphosis to a terrestrial form characteristic of amphibians They grow larger than ordinary larval salamanders and develop sexually, but they retain external gills and a well-developed tail The axolotl was not recognized as a salamander until 1865, when several specimens at the Jardin des Plantes in Paris suddenly underwent metamorphosis After some experimentation it was discovered that when their pools were dried up most of the animals changed into the adult form Axolotls will also mature normally if fed thyroid gland extract The related North American tiger salamander, *Amphistoma tigrinum*, often exhibits neoteny in the Rocky Mts., where the iodine content of the water is low The axolotl has a broad head and bushy gills, its skin is a black-speckled dark brown It may grow as long as 13 in (33 cm) In Mexico City, axolotls are sometimes cooked and eaten as delicacies They are classified in the phylum CHORDATA, subphylum Vertebrata, class Amphibia, order Urodela, family Ambystomidae

axon: see NERVOUS SYSTEM, SYNAPSE

Axum, Ethiopia see AKSUM

Ayabe (āyā'bā), city (1970 pop 44,983), Kyoto prefecture, W central Honshu, Japan, on the Yura River It is an agricultural and communications center where raw silk and silk fabrics are manufactured

Ayacucho (āyākōō'chō), city (1969 est pop 27,900), capital of Ayacucho dept., S central Peru It is a commercial center in a rich mining region that produces gold, silver, and nickel Tourism is also important, and there is some agricultural production On the plains of Ayacucho, near the city, Antonio Jose de SUCRE crushingly defeated (Dec 9, 1824) Spanish forces under Viceroy José de la SERRA The battle not only secured Peruvian independence from Spain but also marked the triumph of the revolutionary forces in all South America Known as Huamanga since the 16th cent., the city was renamed after the battle It has a university and many fine examples of Spanish colonial architecture

Ayala, Pedro López de: see LÓPEZ DE AYALA

Ayala, Ramón Pérez de: see PÉREZ DE AYALA

Aydın (īdün'), city (1970 pop 50,551), capital of Aydın prov., W Turkey, on the Büyük Menderes River It is the trade center for a farm region where olives, figs, cotton, and tobacco are grown The city was destroyed by fire in 1922 and has been completely rebuilt Nearby are the ruins of the ancient Greek city of Tralles

aye-aye (ī'ī), name for an aberrant primate, *Daubentonia madagascariensis*, related to the LEMURS but distinguished by its specialized teeth and fingers A nocturnal, arboreal animal, it is found in dense bamboo forests in two isolated regions of Madagascar The aye-aye is about the size of a house cat It has silver and black fur with reddish underparts, a long, bushy tail, and a small, round head with large eyes and rounded, naked ears Its fingers and toes are extremely long and end in claws, the thumb and big toes are opposable The aye-aye uses its exceedingly slender third finger to dig into bark for wood-boring insect larvae, which it detects by means of its acute hearing It feeds on larvae, other small animals, eggs, and fruit, as well as on bamboo and sugarcane Its teeth are adapted for

gnawing and it was formerly thought to be a rodent because of its large, chisel-shaped, continuously growing incisors The aye-aye has no fear of humans and will strike at them if annoyed It has been the object of superstitious fear It is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Daubentonidae

Ayer, Sir Alfred Jules, 1910-, British philosopher, b London, grad Oxford, 1932 From 1933 to 1944 he was lecturer and research fellow at Oxford's Christ Church College and then was fellow (1944-45) and dean (1945-46) of Wadham College From 1946 to 1959 Ayer was Grote professor of the philosophy of mind and logic at the Univ of London, and in 1959 he became Wykeham professor of logic at Oxford His extremely influential *Language, Truth, and Logic* (1936) brought LOGICAL POSITIVISM to the attention of British and American philosophers Among his other works are *The Foundations of Empirical Knowledge* (1940), *Philosophical Essays* (1954), *The Problem of Knowledge* (1956), and *The Concept of a Person* (1963) He was knighted in 1970 See studies by F M Bak (1970) and Suresh Chandra (1970)

Ayesha: see AISHA

Aylesbury (ālz'barē), city (1971 pop 41,288), Buckinghamshire, central England It is an agricultural market for the upper Thames valley and is famous for its ducks There are printing works and other light industries, developed under a government program undertaken to disperse London's population and industry to surrounding counties The radical John Wilkes represented Aylesbury in Parliament during the late 18th cent

Ayllón, Lucas Vázquez de (lōō'kās vās'kāth dā īlyōn'), c 1475-1526, Spanish explorer He emigrated in 1502 to Santo Domingo, where he became a public official In 1521, Francisco Gordillo, sent by Ayllón to explore northward, seems to have landed in either Florida or South Carolina Ayllón secured title and permission to colonize In 1526 he sailed with three ships and about 500 settlers, landing probably in North Carolina, though some authorities claim it was on the site of the later Jamestown, Va Fever and other hardships plagued the settlers, and when Ayllón died of fever, the survivors returned to Santo Domingo

Aylmer, John (āl'mər), 1521-94, bishop of London His name is also spelled Elmer or Elmer He was briefly chaplain to the duke of Suffolk and tutor to his daughter, Lady Jane Grey In 1553 he was deprived of his church preferments for opposing the doctrine of transubstantiation, and he fled to Switzerland There he aided John Foxe in making a Latin translation of the *Book of Martyrs* and wrote *An Harborowe for Faithfull and Trewe Subjects* (1559) in answer to a tract by John Knox Returning to England after the accession of Elizabeth I, he rose in the Church of England to be (1577) bishop of London Though he was a man of great learning, his harsh treatment of his foes made him generally disliked

Aymara (īmārā'), South American Indians inhabiting the Lake Titicaca basin in Peru and Bolivia They are believed to have been the originators of the great culture represented by the ruins of TIAHUANACO Although subjugated by the INCA in the 15th cent after a long struggle, the Aymara continue to dominate the region The Aymara languages make up a separate unit; they are spoken in Peru and Bolivia in the Titicaca region The Aymara, conquered (1538) by Hernando and Gonzalo Pizarro, retained their pastoral and agricultural civilization In general, social organization was, and still is, based on the patrilineal family unit Contemporary Aymara and the related Quechua peasant culture is a blend of aboriginal, Spanish colonial, and modern elements See Harold Osborne, *Indians of the Andes, Aymaras and Quechuas* (1952), Julian Steward, ed., *Handbook of South American Indians*, Vol II (1963), Hans and Judith-Maria Buechler, *The Bolivian Aymara* (1971)

Aymé, Marcel (mārsēl' āmā'), 1902-67, French writer. Aymé's *La Table aux crevés* (1929), a story of peasant life, typifies the satirical tone of his works *La Jument verte* (1933, tr *The Green Mare*, 1955) and *Les Tiroirs de l'inconnu* (1960, tr *The Conscience of Love*, 1962) contain elements of fantasy and biting commentary on modern values Aymé wrote several superb volumes of tales for children, including *Les Contes du chat perché* (1934, tr *The Wonderful Farm*, 1951) Among his plays are *Clerambard* (1949, tr 1952) and *La Tête des autres* (1952) Two collections of his short stories are *Across Paris* (tr 1958) and *The Proverb* (tr 1961) See study by D R Brodin (1968)

Aymer of Valence (ā'mər, valēns', vālāns'), d 1260, bishop of Winchester, son of Isabella (widow of

King John of England) and Hugh X, count of La Marche. He was thus half brother of King Henry III of England. He is sometimes called Æthelmar. With his French brothers he went to England in 1247. Henry forced the chapter of Winchester to elect Aymer bishop in 1250, but his youth and ignorance, combined with his disinclination to assume the responsibilities along with the revenues of office, delayed his consecration. He was one of the king's 12 delegates in formulating the PROVISIONS OF OXFORD. However, he refused to swear to them, and hostility toward him and his brothers was an important factor in the BARONS' WAR. Later he and his brothers had to flee to the Continent. But although the Winchester chapter had chosen a new candidate, Aymer was consecrated by the pope in 1260 and was on his way back to England when he died in Paris.

Aymer of Valence, earl of Pembroke: see PEMBROKE, AYMER DE VALENCE, EARL OF

Ayolas, Juan de (hwan dā ayō'las), d. 1537?, Spanish conquistador, explorer of the Rio de la Plata country. He accompanied Pedro de MENDOZA on his expedition of 1535-36. Sent to look for provisions, he sailed up the Parana River and founded a fort called Corpus Christi. Later, leaving Domingo Martinez de Irala at a port called Candelaria, he went up the Paraguay River in search of a route to Peru. He fought the Guarani Indians, possibly at the site of Asunción, crossed the Chaco plain to the mountains, and is said to have been killed by the Indians on his return to Candelaria.

Ayr (ār), burgh (1971 pop 47,884), county town of Ayrshire, SW Scotland, at the mouth of the Ayr River on the Firth of Clyde. Ayr is a sea resort and a port for fishing and the export of coal. It manufactures farm and mining machinery, carpets, asphalt, and shoes. Oliver CROMWELL built a 12-acre (5-hectare) fort around St. John's Church when he garrisoned Ayr in 1652. In the heart of the Robert BURNS country, Ayr has various Burns memorials, as well as associations with Sir William WALLACE and Robert I of Scotland. In 1975, Ayr became part of the new Strathclyde region.

Ayrshire (ār'shīr, -shər) or **Ayr**, county (1971 pop 361,074, 1,132 sq mi (2,932 sq km), SW Scotland, on the Firth of Clyde. Ayr is the county town. N Ayrshire, lying in the midland industrial belt, has iron and oil deposits and varied industries. There is a nuclear power station at Hunterston. Farming is pursued in central and S Ayrshire, where potatoes and the famous Ayrshire cattle are raised. Ayrshire belonged to the kingdoms of STRATHCLYDE and NORTHUMBRIA and was the scene of the early exploits of the Scots leaders Sir William WALLACE and ROBERT I. The poet Robert Burns was born in Alloway, now part of Ayr. Under the Local Government Act of 1973, Ayrshire became (1975) part of the Strathclyde region.

Ayrshire cattle (ār'shēr, -shər), breed of dairy cattle originated in Scotland in the latter part of the 18th cent.; they are of medium size and vary in body color from almost pure white to nearly solid cherry-red or brown, as well as any combination of these colors. Ayrshires have excellent grazing qualities, are good, uniform producers of milk, and rank high among the dairy breeds as veal and beef producers. They are raised in Canada, the NE United States, Europe, South Africa, Australia, New Zealand, and Central America. First imported in 1837, there are now an estimated 150,000 registered Ayrshire cattle in the United States.

Ayton or Aytoun, Sir Robert (both ā'tən), 1570-1638, English poet and courtier. He was private secretary to the queens of James I and Charles I, besides holding other posts of honor. He wrote poems in French, Greek, and Latin, of which only the latter are preserved. His verse in English is marked by courtly elegance and delicacy.

Aytoun, William Edmonstone (ā'tōn), 1813-65, Scottish poet. He was (1845-64) professor of belles-lettres at Edinburgh Univ. The *Bon Gaultier Ballads* (written with Sir Theodore Martin, 1845) parodied poems by Macaulay, Tennyson, and others. His best-known poem, *Firmilian* (1854), burlesqued the chaotic, bombastic poetry being written in his day.

Ayub Khan, Muhammad (māhām'īd ā'yōōb kan), 1907-74, military leader and president (1958-69) of Pakistan. He was commissioned in the British Indian army in 1928 and saw active service as a battalion commander in World War II. After 1947, when the state of Pakistan was created, he assumed command of military forces in East Pakistan (now Bangladesh), and in 1951 he became commander in chief of the Pakistan army. He served (1954-56) as defense minister. In 1958, after a military coup d'état and the

abrogation of the constitution, Ayub Khan became president; he was confirmed in office by a referendum (Feb., 1960). Ayub Khan launched a vigorous program of land reform and economic development. He also inaugurated a system of what he called "basic democracies," tiers of local government councils that also served as electoral colleges. Martial law was lifted in 1962, and a new constitution of that year gave the executive enormous powers. Ayub Khan was reelected in 1965, defeating Fatimah Jinnah, daughter of the founder of Pakistan. In the same year he led the nation in war with India, but the conflict was ended by the Tashkent Declaration of Jan., 1966. Despite considerable economic growth, continuing economic and social inequalities, the disadvantaged position of East Pakistan, and limitation of civil liberties provoked increasing discontent with Ayub Khan's regime. Early in 1969, Ayub Khan apparently bowed to the pressure of opposition in announcing that he would not seek reelection in 1970. Unrest continued, however, and in March, 1969, he resigned power to a martial law government headed by Gen. Muhammad Yahya Khan. See his *Speeches and Statements* (8 vol., 1959-66) and *Friends, Not Masters: A Political Autobiography* (1967), study by Lawrence Ziring (1971).

Ayuthia: see AYUTTHAYA, Thailand

Ayutla (ayōōt'la), town (1970 pop 23,668), Guerrero state, S Mexico. Its full name is Ayutla de los Libres [Ayutla of the free]. It is the commercial center for an agricultural, cattle-raising, and lumbering area. The Plan of Ayutla, drawn up in 1854, was a reform program directed toward removing the dictator Santa Anna and convening a constituent assembly to frame a federal constitution. Preparing the way for the War of Reform (1856-61), the plan and the subsequent Revolution of Ayutla (which exiled Santa Anna and established a liberal government) was initially supported by Juan Álvarez, Ignacio Comonfort, Miguel and Sebastian Lerdo de Tejada, and Benito Juárez.

Ayutthaya (ayōōt'ā) or **Phra Nakhon Si Ayutthaya** (pra nakōn' sē), city (1965 est. pop 40,000), capital of Ayutthaya prov., S central Thailand, on the Chao Phraya River. It is the trade center for a prosperous rice-growing region. Ayutthaya was the capital of a Thai kingdom founded c 1350 and was located on the site of a Khmer settlement. Destroyed by the Burmese in 1559, it was rebuilt by the Siamese in the late 16th cent. but was again devastated by the Burmese in 1767, after which the capital was moved to Thon Buri and then to Bangkok. Ayutthaya has some of the few monuments of early Siamese civilization, notably the royal palace (16th cent.) and numerous temples and pagodas.

Azal (ā'zāl), name of uncertain meaning in an apocalyptic passage. Zech 14:5

azalea (azāl'yə) [Gr., = dry], any species of the genus *Rhododendron*, North American and Asian shrubs of the family Ericaceae (HEATH family) that are distinguished by the usually deciduous leaves. Azaleas are handsome shrubs with large clusters of pink, red, orange, yellow, purple, or white flowers. The better-known native American azaleas, often cultivated, include the flame azalea (*R. calendulacea*) of the Appalachians, the pinxter flower (*R. nudiflora*) and the fragrant white azalea, or swamp honeysuckle (*R. viscosa*), of the E United States, and the Western azalea (*R. occidentalis*) of California and Oregon. Most azaleas grow in damp, acid soils of hills or mountains. The rose-purple *R. canadense*, a rare species with an unusually northerly range (from Pennsylvania to Newfoundland) is the rhodora immortalized by Emerson. Many of the brilliantly flowered garden varieties are native to China and Japan, where the genus is most abundantly represented. The popular Ghent azaleas are hybrids. Dwarf azaleas are grown by florists as pot plants. Azaleas are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Ericales, family Ericaceae.

Azaliah (āzāl'ā), father of SHAPHAN. 1 Kings 22:3, 2 Chron 34:8

Azaña, Manuel (manwēl' athā'nyā), 1880-1940, Spanish statesman. An author and critic, he gained prominence as president (1930) of the Madrid Ateneo, a literary and political club, and came to the fore as a revolutionary political leader in 1931. He was minister of war in the first republican cabinet, and premier (1931-33) under President Alcalá Zamora. While premier, he pressed for social, military, and educational reforms. After the victory of the Popular Front in the Feb., 1936, elections, he again became premier, and in May, 1936, after the ousting of Alcalá Zamora, he was elected president. He headed the Loyalist government through the civil war, in which

he did not, however, play an important role. In Feb., 1939, he fled to France just before organized Loyalist resistance in Spain collapsed.

Azaniah (āz'ān'ī), Levite. Neh 10:9

Azanah, Miguel José de (mēgēl' hōsā' dā āthan'tha), 1746-1826, Spanish general and colonial administrator. After brief service in the cabinet of Charles IV, he was sent to the colonies and became viceroy of Mexico (1798-1800). He returned to Spain, served under Joseph Bonaparte, and fled to France after the fall of the Bonaparte regime.

Azarel (āzār'āēl), musician. Neh 12:36

Azareel (āzār'ēēl). 1 One of David's warriors. 1 Chron 12:6. 2 Musician. 1 Chron 25:18. Uzziel. 1 Chron 25:4. 3 Prince. 1 Chron 27:22. 4 Jew married to a foreign wife. Ezra 10:41. 5 Priest. Neh 11:13

Azariah (āzār'ī), common name in ancient Israel, especially among the priests. The following are not necessarily all different persons. 1 Chief officer under Solomon. 1 Kings 4:2, 1 Chron 6:9. 2 Chief officer under Solomon. 1 Kings 4:5. 3,4 Judahites. 1 Chron 2:8,38,39. 5 Kohathite Levite. 1 Chron 6:36. Uziah. 1 Chron 6:24. 6 High priest. 1 Chron 6:10,11. 7 Father of SERAIAH. 2 Chron 6:13,14. 8 Prophet who stirred King Asa to reform. 2 Chron 15:9. King of Judah. see UZZIAH. 10 Same as AHAZI. AH. 2. 11 High priest who withstood King Uziah. 2 Chron 26:17-20. 12 High priest under Hezekiah. 2 Chron 31:10-13. 13,14 Levites. 2 Chron 29:12. 15,16 Sons of King Jehoshaphat. 2 Chron 21:2. 17,18 Aides of Jehoiada in the conspiracy against Athaliah. 2 Chron 23:1. 19 Ephraimite leader. 2 Chron 28:12. 20 Worker on the wall of Jerusalem. Neh 3:23,24. 21 Same as SERAIAH. 7. 22 Interpreter of the law. Neh 8:7. 23 Sealer of the covenant. Neh 10:2. 24 Priest in postexilic Jerusalem. 1 Chron 9:11. Seraiah. Neh 11:11. 25 See JAAZANIAH. 26 One of the THREE HOLY CHILDREN. Azarias is the Greek form of his name.

azathioprine: see METABOLITE

Azay-le-Rideau (azā'-lā-rēdō'), village (1968 pop 2,755), Indre-et-Loire dept., N central France, in Touraine. It is the center of a wine-producing area and has a canning industry. Its famous Renaissance château (1518-29), set in a beautiful park on the Indre River, now houses a museum of Renaissance furniture and art.

Azaz (ā'zāz), descendant of Reuben. 1 Chron 5:8. **Azazel** (āzā'zēl, āz'āzēl), in the Bible, an obscure term of the ritual of the scapegoat. Lev 16:RSV. Azazel may be the name of the scapegoat or of a desert demon to whom the scapegoat was sent. The name was later applied to one of the fallen angels. KJV translates Azazel as "the scapegoat."

Azaziah (āz'āz'ī), 1 Musician. 1 Chron 15:21. 2 Ephraimite. 1 Chron 27:20. 3 Overseer of the Temple. 2 Chron 31:13. Azbuk (āz'bək), father of Nehemiah. Neh 3:16

Azbuk (āz'bək), father of Nehemiah. Neh 3:16

Azacapotzalco (askapōtsal'kō), city (1970 pop 545,513), S Mexico, in the Federal District. An important rail center, with railroad yards, it is the terminus of mail and cargo traffic. Cereals and beans are grown in the area. Azcapotzalco's cattle industry supplies the bulk of Mexico City's dairy products. Other industries include auto assembling, oil refining, and the manufacture of textiles, paper, and records. The city was a leading cultural center in the pre-Columbian period. During Mexico's War of Independence, it was the site (1821) of a major battle in which loyalist troops were forced to retreat by the revolutionary soldiers. Azcapotzalco is noted for its baroque colonial architecture and its 18th-century churches.

Azeglio, Massimo Taparelli, marchese d' (mas'sēmō taparēl'lē markā'zā dadzā'lyō), 1798-1866, Italian premier and author, b. Turin. He studied painting, then turned to literature and wrote two historical novels, *Ettore Fieramosca* (1833) and *Niccolo de Lapi* (1841). In 1845 he became a leader of the movement for national liberation. He urged a more unified policy but strongly opposed secret conspiracies and violent outbreaks. In his pamphlets he denounced the papal government and condemned Austria's ruthless repression of Italian liberals. He influenced King Charles Albert of Sardinia and fought (1848) against Austria, being wounded at Vicenza. In 1849 the new king, Victor Emmanuel II, made him premier, a post he held until 1852, when he was succeeded by the more radical Cavour. His autobiography throws much light on the Risorgimento.

Azekah (azē'ka), ancient city of Palestine, lying W of Jerusalem. Joshua 10:10,11, 1 Sam 17:1, 2 Chron 11:9, Neh 11:30, Jer 34:7

Azel (ā'zēl), descendant of Saul 1 Chron B 37,38, 9 43,44

Azem (ā'zēm), unidentified town of S Palestine Joshua 15 29, 19 3 Ezem 1 Chron 4 29

Azerbaijdzhan: see AZERBAIJAN SOVIET SOCIALIST REPUBLIC, USSR

Azerbaijan (ā'zēbījan', ā'zār-), region, c 41,160 sq mi (106,600 sq km), NW Iran, divided into the provinces of East Azerbaijan (1966 pop 2,596,439) and West Azerbaijan (1966 pop 1,087,182). The chief cities include TABRIZ (the capital of East Azerbaijan), REZAIYEH (the capital of West Azerbaijan), ARDEBIL, MARAGHEH, and KHOY. The region is bounded in the N by the Armenian and Azerbaijan Soviet Socialist Republics (from which it is separated by the Aras River) and in the W by Turkey and Iraq. Azerbaijan, which includes Lake Rezaieyeh, is mountainous, with deep valleys and fertile lowlands. Grains, fruits, cotton, and tobacco are grown, and wool is produced. The region has deposits of copper, lead, and iron. There is little modern industry. In ancient times Azerbaijan was dominated by the kings of Van and Urartu (in ARMENIA). By the 8th cent B C it had been settled by the Medes (see MEDIA), and it later formed the province of Media Minor in the Persian Empire. Azerbaijan is the traditional birthplace (7th cent B C) of Zoroaster, the religious teacher and prophet. After Alexander the Great conquered Persia, he appointed (328 B C) as governor the Persian general Atropates, who eventually established an independent dynasty. Later, the region, which came to be called Atropatene or Media Atropatene, was much disputed. In the 2d cent B C it was taken by the Parthian Mithradates I, and c 226 A D it was captured by the Sassanian Ardashir I. Shapur II enlarged Azerbaijan by adding territory in the north. Heraclius, the Byzantine emperor, briefly held the region in the 7th cent, just before the Arabs conquered it, and he converted most of its people to Islam and made it part of the caliphate. The Seljuk Turks dominated the region in the 11th and 12th cent, and the Mongols under Hulagu Khan established (13th cent) their capital at Maragheh. After being conquered by Tamerlane in the 14th cent, Tabriz became an important provincial capital of the Timurid empire. It was out of Ardebil that the Safavid dynasty arose (c 1500) to renew the state of Persia. There was fierce fighting between the Ottoman Empire and Persia for Azerbaijan. After brief Ottoman control, Abbas I, shah of Persia, regained control of the region in 1603, it remained entirely in the possession of the shahs until the northern part was ceded to Russia in the treaties of Gulistan (1813) and Turkmanchay (1828). The remainder was organized as a province of Persia, in 1938 the province was divided into two parts. In 1941, Soviet troops occupied Iranian Azerbaijan, they were withdrawn (May, 1946) after a Soviet-supported autonomous local government had been created. Iranian troops occupied the region in Nov, 1946, and the autonomous movement was suppressed. The majority of the people of Azerbaijan are Turkic-speaking Azers, or Azerbaijanis, who are Shiite Muslims. There are also some Armenians, Kurds, Jews, and Persians.

Azerbaijan Soviet Socialist Republic or Azerbaijdzhan (both ā'zārbījan', ā'zār-, Rus. azīrbījan'), constituent republic (1970 pop 5,111,000), 33,428 sq mi (86,579 sq km), SE European USSR, in Transcaucasia. BAKU is the capital, other major cities include KIROVABAD and SUMGAIT. Strategically situated at the USSR's gateway to SW Asia, Azerbaijan is bounded by Iran on the south, where the Aras (Araks) River divides it from Iranian Azerbaijan, by the Caspian Sea on the east, by the Dagestan Autonomous Republic on the north, and by the Armenian Republic on the west. The republic includes the Nakhichevan Autonomous Republic (separated from Azerbaijan proper by Armenia) and the Nagorno-Karabakh Autonomous Oblast. Azerbaijan occupies the western ranges of the Greater and Lesser Caucasus and the Kura River valley, which is the region's chief agricultural zone. Wheat, barley, corn, fruits, wine grapes, and potatoes are the leading food crops, and cotton, silk, and tobacco the foremost industrial crops. The subtropical Lenkoran lowland supports tea and rice. The Apsheron peninsula is one of the richest oil regions of the world. The republic's other mineral resources include natural gas, iron, copper, lead, zinc, limestone, pyrites, cobalt, and alunite. Widespread salt springs have enabled health resorts to flourish. Among the republic's chief manufactures are machinery, electrical equipment, building materials (especially cement), steel, aluminum, chemicals, and textiles. The old craft of carpet weaving is still practiced. The Azerbaijanis, a Turkic-speaking, Shiite

Muslim people of Persian culture, make up more than half the republic's population, Russians and Armenians are the largest minorities. The Azerbaijan SSR comprises the Transcaucasian or northern part of the historic region called AZERBAIJAN. Known to the ancients as Albania, the area was linked to the history of Armenia and Persia, particularly after its conquest (4th cent) by Shapur II. Overrun later by Mongols, it was divided after the fall (15th cent) of Tamerlane into several principalities (notably Shirvan). The territory of the present Azerbaijan SSR was acquired by Russia from Persia through the treaties of Gulistan (1813) and Turkamanchay (1828). Soon after the Bolshevik Revolution of 1917, Russian Azerbaijan joined Armenia and Georgia to form the anti-Bolshevik Transcaucasian Federation. After its dissolution (May, 1918), Azerbaijan proclaimed itself independent but was conquered by the Red Army in 1920 and made into a Soviet republic. In 1922, Azerbaijan joined the USSR as a member of the Transcaucasian Soviet Federated Republic. With the administrative reorganization of 1936, it became a separate republic. Immediately after World War II, Azerbaijan was used as a base for Communist rebels in Iranian Azerbaijan. The republic's educational institutions include Baku Univ and the Azerbaijan Academy of Sciences.

Azgad (āz'gād), family in the return to Palestine Ezra 2 12, B 12, Neh 7 17, 10 15

Aziel (āz'ēēl), in the Bible, shorter form of JAIZIEL.

Azikiwe, Benjamin Nnamdi (nam'dē azēk'wā), 1904-, Nigerian statesman, popularly known as Zik. He undertook (1925) advanced studies in the United States and eventually returned to Nigeria, where he founded a chain of newspapers and became one of the country's leading Ibo nationalists. He led a general strike in 1945 and later held a number of important posts, including the premiership (1954-59) of E Nigeria. Always a controversial figure, he was involved in financial and political scandals. During the 1959 elections he made an alliance with the National Peoples Congress, and, although the coalition won, he was appointed (1960) to the largely honorary office of governor general. In 1963 he became the first president of the republic of Nigeria, serving until his retirement in 1966.

Azilian: see MESOLITHIC PERIOD

azimuth (āz'əmāth), in astronomy, one coordinate in the HORIZON COORDINATE SYSTEM. It is the angular distance of a body measured westward along the celestial horizon from the observer's south point.

azine (āz'ēn), IUPAC name for PYRIDINE.

Aziza (āzī'zā), Jew who had a foreign wife Ezra 10 27

Azores (āzōrz', āz'ōrz'), Port Açores [Port. =haws], islands (1970 est pop 336,100), 905 sq mi (2,344 sq km), in the Atlantic Ocean, c 900 mi (1,448 km) W of mainland Portugal. Administratively a part of Portugal, they are divided into three districts named after their capitals: Ponta Delgada (on São Miguel), Angra do Heroísmo (on Terceira), and Horta (on Fayal). The nine main islands are São Miguel (the largest) and Santa Maria in the southeast, Terceira, Pico, Fayal, São Jorge, and Graciosa in the center, and Flores and Corvo in the northwest. Ponta Delgada is the largest city. The fertile soil yields many crops and supports vineyards. The islands are also a resort area. The Azores may have been known to the ancients and were included on a map in 1351. Portuguese sailors reached them in 1427 or 1431, but colonization did not begin until 1445 under Diogo de Sevilha or Gonçalo Velho Cabral (who may have been there in 1431). The islands were used as a place of exile and were also the site of naval battles between the English and the Spanish. In the 19th cent they were used by supporters of Maria II against Dom Miguel. The United States maintains air bases on the islands.

Azorin: see MARTINEZ RUIZ JOSÉ

Azov (āzōf'), city (1970 pop 59,000), SE European USSR, a port on the Don River delta near the Sea of Azov. It is a rail junction and a fishing center and has fish-processing plants. Founded as the Greek colony of Tanais (3d cent B C), it was a trading center and fortress. It came under Kievan Russia in the 10th cent, was taken by the Cumans in the 11th cent, became a Genoese colony in the 13th cent, and passed to the Turks in 1471. The Don Cossacks held the city (1637-42), but were driven out by the Turks. Peter the Great won the city in 1696 and thus opened southern routes for Russia, he was forced to cede it back to Turkey in 1711. Russia took it again in 1736, but was forced by the Treaty of Belgrade to dismantle the fortress in 1739. Russia secured Azov definitively by the Treaty of Kuchuk-Kainarji in 1774.

Azov, Sea of, Gr *Maotris*, Lat *Palus Maeotis*, ancient Rus *Surozhskoye*, northern arm of the Black Sea, c 14,000 sq mi (36,300 sq km), 5 European USSR, in SE Ukraine. The shallow sea (maximum depth 50 ft/15 m) is connected with the Black Sea by the Kerch Strait. Its chief arms are the Gulf of Taganrog (in the northeast) and the Sivash Sea (in the west), which is nearly isolated from the Sea of Azov by Arabat Tongue, a narrow sandspit. The Don and Kuban rivers flow into the sea, supplying it with an abundance of fresh water but also depositing much silt that tends to make the sea more shallow. The Sea of Azov has important fisheries and accounts for a large portion of the Soviet freshwater catch. The major ports are Rostov-na-Donu, Taganrog, Zhdanov, Kerch, and Berdyansk. The sea's importance increased with the opening of the Volga-Don Canal, the Manych Canal connects the Sea of Azov with the Caspian Sea.

Azrael (āz'rāēl) [Heb. =help of God], in the Koran, angel of death, who severs the soul from the body. The name and the concept were borrowed from Judaism.

Azriel (āz'rēēl) 1 Manassite 1 Chron 5 24 2 Naphtalite 1 Chron 27 19 3 Father of SERIAH 9

Aztec (āz'tēk'), Indian people dominating central Mexico at the time of the Spanish conquest. Their language belonged to the Nahuatl subfamily of Uto-Aztecan languages. They arrived in the Valley of Mexico from the north toward the end of the 12th cent and until the founding of their capital, TENOCHTITLÁN (c 1325) were a poor, nomadic tribe absorbing the culture of nearby states. For the next century they maintained a precarious political autonomy while paying tribute to neighboring tribes, but by alliance, treachery, and conquest during the 15th and early 16th cent they became a powerful political and cultural group. To the north they established hegemony over the HUASTEC, to the south over the MIXTEC and ZAPOTEC and even ventured as far as Guatemala. Their subjugation of the people of Tlaxcala in the mountains to the east was bloody but only intermittent, and the Tlaxcala people later became allies of the Spanish against the Aztec. Only in the west, where the TARASCAN Indians severely defeated them, did the Aztec completely fail to conquer. By absorption of other cultural elements and by conquest the Aztec achieved a composite civilization, based on the heritage of TOLTEC and Mixteca-Puebla. They attained a high degree of development in engineering, architecture, art, mathematics, and astronomy. The Aztec calendar utilized a 260-day year and a 52-year time cycle. Aztec skill in engineering was evident in the fortifications of their island capital. The Aztec further developed sculpture, weaving, metalwork, ornamentation, music, and picture writing for historical records. Agriculture was well advanced and trade flourished. The political and social organization was based on three castes—nobility, priesthood, and military and merchant. The priesthood was a powerful political as well as religious force. Aztec government was relatively centralized, although many conquered chiefs retained political autonomy, they paid tribute and kept commerce open to the Aztec. The Aztec had a large and efficient army. Prisoners of war were used for human sacrifice to satisfy the many gods of the Aztec pantheon, notably HUITZILOPOCHTI, the chief god, who was god of war. When the Spaniards, under Hernán Cortés, arrived in 1519, the Aztec civilization was at its height. However, many subject Indian groups, rebellious against Aztec rule, were only too willing to join the Spanish. Initially, the invaders were aided by the fact that the Aztec believed them

to be descendants of the god QUETZALCOATL MONTEZUMA II, the last of the independent Aztec rulers, received Cortes, who made him prisoner and attempted to rule through him. The Aztec revolted, Montezuma was killed, and Tenochtitlan was razed (1521). CUAUHTÉMOC, last of the emperors, was murdered (1525) and the Spanish proceeded to subjugate Mexico. See Bernal Diaz del Castillo, *The Discovery and Conquest of Mexico* (tr. by A. P. Maudslayi, 1928, repr. 1965), Alfonso Caso, *The Aztecs, People of the Sun* (tr. 1958, repr. 1967), Laurette Sejourne, *Burning Water Thought and Religion in Ancient Mexico* (1961), Jacques Soustelle, *The Daily Life of the Aztecs on the Eve of the Spanish Conquest* (tr. 1961, repr. 1970), G. C. Vaillant, *The Aztecs of Mexico* (rev. ed. 1962), B. C. Brundage, *A Rain of Darts The Mexican Aztecs* (1973).

Aztec Ruins National Monument, 27 acres (11 hectares), NW N Mex., near Farmington, est. 1923. The ruins there of a 12th-century PUEBLO INDIAN town contain interesting KIVAS, one of which has been completely restored. Pueblo Indian culture reached a high level of achievement in this area. The ruins were named by early settlers who mis-

takenly believed that they were built by the Aztec Indians.

Azubah (əzyōō'bə) 1 Wife of Caleb 1 Chron 2 18 2 Mother of Jehoshaphat 1 Kings 22 42, 2 Chron 20 31

Azueta, Mariano (maryā'nō aswā'la), 1873-1952, Mexican novelist. Azueta began his medical practice in 1899, writing short stories and novels in his spare time. In 1915 he joined Francisco Villa's revolutionary forces as a surgeon. From this experience came his modern classic, *Los de abajo* (1915, tr. *The Underdogs*, 1929), which depicts the military exploitation of the Indian. The novel is composed of linked sketches that are starkly realistic. After Villa's defeat Azueta took refuge in Texas. Returning to Mexico in 1916, he resumed his medical practice and his writing, taking little interest in politics. Among his later novels are *María Luisa* (1907), *Los fracasados* [the defeated] (1908), *Malá yerba* (1909), *Los caciques* (1917, tr. *The Bosses*, 1956), *Las moscas* (1918, tr. *The Flies*, 1956), and *San Gabriel de Valdivias* (1938).

Azur (ā'zər) 1 Father of HANANIAH 2 2 Father of JAAZANIAH 4

azurite (āzh'ərīt), blue mineral, the basic carbonate of copper, occurring in monoclinic crystals or masses that range from transparent to translucent and opaque. It is usually associated with MALACHITE, which it resembles except in color, when the two minerals are very closely associated, the stone is called azurmalachite. Beautiful crystals of azurite are found in the United States in Arizona and New Mexico and in France at Chessy (for which the mineral is sometimes called chessylite), they are used for ornamental purposes. The mineral is an important ore of copper.

Azusa (əzōō'sə), city (1970 pop. 25,217), Los Angeles co., S Calif., in the San Gabriel valley, inc. 1898. It is a residential and industrial city in a citrus-fruit growing area. Its manufactures include aircraft components, electronic equipment, chemicals, lawn mowers, bicycles, and beer. Azusa has a large Mexican-American population. Azusa Pacific College and Citrus College are in the city.

Azzah (āz'ə), variant of GAZA

Azzan (āz'ān), man of Issachar Num 34 26

Azzur (āz'ər), sealer of the covenant Neh 10 17

B, second letter of the ALPHABET Its Greek correspondent is named beta It is a usual symbol for a voiced bilabial stop In MUSICAL NOTATION it is used to represent a note in the scale In chemistry B is the symbol of the element BORON

Ba, chemical symbol of the element BARIUM

Baade, Walter (val'tar ba'də), 1893–1960, German astronomer From 1919 to 1931 he was on the staff of the Hamburg observatory, from 1931 to 1958, at the Mt Wilson observatory He presented evidence for the existence of two different STELLAR POPULATIONS of older and newer stars After observations through the 200-in reflecting telescope at the Mt Palomar Observatory, his recalculations showed that it was necessary to double the cosmic-distance scale, i.e., the distances between extragalactic bodies and the MILKY WAY but not the distances within the Milky Way itself

Baal (bā'āl), plural **Baalim** (bā'ālīm) [Semitic, = possessor], name used throughout the Old Testament for the deity or deities of Canaan The term was originally applied to various local gods, but by the time of the Ugarit tablets (14th cent B.C., see UGARIT), Baal had become the ruler of the universe The Ugarit tablets make him chief of the Canaanite pantheon He is the source of life and fertility, the mightiest hero, and the lord of war There were many temples of Baal in Canaan, and the name Baal was often added to that of a locality, e.g., Baal-peor, Baal-hazor, Baal-hermon The Baal cult penetrated Israel and at times led to a syncretism The practices of holy prostitution and child sacrifice were especially abhorrent to the Hebrew prophets, who denounced the cult and its "high places" (temples) This abhorrence probably explains the substitution of Ish-bosheth for Esh-baal, of Jerubbesheth for Jerubbaal (a name of Gideon), and of Mephibosheth for Merib-baal The substituted term probably means "shame" The final detestation of the term is seen in the use of the name Beelzebub (see SATAN), probably the same as Baal-zebub 1 Kings 11 4–8, 2 Kings 1 The Baal of 1 Chron 4 33 is probably the same as RAMAH 3 As cognates of Baal in other Semitic languages there are Bel (in Babylonian religion) and the last elements in the Tyrian names Jez-ebe, Hasdrubal, and Hannibal

Baalah (bā'ālā) [Heb, fem of Baal] 1 The same as BILHAH 2 The same as KIRJATH-JEARIM 3 Unidentified mountain, in the vicinity of Jamnia Joshua 15 11

Baalath (bā'ālāth) [Heb, fem of Baal] 1 Town of Dan Joshua 19 44 2 Unidentified city 1 Kings 9 18, 2 Chron 8 6

Baalath-beer (bā'ālāth-bē'er), apparently the same as RAMAH 3

Baalbek (bal'bēk), ancient city, now in Lebanon, 35 mi (56 km) NW of Damascus Originally it was probably devoted to the worship of Baal or Bel, the Phoenician sun god, although no traces of an early Phoenician settlement have survived The Greeks called the city Heliopolis [city of the sun] It became very prominent in Roman days and was made a separate colony by Augustus Both Greek and Roman architects employed their genius on Baalbek's buildings Among the most imposing Roman remains are the temple of Bacchus and the temple of Jupiter The city was sacked by invaders and was destroyed by an earthquake in 1759

Baal-berith (bā'āl-bē'rīth), local god of Shechem Judges 8 33, 9 4 Berith Judges 9 46

Baale (bā'ālē) [Heb, fem of Baal], the same as KIRJATH-JEARIM

Baal-gad (bā'āl-gād'), place at the foot of Mt Hermon It represented the northern limit of Joshua's conquest Gad apparently refers to a god of fortune Joshua 11 17, 12 7, 13 5

Baal-hamon (bā'āl-hāmōn), location of Solomon's vineyard Song 8 11

Baal-hanan (bā'āl-hā'nān) 1 King of Edom Gen 36 38, 39, 1 Chron 1 49, 50 2 One of David's officers 1 Chron 27 28

Baal-hazor (bā'āl-hā'zōr), holy place where Absalom's servant killed Amnon 2 Sam 13 23

Baal-hermon (bā'āl-hūr'mān) see HERMON, MOUNT

Baali (bā'ālī), title of God that is to be used no longer by Israel Hosea 2 16, 17

Baalim (bā'ālīm), plural of BAAL

Baalis (bā'ālīs), king of the Ammonites, contemporary with Jeremiah Jer 40 14

Baal-meon: see BETH-BAAL-MEON

Baal-peor (bā'āl-pē'ōr), local divinity of Peor One of the apostasies of Israel involved this god, apparently the cult was orgiastic, and the name became symbolic of all shameful apostasies Num 25, Deut 4 3, Ps 106 28, Hosea 9 10 Peor Num 25 18, 31 16, Joshua 22 17 The god's name appears in BETH-PEOR Under the form Belphegor, the name became that of a devil in the Middle Ages, Machiavelli used it in his *Belfagor*

Baal-perazim (bā'āl-pēr'azīm), unidentified place where David defeated the Philistines 2 Sam 5 20, 1 Chron 14 11 Perizim of Isa 28 21 is probably the same

Baal-shalisha (bā'āl-shāl'ishā), place perhaps in SHALISHA 2 Kings 4 42

Baal-Shem-Tov (bal-shēm-tōv), c 1698–1760, Jewish founder of modern HASIDISM, b Russia His life is the subject of many legendary tales, which circulated even before his death and which may be based in part upon a fictional collection of tales published in Yiddish in the 17th cent Originally named Israel ben Elezer, he is said to have been born of elderly, poor parents and to have been orphaned at an early age He later supported himself variously as an assistant in a heder (Hebrew religious school), as a synagogue watchman, as a quarry worker, and as an innkeeper He gained a reputation as a miracle healer, hence the name Baal-Shem-Tov [Heb, = master of the good name, i.e., the Name of God] Central to his teachings was the notion that one must worship and adhere to God in all activities, both in acts of prescribed religious observance and in the affairs of daily life He further held that not in sorrow but in joy must one worship God, and that repentance is always possible It appears that his reputation as a miracle healer and his basic orientation to religious life, which allowed the unschooled as well as the scholar to experience a sense of his redemption, gained for him a large circle of followers, out of which developed the several communities of contemporary Hasidim See Martin Buber, *Legend of the Ba'al Shem* (tr 1955, repr 1969) and *Tales of the Hasidim* (tr, 2 vol, 1947–48, repr 1961), D Ben Amos and J R Mintz, ed., *In Praise of the Baal Shem Tov* (tr 1970)

Baal-tamar (bā'āl-tā'mar), unidentified place near Gibeah Judges 20 33

Baal-zebub (bā'āl-zē'bāb), god of Ekron see BAAL and SATAN

Baal-zephon (bā'āl-zē'fōn), place near the Israelites' crossing of the Red Sea Ex 14 2, 9, Num 33 7

Baana or **Baanah** (both bā'anā) 1 Murderer of Ish-bosheth 2 Sam 4 1–12 2 Father of HELEB 3 Officer under Solomon 1 Kings 4 12 4 Officer under Solomon 1 Kings 4 16 5 One who returned with Zerubbabel, apparently the father of ZADOK 6 Ezra 2 2, Neh 7 7, 10 27

Baara (bā'ārā), wife of SHAHARAIM

Baarle-Hertog (bar'lā-hēr'tōkh), Fr *Baerle-Duc*, town (1970 pop 2,146), Antwerp prov, N Belgium A Belgian possession since 1479, it is now an enclave (3 sq mi/7.8 sq km) in S Netherlands The sovereignty of its outlying districts was disputed by the Dutch, but was settled (1959) in favor of Belgium by the International Court of Justice

Baaseiah (bā'āsē'yā), Levite 1 Chron 6 40

Baasha (bā'āshā), king of Israel He made himself king by the murder of King Nadab and the royal family According to the Bible he was a wicked man, he fought against ASA of Judah, who won with the

aid of Benhadad of Syria Baasha was succeeded by his son Elah 1 Kings 15 27–34, 16 1–13, 2 Chron 16

Ba'ath party (ba'ath), Arab political party, in Syria and Iraq Its main ideological objectives are socialism and pan-Arab union Founded in Damascus in 1941 and reformed, with the name Ba'ath, in the early 1950s, it rapidly achieved political power in Syria In 1958—with one of its founders, Salah al-Din Bitar, as foreign minister—it led Syria into the ill-fated United Arab Republic (UAR) with Egypt The Ba'athists, like most other Syrians, quickly came to resent Egyptian domination, and the Ba'athist members of the union government resigned in Dec., 1959 Syria withdrew from the UAR in 1961 In 1963 a military coup d'état restored the Ba'ath to power, and it embarked on a course of large-scale nationalization From 1963 the Ba'ath was the only legal political party in Syria, but factionalism and splintering within the party led to a succession of governments and new constitutions In 1966 a military junta representing the more radical elements in the party displaced the more moderate wing in power, purging from the party its original founders, Michel Aflaq and Bitar Subsequently the main line of division was drawn between the so-called progressive faction, led by Nureddin Atassi, which gave priority to the firm establishment of a one-party state and to neo-Marxist economic reform, and the so-called nationalist group, led by Gen Hafez al-ASSAD, which was less doctrinaire about socialism but favored a militant posture on Arab union and hostility toward Israel Despite constant maneuvering and government changes, the two factions remained in an uneasy coalition of power until 1970, when, in another coup, Assad succeeded in ousting Atassi as prime minister In Iraq the Ba'athists first came to power in the coup d'état of Feb., 1963, when Abdal Salem Arif became president Interference from the Syrian Ba'athists and disputes between the moderates and extremists, culminating in an attempted coup by the latter in Nov., 1963, served to discredit the extremists However, the moderates continued to play a major role in the succeeding governments In July, 1968, a bloodless coup brought to power the Ba'athist general Ahmad Hassan al-BAKR Wranglings within the party continued, and the government periodically purged its dissident members Relations between the Ba'athist regimes of Syria and Iraq have frequently been strained See IRAQ, SYRIA

Bab: see BABISM

Babar: see BABUR

Babbage, Charles (bāb'ij), 1792–1871, English mathematician and inventor He devoted most of his life and expended much of his private fortune and a government subsidy in an attempt to perfect a mechanical calculating machine that foreshadowed present-day machines He was a founder of the Royal Astronomical Society He wrote *Tables of Logarithms* (1827) and an autobiography (1864) See biographies by Maboth Moseley (1970) and Dan Halacy (1970)

Babbitt, Irving, 1865–1933, American scholar, b Dayton, Ohio At Harvard as professor of French literature from 1912 until his death, he was a vigorous critic of romanticism, deprecating especially the influence of Rousseau on modern thought and art He and Paul Elmer MORE initiated a movement, called New Humanism, that advocated a forceful doctrine of moderation and restraint, looking to classical traditions and literature for inspiration His works include *Literature and the American College* (1908), *The New Laokoon* (1910), *The Masters of Modern French Criticism* (1912), and *On Being Creative* (1932) See F E McMahon, *The Humanism of Irving Babbitt* (1931), *Irving Babbitt* (ed by Frederick Manchester and Odell Shepard, 1941, repr 1969)

Babbitt, Milton, 1916–, American composer, b Philadelphia Babbitt turned to music after having begun the study of mathematics He was a composition pupil of Roger Sessions at Princeton Babbitt has attempted to apply 12-tone principles to all the elements of composition dynamics, timbre, and

rhythm, as well as melody and harmony. He calls this "total serialization" (see SERIAL MUSIC). In 1959, Babbitt became one of the directors of the new Columbia-Princeton Electronic Music Center in New York City. His works include *Three Compositions for Piano* (1947), three string quartets (1942, 1954, 1969-70), *Composition for Synthesizer* (1961), and *Philomel* (1964) for soprano, taped soprano, and synthesizer.

Babbitt metal, an antifriction metal first produced by Isaac Babbitt in 1839. In present-day usage the term is applied to a whole class of silver-white bearing metals, or "white metals." These alloys usually consist of relatively hard crystals embedded in a softer matrix, a structure important for machine bearings. They are composed primarily of tin, copper, and antimony, with traces of other metals added in some cases and lead substituted for tin in others.

babbler, common name for some members of the large, diversified family Timaliidae, passerine birds found primarily in wooded areas of Asia, Africa, and Australia. Babblers have soft, fluffy plumage and vary in coloring, various species resemble other birds, and five of the seven groups of babblers are named on this basis—the wren babblers, the tit babblers, the laughing thrushes, and the crow tits, or parrotbills. The wrenbills, the only American babbler (found W of the Rockies), is believed to be an offshoot of the crow tits. Other groups are called ground babblers, found in Australia, jungle babblers, distributed in the Philippines, and rock fowl, found in W Africa. Babblers are insectivorous and, as their name suggests, are noisy birds. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Timaliidae.

Babcock, Stephen Moulton, 1843-1931, American agricultural chemist, b. Bridgewater, N.Y., grad Tufts College (B.A., 1866), Univ. of Göttingen (Ph.D., 1879). He was, from 1887 to 1913, professor of agricultural chemistry at the Univ. of Wisconsin and chief chemist of the Wisconsin Agricultural Experiment Station. He is known chiefly for the Babcock test (perfected in 1890) for determining the percentage of butterfat in milk. The test advanced the modern dairy industry since it permits the rapid and accurate grading of milk at markets, discourages adulteration and thinning practices, and, by making practical the testing of the milk of individual cows, promotes the development of better dairy strains. His experimental studies in the food requirements of animals paved the way for the work of the American chemist E. V. McCollum on vitamin A. He invented an apparatus to determine the viscosity of liquids. The last two decades of his life were spent in basic research on the nature of matter and its relation to energy.

Babel, Isaac Ermanuvelovich (é'sak émanuél'vich ba'bal), 1894-1941, Russian short-story writer and playwright. Babel won fame with *Odessa Tales* (1923-24), written in a Russo-Jewish jargon, and *Red Cavalry* (1926, tr. 1929), dramatic stories based on his life in the army and employing the racy slang of the Kuban Cossacks. A brilliant stylist, he combined stringent Jewish irony with Russian caricature. He turned to drama in *Sunset* (1928) and *Maria* (1935) and in the novel *Benia Krak* (1927, tr. 1935) about a famous Jewish bandit. He was criticized during the 1930s by the Communist party and was arrested in 1938. A victim of Stalin's purges, Babel died in a concentration camp. After Stalin's death, some of his works were republished in censored form in the Soviet Union. Translations of his best stories appear in *Collected Stories* (1955) and *You Must Know Everything* (1969).

Babel (bā'bal), in the Bible, Babylonian city where Noah's descendants (who spoke one language) tried to build a tower to reach to heaven. For this presumption their words were made incomprehensible. Gen. 11:1-9. Some see in this an etiological story on the diversity in speech and also a reminiscence of the ziggurats in Mesopotamia.

Bab el Mandeb (bāb ɛl mǎn'dēb) [Arabic, = gate of tears], strait, 17 mi (27 km) wide, linking the Red Sea with the Gulf of Aden and separating the Arabian Peninsula from E. Africa. It is an important passage on the Indian Ocean-Mediterranean Sea shipping route via the Suez Canal. Control of the strategically located strait was long contested by Britain and France. The island of Barim is in the strait.

Babenberg (ba'bānbērk), ruling house of Austria (976-1246). It possibly descended from, or succeeded, a powerful Franconian family of the 9th

cent. from whose castle the city of Bamberg probably took its name. Holy Roman Emperor Otto II created Count Leopold of Babenberg margrave of the Eastern March (i.e., Austria). Among Leopold's successors were LEOPOLD III, Leopold IV and Henry II, also dukes of Bavaria (1139-56), and Henry II, called Jasomirgott ("if God will") for his favorite phrase. Henry II became (1156) the first duke of Austria. In 1192 the Babenbergs inherited Styria. Duke Leopold V took part in the Third Crusade and later made RICHARD I of England a prisoner. Leopold VI, called the Glorious, brought the house to its greatest power. His son, Frederick II, called the Quarrelsome, died childless in 1246, and Austria passed (1251) to OTTOCAR II of Bohemia, who married Frederick's sister. Under Babenberg rule Austria was extended through eastward colonization, and relative peace was maintained through intermarriage with the ruling families of Bohemia and Poland. As a result the Babenbergs were in part responsible for the multinational character of the later Hapsburg empire.

Baber: see BABUR.

Babeuf, François Noel (fra'nswa' nōēl' babōf'), 1760-97, French revolutionary, organizer of a communist uprising against the DIRECTORY. Of petty bourgeois origin, he was an enthusiastic supporter of the French Revolution. He settled in Paris in 1794 and founded a political journal, the *Journal de la liberté de la presse* (later the *Tribun du peuple*). In it he argued that the Revolution had not gone far enough merely by establishing political equality. He was imprisoned (Feb.-Sept., 1795) for his writings, but emerged an even more violent enemy of economic injustice. Calling himself Gracchus Babeuf, he organized an egalitarian group that included discontented artisans and soldiers. The Directory halted his journal and banned the organization. He then formed a secret society that plotted to overthrow the government; it became known as the Conspiracy of the Equals. It distributed propaganda and announced a program of economic equality—common ownership of the land and the right of all men to work and to share in the products of the economy. The form of communism desired by the conspirators referred mainly to the distribution of goods rather than to means of production. The plot was betrayed to the government, and after a long trial Babeuf was executed. His doctrines, however, known as Babouvism, were kept alive, largely by secret revolutionary societies. See his *Defense of Gracchus Babeuf before the High Court of Vendôme*, tr. and ed. by I. A. Scott with an essay by H. Marcuse (1967), studies by D. Thomson (1947), F. M. Buonarroti (tr. 1965), and E. B. Bax (1911, repr. 1971).

Babington, Anthony (bāb'īngtən), 1561-86, English conspirator. A member of the Roman Catholic gentry, he served as a youth in the household of the earl of Shrewsbury at Sheffield Castle, where MARY QUEEN OF SCOTS was imprisoned. In 1586 he became involved in a plot to murder Queen Elizabeth I, to free Mary, and to make England a Catholic realm. The plot was discovered; Babington was executed, and the evidence against him was also used to convince Elizabeth that it was necessary to behead Mary.

Babism (ba'bīzəm), system of doctrines of a Muslim sect of 19th-century Persia. In 1844 the disciples of a movement within Shiite Islam recognized Sayyid Ali Muhammad of Shiraz as a prophet and thus the successor of Moses, Christ, and Muhammad. They granted Sayyid the title of Bab [gate], and missionaries were sent throughout Persia. Babism took its beliefs especially from Sufism, Gnosticism, and Shiite Islam. It advocated the abrogation of some Koranic laws. The movement placed special emphasis on the coming of the Promised One, who would embody all the tenets of the new religion. In 1845 oppression of Babism began, and in 1848 the movement declared its complete secession from Islam and all its rites. Upon the accession of a new shah in 1848, the Bab's followers, rising in insurrection, were defeated. Many of the leaders were killed, and the Bab was executed at Tabriz in 1850. Two years later, after an attempt had been made on the life of the shah, there were more persecutions. In 1863 the Babists were removed to Constantinople and later to Adrianople and Cyprus. After 1868 a division had its center in Acre under the leadership of BAHÁ ULLAH, the originator of BAHÁISM, who had declared himself the Promised One. See E. G. Browne, ed. and tr., *A Traveller's Narrative Written to Illustrate the Episode of the Bab* (1891) and *Materials for the Study of Babi Religion* (1918), H. M. Balyuzi, *The Bab* (1973).

Babol (baból'), town (1971 est. pop. 52,000), N Iran, near the Caspian Sea, NE of Tehran. It is the region's chief commercial center and was once the major trading center of N Iran. Processed food and textiles are produced, and fruits, tobacco, and cotton are raised nearby. Founded in the 16th cent., it was built on the site of the ancient city of Mamter. Ruins of a palace of Abbas I are there. Located in the Caspian littoral, the city receives abundant rainfall. It was formerly called Barfrush.

baboon, any of the large, powerful, ground-living MONKEYS of the genus *Papio*, also called dog-faced monkeys. Baboons are found in Africa, with one species extending into Asia. They have close-set eyes under heavy brow ridges, long, heavy muzzles, powerful jaws, and sharp, tusklike upper canine teeth. Their fur is thick, and in some species there is a mane about the head and shoulders. The heavy tail is of moderate length. The buttock pads, or ischial callosities, are thick and brightly colored. Baboons have cheek pouches for storing food. They live in grassland, brush, or rocky country, foraging on the ground and sleeping in trees or on rock outcroppings. They travel in troops of up to 100 individuals, led by a dominant male and having a highly developed social structure. They feed on roots, fruits, insects, and small animals, including other monkeys. Powerful fighters, baboons show little fear of larger animals, including humans, and can successfully battle leopards, their worst enemies. They can be nuisances in villages and suburbs, where they sometimes conduct foraging raids into houses. They are considered among the most intelligent of monkeys. The hamadryas baboon (*Papio hamadryas*) of NE Africa and SW Arabia was the sacred baboon of Egypt. It has silvery brown fur and an impressive mane. Several other species, differing in size and color, are found in different parts of sub-Saharan Africa. The gelada (*Theropithecus gelada*) of Ethiopia is closely related to the baboon. It has olive-brown fur, a bright pink face and buttock pads, an enormous mane, and a tufted tail. Also closely related are the fantastically colored MANDRILL and the drill, both forest-dwellers. Baboons are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Cercopithecidae.

Babrius (bā'brēās), fl. 2d cent.?, Greek fabulist, versifier of the fables of AESOP. Many of the medieval prose collections of Aesop were based on Babrius. He may have been a Hellenized Roman.

Babson, Roger Ward, 1875-1967, American businessman and statistician, b. Gloucester, Mass. In 1904 he founded the Babson Statistical Organization, Inc., whose business and financial statistics, published in *Babson's Washington Service*, are widely sold in the United States, Great Britain, and Canada. In 1919 he established Babson Institute (now Babson College), in Massachusetts, and in 1927 he founded Webber College, in Florida. He was the Prohibition party's 1940 presidential candidate, polling 57,812 votes. He was the author of many books on finance and investment, among the best known of which are *Business Barometers* (1909, 10th ed. 1961), *Investment Fundamentals* (1930, 4th ed. 1948), and *If Inflation Comes* (1937). See his autobiography, *Actions and Reactions* (1937, rev. ed. 1949).

Babur (ba'bār) [Turk. = lion], 1483-1530, founder of the MOGUL empire of India. His full name was Zahir ud-Din Muhammad. A descendant of Tamerlane and of Jenghiz Khan, he succeeded (1494) to the principality of Fergana in central Asia. His early life was spent in an ultimately unsuccessful struggle to retain his inheritance and to recover Samarkand (Tamerlane's capital) from the Uzbeks. In 1504, however, he captured Kabul and established a kingdom in Afghanistan. After the failure of his final attempt (1512) on Samarkand, Babur began raids southward into India. In 1525, responding to an invitation from the governor of the Punjab to overthrow the sultan of Delhi, Babur launched a serious invasion. Although his force was small, he defeated the sultan at Panipat in 1526 and captured Agra and Delhi. He finally conquered nearly all of N India. Babur was also a distinguished poet. His autobiography (tr. by A. S. Beveridge, 1922) is his most important work. His son Humayun succeeded him. Babur's name is also transliterated Baber and Babar. See biography by Fernand Grenard (tr. 1930, repr. 1971), study by R. D. Palsokar (1971).

Babylon (bāb'ālōn), ancient city of Mesopotamia. One of the most important cities of the ancient Near East, it was on the Euphrates River and was north of the cities that flourished in S Mesopotamia.

in the 3d millennium B.C. It became important when HAMMURABI made it the capital of his kingdom of BABYLONIA. The patron god of Babylon, Marduk (identical with Bel), became a leading deity in the Neo-Babylonian pantheon. The city was destroyed (c. 689 B.C.) by the Assyrians under SENNACHERIB, and its real splendor belongs to the later period of Babylon after the city was rebuilt. The brilliant color and luxury of Babylon became legendary from the days of Nebuchadnezzar (d. 562 B.C.). The Hanging Gardens were one of the SEVEN WONDERS OF THE WORLD. The walls of Babylon, its palace, and the processional way with the famous Ishtar Gate were decorated with colorfully glazed brick. Among the Hebrews (who suffered the BABYLONIAN CAPTIVITY under Nebuchadnezzar) and the later Greeks the city was famed for its sensual living. Under the rule of Nabonidus the city was captured (538 B.C.) by Cyrus the Great and was used as one of the administrative capitals of the Persian Empire. In 275 B.C. its inhabitants were removed to SELEUCIA, which replaced Babylon as a commercial center.

Babylon, residential and resort village (1970 pop. 12,588), Suffolk co., SE N.Y., on Long Island, on Great South Bay, settled 1689, inc. as a village 1893.

Babylonia (bābīlō'nēā), ancient empire of Mesopotamia. The name is sometimes given to the whole civilization of 5 Mesopotamia, including the states established by the city rulers of Lagash, Akkad (or Agade), Erech, and Ur in the 3d millennium B.C. Historically it is limited to the first dynasty of Babylon established by HAMMURABI (c. 1750 B.C.), and to the Neo-Babylonian period after the fall of the Assyrian Empire. Hammurabi, who had his capital at BABYLON, issued the code of laws for the management of his large empire—for he was in control of most of the Tigris and Euphrates region even before he defeated the Elamites. Babylonian CUNEIFORM writing was derived from the Sumerians. The quasi-feudal society was divided into classes—the wealthy landowners and merchants and the priests, the less wealthy merchants, peasants, and artisans, and the slaves. The Babylonian religion (see MIDDLE EASTERN RELIGIONS) was inherited from the older Sumerian culture. All these Babylonian institutions influenced the civilization of ASSYRIA and so contributed to the later history of the Middle East and of Western Europe. The wealth of Babylonia tempted nomadic and seminomadic neighbors, even under Hammurabi's successor. Babylonia was having to stave off assaults. Early in the 18th cent. B.C. the Hittites sacked Babylon and held it briefly. The nomadic Kassites (Cassites), a tribe from Elam, took the city shortly thereafter and held it precariously for centuries. Babylonia degenerated into anarchy c. 1180 B.C. with the fall of the Kassites. As a subsidiary state of the Assyrian Empire (after the 9th cent. B.C.), Babylonia flourished once more. It was the key area in the attempted uprising against the Assyrian king, SENNACHERIB, and Babylon was sacked (c. 689 B.C.) in his reign. After the death of Assurbanipal, the last great Assyrian monarch, Nabopolassar, the ruler of Babylonia, established (625 B.C.) his independence. He allied himself with the Medes and Persians and helped to bring about the capture of Nineveh (612 B.C.) and the fall of the Assyrian Empire. He established what is generally known as the Chaldean or New Babylonian Empire. Under his son, NEBUCHADNEZZAR, the new empire reached its height (see BABYLON). The recalcitrant Hebrews were defeated and punished with the BABYLONIAN CAPTIVITY. Egypt had already been defeated by Nebuchadnezzar in the great battle of Carchemish (605) while Nabopolassar was still alive. The empire seemed secure, but it was actually transitory. The steady growth of Persian power spelled the end of Babylonia, and in 538 B.C. the last of the Babylonian rulers surrendered to CYRUS THE GREAT (see also BELSHAZZAR). Babylonia became an important region of the Persian Empire. See R. W. Rogers, *A History of Babylonia and Assyria* (6th ed. 1915); D. D. Luckenbill, *Ancient Records of Assyria and Babylonia* (1926-27); G. R. Driver, et al., *The Babylonian Laws* (1952-55); H. W. F. Saggs, *Everyday Life in Babylonia and Assyria* (1965); J. A. Brinkman, *A Political History of Post-Kassite Babylonia* (1968); L. W. King, *A History of Babylonia* (1915, repr. 1969); James Wellard, *Babylon* (1972).

Babylonian art: see SUMERIAN AND BABYLONIAN ART. **Babylonian captivity**, in the history of Israel, the period from the fall of Jerusalem (586 B.C.) to the reconstruction in Palestine of a new Jewish state (after 538 B.C.). After the capture of the city by the Babylonians some thousands, probably selected for their prosperity and importance, were deported to

Mesopotamia. The number of those who remained is disputed by scholars. Such deportations were commonplace in Assyrian and Babylonian policy. The exiles maintained close links with their kinsmen at home, as is clear from Ezekiel, the prophet of the early years of the Exile. In 538 B.C., Cyrus the Great, the new master of the empire, initiated a new attitude toward the nations and decreed the restoration of worship at Jerusalem. The century following this decree was critical in the history of the Jews, for it is the time of their reintegration into a national and religious unit. For parts of the period, Ezra and Nehemiah are the best sources. The prophesied 70 years of captivity were fulfilled when the new Temple was completed in 516 B.C. (Jer. 25:11, Dan. 9:2, Zech. 7:5). For the papal captivity at Avignon, which is also called the Babylonian Captivity, see PAPACY.

Babylonian religion: see MIDDLE EASTERN RELIGIONS. **baby's breath**, name for a plant of the family Caryophyllaceae (PINK family) and for several other flowers, e.g., white bedstraw of the family Rubiaceae (MADDER family) and grape hyacinth of the family Liliaceae (LILY family). The pink and madder families are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, orders Caryophyllales and Rubiales, respectively. The lily family is classified in the class Liliatae, order Liliales.

Baca (bā'ka), allegorical name of a valley. Ps. 84:6. The English expression "vale (or valley) of tears" may be a translation of this, through the Vulgate.

Bacabal (bakābāl'), city (1970 pop. 69,384), Maranhão state, NE Brazil, on the Mearim River. Babassu nuts, rice, and cotton are its principal products.

Bacău (bākū'ōō), city (1969 est. pop. 66,000), E Rumania, in Moldavia, on the Bistrita River. The administrative and industrial center of an oil-producing region, Băcău has industries that manufacture oil-field equipment. Other important products include textiles, leather and wood items, and light machinery. Although probably settled in the 5th cent., Băcău did not become important until oil was discovered there in the 20th cent. It has a regional museum and ruins of a 15th-century princely court.

Baccaloni, Salvatore (sālvātō'rā bāk-kālō'nē), 1900-70, Italian operatic bass, b. Rome. Baccaloni studied architecture before he made his singing debut in Rome in 1921. In 1926 he joined La Scala in Milan under Arturo Toscanini. In 1940 he joined the Metropolitan Opera Company, where he specialized in comic roles such as Bartolo in *The Barber of Seville*. Known for his large repertory, Baccaloni sang nearly 170 roles in five languages.

baccarat (bāk'arā', bāk'-, fr. bākārā'), French card game formerly widely played in European casinos but now supplanted in popularity by CHEMIN DE FER. The banker plays against the hands he deals to two other players called punters. The winning hand is the one whose point total has the number closest to 9 as its last digit, face cards and tens counting nothing. Two cards are dealt to a hand with the privilege of a one-card draw. The term *baccarat* is supposed to mean "nothing" and is applied to hands whose point total ends with a cipher.

bacchae: see MAENADS.

Bacchanalia (bākānāl'ēā), in Roman religion, festival in honor of Bacchus, god of wine. Originally a religious ceremony, like the LIBERALIA, it gradually became an occasion for drunken, licentious excesses and was finally forbidden by law (186 B.C.).

bacchantes: see MAENADS.

Bacchus (bāk'as), in Greek and Roman mythology, god of wine, identified with Dionysus. He was also a god of vegetation and fertility, and his worship was orgiastic. He was the protector of vines. Many legends connected with Dionysus were also used in the cult of Bacchus.

Bacchylides (bākīl'idēz), fl. c. 470 B.C., Greek lyric poet, b. Ceos, nephew of Simonides of Ceos. A contemporary of Pindar, he was patronized by Hiero I. Although a competent craftsman capable of elegant lyrics, Bacchylides lacked the inspiration of Pindar. A number of Bacchylides' epinicia and dithyrambs were among the verses recovered from an Egyptian papyrus (text published by F. G. Kenyon, *The Poems of Bacchylides*, 1897). See R. C. Jebb, *Bacchylides: The Poems and Fragments* (1905).

Bach (bākh), German family of distinguished musicians who flourished from the 16th through the 18th cent., its most renowned member being Johann Sebastian Bach (see separate article). Johannes, or Hans, Bach, 1580-1626, was a Thuringian carpetweaver and a musical performer at festivals. His sons and descendants were noted organists and

composers. One of his grandsons was Johann Ambrosius Bach, 1645-95, violinist, town musician at Eisenach, and father of Johann Sebastian Bach. Johann Sebastian's eldest brother, Johann Christoph Bach, 1671-1721, was organist at Ohrdruf. When his parents died he took his youngest brother, Johann Sebastian, into his home and taught him. Of the 20 children of Johann Sebastian, several were well known as musicians. The eldest son, Wilhelm Friedemann Bach, 1710-84, was made organist at the Sophienkirche in Dresden in 1733 and later (1746-64) organist and musical director at the Liebfrauenkirche in Halle. He was a brilliant organist and well-known composer, but he did not live up to his father's hopes and, after a dissolute life, he died in misery. A younger son was Carl Philipp Emanuel Bach (see separate article), and the youngest son was Johann Christian Bach (see separate article). See Karl Geiringer and I. S. Geiringer, *The Bach Family* (1954); Percy Young, *The Bachs* (1970).

Bach, Alexander, 1813-93, Austrian politician. A well-known lawyer and liberal, he took part in the REVOLUTION OF 1848 in Vienna, but after its suppression he joined the forces of reaction. He became minister of justice (1848) and of the interior (1849-59), and after the death (1852) of Prince Schwarzenberg was the chief figure in the ministry. He was created baron in 1854. Bach instituted the Bach system of bureaucratic control of the Hapsburg lands. Centralization and Germanization were its chief aims, stringent control by secret police was the method of enforcing them. This program was accompanied, however, by measures promoting economic prosperity, notably the abolition of internal tariff barriers, and by agricultural reforms implementing the emancipation of the serfs. Through the Concordat of 1855 the Roman Catholic Church gained wide powers. The Bach system met with opposition, especially in Hungary, and after the Austrian defeat in the Italian War of 1859 its author was dismissed and new systems introduced.

Bach, Carl Philipp Emanuel (fē'līp ēmā'nōō'ēl), 1714-88, German composer, second son of J. S. Bach, his only teacher. While harpsichordist at the court of Frederick the Great, where his chief duty for 28 years (1738-67) was to accompany the monarch's performances on the flute, he wrote an important work on technique, *Essay on the True Art of Playing Keyboard Instruments* (1753, tr. 1949). After this artistically unsatisfying service with Frederick, Bach succeeded his godfather, Georg Philipp Telemann, as musical director at Hamburg. His 2 volumes of sonatas (1742-43) and his 12 symphonies established the typical classical forms of such works and powerfully influenced both Haydn and Beethoven. He also composed other keyboard music and sacred choral music. His craftsmanship was outstanding in the period between the baroque and classical periods.

Bach, Johann Christian (krīs'tyān), 1735-82, German musician and composer, son of J. S. Bach. He went to Italy in 1754, became a Roman Catholic, and composed church music and operas. In 1760 he became organist of the Milan Cathedral. Two years later he went to England, where he became music master to the royal family. A popular and highly prolific composer in the rococo style, he influenced the young Mozart.

Bach, Johann Sebastian (sābās'tyān), 1685-1750, German composer and organist, b. Eisenach, one of the greatest and most influential composers of the Western world. He brought polyphonic baroque music to its culmination, creating masterful and vigorous works in almost every musical form known in his period. Born into a gifted family (see separate article), Bach was devoted to music from childhood, he was taught by his father and later by his brother Johann Christoph, and was a boy soprano in Lüneberg. His education was acquired largely through independent studies, he had an insatiable curiosity about music and sometimes walked great distances to hear the organists Johann Adam Reincken (at Hamburg) and Buxtehude (at Lübeck). In 1703 he became violinist in the private orchestra of the prince at Weimar but left within a year to become organist at Arnstadt. He went to Mühlhausen as organist in 1707. There he married his cousin Maria Barbara Bach, who was to bear him seven children. In 1708 he was made court organist and chamber musician at Weimar, and in 1714 he became concert master. Prince Leopold of Anhalt engaged him as musical director at Cöthen in 1717. Three years later his wife died, and in 1721 he married Anna Magdalena Wülfen, a woman of considerable musical cultivation who eventually bore him 13 children. In

1723 he left Weimar to take the important post of music director of the church of St Thomas, Leipzig, and of its music school, he remained in Leipzig until his death. Since few of Bach's many works were published in his lifetime, exact dates cannot be fixed for all of them, but most can be placed with some certainty in the periods of his life. At Arnstadt and Muhlhausen he began a series of organ compositions that culminated in the great works of the Weimar period: the *Passacaglia* and *Fugue in C Minor*, most of the great preludes and fugues, and the 45 chorale-preludes gathered in *Das Orgelbuchlein* [the little organ book]. At Cothen he concentrated on instrumental compositions, especially keyboard works: the *Chromatic Fantasy* and *Fugue*, the *English Suites*, the *French Suites*, the *Two-Part* and *Three-Part Inventions*, written for the education of his son Wilhelm Friedemann, and Book I of the celebrated *The Well-Tempered Clavier*. He also wrote several unaccompanied violin sonatas and cello suites, and the *Brandenburg Concertos*, recognized as the best concerti grossi ever composed. The *St John Passion* was performed (1723) at Leipzig, when Bach was a candidate for the position of musical director at St Thomas. His *Magnificat* was presented shortly after he assumed that post. Many more of his superb religious compositions followed: the *St Matthew Passion* (1729), the *Christmas Oratorio*, the sonorous *Mass in B Minor*, and the six motets. The principal keyboard works of this period were Book II of *The Well-Tempered Clavier* and the four books of clavier pieces in the *Clavierübung*, which includes six partitas (1726-31), the Italian Concerto and the Partita in B Minor (1735), the *Catechism Preludes*, the *Prelude and Fugue* (St Anne) in E Flat (1739), and four duets, and the *Goldberg Variations* (more formally *Aria with Thirty Variations*, 1742). His last notable compositions were the *Musical Offering* composed (1747) for Frederick the Great and *The Art of the Fugue* (1749). In all his positions as choir director, Bach composed sacred cantatas—a total of some 300, of which nearly 200 are extant. There are also over 30 secular cantatas, composed at Leipzig, among them *Phoebus and Pan* (1731). The bulk of his work is religious—he made four-part settings of 371 Lutheran chorales, also using many of them as the bases of organ preludes and choral works. In addition, he composed an astonishing number of instrumental works, many of them designed for the instruction of his numerous pupils. In his instrumental and choral works he perfected the art of polyphony, displaying an unmatched combination of inventiveness and control in his great, striding fugues. During his lifetime, Bach was better known as an organist than as a composer. For decades after his death his works were neglected, but in the 19th cent his genius came to be recognized, particularly by romantic composers such as Mendelssohn and Schumann. Since that time his reputation has grown steadily. The classic study of his life and music is that by Phillip Spitta (tr 1884-85, repr 1972), and Albert Schweitzer's study (tr 1911, repr 1962) has attracted much attention. See also biographies by C S Terry (1928, repr 1962), Imogen Holst (1965), and Karl and Irene Geiringer (1966), studies by J N Forkel (tr 1920, repr 1970) and R L Marshall (2 vol, 1972), H T David and Arthur Mendel, *The Bach Reader* (1945).

Bacharach, Burt (băk'ərăk'), 1929-, American composer, b Kansas City, Mo. He began his career playing piano in nightclubs. With the lyricist Hal David, Bacharach has produced a number of popular songs, they include "Don't Make Me Over," "What the World Needs Now," and "Do You Know the Way to San Jose." The team also provided words and music for the successful Broadway musical *Promises, Promises* (1968) and the film *Butch Cassidy and the Sundance Kid* (1969). Bacharach's music utilizes Latin, rock, and gospel styles and is marked by unexpected chord changes.

Bache, Benjamin Franklin (bäch), 1769-98, American journalist, b Philadelphia, son of Richard Bache and grandson of Benjamin Franklin. In 1790 he founded the *Philadelphia General Advertiser* (later the *Aurora*). As the champion of the Jeffersonians, Bache's paper denounced the Federalists bitterly, and he was arrested under the Sedition Act (see ALIEN AND SEDITION ACTS) but was released on parole. He died soon afterward of yellow fever.

Bache, Jules Semon, 1861-1944, American banker and art collector, b New York City. He made an immense fortune on Wall St, organized the banking firm of J S Bache and Company, and was director of 12 other firms. In 1937 he opened his magnificent art collection to the public, and in 1944 the collection

was given permanently to the Metropolitan Mus. It includes famous works by Raphael, Titian, Rembrandt, Velazquez, and other masters.

Bache, Richard, 1737-1811, American merchant, b Yorkshire, England. He came to New York City in 1765 to join an older brother in the mercantile business. Bache soon moved to Philadelphia in the interest of the firm, which had built up a large West Indian trade. In 1767 he married Sarah, daughter of Benjamin Franklin. He served on many committees in the American Revolution, including the Board of War. He succeeded Franklin as Postmaster General in 1776 and held office until 1782.

Bachelard, Gaston (gastōN' bashlar'), 1884-1962, French philosopher. He held degrees in physics, mathematics, and philosophy and taught at Dijon (1930-40) and the Univ of Paris (1940-54). Bachelard regarded knowing as a result of the interaction between reason and experience. Disagreeing with the Cartesian concept of scientific truths as immutable elements of a total truth, he also rejected the notion of the empirical world as random or senseless. He characterized his position as a "philosophy of saying no" because scientific insights are, as he saw it, always open to reformulation on the basis of new experience. This reformulation does not involve the rejection but the recasting of previous positions as resulting from the dialectic of reason and experience. Bachelard was not, despite his scientific orientation, a thorough-going rationalist; he considered imagination and reverie as well as reason to be creative forces in knowing. Among his books are *La Psychanalyse du feu* (1932, tr *Psychoanalysis of Fire*, 1964), *Lautremon* (1939), *La Philosophie du non* (1940, tr *The Philosophy of No*, 1968), and *On Poetic Imagination and Reverie* (tr 1971).

Bacheller, Irving, 1859-1950, American novelist, b Pierpont, N.Y., grad St Lawrence Univ, 1882. In 1884 he founded the first newspaper syndicate in the United States. His novels, chiefly concerned with early American life, include *Eben Holden* (1900), *Dr. and I* (1901), and *A Man for the Ages* (1919). See his autobiographical works.

bachelor's-button, popular name for several plants usually characterized by rounded flowers, such as the CORNFLOWER and globe AMARANTH.

Bache Peninsula (bäch), on E Ellesmere Island, in N Northwest Territories, Canada. U.S. explorer Robert Peary proved this area to be a peninsula when he explored (1898) the region. From 1926 to 1933 the Royal Canadian Mounted Police had a post there, c 800 mi (1,290 km) from the North Pole, that was the most northerly habitation in the world.

Bachrites (băk'rīts), descendants of BECHER 2.

Bach system: see BACH, ALEXANDER.

Baciccio, Il: see GAULLI, GIOVANNI BATTISTA.

bacillus (băsil'as) see BACTERIA.

bacitracin (băs'tră'sin), ANTIBIOTIC produced by a strain of the bacterial species *Bacillus subtilis*. It is widely used for topical therapy such as for skin and eye infections; it is effective against gram-positive bacteria including strains of staphylococcus that are resistant to PENICILLIN (see GRAM'S STAIN). Bacitracin is toxic to humans and therefore it is used internally only in severe illness where the infecting bacteria are resistant to other drugs.

Back, Sir George, 1796-1878, British explorer in N Canada. He accompanied Sir John Franklin on arctic expeditions in 1818, 1819-22, and 1824-27. On an expedition (1833-35) to search for the missing John Ross, Back explored the Great Fish River (now Back River) and Montreal Island in the present Northwest Territories. His *Narrative of the Arctic Land Expedition* appeared in 1836. On a later journey (1836-37) he explored the arctic coast of Canada.

Back, river, c 600 mi (970 km) long, rising in Lakes E Mackenzie dist., Northwest Territories, Canada, and flowing northeast across the tundra to Chantry Inlet. There are numerous lakes along its course. It is named for Sir George Back, the first person to descend the river (1834).

backbone see SPINAL COLUMN.

Backbone Mountain, peak, 3,360 ft (1,024 m) high, NW Md., in the Allegheny Mts., highest elevation in the state.

backgammon (băk'găm'an, băk'găm'an), game of chance and skill played by two persons upon a specially marked board divided by a space called the bar into two tables (inner table and outer table), each of which has 12 alternately colored points, or triangular spaces. The moves permitted each player are dictated by the throws of two dice, and the object is to remove one's 15 pieces, or disks, from the board first according to the rules. The game was

played by the ancients, a backgammon board with dice and pieces was found in Babylonian excavations. Backgammon was also played in Greece and Rome, and after the 10th cent A.D. it became popular in Europe. In England the game was known as tables. Parcheesi, which probably originated in India, is a form of backgammon that permits four to play. See Oswald Jacoby and J R Crawford, *The Backgammon Book* (1970).

Backhuysen or Bakhuyzen, Ludolf (lōō'dōlf bak'hīzan), 1631-1708, Dutch marine painter. He is best known for his scenes of stormy seas. Peter the Great is said to have been instructed by him in drawing. In later years Backhuysen also did some etching and engraving of marine views. He was the foremost follower of Willem van de Velde II, but his works lack his master's poetic vision.

backshore: see BEACH.

backswimmer, common name for WATER BUGS of the cosmopolitan family Notonectidae, so named because they swim upside down, usually near the surface of the water. They resemble the upright-swimming water boatmen, having oval bodies and long, oarlike hind legs, with which they swim rapidly, but their backs are more convex than those of the water boatmen. The exposed belly is yellowish to black. Backswimmers, $\frac{1}{8}$ to $\frac{1}{2}$ in (3-12 mm) long, feed on small crustaceans, insect larvae, snails, and sometimes on small fish and tadpoles from which they suck the body juices. They can inflict a painful bite on a human being. Most of the 50 North American species overwinter as adults. The eggs are usually laid on submerged plants or rocks and development to the adult stage takes 40 to 60 days. Backswimmers are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera, family Notonectidae.

Backus, Isaac, 1724-1806, American clergyman, leader among New England Baptists and a champion of religious freedom, b Norwich, Conn. Converted in the Great Awakening, he joined the separatists or "New Light" faction. He became pastor in 1748 of a Congregational church in Middleboro, Mass., after his adherence to the Baptist faith, he organized and became minister of a Baptist church there, which he served from 1756 until his death. According to his calculations, Backus traveled over 68,000 mi (109,435 km) on his evangelistic tours, mostly on horseback. His *History of New England with Particular Reference to the Baptists* (3 vol, 1777-96) is a major source for the religious history of the region and the period.

Bacolod (bakō'lōd, -lōth), city (1970 est pop. 165,000), capital of Negros Occidental prov, NW Negros island, the Philippines. It is an important seaport, the shipping and processing center of the country's major sugarcane-producing area. The Univ of Negros Occidental-Recoletos is there.

Bacon, Francis, 1561-1626, English philosopher, essayist, and statesman, b London, educated at Trinity College, Cambridge, and at Gray's Inn. He was the son of Sir Nicholas Bacon, lord keeper to Queen Elizabeth I. Francis Bacon was a member of Parliament in 1584 and his opposition to Elizabeth's tax program retarded his political advancement, only the efforts of the earl of Essex led Elizabeth to accept him as an unofficial member of her Learned Council. At Essex's trial in 1601, Bacon, putting duty to the state above friendship, assumed an active part in the prosecution—a course for which many have condemned him. With the succession of James I, Bacon's fortunes improved. He was knighted in 1603, became attorney general in 1613, lord keeper in 1617, and lord chancellor in 1618; he was created Baron Verulam in 1618 and Viscount St Albans in 1621. In 1621, accused of accepting bribes as lord chancellor, he pleaded guilty and was fined £40,000, banished from the court, disqualified from holding office, and sentenced to the Tower of London. The banishment, fine, and imprisonment were remitted. Nevertheless, his career as a public servant was ended. He spent the rest of his life writing in retirement. Bacon belongs to both philosophy and literature. He projected a large philosophical work, the *Instauratio Magna*, but completed only two parts, *The Advancement of Learning* (1605), later expanded in Latin as *De Augmentis Scientiarum* (1623), and the *Novum Organum* (1620). Bacon's contribution to philosophy was his application of the inductive method of modern science as opposed to the a priori method of medieval scholasticism. He urged full investigation in all cases, avoiding theories based on insufficient data. He has been widely censured for being too mechanical, failing to carry his investigations to their logical ends, and not

staying abreast of the scientific knowledge of his own day. In the 19th cent., Macaulay initiated a movement to restore Bacon's prestige as a scientist. Today his contributions are regarded with considerable respect. In *The New Atlantis* (1627) he describes a scientific utopia that found partial realization with the organization of the Royal Society in 1660. His *Essays* (1597-1625), largely aphoristic, are his best-known writings. They are noted for their style and for their striking observations about life. See his works (14 vol., 1857-74, repr. 1968), studies by F. H. Anderson (1948, repr. 1971), A. W. Green (1966), and J. G. Crowther (1960), D. W. Davies and E. S. Wrigley, eds., *Concordance to the Essays of Francis Bacon* (1973).

Bacon, Francis, 1910-, English painter, b. Dublin. A self-taught artist, Bacon became the center of a storm of controversy with his *Three Studies* for the base of *Crucifixion* (1944, Tate Gall., London). He painted a series of variations on diverse themes, e.g., *Van Gogh Goes to Work*, *Velázquez's Innocent X*. Bacon's works are satirical, emphasizing the repulsive, the terrible, and the hallucinatory in human life. See study by John Russell (1974).

Bacon, Henry, 1866-1924, American architect, b. Watseka, Ill. He began his professional career with the firm of McKim, Mead, and White, but after 1903 he practiced independently. Among the important structures designed by him are the Lincoln Memorial at Washington, D.C. (completed 1917), and the World War Memorial at Yale Univ.

Bacon, Leonard, 1802-81, American Congregational minister, b. Detroit, Mich. He served for 41 years as pastor of the First Church of New Haven, one of the leading Congregational churches in the country. Bacon was a noted antislavery leader, although not an abolitionist. His *Slavery Discussed in Occasional Essays* (1846) made a great impression upon Lincoln. He was a founder and editor of the *Independent* and author of the widely known *Pilgrim Hymn* (1833) and *The Genesis of the New England Churches* (1874). See biography by T. D. Bacon (1931).

Bacon, Nathaniel, 1647-76, leader of BACON'S REBELLION in colonial Virginia. An aristocrat (he was kin to Francis Bacon, had been educated at Cambridge and Gray's Inn, and was a member of the governor's council), Bacon nevertheless became the champion of the discontented frontiersmen after only two years' residence in the colony. When he died suddenly from the effects of malaria, the revolt collapsed.

Bacon, Sir Nicholas, 1509-79, English jurist. Called to the bar in 1533, he was made attorney of the court of wards and liveries in 1546 and, although a staunch Protestant, held this office through the reign of Mary I. On the accession (1558) of Elizabeth I, he was appointed lord keeper of the privy seal, possibly through the influence of William Cecil, later Lord Burghley (whose wife's sister Bacon married). In 1559 he was authorized to exercise the jurisdiction of the lord chancellor. He regarded Mary Queen of Scots as a menace to English peace and opposed any measure of compromise with her. He was the father of Francis Bacon.

Bacon, Peggy, 1895-, American illustrator, caricaturist, and etcher, b. Ridgefield, Conn. Bacon has illustrated more than 60 books including works by George Ade, Carl Sandburg, and Louis Untermeyer, as well as her own poems and her stories for children. Her shrewd and caustic observations have found expression in her writings and in her graphic work. *Socialist Meeting* (Metropolitan Mus.) is characteristic. Among her published works are *Off with Their Heads* (1934), *Cat-Calls* (1935), a volume of light verse, and, for children, *The Ghost of Opalina* (1967) and *Magic Touch* (1968). Bacon was married (1920-40) to the painter Alexander BROOK.

Bacon, Robert, 1860-1919, American banker and government official, b. Jamaica Plain, Mass. He embarked upon a career in business and in 1894 accepted a partnership with J. P. Morgan and Company. He participated in the formation (1901) of the U. S. Steel Corp. and the Northern Securities Company. Bacon later served (1905-9) as Assistant Secretary of State under President Theodore Roosevelt, and was briefly (1909) Secretary of State. He was (1909-12) also ambassador to France. An outspoken proponent of U. S. entry into World War I, he served (1917-19) in the U. S. army. He wrote *For Better Relations with Our Latin American Neighbors* (1915). See biography by J. B. Scott (1923).

Bacon, Roger, c. 1214-1294?, English scholastic philosopher and scientist, a Franciscan. He studied at Oxford as well as at the Univ. of Paris and became

one of the most celebrated and zealous teachers at Oxford. Bacon was learned in Hebrew and in Greek and stressed the value of knowing the original languages in the study of Aristotle and of the Bible. He may also have known Arabic, his own philosophy drew upon Arabian Aristotelianism as well as upon St. Augustine. He had an interest far in advance of his times in natural science, in controlled experiments, and in the accurate observation of phenomena. "It is the intention of philosophy," he said, "to work out the natures and properties of things." He declared that mathematics was the gateway to science, and experience, or verification, the only basis of certainty. This belief in experience as a guide to the outer world was, however, not divorced from theology, wisdom and faith were to him one. His writings were numerous. Three of his most important works were written for Pope Clement IV in one year (1267-68)—the *Opus majus* (tr. 1928), the *Opus minor*, and the *Opus tertium*. He was deeply interested in alchemy, an interest that may account for his being credited by his contemporaries with great learning in magical practices. He was long credited with the invention of gunpowder (because of a formula for gunpowder that appeared in a work attributed to him). A manuscript in cipher, discovered in the 20th cent. and attributed to him, would make Bacon the first man to have observed spiral nebulae through a telescope and to have examined cells through a microscope, but considerable doubt has been cast on the original date and the authenticity of the manuscript. Earlier editions of his major works were supplemented by an edition of his hitherto unedited works in various fascicles by Robert Steele and others (1909-35). See A. G. Little, ed., *Roger Bacon Essays* (1914, repr. 1972), biography by F. Winthrop Woodruff (1938), studies by Theodore Crowley (1950) and Stewart C. Easton (1952, repr. 1971).

bacon, flesh of hogs—especially from the sides, belly, or back—that has been preserved by being salted or pickled and then dried with or without wood smoke. In early agricultural communities the curing of meat was an important household industry, the process consisted of soaking the pork in brine or rubbing it in a salt mixture by hand, then smoking the sides in smoke from an open chimney. It sometimes took three or four months. From ancient times bacon has been a major part of the diet of poor people, and many references to it are found in proverbs and phrases. Bacon is still home cured in some rural communities, but the bulk of its manufacture is carried on in large industrial meat-packing plants equipped to slaughter, dress, cure, smoke, and sell on a large scale. Bacon refers to different cuts in different countries. In the United States it usually means the side between the fifth rib and the hip-bone. In Europe, the word *bacon* generally refers to one half of a fattened pig. The high fat content of bacon makes it a valuable energy food.

Bacon's Rebellion, popular revolt in colonial Virginia in 1676, led by Nathaniel BACON. High taxes, low prices for tobacco, and resentment against special privileges given those close to the governor, Sir William BERKELEY, provided the background for the uprising, which was precipitated by Berkeley's failure to defend the frontier against Indian attacks. Bacon commanded two unauthorized but successful expeditions against the Indians and was then elected to the new house of burgesses, which Berkeley had been forced to convene. When he attempted to take his seat, Berkeley had him arrested. Soon released, Bacon gathered his supporters, marched on Jamestown, and coerced Berkeley into granting him a commission to continue his Indian campaigns. A circumspet assembly then passed several reform measures. The governor, having failed to raise a force against Bacon, fled to the Eastern Shore. He gathered enough strength to return to Jamestown, where he proclaimed Bacon and his men rebels and traitors. After a sharp skirmish Bacon recaptured the capital (Berkeley again took flight) but, fearing that he could not hold it against attack, set fire to the town. Bacon now controlled the colony, but he died suddenly (Oct., 1676), and without his leadership the rebellion collapsed. After a few months Berkeley returned to wreak a bloody vengeance before he was forced to return to England. Berkeley's removal and the end of Indian attacks were the only benefits the yeomen had won in the rebellion, and the tidewater aristocracy long maintained its power. See T. J. Wertenbaker, *Torchbearer of the Revolution* (1940, repr. 1965) and *Bacon's Rebellion, 1676* (1957), W. E. Washburn, *The Governor and the Rebel* (1957, repr. 1967).

bacteremia: see SEPTICEMIA

bacteria [pl. of bacterium], microscopic unicellular organisms classified either as plants of the class Schizomycetes of the division SCHIZOPHYTA of the thallophytes or as a separate phylum (Schizomycophyta) comprised of heterogeneous types most nearly resembling the blue-green algae. Three forms are typical—rod-shaped (bacillus), round (coccus, e.g., streptococcus), and spiral (spirillum). The cytoplasm and plasma membrane of most bacterial cells is surrounded by a cell wall, the nucleus contains the universal genetic agent DNA (see NUCLEIC ACID) but lacks the nuclear membrane typical of higher plants and animals. Many, chiefly the bacillus and spirillum forms, are motile, swimming about by whiplike movements of flagella. Reproduction is chiefly by transverse fission, but bacteria are also capable of specialized types of sexual reproduction and genetic RECOMBINATION involving the transfer of nucleic acid by individual contact (conjugation), by exposure to nucleic acid remnants of dead bacteria (transformation), or by a viral agent, the BACTERIOPHAGE (transduction). Under unfavorable conditions some bacteria form highly resistant spores with thickened coverings, within which the living material remains dormant in altered form until conditions improve. Some bacteria (those known as aerobic forms) can function metabolically only in the presence of free or atmospheric oxygen, others (anaerobic bacteria) cannot grow in the presence of free oxygen but obtain oxygen from compounds, and a third group, called facultative anaerobes, can grow with or without free oxygen. By their metabolic processes, different types of bacteria are capable of innumerable chemical, metabolic transformations involving enzyme production, including photosynthesis and the conversion of free nitrogen and sulfur into amino acids, organic compounds that can then be used by other plants and animals to synthesize proteins for their own protoplasm. Bacteria are remarkably adaptable to diverse environmental conditions; they are found in the bodies of all living organisms and on all parts of the earth—in land terrains and ocean depths, in arctic ice and glaciers, in hot springs, and even in the stratosphere. There are more bacteria, as separate individuals, than any other type of organism, there may be as many as 100 million bacteria in one gram of fertile soil. Harmless and beneficial bacteria far outnumber harmful varieties. Because they are capable of producing so many enzymes necessary for the building up and breaking down of organic compounds, bacteria are employed extensively by man—for soil enrichment with leguminous crops (see NITROGEN CYCLE), for preservation by pickling, for fermentation (as in the manufacture of alcoholic beverages, vinegar, and certain cheeses), for decomposition of organic wastes (in septic tanks, in some sewage disposal plants, and in agriculture for soil enrichment), and for curing tobacco, retting flax, and many other specialized processes. Bacteria frequently make good objects for genetic study. Large populations grown in a short period of time facilitate detection of MUTATIONS, or rare variations. Bacterial parasites that cause disease are called pathogenic forms, or pathogens. Among bacterial plant diseases are leaf spot, fire BLIGHT, and wilts, animal diseases caused by bacteria include TUBERCULOSIS, CHOLERA, SYPHILIS, TYPHOID FEVER, and TETANUS. Some bacteria attack the tissues directly, others produce poisonous substances called toxins. Natural defense against harmful bacteria is provided by antibodies (see IMMUNITY). Certain bacterial diseases, e.g., tetanus, can be prevented by injection of ANTITOXIN or of serum containing antibodies against specific bacterial antigens, immunity to some can be induced by VACCINATION, and certain specific bacterial parasites are killed by ANTIBIOTICS. Bacteria were first observed by Leeuwenhoek in the 17th cent., bacteriology as an applied science began to develop in the late 19th cent. as a result of research in medicine and in fermentation processes, especially by Louis Pasteur and Robert Koch. See Kenneth Thimann, *The Life of Bacteria* (2d ed. 1963), William Hayes, *The Genetics of Bacteria and their Viruses* (1964).

bacteriophage (bakter'ēofāj'), VIRUS that infects bacteria and sometimes destroys them by lysis, or dissolution of the cell. Bacteriophages, or phages, have a head composed of protein, an inner core of NUCLEIC ACID, either deoxyribonucleic acid (DNA) or ribonucleic acid (RNA), and a hollow protein tail. A particular phage can usually infect only one or a few related species of bacteria, for example, coliphages are DNA-containing viruses that infect only the bacterium *Escherichia coli*. A virus infects a bacterial

cell by first attaching to the bacterial cell wall by its tail. In coliphages the tail is a complex protein structure consisting of a hollow contractile sheath, with a plate at the base that contains long protein fibers. The tail fibers fix the base plate to the specific receptor site on the bacterial cell wall, and the tail sheath contracts like a syringe, forcing the DNA that is inside the virus through the cell wall and cell membrane. The entire virus protein coat remains outside the bacterium. The injected nucleic acid is the viral genetic material, it makes use of the bacterium's chemical energy and biosynthetic machinery to produce viral enzymes that an uninfected bacterium does not make, as well as more phage nucleic acid. The viral proteins and nucleic acid molecules within the bacterial host assemble spontaneously into up to a hundred new phage particles. Eventually the bacterium lyses, and the particles are released. Lysis can be readily observed in bacteria growing on a solid medium, where groups of lysed cells appear as clear areas, or plaques. Some DNA phages, called temperate phages, have a more complex relationship with the host than simple lysis. Temperate phages only lyse a small fraction of bacterial cells, in the remaining majority of the bacteria, the phage DNA becomes integrated into the bacterial chromosome and replicates along with it. In this state, known as lysogeny, the information contained in the viral nucleic acid is not expressed. A lysogenic culture, i.e., a bacterial culture infected with temperate phages, can be treated with radiation or mutagens, either of which induces the cells to begin producing viruses and lyse. Lysogenic phages resemble bacterial genetic particles known as EPI-SOMES. The bacteriophage was discovered independently by the microbiologists F. W. Twort (1915) and Felix d'Herelle (1917). The phages have been much used in the study of bacterial genetics and cellular control mechanisms largely because the bacterial hosts are so easily grown and infected with phage in the laboratory. There have also been unsuccessful attempts to use phages to destroy such pathogenic bacteria as those causing typhoid and cholera.

Bactria (băk'trēə), ancient Greek kingdom in central Asia. Its capital was Bactra, present-day Balkh in N Afghanistan. Before the Greek conquest, the region had been taken by the Persians and was an eastern province of the Persian Empire. It became prosperous as the area for transmitting Siberian and Indian metals and goods to the Persians. When Alexander the Great invaded the Persian Empire, the defeated Darius III fled to Bactria, where he was murdered (330 B.C.) by the Bactrian satrap, Bessus. The Bactrians, under Bessus, resisted Alexander stoutly, but they were subdued in 328 B.C. Bactria took on Greek culture and became quasi-independent. Theoretically it remained part of the Seleucid empire. In 256 B.C., Diodotus I was made satrap, and a little later he assumed complete independence. His successor, Euthydemus, successfully resisted the attempts (208–206 B.C.) of Antiochus III to bring Bactria back into the empire. Euthydemus' son Demetrius made Bactria a powerful state. He was overlord of part of Chinese Turkistan and carried his conquests deep into N India, taking Patna. The Seleucid ruler, Antiochus IV, sent Eucratidas into Bactria, and Eucratidas in 167 B.C. brought about the death of Demetrius but was himself slain in 159 B.C. Menander, Demetrius' general, continued to exercise power until his death in 145 B.C. A little later (c. 130 B.C.) Bactria fell to the nomadic Sakas and did not rise again as a state. See H. G. Rawlinson, *Bactria: The History of a Forgotten Empire* (1912, repr. 1969), W. W. Tarn, *The Greeks in Bactria and India* (2d ed. 1951), A. K. Narain, *The Indo-Greeks* (1957, repr. 1962).

Badagri (badă'grē), town, SW Nigeria, on a lagoon off the GULF OF GUINEA. Jute bags are made there. Badagri was founded c. 1730 and became an important shipping point for black African slaves. In the 1840's it became a center for British Christian missionaries, and in 1863 it was annexed by Britain. Badagri declined with the end of the slave trade.

Badajoz (bădă'hōzh'), city (1970 pop. 101,710), capital of Badajoz prov., SW Spain, in Estremadura, on the Guadiana River. It is situated in a fertile agricultural region where food processing is the main industry. Strategically located near the border of Portugal, it has an active trade with that country. Badajoz was an ancient fortress city that rose to prominence under the Moors as the seat (1022–94) of a vast independent emirate. Alfonso IX of Leon liberated it in 1228. Thereafter Badajoz was repeatedly attacked by the Portuguese and was consequently strongly fortified. The city has often been besieged, in the Peninsular War the French failed to

take it in a long siege (1808–9) and succeeded in 1811 only to be driven out by Wellington. In 1812 after bitter fighting. In the civil war of 1936–39 the capture (1936) of Badajoz by the Insurgents after a bloody battle was followed by hundreds of executions. Notable landmarks are the massive cathedral (begun in the 13th cent.) and the remains of the Moorish citadel. Charles IV's favorite, Manuel de Godoy, and the painter Luis de Morales were born in Badajoz.

Badakhshan (badakhshān'), province (1970 est. pop. 344,500), 16,844 sq mi (43,626 sq km), extreme NE Afghanistan, between the Hindu Kush Mts. and the Amu Darya River. The capital is FAIZABAD. Renowned for its mineral wealth, it is the world's chief source of lapis lazuli, a semiprecious stone. The deposits have been worked for more than 3,000 years. Rubies, emeralds, amethysts, and gold have also been mined in Badakhshan. Mountain goats and the famed Marco Polo wild sheep are hunted in the province (Marco Polo visited the area in 1272). Some agriculture and sheep and goat herding are also practiced. Badakhshan, part of the ancient Greek kingdom of Bactria, may once have been ruled by Alexander the Great. Its strategic location astride the trade routes from Europe and the Middle East to China and from central Asia and the Indian subcontinent made Badakhshan an international pawn for centuries. In 1859 it became an integral part of Afghanistan. Many of its inhabitants are Tadzhiks who speak an archaic form of Persian.

Badakhshan* see GORNO-BADAKHSHAN AUTONOMOUS OBLAST, USSR

Badalona (bathălô'nă), city (1971 pop. 162,888), Barcelona prov., NE Spain, in Catalonia. It is a Mediterranean port and an important industrial suburb of Barcelona, with textile, chemical, and glass manufactures. Nearby there are ancient tombs, possibly Phoenician, and the 15th-century monastery of San Jeronimo de la Murtra.

Bad Blankenburg: see BLANKENBURG, East Germany

Bade, Josse: see BADIUS, JODOCUS

Bad Ems, West Germany: see EMS

Baden (bə'dən), former state, SW West Germany. KARLSRUHE was the capital. Stretching from the Main River in the northeast across the lower Neckar valley and along the right bank of the Rhine to the Lake of Constance (Bodensee), the former state of Baden bordered on France and the Rhenish Palatinate in the west, Switzerland in the south, Hesse in the north, and Bavaria and Württemberg in the east. It included the cities of Mannheim, Pforzheim, Heidelberg, Baden-Baden, Freiburg, and Rastatt and, in the south, most of the Black Forest. Until the French Revolution the area was a confusing jigsaw puzzle of petty margraviates and ecclesiastical states (the bishoprics of Mainz, Speyer, Strasbourg, and Konstanz). The BREISGAU belonged to the Hapsburgs, the Mannheim-Heidelberg area to the Rhenish PALATINATE. In 1771 the margraviates of Baden-Baden and Baden-Durlach were united as Baden under the same branch of the house of ZAHRINGEN. Margrave Charles Frederick of Baden, raised to the rank of elector at the beginning of the 19th cent., joined the Confederation of the Rhine in 1806 with the title of grand duke and by 1810 had acquired, with the aid of Napoleon I of France, the entire state of Baden. Despite the liberal constitution of 1818 the grand duchy was severely shaken by the Revolution of 1848, which was suppressed with the help of Prussian troops. Among the revolutionary leaders in Baden was Friedrich Hecker. Baden sided with Austria in the Austro-Prussian War (1866), but joined the German Empire in 1871. It became a republic in 1918 and joined the Weimar Republic. After World War II, Baden was divided into two parts—in the south, the state of Baden (3,842 sq mi/9,951 sq km), occupied by France, and in the north, the state of Württemberg-Baden (1,984 sq mi/5,139 sq km), including part of Württemberg, occupied by U.S. armed forces. In 1952 the two states were merged with Württemberg-Hohenzollern to form the new state of BADEN WÜRTTEMBERG.

Baden (bə'dən) or **Baden-bei-Wien** (-bī-vēn'), city (1971 pop. 22,600), Lower Austria province, E Austria, on the Schwechat River, near Vienna. The hot sulfur springs of this picturesque city have been frequented since Roman times. From 1945 to 1955, Baden served as the Soviet military headquarters for Austria.

Baden, anc. *Aquae Helveticae*, town (1970 pop. 14,115), Aargau canton, N Switzerland, on the Limmat River. A noted spa since ancient times, the town has hot sulfur springs. It is also a manufacturing center known for aluminum ware and electrical ma-

chinery. The Swiss diet met at Baden from c. 1425 to 1712. The Treaty of Baden (1714) complemented the Peace of Utrecht (see UTRECHT, PEACE OF). Baden was the capital (1798–1803) of Baden canton under the HELVETIC REPUBLIC. The castle of Stein, now in ruins, was once a Hapsburg residence.

Baden-Baden (bə'dən-bă'dən), city (1970 pop. 37,537), Baden-Württemberg, SW West Germany, in the Black Forest. It is one of Europe's most fashionable spas. The city has many parks and a large casino (built 1821–24). Baden-Baden was founded as a Roman garrison in the 3d cent. Its hot mineral springs were used by the Romans, and remains of Roman baths have been found in the city. It was the residence of the margraves of Baden until the early 18th cent.

Badenoch (bad'anōkh'), highland district, 45 mi (72 km) long and 19 mi (31 km) wide, Inverness-shire, N central Scotland. It is a wild, densely wooded, mountainous region, cut by the river Spey. Loch Laggan is there. Kingussie is the main town and tourist center.

Baden-Powell of Gilwell, Robert Stephenson Smyth Baden-Powell, 1st Baron (bə'dən-pō'al), 1857–1941, British soldier, founder of the BOY SCOUTS. He saw much active service in India and Africa prior to the South African War, in which he defended Mafeking for seven months (1899–1900) and subsequently organized the South African constabulary. For his enduring work in organizing (1908) the Boy Scout and Girl Guide movements, he received a peerage in 1929. His writings include *Scouting for Boys* (1908), *Rovering to Success* (1922), and *Scouting and Youth Movements* (1929). See biographies by E. E. Reynolds (1942, 2d ed. 1957) and William Hillcourt and O. S. Baden-Powell (1964).

Baden-Württemberg (bə'dən-wūrt'tembūrg, Ger. wūrt'tembērk'), state (1970 pop. 8,895,000), 13,803 sq mi (35,750 sq km), SW West Germany. STUTTGART is the capital. It was formed in 1952 by the merger of WÜRTTEMBERG-BADEN, WÜRTTEMBERG-HOHENZOLLERN, and postwar Baden, all of which came into being after 1945. It includes the historic states of Baden and Württemberg, the former principality of HOHENZOLLERN, and the former district of LINDAU, Bavaria. The state borders on Switzerland in the south, France and the Rhineland-Palatinate in the west, Hesse in the north, and Bavaria in the east. Drained by the Rhine (which forms its border on the west), the upper Danube, and the Neckar, Baden-Württemberg includes the Black Forest in the southwest, the Lake of Constance in the south, and the Swabian Jura in the southeast. Although it is a forested and fertile land (the Rhine plain is one of the most fertile areas in Germany), industry is the main occupation. Industries (chiefly the manufacture of electrical power, chemicals, textiles, and machinery and the assembly of motor vehicles) are centered at Stuttgart, Mannheim, Karlsruhe, Heidelberg, Freiburg, and Ulm. Agriculture, forestry, and livestock raising are also important. One of the largest and most varied tourist areas of Germany, Baden-Württemberg has the picturesque Neckar valley, the idyllic forests and lakes of the south, and the famous spas of Baden-Baden and Wildbad. Freiburg and Heidelberg have noted universities. The history of Baden-Württemberg is the history of BADEN and of WÜRTTEMBERG.

Badger, Joseph, 1708–65, American painter, b. Charlestown, Mass. By trade a glazier and house and sign painter, he turned his hand to portraiture. Generally uninspired, his work appears at its best in his numerous portrayals of young children, such as Jeremiah Belknap (Mus. of Art, Cleveland). See Cuthbert Lee, *Early American Portrait Painters* (1929).

badger, name for several related members of the WEASEL family. Most badgers are large, nocturnal, burrowing animals, with broad, heavy bodies, long snouts, large, sharp claws, and long, grizzled fur. The Old World badger, *Meles meles*, is found in Europe and in Asia. N of the Himalayas, it is about 3 ft (90 cm) long, with a 4-in. (10-cm) tail, and weighs about 30 lb (13.6 kg). Its unusual coloring, light above and dark below, is unlike that of most mammals but is found in some other members of the family. The head is white, with a conspicuous black stripe on each side. European badgers live, often in pairs, in large burrows called sets, which they usually dig in dry slopes in woods. They emerge at night to forage for food; their diet includes rodents, young rabbits, insects, and plant matter. The American badger, *Taxidea taxus*, is about 2 ft (60 cm) long, with a 5-in. (13-cm) tail and weighs 12 to 24 lb (5.4–10.9 kg); it is very short-legged, which gives it its body

a flattened appearance. The fur is yellowish gray and the face black, with a white stripe over the forehead and around each eye. It is found in open grasslands and deserts of W and central North America, from N Alberta to N Mexico. It feeds largely on rodents, an extremely swift burrower, it pursues ground squirrels and prairie dogs into their holes, and may construct its own living quarters 30 ft (9.1 m) below ground level. American badgers are solitary and mostly nocturnal, in the extreme north they sleep through the winter. Several kinds of badger are found in SE Asia, these are classified in a number of genera. Badgers are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Mustelidae.

Bad Godesberg (bāt gō'dasbērk), part of BONN, North Rhine-Westphalia, W West Germany, on the Rhine River. It is the site of numerous foreign embassies and government agencies as well as residences of diplomats and government officials. It is also a resort noted for its radioactive mineral springs. In Sept., 1938, Adolf Hitler and British Prime Minister Neville Chamberlain met there (see MUNICH PACT). Bad Godesberg was incorporated into Bonn in 1969.

Bad Homburg vor der Höhe (bāt hōm'bōrk fōr dēr hō'a), **Bad Homburg**, or **Homburg**, city (1970 pop. 41,598), Hesse, central West Germany, at the foot of the Taunus mts. It is a famous spa and resort. Manufactures include foodstuffs and machinery. Chartered in the early 14th cent., Bad Homburg was from 1622 to 1866 the capital of the landgraviate of Hesse-Homburg.

Badia y Leblich, Domingo (dōmēng'gō bāthē'a ē lāblēk'), 1766-1818, Spanish traveler, known as Ali Bey. Posing as a Muslim, he set out from Cadiz (1803) and traveled through N Africa, Syria, and Arabia, reaching Mecca, of which he fixed the position astronomically. He wrote *Voyage d'Ali Bey en Asie et en Afrique* (1814). See D. G. Hogarth, *The Penetration of Arabia* (1904, repr. 1967).

Badings, Henk (hēngk bā'dīngz), 1907-, Dutch composer, b. Bandung, Java (now Indonesia). Badings studied with Willem Pijper after working as a mining engineer. An extremely prolific composer, he started writing electronic music in the 1950s. Some of his music utilizes scales of alternating whole and half steps and pluritonicity. Badings's first symphony was written in 1930, other works are the electronic ballet *Evolutions* (1958) and the opera *Salto Mortale* for voices and electronic accompaniment.

Bad Ischl (bāt īsh'əl) or **Ischl**, city (1971 pop. 12,700), in Upper Austria prov., W Austria, in the center of the SALZKAMMERGUT. It is a famous spa. After 1822 it was the summer residence of the Austrian imperial family. Emperor Francis Joseph signed (1914) his declaration of war on Serbia there.

Badius, Jodocus (jōdō'kas bā'dēās), 1462-1535, French printer, b. Asche, near Brussels. His original name was Josse Bade, and he is sometimes called for his birthplace Jodocus Badius Ascensius. He taught Greek and edited classics in Lyons before he became a printer, gaining recognition as a scholar and as an author, his writings include a life of Thomas a Kempis. In 1503 he went to Paris where he established the Ascensian press, which printed over 400 books, mainly Greek and Latin texts. His printer's marks are early pictures of a printing press. See A. F. Johnson, *French Sixteenth Century Printing* (1928).

Bad Kreuznach (bāt kroit's'nakh), city (1970 pop. 42,146), Rhineland-Palatinate, W West Germany, on the Nahe River. Its manufactures include precision instruments, tires, glass, and leather. Bad Kreuznach was probably settled in the Stone Age. Its radioactive salt baths have been frequented since Roman times, when it was a garrison town.

badlands, area of severe erosion, usually found in semi-arid climates and characterized by countless gullies, steep ridges, and sparse vegetation. Badland topography is formed on poorly cemented sediments that have few deep-rooted plants because short, heavy showers sweep away surface soil and small plants. Depressions gradually deepen into gullies. The term *badlands* was first applied to the arid, dissected plateau region of SW South Dakota by Indians and fur trappers who found the area difficult to cross. South Dakota's Big Badlands, also known as the Badlands of the White River, are the world's best and most extensive (c. 2,000 sq mi/5,180 sq km) example of this topography. Gullies have cut as deep as 500 ft (152 m) below the plateau's surface, and differences in rock type have created colorful and spectacular formations. The Big Badlands are famous for fossils of prehistoric animals. Badlands Na-

tional Monument occupies most of the region (see NATIONAL PARKS AND MONUMENTS, table).

badminton (bād'mīntən), game played by volleying a shuttlecock (called a "bird")—a small, cork hemisphere to which feathers are attached—over a net. Light, gut-strung rackets are used. Badminton, which is generally similar to tennis, is played by two or four persons. A badminton court for singles play measures 17 ft (5.18 m) by 44 ft (13.40 m) and for doubles 20 ft (6.10 m) by 44 ft (13.40 m). The net is 5 ft (1.52 m) high at the center and 5 ft 1 in. (1.55 m) at the posts. The game probably originated in India (where it was called *poona*), although it may have been known earlier in China. It was popular in the 1870s in England, taking its name from Badminton, the Gloucestershire estate of the duke of Beaufort. The game was introduced into the United States in the 1890s and grew in popularity in the 1930s. The International Badminton Association (founded 1934) sponsors the Thomas Cup for men's teams and the Woer Cup for women's teams, the world championships of badminton.

Bad Nauheim (bat nou'hīm), town (1970 pop. 14,242), Hesse, central West Germany, in the Taunus mts. It is a world-famous resort, noted for its salt springs, which are used to treat heart and nerve diseases.

Badoglio, Pietro (pyā'trō bādō'lyō), 1871-1956, Italian soldier and public official. After serving in World War I, he was governor of Libya (1929-33) and succeeded Gen. Emilio de Bono as commander in chief in the Ethiopian conquest, which he brought (1936) to a victorious end. Created duke of Addis Ababa, he was briefly viceroy of Ethiopia, then chief of the Italian general staff until 1940. After the fall of Mussolini, he was made (1943) premier by King Victor Emmanuel III. He negotiated an armistice with the Allies, whom he joined in the war against Germany. Meeting with much opposition in Italy, he resigned in 1944. He wrote *Italy in the Second World War* (tr. 1948).

Bad Reichenhall (bat rī'khānhāl) or **Reichenhall**, town (1970 pop. 13,042), Bavaria, SE West Germany, on the Saalach River, near the Austrian border. It is a year-round health resort. Salt has been mined there since Roman times.

Badrinath (būd'rīnāt), peak, 23,210 ft (7,074 m) high, in the central axis of the Himalayas, Uttar Pradesh state, N India. The peak has several glaciers. At a height of c. 10,000 ft (3,050 m), is an 8th-century monastery and a temple to the Hindu god Shiva, a popular pilgrimage center built by the great Indian scholar and teacher Śāṅkaracharya.

Baduila: see TOTIA.

Baeck, Leo (lā'ō bēk), 1873-1956, German rabbi and scholar. He studied at the conservative Jewish Theological Seminary of Breslau and then at the liberal Hochschule für die Wissenschaft des Judentums in Berlin, also attending the universities of Breslau and Berlin, at Berlin he studied philosophy under Wilhelm Dilthey. He held positions as rabbi in Oppeln (1897-1907), Düsseldorf (1907-12), and Berlin (1912-43). In 1943 he was sent to the Theresienstadt concentration camp. After being liberated in 1945, he moved to London, becoming president of the World Union for Progressive Judaism, he also taught on occasion at the Hebrew Union College in Cincinnati. Baeck's works in English translation include *The Essence of Judaism* (1905, tr. 1936), *The Pharisees and Other Essays* (1947), and *Judaism and Christianity* (1958). In *This People Israel* (1955, tr. 1965), he propounded his belief in the eternal dialectical polarity between "mystery" and "command," the latter being the divine instructions that give concrete expression to the "mystery" in terms of man's obligations to others, which he defined as piety. See A. H. Friedlander, *Leo Baeck, Teacher of Theresienstadt* (1968).

Baeda: see BEDE, SAINT.

Baedeker, Karl (bā'dēkər), 1801-59, German publisher, founder of the Baedeker guidebooks. His printing establishment was at Koblenz, but his son Fritz, who continued the business, moved it to Leipzig. Printed in several languages, the guidebooks provided valuable historical information and ran into many editions, especially for European countries. Although the firm's files were destroyed during World War II, the business was revived after the war by a great-grandson of Baedeker. In 1950 the firm began publishing automobile touring guides.

Baekeland, Leo Hendrik (bāk'lānd), 1863-1944, American chemist, b. Belgium, grad. Univ. of Ghent, 1882. In 1889 he emigrated to the United States. He founded (1893) and conducted, until 1899, when he

sold the rights to Eastman, a company for producing a photographic paper of his own invention. In 1909 he announced his invention of *BAKELITE*, and from 1910 to 1939 he served as president of the Bakelite Corp. He wrote *Some Aspects of Industrial Chemistry* (1914).

Baer, George Frederick (bār), 1842-1914, American financier, b. Somerset co., Pa. Baer became legal adviser to J. Pierpont Morgan and held many posts as a key figure in the railroad-and-coal empire. He is remembered for his refusal to arbitrate in the strike of the anthracite-coal miners in 1902.

Baer, Karl Ernst von, 1792-1876, Estonian biologist. He was a professor at Würzburg and Königsberg and from 1834 at St. Petersburg. Considered a founder of modern embryology, he discovered the notochord as well as the mammalian ovum. In his *History of the Development of Animals* (2 vol., 1828-37) he presented the theory of embryonic germ layers (the development of body tissues and organs from definite layers of cells formed in the early embryonic stages) and showed that the development of the embryo in different animals is similar in its early stages. He made these ideas a basis for a general evolutionary theory.

Baerle-Duc: see BAARLE-HERTOG, Belgium.

Baeyer, Adolf von (Johann Friedrich Wilhelm Adolf von Baeyer) (ā'dōlf fən bā'yər, yō'hān' frē'drīkh vīl'hēlm), 1835-1917, German chemist. He taught at Berlin and Strasbourg and in 1875 succeeded Liebig at Munich. For his work in organic chemistry, especially that on organic dyes and the hydroaromatic compounds, he received the 1905 Nobel Prize in Chemistry. His discovery of the molecular structure of indigo and his research on many other organic substances did much to develop the chemical industry of Germany. His collected works were published in German (1905).

Báez, Buenaventura (bwā'navāntō'rā bā'ās), c. 1810-1884, president of the Dominican Republic (1849-53, 1856-58, 1865-66, 1868-73). Like his bitter rival, SANTANA, Báez was unscrupulous and selfish, he gained and lost the presidency by revolution and counterrevolution. With his country in a condition of financial ruin and recurrently gripped by anarchy, he negotiated (1869) a treaty with the United States providing for U.S. annexation of the Dominican Republic. A Dominican plebiscite (1870) confirmed the treaty, but the U.S. Senate, ignoring President Grant's wishes, failed to ratify it. Báez lost his popular support and was overthrown.

Baez, Joan (ba'ēz, bīz), 1941-, American folk singer and political activist, b. New York City. Baez began singing folk ballads, blues, and spirituals in Cambridge, Mass., coffeehouses, singing traditional folk songs such as "Donna, Donna," "Mary Hamilton," and "All My Trials" in a clear soprano voice with a three-octave range. She made folk music popular where it had been largely ignored. Baez's folk records were the first complete albums to become best-sellers. Her later albums include several of her own compositions, e.g., "Song for David" and "Blessed Are." Among the first performers to urge social protest, she sang and marched for civil and student rights and peace. Since the late 1960s she has devoted most of her time to her school for nonviolence in California. See her autobiography, *Day-break* (1968).

Baffin, William, c. 1584-1622, British arctic explorer. He was pilot on two expeditions (1615-16) sent out to search for the NORTHWEST PASSAGE under command of Robert Bylot, who was formerly with Henry Hudson. The first expedition vainly tried to find a channel in Hudson Bay N of Southampton Island. The second attempt, NW through Davis Strait, led to exploration of what was later called Baffin Bay and the northeast shore of Baffin Island. The existence of Baffin Bay was discredited until 1818 when Sir John Ross confirmed Baffin's discovery and observations. Baffin's conviction that the Northwest Passage did not exist discouraged arctic exploration for a time. His narratives were edited by Sir Clements Markham in 1881.

Baffin Bay, ice-clogged body of water, c. 700 mi (1,130 km) long, between Greenland and NE Canada. It connects with the Arctic Ocean to the north and west and with the Atlantic Ocean to the south by way of Davis Strait. Although more than 9,000 ft (2,740 m) deep, navigation in the bay is made hazardous by many icebergs brought there by the Labrador Current. In the 1800s the bay was an important whaling station. The British explorer John Davis was first (1585) to enter the bay, which is named for William Baffin, who explored it in 1616.

Baffin Island, 183,810 sq mi (476,068 sq km), c 1,000 mi (1,610 km) long and from 130 to 450 mi (210–720 km) wide, in the Arctic Ocean, E Northwest Territories, Canada. It is the fifth-largest island in the world and the easternmost member of the Arctic Archipelago. Baffin Island is geographically and geologically a continuation of Labrador, from which it is separated by Hudson Strait. The western side of the island is covered largely by tundra. There are many freshwater lakes, including Nettilling (1,956 sq mi/5,066 sq km) and Amadjuak. In the east, snow-covered mountain ranges rise more than 8,000 ft (2,440 m). Baffin Island has a deeply indented coastline with many fjords. Most of the island's inhabitants are Eskimos who live mainly at coastal trading posts. Whaling, fur trading, and fishing are the chief occupations. The posts have stores, post offices, police stations, schools, and occasionally hospitals. Martin Frobisher visited the island between 1576 and 1578, and Frobisher Bay, in the southeast, is the principal town. The island is named for William Baffin, the British explorer who explored the Arctic in 1616.

Baffin Island National Park, c 8,290 sq mi (21,470 sq km), SE Franklin dist., Northwest Territories, Canada, on E Baffin Island near Pangnirtung, est. 1972. Located on the Cumberland Peninsula, it was the first Canadian national park to be created N of the Arctic Circle. The park includes scenic fjords, glaciated mountains, numerous glaciers, and the extensive Penny Ice Cap.

Bagdad: see BAGHDAD, Iraq

Bagshot, Walter (bā'ŷŏt), 1826–77, English social scientist. After working in his father's banking firm, he edited (1860–77) the *Economist* (which had been founded by his father-in-law) and helped establish its high reputation as a financial journal. From these activities came his noted study of the English banking system, *Lombard Street* (1873). Bagshot's classic *English Constitution* (1864) distinguished between the effective institutions of government and those, like the House of Lords, that had entered decay. His other important books include *Literary Studies* (1879) and *Economic Studies* (1880). In *Physics and Politics* (1875) he made a pioneer analysis of the interrelationship between the natural and the social sciences. Bagshot was also a noted literary critic of his day. See his collected works (10 vol., 1915), biography by William Irvine (1939, repr. 1970), studies by Alistair Buchan (1960) and Norman St John-Stervas (1963).

Baggesen, Jens (yēns bag'əsen), 1764–1826, Danish poet and satirist, b. Zealand. Although a Germanophile, Baggesen was considered the leading Danish poet of his day. His elegant, imaginative poems include *Comic Tales* (1785) and the satirical *The Ghost and Himself*, or, *Baggesen on Baggesen*. *The Labyrinth* (2 vol., 1792–93), his outstanding prose work, is a vivid and witty account of his journeys.

Baghdad or **Bagdād** (both bāg'dād, bagdad'), city (1970 est. pop. 2,183,760), capital of Iraq, central Iraq, on both banks of the Tigris River. Most of Iraq's industries are in Baghdad, they include the making of carpets, leather, textiles, cement, and tobacco products and the distilling of arrack. The present city was founded (762) on the west bank of the Tigris by the Abbasid caliph MANSUR, who made it his capital. Its commercial position became generally unrivaled and under the caliph HARUN AR-RASHID it rose to become one of the greatest cities of Islam. Baghdad was the home of eminent scholars and artists and enjoyed great wealth from the sale of its silks and tiles. Its many gardens gave added justification to its claim to be the "Abode of Peace." This period of its greatest glory is reflected in the *Thousand and One Nights*, in which many of the tales are set in Baghdad. After the death (809) of Harun the seat of the caliph was moved to Samarra, when the caliphate was returned later in the century, Baghdad had already been weakened by internal struggles. In 1258 the Mongols sacked the city and destroyed nearly all of its splendor. It revived but was captured again by Tamerlane (1400) and by the Persians (1524). It was repeatedly contested by Persians and Turks until 1638, when it definitively became part of the Ottoman Empire. By that time the city's population had dwindled from a peak of about 2,000,000 to only a few thousand. Baghdad was captured by the British in 1917. In 1920 it became the capital of the newly constituted kingdom of Iraq. The city was the scene of a coup in 1958 that overthrew the monarchy and established the Iraqi republic. Baghdad is rich in archaeological remains and has several museums. There are three universities in Baghdad, the largest is the Univ. of Baghdad (1958).

Baghdad Pact: see CENTRAL TREATY ORGANIZATION

Baghdad Railway, railroad of international importance linking Europe with Asia Minor and the Middle East. The line runs from Istanbul, Turkey, to Basra, Iraq. The railroad was initially financed chiefly by German capital, its Anatolian sections were completed in 1896. The ambitious project was then formed to extend the railroad to Baghdad, and a company, again backed chiefly by German capital, was organized for the purpose. Immediate protests were made to Turkey by France, Russia, and, particularly, Great Britain, which saw in the projected line a direct threat to its empire in India. Operations were held up for several years by these international representations and by engineering difficulties, but in 1911 work was resumed. By playing on imperialistic rivalries, the construction of the railroad was a factor in bringing about World War I. By the end of the war only a stretch between Mosul and Samarra remained to be completed on the main line. See E. M. Earle, *Turkey, the Great Powers, and the Baghdad Railway* (1923, repr. 1966), J. B. Wolf, *The Diplomatic History of the Baghdad Railroad* (1936, repr. 1973).

Baghlan (bag'lan), city (1971 pop. 105,944), N Afghanistan, on the Kunduz River. A center of beet sugar production, it has industries producing cotton and fabrics.

Bagley, William Chandler, 1874–1946, American educator and editor, b. Detroit, grad. Michigan State College, 1895, M.S. Univ. of Wisconsin, 1898, Ph.D. Cornell Univ., 1900. He taught in elementary schools before becoming (1908) professor of education at the Univ. of Illinois. He was professor of education at Teachers College, Columbia, from 1917 to 1940. An opponent of pragmatism and progressive education, Bagley insisted on the value of knowledge for its own sake, not merely as an instrument, and he criticized his colleagues for their failure to emphasize systematic study of academic subjects. Of his many works, *Education and Emergent Man* (1934) contains the clearest exposition of his educational philosophy. His other writings include *The Educative Process* (1905), *Educational Values* (1911), and *Determinism in Education* (1925). Bagley was editor in chief of the *Journal of the National Education Association* (1920–25) and *School and Society* (1939–46), which he founded in 1915. See biographies by F. B. Stratemeyer (1939) and I. L. Kandel (1961).

Bagnères-de-Luchon (banyēr'-dā-lushōn'), town (1968 pop. 4,139), Haute-Garonne dept., S France, at the foot of the Maladetta Mts. It is an important resort in the Pyrenees. Its warm sulfur springs have been known since Roman times.

Bagnold, Enid, 1889–, English novelist and playwright, b. Rochester, Kent, England. She was a nurse in a military hospital in World War I. In 1920 she married Sir Rodenck Jones, head of Reuters news agency. Bagnold's works combine wit, charm, sophistication, and wisdom. Her best-known novel is *National Velvet* (1935), the story of a teenage girl who wins a horse in a raffle and rides it to victory in the famed Grand National race. Bagnold's other works include the novels *Serena Blandish* (1924) and *The Loved and the Envid* (1951), and the plays *The Chalk Garden* (1955) and *The Chinese Prime Minister* (1964). See her autobiography (1969).

Bagot, Sir Charles (bāg'ŏt), 1781–1843, British diplomat. As minister to the United States (1815–20) he negotiated the RUSH-BAGOT CONVENTION, which limited armaments along the U.S.-Canadian border. As governor general of Canada (1841–43), he was instructed by the British cabinet to resist Canadian demands for responsible government along the lines proposed by the earl of DURHAM. Bagot, however, allowed Robert BALDWIN and Sir Louis LAFontaine to form a ministry on the basis of their parliamentary majority. See G. P. Glazebrook, *Sir Charles Bagot in Canada* (1929).

Bagotville (bāg'ŏvil), town (1971 pop. 6,041), S Que., Canada, on Ha Ha Bay, an arm of the Saguenay River. It is the port for the area's industries.

bagpipe, musical instrument whose ancient origin was probably in Mesopotamia from which it was carried east and west by Celtic migrations. It was used in ancient Greece and Rome and has been long known in India. Some form of bagpipe was later used in nearly every European country, it was particularly fashionable in 18th-century France, where it was called the musette. Its widest use and greatest development was in the British Isles, particularly Northumberland, Ireland, and Scotland. The island of Skye was the home of a school for pipers.

The Highland pipe of Scotland, the most well-known type, was a martial instrument and from it comes the modern great pipe, but at least six other

Scottish bagpipe

types were once used in the British Isles. The basic construction of a bagpipe consists of a bag, usually leather, which is inflated either by mouth through a tube or by a bellows worked by the arm, one or two chanters (or chaunters), melody pipes having finger holes and fitted usually with double reeds, and one or more drones, which produce one sustained tone each and usually have single reeds, though the musette drones have double reeds (see REED INSTRUMENT). Associated with folk and military music, it has been neglected by composers, possibly because of its short range. See Anthony Baines, *Bagpipes* (1960), T. H. Podnos, *Bagpipes and Tunings* (1974).

Bagration, Piotr Ivanovich, Prince (pyō'tar ēva'-navy'ich bāgratēōn'), 1765–1812, Russian general in the French Revolutionary and Napoleonic Wars. He fought under Field Marshal SUVOROV in the Italian and Swiss campaigns of 1798–99 and at Austerlitz, Eylau, and Friedland. In 1808 he captured the Åland Islands from Sweden, in 1809 he fought against the Turks in the Russo-Turkish War of 1806–12, and in 1812 he commanded an army against Napoleon and was mortally wounded at Borodino.

Bagrationovsk (bāgrŭ'tyēō'nafsk), town, NW European USSR, formerly in East Prussia, on the Polish border. Its German name was Eylau or Preussisch Eylau. It is a rail terminus and has meat-processing and dairy industries. The town was founded in 1336. In Feb. 1807, it was the site of a bloody, indecisive battle between Napoleon I and the allied Russian and Prussian forces that checked Napoleon's movement toward the Russian frontier. The town is named in honor of Gen. P. I. Bagration, who distinguished himself during the battle.

Baguio (bā'gēō, Sp. bagyō'), city (1970 pop. 84,538), Mountain prov., NW Luzon, the Philippines. Baguio is the summer capital of the country, with many government buildings. It is also a noted mountain resort situated in beautiful pine forests and is the center of a major gold-producing area. The city is noted for the wood carvings of its Igorot aborigines. Nearby, at Lepanto, are important copper mines, and there is a major hydroelectric development on the Agno River. Originally settled by the Spanish, Baguio developed only after the American occupation, when a modern city was laid out (1909) by Daniel H. Burnham and roads were built (the first in 1913) to connect it with the main highways. The city was captured early (Dec., 1941) in World War II by Japanese land forces. U.S. Camp John Hay is now maintained there by the U.S. military for recreational purposes. Baguio is the seat of the national Philippine Military Academy, the Univ. of Baguio, and St. Louis Univ.

bagworm, common name for the larva of small moths of the family Psychidae. The larva spins a silken cocoon as it travels, hence the term bagworm. When fully grown, the bagworm fastens its covering to a twig and pupates within it. Some species weave bits of leaves or twigs into their bags. During mating season the wingless, footless adult female perforates the lower end of the bag, crawls in, and soon after laying about a thousand overwintering eggs, dies. The larvae develop slowly, requiring several months to reach maturity. Bagworms prefer arborvitae and juniper trees, but practically all trees are attacked. The best known of these small moths is *Thyridop-*

teryx ephemeraeformis, occurring throughout the E United States and regions adjacent to the Gulf of Mexico. Control of the pests is through use of insecticides or by handpicking the cocoons before the eggs hatch at the end of May. Bagworms are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Psychidae.

Bahadur Shah II (baha'dōr sha), 1775–1862, last Mogul emperor of India (1837–57). A political figurehead, he was completely controlled by the British East India Company, who found it convenient to maintain the fiction of Mogul rule. He was an old man of 82 at the time of the INDIAN MUTINY (1857–58), but implicated by rebel proclamation he was convicted of complicity and exiled to Rangoon for life.

Bahaism (ba'haizəm, baha'izəm), religion founded by BAHÁ ULLAH and promulgated by his eldest son, Sir Abdul Baha Bahai (1844–1921). It is a doctrinal outgrowth of BABISM, with Baha Ullah as the Promised One of the earlier religion. Bahaism holds that God can be made known to man through manifestations, which have come at various stages of human progress, the prophets include Abraham, Moses, Christ, Muhammad, the Bab, and Baha Ullah. Bahaists believe in the unity of all religions, in universal education, in world peace, and in the equality of men and women. An international language and an international government are advocated. Emphasis is laid upon simplicity of living and upon service to suffering fellow men. The teachings spread across the world in the 20th cent. The center of the faith in the United States is the great house of worship at Wilmette, Ill. The administrative center of the world faith is in Haifa, Israel, and in recent years the movement has made progress throughout the world, particularly in Africa.

Bahama Islands, officially **Commonwealth of the Bahamas** (baha'məz), country (1970 pop 168,209), 4,403 sq mi (11,404 sq km), in the Atlantic Ocean, consisting of some 700 islands and islets and about 2,400 cays, beginning c 50 mi (80 km) off SE Florida and extending c 600 mi (970 km) SE almost to Haiti. The country does not include the TURKS AND CAICOS ISLANDS, to the southeast, which, although geo-

graphically part of the archipelago, have been separately administered by Great Britain since 1848. Until 1973, when they became independent, the Bahamas were administered as a British crown colony. The capital and principal city is NASSAU, on New Providence island. Other chief islands, known as "out islands," are Grand Bahama, Great and Little Abaco (see ABACO AND CAYS), the Bimini, Andros, Eleuthera, Cat Island, SAN SALVADOR, Great and Little Exuma (Exuma and Cays), Long Island, Crooked Island, Acklins Island, Mayaguana, and Great and Little Inagua (see INAGUA). The islands, composed mainly of limestone and coral, rise from a vast submarine plateau. Most of the islands are generally low and flat, riverless, with many mangrove swamps, brackish lakes (connected with the ocean by underground passages), and coral reefs and shoals. Fresh water is obtained from rainfall and from the desalination. Navigation is hazardous, and many of the outer islands are uninhabited and undeveloped, although in recent years steps have been taken to improve transportation facilities. Hurricanes occasionally cause severe damage, but the climate is generally excellent. The islands' vivid subtropical atmosphere—brilliant sky and sea, lush vegetation, flocks of bright-feathered birds, and submarine gardens where multicolored fish swim among white, rose, yellow, and purple coral—as well as rich local color and folklore, has made the Bahamas one of the most fashionable and popular winter resorts in the hemisphere. Tourism, which has grown rapidly

since the end of World War II, is by far the country's most important industry, employing a large portion of the population and accounting for most of the foreign exchange. Crawfish, lumber, cement, salt, agricultural products, and handicraft curios are exported. Sugar and oil refining industries have been introduced to diversify the economy and to increase the Bahamas' export trade. The country's population is about 85% black and mulatto. English is the official language. The Bahamas have a relatively low illiteracy rate. The government provides free education through the secondary level, there is a branch of the Univ of the West Indies at Nassau. The Bahamas are governed by the constitution of 1973 and have a parliamentary form of government. There is a bicameral legislature consisting of a 16-seat Senate and a 38-seat House of Assembly. The prime minister is the head of government, and the monarch of the United Kingdom, represented by an appointed governor-general, is the titular head of state.

History Christopher Columbus first set foot in the New World in the Bahamas (1492), presumably at San Salvador, and claimed the islands for Spain. Although the aborigines, a gentle people called the Lucayos, were soon exterminated, the Spanish did not in fact colonize the islands. The first settlements were made in the mid-17th cent by the English, who later imported blacks to work cotton plantations. In 1670 the islands were granted to the lords proprietors of Carolina, who did not relinquish their claim until 1787, although Woodes ROGERS, the first royal governor, was appointed in 1717. Under Rogers the pirates and buccanniers, notably Blackbeard, who haunted the Bahama waters, were driven off. The Spanish attacked the islands several times, and an American force held Nassau for a short time in 1776. After the American Revolution many Loyalists settled in the Bahamas. In 1781 the Spanish captured Nassau and took possession of the whole colony, but under the terms of the Treaty of Paris (1783) the islands were ceded to Great Britain. Plantation life gradually died out after the emancipation of slaves in 1838. Blockade-running into Southern ports in the U.S. Civil War enriched some of the islanders, and during the prohibition era in the United States the Bahamas became a base for rum-running. The United States leased areas for bases in the Bahamas in World War II and in 1950 signed an agreement with Great Britain for the establishment of a proving ground and a tracking station for guided missiles. In the 1950s black Bahamians, through the Progressive Liberal party (PLP), began to oppose successfully the ruling white-controlled United Bahamian party, but it was not until the 1967 elections that they were able to win control of the government. The Bahamas were granted limited self-government in 1964, broadened (1969) through the efforts of Prime Minister Lynden O. PINDLING. The PLP, campaigning on a platform of immediate independence, won an overwhelming victory in the 1972 elections, and negotiations with Britain were begun, and on July 10, 1973, the Bahamas became a sovereign state within the Commonwealth of Nations. See W. A. Roberts, *The Caribbean* (1940, repr 1969), Timothy Severin, *The Golden Antilles* (1970), H. P. Mitchell, *Caribbean Patterns* (2d ed 1970).

Baharampur (baha'rəmpōr) or **Berhampore** (būr'əmpōr), town (1971 pop 73,380), West Bengal state, E central India. Jute and rice are traded. Its industries include silk weaving, ivory carving, and the production of bell metal. An early uprising in the INDIAN MUTINY occurred there.

Baharumite (baha'rəmit) see **BAHURIM**.

Bahasa Indonesia (baha'sa), another name for Indonesian, one of the MALAYO-POLYNESIAN LANGUAGES.

Baha Ullah or **Baha Allah** (baha' ōl'a), 1817–92, Persian religious leader originally named Mirza Husayn Ali Nuri. One of the first disciples of the Bab (see BABISM), he and his half-brother Subhi Azal became the leaders of the Babi faith. In 1863, shortly before being exiled to Constantinople, he declared himself the manifestation of God, the Promised One, as foretold by the Bab. He then founded BAHAIISM and wrote its fundamental book, *Kitabi-Ikan* (tr *The Book of Certitude*, 1943). He spent most of his adult life in prison or under close surveillance. He died in Acre, his tomb there is one of the monuments of the Bahai faith. See J. E. Esslemont, *Bahau'llah and the New Era* (3d rev ed 1970).

Bahawalpur (baha'wəlpōr), city (1969 est pop 146,800), capital of Bahawalpur division, Punjab prov., E central Pakistan, on the Sutlej River. It is a commercial center, trading in wheat, rice, dates, and cotton. Major manufactures are textiles, machinery,

and pharmaceuticals. Formerly the capital of the princely state of Bahawalpur, which was founded in the late 18th cent and acceded to Pakistan in 1947, the city has several palaces and fine buildings, notably the Gulzar Mahal. The city is also known as Baghdad-ul-Jadid.

Bahia (ba'e'ya), state (1970 pop 7,508,779), 216,612 sq mi (559,921 sq km), E Brazil, on the Atlantic Ocean. SALVADOR (also called Bahia) is the capital.

Bahia, city, Brazil see **SALVADOR**, Brazil.

Bahia Blanca (ba'e'a blang'ka), city (1970 pop 191,624), Buenos Aires prov., SE Argentina, a port near the head of the Bahia Blanca, an inlet of the Atlantic Ocean. It is the main commercial center and principal shipping point of the southern Pampa, as well as a rail terminus and an industrial city. A huge import and export trade is also carried on. Founded as a fortress town in 1828, Bahia Blanca grew with the economic expansion of the southern Pampa in the early 20th cent. The Bernardino Rivadavia library, founded in 1882, is a city landmark.

Bahr, Hermann (hēr'man bar), 1863–1934, Austrian dramatist and critic. His essay *Zur Kritik der Moderne* (1890) established *modernism* as a literary term, and his study *Expressionismus* (1916, tr 1925) defined that literary trend. Bahr's plays include the comedies *Das Konzert* (1909, tr 1910) and *Der Meister* (1914, tr 1918).

Bahraich (bar'ich), town (1971 pop 73,925), Uttar Pradesh state, NE India, on the Saryu River. A district administrative center, Bahraich also carries on a trade in rice, maize, sugar, jute, timber, and herbs. The mausoleum of Saiyud Salar Masud (d c 1050), a famous Muslim soldier and teacher, is in the town.

Bahrain or **Bahreïn** (both bar'ān, bā-), sheikhdom and archipelago (1973 est pop 225,000), 231 sq mi (598 sq km), in the Persian Gulf. The two main islands are Bahrain, or Aval, and Al Muharraq, connected by a causeway. The capital and chief port is AL MANAMA, on Bahrain. The islands are flat and sandy, with a few low hills. The climate is hot and humid. There is intensive cultivation of dates and alfalfa, cereals, fruits, and vegetables are also grown, and there are poultry and dairy industries. Oil was found in 1931, and oil revenues have financed extensive modernization projects, particularly in

health and education. However, Bahrain is expected to be the first Persian Gulf nation to run dry of oil, and steps are being taken to diversify the nonagricultural sector of the economy. Ship-repair, aluminum, and turbine-manufacturing industries have been started or planned. The population is predominantly Arabic. Bahrain was ruled in the 16th cent by Portugal and intermittently from 1602 to 1783 by Persia. The Persians were expelled by an Arabian family that established the presently ruling dynasty of sheikhs. In 1861, Bahrain became a British protectorate. There were demonstrations and strikes in the 1950s and 60s demanding greater popular participation in government. Iran claimed the islands in 1970 after the UN reported that the inhabitants desired independence. In 1971, after Britain withdrew from the Persian Gulf area, Bahrain became independent. Bahrain is a member of the United Nations and the Arab League. A council of state, constituting the executive, was appointed by the sheikh in 1970. In June, 1973, a constitution was adopted limiting the powers of the sheikh and granting women the right to vote. See Fereyduh Adamiyat, *Bahrain Islands* (1955), A. M. Abu Hakima, *History of Eastern Arabia, 1750–1800. The Rise and Development of Bahrain and Kuwait* (1965).

Bahr al Hulah: see HULA, LAKE

Bahrein Islands: see BAHRAIN

Bahr-el-Abiad, river, Sudan see WHITE NILE

Bahr-el-Azrak, river, Sudan see BLUE NILE

Bahr-el-Ghazal (bar-él-gazal'), region and province, SW Sudan The region takes its name from a river that flows E to the Bahr-el-Jebel to form the White Nile. An area of swamps and ironstone plateaus, the region is inhabited mainly by pagan tribes, notably the Nilotic-speaking Dinka. Subsistence agriculture, cattle raising, and game hunting are carried on. Turco-Egyptian and European penetration of the region in the 19th cent. was followed by the development of slave trading. With the suppression of the slave trade in 1864 by the Egyptian Khedive, European traders withdrew and local merchant-princes, independent of the Khedive's authority, took over the trade. In 1873, al-Zubayr, the most powerful of the native merchant-princes defeated a Turco-Egyptian force sent to reinforce the ban on slave trading. The Khedive then made Bahr-el-Ghazal a nominal province of Egypt, with al-Zubayr as governor. A Mahdist force captured the region in 1884 but failed to maintain control. Anglo-Egyptian troops occupied Bahr-el-Ghazal in 1900.

Bahr el-Huleh: see HULA, LAKE

Bahr-el-Jebel (ba'här-él-jēb'ēl), river, 594 mi (956 km) long, section of the White Nile, S Sudan, Africa. The name is usually used for the White Nile between Nimule, where it enters the Sudan (as the Albert Nile), and Lake No, where it joins with the Bahr-el-Ghazal to form the Bahr-el-Abiad, also a section of the White Nile. As the river passes through the Sudd swamps it loses much of its volume through evaporation and dispersal. The river is navigable to Juba.

Bahurim (bāhyōō'rīm), town, NE of Jerusalem. 2 Sam 3:16, 16 S, 17:18, 19:16, 1 Kings 2:8. Azmaveth of Bahurim is called once a Baharumite, once a Barhumite. 1 Chron 11:33, 2 Sam 23:31.

Baia (bi'a), Lat. *Baiae*, village, in Campania, S Italy, on the Bay of Naples. In Roman times it was a celebrated spa and a favorite imperial residence, with sumptuous villas (1st cent. B.C.). There are remains of the huge Roman baths.

Baia-Mare (bi'a-ma'rē), Hung. *Nagybánya*, city (1969 est. pop. 51,000), NW Rumania, in Crișana-Maramureș. It is a mountain resort and the industrial center of a region that mines copper, lead, zinc, gold, and silver. The city has smelting works and produces sulfuric acid and synthetic fibers. Baia-Mare, founded by Saxons in the 12th cent., was long held by Hungary. In the city are a college of mines, remains of 16th-century fortifications, and an old wooden church. There is a large Hungarian minority in Baia-Mare.

Baie Comeau (bā kō'mō), town (1971 pop. 12,109), E Que., Canada, on the St. Lawrence River near the mouth of the Manicouagan River. It is a port and has an aluminum smelter and a large pulp and paper industry.

Baif, Jean Antoine de (zhaN aNtwan' də baēf'), 1532-89, French poet of the Pléiade. He wrote sonnets, didactic and satirical poems, and plays.

Baikal: see BAYKAL

Baikie, William Balfour (bā'kē), 1825-64, British explorer in Africa, b. Kirkwall, the Orkneys. He was the surgeon of a Niger expedition in 1854 and succeeded to the command on the death of the leader. In 1856 he published an account of the expedition. Returning to Nigeria as leader of a second expedition, he established himself (1859) at LOKOJA. Under his leadership the town became an unofficial British settlement and thriving commercial center. He compiled valuable information about N. Nigeria, including vocabularies of nearly 50 African dialects.

bail, in law, procurement of release from prison of a person awaiting trial or an appeal, by the deposit of security to insure his submission at the required time to legal authority. The monetary value of the security—known also as the bail, or, more accurately, the bail bond—is set by the court having jurisdiction over the prisoner. The security may be cash, the papers giving title to property, or the bond of private persons of means or of a professional bondsman or bonding company. Failure of the person released on bail to surrender himself at the appointed time results in forfeiture of the security. Bail is usually granted in a civil ARREST. Courts have greater discretion to grant or deny bail in the case of persons under criminal arrest, e.g., it is usually refused when the accused is charged with homicide. The Eighth Amendment to the Constitution of the United States provides that "excessive bail shall not

be required," but it does not provide any absolute right to bail.

Baile Átha Cliath: see DUBLIN, county borough, Republic of Ireland

Bailén (bilān'), city (1970 pop. 13,233), Jaén prov., S Spain, in Andalusia. In 1808, early in the Peninsular War, a French army was surrounded and forced to surrender near Bailén by the Spanish under Castaños, who was made duke of Bailén.

Bailey, Anne, 1742-1825, American frontier heroine, b. Anne Hennis in Liverpool, England. She emigrated to Virginia c. 1761. After her first husband, Richard Trotter, was killed at the battle of Point Pleasant (1774), she donned male attire and became a noted scout and messenger. At that time she married John Bailey. According to legend, Indians besieged Fort Lee, on the present site of Charleston, W. Va., in 1791, and Anne Bailey rode 100 mi (161 km) through the mountain wilderness to Fort Savannah (Lewisburg) and returned with enough ammunition to raise the siege. See biography by V. A. Lewis (1891).

Bailey, Gamaliel, 1807-59, American abolitionist editor, b. Mt. Holly, N.J. In 1837 he succeeded James Birney as editor and publisher of the *Philanthropist* at Cincinnati. Three times his office was attacked by proslavery mobs, and once the entire establishment was destroyed. From 1847 until his death Bailey ably edited the influential *National Era*, an abolitionist weekly published in Washington, D.C. Harriet Beecher Stowe's *Uncle Tom's Cabin* first appeared in that journal.

Bailey, Liberty Hyde, 1858-1954, American botanist and horticulturist, b. South Haven, Mich., grad. Michigan Agricultural College (now Michigan State College of Agriculture and Applied Science), 1882. At Cornell Univ. he was professor of horticulture (1888-1903) and dean of the agricultural college and director of the agricultural experiment station (1903-13). Through numerous writings and as chairman of President Theodore Roosevelt's Commission on Country Life (1908), he worked for the improvement of rural life. Bailey was influential in establishing horticulture as a respected science. He wrote many basic works on botany and horticulture, edited *The Standard Cyclopaedia of Horticulture* (6 vol., 1914-17, new ed. 1935) and *Cyclopaedia of American Agriculture* (4 vol., 1907-9), and compiled (with E. Z. Bailey) *Hortus* (1930, rev. ed. 1935) and *Hortus Secundus* (1941). See biographies by Philip Dorf (1956) and A. D. Rodgers (1949, repr. 1965).

Bailly, Jean Sylvain (zhaN sēlvāN' bayē'), 1736-93, French astronomer and politician. His works on astronomy and on the history of science (notably the *Essai sur la théorie des satellites de Jupiter*) were distinguished both for scientific interest and literary elegance and earned him membership in the French Academy, the Academy of Sciences, and the Academy of Inscriptions. He was elected (1789) from Paris to the States-General and was chosen president of the National Assembly. Mayor of Paris from 1789 to 1791, he lost favor with the popular elements that pushed the French Revolution onward. He permitted the national guard to fire upon a demonstrating crowd (July 17, 1791). Bailly retired from Paris, but in 1793 he was seized, taken to Paris, convicted of having contrived the July massacre, and guillotined. His lengthy *Essai sur l'origine des fables et des religions anciennes* was published in 1799.

Baily, Edward Hodges, 1788-1867, English sculptor. He studied under Flaxman. One of his best works is the statue of Admiral Nelson in Trafalgar Square, London. Other works include decorations for Buckingham Palace, numerous portrait busts and statues, and *Eve at the Fountain*, *Psyche*, and *Helen and Paris*.

Bailyn, Bernard, 1922-, U.S. historian, b. Hartford, Conn. After receiving his Ph.D. from Harvard in 1953, he taught (1953-) U.S. colonial history there, becoming full professor in 1961. His most noted work, the Pulitzer Prize winning *Ideological Origins of the American Revolution* (1967), challenged long-standing interpretations of the causes of the American Revolution. His other books include *The New England Merchants in the Seventeenth Century* (1955), *Education in the Forming of American Society* (1960), *The Origins of American Politics* (1968), and *The Ordeal of Thomas Hutchinson* (1974).

Baily's beads: see ECLIPSE

Bain, Alexander, 1818-1903, Scottish philosopher and psychologist. He was educated at Marischal College, Aberdeen, where he later taught for three years. He taught one year (1845) at Anderson's Univ., Glasgow, but resigned to do free-lance work

in London. There he joined a brilliant circle including George Grote and John Stuart Mill, with whom he already had close literary relationships. From 1860 to 1880 he held the chair of logic and English at the Univ. of Aberdeen (which had absorbed Manschal College), where he worked for educational reform. After his retirement he was twice elected lord rector of the university. His major contributions were in the field of psychology. Although he remained firmly in the associationist tradition of the Mills and shared their distrust of metaphysics, he nevertheless developed the current psychology in several directions. The most important of these was toward a greater recognition of the importance of the will and emotions. He considered physiological factors but refused to make any materialistic assumptions. Besides being the founder of the first psychological journal, *Mind*, in 1886, Bain was the author of *The Senses and the Intellect* (1855), *The Emotions and the Will* (1859), *Mental and Moral Science* (1868), *Education as a Science* (1879), *James Mill* (1882), *John Stuart Mill* (1882), and an autobiography (pub. posthumously with a bibliography of his works, 1904).

Bainbridge, William, 1774-1833, American naval officer, b. Princeton, N.J. An experienced sea captain, he joined (1798) the navy when war with France threatened. His ship, the *Retaliator*, was captured by two French frigates, and he and his crew were imprisoned on Guadeloupe. Released, he returned to America and in 1800, as commander of the *George Washington*, he carried U.S. tribute money to the dey of Algiers (see TRIPOLITAN WAR). The dey forced him to proceed under the Turkish flag to Constantinople—an insult that contributed to the American decision to declare war against the BARBARY STATES. In 1803, assigned to the troubled Mediterranean area, Bainbridge's ship, the *Philadelphia*, ran aground in the harbor of Tripoli and was captured. He was freed at the end of the Tripolitan War. In the war of 1812, as commander of the *CONSTITUTION*, Bainbridge captured the British frigate *Java* off the Brazilian coast in Dec., 1812. In 1815, a commodore, he went out in the *Independence* to aid Stephen Decatur in the operations against Algiers, but he arrived after the fighting was over. See his biography written in 1816 by H. A. S. Dearborn (ed. by James Barnes, 1931).

Bainbridge, city (1970 pop. 10,887), seat of Decatur co., SW Ga., on the Flint River, inc. 1829. It grew up around the site of an Indian trading post and is now a trade and industrial center as well as an inland port and barge terminal. Its manufactures include machinery, clothing, automotive parts, mobile homes, aluminum windows, and molded plastic items. Fertilizers are also produced, and salt is processed there. Bainbridge is in the vicinity of Lake Seminole, a fishing, hunting, and boating center.

Bainville, Jacques (zhak bāNvēl'), 1879-1936, French historian and journalist. A nationalist and a royalist, he was one of the founders and the foreign editor of the royalist daily, *Action française*. His brilliant and concise *History of France* (1924, tr. 1926), although highly debatable in its nationalist thesis, is an eloquent apology for the monarchic tradition in France. His other writings include *Napoleon* (tr. 1934), *The French Republic, 1870-1935* (tr. 1936), and *Dictators* (tr. 1937, repr. 1967).

Baird, John Logie, 1888-1946, Scottish inventor. In 1926 he gave the first demonstration of true television with a televisior of his own invention that differed from later instruments in being partially mechanical rather than wholly electronic. He accomplished transatlantic television in 1928 and demonstrated color television in the same year. He also invented (1926) the noctovisor, an instrument for making objects visible in the dark or through fog by means of infrared light.

Baird, Spencer Fullerton, 1823-87, American zoologist, b. Reading, Pa., grad. Dickinson College, 1840. He was professor of natural history at Dickinson from 1846 to 1850. While at the Smithsonian Institution (from 1850, as secretary from 1878) he supervised the building of a museum to house the great collection of North American fauna that had been amassed under his guidance. In 1871, Congress established the U.S. Fish Commission with Baird as its head. Baird set up the Marine Biological Station at Woods Hole, Mass., organized the expeditions of the research ship *Albatross*, and initiated valuable studies on wildlife preservation. His publications (over 1,000 titles) show a phenomenal range of scientific work. His books on birds inaugurated the so-called Baird school of ornithological description,

emphasizing accurate observation of each individual. Among other major studies were the *Catalogue of North American Reptiles* (with Charles Girard, 1853) and the *Catalogue of North American Mammals* (1857). See biography by W. H. Dall (1915).

Bairnsfather, Bruce (bârnz'fâthər), 1888–1959, English illustrator and author, b. India. He served with the British forces in World War I and created the cartoon character "Old Bill" to typify the spirit of the British infantryman. During World War II, Bairnsfather was cartoonist with the U.S. forces in Europe. His works include *Fragments from France* (1916), *Bullets and Billets* (1917), and *Jeeps and Jest* (1943).

Baius (bâ'yās) or **Bajus** (bâ'jās), **Michael**, 1513–89, Flemish Roman Catholic theologian, also known as Michel de Bay. He was chancellor of the Univ. of Louvain and was sent to the Council of Trent. Baius was the center of a subtle controversy on GRACE, in which he is said to have been the forerunner of Jansenism (see under JANSEN, CORNELIUS). His position was peculiar in giving original sin an important place while at the same time making man partly instrumental in his own redemption. His doctrines were condemned several times (especially by the bull of St. Pius V, *Ex omnibus afflictionibus*, 1567), but Baius abjured, or recanted, each time, and he died in the church.

Baixada Fluminense (bîshă'dă flōōmēnēN'n'sa), coastal lowland region, Rio de Janeiro state, SE Brazil. It extends c. 250 mi (400 km) from Sepetiba Bay to the Paraíba River between the Serro do Mar and the Atlantic Ocean. Intensive farming, especially near Rio de Janeiro, is practiced there. Formerly marshy and disease breeding, much of the region was drained in the 1930s.

Baja (bă'yō), city (1970 pop. 34,360), S Hungary, on the Danube River. It is a river port and a road and rail hub, where agricultural products of the surrounding region are traded. Baja has textile, wood-working, and agricultural-processing industries. A fine 18th-century town hall is in the city.

Baja California (Span. bā'hā kālēfōr'nyā) or **Lower California**, peninsula, c. 760 mi (1,220 km) long and from 30 to 150 mi (48–241 km) wide, NW Mexico, separating the Gulf of California from the Pacific Ocean. The peninsula is divided at lat. 28° N into the state of **Baja California** (1970 pop. 856,773), 27,655 sq mi (71,626 sq km), in the north, and the state of **Baja California Sur** (1970 pop. 123,786), 27,979 sq mi (72,466 km), in the south. The capitals of the states are, respectively, MEXICALI and LA PAZ. Except for two large coastal plains on the Pacific side, the peninsula consists largely of rugged mountain ranges averaging 5,000 ft (1,524 m), with one peak, San Pedro Martir, more than 10,000 ft (3,048 m) high. The land is generally desolate and arid. The only naturally cultivable areas are isolated mountain valleys. The mineral yield is considerable, especially silver, lead, gold, and copper. The state is by far more commercially advanced than the territory, and its population has increased rapidly. Irrigation systems on the Colorado River have made possible the development of a rich farming area around Mexicali. Baja California is a leading national producer of cotton and wheat. Fruits and vegetables are also important. There are fisheries and fish canneries at Ensenada, which is also developing as a resort. Wealthy Mexicans, who have bought large estates and established resort ranches on the scenic coasts, have done much to stir tourist interest in regions other than the border towns and to open up hitherto inaccessible areas. Hunting and deep-sea fishing are favorite sports. Communications are generally poor, particularly in the south. Baja California Sur is not economically prosperous, although there is pearl fishing around La Paz and the city itself is very popular with Mexican vacationers. Indians constitute a sizable percentage of Baja California's population. The coasts were first explored by Francisco de Ulloa and other Spaniards in the 1530s. Attempts to colonize the forbidding interior, even those made by the intrepid mission fathers, were largely unsuccessful. U.S. forces occupied (1847–48) Baja California during the Mexican War, and William Walker attempted (1853–54) to wrest it from Mexico in his first disastrous filibustering expedition. In 1911 the area was the scene of an abortive uprising against Porfirio Díaz—the so-called desert revolution led by Ricardo Flores Magón, a liberal anarchist, who was a precursor of Francisco Madero and Emiliano Zapata. The state of Baja California was created in 1952. The peninsula and surrounding waters are a paradise for naturalists and archaeolo-

gists, offering unparalleled opportunities for the study of marine life, plants and animals, and Indian artifacts. In 1962 remarkable mural paintings were discovered in a steep coastal cliff. See John Steinbeck, *The Log from the Sea of Cortez* (1951), Leonard Wibberley, *Yesterday's Land* (1961), Joseph Wood Krutch, *Baja California and the Geography of Hope* (1969), F. J. Clavijero, *The History of Lower California* (tr. 1937, repr. 1971).

Bajah (bajə') or **Béja** (bāzhə'), town (1966 pop. 28,145), N Tunisia. It is on the site of ancient Vacca or Vaga, a Punic town and later a Roman colony. It became a military and administrative center under the Turks. The town has a sugar refinery.

Bajazet: For Ottoman sultans and princes thus named, see BEYAZID.

Bajer, Fredrik (frāth'rik bī'ər), 1837–1922, Danish pacifist and writer. He helped found the International Peace Bureau at Berne in 1891, and he shared the 1908 Nobel Peace Prize with K. P. Arnoldson.

Bajith (bā'jīth), term of unknown significance. Isa 15:2.

Bajus, Michael. see BAIUS, MICHAEL.

Bakacs, Thomas: see BAKOCZ, THOMAS.

Bakbakkar (bākbāk'ər), Levite. 1 Chron. 9:15.

Bakbuk (bāk'bək), family that returned with Zerubbabel. Ezra 2:51, Neh. 7:53.

Bakbukiah (bāk'bak'īə), 1 Levite with Zerubbabel. Neh. 11:17, 12:9. 2 Porter. Neh. 12:25.

Bakelite (bā'kalīt) [for its inventor, L. H. Baekeland], synthetic thermosetting RESIN. It is widely used both alone, to form whole objects, and in combination with other materials, as a laminate or a surface coating. It is used as a substitute for hard rubber, amber, or celluloid, for insulating electrical apparatus (since it is a nonconductor), and for the manufacture of certain machinery gears, phonograph records, and many other articles useful and ornamental and as diverse in character as buttons, billiard balls, pipestems, and umbrella handles. Bakelite is a condensation POLYMER of FORMALDEHYDE and PHENOL. In practice, the phenol and formaldehyde are first polymerized to a small extent by using the proper choice of catalyst and temperature. The resulting prepolymer, called a resol, is a low-melting, soluble material, which can then be combined with a filler (usually cotton linters or wood fibers) and a pigment and heated under pressure in a mold to yield an object of the desired shape. The pure resin is colorless or amber-colored and very brittle; the various fillers and other additives give it the desired properties depending on its application. Heating of the prepolymer results in extensive cross-links between the polymer chains, resulting in a tightly bound three-dimensional network. A Bakelite-type resin can also be formed using FURFURAL in place of the formaldehyde.

Baker, Sir Benjamin, 1840–1907, English civil engineer. He helped build London's underground railway, Tower Bridge, and the Blackwall Tunnel, and with Sir John Fowler he designed and built the bridge over the Firth of Forth in Scotland. In Egypt he assisted with the first Aswan dam. Baker also designed the cylindrical ship used to carry the obelisk Cleopatra's Needle from Egypt to London.

Baker, George Fisher, 1840–1931, American financier and philanthropist, b. Troy, N.Y. Baker was one of the founders of the First National Bank of New York in 1863 and became (1877) its president and then (1909) chairman of its board of directors. Largely through his efforts this bank became one of the strongest financial institutions in the United States. Baker was closely associated with the interests of the house of Morgan; he helped finance James J. Hill in building his railroad empire and backed him in the fight to control the Northern Pacific RR. Baker himself became a leading figure in the world of railroad organization and finance and gained a commanding influence in insurance, utilities, and the steel and rubber industries. His philanthropic bequests were many. The most notable were \$6 million to found and support the Harvard graduate school of business administration, \$2 million to Cornell Univ., \$1 million to build the Baker Memorial Library at Dartmouth, and the money for Baker Field of Columbia.

Baker, George Pierce, 1866–1935, American educator, b. Providence, R.I., grad. Harvard, 1887. He taught (1888–1924) in the English department at Harvard and there conceived and instituted (1906) the 47 Workshop, a class on playwriting techniques and a laboratory of experimental productions. The first

of its kind, the workshop was an inspiration to many young dramatists and gave impetus to the movement toward campus theater. In 1925 he went to Yale, where as professor of the history and technique of drama and director of the university theater he continued his work. Baker wrote *The Development of Shakespeare as a Dramatist* (1907, repr. 1965) and *Dramatic Technique* (1919) and edited the works of his students. See memorial by John Mason Brown and others (1939), W. P. Kinne, *George Pierce Baker and the American Theatre* (1954, repr. 1968).

Baker, Janet, 1933–, English mezzo-soprano. She made her singing debut in 1956 with the Glyndebourne Chorus. In 1966 she made her American debut at Town Hall in New York City, winning critical acclaim for the sensitivity, style, and intelligence of her singing. Baker was for many years regarded as primarily an oratorio and lieder singer. However, in 1969 she made a triumphal appearance as Dido in the Scottish Opera's production of Berlioz's *The Trojans*, repeating her performance later that year at Covent Garden in London. She soon was regarded as a great interpreter of Berlioz and began to take on more operatic roles.

Baker, Newton Diehl, 1871–1937, U.S. Secretary of War (1916–21), b. Martinsburg, W. Va. He practiced law and politics in Cleveland as a protégé of Tom L. Johnson. As city solicitor (1902–12) he opposed the powerful public utilities, as mayor (1912–16) he instituted notable tax reforms. Woodrow Wilson appointed him Secretary of War in March, 1916, just before the United States sent a punitive expedition into Mexico to oppose Francisco VILLA. An avowed pacifist, Baker suffered merciless criticism of his conduct of the War Dept. during the early months of World War I and was subjected to a congressional investigation in late 1917. His devotion to his task and the achievements of his department were later praised by all. He retired (1921) to private law practice in Cleveland but remained a public figure. An ardent advocate of peace, he urged U.S. entry into the League of Nations as late as 1924; in 1928, Coolidge appointed him to the Permanent Court of Arbitration (Hague Tribunal). See biographies by Frederick Palmer (1931, repr. 1969) and C. H. Cramer (1961), study by D. R. Beaver (1966).

Baker, Oliver Edwin, 1883–1949, American economic geographer, grad. Heidelberg College, Tiffin, Ohio. He studied forestry at Yale and agriculture and economics at the Univ. of Wisconsin (Ph.D., 1921). He served (1912–42) with the U.S. Dept. of Agriculture, largely in research on land utilization. Besides many articles and reports, he wrote with V. C. Finch *Geography of the World's Agriculture* (1917), and he edited the *Atlas of American Agriculture*.

Baker, Ray Stannard, pseud. **David Grayson**, 1870–1946, American author, b. Lansing, Mich., grad. Michigan State College, 1889. At first a Chicago newspaper reporter, he joined the staff of *McClure's Magazine* in 1897, for which he wrote some famous muckraking articles. With other *McClure's* contributors he purchased the *American Magazine* in 1906 and helped edit it. The first book of quiet country sketches by "David Grayson," *Adventures in Contentment*, appeared in 1907; the series continued with *Great Possessions* (1917), *The Countryman's Year* (1936), and others. An intimate of Woodrow Wilson, Baker was sent to Europe in 1918 as one of the President's special agents to study the war situation. At the peace conference at Versailles, Baker was director of the press bureau of the American peace commission. Afterward he wrote *Woodrow Wilson and World Settlement* (3 vol., 1922), a history of the peace conference based largely on the Wilson papers. With W. E. Dodd he edited Wilson's *Public Papers* (6 vol., 1925–26). His authoritative biography of Wilson (8 vol., 1927–39), for which he used the President's personal papers, won the Pulitzer Prize for biography in 1940 for the last two volumes. See his autobiographical works, *Native American: The Book of My Youth* (1941) and *American Chronicle* (1945).

Baker, Sir Samuel White, 1821–93, English explorer in Africa. He explored the Nile tributaries in Ethiopia in 1861–62. Going up the Nile from Cairo, he reached Gondokoro in 1863. He continued his journey southward in spite of the opposition of Arab slave traders and discovered Albert Nyanza, or Lake Albert, on March 14, 1864. In 1869, with the authority of the khedive of Egypt, he returned to the region and, creating an administration in the Lado En-

clave, he suppressed the slave trade and opened up the lake areas to commerce

Baker Island, uninhabited island (1 sq mi/2.6 sq km), central Pacific, near the equator, c.1,650 mi (2,660 km) SW of Honolulu The arid coral island was discovered in 1832 by Capt Michael Baker, an American, and was claimed by the United States in 1856 Like JARVIS ISLAND and HOWLAND ISLAND, Baker was worked for guano by both American and British companies during the 19th cent In 1935 it was colonized by Americans from Hawaii in order to establish U.S. control against British claims The colonists were removed during World War II Baker Island is administered under the U.S. Dept of the Interior

Baker Lake, c.1,000 sq mi (2,590 sq km), Keewatin dist., Northwest Territories, Canada, W of Chesterfield Inlet of Hudson Bay It has a post of the Royal Canadian Mounted Police at its western end

Bakersfield, city (1970 pop. 69,515), seat of Kern co., S central Calif., at the southern end of the San Joaquin valley, inc. 1898 It is an oil, mining, and agricultural center Almost all of the major oil companies have refineries in Bakersfield Cotton, citrus fruits, potatoes, and roses are grown in the area Among the city's manufactures are plastics, pharmaceuticals, and processed foods Gold was discovered in the region in 1855 and petroleum in 1899 Silver, borax, and tungsten mines are also in the vicinity A branch of California State College and a junior college are there Kern River State Park is nearby

Baker vs. Carr, case decided in 1962 by the U.S. Supreme Court Tennessee had failed to reapportion the state legislature for 60 years despite population growth and redistribution Charles Baker, a voter, brought suit against the state (Joe Carr was a state official in charge of elections) in Federal district court, claiming that the dilution of his vote as a result of the state's failure to reapportion violated the equal protection clause of the Fourteenth Amendment to the Constitution The court dismissed the complaint on the grounds that it could not decide a political question Baker appealed to the Supreme Court, which ruled that a case raising a political issue would be heard This landmark decision opened the way for numerous suits on LEGISLATIVE APPOINTMENT

Bakewell, Robert, 1725-95, English livestock breeder and agriculturist He successfully bred livestock for meat rather than appearance, developing new breeds, which included the Leicestershire sheep and the Dishley, or New Leicestershire, long-horn cattle He introduced the progeny test for selective breeding and also improved methods of housing stock, cultivating grass, and manuring

Bakhchisaray (bakh'chēsār') [Turkish, =garden palace], city, SE European USSR, in the Ukraine From the early 15th cent. until 1783 it was the capital of the khanate of Crimea, or Little Tatar The palace of the khans, celebrated by Pushkin and Mickiewicz for its beauty, notably for its white marble fountains, was built in the 16th cent. and is now a museum In the city are many mosques and the tombs of the khans Nearby are the ruins of Chufut-Kale

Bakhtegan (bākh'tēgān'), salt lake, c.60 mi (100 km) long, in the Zagros mts., 5 Iran, fed by the Kur River The town of Niriz was once on its shores, but because of the lake's shrinkage is now to the south-east Ancient accounts of the region do not refer to the lake, suggesting that it is of relatively recent origin The lake is also called Niriz

Bakhtiari (bakh'tē'ārē, -arē', bākh'-), ethnic group (1966 est. pop. 400,000), living in SW Iran, in a mountainous region (c.25,000 sq mi/64,750 sq km) located in Khuzistan and Esfahan provs They herd sheep and cattle and grow wheat and barley In the past they were chiefly nomadic, but today only about one third are nomads The Bakhtiari are Shiite Muslims and are famed for their courage and independence Women enjoy a high position in their patrilineal society The group can be divided into two large branches, the Haftlang, with about 55 tribes, and the Charlang, with about 25 The Bakhtiari originally migrated (10th cent.) from Syria to Iran, and until the 15th cent. were known as the Great Lurs In the early 20th cent., after the discovery of oil in the region they inhabit, their chiefs were courted by the British and were paid to protect oil pipelines The Bakhtiari played a decisive part in the deposition of Muhammad Ali Shah in 1908-9 Reza Shah Pahlavi forced many of them to abandon their nomadic ways and to settle in permanent communities, after his deposition in 1941, however, some Bakhtiari returned to nomadism Muhammad Reza

Shah was married (1951-58) to Soraya, the daughter of a Bakhtiari chieftain

Bakhuyzen, Ludolf: see BACKHUYSEN, LUDOLF

baking soda: see SODIUM BICARBONATE

Bakocz or Bakacs, Thomas (bō'kōts, bū'kōch), Hung. Bakócz or Bakács Tamás (tō'mash'), c.1442-1521, Hungarian politician, cardinal of the Roman Catholic Church He is often called the Hungarian Wolsey Of unbounded ambition, he rose from servile origin, was secretary to King Matthias Corvinus, and under Uladislav II, whom he dominated, became chancellor, archbishop of Esztergom, and papal legate Although he was expected by many to succeed Julius II as pope, Leo X was elected Leo in 1514 charged him as primate of Hungary with a crusade against the Turks The nobles did not heed Bakocz's call, and the peasants who had volunteered revolted against the aristocracy The rebellion was crushed with great cruelty by John Zapolya (see JOHN I), and the few remaining liberties of the peasants were abolished After Uladislav's death Bakocz retired to Esztergom, where he died, leaving an enormous fortune

Bakr, Ahmad Hasan al- (akhmad' hasan' al-bak'ar), 1914-, president of Iraq He served as an officer in the Iraqi army but was forced to retire (1958) because of his participation in revolutionary activities A member of the 8a'ath party, an ultranationalist left-wing group, he became prime minister after the Ba'athists seized power in 1963 He left the government later in that same year when conservative military leaders forced the Ba'athists from power Bakr became president in 1968 after leading another 8a'athist coup d'état

Bakst, Lev Nikolayevich (lyēf nyīkāl'yēvīch bakst), 1868-1924, Russian scene designer and painter His original, imaginative style and brilliant color exerted a wide influence on costume, stage setting, and the decorative arts His set and costume designs made for Diaghilev's ballets *Cleopatra* and *Scheherazade* from 1910 to 1912 gained him considerable fame He was also a fine portrait painter, including among his subjects Diaghilev and Ida Rubinstein See study by Charles Spencer (1973)

Baku (bakōō', Rus. bakōō'), city (1970 pop. 1,261,000), capital of the Azerbaijan Soviet Socialist Republic, SE European USSR, on the Caspian Sea Greater Baku includes almost the whole Apsheron peninsula, on which Baku proper is situated The city is a leading Soviet industrial and cultural center and until World War II was the country's chief petroleum center It handles one of the greatest volumes of freight (mainly oil and oil products) of any Soviet port Oil drilling (especially on the Apsheron peninsula and offshore) is the major economic activity, and Baku has many oil refineries and factories that produce oilfield equipment Other important industries include shipbuilding and the processing of food and tobacco Most of Baku's people are Azerbaijani, Russians, and Armenians The city was first mentioned in a 9th-century chronicle, but as early as the 6th cent. B.C. oil and gas wells in the area were worshipped, and shrines were made of constantly burning fires Baku was a great medieval trade and craft center It flourished in the 15th cent. under the independent Shirvan shahs and from 1509 to 1723 under Persian rule Captured by Peter I in 1723, it was returned to Persia in 1735 Russia annexed it definitively in 1806 Oil production began in the late 19th cent. Taken by the Bolsheviks in 1917, the city was occupied during the next two years by the White Army and its foreign allies (mainly Britain) From 1918 to 1920, Baku belonged to the independent, anti-Bolshevik Azerbaijan republic The Old City, comprising the 13th-century fortress of Bad-Kube, has narrow, winding streets, several mosques, and the 17th-century palace of the khans of Baku, who were vassals of the Persian shahs The mosque of Synyk-Kala dates from the 11th cent. and the Maiden's Tower from the 12th In the European-style New City are the university (est. 1920), the Azerbaijan Academy of Sciences, and many other educational and cultural institutions

Bakunin, Mikhail (mēkhayēl' bakōō'nyīn), 1814-76, Russian revolutionary and leading exponent of ANARCHISM He came from an aristocratic family but entered upon revolutionary activities as a young man He took part (1848-49) in the revolutions in France and Saxony and was sent back to Russia and exiled to Siberia Escaping (1861), he went to London, where he worked with Aleksandr Herzen In 1868, Bakunin became active in the First INTERNATIONAL, where, with his militant anarchist doctrines, he had great influence These doctrines, however,

brought him into conflict with Karl MARX, and he was expelled (1872) Bakunin believed that man is inherently virtuous and deserving of absolute freedom obtained through extreme individualism He advocated violent overthrow of existing states and institutions as a necessary step to achieving such freedom His writings include *God and the State* (1882, tr. 1893) See biography by E. H. Carr (1937, repr. 1961), studies by G. P. Maximoff (1953) and G. Alfred (1971)

Bakwanga, Zaire: see MBUJI-MAYI

Balaam (bā'lam), prophet hired by Balak, king of Moab, to curse the Jews, encamped in the Jordan valley For a recounting of the way every curse became a blessing see Num. 22-24 Later, Balaam seduced the Israelites to evil practices, an act for which he was killed See Num. 31 8,16, Micah 6,5, 2 Peter 2,15,16, Jude 11, Rev. 2,14

Balac (bā'lāk), Greek form of BALAK

Baladan: see MERODACH-BALADAN

Baladhuri, al- (al-bala'hūrē), d. c.892, Arab historian One of the most important Arab historians, he spent most of his life in Baghdad and enjoyed great influence at the court of the caliph al-Mutawakkil He traveled in Syria and Iraq, compiling information for his major works He is regarded as a reliable source for the history of the early Arabs and the history of Muslim expansion See his major work, *The Origins of the Islamic State* (tr., 2 vol., 1916-24)

Balaguer, Joaquín (hwakēn' balagār'), 1907-, president of the Dominican Republic (1960-62, 1966-) A lawyer, he held many important government posts under the dictator Rafael TRUJILLO MOLINA He served as vice president (1957-60) and assumed the presidency (1960) upon the resignation of President Hector Trujillo (the dictator's brother) Real power rested, however, with Rafael Trujillo until his assassination in May, 1961 Balaguer ruled during the chaos that followed and exiled members of the Trujillo family Unable to pacify opposing factions, he was ousted by the military in Jan., 1962 He lived in exile until 1965 Elected president in 1966, he was reelected in 1970 and 1974 His administration restored financial stability and promoted economic development, but political chaos, terrorism, and guerrilla activity led him to resort to repressive measures His 1974 victory climaxed a violent campaign characterized by strikes and bloody clashes A scholar and poet, Balaguer is the author of numerous books on a wide range of subjects

Balah (bā'la), the same as BILHAH 2.

Balak (bā'lāk), king of Moab who hired Balaam to curse Israel Num. 22-24 Balac is a Greek form Rev. 2,14

Balakirev, Mili Alekseyevich (mē'lyī ālyīksyā'yāvīch balakē'ryēf), 1837-1910, Russian composer and conductor, leader of the group called the FIVE He founded (1862) the Free School of Music in St. Petersburg and conducted (1867-69) the Russian Music Society and (1883-94) the Imperial Chapel Choir and Imperial Music Society His works include the symphonic poems *Tamara* and *Russ* (or *Russia*), a piano fantasy, *Islamey*, incidental music for *King Lear*, and songs His music combined romanticism with Russian and Oriental folk songs See M. O. Zetlin, *The Five* (tr. 1959)

Balaklava (balakla'va), section of the city of SEVASTOPOL, SE European USSR, in the Ukrainian Republic, on the Crimean peninsula Fishing and limestone quarrying are carried on In ancient times it was an important Greek commercial city In the Middle Ages it belonged to the Genoese until it was taken (1475) by the Turks, who gave it its present name In the CRIMEAN WAR, Balaklava became famous for an allied victory (Oct., 1854) over the Russians and particularly for the charge of the Light Brigade, celebrated by Tennyson On Oct. 25, through a disputed error in orders, the earl of CARDIGAN led an English light cavalry brigade of some 670 in a hopeless charge on a heavily protected Russian position, and more than two thirds of his men were killed or wounded Balaklava was the capital of the former Balaklava dist. in the Crimean oblast until 1957, when it was incorporated into Sevastopol There are ruins of a Genoese fortress (14th-15th cent.) in Balaklava

balalaika (bālalī'ka), Russian stringed musical instrument, with a triangular body and a long fretted neck (see FRETTED INSTRUMENT) Usually there are three strings, which are generally plucked with a pick The balalaika is made in various sizes, and several may be combined to make a band or orchestra A similar instrument, the bandura, is found in the Ukraine and Russia, and other types are to be found in the

countries of the Middle East, where the balalaika almost certainly originated. The instrument did not appear in Russia until c 1700. Like the guitar, it has

Balalaika

been much used to accompany folk songs and country dances.

balance, instrument used in laboratories and pharmacies to measure the mass or weight of a body. A balance functions by measuring the force of gravity that the earth exerts on an object, i.e., its weight. Since the mass of an object is directly proportional to its weight, a balance can also be used to measure mass. The simplest type of balance, the equal-arm, or beam, balance, is an application of a LEVER. A uniform bar, the beam, is suspended at its exact center upon a knife-edge set at right angles to it. The point of support is called the fulcrum. Two pans of equal weight are suspended from the beam, one at each end, at points equidistant from the fulcrum. Since the center of gravity of a uniform bar is at its midpoint, the beam supporting the pans will be in equilibrium, i.e., will balance upon the knife-edge. A long pointer attached at right angles to the beam at the fulcrum indicates zero on a scale when the beam is at rest parallel to a level surface. It shows also the extent of swing of the beam on one side or the other, acting somewhat as a pendulum, when the beam is coming to rest. The object to be weighed is placed upon one pan and standard weights are added to the other until the balance of the beam is established again. The unknown weight can then be determined by adding up the standard weights in the pan. One balance of this type, the analytical balance, is used for delicate weighing in quantitative chemical analysis and in preparing pharmaceutical prescriptions. It is kept in a glass case, since its accuracy is easily affected by dust and moisture. The platform balance is a form of equal-arm balance in which two flat platforms are attached to the top side of the beam, one at each end. Such a balance has a rider, or weight, mounted upon a bar which has a calibrated scale, is parallel to the beam, and connects the supports of the two platforms. This rider is moved along the bar, its edge marking decimal fractions of the unit weight. On the unequal-arm balance the beam is suspended at a point a very short distance from one of its ends. The object to be weighed is placed on this end, and a small known weight is moved out along the longer arm until balance is obtained. The unknown weight is then determined by using a formula involving the known weight and the distance of each weight from the fulcrum. One example of this type of balance is the Roman steelyard. A spring balance consists of a coiled spring fixed to a support at one end, with a hook at the other to which the body to be weighed is applied. Within the spring's limit of elasticity, the distance through which it is stretched is directly proportional to the weight of the applied body. A pointer and graduated scale attached to the spring convert this distance into a weight reading. Such a balance does not retain its accuracy permanently, for no matter how carefully it is handled, the spring very gradually uncoils even though its limit of elasticity has not been exceeded. Although extremely accurate results can be obtained in measuring the weights of minute objects, it is physically impossible to construct any balance perfect enough to yield absolutely accurate determinations. For ordinary purposes the errors are so small that they are consid-

ered insignificant, but in chemical analysis it has been necessary to develop methods by which they can be further minimized. A so-called TORSION BALANCE, which depends upon the twisting of a wire or thread, is employed for weighing, but the term is commonly used to indicate a device for measuring minute electrical and magnetic forces. See SCALE.

Balance, The, English name for LIBRA, a CONSTELLATION, also called The Scales.

balance of payments, relations between all payments out of a country within a given period and all payments into the country. The concept of the balance of payments is an outgrowth of the mercantilist one of BALANCE OF TRADE. Balance of payments includes all payments between a country and its trading partners and includes the balance of trade (known as the current account), private foreign loans and their interest, loans and grants by governments or international organizations, and movements of gold. An unfavorable balance of payments (that is, when remittances exceed receipts), if serious and chronic, may affect the stability of the nation's currency. After World War II the INTERNATIONAL MONETARY FUND was established to deal with problems relating to the balance of payments, particularly with foreign exchange. Since the late 1950s the United States has generally experienced an unfavorable balance of payments due to sizable U.S. investment in Europe, foreign spending by American tourists, large-scale foreign aid, and large expenditures on U.S. military forces abroad. In the early 1970s the United States took action to create a more favorable balance of payments by twice announcing (1971, 1973) a DEVALUATION of the U.S. dollar with respect to other currencies. However, the increase in the cost of petroleum from the Arab states in 1973-74 had a deleterious effect on the U.S. balance of payments, as it did on those of most countries of Western Europe. See R. M. Stern, *The Balance of Payments Theory and Economic Policy* (1973); H. R. Heller, *International Monetary Economics* (1974).

balance of power, system of international relations in which nations seek to preserve international order by maintaining an approximate equilibrium of power among many rivals, thus preventing the preponderance of any one state. Crucial to the system is a willingness on the part of individual national governments to change alliances as the situation demands in order to maintain the balance. Intimations of this idea can be found in Thucydides' description of Greece in the 5th cent. B.C. and Guicciardini's description of 15th-century Italy. Its modern development began in the mid-17th cent., when it was directed against the France of Louis XIV. Balance of power was the stated British objective for much of the 18th and 19th cent., and it characterized the European international system, for example, from 1815-1914. After World War I the balance of power system was attacked by those who sought a system characterized by cooperation and a community of power. International relations were changed radically after World War II by the predominance of two superpowers, the United States and the Soviet Union, with major ideological differences between them. However, in the 1960s the revival of Europe and the emergence of China as a potential great power seemed to indicate a possible return to the traditional balance of power system. See H. J. Morgenthau, *Politics Among Nations* (1960); Ludwig Dehio, *The Precarious Balance* (tr. 1962); Herbert Butterfield and Martin Wright, eds., *Diplomatic Investigations* (1966).

balance of trade, relation between the merchandise exports and imports of a country. The concept first became important in the 16th and 17th cent. with the growth of MERCANTILISM. Mercantilist theorists believed that a country should have an excess of exports over imports (i.e., a favorable balance of trade) to bring money, which they confused with wealth, into the country. They urged legislation to restrict the use of foreign goods, encourage exports, and—in some cases—prohibit the export of bullion. The importance of a favorable balance of trade remained unchallenged until David Hume, Adam Smith, David Ricardo, and John Stuart Mill concerned themselves with the theories of the international adjustment of the balance of trade. The classical theory of the adjustment mechanism is that a country whose exports fall short of its imports must export part of its stock of gold, thereby affecting its price structure and its ability to compete on the world market. Today the balance of trade is regarded as only one of several elements that make up the BALANCE OF PAYMENTS of a nation. See Imanuel

Wexler, *Fundamentals of International Economics* (2d ed. 1972).

Balanchine, George (bāl'anchēn'), 1904–, American choreographer and ballet dancer, b. Russia as Georgi Balanchivadze. Balanchine attended the Imperial Ballet School, St. Petersburg, and performed in Russia. In 1924 he toured Europe and joined Diaghilev's Ballet Russe as a principal dancer and choreographer (1924-28). After moving to the United States (1933), he became director of ballet for the Metropolitan Opera House (1934-37) and a founder of the School of American Ballet (1934). Since 1948 he has been artistic director and principal choreographer for the New York City Ballet. Balanchine's choreography of more than 90 compositions includes *Serenade*, *Concerto Barocco*, *Bourrée Fantasque*, *Seven Deadly Sins*, *Agon*, and *Don Quixote*. He has done choreography for films, operas, and musicals; he created the original *Slaughter on Tenth Avenue* in the musical *On Your Toes*. Most of his works emphasize patterns of pure dance rather than plot. See study by Bernard Taper (1963, rev. ed. 1974).

Balasore (bū'lasōr), town (1971 pop. 46,279), Orissa state, E. central India, near the Bay of Bengal. Settled by the British in 1651, it was the first British settlement in what was then known as Bengal. Goods were unloaded there for transport up the Hooghly River. Balasore was a resort in the 18th cent., with French, Dutch, and Danish, as well as British, settlements. The Dutch and Danish areas were ceded to Great Britain in 1846. A French settlement remained until the French administration of Chandernagore was relinquished to the Indians in 1947. It is a district administrative center and a mining and rice-trading town.

balata (bāl'atā), nonelastic natural RUBBER obtained as a LATEX from the South American tree *Manikara bidentata* and from related trees. Its properties are similar to those of GUTTA PERCHA, and its processing and uses are essentially the same. It is sometimes called gutta balata.

Balaton (bā'latōn, Hung. bō'lōtōn), lake 230 sq mi (596 sq km), W. central Hungary, at the foot of the Bakony Forest. The Zala River is its main tributary; the lake is drained by the Sió River. It is the largest lake in Central Europe with many tourist and health resorts. Its shallow waters abound in fish, and along the shores are fine vineyards.

Balbo, Cesare (chā'zārā bāl'bō), 1789-1853, Italian premier, historian, and author. He held various posts during the Napoleonic occupation of Italy and became involved in the liberal revolution of 1821 in Piedmont. He joined with Count Cavour in founding (1847) the review the *Risorgimento*. King Charles Albert of Sardinia made (1848) him premier of his first constitutional cabinet, but Balbo resigned after three months. His works include *Sommario della storia d'Italia* (1846), *Le Speranze d'Italia* (1844), and a life of Dante (2 vol., 1839, tr. 1852).

Balbo, Italo (ē'tālō), 1896-1940, Italian Fascist leader and aviator. After serving in World War I, he joined the Fascist movement and in 1922 was one of the four top leaders of the March on Rome, which brought Mussolini to power. A general of the Fascist militia, he held several cabinet posts and was (1929-33) minister of aviation. He efficiently developed aviation in Italy and led mass flights, the most notable being Rome-Rio de Janeiro and Rome-Chicago (1933). As governor general of Libya (1933-40) he attempted to gain Muslim support for Fascism. He was killed when his plane was brought down over Tobruk, Libya, apparently shot down accidentally by Italian antiaircraft artillery.

Balboa, Vasco Núñez de (bālbō'ā, Span. vā'skō nōō'nyāth dā bālbō'ā), c. 1475-1519, Spanish conquistador, discoverer of the Pacific Ocean. After sailing with BASTIDAS in 1501, Balboa probably went to Hispaniola. In 1510, fleeing from creditors, he hid on the vessel that took ENCISO to Panama. After reaching DARIEN, Balboa took command, deposed the incompetent Enciso, and sent him to Spain as a prisoner. Balboa showed only rarely the rapacity and cruelty characteristic of the conquistador. He won the friendship of the Indians, who accompanied him on his epic march across the isthmus. Toward the end of Sept., 1513, he discovered the Pacific and claimed it and all shores washed by it for the Spanish crown. His discovery came too late to offset Enciso's complaints at the court of Spain. Balboa was replaced by Pedro ARIAS DE AVILA, and while preparing an expedition to Peru, he was summarily seized, accused of treason and beheaded. See C. L. G. Anderson, *Life and Letters of Vasco Núñez de Balboa* (1941, repr. 1971).

Balboa, town (1970 pop., including Balboa Heights, 2,801), Panama Canal Zone, on the Gulf of Panama. The port for Panama City, Balboa is the largest town in the Canal Zone and the administrative headquarters of the zone and the canal. It is also the site of a U.S. navy base.

Balbus (Lucius Cornelius Balbus) (bāl'bəs), fl. 1st cent. B.C., Roman statesman, b. Gades (now Cádiz, Spain). He won notice for brilliant service against Sertorius, and Pompey brought him to Rome and had him made a citizen. Balbus helped to bring about the creation of the First Triumvirate (Pompey, Caesar, and Crassus) in 60 B.C. and thereafter was a friend and protégé of Julius Caesar. In 56 B.C. the conservative party, to embarrass Pompey and Crassus in Caesar's absence, charged Balbus with obtaining citizenship illegally. When the case came to trial, CICERO at Pompey's request made a brilliant oration in Balbus' defense and secured an acquittal. Balbus at first was neutral, then openly favored Caesar in the struggle with Pompey. After Caesar's death he supported Octavian (later Augustus) and in 40 B.C. was made the first foreign-born Roman consul.

Balch, Emily Greene (bōlch), 1867-1961, American economist and sociologist, b. Jamaica Plain, Mass., grad. Bryn Mawr, 1889. International secretary of the Women's International League for Peace and Freedom (1919-22), she shared with John R. Mott the 1946 Nobel Peace Prize.

Balchen, Bernt (bānt bal'kən), 1899-1973, Norwegian-American aviator. He headed one of the search expeditions for Amundsen and Ellsworth in 1925 and was a member of their 1926 expedition to the Arctic. Richard E. Byrd, meeting Balchen at Spitsbergen in 1926, brought him to the United States. He was second pilot on Byrd's transatlantic flight in 1927 and was the hero of the forced night landing of Byrd's plane in the surf on the Normandy coast. He was the chief pilot on Byrd's expedition to Antarctica (1928-30), which included the first flight (1929) over the South Pole. Serving in the U.S. air force during World War II, Balchen again distinguished himself. See his autobiography, *Come North With Me* (1958).

Balch Springs, town (1970 pop. 10,464), Dallas co., NE Texas, a residential suburb of Dallas, inc. 1953.

bald cypress, common name for members of the Taxodiaceae, a small family of deciduous or evergreen conifers with needlelike or scalelike leaves and woody cones. Most species of the family are trees of the Far East, almost all are cultivated for ornament (and are often erroneously called firs or pines). The big trees and redwoods (see SEQUOIA) and the bald cypresses are the only species native to North America. The bald cypresses (genus *Taxodium*) were widely distributed in earlier times (as were the other trees in the family) but are now restricted to the SE United States and Mexico. They are called "bald" because of their deciduous character, unusual in conifers. The common bald cypress (*T. distichum*) forms dense forests in the southeastern swamplands and is a common tree of the Everglades. It produces "knees" which project from the root system upward above water level. Because its wood is resistant to wood-rotting fungi, it is valued as softwood lumber for shingles, trim, and especially for greenhouse benches and racks. *T. mucronatum*, the big cypress or Mexican bald cypress, is a larger tree with a more western range. The true CYPRESSES belong to a separate family. The bald cypress family is classified in the division PINOPHYTES, class Pinopsida, order Coniferales.

Balder (bōl'dər, bal-), Norse god of light, son of Odin and Frigg. He was the most beautiful and gracious of the gods of Asgard. His mother extracted oaths from all things in nature not to harm her son, but neglected the mistletoe. According to one legend, Loki gave a dart of mistletoe to the blind god Hoder and aimed it for him at Balder, who was killed by it. The gods grieved inconsolably over his death. It was prophesied, however, that after RAGNAROK (the doom of the gods) Balder would return to heaven. See GERMANIC RELIGION.

Baldinucci, Abate Filippo-(aba'tā fēl'ip'pō baldēnōō'tchē), 1624-96, Italian art historian and philologist. Baldinucci was a pioneer in research techniques and among the first to emphasize the aesthetic importance of the print. An artistic adviser to the Medici court, he also wrote the first dictionary of art terminology. His three-volume lives of the artists from Cimabue to the 17th-century masters remains a valuable historical source.

baldness, thinning or loss of hair as a result of illness, functional disorder, or hereditary disposition,

also known as alopecia. Male pattern baldness, a genetic trait, is the most common cause of baldness among white males. It is caused by females, but they are rarely susceptible inasmuch as it develops under the influence of testosterone, a male sex hormone. Hair loss begins at the forehead and crown and is slowly progressive. It is irreversible but may be cosmetically disguised by hair-follicle transplants. Diseases characterized by high fever (e.g., scarlet and typhoid fevers), malnutrition, drug poisoning, and glandular disorders can all cause balding. Treatment of the disease or dysfunction will usually halt the loss of hair, and if the scalp and hair follicles are not severely damaged, hair will usually regrow spontaneously. Scalp infection, oiliness or dirtiness of the scalp and hair, and excessive teasing and lacquering of hair are also conducive to baldness. Alopecia areata is a disease of unknown origin characterized by noninflamed bald patches in the scalp hair and beard. It is recurrent but is usually of short duration.

Baldovineti, Alesso (ālās'sō baldōvēnētē), c. 1425-1499, Italian painter and decorative artist of the early Florentine Renaissance. He was probably trained in the workshop of Domenico Veneziano, whose influence is evident in his early works. These paintings include an altarpiece for the Medici villa at Cafaggiolo and an *Annunciation* (both Uffizi). In 1462 he completed the *Nativity* in the Annunziata. This scene and his decoration of the Portuguese chapel in San Miniato have deteriorated because of Baldovineti's unfortunate experiments with the technique of fresco. He painted several Madonnas (Louvre and Uffizi) in a serene, rather mellow style. Baldovineti was considered the foremost designer in mosaics of his day. He also worked in other media such as stained glass, inlaid wood, shields, and coats of arms. See study by R. W. Kennedy (1938).

Baldung or Baldung-Grien, Hans (hans bal'dōng-grēn), c. 1484-1545, German painter and printmaker, active mainly at Strasbourg. He was nicknamed Grien or Grun because of his fondness for the color green. Although he probably studied with Dürer, he evolved a personal style revealing his interest in brilliant color, effects of light, and expressively contorted forms. He is best known as a painter of such disturbing subjects as *Death and the Maiden* (Basel) and for drawings and prints of witches and allegorical or mythological scenes. The high altar of the cathedral at Freiburg in Breisgau, with depictions of the *Coronation of the Virgin*, the *Crucifixion*, and other subjects (c. 1515) is his most famous work. Baldung was also esteemed as a portrait painter and designer for stained glass.

Baldwin I, 1171-1205, 1st Latin emperor of Constantinople (1204-5). The count of Flanders (as Baldwin IX), he was a leader in the Fourth Crusade (see CRUSADES). After the seizure of Constantinople (1204), the Crusaders elected him emperor (see CONSTANTINOPLE, LATIN EMPIRE OF). He was captured (1205) in battle by the Bulgarians and died in captivity, probably by poison. He was succeeded by his brother, Henry of Flanders.

Baldwin II, 1217-73, last Latin emperor of Constantinople (1228-61), brother and successor of ROBERT OF COURTENAY. He began his personal rule only after the death (1237) of his father-in-law, JOHN OF BRIENNE. Baldwin traveled in Western Europe seeking financial and military aid for his precarious throne (see CONSTANTINOPLE, LATIN EMPIRE OF). To obtain funds he sold a large part of the True Cross and other sacred relics to Louis IX of France and at one time pawned his son to the Venetians. In 1261, MICHAEL VIII, Greek emperor of Nicaea, stormed Constantinople. Baldwin escaped to Italy and ultimately transferred his claims on the throne to CHARLES I of Naples.

Baldwin I (Baldwin of Boulogne), 1058?-1118, Latin king of Jerusalem (1100-1118), brother and successor of GODFREY OF BOUILLON, whom he accompanied on the First Crusade (see CRUSADES). Separating from the main army after the successful siege of Nicaea, Baldwin followed TANCRED into Cilicia and seized (1097) Tarsus from him. He wrested (1097) Edessa from the Muslims and as count of Edessa defended the city until elected ruler of Jerusalem. His election marked the triumph of the military faction of the Crusaders over the ecclesiastical faction. Taking the title of king, he consolidated the Latin states of the East. With the help of crusading fleets from the West and, more important, the Genoese and the Venetians, to whom he made large concessions, he gained possession of the chief ports of Palestine. He helped the Latin rulers of Antioch, Edessa, and Tripoli against the Muslims and fought against the Egypt-

ians. He died on his return from an expedition into Egypt. His cousin, Baldwin II, succeeded him.

Baldwin II (Baldwin of Le Bourg), d. 1131, Latin king of Jerusalem (1118-31), count of Edessa (1100-1131), cousin and successor of Baldwin I. He accompanied Godfrey of Bouillon on the First Crusade and was captured (1104) by the Muslims. He was released in 1108. As king of Jerusalem, he spent most of his reign warring with the Turks in N. Syria. He was a prisoner from 1123 to 1124, Eustace Garnier, his regent during his captivity, captured Tyre. In Baldwin's reign the Latin principality of Antioch was reduced to dependence on the kingdom of Jerusalem. Baldwin's daughter Melisende married (1129) FULK of Anjou, who succeeded Baldwin.

Baldwin III, 1130-62, Latin king of Jerusalem (1143-62), son and successor of Fulk. Until 1152 he ruled with his mother, Melisende. In his reign began the decay of Latin power in the East. Edessa fell to the Muslims (1144), the Second Crusade (see CRUSADES) failed, and Sultan NUR AD-DIN seized (1154) Damascus and N. Syria. Baldwin in 1153 took Ashkelon and foolishly directed his policy against the Egyptians rather than the Turks. His brother succeeded as Amalric I.

Baldwin IV (Baldwin the Leper), c. 1161-1185, Latin king of Jerusalem (1174-85), son and successor of Amalric I. RAYMOND, count of Tripoli, was regent from 1174 to 1176. Baldwin was constantly engaged, except for a truce (1180-82), in defending his kingdom against SALADIN. In 1183 his leprosy began to spread very rapidly, he appointed GUY OF LUSIGNAN as his regent, but in the same year he withdrew the commission and had his five-year-old nephew crowned king as Baldwin V (d. 1186). Raymond was regent for Baldwin V, who was succeeded as king by Guy of Lusignan.

Baldwin, Abraham, 1754-1807, American political leader, b. Guilford, Conn. After serving as a chaplain in the American Revolution, he studied law and in 1784 was admitted to practice in Georgia. He was a member (1785-88) of the Continental Congress and the leading Georgia delegate to the U.S. Constitutional Convention in 1787. His change of vote in that convention on the issue of the mode of representation in Congress brought about a tie between the large and small states. Baldwin served on the committee appointed to solve this problem. The compromise system of representation that it proposed (by population in the House of Representatives and by states in the Senate) was adopted. Baldwin was elected to the first House of Representatives and served until 1799. He then served in the Senate until his death. He was an industrious member of many committees and supported Jeffersonian policies. Earlier, while in the Georgia assembly, Baldwin wrote the charter of Franklin College, which later developed into the Univ. of Georgia. See biography by H. C. White (1926).

Baldwin, James, 1924-, American author, b. New York City. He spent an impoverished boyhood in Harlem and at 14 became a preacher in the Fireside Pentecostal Church. After graduating from high school he decided to become a writer, and the receipt of several grants enabled him to live in France for nine years. His first novel, *Go Tell It on the Mountain* (1953), which reflects his experience as a storefront preacher, was well received. Also critically acclaimed was *Another Country* (1962), a bitter novel about sexual relations and race relations. With the publication of the perceptive essays in *The Fire Next Time* (1963), Baldwin was recognized as an extremely articulate spokesman for the feelings and attitudes of American Negroes. His other works include the play *Blues for Mr. Charlie* (1964), a volume of short stories, *Going to Meet the Man* (1964), the novels *Giovanni's Room* (1956), *Tell Me how Long the Train's Been Gone* (1968), and *If Beale Street Could Talk* (1974), collections of essays, including *Notes of a Native Son* (1955), *Nobody Knows My Name* (1961), and *No Name in the Street* (1972). See studies by Stanley Macebuh (1973), and Kenneth Kinamon, ed. (1974).

Baldwin, James Mark, 1861-1934, American psychologist, b. Columbia, S.C., grad. Princeton (B.A., 1884, Ph.D., 1889). He taught philosophy at the Univ. of Toronto (1889-93), psychology at Princeton (1893-1903), and philosophy and psychology at Johns Hopkins (1903-9) and the National Univ. of Mexico (1909-13). Internationally known as a philosopher and psychologist, he was the author of numerous works in these fields, many of which were translated into European languages. Among his books are *Elements of Psychology* (1893), *Story of*

the *Mind* (1898), and *Dictionary of Philosophy and Psychology* (1901-6)

Baldwin, Matthias William, 1795-1866, American industrialist and philanthropist, b. Elizabethtown (now Elizabeth), N.J. After earlier business successes, Baldwin became interested in steam-engine production and completed in 1832 the locomotive *Old Ironsides*—one of the first successful American models—for the Philadelphia, Germantown, and Norristown RR. The Baldwin Locomotive Works subsequently prospered and maintained a leading position in the industry. Baldwin made many contributions to the Franklin Institute for the Promotion of Mechanical Arts, of which he was a charter member.

Baldwin, Robert, 1804-58, Canadian statesman, leader of the movement for representative government in Canada, b. York (now Toronto), Ont. His father, William Warren Baldwin (1775-1844), was a leader of the Reform party and a supporter of the principle of responsible (i.e., cabinet) government in the colonies. In 1836, as a recognized leader of reform in Upper Canada, Robert Baldwin was appointed by Sir Francis Bond Head to the executive council, but he resigned in a few weeks when it became apparent that the governor had no intention of acceding to the demands of the reformers. In England, in 1836, Baldwin sent to the colonial secretary a memorandum that was the first clear enunciation of the tenet of responsible government for Canada. Shortly after his return to Canada in 1837, he served as mediator between Head and the rebels, as a moderate reformer, he had opposed the faction of William Lyon Mackenzie in the rebellion of that year. Again (1841) he hopelessly accepted appointment to the executive council under Lord Sydenham, only to resign when the governor showed no disposition to grant responsible government. As a member of the assembly, Baldwin led the opposition group and increased his influence, particularly by effecting an alliance with the French in Lower Canada, whom Sydenham had ignored in forming his council. After the reunion of Upper and Lower Canada in 1841, Baldwin and Louis Hippolyte LaFontaine were allowed to form their first coalition government (1842) under Sir Charles Bagot. With Bagot's death and the arrival (1843) of Sir Charles Metcalfe as governor, the first Baldwin-LaFontaine government resigned, but in the elections of Dec., 1847, the reformers won an overwhelming vote. As a consequence, the second Baldwin-LaFontaine ministry (1847-51) was formed, it is often called "the great ministry." Outstanding among its accomplishments were the Municipal Corporations Act, commonly called the Baldwin Act, for the reformation of local government in Ontario, an act to revise the judicial system, and an act to transform King's College into the nonsectarian Univ. of Toronto (over the violent opposition of Bishop John Strachan). See biography by G. E. Wilson (1933), Stephen Leacock, *Mackenzie, Baldwin, LaFontaine, Hincks* (rev. 1926), R. W. Langstone, *Responsible Government in Canada* (1931).

Baldwin, Simeon Eben, 1840-1927, American jurist and politician, b. New Haven, Conn., grad. Yale, 1861. He taught at Yale from 1869 to 1919, serving as a professor of law after 1872. His teaching and financial aid helped to increase the prestige and quality of the law school. He was appointed (1893) associate justice of the supreme court of Connecticut and in 1907 became chief justice. In the year of his compulsory retirement from judicial office (1910) he was elected governor of Connecticut and was reelected in 1912. See biography by Frederick H. Jackson (1955).

Baldwin, Stanley, 1867-1947, British statesman, cousin of Rudyard Kipling. The son of a Worcester-shire ironmaster, he was educated at Harrow and at Trinity College, Cambridge, and entered the family business. In 1908 he was elected to Parliament as a Conservative. In 1916 he became parliamentary private secretary to Andrew Bonar Law, who made him (1917) joint financial secretary to the treasury. He was made president of the Board of Trade in 1921 but in 1922 played an important role in the decision of the Conservative party to withdraw from David Lloyd George's coalition government. When the Conservatives won the ensuing election, Baldwin became chancellor of the exchequer and in 1923 succeeded Bonar Law as prime minister. His government fell (1924) when he failed to obtain support for a protectionist tariff policy, but he returned to office within the year. Baldwin's second period of office (1924-29) was marked by rising unemployment and by a general strike (1926), following which

he secured passage of the Trade Disputes Act (1927) to restrict the power of the labor unions. In 1931, Baldwin became lord president of the council in the National government. Although under the nominal leadership of Ramsay MacDonald, the coalition was dominated by Baldwin, and in 1935 he again became prime minister. Although he won the general election of 1935 on a platform of support for the League of Nations, Baldwin approved the Hoare-Laval pact (see TEMPLEWOOD, SAMUEL JOHN GURNEY HOARE, 1st Viscount), which greatly discredited his government. As international relations continued to deteriorate, with the German reoccupation of the Rhineland and the beginning of the Spanish civil war, Britain finally began to rearm. Baldwin steadfastly opposed the proposed marriage of Edward VIII to Wallis Warfield Simpson and secured the king's abdication (1936). He retired in 1937 and shortly thereafter was created Earl Baldwin of Bewdley. Although an able politician, Baldwin has been much criticized for his indolence and particularly for his apparent complacency in the face of the mounting threats to peace in Europe. See biographies by G. M. Young (1952), A. W. Baldwin (1956), and Keith Middlemas and John Barnes (1969).

Baldwin, 1. Uninc. city (1970 pop. 34,525), Nassau co., SE N.Y., on the south shore of Long Island, on Baldwin Bay, settled 1640s. A fishing center and summer resort, it has varied manufactures. 2. Borough (1970 pop. 26,729), Allegheny co., SW Pa., a suburb just S of Pittsburgh, on the Monongahela River, in a bituminous coal region, inc. 1952. Tools, wood products, flooring, and metal goods are manufactured.

Baldwin of Bewdley, Stanley Baldwin, 1st Earl: see BALDWIN, STANLEY

Baldwin Park, city (1970 pop. 47,285), Los Angeles co., S Calif., a residential suburb of Los Angeles, in the fertile San Gabriel valley, settled 1870, inc. 1956. It has varied manufactures.

Bale, John, 1495-1563, English dramatist and clergyman. An ardent proponent of the Reformation, he used the stage as a vehicle for his views. His most famous play, *King John* (written c. 1535), shows the transition from the medieval morality play to the Renaissance historical drama by allegorical treatment of the fate of England rather than of the fate of man's soul. Bale's *Illustrium Scriptorum* (1548) is one of the first bibliographies of English literature. See Honor McCusker, *John Bale, Dramatist and Antiquary* (1942, repr. 1971).

Bäle, Switzerland: see BASEL

Balearic Islands (baläär'ik), Span. *Baleares* (baläär-räs), archipelago, off Spain, in the W Mediterranean, forming Balearic prov. (1970 pop. 558,287) of Spain. Palma is the capital. The chief islands are Majorca, Minorca, and Ibiza. Noted for their scenery and their mild climate, the Balearics are a major tourist center. After tourism, agriculture and fishing are the chief economic activities; fruit, wine, olive oil, majolica ware, and silver filigree are exported. Inhabited since prehistoric times—there are numerous Cyclopean remains—the islands were occupied by Iberians, Phoenicians, Greeks, Carthaginians, Romans, and Byzantines. The Moors, who first came in the 8th cent., established (11th cent.) an independent kingdom, which became the seat of powerful pirates, harassing Mediterranean coastal cities and trade. James I of Aragon conquered (1229-35) the islands. They were included (1276-1343) in the independent kingdom of Majorca and reverted to the Aragonese crown under Peter IV. At the outbreak of the Spanish civil war (1936), Majorca and Ibiza were seized by insurgent forces—Majorca becoming a base of the Italian fleet—while Minorca remained in the hands of the Loyalists until 1939.

baleen: see WHALE

Balen, Hendrik van (hên'drik van ba'län), 1575-1632, Flemish painter, b. Antwerp. Van Balen usually provided the figures for scenes in which another painter, frequently Jan Brueghel, designed the landscape settings. A minor artist, van Balen is noted mainly for his mythological scenes, of which *Landscape with Two Nymphs* (Munich) is typical.

Balenciaga, Cristóbal: see under FASHION

baler: see HAY BALER

Balewa, Alhaji Sir Abubakar Tafawa (alha'jé abôô'bäkar' tafä'wa balä'wä), 1912-66, Nigerian political leader. He was born Mallam Abubakar. After studying to become a teacher, he held a series of posts in education and then became a member of the Northern Region house of assembly in 1947. Later (1951), he was elected to the federal house of representatives. He was appointed the first prime

minister of the Federation of Nigeria in 1957. When the federation became independent (1960), he retained his office. He was a founder and deputy president general of the country's largest political party, the Northern People's Congress. He was knighted by Queen Elizabeth II. In 1966, he was killed in a military coup d'état.

Balfe, Michael William, 1808-70, Irish composer. Of his many operas, very popular in their time, the best known was *The Bohemian Girl* (1843).

Balfour, Arthur James Balfour, 1st earl of (bäl'föör), 1848-1930, British statesman, nephew of the 3d marquess of Salisbury. He entered parliament as a Conservative in 1874 and served as secretary to his uncle at the Congress of Berlin (1878). Although associated with the "Fourth Party" of Lord Randolph Churchill, he remained close to Salisbury, serving as president of the Local Government Board (1885-86) and secretary for Scotland (1886). As chief secretary for Ireland (1887-91) Balfour was a resolute opponent of the Home Rule movement and suppressed riots, but he worked for agrarian reform. In 1891 he became Conservative leader in the House of Commons and served (1891-92, 1895-1902) as first lord of the treasury. He succeeded his uncle as prime minister in 1902. His government achieved educational reform (1902), passed the Irish Land Purchase Act (1903), created the Committee of Imperial Defence (1904), and inaugurated the Franco-British Entente (1904). However, the Conservative party split over tariff protection advocated by Joseph Chamberlain. Balfour resigned in 1905, and his party was overwhelmingly defeated in the 1906 election. He continued as leader of the Conservatives during the disputes over the 1909 budget and the reform of the House of Lords but resigned in 1911. Balfour was first lord of the admiralty (1915-16) in Herbert Asquith's coalition government and became (1916) foreign secretary under David Lloyd George. In this capacity he issued the Balfour Declaration (1917), pledging British support to the Zionist hope for a Jewish national home in Palestine, with the proviso that the rights of non-Jewish communities in Palestine would be respected (see ZIONISM). He attended the Versailles peace conference and, as lord president of the council (1919-22), represented Britain at the first meeting of the League of Nations in 1920 and at the Washington Conference on limiting naval armaments in 1921-22. Created earl of Balfour in 1922, he was again lord president of the council (1925-29). Balfour was a brilliant intellectual and an effective public official, devoted to the cause of international peace. His philosophical writings, which explore the problems of modern religion, include *The Foundations of Belief* (1900), *Theism and Humanism* (1915), *Theism and Thought* (1923), and *Opinions and Arguments* (1927). See biographies by Blanche Dugdale (2 vol., 1936), Kenneth Young (1963), and S. H. Zebel (1973).

Balfour, Francis Maitland, 1851-82, Scottish embryologist, brother of A. J. Balfour. He was an early exponent of RECAPITULATION. His *Treatise on Comparative Embryology* (2 vol., 1880-81) is a classic treatment of the evolution of the egg and embryo. Professor of animal morphology at Cambridge Univ., Balfour did research there and at the zoological station at Naples.

Balfour, Sir James, d. 1583, Scottish judge and politician. Captured (1547) at St. Andrews after the murder of Cardinal Beaton, he served a sentence in the French galleys and on his release (1549) abjured Protestantism. He became an adviser to MARY QUEEN OF SCOTS and was deeply involved in the murder of Lord Darnley. He was made governor of Edinburgh Castle, but when the Scottish lords rose against the queen, he surrendered it to them. Balfour repeatedly changed his political allegiance in the conflicts of the succeeding years. Eventually he withdrew to France, but he returned to Scotland (1580) to help secure the conviction of the earl of Morton for Darnley's murder. He was long a jurist, but, despite its name, the early law text, *Balfour's Practicks of Scots Law*, is only partially of his authorship.

Bali (ba'le), island and (with two offshore islets) province (1970 est. pop. 2,247,000, c. 2,200 sq. mi. (5,700 sq. km)), E Indonesia, westernmost of the Lesser Sundaes, just E of Java across the narrow Bali Strait. The capital is Denpasar. Although Bali is relatively small, it is densely populated and culturally and economically one of the most important islands of Indonesia. Largely mountainous, with active volcanoes, it rises to 10,308 ft (3,142 m) at Mt. Agung; there is a great fertile plain to the south. Fauna include tigers and deer. Bali is known for its giant waringin trees, sacred to the inhabitants. The Balinese

(a Malayan group closely related to the Javanese) are skillful farmers, rice, the chief crop, is grown with the aid of elaborate irrigation systems. Vegetables, fruits, coffee, and coconuts are also produced. Livestock is important, pigs and cattle are major export items. Industries include food processing, tourism, and handicrafts. The people are noted for their artistic skill (especially wood carving), their physical beauty, and their high level of culture, which includes advanced forms of music, folk drama, dancing, and architecture. They are Hindu in a nation that is overwhelmingly Muslim, their unique ritualistic culture, as well as the island's scenic beauty, has made Bali one of the great tourist attractions of the Far East. An international airport was opened in 1969. Bali was converted to Hinduism in the 7th cent, and was under Javanese rule from the 10th to the late 15th cent. It was a refuge (1513-28) for the Hindus of Java fleeing the advance of Islam. The Dutch first landed in 1597 and the Dutch East India Company began its trade with the island in the early 17th cent. Dutch sovereignty was not firmly established until after a series of colonial wars (1846-49), and the entire island was not occupied until 1908, after the quelling of two rebellions. Klungkung, NE of Denpasar, was the capital of the native rulers from the 17th cent. until 1908. Bali was particularly hard hit during the nationwide purge of Communists in 1965, more than 40,000 people were killed, and entire villages were destroyed. A state univ. is in Denpasar. See *Bali* (Vol. V and VIII of *Selected Studies on Indonesia*, publ. by W. van Hooft, 1960 and 1970), Jane Belo, *Trance in Bali* (1960) and *Traditional Balinese Culture* (1970).

Balikesir (balük'ësör'), city (1970 pop. 85,032), capital of Balikesir prov., NW Turkey. It is a rail junction and the center of a fertile agricultural region.

Balikpapan (ba'lekpa'pan), city (1961 pop. 91,706), E Borneo (Kalimantan), Indonesia, on an inlet of Makassar Strait. An important seaport and oil center with refineries, it is connected by pipeline with the oil fields of Samarinda. Timber is also exported.

Balinese music represents, to a large extent, a survival of the pre-Islamic music of Java. It was taken to Bali by Hindu Javanese in the 15th cent. and uses the tonal systems of JAVANESE MUSIC, of which *pelog* is by far the more important in Bali. Balinese music sounds impetuous and noisy, in contrast to the soft, tranquil music heard currently in Java. Few *gamelans*, the orchestras of tuned percussion instruments, play in Java today but they flourish, their archaic forms preserved, in modern Bali. The *gamelans* of the princes are no longer important in Bali, but have left their influence on the village societies for music making. There are also the ceremonial *gamelans* of the temples. The most important instruments are xylophones, which may be made of bronze or bamboo. Bronze xylophones are of two basic types—*gangsa*, whose keys are supported over a wooden resonance box, and *g'ndér*, whose keys have individual bamboo resonators. These instruments sometimes play the melody and sometimes they provide a brilliant figuration. Gongs, suspended singly, are used for metrical accentuation, there are also gong chimes, which are of two types. The *trompong*, a set of 10, is a solo instrument, and the *reyong*, a set of 12, is played by four men, supplying figuration. Flutes, in two sizes, are made of bamboo and are used in theatrical music. Although the name of the *rebab*, a two-string spike fiddle, is Persian-Arabic, the instrument probably originated in S China and is used in the music of the *gambuh* play. Cymbals, bell rattles, and drums supply the all-important, elaborate rhythmic background. The *anklung* is an archaic, tuned bamboo rattle. It is not known in all parts of Bali, but gives its name to the *anklung gamelan*, a ceremonial *gamelan* which may at one time have always included *anklungs*. The instrumentation and the repertoire of a particular *gamelan* depend on its function. Each of the various forms of dance and drama has a *gamelan* which specializes in its music. The most recent musical development is *kebyar*, a restless, explosive music which discards the highly developed, balanced forms of the older music. *Kebyar* clubs compose their own music, often taking themes from older music. The wealthier clubs include a dancer—a young man who performs seated on the ground, dancing from the waist up. Balinese notation was invented by the Javanese who brought the music to Bali. It gives no indication of the rhythm and is little used. Music is learned by rote, it is not improvisation, however, but a sophisticated, composed art form. See D. A. Lentz, *The Gamelan Music of Java and Bali* (1965), C. McPhee, *Music in Bali* (1965).

Baliol, Edward de (bäl'yäl), d. 1363, king of Scotland, son of John de Baliol (d. 1315). Having secured English support for his claim to the Scottish throne, he invaded Scotland in 1332 and was crowned at Scone. He was soon driven out, but EDWARD III of England came to his active support, and together they defeated forces of the young DAVID II at Halidon Hill in 1334. Baliol then ceded several southern Scottish counties to Edward. He was driven out again, and David, who had been in France, returned in 1341 as king. In 1356 Baliol retired on an English pension, surrendering his title as king to Edward.

Baliol, John de, 1249-1315, king of Scotland (1292-96), son of John de Baliol (d. 1269). He became head of the family after the death of his elder brothers in 1278. At the death of Margaret Maid of Norway (1290), he claimed the Scottish throne through his grandmother, eldest daughter of David of Huntingdon, brother of King William the Lion. His principal rival was Robert the Bruce, of the celebrated BRUCE family, son of David of Huntingdon's second daughter and hence one generation closer to his royal ancestor, although through a younger line. The laws of succession not being firmly established, the question was referred to EDWARD I of England, who first demanded and secured (1291) recognition as feudal overlord of Scotland. Edward decided in favor of Baliol, who was then crowned king (1292) and did homage to Edward for the kingdom. Baliol, after some hesitation, accepted Edward's asserted right to hear appeals from Scottish courts. However, when he attended Edward's Parliament at Westminster in late 1293, he refused to answer such an appeal. The Scottish council subsequently disregarded Edward's summons for help against France and formed (1295) an alliance with Philip IV of France. Early in 1296 the Scots invaded England, and as Edward marched north to take Berwick, Baliol renounced his oath of fealty to the English king. However, after defeat in a brief campaign, in which he took no active part, Baliol surrendered to Edward. He was imprisoned in England until 1299 and ended his days on his estates in France, ignoring the continuing struggle for Scottish independence.

Baliol, John de, d. 1269, nobleman with lands in both England and Scotland, founder of Balliol College, Oxford. The name is also spelled Balliol. In 1249 he became a member of the Scottish council of regency and a guardian of Alexander III. However, he was apparently disliked by the young king and was discharged and heavily fined in 1255. He fought for Henry III of England in the BARONS' WAR and was taken prisoner at the battle of Lewes (1264). His third son, another John, became king of Scotland.

Balkan Entente, loose alliance formed in 1934 by Yugoslavia, Rumania, Greece, and Turkey to safeguard their territorial integrity against Bulgarian revisionism. It thus was in harmony with the LITTLE ENTENTE (formed by Yugoslavia, Rumania, and Czechoslovakia chiefly against Hungarian revisionism). The events of World War II caused the dissolution of the Balkan Entente.

Balkan Peninsula, southeasternmost peninsula of Europe, c. 200,000 sq mi (518,000 sq km), bounded by the Black Sea, Sea of Marmara, Aegean Sea, Mediterranean Sea, Ionian Sea, and Adriatic Sea. Although there is no sharp physiographic separation between the peninsula and Central Europe, the line of the Sava and Danube rivers is commonly considered as the region's northern limit, it therefore includes Albania, continental Greece (including the Peloponnese), Bulgaria, European Turkey, most of Yugoslavia, and SE Rumania. These six countries, successors to the Ottoman Empire, are called the Balkan States. Historically and politically the region extends north of this line to include all of Yugoslavia and Rumania. The peninsula is very mountainous, the main ranges are the Dinaric Alps, the Balkans, the Rhodope Mts., and the Pindus. Except for the barren Karst plateau of Yugoslavia and the eroded highlands of Greece, the mountains are densely forested. The Morava, Vardar, Strmon, Mesta, and Maritsa are the largest rivers. The Morava and Vardar river valleys form the chief corridor across the peninsula. The mild Mediterranean-type climate, with its dry summer period, is limited to the southern and coastal areas. Covering a greater area are the humid subtropical climate in the northwest and the harsher humid continental climate in the northeast. The region as a whole is largely agricultural, fruits, grains, and grazing are important. A variety of mineral deposits are found there, including iron ore, coal, manganese, copper, lead, and zinc. The peoples of the Balkan Peninsula make up several racial groups. However, linguistic and religious

differences are more distinct than the racial divisions. The peninsula, at the crossroads of European and Asian civilizations, has a long history, Ancient Greece, the Byzantine Empire, and the Ottoman Empire flourished there.

Balkans, Bulg. *Stara Planina* (sta'ra pla'nëna'), major mountain range of the Balkan Peninsula and Bulgaria, extending c. 350 mi (560 km) from E Yugoslavia through central Bulgaria to the Black Sea. It rises to 7,794 ft (2,376 m) at Botev, the highest peak. The Balkans are a continuation of the Carpathian Mts. The forested range is sparsely populated and rich in a variety of minerals. It acts as a climatic barrier, preventing the inland penetration of Mediterranean influences. There are numerous trans-Balkan passes including Shipka Pass (alt. c. 4,000 ft/1,220 m).

Balkan Wars, 1912-13, two short wars, fought for the possession of the European territories of the Ottoman Empire. The outbreak of the Italo-Turkish War for the possession of Tripoli (1911) encouraged the Balkan states to increase their territory at Turkish expense. Serbia and Bulgaria accordingly concluded (1912), with the aid of Russian secret diplomacy, a treaty of alliance. In a secret annex, the treaty provided for joint military action and the division of prospective conquests. The outbreak of the war (Oct., 1912), in which Greece and Montenegro joined the original allies, was followed by the speedy expulsion of the Turks from all of European Turkey, except the Constantinople area. After the conclusion of hostilities Serbia showed intentions of annexing a large part of Albania, in order to gain an outlet on the Adriatic, but this step toward a "Greater Serbia" was opposed by Austria-Hungary and Italy and by the Albanians, who had proclaimed their independence. Conferences of the ambassadors of the Great Powers at London created (1913) an independent Albania of fair size, thus cutting Serbia off from the sea. Dissatisfied with these terms, Serbia demanded of Bulgaria a greater share of Macedonia. Bulgaria thereupon attacked (June, 1913) Serbia, only to be attacked by Rumania, Greece, and Turkey. As a result of this Second Balkan War, Bulgaria lost territory to all her enemies by the Treaty of Bucharest (Aug., 1913). The Balkan Wars prepared the way for World War I by satisfying some of the aspirations of Serbia and thereby giving a great impetus to the Serbian desire to annex parts of Austria-Hungary, by alarming Austria and stiffening Austrian resolution to crush Serbia, and by giving causes of dissatisfaction to Bulgaria and Turkey. See George Young, *Nationalism and War in the Near East* (1915, repr. 1970), E. C. Helmreich, *The Diplomacy of the Balkan Wars, 1912-1913* (1938, repr. 1969).

Balkar, see KABARDINO-BALKAR AUTONOMOUS SOVIET SOCIALIST REPUBLIC.

Balkh (balkh), town (1967 pop. 15,000), N Afghanistan, on a dried-up tributary of the Amu Darya River. One of the world's oldest cities, it is the legendary birthplace of the prophet ZOROASTER. Alexander the Great reputedly founded a Greek colony at the site c. 328 B.C. The city later attained great wealth and importance as Bactra, capital of the independent kingdom of Bactria. In the early centuries A.D., Balkh, a prominent center of Buddhism, was renowned for its Buddhist monasteries and stupas. Conquered by the Arabs in 653, it became important in the world of Islam as the original home of the Barmecides (see HARUN AR-RASHID). Under the Abbasid caliphate its fame as a center of learning earned Balkh the title "mother of cities." The city was sacked in 1221 by Jenghiz Khan and lay in ruins until Tamerlane rebuilt it (early 16th cent.). It passed to the Uzbeks and then briefly to the MOGUL empire before falling (18th cent.) to Nadir Shah. In 1850, Balkh became part of the unified kingdom of Afghanistan. The old city, sections of whose walls remain, is now mostly in ruins, the new city, some distance away, is an agricultural and commercial center, inhabited chiefly by Uzbeks. Excavations in the area have uncovered some objects of the early Muslim period.

Balkhash (bal-khash'), city (1969 est. pop. 77,000), W Central Asian USSR, in Kazakhstan, on the north shore of Lake Balkhash. A railroad terminus, port, and copper-smelting center, it was founded as Bertys in 1929 and was renamed in 1936.

Balkhash, lake, 6,562 sq mi (16,996 sq km), c. 350 mi (560 km) long, maximum width c. 45 mi (70 km), Kazakhstan, Central Asian USSR. The lake, which has an average depth of 20 ft (6 m), stretches from the Kazakh Hills in the northeast to desert steppes in the southwest. The eastern half of the lake is saline, the

western half, separated from the eastern section by a sandbar and fed by the Ili River, is fresh Lake Balkhash, which has no outlet, is slowly shrinking from evaporation. There are valuable copper deposits along the northern shore, and the city of Balkhash has a large copper smelter.

Ball, George Wildman, 1909–, American lawyer and diplomat, b. Des Moines, Iowa. Admitted to the bar in 1934, he served (1942–44) as counsel in the Lend Lease Administration and the Foreign Economic Administration. An expert on foreign economic policy, Ball became (1961) Undersecretary of State for Economic Affairs and then served (1961–66) as Undersecretary of State. During that period he played a major role in formulating U.S. foreign aid and foreign trade policy and was the chief architect of the Trade Agreements Act of 1962. A persistent critic of U.S. military involvement in Vietnam, Ball left the State Department to become (1966–68) chairman of Lehman Brothers, a major investment banking firm. After briefly serving (1968) as U.S. representative to the United Nations, he returned to Lehman Brothers as a senior partner. Ball is the author of *The Discipline of Power* (1968).

Ball, John, d. 1381, English priest and social reformer. He was one of the instigators of the Peasants' Revolt of 1381 (see under TYLER, WAT). He was an itinerant for many years, acting independently of the influence of John Wyclif and advocating ecclesiastical poverty and social equality. Excommunicated in 1376, he was in prison at Maidstone when the rebels released him in 1381. After the dispersal of the rebels, Ball was captured at Coventry. He was taken to St. Albans, where he was hanged, drawn, and quartered. He is perhaps best remembered for giving currency to the couplet "When Adam delved and Eve span/Who was then the gentleman?" William Morris wrote one of his works on utopian socialism under the title *The Dream of John Ball*. See Charles Oman, *The Great Revolt of 1381* (1906).

Ball, Thomas, 1819–1911, American sculptor, b. Charlestown, Mass., son of a house and sign painter. Thomas Ball was also a singer of reputation, the first in the United States to sing the title role in Mendelssohn's *Elijah*. Although he lived many years in Florence, Ball's work remained distinctly American. He made portrait busts of many distinguished people. Among his works are the mounted figure of Washington in the Boston Public Gardens and a statue of Daniel Webster in Central Park, New York. His autobiography, *My Three Score Years and Ten*, appeared in 1890.

ballad, in literature, short, narrative poem usually relating a single, dramatic event. Two forms of the ballad are often distinguished—the folk ballad, dating from about the 12th cent., and the literary ballad, dating from the late 18th cent. The first form, the anonymous folk ballad (or popular ballad), was composed to be sung. It was passed along orally from singer to singer, from generation to generation, and from one region to another. During this progression a particular ballad would undergo many changes in both words and tune. The medieval or Elizabethan ballad that appears in print today is probably only one version of many variant forms. Primarily based on an older legend or romance, this type of ballad is usually a short, simple song that tells a dramatic story through dialogue and action, briefly alluding to what has gone before and devoting little attention to depth of character, setting, or moral commentary. It uses simple language, an economy of words, dramatic contrasts, epithets, set phrases, and frequently a stock refrain. The familiar stanza form is four lines, with four or three stresses alternating and with the second and fourth lines rhyming. For example:

It was in and about the Martinmas time,
When the green leaves were a falling,
That Sir John Graeme, in the West Country,
Fell in love with Barbara Allan

"Bonny Barbara Allan"

It was in the 18th cent. that the term *ballad* was used in England in its present sense. Scholarly interest in the folk ballad, first aroused by Bishop Percy's *Reliques of Ancient English Poetry* (1765), was significantly inspired by Sir Walter Scott's *Minstrelsy of the Scottish Border* (1802). Francis Child's collection, *English and Scottish Popular Ballads* (5 vol., 1882–98), marked the high point of 19th-century ballad scholarship. More than 300 English and Scottish folk ballads are extant, dating from the 12th to the 16th cent. Although the subject matter varies considerably, five major classes of the ballad can be distinguished—the historical, such as "Otterburn" and "The Bonny Earl o' Moray", the romantic, such

as "Barbara Allan" and "The Douglas Tragedy", the supernatural, such as "The Wife of Usher's Well", the nautical, such as "Henry Martin", and the deeds of folk heroes, such as the Robin Hood cycle. Ballads, however, cannot be confined to any one period or place, similar subject matter appears in the ballads of other peoples. Indigenous American ballads deal mainly with cowboys, folk heroes such as Casey Jones and Paul Bunyan, the mountain folk of Kentucky and Tennessee, the Southern Negro, and famous outlaws, such as Jesse James.

Jesse had a wife to mourn for his life,
Three children, they were brave,
But the dirty little coward that shot Mister
Howard
Has laid Jesse James in his grave

"Ballad of Jesse James"

During the mid-20th cent. in the United States there was a great resurgence of interest in folk music, particularly in ballads. Singers such as Joan Baez and Pete Seeger included ballads in their concert repertoires, composer-performers like Woody Guthrie and Bob Dylan wrote their own ballads. The literary ballad is a narrative poem created by a poet in imitation of the old anonymous folk ballad. Usually the literary ballad is more elaborate and complex, the poet may retain only some of the devices and conventions of the older verse narrative. Literary ballads were quite popular in England during the 19th cent. Examples of the form are found in Keats's "La Belle Dame sans Merci," Coleridge's "The Rime of the Ancient Mariner," and Oscar Wilde's "The Ballad of Reading Gaol." In music a ballad refers to a simple, often sentimental, song, not usually a folk song. See D. C. Fowler, *A Literary History of the Popular Ballad* (1968), B. H. Bronson, *The Ballad as Song* (1969), James Kinsley, ed., *The Oxford Book of Ballads* (1971), T. F. Henderson, *The Ballad in Literature* (1912, repr. 1973).

ballade (bălăd'), in literature, verse form developed in France in the 14th and 15th cent. The ballade usually contains three stanzas of eight lines with three rhymes and a four-line envoy (a short, concluding stanza). Also popular was the ten-line stanza with four rhymes and a five-line envoy. The envoy is used primarily as a summary or as a dedication or direct address to an important person. The ballades of Charles d'Orleans, François Villon, and Geoffrey Chaucer are well known.

ballad opera, in English drama, a play of comic, satiric, or pastoral intent, interspersed with songs, most of them sung to popular airs. First and best was *The Beggar's Opera* (1728) by John Gay. The vogue for these operas lasted until c. 1750.

Ballanche, Pierre-Simon (pyër-sēmôn' bälänsh'), 1776–1847, French philosopher. A frequenter of Mme Récamier's salon, he was elected to the Académie française in 1842. He is regarded as the precursor of both liberal Catholicism and Romanticism. In *Palingénésie* (1827–32) he historically documents his belief in cyclical cultural rebirth. In addition to essays, Ballanche wrote didactic fiction, including a Christianized Antigone (1813) and *L'Homme sans nom* (man without a name) (1820).

ball-and-socket joint, in engineering, mechanical connection used between parts that must be allowed some relative angular motion in nearly all directions. As the name implies, the joint consists essentially of a spherical knob at the end of a shaft, with the knob fitting securely into a mating socket. Like other mechanical joints, a ball-and-socket joint must have some provision for lubrication and is normally provided with a seal to prevent loss of the lubricant. Joints of this type are commonly used in mounting the front wheels of automobiles, allowing these wheels movement sufficient for steering. In this application they are usually called ball joints.

Ballantyne, James (bäl'antín), 1772–1833, Scottish editor and publisher. Ballantyne and his brother John set up a publishing business in Edinburgh with the aid of Sir Walter Scott. The firm published Scott's works, beginning in 1802 with *Minstrelsy of the Scottish Border*. Although the firm failed in 1826, it still continued to operate under the creditors' trustees, and Ballantyne remained its manager.

Ballarat (bäl'arät'), city (1971 pop. 39,606, urban agglomeration pop. 58,434), Victoria, SE Australia. It is an industrial center, clothing, food products, paper, brick and tile, and other goods are made. The city flourished during the gold rush (1860s), then declined. There are Anglican and Roman Catholic cathedrals in Ballarat.

ball bearing: see BEARING

ballet (bäl'ä, bälä') [Ital. *ballare*=to dance], classic, formalized solo or ensemble dancing of a highly controlled, dramatic nature performed to music. Foreshadowed in earlier mummeries and lavish masquerades, ballet emerged as a distinctive form in Italy before the 16th cent. The first ballet that combined movement, music, decor, and special effects was presented in France at the court of Catherine de' Medici in 1581. Organized by the violinist Balhassar de Beaujoyeux, it was entitled *Le Ballet comique de la Reine*. This production was the first *ballet de cour*, the ancestor of the modern ballet, which influenced the English court masque, a 16th-century entertainment with dance interludes. The first treatise on ballet dancing was the *Orchesographie* of Thoinot Arbeau (1588). The 17th cent. saw the major development of ballet in France. At first a court entertainment, the simple entrées were extended c. 1610 and joined together to form scenes, called divertissements, which culminated in a *grand ballet*. Louis XIV, who performed in ballets himself for nearly 50 years, founded the Royal Ballet Académie (1661), the Royal Music Academy (1669), and the first National Ballet School (1672). All parts were performed by male dancers, boys in wigs and masks took the female roles. The first ballet using trained women was *The Triumph of Love* (1681), with music by Lully. Ballet remained a court spectacle and included opera or drama until about 1708, when the first ballet was commissioned for public performance. Thereafter the form, infused with new ideas, developed as a separate art (although the court ballet continued its historic traditions). Choreographic notation came into being, and for the first time mythological themes were explored. With the increased influence of the Italian school of ballet, movement became elevated and less horizontal, and the five classic positions of the feet, which form the base for the dancer's stance and movement, were established by Pierre Beauchamps. The costumes, which had been cumbersome with decoration, long skirts, and high heels (for both men and women) were newly designed to allow greater freedom of movement. The virtuosa dancer Marie Camargo, who introduced the *entrechat* (elevation) for women, shortened her skirt to the middle of the calf, wore tights and what were to be the first ballet slippers (heelless shoes). Her rival, Marie Salle (who was also the first female choreographer), was the first dancer to wear a filmy, liberating Grecian-style costume, made popular two centuries later by Isadora Duncan. Jean Georges Noverre, a revolutionary *maître de ballet*, established the determining principles of the ballet d'action, which he described in his *Lettres sur la danse et les ballets* (1760). He wanted the ballet to tell a story, aided by the music, decor, and dance; he wanted the performer to interpret his role through the dance and through his own body and facial expression. In stressing naturalism, Noverre simplified the costume and c. 1773 abolished the mask. Other innovations came from the great artists of the period, Gaetano and Auguste Vestris, Salvatore Viganò, and Charles Didelot. Technical innovation in dance movement was increased after further modification of the ballet costume. In Milan in 1820, Carlo Blasis first set down the technique of ballet as we know it today—with its stress on the turned-out leg, which permits great variety of movement. With the production of *La Sylphide* (1832) the romantic period formally began, ushering in a new era of brilliant choreography that emphasized the beauty and virtuosity of the prima ballerina. In this production Maria Taglioni first wore the filmy, calf-length costume that was to become standard for classical ballet. The great ballerinas of the era included Taglioni, Fanny Elssler, Carlotta Grisi, and Fanny Cerrito. In keeping with the literature and art of the romantic movement, the new ballet concerned the conflicts of reality and illusion, flesh and spirit. Love stories and fairy tales replaced mythological subjects. At the same time dancing sur les pointes [on the toes] had come into favor. By the end of the century the blocked toe had appeared, and the tutu, a very short, buoyant skirt that completely freed the legs, had come into use. The male dancer functioned as partner to support the ballerina, the central focus of the dance and drama. Ballet declined progressively after 1850 with the ballet d'action giving way entirely to divertissements, finally the great stars had retired, and the sets, costumes, and choreography had become stereotyped and uninteresting. The naturalistic trend in the theater had all but destroyed the imaginative touch necessary to ballet. The renaissance in romantic ballet began in Russia after 1875. The Russian Imperial

The five classical positions in ballet

SOME IMPORTANT BALLET TERMS

arabesque graceful posture in which one leg is raised and extended behind the body, which is bent forward from the hip, the arms are held in one of five basic positions

attitude posture derived from Giovanni Bologna's *Mercury*, the body is bent slightly forward, one leg raised and bent behind the body with the corresponding arm raised and curved forward, and the opposite arm extended downward and back or to the side

entrechat elevation step in which the position of the feet is changed in midair. Nijinsky could perform the *entrechat dix* (ten changes)

glissade sliding step performed to the side

grand jeté great jump, in elevation, performed as an advancing or turning movement

pas de deux dance performed by two partners, usually a romantic duet between a ballerina and a danseur. Famous *pas de deux* form part of the great classical ballets

plié bending of the knees from any of the five positions of the feet, a movement basic both to ballet performance and exercise

port de bras carriage of the arms, the eight basic graceful changes in arm position performed with rounded elbows. They are generally accompanied by complementary movements of the legs and body

premier danseur the principal male dancer of the ballet company

prima ballerina the principal female dancer of the ballet company, if she is termed *assoluta*, she is considered a great dancer

School of Ballet had been founded in 1738. During the early 19th cent the Imperial Theatre housed more than 40 ballet productions staged by the celebrated Swedish master Charles Dridelot. Marius Petipa, who created a powerful sense of unity by rigorously training his corps de ballet as had not been done before, and Nicholas Legat indicated in their choreography the direction of intensified romantic drama that the newly revived art was to take. Petipa contributed many of the classic ballets still considered to be the greatest expressions of the form, including *Don Quixote*, *La Bayadere*, *The Sleeping Beauty*, *Raymonda*, *Harlequinade*, and restagings of *Giselle*, *Coppelia*, *La Sylphide*, and *Swan Lake*. In 1909 the celebrated impresario Sergei Diaghilev took his Russian company to Paris, and for 20 years it dominated the world of dance, displaying the creative talents of such choreographers and dancers as Michel Fokine, Leonide Massine, Vaslav Nijinsky, Bronislava Nijinska, Anna Pavlova, and George Balanchine. In 1931 the company merged with the Ballet Russe de Monte Carlo of Rene Blum and Col W de Basil, which nurtured the talents of Alexandra Danilova, Andre Eglevsky, and Igor Youskevitch. Russian dancing has been maintained at the highest level of excellence to the present day. The Moscow Bolshoi Ballet, which brought fame to Galina Ulanova and Maya Plisetskaya, and the Leningrad Kirov Ballet, whose dancers have included Rudolf Nureyev, Natalia Makarova, and Mikhail Baryshnikov, are the two foremost Soviet companies and are ranked among the finest in the world. In England in about 1918, Enrico Cecchetti, who had taught many great dancers including Pavlova, Nijinsky, Massine, and Danilova, set down his method of training (which is still in practice) in collaboration with Cyril Beaumont, proprietor of "Under the Sign of the Harlequin," a world-famous bookstore specializing in the dance. The Cecchetti Society was founded in 1922 to preserve and protect that system. In 1930, Marie Rambert founded the Ballet Club, the first permanent ballet school and company in England, and in 1931, Ninette de Valois established Sadler's Wells Ballet (now the Royal Ballet), which has drawn international attention to the work of Alicia Markova, Anton Dolin, Frederick Ashton, Margot Fonteyn, Robert Helpmann, Rudolf Nureyev, Antonette Sibbey, Svetlana Benosova, and Anthony Dowell. Nureyev, both a choreographer and dancer, has been instrumental in changing the traditional supportive role of the male dancer to a far more significant, dynamic, and athletic place in the ballet, many other contemporary choreographers have similarly given their male dancers a more flamboyant showcase. In the United States, Lincoln Kirstein and Edward

Warburg founded the American Ballet company in 1934. Under the direction of George Balanchine, its chief choreographer, the company established the first major school of ballet in the country, developed the talents of many notable American dancers (including Maria Tallchief, Todd Bolender, Suzanne Farrell, Patricia McBride, Jacques d'Amboise, Arthur Mitchell, and Edward Villella), and influenced enormously the evolution of an American ballet style as parent company to the New York City Ballet (founded 1948), one of the world's outstanding companies. Among the celebrated choreographers (other than Balanchine) who designed ballets for the New York City Ballet are Eugene Loring, Merce Cunningham, Jerome Robbins, and Antony Tudor. The other major American company, the American Ballet Theatre (formerly the Ballet Theatre), was founded in 1939 as an offshoot of the smaller Mordkin Ballet. The company's principal dancers have included Lucia Chase, Anton Dolin, Nora Kaye, Alicia Alonso, Michael Kidd, Schott Douglas, Royce Fernandez, and Sallie Wilson, performing in works designed for them by Michel Fokine, Leonide Massine, Antony Tudor, Jerome Robbins, Michael Kidd, Agnes De Mille, Herbert Ross, Eugene Loring, Glen Tetley, and many others. Through numerous tours both companies have earned international reputations of a high order. Other American companies of note include the Robert Joffrey Ballet (founded 1956), the Harkness Ballet (1964), and the Dance Theatre of Harlem. In addition to these, there are many active regional ballet companies throughout the United States. Using the traditional formal training and movement, the American choreographers have designed a new sort of pure, abstract ballet, far less dependent on literary plot, often using modern rock and electronic music, and have developed greatly simplified decor and costuming (e.g., Balanchine's *Agon*, Robert Joffrey's *Astarte*, and Glen Tetley's *Chronochromie*). Many modern choreographers have also designed dances for stage and film musicals (e.g., Jerome Robbins's *West Side Story* and Agnes De Mille's *Oklahoma!*). See articles about individuals, e.g., Dame Margot FONTÉYN, and companies, e.g., BOLSHOI BALLET. See also DANCE, MODERN DANCE. See Serge Lifar, *A History of Russian Ballet* (tr. 1955), Ferdinando Reyna, *A Concise History of Ballet* (tr. 1965), A. L. Haskell, *Ballet Retrospect* (1965), Anatole Chujoy, *The Dance Encyclopedia* (1945, rev. ed. 1967), Walter Terry, *The Ballet Companion* (1968), Lincoln Kirstein, *Movement and Metaphor* (1972), and *The New York City Ballet* (1973), Mary Clarke and Clement Crisp, *Ballet: An Illustrated History* (1973).

Ballia (bū'ya), town (1971 pop. 47,080), Uttar Pradesh state, N central India. Situated on a rich alluvial

plain, Ballia is a district administrative center and an important market for rice, sugarcane, and oilseed. Changes in the course of the Ganges River destroyed the old town in the years from 1873 to 1877, and a new town was created in 1900. The annual Dadrī fair, held on the full moon of Kartik (October–November) attracts about one million people. **Ballinger, Richard Achilles** (bāl'īnjər), 1858–1922, U.S. Secretary of the Interior (1909–11), b. Boonesboro (now in Boone), Iowa. He was mayor of Seattle (1904–6) and commissioner of the General Land Office (1907–9). In 1909, Taft appointed him Secretary of the Interior. While Secretary, he was accused by L. R. Glavis of the Land Office of having halted investigation into the legality of certain private coal-land claims in Alaska. With Taft's approval, Glavis was dismissed from service. Glavis took his case to the public in a series of articles in *Collier's Weekly* that roused the conservationists. Led by Gifford Pinchot, they demanded an investigation. A congressional committee exonerated Ballinger, but the questioning of committee counsel Louis D. Brandeis made the Secretary's anticonservationism clear; he resigned in March, 1911. The incident split the Republican party and helped turn the election of 1912 against Taft. See A. T. Mason, *Bureaucracy Confronts Itself* (1941), J. L. Penick, *The Ballinger-Pinchot Affair* (1968).

ballistics (bāl'stīks), science of projectiles. Interior ballistics deals with the propulsion and the motion of a projectile within a gun or firing device. Its problems include the ignition and burning of the propellant powder, the pressure produced by the expanding gases, the movement of the projectile through the bore, and the designing of the barrel to resist resulting stresses and strains. Exterior ballistics is concerned with the motion of a projectile while in flight and includes the study not only of the flight path of bullets but also of bombs, rockets, and missiles. All projectiles traveling through the air are affected by wind, air resistance, and the force of gravity. These forces induce a curved path known as a trajectory. The trajectory varies with the weight and shape of the projectile, with its initial velocity, and with the angle at which it is fired. The general shape of a trajectory is that of a parabola. The total distance traveled by a projectile is known as its range. A ballistic missile in the first stage of its flight is powered and guided by rocket engines. After the engines burn out, the warhead travels in a fixed arc as does an artillery shell. In criminology the term ballistics is applied to the identification of the weapon from which a bullet was fired. Microscopic imperfections in a gun barrel make characteristic scratches and grooves on bullets fired through it. See E. D. Lowry, *Interior Ballistics* (1968).

Ballivián, José (hōsā' bāyēvyān'), 1805–52, president of Bolivia (1841–47). An able military commander who had served in the war against Spain, Ballivián was proclaimed president after the breakup of the Peru-Bolivia confederation under SANTA CRUZ. At In-gavi (1841) he defeated President Gomara of Peru, who had attempted to seize La Paz. Ballivián thus insured Bolivian autonomy. Promulgating (1841) a new constitution, he energetically but arbitrarily instituted public reforms. Intense opposition forced him to resign.

balloon, lighter-than-air craft without a propulsion system, lifted by inflation of one or more containers with a gas lighter than air or with heated air. During flight, altitude is gained by discarding ballast (e.g., bags of sand) and is lost by releasing some of the lifting gas from its container. In some late designs using air heated by a small gas-fired burner, the altitude is controlled by varying the temperature of the heated air. Although interest in such a craft dates from the 13th cent., the balloon was not actually invented until the late 18th cent., when two French brothers, Joseph and Jacques Étienne Montgolfier, experimented with inverted paper and cloth bags filled with heated air and, in 1783, caused a linen bag about 100 ft (30 m) in diameter to rise in the air. In the same year the Frenchman Pilâtre de Rozier made one of the first balloon ascents by man, rising in a hot-air-filled captive balloon (i.e., one made fast by a mooring cable to prevent free flight) to a height of 84 ft (26 m). In 1766 the English scientist Henry Cavendish had shown that hydrogen was seven times lighter than air, and the usefulness of this gas in balloon ascension was demonstrated in Dec., 1783, by J. A. C. Charles of France, who with his associates successfully ascended in a hydrogen-

filled balloon and traveled 27 mi (43 km) from the starting point. The first ascent in England was made by James Tytler, a Scottish writer, in 1784, and in 1793 the French balloonist J. P. Blanchard made an ascent at Philadelphia. Blanchard, with Dr. John Jeffries, an American physician, also made the first sea voyage by balloon, crossing the English Channel in 1784. Among the noted balloon voyages of the 19th cent. was that made by the Swedish engineer S. A. Andree, who, in 1897, attempted unsuccessfully to reach the North Pole by balloon. In the American Civil War and World War I, captive balloons were used to observe troop movements and to direct gunfire. Captive balloons, called barrage balloons, were used as obstacles against low-flying aircraft in World War II. The helplessness of the free balloon in controlling direction led to the development of the dirigible balloon (see AIRSHIP). In 1932 the Belgian physicist Auguste Piccard, one of the major figures in 20th-century ballooning, ascended in a balloon with a sealed spherical gondola to a height of 55,500 ft (16,920 m). His brother, Jean, in 1934 reached an altitude of 58,000 ft (17,680 m). Increasingly high ascents followed, with manned balloons exceeding heights of 100,000 ft (30,480 m) and unmanned balloons exceeding 140,000 ft (42,670 m). Today balloons are used primarily as aids to scientific studies, principally meteorology and the study of cosmic rays. Unmanned meteorological balloons carry aloft radios and other instruments, which at regular intervals during the ascent transmit readings to ground stations. Balloons have also been used by the United States to photograph the atmospheres of other planets in the clear air of the stratosphere. Balloon racing has become a popular sport. The gas bags of modern balloons are generally made of synthetic material, as a lifting gas, hydrogen has lost favor to helium because the latter is nonflammable. See L. T. C. Rolt, *The Aeronauts: A History of Ballooning* (1966); Eric Norgaard, *Book of Balloons* (1972).

ballot, means of voting for candidates for office. The choice may be indicated on or by the ballot forms themselves—e.g., colored balls (hence the term *ballot*, which is derived from the Italian *ballotta*, meaning "little ball"), printed tickets, or mechanical devices—or by the depositories into which the ballots are put. The ballot was used in Athens in the 5th cent. B.C. by the popular courts and, on the question of ostracism, by the people as a whole, in India before 300 B.C., and in Rome by the popular assemblies and occasionally by the senate. Like other institutions of popular government, it was largely abandoned during the Middle Ages, but its use reappeared in the Italian communes and in elections to the papacy during the 13th cent. In the 16th and 17th cent. the ballot appeared in English borough and university elections. The General Court of Massachusetts elected governors by ballot after 1634, corn and beans were occasionally used as ballots, following Indian custom. Early American ballots were known as "papers"; the name ballot does not occur in America before 1676. The British colonies in America were the first to elect representatives by secret ballot, and its use was made obligatory in all but one of the state constitutions adopted in the United States between 1776 and 1780. In the 19th cent. the use of the ballot became widespread in local and national elections in Europe. Groups wishing to exert undue influence, intimidation, or force upon the voter have opposed the ballot. The effort to reform election abuses led to the widespread use of the Australian ballot, which was adopted in Victoria in 1857 and in Great Britain in 1872, and grew increasingly popular in the United States after 1888. In the latter country it gradually replaced earlier methods of voting such as the lengthy "tickets" distributed by political parties. In the Australian system all candidates' names are printed on a single ballot and placed in the polling places at public expense, and the printing, distribution, and marking of the ballot are protected by law, thus assuring a secret vote. The Australian ballot is now used in many European countries and in almost all sections of the United States. Separate ballots are frequently distributed for referendums and constitutional propositions. In the United States the office-group, or Massachusetts ballot, on which the candidates' names are listed under the headings of the offices for which they are running, is less used than the party-column, or Indiana ballot. The VOTING MACHINE is increasingly used to ensure electoral honesty. The institution of official ballots has helped bring political parties under the scope of the law. In Great Britain and Canada, party designations are left

off the ballot, elective offices are few, and local and national elections are separate, hence the ballot is a short one, easy to use intelligently. Some critics denounce the excessive length of the ballot in the United States and the combination of many items on one ballot, claiming that the voter is thus too pressed for time in his decisions. See H. M. Bain and D. S. Hecock, *Ballot Position and Voter's Choice* (1957); L. E. Fredman, *Australian Ballot: The Story of an American Reform* (1968).

Ballou, Adin (bālōō'), 1803–90, American Universalist clergyman, b. Cumberland, R.I. He was prominent in the movement that resulted in the Massachusetts Association of Universal Restorationists (1831–41). In 1841 he organized near Milford, Mass., the Hopedale Community, one of the religious utopian communities of the period. He was its president and edited its periodical, the *Practical Christian*. The Hopedale Community, whose dissolution as a communal enterprise began c. 1857, merged (1868) with the Unitarian Hopedale Parish, of which Ballou was pastor until 1880. His writings include *Practical Christian Socialism* (1854), *Primitive Christianity and Its Corruptions* (1870), and *History of the Hopedale Community* (1897). See his autobiography, edited by his son-in-law, W. S. Heywood (1896).

Ballou, Hosea, 1771–1852, American clergyman, foremost among expositors of Universalism in the United States, b. Cheshire co., N.H. From 1818 until his death he was pastor of the Second Universalist Society in Boston. One of the founders (1819) of the *Universalist Magazine*, he was its editor until 1828, from 1830 he edited the *Universalist Expositor*. His works include *Notes on the Parables* (1804), *A Treatise on the Atonement* (1805), and a number of hymns.

Ballou, Hosea, 2d, 1796–1861, American Universalist clergyman, b. Guilford, Vt., grandnephew of Hosea Ballou (1771–1852). He was one of the founders and the first president (1853–61) of Tufts College. His *Ancient History of Universalism* (1829) is the earliest American monograph dealing with the history of the doctrine.

Balls Bluff, hill on the south bank of the Potomac River, near Leesburg, Va. In the Civil War, Union troops who had crossed the river were severely repulsed there on Oct. 21, 1861. Dissatisfaction with that defeat and with the general inactivity of the Union armies led to the organization of a joint congressional committee on the conduct of the war.

Ball State University, at Muncie, Ind., coeducational, founded 1918 as a state institution. In 1929 it became Ball State Teachers College and in 1965 achieved university status.

Ballwin, city (1970 pop. 10,656), St. Louis co., E. Mo., a suburb of St. Louis, settled 1803 as Ballshow, renamed 1837, inc. 1950. It is mainly residential with some light industry.

Ballymena (bālēmē'nə), municipal borough (1971 pop. 16,487), Co. Antrim, NE Northern Ireland, on the Braid River. Linen, woolen goods, carpets, and tobacco products are produced there. According to tradition, St. Patrick worked as a herdsman at Slemish Mt., 5 mi (8.1 km) from Ballymena.

balm, name for any BALSAM resin and for several plants, e.g., the BEE BALM.

Balmaceda, José (hōsā' balmasā'tha), 1840–91, president of Chile (1886–91). A leader of a liberal, anticlerical group, he was sent as minister (1878) to Argentina, where he successfully prevented Argentina from entering the War of the Pacific. He later served as foreign minister under Domingo Santa María. As president, Balmaceda instituted a wide reform program, but his rule was unparliamentary. A resultant quarrel with congress came to a head in 1890. A disastrous civil war broke out in Jan., 1891, led by Jorge Montt. After vigorous fighting the revolutionists triumphed. Balmaceda took refuge in the Argentine legation. Rather than surrender for a trial, he committed suicide.

Balmerino, Arthur Elphinstone, 6th Baron (ēl'fīnstin, bāl'mēr'īnō), 1688–1746, Scottish nobleman. He resigned a command in the English army to join the Jacobite rising of 1715, escaping after its suppression to France. He returned and took part in the 1745 rising, was captured at the battle of Culloden, and was executed.

Balmer series: see SPECTRUM.

balm of Gilead (gīl'ēād), name for several plants belonging to different taxonomic families. The historic Old World balm of Gilead, or Mecca balsam, is a small evergreen tree (*Commiphora opobalsam*) of the family Burseraceae (INCENSE-TREE family) native

to Africa and Asia and the source of the commercial balm of Gilead, it is referred to in the Bible in Jer. B. 22. The Ishmaelites from Gilead were bearing balm when they bought Joseph from his brothers. Balm of Gilead is still in high repute for healing in some countries. The American balm of Gilead is a species of poplar (*Populus candicans*) of the family Salicaceae (WILLOW family) which has large balsamic and fragrant buds. The tree is seldom seen in the wild but was formerly a favorite dooryard tree of the northern states. The buds were used in domestic medicine. This poplar is closely related to, and sometimes considered a variety of, the balsam poplar (*P. tacamahaca*), which has also been called balm of Gilead and tacamahac. The name balm of Gilead has also been used for the balsam fir and for a herbaceous aromatic, shrubby plant (*Dracocephalum canariense* or *Cedronella canariensis*) of the family Labiatae (MINT family) native to the Canary Islands and cultivated in parts of the United States.

Balmont, Konstantin Dmitriyevich (kən-stāntyēn' damē'trēāvich bal'mōnt), 1867–1943, Russian poet and translator. After first hailing the Bolshevik revolution, he repudiated it and lived chiefly in France, where he died destitute and forgotten. Although his early verse was revolutionary in content, after 1894 it revealed the influence of the SYMBOLISTS. He translated Shelley, Ibsen, Poe, Calderon, and Whitman. His major work began with *Under Northern Skies* (1894). *Let Us Be Like the Sun* (1903) and *Love Alone* (1903) are typical of his melodious and inventive verse. His verse written after 1910 is considered mediocre.

balsa: see BOMBAX.

balsam, fragrant RESIN obtained from various trees. The true balsams contain benzoic or cinnamic acid, these include Peru balsam and tolu balsam (both obtained from varieties of the South American tree *Myroxylon balsamum* of the PULSE family), BENZOIN, and STORAX. Other resins called balsams include Mecca balsam (BALM OF GILEAD), CANADA BALSAM, and COPAIBA. Balsams are often used in medical preparations and perfumes.

balsam, garden, common name for the species *Impatiens balsamina*, a member of the JEWELWEED family.

balsam fir, common name for the evergreen tree *Abies balsamea* of NE North American boreal forests. It has small needles and cones and is used for lumber. It is also called CANADA BALSAM, as is the resin it produces, which is used as an adhesive in optical lenses and glass slides. Balsam fir is classified in the division PINOPHYTA, class Pinopsida, order Coniferales, family Pinaceae.

Balsamo, Giuseppe: see CAGLIOSTRO, ALESSANDRO.

Balsas, Río (rē'ō bal'sās), river, c. 450 mi (720 km) long, rising in the state of Puebla, E. central Mexico. One of Mexico's longest rivers, it flows in a curve from south to northwest through Puebla and Guerrero states, where it waters a fertile valley, to Michoacan state, forming most of the boundary between the last two states. Then it turns southwest, passing through a hot, dry region before emptying into the Pacific Ocean. It is also known as the Río Mescala.

Balta, José (hōsā' bal'ta), 1816–72, president of Peru (1868–72). In 1865 he helped Mariano I. Prado to seize the presidency and served in his government, but in 1867 Balta led in overthrowing the dictatorship. As president, he reestablished constitutional rule and undertook vast schemes for internal improvement. He granted a monopoly of guano export to a French company and obtained large loans in Europe, yet the lavish expenditures of his administration plunged Peru deep in debt. Balta was deposed and shot. He was succeeded by Manuel PARDO.

Balthazar (bālt'hā'zār) see WISE MEN OF THE EAST.

Baltic languages, a subfamily of the Indo-European family of languages. The Indo-European subfamily to which the Baltic languages appear to be closest is the Slavic. Because of this, some linguists regard Baltic and Slavic as branches of a single Balto-Slavic division of the Indo-European family. The Baltic tongues are thus named because they are spoken in an area bordering on the Baltic Sea. The principal ones are Lettish (or Latvian) and Lithuanian (together native to about 5 million people in Eastern Europe) and Old Prussian (which ceased to be a living language during the 17th cent.). The early common ancestor of the various Baltic languages, both living and dead, is traditionally referred to as Proto-Baltic. It is thought that Proto-Baltic broke off from the other Indo-European languages before 1000 B.C. A further division into East Baltic (to

which Lettish and Lithuanian belong) and West Baltic (which claims Old Prussian) is believed to have taken place before 300 B.C. The Baltic languages are said to be the closest of the living Indo-European languages to Proto-Indo-European—the original parent of all the Indo-European tongues—both phonologically and grammatically. They show a high degree of inflection in both the noun and verb systems. The earliest surviving text in a Baltic language may be dated c. 1400, but by the 16th cent. documents had become fairly numerous. See also LETTISH, LITHUANIAN, INDO-EUROPEAN. See T. F. Magner and W. R. Schmalstieg, ed., *Baltic Linguistics* (1970).

Baltic provinces, historic regions of COURLAND, LIVONIA, ESTONIA, and INGERMANLAND bordering on the eastern coast of the Baltic Sea. They were conquered by Russia from Sweden in the 18th cent. and made into provinces. Ingermanland was included into Russia proper, and the three independent republics of ESTONIA, LATVIA, and LITHUANIA were established in 1918. See also BALTIC STATES.

Baltic Sea, arm of the Atlantic Ocean, c. 163,000 sq mi (422,170 sq km), including the Kattegat strait, its northwestern extension. The Øresund, Store Bælt, and Lille Bælt connect the Baltic Sea with the Kattegat and Skagerrak straits, which lead to the North Sea, the Kiel Canal, across the Jutland peninsula, is a more direct connection with the North Sea. The Gulf of Bothnia, the Gulf of Finland, and the Gulf of Riga are the chief arms of the Baltic Sea. Of the many islands in the sea, the principal ones are Sjaelland, Fyn, Lolland, Falster, and Bornholm (Denmark), Öland and Gotland (Sweden), the Åland Islands (Finland), Sarema (USSR), and Rugen (East Germany). Most of the Baltic is shallow, and its tides are less pronounced than those of the North Sea. The salinity of the sea is reduced by the many rivers that enter it (the Oder, Vistula, Dvina, Tornälven, Umeälven, Angermanälven, and Dalälven), and parts of the sea freeze over in winter. The Baltic was frequented from ancient times, especially because of the amber found along the coast. In the late Middle Ages commerce on the Baltic was dominated by the Hanseatic League. Copenhagen, Szczecin, Gdansk, Riga, Leningrad, Helsinki, and Stockholm are the chief ports. The Baltic Sea is connected with the White Sea by the White Sea-Baltic Canal, and with the Volga River by the Volga-Baltic Waterway.

Baltic Shield, the continental core of Europe, composed of Precambrian crystalline rock, the oldest of Europe. The tectonically stable region was not affected by the Caledonian, Hercynian, and Alpine mountain periods of Europe, although mountains did rise along the edges. The exposed portion of the Baltic Shield, Fennoscandia, is found in Finland, Sweden, and Norway. During the Pleistocene epoch, great continental ice sheets scoured and depressed the shield's surface, leaving a thin covering of glacial material and innumerable lakes and streams. The ancient rocks have yielded a rich variety of minerals, especially iron and copper. In W. USSR the Russian Platform is that portion of the Baltic Shield buried beneath a great thickness of sedimentary rock.

Baltic states, the countries of ESTONIA, LATVIA, and LITHUANIA, bordering on the eastern coast of the Baltic Sea. Formed in 1918, they remained independent republics until their incorporation in 1940 into the USSR. Finland is usually classed with the Scandinavian rather than with the Baltic states. See also BALTIC PROVINCES.

Baltimore, Cecilius Calvert, 2d Baron. see CALVERT, CECILIUS.

Baltimore, Charles Calvert, 3d Baron. see CALVERT, CHARLES.

Baltimore, George Calvert, 1st Baron. see CALVERT, GEORGE.

Baltimore (bôl'tīmôr, -môr), city (1970 pop. 905,759), N. Md., surrounded by but politically independent of Baltimore co., on the Patapsco River estuary, an arm of Chesapeake Bay, inc. 1745. The largest city in the state and the seventh largest in the country, it is a port of entry, a commercial and industrial center, an important railroad point, and a great seaport with extensive anchorages and dock and storage facilities. Large amounts of coal and grain, and iron, steel, and copper products are exported. Among Baltimore's leading industries are shipbuilding, sugar and food processing, copper and oil refining, and the manufacture of chemicals, steel, clothing, aerospace equipment, fertilizer, and tin cans. The site was first settled in the early 17th cent., but the city was not founded until 1729, when the provincial assembly authorized the building of a

town. The excellent harbor soon made Baltimore an important center for the shipping of tobacco and grain. Shipbuilding, an early industry, flourished during the Revolution and the War of 1812 with the fitting out of many privateers, and in the early 1800s the famous Baltimore clippers were built. The nation's wars have played a large role in the city's history. When the British occupied (1777) Philadelphia, Baltimore became the meeting place of the Continental Congress. In the War of 1812 the gallant defense of FORT MCHENRY inspired Francis Scott Key to write "The Star-spangled Banner." After the War of 1812, Baltimore experienced a phenomenal growth, largely because of the NATIONAL ROAD. When the Erie Canal (completed in 1825) endangered the city's hold on the trans-Allegheny traffic, Baltimore businessmen chartered (1827) the BALTIMORE & OHIO RAILROAD to meet the competition of New York as a new ocean outlet for the West. During the Civil War, Baltimore was strongly pro-Southern in sentiment, the 6th Massachusetts Regiment, passing through the city in April, 1861, was attacked by a mob. In World Wars I and II, Baltimore was an important shipbuilding and supply-shipping center. A disastrous fire in 1904 destroyed almost the entire downtown section but enabled the emergence of a more beautiful and better-planned city. Today it is famous for its residential streets of red brick row houses with scrubbed white steps. An important cultural and educational center, Baltimore is the seat of The Johns Hopkins Univ., the Univ. of Baltimore, St. Mary's Seminary and Univ., Goucher College, Loyola College, College of Notre Dame of Maryland, Coppin State College, a branch of the Univ. of Maryland and its schools of medicine, dentistry, pharmacy, nursing, law, and social work, and two junior colleges. Also in Baltimore are the Peabody Conservatory of Music, the Maryland College of Art, the Maryland Academy of Sciences, the Walters Art Gallery, and the Baltimore Museum of Art. The Enoch Pratt Free Library and the municipal symphony orchestra are well known. The city's many historical attractions include Flag House, the first Roman Catholic cathedral in the United States (1806-21, designed by B. H. Latrobe), a Unitarian church (1817), the Edgar Allan Poe House (c. 1830), Westminster Churchyard, where Poe is buried, Fort McHenry National Monument and Historic Shrine (see NATIONAL PARKS AND MONUMENTS, table), the Baltimore and Ohio Transportation Museum, and numerous colonial homes. The USS *Constellation*, a national historic shrine, is docked in Baltimore; it was the first U.S. navy ship (1797) and is the oldest navy ship still afloat. Other landmarks are the historic square Mt. Vernon Place, which contains the Washington Monument (1815-42, designed by Robert Mills), Druid Hill Park, with a zoo and a natural history museum, Baltimore's Memorial Stadium, home of the city's professional baseball (Orioles) and football (Colts) teams, and Pimlico Race Course, site of the famous Preakness, held annually since 1873. Baltimore-Washington International Airport is nearby. H. L. Mencken is one of the many famous people born in Baltimore. See A. M. Siousat, *Old Baltimore* (1931), Hamilton Owens, *Baltimore on the Chesapeake* (1941), F. F. Beirne, *The Amiable Baltimoreans* (1951, repr. 1968), and *Baltimore: A Picture History* (rev. ed. 1968), J. F. Waesche, *Baltimore Today* (1969), J. T. Scharf, *History of Baltimore* (1881, repr. in 2 vol., 1971) and *The Chronicles of Baltimore* (1874, repr. 1972).

Baltimore & Ohio Railroad (B&O), first U.S. public railroad, chartered in 1827 by a group of Baltimore businessmen to regain trans-Allegheny traffic lost to the newly opened Erie Canal. Construction began in 1828, and the first division opened in May, 1830, between Baltimore and Ellicott's Mills, Md. Horses were the first source of power, but the successful trial run of Peter Cooper's *Tom Thumb* in Aug., 1830, brought the change to steam locomotives. The B&O expanded steadily and reached St. Louis in 1857. During the Civil War the railroad moved Union troops and supplies. By the end of the 19th cent. the B&O had achieved most of its present 5,800 mi (9,334 km) of track and connected with Chicago, Philadelphia, and New York City. By the mid-1900s it had become mainly a freight carrier. Faced with financial difficulties, the B&O merged with the Chesapeake & Ohio in 1965. The B&O was the first railroad to publish a timetable, to use electric locomotives and specialty cars (e.g., dining and baggage), and to run fully air-conditioned trains.

Baltimore oriole: see ORIOLE.

Baltimore-Washington Parkway: see NATIONAL PARKS AND MONUMENTS (table).

Balts, peoples of the east coast of the Baltic Sea. They include the Latvians, the Lithuanians, and the now extinct Old Prussians. Their original home was farther east, but from the 6th cent. they were pushed westward by the Slavs. In the 13th cent. the TEUTONIC KNIGHTS and the LIVONIAN BROTHERS OF THE SWORD conquered the region later comprising Estonia and Latvia and forced Christianity on the inhabitants. Pressed by the Teutonic Order, the Lithuanians formed (13th cent.) a unified state of LITHUANIA, which successfully resisted annexation and became one of the largest states of medieval Europe. In 1387, under Grand Duke Jagiello (King Ladislaus II of Poland), Lithuania officially adopted Christianity. The Teutonic Order lost (15th cent.) all but East Prussia, but descendants of the German knights and settlers continued to control land and commerce in Latvia and Estonia until the 20th cent. After the union (1569) of Lithuania with Poland, the Lithuanian nobility became thoroughly Polish in language and politics. The Estonians, a Finnic rather than a Baltic people, came under Swedish rule in 1561 and in 1721 passed to Russia, which by 1795 acquired all the Baltic lands. The incorporation of the Baltic nations of Lithuania, LATVIA, and ESTONIA into the Soviet Union since 1940 has been a source of political disputes. For earliest history to the 13th cent. see Marija Gimbutas, *The Balts* (1963).

Baluchi (balōō'chē), language belonging to the Iranian group of the Indo-Iranian subfamily of the Indo-European family of languages. See INDO-IRANIAN languages.

Baluchistan (balōō'chīstān), region and province (1969 est. pop. 1,484,000), c. 134,000 sq mi (347,000 sq km), Pakistan. It is bounded by Iran on the west, by Afghanistan on the north, and by the Makran coast of the Arabian Sea on the south. QUETTA is the capital. Lying outside the monsoon zone and with few rivers usable for irrigation, Baluchistan is largely desert land with inarable hills and mountains. Pastoral nomads, such as the Baluchi and Pathans, who speak languages related to Persian, constitute the bulk of the sparse population. Some cotton is raised and processed, and natural gas is exploited. On the coast there is trade in fish and salt.

baluchitherium (balōōchīthērēəm), extinct primitive rhinoceros, belonging to the genus *Baluchitherium*, of the Oligocene epoch, fossilized bones of which were found in central Asia. It had an estimated shoulder height of nearly 18 ft (5.5 m) and a weight of about 10 tons, and is believed to have been the largest land mammal of all time. The baluchitherium is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Perissodactyla, family Rhinocerotidae.

Balue, Jean (zhāN balu'), c. 1421-1491, French statesman, cardinal of the Roman Catholic Church. A trusted adviser of the French king LOUIS XI, he saved Paris for the king during the revolt of the League of the Public Weal (1465). Subsequently he conspired with Charles the Bold of Burgundy against Louis and arranged the meeting of the two rulers at Peronne (1468), where Charles made Louis a prisoner. After his release Louis held Balue prisoner from 1469 to 1480, when the pope intervened. The legend that Balue was kept in an iron cage is unproved. Balue went to Rome, but in 1484 he returned temporarily to France as a papal legate.

Balzac, Honoré de (bāl'zāk, bōl-, Fr. ōnōrā də balzak'), 1799-1850, French novelist, b. Tours. Balzac ranks among the great masters of the novel. Of a bourgeois family, he himself later added the "de" to his name. Neglected in childhood, he was sent to a grammar school at Tours and later to a boarding school at Vendôme, where he was a dull student but a voracious reader. In 1816 he began studying law at the Sorbonne, but after receiving his license in 1819 he decided to abandon law for literature. Half starving in a Paris garret, Balzac began writing sensational novels to order, publishing them under a pseudonym. Throughout his life he worked with feverish activity, sleeping a few hours in the evening and writing from midnight until noon or afternoon of the next day. He was ridden with debts, which were increased rather than relieved by his business ventures. Balzac's first success, *Les Chouans* (1829, first published as *Le Dernier Chouan*), was followed by *La Peau de chagrin* (1831). In the next 20 years he produced the vast collection of novels and short stories called "La Comédie humaine." This, his greatest work, is a reproduction of the French society of his time, picturing in precise detail individuals of every class and every profession. The chief novels in "La Comédie humaine" are *Louis Lambert*

(1832), *Eugénie Grandet* (1833), *La Recherche de l'absolu* (1834), *Le Pere Goriot* (1835), *Les Illusions perdues* (1837), *César Biotteau* (1837), *La Cousine Bette* (1847), and *Le Cousin Pons* (1847). Outweighing Balzac's faults—his lack of literary style, his moralizing, his tendency toward melodrama—are his originality, his great powers of observation, and his vivid imagination. His short stories include some of the best in the language, but his attempts at drama failed. Though an unattractive, awkward man, Balzac formed several famous liaisons. Only a few months before his death he married the Polish Countess Evelina Hanska, with whom he had conducted a romantic correspondence for 18 years. See *The Human Comedy* (with introductions by George Saintsbury, 40 vol., 1895–98), *Balzac's Letters to His Family, 1809–1850* (ed. by W. S. Hastings, 1934), biographies by H. J. Hunt (1957, repr. 1969), A. Maurois (1966), and V. S. Pritchett (1973), studies by E. J. Oliver (1959, repr. 1964), P. Bertault (1963), bibliography and index comp. by W. H. Royce (1929, repr. 1969).

Balzac, Jean Louis Guez de (zhān lwē gā), 1597?–1654, French writer. His *Lettres* (1624, tr. 1634) and other writings were a great influence in reforming French prose. Their style was marked by their orderly, Latinate sentence structure.

Bamah (bā'ma) [Heb., =high place], term elsewhere translated, but in Ezek. 20:29 given in the original. The word is translated earlier in the same verse. There is a pun on the verb "to go" that had in Hebrew a sound much like the word Bamah.

Bamako (bamakó'), city (1970 est. pop. 170,000), capital of Mali and of its Bamako region, SW Mali, on the Niger River. It is the nation's administrative center, as well as a river port, a junction on the Dakar-Niger RR, and a major regional trade center. Manufactures include textiles, processed meat, and metal goods. Bamako ships shea-nut oil, kapok, cotton, and peanuts. There is commercial fishing on the Niger. Bamako was a leading center of Muslim learning under the Mali empire (c.11th–15th cent.) but by the 19th cent. had declined into a small village. In 1883 it was occupied by French troops under Joseph S. GALLIENI. In 1908, Bamako became the capital of the French Sudan (see MALI) and began to develop into a major city. As a result of a conference of Africans from French West and Equatorial Africa, held in Bamako in 1946, the Rassemblement démocratique africain, an important regional political party, was founded. Bamako is a picturesque city, with a botanical and zoological park and many decorative gardens. Residential areas often consist of mud huts arranged in a star or checkerboard pattern and enclosed by a wall. Bamako's educational institutions include schools of administration, medicine, and engineering. The city also has an international airport.

Bamberg (bam'bērk), city (1970 pop. 70,581), Bavaria, S West Germany, a port on the Regnitz River. It is an industrial and commercial center, its manufactures include textiles, clothing, electrical equipment, machinery, and beer. Bamberg was the capital of a powerful ecclesiastical state from 1007 to 1802. In 1803 it passed to Bavaria. Noteworthy buildings in the picturesque city include the cathedral (built mostly in the 13th cent.), which includes the tombs of Emperor Henry II and Pope Clement II, a Gothic church (14th cent.), and two episcopal residences (16th and 18th cent.). It is the seat of a Roman Catholic archbishopric and has a museum of natural history.

Bamberger, Ludwig (lōōt'vīkh bām'bērgər), 1823–99, German economist, politician, and journalist. An ardent liberal, he took part in the Revolution of 1848 and was forced to live in exile until 1866. He worked for the unification of Germany, and as a leader of the National Liberals he supported Otto von Bismarck until he was alienated by the chancellor's turn to protection and state socialism. In 1880, Bamberger led a group out of the party. As a member of the Reichstag (1871–93), he was chiefly responsible for the adoption of the gold standard in Germany and for the founding of the Reichsbank.

Bambocciante: see LAER, PIETER VAN

Bamboccio, Il: see LAER, PIETER VAN

bamboo, plant of the family Gramineae (GRASS family), chiefly of warm or tropical regions, where it is an extremely important component of the vegetation. It is most abundant in the monsoon area of E Asia. Many species are among the largest grasses, sometimes reaching 100 ft (30 m). The stalks are round (rarely square), jointed, and hollow or solid with evergreen or deciduous leaves. Some types die

after flowering and some do not flower until they are about 30 years old. In many places bamboo is used as wood, for construction work, furniture, utensils, fiber, paper, fuel, and innumerable small articles. Bamboo sprouts are eaten as a vegetable, and the grains of some species are also utilized for food. The bamboo has long been used for decorative purposes, both in gardens and in art. In the United States the native bamboo is a CANE. The most common bamboo is *Bambusa arundinacea*. Bamboo is classified in the division MAGNOLIOPHYTA, class Filiales, order Cyperales, family Gramineae. See F. A. McClure, *The Bamboos* (1966).

Bamburgh, village, Northumberland, NE England, on the North Sea. It was the capital of ancient BERNICIA and for a time of NORTHUMBRIA. In the 6th cent. a castle was erected above a tall cliff on the site of a Roman fort. Restored in the 18th cent., it is still used as a residence and contains the 14,000-volume Crewe Library.

Bamford, Samuel, 1788–1872, English weaver, poet, and social reformer. Always sympathetic toward the working class, he was jailed in 1819 for his part in the Peterloo massacre. His dialect verses were popular among the Lancashire workers. Besides his poetry, Bamford is noted for *Passages in the Life of a Radical* (2 vol., 1840–43, repr. 1967).

Bamian (bamyān'), town (1969 est. pop. 48,000), N central Afghanistan, on the Kunduz River. It was long a major caravan center on the route between India and central Asia. By the 7th cent. the town was a prominent center of Buddhism, the Bamian valley is lined with cave dwellings cut out of the cliffs by Buddhist monks. Particularly interesting are two great Buddha figures (probably 6th or 7th cent.) carved from rock and finished in fine plaster. In the same area are grottoes decorated with well-preserved wall paintings in Greco-Buddhist styles. Bamian was invaded by the Saffarids in 871, and many Buddhist idols were carried off to Baghdad. A Muslim fortress town from the 9th to the 12th cent., Bamian was sacked by Jenghiz Khan in 1221 and never regained its former prominence.

Bamian, valley, E Afghanistan, NW of Kabul, site of the ancient commercial and cultural center of Bamian. This major archeological area is noted for its two gigantic statues of Buddhist saints, 174 ft (53 m) and 115 ft (35 m) high, carved in the valley's rock walls. Many of the rock sanctuaries and cells are still in use.

Bamoth (bā'mōth) [Heb., =pl. of BAMAH], unidentified place, E of the Dead Sea. Num. 21:19, 20. It is probably the same as Bamoth-baal (-bā'el), Joshua 13:17. Bamoth-baal is translated in Num. 22:41.

Bampton, John, 1689–1751, English clergyman, founder of an Oxford lectureship on religious subjects. The Bampton Lectures, given annually, have frequently given rise to lively controversy.

Bampton, Rose, 1909–, American operatic soprano, b. Cleveland. Bampton studied at the Curtis Institute of Music, Philadelphia. She made her debut at the Metropolitan Opera in 1932 in the leading contralto role in Ponchielli's *La Gioconda* and sang contralto and mezzo-soprano roles until 1936, when she retrained her voice to soprano range and made her first European tour. She made her soprano debut at the Metropolitan in 1937.

Banaba: see OCEAN ISLAND

Banach, Stefan (stē'fan bā'nakh), 1892–1945, Polish mathematician. He was educated at the Institute of Technology in Lvov, his doctoral thesis laid the foundations of modern functional analysis, which he continued to work at throughout his life. He also made fundamental contributions to general topology, set theory, the theory of measure and integration, and the general theory of linear spaces, or vector spaces, e.g., *Théorie des opérations linéaires* (1932). He introduced and developed the concept of complete normed linear spaces, now called Banach spaces.

banana, name for several species of the genus *Musa* and for the fruits these produce. The banana plant—one of the largest herbaceous plants—is said to be native to tropical Asia, but is now cultivated throughout the tropics. Used to a minor degree for its leaf fiber, the banana is of the same genus as the extremely valuable fiber plant MANILA HEMP, or abaca, and is also related to the BIRD-OF-PARADISE FLOWER. Along with the banana, these are economically the most important plants of the banana family (the Musaceae), a group of large monocotyledonous tropical herbs. The banana is of palmlike aspect and has very large leaves, the overlapping bases of which form the so-called false trunk. As the plant

reaches maturity its true stem rises from the ground and pushes through the center of the false trunk to emerge from the top of the plant, there becoming pendent and bearing the male and female flowers. The female flowers develop into bananas, the clusters of upturned fruits being called "hands" and each banana a "finger." The plants are cut down to harvest the fruit, since they bear only once. Their seeds are sterile, shoots from the rhizomes are used for propagation. The banana fruit (botanically a berry) is a staple food in the tropics and is used in many forms, raw or cooked, and grown in many varieties, e.g., the plantain. Dried bananas are eaten as "banana figs" and inferior fruits serve as a stock feed. Banana oil is a synthetic product, so named because of its odor. Although the banana has long been cultivated in Asia—Alexander the Great encountered it in India—the large international traffic began only in the late 19th cent. with the development of refrigerated transport. The most common banana of North American commerce is *M. sapientum* (or *M. paradisiaca sapientum*). Bananas are classified in the division MAGNOLIOPHYTA, class Liliales, order Zingiberales, family Musaceae.

banana fish: see BONEFISH

Bananal Island, Brazil: see ARAGUAIA, river

Banat (bā'nāt), region extending across W Rumania, NE Yugoslavia, and S Hungary. The term *banat* originally referred to any of several frontier provinces of Hungary and Croatia that were ruled by bans (governors). The Banat region is bordered on the E by Transylvania and Walachia, on the W by the Tisza River, on the N by the Mureșul River, and on the S by the Danube. Except for some eastern mountains, it is primarily an agricultural area of fertile, rolling plains. Inhabited since prehistoric times, the Banat was occupied successively by Romans, Goths, Gepidae, Huns, and Avars. Slavs began to settle there in the 5th cent. and Magyars in the 9th cent. In 1233, King Andrew II of Hungary established the Banat of Severin, a frontier province whose defense was entrusted to the Knights Hospitalers. In the aftermath of the Turkish victory over the Serbs at Kosovo (1389) and the Turkish occupation of Serbia (1459), many Serbs emigrated to the Banat, which itself became a Turkish sanjak (province) around 1552. By the Treaty of Passarowitz (1718), the Banat was made an Austrian military frontier zone known as the Banat of Temesvár. Empress Maria Theresa put the region under civilian government in 1751 and brought in thousands of German colonists. In 1779 the Banat passed to Hungary, to which it belonged until 1918, except for a brief period as an Austrian crownland. Although the Allies in World War I had promised through a secret agreement to give the Banat to Rumania, it was divided by the Treaty of Trianon (1920) between Rumania and newly independent Yugoslavia, with the Szeged district reserved for Hungary.

Banbury, municipal borough (1971 pop. 29,216), Oxfordshire, central England, on the Cherwell River. It is an agricultural market and manufactures aluminum, fabricated steel, farm machinery, electrical apparatus, and furniture. The town still produces the spiced currant cakes for which it has been famous since the 17th cent. The Banbury Cross of the nursery rhyme was destroyed by the Puritans in 1602, a new one was installed in 1859.

Bancroft, Anne, 1931–, American actress, b. New York City as Anne Italiano. Her New York stage debut in *Two for the Seesaw* (1958) was a major triumph. She was acclaimed for her performance in *The Miracle Worker* (1959) and won an Academy Award for the 1962 film version. In the mid-1960s she appeared in *Mother Courage, The Devils, and A Cry of Players*. Bancroft's films include *The Pumpkin Eater* (1964), *The Graduate* (1968), and *Young Winston* (1972).

Bancroft, Edward, 1744–1821, spy in the American Revolution, b. Westfield, Mass. While living in London, he became a friend of Benjamin Franklin and in the Revolution began to operate as an American secret agent. He reported to the American commissioners in France, but, unknown to them, he was a double agent and reported their movements to the British. Bancroft in 1778 gave advance information of the Franco-American alliance to the British. Evidence of his duplicity was revealed by Paul L. Ford in 1891. See Lewis Einstein, *Divided Loyalties* (1933).

Bancroft, George, 1800–1891, American historian and public official, b. Worcester, Mass. He taught briefly at Harvard and then for eight years at the Round Hill School in Northampton, Mass., of which he was a founder and proprietor. He then turned

definitely to writing His article (Jan, 1831) in the *North American Review* attacking the Bank of the United States delighted Jacksonian Democrats, and in 1834 Bancroft became an avowed apostate from New England Federalism, "a traitor to his class" In that year also appeared the first volume of his monumental work, *A History of the United States* (10 vol, 1834-74, revised into 6 vol by the author in 1876 and 1883-85) As a reward for his speeches and writings for the Democratic cause he was appointed (1837) collector of the port of Boston by President Martin Van Buren, and as the dispenser of the patronage of that office Bancroft was the Democratic boss in Massachusetts He was defeated for the governorship in 1844, but President Polk, whom he had helped nominate, made him Secretary of the Navy In that post (March, 1845-Sept, 1846) he established the U.S. Naval Academy at Annapolis and issued the standing orders under which Capt John D Sloat, commanding the Pacific squadron, seized California ports on the outbreak of the Mexican War That conflict formally began in May, 1845, when Bancroft, then serving also as acting Secretary of War, gave the order that sent Gen Zachary Taylor into Mexico While minister to Great Britain (1846-49), he diligently collected materials for his *History* in British and French archives Bancroft, an antislavery Democrat, came to support Abraham Lincoln in the Civil War and on Feb 12, 1866, delivered the official memorial address on Lincoln before the Congress (he had also been the official eulogist of Andrew Jackson in 1845) He is assumed to have written President Andrew Johnson's first message to Congress, and in 1867 Johnson appointed him minister to Prussia He held the post until 1874 Although his famous *History* is little read today, it was an important landmark in American historiography, hitherto burdened with Federalist myths, and it remains valuable for its extensive use of source materials The *History* is violently anti-British and intensely patriotic and leaves no doubt that the author was passionately sincere in his devotion to democracy Acknowledged partisan that he was, Bancroft, the first American trained in the so-called scientific school of German historical scholarship, nevertheless insisted that his was an objective interpretation, the high praise his work won from the great Leopold von Ranke as the best history ever written from the democratic point of view annoyed as well as gratified him His literary style was sonorous and rather ponderous, although some passages still have an emotional appeal See biographies by M A De Wolfe Howe (1908) and R B Nye (1944, repr 1964), study by R H Canary (1974)

Bancroft, Hubert Howe, 1832-1918, American publisher and historian, b Granville, Ohio Bancroft began his career as a bookseller in San Francisco in 1852 Soon he had his own firm, the largest book and stationery business W of Chicago He also developed a passion for collecting materials on the western regions of North and South America, from Alaska to Patagonia After toying with the idea of compiling an encyclopedia, he settled on the publication of a prodigious history (39 vol, 1874-90), reissued (1882-90) as *The Works of Hubert Howe Bancroft* The *Works* cover the history and to some extent the anthropology of Central America, Mexico, and the Far West of the United States The first 5 volumes concern the native races, the next 28 the Pacific states, and the last 6 are essays *Literary Industries*, the 39th volume, contains autobiographical material and an account of Bancroft's historical method About a dozen assistants—out of hundreds Bancroft had tried out in his "history factory"—did the actual writing of the *Works*, Bancroft personally wrote very little Because his assistants were not given credit lines and because of Bancroft's rather unethical business practices, Bancroft and the *Works* were at first severely attacked However, his enormous contribution soon received just recognition When Bancroft presented his library to the Univ of California (1905) it contained about 60,000 items, including rare manuscripts, maps, books, pamphlets, transcripts of archives made by his staff, and personal narratives of early pioneers as recorded by his reporters Known as the Bancroft Library, the collection remains an outstanding repository of the history of the West See biography by J W Caughey (1946, repr 1970)

Bancroft, Marie Effie Wilton, Lady, 1839-1921, English actress and manager She made her debut (1856) at the Lyceum Theatre, London, and in 1865 became joint manager of the Prince of Wales's Theatre, London, with Sir Squire Bancroft, 1841-1926, whose entire name was Squire Bancroft White But-

terfield They were married in 1867 With their production of *Caste* in the same year, the Bancrofts, as co-stars, began an association with its author, Tom Robertson, that was to prove most successful Their presentations of his plays, which were more true to life than the current melodramas, and their utilization of the reforms of Mme VESTRIS introduced realism to the 19th-century English stage They continued their work at the Haymarket theater in London (1880-85) The Bancrofts appeared together until 1886, when Mrs Bancroft retired Squire Bancroft was knighted in 1895 See their joint memoirs, *Mr and Mrs Bancroft, on and off the Stage* (1888) and *Recollections of Sixty Years* (1909), Sir Squire Bancroft, *Empty Chairs* (1925)

Bancroft, village (1971 pop 2,276), SE Ont, Canada, on the York River Uranium mines are in the area

band, in music, a group of musicians playing principally on wind and percussion instruments, usually outdoors Such grouping of loud instruments characterized Saracen military bands participating in the Crusades About 1300 similar groups, often including the SHAWM (a type of oboe), trumpet, and drum, appeared in the courts and towns of Europe Town bands were manned by members of the watch and were integral to both the civic and social life of the community These musicians participated in processions, dances, weddings, and feasts and provided incidental music for dramatic representations During the 16th cent the practice of playing instruments of the same family in consort (as in a shawm band) became popular, and new families of wind instruments added variety As the town band began to decline at the end of the 17th cent, its official duties gradually shifted to the military band, which had assumed classical proportions in the early Renaissance A vestige of the extravagant, almost ritualistic affectations of the instrumentalists has survived in the routines of present-day drum majors and majorettes For several centuries the general composition of the military band remained static, the fife and drum being associated with the infantry and the trumpet and kettledrum with the cavalry France introduced the oboe in the latter half of the 17th cent, and a gradual merger with the full wind contingent of the town band ensued Important developments in instrument-making affected the composition of bands in the 19th cent A Prussian bandmaster, Wilhelm Wierprecht (1802-72), introduced (c 1830) valve trumpets and horns into the military band The saxhorns and saxophones of Adolphe Sax were incorporated into French military bands at midcentury The sarrusophone was added in the 1860s, thus completing the ensemble that in most respects is known today Two outstanding European bands are the British Royal Artillery Band (founded 1762) and the band of the French Garde Republicaine, playing under that name since 1872 The U.S. Marine Band, founded in 1798, was the first important band in the United States and remains outstanding The first U.S. band devoted exclusively to the presentation of public concerts was that of P S Gilmore, founded in 1859 His successor as America's leading bandmaster was John Philip SOUSA (1854-1932) In 1911, Edwin Franko Goldman organized the Goldman Band, which continues to give outdoor concerts in New York City in the summer Modern bands usually include the PICCOLO, FLUTE, CLARINET, OBOE, ENGLISH HORN, BASSOON, SAXOPHONE, CORNET, TRUMPET, FRENCH HORN, TROMBONE, TUBA, flugelhorn, euphonium, and various PERCUSSION INSTRUMENTS Concert bands may add the cello, bass viol, and harp The band repertory has traditionally included flourishes, marches, and music transcribed from other mediums As town bands once provided music for social dancing, so do modern jazz and rock bands of numerous descriptions (see ROCK MUSIC) Prior to the 18th cent, the term *band* was frequently applied in a generic sense to cover the combinations of instruments employed by kings and nobles The term is also used for an ensemble of any one type of instrument, as brass band, wind band, marimba band See R F Goldman, *The Band's Music* (1938) and *The Concert Band* (1946)

Banda, Hastings Kamuzu (kamōō'zōō ban'dā), 1902?- , African political leader, president of Malawi (1966-) Overcoming the disadvantages of his peasant background, he received a medical degree in the United States and established a prosperous practice in London after World War II He returned to Africa (1953) and then to his homeland, Nyasaland (1958), to campaign against the federation of Nyasaland (now Malawi) with Rhodesia In a 1961 general election Banda's Malawi Congress party won a sweeping victory Nyasaland, led by Banda as prime minister,

became an independent member of the British Commonwealth as Malawi in 1964 Banda instituted constitutional changes in 1966, making himself life president and eliminating political opposition In 1971 he became the first black African leader to visit South Africa See biography by Philip Short (1974)

Banda Islands, group of 10 volcanic islands, c 70 sq mi (180 sq km), E Indonesia, in the Banda Sea, in the Moluccas The capital and commercial center is Bandanaira, a seaport on Bandanaira island The largest island in the group is Bandalontar Nutmeg and mace are the chief products The islands were discovered and claimed by the Portuguese in 1512 The Dutch ousted the Portuguese in the early 1600s, and the Dutch East India Company assumed control in 1619 Conflict with the English led to the so-called Ambon massacre Many inhabitants are Christian

Banda Oriental (ban'dā öryäntal') [Span, = eastern shore, i.e., of the Rio de la Plata], region, S Uruguay An alluvial plain, it is Uruguay's principal livestock-raising and wheat-growing region In the Spanish colonial period Banda Oriental was the term applied to Uruguay

Bandar, India see MASULIPATAM

Bandar Abbas (bandar' ab-bas'), town (1971 est pop 38,000), S Iran, on the Strait of Hormoz at the mouth of the Persian Gulf A port of strategic and commercial importance, it is the focal point of the trade routes of S Iran It was long noted for its trade with India The town has food processing and textile industries, cotton, rugs, nuts, and dates are exported Early in the 16th cent the Portuguese established themselves in the region, seizing the islands in the strait and using the town, which they fortified and called Gamru, as a mainland port Shah Abbas I recaptured (c 1615) the town and later the islands The Dutch (without the shah's consent) and the English (with the shah's approval) subsequently set up trading stations there, they called the town Gombroon In 1622, Shah Abbas renamed the town Bandar Abbas (port of Abbas) and developed it into a major port Bandar Abbas began to lose importance in the late 1800s, especially after the opening of the Trans-Iranian RR terminal at the head of the Persian Gulf

Bandaranaike, Sirimavo (sērēmā'vō bandranī'kē), 1916-, prime minister of Sri Lanka (formerly Ceylon) Of an aristocratic family, she was educated at a Roman Catholic convent In 1940 she married S W R D Bandaranaike, also a Christian She was converted to Buddhism, as was her husband, before he became (1956) prime minister After her husband was assassinated (1959) she led the Sri Lanka Freedom party to victory in the 1960 elections and became prime minister She remained in office until 1965, pursuing a nationalist program, was defeated in the 1965 elections, but returned as prime minister in 1970 In 1972 she was the guiding force behind the adoption of a new constitution that proclaimed a republic and officially changed the country's name to Sri Lanka

Bandaranaike, Solomon West Ridgeway Dias, 1899-1959, prime minister (1956-59) of Ceylon (later Sri Lanka), husband of Sirimavo Bandaranaike A lawyer educated in England, he entered politics and rose to hold a cabinet position He resigned, however, in 1951 to form what became the Sri Lanka Freedom party In 1956 he organized a leftist coalition that came to power with the 1956 elections As prime minister, he took a neutralist stance in foreign affairs, domestically, he was faced by economic problems and disputes over languages He was assassinated by a dissident Buddhist monk

Bandar-e Pahlavi (bandar-ā palāvē'), city (1966 pop 41,785), Gilan prov, NW Iran, a port on the Caspian Sea It has fisheries and exports food products, cotton, fish, and caviar The city is also called Pahlevi and was formerly known as Enzeli

Bandar-e Shah (sha), town (1966 pop 13,000), Mazandaran prov, N Iran, on the Caspian Sea The town has fisheries and serves as the northern terminus of the Trans-Iranian Railway, which runs to the Persian Gulf

Bandar-e Shahpur (shapōōr'), town (1966 pop 6,000), Khuzestan prov, SW Iran, a port at the head of the Persian Gulf It is the southern terminus of the Trans-Iranian Railway, which runs to the Caspian Sea

Banda Sea (bān'dā, ban'dā), section of the Pacific Ocean, c 600 mi (970 km) long and c 300 mi (480 km) wide, E Indonesia, outlined by the South Molucca islands The deepest point is c 21,000 ft (6,400 m) Reefs and currents near the sea's islands are a hazard to shipping

Bandeira (bāndē'ē-rā), highest peak of Brazil, 9,462 ft (2,884 m) high, in the Serra do Caparaó, situated on the border between Minas Gerais and Espírito Santo states, SE Brazil

Bandelier, Adolph Francis Alphonse (bāndēl'ēr'), 1840–1914, American archaeologist, b. Bern, Switzerland. His pioneering studies on ancient Mexican civilizations and his important excavations in Peru and Bolivia laid the foundations for later research in American archaeology. He is well known for his popular books *The Delight Makers* (1890, repr. 1954) and *The Gilded Man* (1893).

Bandelier National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Bandello, Matteo (mat-tē'ō bāndēl'ō), 1485–1561, Italian storyteller, a Dominican priest. He is famous for his novellas, short tales in imitation of Boccaccio, that provided themes for several 17th-century plays. Often coarse, they have considerable vitality and occasional tragic force. His version of an earlier *Romeo and Juliet* is probably the source of Shakespeare's play. An edition of his novellas was translated into English by Sir Geoffrey Fenton in 1567 and reprinted in 1924.

bandicoot, small marsupial mammal native to Australia and nearby islands. Bandicoots have long, pointed, shrewlike faces, gray or brown fur, and long, bushy, ratlike tails. They range in size from that of a rat to that of a rabbit. Their feet are equipped with sharp claws, used for digging food; they feed nocturnally on insects, worms, roots, and vegetables dug from the ground. The second and third toes of the hind legs are bound together and the paired claws are used as a comb for grooming the fur. Bandicoots are able to hop about like rabbits on their strong hind legs, but they also commonly creep on all fours. Bandicoots are classified in the phylum CHORDATA, subphylum Vertebrata, order Marsupialia, family Peramelidae.

bandicoot rat, giant rat of southern Asia, unrelated to true bandicoots. It is an agricultural pest in the grain crops and gardens of India and Sri Lanka and is known for the piglike grunts it emits when attacked. Bandicoot rats are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Muridae.

Bandinelli, Bartolomeo (bārtōlōmā'ō bāndēnēl'īē) or **Baccio** (bat'chō), 1493?–1560, Florentine sculptor and painter, son of a goldsmith. He attempted to emulate Michelangelo, and derived from him a strong interest in musculature. Although his drawings are forceful, his sculpture tends toward a somewhat petrified rendering of the human form. Among his works are a statue of St. Peter and an altar screen in the cathedral at Florence. *Hercules and Cacus* and the monument to Giovanni delle Bande Nere are also in Florence. Together with his assistants, he is responsible for the execution of the tombs of popes Leo X and Clement VII in Santa Maria sopra Minerva, Rome.

bandit: see BRIGANDAGE

Bandjarmasin (ban'jərmasin), city (1961 pop. 214,096), capital of South Kalimantan prov., S Borneo (Kalimantan), Indonesia, on a delta island near the junction of the Barito and Martapura rivers. An important deep-water port, it is the trade center of the rich Barito basin, exports include rubber, pepper, timber, oil, coal, gold, and diamonds. There is a large oil refinery, and coal mines and sawmills are in the vicinity. In the 14th cent. Bandjarmasin was part of the Hindu kingdom of Madjapahit, but it passed to Muslim rulers in the late 15th cent. The Dutch opened trade there in 1606. The British controlled the city for several brief periods, and in 1787 it became a Dutch protectorate. There is much flooding, and many of the inhabitants live on raftlike dwellings. A state university is in the town. It is also spelled Banjermasin or Bandjermasin.

Bandjermasin: see BANDJARMASIN, Indonesia

Bandoeng see BANDUNG, Indonesia

Bandung or Bandoeng (both bān'dōōng), city (1971 est. pop. 1,114,000), capital of West Java prov., W Java, Indonesia, near the Guntur volcano. Formerly the administrative and military headquarters of the Netherlands East Indies, it is the third largest city in Indonesia, an industrial hub, a famous educational and cultural center, and a tourist resort known for its cool, healthful climate. Bandung is a textile center and the site of the country's quinine industry, which uses the cinchona grown on nearby plantations. Other manufactures include ceramics, chemicals, rubber products, and machinery. The city is the seat of a textile institute, the Pasteur Institute, a technological institute, a state university, two pri-

vate universities, and a nuclear research center. Nearby is Malabar radio station, one of the most powerful in SE Asia. Founded by the Dutch in 1810, Bandung became important with the arrival of the railroad in the late 19th cent.

Bandung Conference, meeting of representatives of 29 African and Asian nations, held at Bandung, Indonesia, in 1955. The aim—to promote economic and cultural cooperation and to oppose colonialism—was more or less achieved in an atmosphere of cordiality. Communist China played a prominent part and strengthened its friendly relations with other Asian peoples. Not invited to the conference were South Africa, Israel, Nationalist China, the Republic of Korea, and the People's Republic of Korea. In the 1960s and 1970s, conflicts between the African and Asian nations eroded the solidarity expressed at Bandung. See AFRO-ASIAN BLOC. See Carlos P. Romulo, *The Meaning of Bandung* (1956).

baneberry, any plant of the small genus *Actaea*, north temperate perennials of the family Ranunculaceae (BUTTERCUP family) sometimes cultivated for the handsome (though poisonous) berrylike fruits. Native species, formerly used medicinally by both Indian and white man and also called cohosh, are the red baneberry (with a stalk of red berries) and the white baneberry (with a stalk of white berries). The plant is also one of several plants called herb Christopher, particularly the dark-fruited European species. The baneberry is similar to the related bugbane, one species of which is also called cohosh. Baneberry is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Banér, Johan (yōō'han bānār'), 1596–1641, Swedish field marshal in the THIRTY YEARS WAR. He served (1626–29) in Poland and Russia and accompanied (1630) Gustavus II of Sweden to Germany. At Gustavus's death (1632) Baner was a leading officer, and after the major Swedish defeat at Nordlingen he became the chief Swedish general in Germany. Baner reestablished Sweden's military prestige at Wittstock (1636), where he defeated the Saxon and imperial forces. After recovering (1638) Pomerania and Mecklenburg and winning (1639) a victory over the Saxons at Chemnitz, he penetrated (1639) into Bohemia but was forced to retreat.

Banerjee, Sir Surendranath (sōōrēn'drənāt ba'nārjē), 1848–1926, Indian nationalist. One of the first Hindus to join the Indian civil service, he was dismissed (1874) for a minor error and was considered by many to be the victim of discrimination. He became a teacher in Calcutta and editor of the nationalist paper *Bengalee*, and in 1876 he founded the nationalist Indian Association, a predecessor of the Indian National Congress. He served twice (1895, 1902) as president of the latter organization but withdrew in 1918 to espouse a more moderate nationalism that called for Hindu-Muslim cooperation and gradual reform. Knighted in 1921, he served (1921–24) as minister for local self-government in Bengal. He was a founder (1882) of Ripon College in Calcutta, which in 1947 was renamed Surendranath College. See his autobiography, *A Nation in Making* (1925). Daniel Argov, *Moderates and Extremists in the Indian Nationalist Movement, 1883–1920* (1967).

Banff (bāmf, bānf), town (1971 est. pop. 3,500), SW Alta., Canada, on the Bow River in the Rocky Mts. A famous tourist center and a winter resort, it is the administrative headquarters of Banff National Park. The Banff School of Fine Arts is a branch of the Univ. of Alberta.

Banff National Park, 2,564 sq mi (6,641 sq km), W Alta., Canada, in the Rocky Mts., est. 1885. Noted for its mountain scenery and hot mineral springs, the park is a year-round resort area. Banff and Lake Louise are the chief resort centers.

Banffshire or Banff, county (1971 pop. 43,501), NE Scotland. Banff is the county town. The terrain slopes from the Cairngorm mts. in the south to a fertile farm belt near the Moray Firth. Oats and barley are the staple crops, and sheep and cattle are raised. The distilling industry is mainly around Dufftown. Glenlivet is also famous for whiskey. Fishing villages dot the coast. Buckie and Banff are important cod and herring ports. There is also a boat-building industry. Fine woollens are manufactured at Keith. The county has granite, limestone, and marble quarries. Banffshire was torn by religious strife after the Reformation, and troubles continued through the period of the ENGLISH CIVIL WAR. After the GLORIOUS REVOLUTION (1688–89), the county was strongly Jacobite. In 1975, Banffshire became part of the new Grampian region.

Bangalore (bāng-gālōr'), city (1971 pop. 1,648,232), capital of Karnataka state, S central India, 3,000 ft (914 m) above sea level. A major industrial center and transportation hub of S India, Bangalore has electronics and aircraft industries, textile mills, and varied manufactures. Coffee is traded. A well-planned city with numerous parks and wide streets, it is famous as a place of retirement. It was founded in 1537, taken by Haidar Ali (c. 1760), but was restored to the original rulers of Bangalore after the British defeated Tipoo Sahib, the son of Haidar Ali, at Srirangapatna in 1799. Bangalore became the administrative seat of Mysore in 1831. The remains of the palace of Tipoo Sahib and several institutes of learning, notably the Tata Institute of Science, are the outstanding landmarks of the city.

Bangka or Banka (both bāng'ka, bāng'kə), island (1961 pop. 251,639), c. 4,600 sq mi (11,910 sq km), Indonesia, in the Java Sea, SE of Sumatra, from which it is separated by the narrow Strait of Bangka. Pangkalpinang is the largest town, and Muntok is the principal port. Since c. 1710, when tin was discovered there, Bangka has been one of the world's principal tin-producing centers. Tin production is a government monopoly; there is a smelter at Muntok. Pepper is also produced on the island. The majority of the inhabitants are Chinese; they are mostly employed as mine laborers. Bangka was ceded to Britain by the sultan of Palembang in 1812, but in 1814 it was exchanged with the Dutch for Cochinchina in India.

Bangkok (bāng'kōk'), Thai *Krung Thep*, city (1970 pop. 2,132,000), capital of Thailand and of Phra Nakhon prov., SW Thailand, on the east bank of the Chao Phraya River, near the Gulf of Siam. Thailand's largest city and one of the leading cities of Southeast Asia, Bangkok lies in the heart of the country's major commercial rice-growing region. The metropolitan area includes Bangkok proper, the industrial city of THON BURI on the west bank of the river, and Klongtoei Wharf, c. 5 mi (8 km) downstream, which, along with Bangkok's man-made harbor, handles the bulk of Thailand's foreign trade. The city is the hub of a continental Southeast Asian railroad network and has modern highways. Nearby Don Muang international airport is one of the busiest in Asia. Despite these transportation facilities, Bangkok depends mainly on its numerous canals to carry the commercial produce of the surrounding area. Rice, tin, teak, rubber, gold, silver, hides, and processed fish are the leading exports of the city's port. Industrial plants include rice mills, cement factories, sawmills, oil refineries, and shipyards. Textiles, motor vehicles, electrical goods, and food products are also manufactured. The city is a famous jewelry trading center, dealing in silver and bronze ware and precious stones. Ethnic Chinese dominate both commerce and industry in Bangkok, whose population includes sizable Indian, Pakistani, European, and American communities. The city began as a small trading center and port community serving Ayutthaya, the capital of Siam until its destruction by Burmese invaders in 1767. Thon Buri became the capital in 1769, but in 1782, King Rama I, founder of the present ruling Chakri dynasty, built his royal palace on the east bank of the river and made Bangkok his capital. The vast, walled Grand Palace complex encompasses the Wat Phra Kaew (the royal chapel housing the sacred image of the Emerald Buddha). There are more than 400 other Buddhist temples in Bangkok. During World War II the city was occupied by the Japanese and was a target of Allied bombing raids. Bangkok's educational and cultural facilities include four universities, a fine arts academy, the national theater, and the national museum, which has a large collection of Thai antiquities. Of particular interest is the daily floating market, in which merchandise is sold aboard boats on canals.

Bangladesh (bang-ladēsh', bāng-) [Bengali, = Bengal Nation], republic (1972 est. pop. 75,000,000), 55,126 sq mi (142,776 sq km), S Asia. Dacca is the capital. Bangladesh was formerly East Pakistan, which had been called East Bengal until 1955 and was constituted from the eastern portion of BENGAL and the former Sylhet district of Assam. Bangladesh proclaimed its independence from Pakistan on March 26, 1971, it achieved sovereignty in Dec., 1971, following the war between India and Pakistan. Bangladesh borders on the Bay of Bengal in the south, the Indian states of West Bengal in the west and Assam in the north, and Burma in the southeast. A humid, low-lying, alluvial region, Bangladesh is composed mainly of the great combined delta of the Ganges, Brahmaputra, and Meghna rivers. Except for the

Chittagong Hills along the Burma border, most of the country is no more than 300 ft (90 m) above sea level. Bangladesh is laced with numerous streams,

distributaries, and tidal creeks, forming an intricate network of waterways that constitutes the country's chief transportation system. Along the southeastern coast is the Sundarbans, a heavily forested swamp area with numerous low islands. Bangladesh has a tropical monsoon climate with a short dry season in the winter. It receives an average annual rainfall of 80 in (203 cm), with most falling during the summer monsoon period. The Sylhet district in the northeast is the wettest part of the country, having an annual average rainfall of 140 in (356 cm). The low-lying delta region is subject to severe flooding from monsoon rains, cyclones, and tidal waves and usually suffers major crop damage and high loss of life. The cyclone and tidal wave of Nov., 1970, devastated the southern delta region and caused an estimated 300,000 deaths. Monsoon rains in mid-1974 caused much damage. Bangladesh, one of the world's ten most populated countries, has the highest population density (more than 1,300 people per sq mi/500 people per sq km) of any nation on earth, its yearly growth rate is a very high 3%. The great majority of Bangladesh's population is Bengali, the Biharis, a non-Bengali Muslim group, form a large minority that has not been assimilated into the national social structure. About 80% of the population is Sunni Muslim, there are Hindu, Buddhist, and Christian minorities. Bengali is the nation's official language, but English is in wide use. Bangladesh has a predominantly rural population, with about 80% of the people engaged in agriculture. Dacca and CHITTAGONG are the largest cities. Bangladesh has several universities, including those at Chittagong, Dacca, MYMENSINGH, and RAJSHAHI. Except for natural gas (found along its eastern border) and oil (in the Bay of Bengal), Bangladesh is lacking in minerals. The country's economy is based on agriculture, with about 65% of the territory under cultivation. Jute, rice, sugarcane, tea, tobacco, and wheat are the chief crops. Bangladesh produces more than half of the world's raw jute. Fishing is also an important economic activity. Dacca and Chittagong (the country's chief port) are the principal industrial centers of Bangladesh, jute products, textiles, paper, processed food, and leather goods are manufactured. Raw jute and jute products account for about 90% of the country's exports, which also include tea, leather, and fish. Since the country is unable to feed itself, the most important of Bangladesh's imports is food. Raw cotton, transportation equipment, and consumer goods are other major imports. Bangladesh is governed by the constitution of 1972 (amended in 1975) and has a presidential system of government. The president is the head of state, and the prime minister is the head of government. There is a 315-seat national assembly. The Awami League is the chief political party, and in the country's first general election (March, 1973) it won virtually all the seats in the national assembly.

History Until 1757, when ROBERT CLIVE, the British statesman who laid the basis of the British Empire in India, defeated the Nawab, Suraj-ud-daulah, at Plas-

sey, the area that is now Bangladesh was ruled by Afghan or Mogul dynasties or by independent Muslim kings. Baber, who took Kabul in 1504 and thence advanced through the northwest, established the Mogul empire in India in 1526. Thereafter, with interruptions, the Mogul empire united India until 1857. Like India and Pakistan, the territory that is now Bangladesh was part of imperial British India from 1857 until 1947, when India and Pakistan achieved independence, for nearly 25 years afterward, Bangladesh existed as East Pakistan, the eastern province of Pakistan (for pre-1970 history see PAKISTAN). The two provinces of Pakistan, which differed considerably in natural setting, economy, and historical background, were separated from each other by more than 1,000 mi (1,610 km) of India. The East Pakistanis, who comprised 56% of the total population of Pakistan, were discontented under a government centered in West Pakistan, the disparity in government investments and development funds given to each province also added to the resentment, especially since the eastern province's jute and tea sales supplied two-thirds of the country's foreign earnings. Efforts over the years to secure increased economic benefits and political reforms proved unsuccessful, and serious riots broke out in 1968 and 1969. The movement for greater autonomy gained momentum when, in the Dec., 1970, general elections, the Awami League under the leadership of Sheikh MUJIBUR RAHMAN won practically all of East Pakistan's seats and thus achieved a majority in the Pakistan National Assembly. President Muhammad Agha YAHYA KHAN, hoping to avert a political confrontation between East and West Pakistan that might have led to East Pakistan's regional autonomy and control of its foreign exchange and trade, twice postponed (March, 1971) the opening session of the national assembly. The government's attempts to forestall the autonomy bid led to general strikes and nonpayment of taxes in East Pakistan and finally to civil war on March 25. On the following day the Awami League's leaders proclaimed the independence of Bangladesh. Yahya Khan's government outlawed the Awami League, imprisoned Sheikh Mujibur Rahman on treason charges, and imposed strict press censorship. During the months of conflict an estimated one million Bengalis were killed in East Pakistan and another ten million fled into exile in India. Fighting raged in Dacca, Chittagong, COMILLA, SYLHET, JESSORE, BARISAL, RANGPUR, and KHULNA. Finally India allied itself with Bangladesh, which it had recognized on Dec. 6, and during a two-week war (Dec. 3-16) defeated the Pakistani forces in the east. The Awami League leaders of Bangladesh's provisional government returned from exile in Calcutta, India. Sheikh Mujibur Rahman, who had been chosen president while in prison in West Pakistan, was released and allowed to return to Bangladesh in early Jan., 1972. He set up a government and assumed the premiership. Abu Sayeed Choudhury became president. Rejecting Pakistan's call for a reunited country, the Sheikh embarked upon the tremendous job of rehabilitating an economy devastated by months of warfare. Relations with Pakistan were hostile, Pakistan withheld recognition from Bangladesh, and Bangladesh and India refused to repatriate more than 90,000 Pakistani prisoners of war who had surrendered at the end of the conflict. Armed Bengali "freedom fighters" fought Bihari civilians in Bangladesh, particularly after Indian troops withdrew from Bangladesh in March, 1972. In addition, Bangladesh announced its intention to bring to trial a number of captured civilians and soldiers on war crime charges. Tensions were eased in July, 1972, when President Zulfikar Ali BHUTTO of Pakistan (who assumed power after the fall of the Yahya Khan government) and Prime Minister Indira Gandhi of India agreed during a meeting in Simla, India, to peacefully settle the differences between their countries. In the summer of 1973 the Pakistan national assembly authorized President Bhutto to extend recognition to Bangladesh when he deemed it in the national interest, and he did so in Feb., 1974, prior to the start of a summit conference of Islamic nations in Lahore, Pakistan. Subsequently, India and Pakistan reached consensus on the release of Pakistani prisoners of war and the exchange of hostage populations—between 150,000 and 400,000 Bengalis were permitted to leave Pakistan for Bangladesh, and about 260,000 Biharis were allowed to resettle in Pakistan—but the actual transfer procedures were very slow. Bangladesh was gradually recognized by most of the world's nations. It joined the British Commonwealth in April, 1972, but its first bid for membership in the United Nations was vetoed

(Aug., 1972) by China. Widespread famine has been averted through massive international aid, but a smallpox epidemic claimed about 7,000 lives in early 1972. In March, 1972, the country's major industries, banks, and shipping and insurance firms were nationalized. The high rate of inflation has hampered rehabilitation efforts and has triggered open criticism of the government's economic policies. Bangladesh has signed treaties of friendship and trade agreements with India and the Soviet Union. The constitutional amendment of 1975 made Sheikh Mujib president and greatly increased his powers. For bibliography of preindependent Bangladesh see under PAKISTAN, see Mohamed Ayoob and K. Subrahmanyam, *The Liberation War* (1972), Subrata Roy Chowdhury, *The Genesis of Bangladesh* (1972), A. R. Khan, *The Economy of Bangladesh* (1972), Prabhat Srivastava, *The Discovery of Bangla Desh* (1972), *Bangladesh Documents*, prepared by the Ministry of External Affairs, India (1973), P. S. Payne, *Massacre* (1973).

Bangor (bāng'gôr), municipal borough (1971 pop. 35,178), Co. Down, E. Northern Ireland, on Belfast Lough. It is a seaport, resort, and yachting center (site of an annual regatta), with some light industry. The Elizabethan Bangor Castle is in the borough. There are also remains of an abbey founded c.555 by St. Comgall and destroyed by the Danes in the 9th cent. Rebuilt in 1120, it was taken over by Franciscans in 1469. The missionary abbey was dissolved in 1542.

Bangor (bāng'gôr, bān'-, bāng'gôr), city (1970 pop. 33,168), seat of Penobscot co., S. Maine, at the confluence of the Penobscot and Kenduskeag rivers, inc. as a town 1791, as a city 1834. It is a port of entry, commercial center, and gateway to an extensive resort and lumber region. Major industries include the production of shoes and paper, food and lumber processing, and printing. The city was settled in 1769 and was known as Sunbury. During the War of 1812 it was occupied by the British. In the 19th cent. Bangor was a shipbuilding center that carried on an extensive coastal and overseas trade in lumber, stone, and ice. The city has a theological seminary, a conservatory of music, and a community college. Bangor International Airport, part of which was once Dow Air Force Base, has one of the largest runways in the United States.

Bangor (bāng'gôr), municipal borough (1971 pop. 14,526), Caernarvonshire, NW Wales, at the northern end of Menai Strait. Slate is shipped from adjacent Port Penrhyn. The cathedral, on the site of a 6th-century church, dates from the 11th cent. and has been rebuilt several times. In 1974, it became part of the new nonmetropolitan county of Gwynedd. Bangor is the seat of the University College of North Wales.

Bangorian Controversy (bāng-gôr'ēan), religious dispute in the Church of England during the early part of the reign of George I. Benjamin HOADLY, bishop of Bangor, Wales, delivered a sermon (1717) before the king in which he denied that the church had any doctrinal or disciplinary authority. Advocates of ecclesiastical authority (among them William LAW) attacked Hoadly's position, and a sharp controversy ensued, in which some 50 writers participated and about 200 pamphlets were issued. Attacks on Hoadly in convocation, the church assembly, led the king to suspend that body in 1717; it was not allowed to meet again until 1852.

Bangs, John Kendrick, 1862-1922, American humorist, b. Yonkers, N.Y., grad. Columbia, 1883. He was the editor of *Puck* (1904-5) and other magazines and wrote over 30 books of humorous stories, verse, and plays, including *Three Weeks in Politics* (1894), *The Idiot* (1895), and *A Houseboat on the Styx* (1896).

Bang's disease: see BRUCELLIS

Bangu (bang-gé'), city (1971 est. pop., with suburbs, 187,000), capital of the Central African Republic, a port on the Ubangi River, near the Zaire border. Bangu is an administrative, trade, and communications center. Its manufactures include textiles, food products, beer, shoes, and soap. Bangu's port handles most of the country's international trade, the chief exports are cotton, timber, coffee, and sisal. Bangu is at the hub of the nation's road network, which connects the city with Cameroon, Chad, and Sudan. The city was founded in 1889 by an aide of the French explorer Savorgnan de BRAZZA. Jean-Bedel Bokassa University (1970) is located there.

Bangweulu (bāng'wōō'lōō) or **Bangweolo** (-wōō'lōō), lake and swamps, c. 3,800 sq mi (9,840 sq km), NE Zambia. The lake is c. 50 mi (80 km) long and 25 mi

(40 km) wide. Commercial fishing is pursued in the lagoons of the swamps. The swamps are formed largely by the flooding of the lower Chambezi River, which enters Lake Bangweulu from the east. The lake is drained in the S by the Luapula River, a tributary of the Congo.

Banha (bān'hā) or **Benha** (bēn'-), city (1970 est pop 72,500), capital of Qalyubiyah governorate, N Egypt, in the Nile River delta. A rail junction and trade center, Banha has cotton-ginning, rug-weaving, and food-processing industries.

Bani (bā'nī) 1 One of David's mighty men. 2 Sam 23:36. 2 Musician. 1 Chron 6:46. 3 Levites. Neh 3:17, 9:4, 11:22. 4 Family in the return from exile. Ezra 2:10, 10:29, Neh 10:14. Binnui. Neh 7:15. S The same as BINNUI. 1. 6 Judahite. 1 Chron 9:4. 7 Jew married to a foreign wife. Ezra 10:3B.

Bani Hasan (bā'nē hāsān'), village, E central Egypt, on the Nile near Al Minya. There are 39 tombs, carved out of solid rock in the XII dynasty of ancient Egypt. The name is also spelled Beni Hasan.

banishment: see EXILE.

Bani Suwayf (bā'nē swāf) or **Beni Suef** (bē'-), city (1970 est pop 99,400), capital of Bani Suwayf governorate, N central Egypt, on the Nile River. Situated in an intensely cultivated farming region, Bani Suwayf has cotton mills and sugar refineries. Alabaster is quarried near the city.

Banja Luka (bān'yā lōō'kā), city (1971 pop 157,515), W Yugoslavia, in Bosnia, on the Vrbas River. It has varied manufactures, including iron goods and electrical equipment. Banja Luka was captured by the Turks in 1528 and was (1583-1638) the seat of the pashas of Bosnia. Later (1878-1918) a part of Austria-Hungary, it passed to Yugoslavia after World War I. The city has Roman ruins and a 16th-century mosque.

Banjarmasin: see BANDJARMASIN, Indonesia.

banjo, stringed musical instrument, with a body resembling a tambourine. The banjo consists of a hoop over which a skin membrane is stretched; it has a long, often fretted neck and four to nine

Banjo

strings, which are plucked with a pick or the fingers (see FRETTED INSTRUMENT). Negro slaves brought it to America (by 1688) from W Africa, to which it may have come from Europe or Asia. It is used frequently in hillbilly and Southern folk music. Because of an incisive, percussive quality, it is often used as a rhythm or a solo instrument in Dixieland bands.

Banjoewangi: see BANJUWANGI, Indonesia.

Banjul (bān'jool), formerly **Bathurst** (bāth'arst), port city (1971 est pop 45,000), capital of The Gambia, W Gambia, situated on St. Mary's Island where the Gambia River enters the Atlantic Ocean. It is the only large urban area in The Gambia and is the country's economic and administrative center. Its port handles oceangoing ships. Banjul's chief export is peanuts, beeswax, palm kernels and oil, and skins and hides are also shipped. Peanut processing is the chief industry. The city was founded by the British on the site of an anchorage in 1816 as a trading post and a base for suppressing the slave trade. A vocational school is in the city.

Banjuwangi (bān'yōōwāng'ē), city (1961 pop 54,408), E Java, Indonesia, opposite Bali on Bali Strait. It is a railroad terminus and the seaport for shipment of passengers and goods to Bali. It is also spelled Banyuwangi or Banjoewangi.

Banka: see BANGKA, Indonesia.

Bank for International Settlements (BIS), financial institution established (1930) in Basel, Switzerland, by bankers and diplomats of Europe and the United States. Chartered under Swiss laws, the BIS was originally designed to conduct a limited banking business and to administer German war reparations payments according to the provisions of the Hague Agreements. Since then it has become one of the world's foremost international banks. As a meeting place for the governors of West European central banks, the BIS serves to promote international financial cooperation. It is the representative of sev-

eral important West European financial enterprises, holding the accounts of the European Coal and Steel Community and serving as agent for the European Monetary Agreement. Its professional staff and its publications, especially the *Annual Report*, are important sources of economic data and analysis. The BIS is run by a board composed of eight West European central bank governors and five other financiers. By the early 1960s American interests in the bank had become minimal, with most of the original U.S. shares having been sold to European groups. BIS has holdings of about 30 billion francs (approximately 6 billion dollars).

Bankhead, John Hollis, 1872-1946, American politician, b. Moscow, Alabama, brother of William Brockman Bankhead. He was elected to the Alabama legislature in 1903 and served in the U.S. Senate from 1931 until his death. Bankhead was a leader of the farm bloc in the Senate and strongly supported the New Deal. He sponsored (with his brother) the Bankhead Cotton Control Act of 1934.

Bankhead, Tallulah Brockman, 1903-68, American actress, b. Huntsville, Ala., daughter of William Brockman Bankhead. After her debut in 1918, Bankhead had great success on the London stage (1923-30). She was acclaimed for her Broadway performance as Regina in *The Little Foxes* (1939). Her best-known film performance was in *Lifeboat* (1944). Bankhead's beauty, wit, and uninhibited behavior made her a legend. See her autobiography (1952), biographies by Brendan Gill (1972), Lee Israel (1972), and Kieran Tunney (1973).

Bankhead, William Brockman, 1874-1940, U.S. Representative from Alabama (1917-40), b. Lamar, Ala. Chairman of the House rules committee (1934-35), Democratic floor leader (1935-36), and speaker of the House (1936-40), he was one of the outstanding New Deal legislative leaders. The Cotton Control Act of 1934 was largely the work of Bankhead and his brother, Senator John H. Bankhead. He was also interested in monetary legislation and was considered one of the ablest parliamentarians in the House.

bank holidays, days when the law requires that banks be closed. In the United States the list varies from state to state but generally includes, besides the major holidays, many days that are observed only by the banks and such government institutions as post offices. In England since 1871 bank holidays have had special significance as secular and perpetual holidays. The days include Christmas, Boxing Day (the first weekday after Christmas), Good Friday, Easter Monday, Whitmonday (the day after Pentecost), and the special banking day on the first Monday in August.

banking, primarily the business of dealing in money and instruments of credit. Banks are usually differentiated from other financial institutions by their principal functions of accepting deposits—subject to withdrawal or transfer by check—and of making loans. A simple form of banking was practiced by the ancient temples of Egypt, Babylonia, and Greece, which loaned at high rates of interest the gold and silver deposited for safekeeping. Private banking existed by 600 B.C. and was considerably developed by the Greeks, Romans, and Byzantines. Medieval banking was dominated by the Jews and Levantines because of the strictures of the Christian Church against interest and because other occupations were largely closed to Jews. The forerunners of modern banks were frequently chartered for a specific purpose, e.g., the Bank of Venice (1171) and the Bank of England (1694), in connection with loans to the government, the Bank of Amsterdam (1609), to receive deposits of gold and silver. Banking developed rapidly throughout the 18th and 19th cent., accompanying the expansion of industry and trade, with each nation evolving the distinctive forms peculiar to its economic and social life. In the United States the first bank was the Bank of North America, established (1781) in Philadelphia. Congress chartered the first BANK OF THE UNITED STATES in 1791 to engage in general commercial banking and to act as fiscal agent of the government, but failed to renew its charter in 1811. A similar fate attended the second Bank of the United States, chartered in 1816 and closed in 1836. Prior to 1838 a bank charter could be obtained only by a specific legislative act, but in that year New York adopted the Free Banking Act, which permitted anyone to engage in banking, upon compliance with certain charter conditions. Free banking spread rapidly to other states, and from 1840 to 1863 all banking business was done by state-chartered institutions. In many Western states it degenerated into "wildcat" banking because of laxity and

abuse of state laws. Bank notes were issued against little or no security, credit was overexpanded, and depressions brought waves of bank failures. In particular, the multiplicity of state bank notes caused great confusion and loss. To correct such conditions, Congress passed (1863) the National Bank Act, which provided for a system of banks to be chartered by the Federal government. In 1865, by granting national banks the authority to issue bank notes and by placing a prohibitive tax on state bank notes, an amendment to the act brought all banks under Federal supervision. Most banks in existence did take out national charters, but some, being banks of deposit, were unaffected by the tax and continued under their state charters, thus giving rise to what is generally known as the "dual banking system." The number of state banks expanded rapidly with the increasing use of bank checks and has exceeded the number of national banks since 1892. Recurrent banking panics caused by overexpansion of credit, inadequate bank reserves, and inelastic currency prompted Congress in 1908 to create the National Monetary Commission to investigate the field of banking and currency and recommend legislation. Its suggestions were embodied in the Federal Reserve Act (1913), which provided for a central banking organization, the FEDERAL RESERVE SYSTEM. Aside from their type of charter, banks may be distinguished according to their primary functions. Commercial banks, which include national and state banks, trust companies, stock savings banks, and industrial banks, render a wide range of services in addition to their primary functions of making loans and investments and handling demand as well as savings and other time deposits. Mutual savings banks, which are exclusively state-chartered institutions, accept only savings and other time deposits, and the types of loans made and services rendered are limited. The fact that commercial banks are able to expand or contract their loans and investments in accordance with changes in reserves and reserve requirements further differentiates them from mutual savings banks, where the volume of loans and investments is governed by changes in customers' deposits (See SAVINGS BANK.) Since the establishment of the Federal Reserve System, Federal banking legislation has been limited largely to detailed amendments of the National Bank and Federal Reserve acts. The Banking Act of 1933 was an extensive reform measure designed to correct the abuses that had led to numerous bank crises in the years following the stock market crash of 1929. It strengthened the powers of supervisory authorities, increased controls over the volume and use of credit, and provided for the insurance of bank deposits under the Federal Deposit Insurance Corporation (FDIC). The Banking Act of 1935 strengthened the powers of the Federal Reserve Board of Governors in the field of credit management, tightened existing restrictions on certain banking operations, and enlarged the supervisory powers of the FDIC. Membership in the FDIC is compulsory for all Federal Reserve member banks but optional for other banks. The Federal Savings and Loan Insurance Corporation insures deposits in all federally chartered—and in many state-chartered—savings and loan associations, or corporations that make real estate loans and accept savings deposits. Types of financial institutions that are not subject to the supervision of state or Federal banking authorities but that perform one or more of the traditional banking functions are building and loan associations, mortgage companies, finance companies, insurance companies, credit agencies owned in whole or in part by the Federal government, credit unions, brokers and dealers in securities, and investment bankers. Such organizations operate under state or Federal laws, and most of them are under the jurisdiction of the Dept. of Agriculture or the Federal Loan Agency. Other credit institutions operating under Federal laws include the Federal Housing Authority and the Veterans Administration. Building and loan associations, which are state institutions, provide home-building loans to members with funds obtained from savings deposits and from the sale of shares to members. Finance companies make small loans with funds obtained from invested capital, surplus, and borrowings. CREDIT UNIONS, which are institutions owned cooperatively by groups of persons having a common business, fraternal, or other interest, make small loans to their members out of funds derived from the sale of shares to members. The primary functions of investment bankers are the purchase of new issues of securities from public bodies or corporations and their sale to institutional and individual

investors and the distribution of blocks of outstanding securities from large holders to the investing public. Investment bankers usually act as intermediaries between the issuers of securities and investors in supplying long-term capital funds, as distinguished from commercial banks, which primarily make short-term loans to finance the production and distribution of goods. After World War II banking institutions were established to advance credit and further investment on an international scale. The International Bank for Reconstruction and Development (World Bank) was organized (1945) to make loans both to governments and to private investors. The discharge of debts between nations has been simplified and facilitated through the International Monetary Fund, which also provides members with technical assistance in international banking. The European Monetary Agreement also makes possible the rapid discharge of debts and balance of payments obligations between nations. See B. H. Beckhart, ed., *Banking Systems* (1954, repr. 1969), R. G. Thomas, *Our Modern Banking and Monetary System* (4th ed. 1964), R. E. Cameron, *Banking in the Early Stages of Industrialization* (1967), Roger Orsingher, *Banks of the World* (tr. 1967), G. C. Fischer, *American Banking Structure* (1968), H. V. Prochnow and H. V. Prochnow, Jr., eds., *The Changing World of Banking* (1974).

Bank of England, central bank and note-issuing institution of Great Britain. Popularly known as the Old Lady of Threadneedle Street, its main office stands on the street of that name in London. The bank has eight branches, all of which are located in the British Isles. Although Bank of England notes are legal tender throughout the United Kingdom, banks in Scotland and Northern Ireland also issue notes that may be either used as currency themselves or exchanged for Bank of England issues. In all matters beside note issue, the Bank of England has sole central banking functions in Great Britain. It was founded (1694) as a commercial bank by William PATERSON with a capital of £1,200,000, which was advanced to the government in return for banking privileges, including the right to issue notes up to the amount of its capital. In 1709 the capital was doubled, the charter was renewed in 1742, 1764, and 1781. The bank's facilities proved a great asset in English commercial, and later industrial, expansion. The bank's functions were both public and private; it safeguarded the English pound and also operated for private profit. Efficient regulation was assured by the Bank Charter Act of 1844, which laid the basis for the bank's modern structure. The issue department, which handles the issuing of bank notes for general circulation, was separated from the banking department, which handles the remaining banking functions, including the management of the public debt, and serves as the depository of government funds and as the staple bank of England. The affairs of the bank are controlled by a governor, a deputy, and 16 directors. It was privately owned until 1946, when an act of Parliament provided for its nationalization. The stockholders were recompensed with government bonds to the value of more than £58 million, and the bank subsequently dropped virtually all its private business. See J. H. Clapham, *The Bank of England. A History* (2 vol., 1944, repr. 1966), John Giuseppe, *The Bank of England* (1966).

Bank of the United States, name for two national banks established by the U.S. Congress to serve as government fiscal agents and as depositories for Federal funds, the first bank was in existence from 1791 to 1811 and the second from 1816 to 1836. The first bank was established under the auspices of the Federalists as part of the system proposed by Alexander HAMILTON to establish the new government on a sound economic basis. Congress approved a charter for the bank despite the argument that the Constitution did not give Congress power to establish a central bank and the charge that the bank was designed to favor mercantile over agrarian interests. The bank had a head office in Philadelphia and branches in eight other cities. The government subscribed one fifth of the capital of \$10 million, but a loan of \$2 million was immediately made to the government. In addition to acting as a fiscal agent for the government, the bank conducted a general commercial business. It was well managed and paid good dividends, but its conservative policies and its restraining influence on state banks, through its refusal to accept state bank notes not redeemable in specie, antagonized more exuberant business elements, especially in the West. These interests combined with agrarian opponents of the bank to defeat its rechartering, despite the support given the bank

by the Madison administration. The bank concluded its affairs and repaid its shareholders. Later, financing the War of 1812 proved difficult because of the lack of a central bank, and by the end of the war the financial system of the country was in chaos. Enough support was secured to charter a new bank for 20 years. The second bank, capitalized at \$35 million, operated much as did the first one, 25 branches being established. After an initial period of difficulty during the presidency (1816-19) of William Jones, the bank was placed on a sound basis by Langdon CHEVES (1819-22). It became especially prosperous under the management of Nicholas BIDDLE, but aroused criticism by state banks and frontiersmen on the grounds that it was too powerful and that it operated in the interests of the commercial classes of the East. The opponents of the bank came into power with the election (1828) of Andrew JACKSON. Although the bank's charter did not expire until 1836, Henry CLAY persuaded Biddle to apply to Congress for a renewal in 1832. President Jackson vetoed the bill for its recharter and the bank became a leading issue in his fight for reelection against Clay. Interpreting his victory at the polls as an expression of popular will on the subject, Jackson did not wait for the expiration of the bank's charter but began in 1833, through his new Secretary of the Treasury Roger B. TANEY, to deposit government moneys in state banks, known to his opponents as "pet banks." Under Martin Van Buren's administration the INDEPENDENT TREASURY SYSTEM was established to handle the government's funds. See R. C. H. Catterall, *The Second Bank of the United States* (1902, repr. 1960), W. B. Smith, *Economic Aspects of the Second Bank of the United States* (1953), J. A. Wilburn, *Biddle's Bank* (1967).

bankruptcy, in law, settlement of the liabilities of a debtor who is wholly or partially unable to meet his obligations. The purposes of bankruptcy laws are to distribute, through a court-appointed receiver, the bankrupt's assets equitably among his creditors and, in most instances, to discharge him from further liability. The U.S. Constitution authorizes Congress to enact uniform bankruptcy legislation for the entire United States. The present Federal law was adopted in 1898 and has been amended several times, especially in 1938 by the Chandler Act. Bankruptcy proceedings may be voluntary (instituted by the debtor) or involuntary (instituted by creditors). Ordinarily the debtor must be insolvent, i.e., unable to pay all his debts even if the full value of his assets were realized. Bankruptcy is also permitted when the discharge of debts would otherwise be unduly delayed, e.g., if the debtor has fraudulently transferred property to put it out of a creditor's reach. When a person has been adjudged bankrupt, preferred creditors (e.g., unpaid employees or the Federal government) are paid in full, and the other creditors, who manage the estate through a committee, share, usually pro rata, in the remaining assets. Unless a debtor was discharged from debt by bankruptcy proceedings within the previous six years or was guilty of fraud in becoming bankrupt, the effect of bankruptcy proceedings is to wipe out his indebtedness. The law also permits courts, instead of ordering the liquidation of all the assets of a business threatened with insolvency, to reorganize it on a sound basis. In the United States the bankrupt receives perhaps more lenient treatment than in any other country; this practice reflects the belief that business initiative should not be unduly stifled by the threat of criminal or civil penalties for unintentional commercial failure.

Banks, Sir Joseph, 1743-1820, British naturalist and patron of the sciences. He accompanied Capt. James Cook on his voyage around the world and made large collections of biological specimens, most of which were previously unclassified. Botany Bay was named on this voyage. In 1772, Banks went on an expedition to Iceland. From c. 1762 until his death he was the chief influence in inaugurating and directing the policies that made Kew Gardens an important botanical center for encouraging exploration and experimentation. In 1766 he was elected to the Royal Society, and he served as its president from 1778 until his death. The plant genus *Banksia* was named for him. See studies by H. C. Cameron (1952, repr. 1966) and A. M. Lysaght (1971).

Banks, Nathaniel Prentiss, 1816-94, American politician and Union general in the Civil War, b. Waltham, Mass. After serving in the Massachusetts legislature (1849-53), Banks entered Congress as a Democrat, was returned in 1855 as a Know-Nothing and became speaker of the House, and was reelected in 1857 as a Republican. He resigned from

Congress in Dec., 1857, and served as Republican governor of Massachusetts (1858-60). In the Civil War he was given command in the Dept. of the Shenandoah, where he was defeated by T. J. (Stonewall) JACKSON at Front Royal and Winchester and then at Cedar Mt. during the second battle of Bull Run. Late in 1862, Banks replaced B. F. Butler at New Orleans and cooperated with Grant in opening up the Mississippi by capturing Port Hudson in July, 1863, and in participating in the Red River expedition of 1864. After the war he again served as Representative from Massachusetts (1865-73, 1875-79, 1889-91). See biography by F. H. Harrington (1948), L. H. Johnson, *Red River Campaign* (1958).

Banks, Thomas, 1735-1805, English neoclassical sculptor, studied at the Royal Academy. A traveling scholarship enabled him to study in Rome from 1772 to 1779. In 1781 he went to Russia, where Catherine II bought his *Cupid Catching a Butterfly* and commissioned his *Armed Neutrality*. On his return to England he executed numerous monuments and portrait busts, many are in English churches. Monuments to Isaac Watts, Sir Eyre Coote, and William Woollett are in Westminster Abbey. See his *Annals* (ed. by C. F. Bell, 1938).

banksia [for Sir Joseph Banks], popularized name of a genus of Australian evergreen trees and shrubs of the same family as the macadamia and sometimes cultivated in America. Banksias are also called honeysuckle trees or Australian honeysuckle. Banksia is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Proteales, family Proteaceae.

Banks Island, c. 26,000 sq mi (67,340 sq km), NW Northwest Territories, Canada, in the Arctic Ocean, in the Arctic Archipelago. It is the westernmost of the group and is separated from the mainland by Amundsen Gulf. Banks Island, which has many lakes, is a hilly plateau rising to c. 2,000 ft (610 m) in the south. There is a small Eskimo population. British explorer Sir Robert McClure discovered that it was an island in 1851. Canadian explorer Vilhjalmur Stefansson spent much time (1914-17) there and explored the interior.

Bankstown, city (1971 pop. 162,310), New South Wales, SE Australia. It is a suburb of Sydney.

Bankura (bang'kōōrā), town (1971 pop. 79,243), West Bengal state, NE India, on the Dhalkisor River. It is a district administrative center and a market for rice, oilseed, cotton, and silk. There are cigarette factories.

Bann, longest river of Northern Ireland, rising as the Upper Bann in the Mourne Mts. and flowing 40 mi (64 km) NW through Counties Down and Armagh to the southern end of Lough Neagh. It leaves the lake at its north shore as the Lower Bann and flows 40 mi (64 km) north, forming the border between Counties Antrim and Londonderry, past Coleraine to the Atlantic Ocean. It has important salmon fisheries.

Bannack, ghost town, SW Mont. Founded in 1862 when gold was discovered along Grasshopper Creek, Bannack was the first town in Montana and was the first territorial capital (1864-65). It declined when many miners left the thin deposits for the richer gold of Virginia City. Bannack is now a state park.

Bannatyne, George (bān'atīn), 1545-1608?, collector of Scottish poems. He compiled the Bannatyne MS (1568), the chief collection of Scottish verse of the 15th and 16th cent. The Bannatyne Club was founded in his honor in 1823 for the purpose of publishing old Scottish works.

banner system, Manchu conscription system. Companies of MANCHU warriors were grouped (1601) into brigades, each with a distinctive banner. The banner system integrated former tribal units into a bureaucratic war machine that enabled the Manchus to conquer and rule China as the CH'ING dynasty (1644-1912). Banners (brigades) and their component companies did not live and fight as units but were garrisoned at various places and contributed a certain quota of men to make up a fighting force when needed. Later, banners of Mongol and Chinese adherents were also organized. About 1.5 million bannermen and their families were garrisoned at strategic points and major population centers throughout China. By the 19th cent. corruption and inefficiency pervaded the banner system, forcing the Ch'ing government to rely increasingly on provincial militia.

Banning, resort city (1970 pop. 12,034), Riverside co., S Calif., in a fruit-growing area between Mt. San Jacinto and Mt. San Geronimo, inc. 1913. Electronic equipment, wearing apparel, plastics, and metal

products are manufactured. An annual stagecoach day festival is held, and the city has a stagecoach museum. Nearby are San Bernardino National Forest, a state park, and a Univ. of Southern California art complex.

Bannister, Roger Gilbert, 1929–, British athlete, b. Harrow, England. A physician, on May 6, 1954, at Oxford's Iffley Road track, Bannister became the first man to run the mile in less than 4 min. His time was 3 min 59.4 sec (the old record set by Gunder Haegg of Sweden in 1945 was 4 min 01.4). John Landy of Australia bettered the record, as did New Zealand's Peter Snell. At the British Empire and Commonwealth Games at Vancouver, Canada, on Aug. 7, 1954, Bannister clocked 3:58.8 when defeating Landy in a thrilling race. Bannister retired from active competition in 1954. See his book, *The Four Minute Mile* (1955).

Bannockburn, moor and parish, Stirlingshire, central Scotland, on the Bannock River. Textiles are manufactured in the parish. In 1314 on the moor, a 10,000-man Scots army led by Robert Bruce routed 23,000 Englishmen under Edward II, thus climaxing Robert's struggle for Scottish independence and establishing him as king of the Scots.

Bannock Indians, North American Indians who formerly ranged over wide territory of the N. Great Plains and into the foothills of the Rocky Mts. They were concentrated in 5 Idaho. Their language belonged to the Uto-Aztecan branch of the Aztec-Tanoan linguistic stock (see AMERICAN INDIAN LANGUAGES). Their culture was typical of the Plains Indians. In 1869, Fort Hall Reservation was established for them and for the Northern SHOSHONE INDIANS, with whom the Bannock were closely associated. Loss of hunting lands, disappearance of the buffalo, and lack of assistance from the U.S. government led to a Bannock outbreak in 1878, which was suppressed. The Bannock and the Shoshone at Fort Hall Reservation today number some 3,000. See B. D. Madsen, *The Bannock of Idaho* (1958); R. F. Murphy, *Shoshone-Bannock Subsistence and Society* (1960).

Bannu (ban'noo), town (1961 pop. 31,623), N. Pakistan. It is a district administrative center and an important road junction and market town. The major industries are wool milling and the production of sandals and wooden articles. Bannu, noted for its weekly fair, also has a college affiliated with Peshawar Univ. Founded by Sir Herbert Edwardes in 1848, the town was formerly called Edwardesabad and was a leading British military base, especially against Afghan border tribes. Still an important military station, Bannu is enclosed by a 12 ft (3.7 m) earth wall with 10 iron gates that are closed at sunset.

Banska Bystrica (ban'ska bis'tritsa), city (1970 pop. 46,846), E. central Czechoslovakia, in Slovakia, at the junction of the Bystrica and Hron rivers. It is an industrial center noted for the large plywood, pulp, and veneer factories nearby. An ancient town, Banská Bystrica became well known in the Middle Ages for its surrounding mines. The city was the heart of the Slovak national uprising against German occupation in 1944.

Banstead, urban district (1971 pop. 44,986), Surrey, SE England, on the North Downs. The district is mainly residential and contains some highly regarded landscapes. There is a church from the Norman period and an excavated Roman villa. The area is mentioned in the Domesday Book.

Bantam fowl, see POULTRY.

Banting, Sir Frederick Grant, 1891–1941, Canadian physician, M.D. Univ. of Toronto, 1922. From 1923 he was professor of medical research at Toronto. Working with C. H. Best under the direction of J. J. R. Macleod, he succeeded in isolating (1921) from the pancreas the hormone later called insulin. For this he shared with Macleod the 1923 Nobel Prize in Physiology and Medicine. He was knighted in 1934. Besides his work on insulin, he made valuable studies of the cortex of the adrenal glands, of cancer, and of silicosis and stimulated research in aviation medicine. He was killed in a plane crash while en route to England on a medical war mission. See Seale Harris, *Banting's Miracle* (1946).

Bantry Bay, inlet of the Atlantic Ocean, 21 mi (34 km) long and 4 mi (6.4 km) wide, Co. Cork, SW Republic of Ireland. It is one of Europe's best natural anchorages. At the head of the bay is Bantry, site of a modern facility for unloading oil tankers. Bear and Whiddy islands are in the bay.

Bantu (ban'too) ethnic and linguistic group of Africa, numbering about 70 million. The Bantu inhabit most of the continent S. of the Congo River except the extreme southwest. Physically the Bantu are similar to the Negroes, and there is a wide range of

types, from the near Hamite to the near Negro, the classification is primarily linguistic, and there are almost a hundred Bantu languages, including Luganda, Zulu, and Swahili. Few cultural generalizations concerning the Bantu can be made. Before the European conquest of Africa the Bantu tribes were either pastoral and warlike or agricultural and usually pacific. There were some highly developed Bantu states, including Buganda in present-day Uganda. Possibly under the fear of European encroachment, several additional Bantu confederations developed in the 19th cent., notably the Zulu and the Basuto (in Basutoland). Other well-known Bantu tribes include the Matabele and the Mashona. In South Africa, the term *Bantu* is commonly used to refer to the native African population, which is there subject to the policies of APARTHEID. See W. M. Macmillan, *Bantu, Boer, and Briton* (rev. ed. 1963); M. F. Perham, *Ten Africans* (2d ed. 1964); W. C. Willoughby, *The Soul of the Bantu* (1928, repr. 1970).

Bantu languages, group of African languages forming a subdivision of the Benue-Niger division of the Niger-Congo branch of the Niger-Kordofanian language family (see AFRICAN LANGUAGES). Bantu contains hundreds of tongues that are spoken by 70 million Africans in the Congo Basin, Angola, the Republic of South Africa, Mozambique, Rhodesia, Zambia, Malawi, Tanzania, and Kenya. The total number of Bantu languages, however, is uncertain. In addition to SWAHILI, its most important member, Bantu has among its significant languages Zulu, Xhosa, and Sotho, which are spoken respectively by 4 million, 2 million, and 4 million persons, all living in the Republic of South Africa. Makua and Thonga, the languages respectively of 2 million and 1 million people in Mozambique, Bemba, the tongue of 900,000 in Zambia, Shona, reaching 2 million in Rhodesia and Mozambique, Kikuyu, native to 1 million in Kenya, Ganda, the language of 2 million in Uganda, Ruanda, spoken by 5 million in Rwanda and Zaïre, Rundi, the tongue of 2 million in Zaïre and Burundi, Mbundu, native to 2 million in Angola, Luba, reaching 3 million in Zaïre, Kongo, the language of 1 million in both the Congo and Zaïre, and Lingala, spoken by 700,000 in Zaïre. The word *Bantu* means "the people" and is made up of the stem *-ntu* ("person") and the plural prefix *ba-*. All of the Bantu languages are tonal, except perhaps Swahili. Tones are used to indicate differences in meaning. Grammatically, nouns belong to a number of classes, each of which has its pair of prefixes, one to denote the singular and the other the plural. Linguists have not yet discovered a logical basis for most of the many different noun classes. Although they are not based on sex, these classes have been compared to the genders of Indo-European tongues. The class prefix of a noun is attached to every word that is connected grammatically with this noun, whether adjective, verb, or other part of speech. The following example from Swahili illustrates the nature of such agreement: *m-thu m-zuri*, "handsome man," but *wu-thu wu-zuri*, "handsome men." The Bantu verb consists of a stem to which are added one or more prefixes (with the exception of the imperative) and also one or more suffixes. The verbal suffixes relate to person, number, negation, tense, voice, and mood. Suffixes added to certain stems can form nouns and verbs, especially of a derivational nature. At present Bantu languages are being used to a considerable extent in primary and secondary schools and are developing literatures. See M. A. Bryan, ed., *The Bantu Languages of Africa* (1959); Malcolm Guthrie, *The Classification of the Bantu Languages* (1948, repr. 1967) and *Comparative Bantu* (4 vol., 1967–71).

Banu Musa (ban'oo' moosa'), family of Arab mathematicians and astronomers of the 9th cent. A.D. The name means "sons of Musa" and refers to the three brothers, Muhammad, Ahmad, and al-Hasan. They supervised the translation of Greek scientific works into Arabic and helped to found the Arabic school of mathematics. The most important work ascribed to them is the geometrical treatise *Book on the Measurement of Plane and Spherical Figures*.

Banville, Théodore de (täodör' də bänvél'), 1823–91, French poet. He was one of the group known as the PARNASSIANS. His many volumes of verse, including *Odes funambulesques* (1857) and *Les Exiles* (1866), are characterized by expert technique.

banyan (bän'yan), species of fig (*Ficus bengalensis*) of the family Moraceae (MULBERRY family), native to India, where it is venerated. Its seeds usually germinate in the branches of some tree where they have been dropped by birds. The young plant puts forth aerial rootlets, which, on reaching the ground, take

root to form secondary trunks to support the giant horizontal limbs. Branches from these trunks ultimately send down more such prop roots until the banyan crowds out the host tree and becomes grovelike in appearance, often covering large areas. This undergrowth is sometimes trimmed to form arbors. Alexander the Great is said to have camped under a banyan tree that was big enough to shelter his whole army of 7,000 men. The seeds frequently germinate on walls and buildings, causing considerable damage as does the related strangling fig of tropical America. Banyan is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Urticales, family Moraceae.

Banyuwangi: see BANJUWANGI, Indonesia.

baobab (bā'ōbāb', bā'ō-), gigantic tree of India and Africa, exceeded in trunk diameter only by the sequoia. The trunks of living baobabs are hollowed out for dwellings, rope and cloth are made from the bark and condiments and medicines from the leaves, the gourdlike fruit (monkey bread) is eaten. The botanic name is *Adansonia digitata*. An Australian baobab is also called sour gourd. In spite of the enormous girth of the trees, they are not particularly tall, and thus have a bottle-like appearance. Baobab is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Malvales, family Bombacaceae.

Bao Dai (bou dī), 1913–, emperor of Annam (1932–45) and chief of state of Vietnam (1949–55). Born Prince Nguyen Vinh Thuy, he was the son of Emperor Khai Din and succeeded to the throne in 1926, but did not occupy it until 1932. Bao Dai cooperated with both the Vichy French and Japanese during World War II but resigned in 1945 when the Viet Minh nationalists under Ho Chi Minh gained widespread acceptance. After extracting concessions from the French, the emperor returned in 1949 as head of state of Vietnam, which included Annam plus Tonkin and Cochinchina. Bao Dai was unable to establish an effective government, however, and following Vietnam's partition (1954) he accepted Ngo Dinh DIEM as prime minister. In 1955 Diem engineered a referendum that abolished the monarchy and assumed control. Bao Dai subsequently lived in exile, primarily in France.

Baphomet (bāf'ōmēt), idol or mystical figure that the KNIGHTS TEMPLARS were accused of worshipping in the 14th cent. Apparently the name was unknown before that time in Western demonology. Its origin is disputed. It may have been a distorted form of Mahomet, it may have been of Greek origin.

baptism [Gr. = dipping], in most Christian churches a SACRAMENT. It is a rite of purification by water, a ceremony invoking the grace of God to regenerate the person, free him or her from sin, and make that person a part of the church. Thus, baptism is usually required for membership in the church. In Roman Catholic and Anglican theology baptism is also held to confer an indelible character on the person, requiring him or her to worship. Formal baptism is performed by immersion (as among the BAPTISTS) or by pouring or sprinkling water on the person to be baptized. This ceremony is accompanied, in churches that accept the dogma of the Trinity, by a formula asking the blessing of Father, Son, and Holy Ghost. In some churches the child is baptized soon after birth and has sponsors (godfather and godmother) who make declarations of faith in his name. The rite is sometimes called christening, and this term is applied especially to the giving of a baptismal name. Other churches withhold baptism until the person is relatively mature. Some Protestant groups, such as the Religious Society of FRIENDS, reject all outward baptismal rites. Similar customs are known in many non-Christian cultures. The baptism of Jesus himself can be considered part of the founding of the Christian Church (Mat. 3, Mark 1:1–11, Luke 3:1–22, John 3:22, 23).

baptistery (bāp'tistērē), part of a church, or a separate building in connection with it, used for administering baptism. In the earliest examples it was merely a basin or pool, set into the floor. Later, the Christian Church set aside a separate structure for the ceremony. The earliest such structure still extant is in the Lateran basilica at Rome, in which, by tradition, Emperor Constantine was baptized (337). Octagonal in plan, it formed a model for many subsequent baptisteries, most of which were octagonal or circular. In the center of the chamber was the sunken pool, often surrounded by columns, with curtains to screen the neophyte during immersion. Early baptisteries are chiefly found in Italy and Asia Minor. In Hagia Sophia there is a 6th-century example still extant. When immersion was no longer practiced, a

separate structure became unnecessary and was supplanted by a place within the church itself, set aside for the purpose. The standing fonts of the Middle Ages and the Renaissance were often objects of superb artistry. In Italy separate baptisteries continued to be built in the 12th to the 15th cent., notably the beautiful Romanesque structures at Florence, Pisa, Siena, and Parma. The baptistery at Florence contains the celebrated bronze doors of Andrea Pisano and of Lorenzo Ghiberti, that at Pisa the pulpit by Nicola Pisano.

Baptists, denomination of Protestant Christians holding a distinctive belief with regard to the ordinance of BAPTISM. There are over 31 million Baptists worldwide. Since 1644 the name has been applied to those who maintain that baptism should be administered to none but believers and that immersion is the only mode of administering baptism indicated in the New Testament. The doctrine and practices of some earlier bodies, such as the Anabaptists and Mennonites, were similar. In Holland a group of English SEPARATISTS, led by John SMYTH, came under Mennonite influence and formed c 1608 in Amsterdam the first English Baptist congregation. Smyth baptized first himself, then the others. In 1611 certain members of this congregation returned to London and established a church there. This was the first of the churches afterward known as General Baptists, since they held the Arminian belief that the atonement of Christ is not limited to the elect only but is general. In 1633 the Particular Baptists were founded. They were a group whose Calvinistic doctrine taught that atonement is particular or individual. Immersion was not yet insisted upon in these churches, but in 1644 seven Particular Baptist churches issued a confession of faith requiring that form of baptism, and Baptist was thenceforth the name given to those who practiced it. In 1891, General and Particular Baptists united into a single body called the Baptist Union of Great Britain and Ireland. In America it was Baptists of the Particular type that first gained influence among the Puritans and Calvinists, when Roger Williams and his companions in Rhode Island rejected infant baptism and established a church in 1639 based on the individual profession of faith. Baptists were later persecuted in New England for opposing infant baptism, and one group emigrated c 1684 from Maine to Charleston, S.C. A group of Separate Congregationalists from New England under Shubael Stearns and Daniel Marshall established (1755) the Separate Baptists in Sandy Creek, N.C. In the Southeast the General Baptist views found acceptance, but the stricter Calvinistic ideas suited the pioneers who settled the Southern mountains after the Revolution. Their opposition to mission work gave them the name Anti-Mission. They were also called Hard Shell or Primitive Baptists. Baptist churches are congregational in matters of government. Such general associations as are formed do not have control over the individual churches. Early missionary activity extended the Baptist movement to the Continent and elsewhere. In the United States the American Baptist Missionary Union (under a longer title) was formed in 1814 to support workers in foreign lands. In 1832 the American Baptist Home Mission Society was organized. When the question of slavery became a dividing wall, the Southern Baptist Convention was established (1845), with its various boards for missions and other activities, it is the largest body, with about 11.6 million members. The American Baptist Convention, organized in 1907, is a delegated body operating through many agencies (until 1950 it was called the Northern Baptist Convention), it has about 1.5 million members. Both support a number of educational institutions and periodicals. The original national organization of black Baptist churches is the National Baptist Convention of the United States of America, it has about 5.5 million members. Separated from that body is the largely black National Baptist Convention of America, this body has about 2.7 million members. Another large body is the National Primitive Baptist Convention, Inc., with about 1.5 million members. The principal conventions agree in doctrine and ecclesiastical order. Some attempts at mergers of these groups (and numerous other, smaller Baptist groups) have been successful. The Baptist World Alliance (formed 1905) holds international congresses regularly. See H. C. Vedder, *Baptist History* (1907), G. F. D. Dobbin, *Baptists* (1958), R. G. Torbet, *A History of the Baptists* (1963), Samuel Hill, *Baptists North and South* (1964), J. E. Tull, *Shapers of Baptist Thought* (1972), Lawrence Davis, *Immigrants, Baptists, and the Protestant Mind in America* (1973).

bar, offshore. see BEACH

Bar, Confederation of, union formed in 1768 at Bar, in Podolia (now in W Ukraine, USSR), by a number of Polish nobles to oppose the interference of Catherine II of Russia in Polish affairs. Headed by the Pulaski family and supported by the Roman Catholic clergy, it sought to defend Polish independence, the Polish constitution, the rights of the landed gentry, and Roman Catholicism. Further, it endeavored to impose Roman Catholicism, as opposed to Orthodox Eastern beliefs, on the serfs of right-bank Ukraine (W of the Dnepr), which was then under Polish rule. Working against the confederation's policies was the Polish king, STANISLAUS II, whose election (1764) had been sponsored by Catherine and who at her request had conceded to non-Catholics the rights of freedom of worship and participation in the Polish government. Incensed by the confederation's hostile intentions toward them, the right-bank Ukrainians rose up (1768) in the rebellion of the Koliyivshchyna (see UKRAINE). Catherine sent Russian forces to suppress the rebellion, however, in the fear that it might spread among serfs under her control. In 1770, the confederation declared King Stanislaus deposed. Supported to a minor degree by France and more effectively by Turkey, which declared war on Catherine, the confederation fought a bitter war against Russia until 1772, when its effective resistance was ended by the First Partition of Poland.

bar, the, originally, the rail that enclosed the judge in a court, hence, a court or a system of courts. The persons qualified and authorized to conduct the trial of cases are also known collectively as "the bar." From late medieval times in England the INNS OF COURT acted as training schools for men who were to plead causes in the courts, and when a student was judged to be trained in competence, he was "called to the bar" of the Inn, automatically he was then judged competent to plead at the bar of the courts. Modern bar associations, through which the legal profession regulates itself, derive from the Inns of Court. ATTORNEYS must be admitted to the bar before they can practice law in the United States. The requirements for admission vary among the states, but generally an applicant must be of good moral character, have completed a stated course of study at a law school, and have passed a bar examination. The last two requirements were once satisfied by clerking and "reading law" with a practicing attorney. A lawyer can be prohibited from practicing law (disbarred) for conduct impeding justice, criminal acts involving moral turpitude, and unethical professional conduct. The first state to allow women admission to the bar was Iowa (1869), and Great Britain admitted women to law practice in 1919. There are about 150 law schools in the United States, the oldest being Harvard Law School, founded in 1817.

Baraba Steppe (barābā'), agricultural district, SW Siberian USSR, between the Ob and the Irtysh rivers. **Barabinsk**, on the Trans-Siberian RR, is the region's chief town. It was founded in the 19th cent.

Barabbas (barāb'ās), bandit held in jail at the time of Jesus' arrest. Pontius Pilate, who annually released a prisoner at Passover, offered to release Jesus, but the people demanded his death and Barabbas' delivery. Mat. 27 15-18, Mark 15 6-15, Luke 23 13-25, John 18 39, 40.

Barabinsk: see BARABA STEPPE

Barachel (bārāk'ēl, bārāk'əl), father of LUHU 2. Job 32 26.

Barachias (bārākī'ās), the same as BERECHIAH

Baracoa (barakō'a), city (1970 pop. 20,926), Oriente prov., SE Cuba, a port near the eastern extremity of the island. Bananas and coffee are exported. Founded c 1512 by the Spanish explorer Diego de Velazquez, Baracoa is the oldest settlement in Cuba.

Barada (bar'ādā), ancient Abana (āb'āna), river, 52 mi (84 km) long, rising in the Anti-Lebanon mts and flowing S to marshy Lake Al Umayyah, SE Syria, forms the Ghutah oasis, site of the city of Damascus. The Barada's waters have been used for irrigation for centuries, fruit orchards, wheat, and vineyards thrive there. Two dams on the Barada generate hydroelectricity and store water for irrigation. See ABANA.

Baradla Caves (bō'rōdlō), three large caves, NE Hungary and SE Czechoslovakia, c 25 mi (40 km) NW of Miskolc, Hungary. Aggtelek and Juvásfo caves are in Hungary, Dobšina is in Czechoslovakia. They are noted for their huge stalactites. Two underground rivers and a lake are found there.

Baraga, Frederic (bār'āga), 1797-1868, Roman Catholic missionary to the Indians of Upper Michi-

gan, b. Slovenia. He received (1821) a law degree from the Univ. of Vienna, and after study at the Larbach seminary he was ordained (1823). As a missionary, he reached (1831) Cincinnati, where he was later (1853) consecrated bishop of Upper Michigan. The seat of that bishopric was Sault Ste. Marie, and in 1865 he was given authority also over the see of Marquette. His authoritative grammar and dictionary of the Ojibwa language are still used by scholars. See biographies by Edward Jacker (1957) and B. J. Lambert (1967).

Baragaon (būr'āgoun), village, Bihar state, E central India. It was the site of Nalanda Univ., which from the 4th to the 12th cent. A.D. was the most famous center of Buddhist learning in India. There are extensive ruins of stupas, monasteries, and temples.

Barahona (baraō'na), city (1970 pop. 37,889), SW Dominican Republic, on Neiba Bay, an arm of the Caribbean Sea. Barahona is a provincial capital. It has a lumber industry and is a commercial and processing center for an agricultural region.

Barak (bār'āk), leader from N Canaan who fought, with DEBORAH, against Jabin and Sisera. Judges 4:1-24. See also BEDAN.

Baranagar (būr'anāgar), city (1971 pop. 131,431), West Bengal state, NE India, on the Hooghly River. It is a suburb of Calcutta.

Baranov, Aleksander Andreyevich (alyiksan'dar āndrā'avyich bārā'nōf), 1747-1819, Russian trader, chief figure in the period of Russian control in Alaska. When his Siberian business faltered, Baranov accepted (1790) an offer to become managing agent of a Russian fur-trading company on Kodiak Island. The organization of the RUSSIAN AMERICAN COMPANY in 1799 made him virtual governor of all Russian activities in North America until 1817, except for a brief challenge by Rezanov. Baranov's dogged determination to keep the settlement going despite Indian attacks and challenges by British and American trading vessels brought steady profits to the company. He was supplanted in 1817 and died en route to Russia. See Hector Chevigny, *Lord of Alaska* (1942), S. R. Tompkins, *Alaska Promyshlennik and Sourdough* (1945), Clarence Hulley, *Alaska Past and Present* (rev. ed. 1953).

Baranovich (barān'ovyechē), Pol. *Baranowicz* (barānōv'chē), city (1970 pop. 107,000), Belorussia, W European USSR. It is a major railway junction and has industries that manufacture machinery, metalware, and textiles. Founded as a railway station in 1870, Baranovich passed from the Soviet Union to Poland in 1920. In 1939, Baranovich again was incorporated into the USSR.

Barante, Amable Guillaume Prosper Brugiere, baron de (ama'blō gēyōm' prōspēr' bruzhyēr' barōn' dā bārānt'), 1782-1866, French statesman and historian. He held numerous administrative and diplomatic posts but retired with the downfall of Louis Philippe (1848). Of his historical works, the best known is a history of the duchy of Burgundy (1824). His *Souvenirs* (8 vol., 1890-1901), published posthumously, have considerable charm and some value as historical source material.

Barany, Robert (rō'bērt bārānē), 1876-1936, Austrian physician. For his work on the physiology and pathology of the vestibular apparatus of the ear he received the 1914 Nobel Prize in Physiology and Medicine. From 1917 until his death he was professor at the Univ. of Uppsala.

Barataria Bay (bārātār'ēa), SE La., separated from the Gulf of Mexico by Grand and Terre Terre islands. It is linked to the Intracoastal Waterway by a navigable channel. The bay is the center of the Louisiana shrimp industry and is trapped for muskrat furs. Oil and natural gas are found in the area, and the bay region is a major source of sulfur. In the early 19th cent. the bay was the headquarters of Jean Lafitte and his pirates.

Barbados (barbā'dōz), island state (1970 pop. 238,141), 166 sq mi (430 sq km), in the West Indies. The capital is BRIDGETOWN. The island, E of St. Vincent, in the Windward Islands, is low and rises gradually toward its highest point at Mt. Hillaby (1,104 ft/336 m). Although there is ample rainfall from June to December, there are no rivers, and water must be pumped from subterranean caverns. The porous soil and moderate warmth are excellent for the cultivation of sugarcane, long the island's major occupation. Other exports include molasses and rum. Commercial fishing is also important. The population of Barbados, about 90% of black African descent, is mostly rural. The healthful and equable climate makes it a very popular tourist resort and tourism is the country's largest source of foreign ex-

change. Although it was probably discovered by the Portuguese and named Los Barbados for the bearded fig trees they found, the first definite settle-

ment was made by English expeditionaries in 1627 (1605, according to local tradition). Barbados remained a British colony until independence was granted in 1966. During the 19th cent. it was the administrative headquarters of the Windward Islands, but in 1885 it became a separate colony. It was a member of the short-lived Federation of the West Indies (1958-62). The island has a parliamentary form of government. It is a member of the Commonwealth of Nations, the Organization of American States, the Caribbean Free Trade Area, and the United Nations. See O. P. Starkey, *The Economic Geography of Barbados* (1939, repr. 1971), R. H. Schomburgk, *The History of Barbados* (1848, repr. 1971).

Barbara, Saint, fl. 3d or 4th cent., virgin martyr, whose life is shrouded in contradictory legends. Her father is said to have shut her up in a tower and then to have killed her for being a Christian. He was struck down by lightning, and by an extended analogy St. Barbara became the patroness of makers and users of firearms and fireworks. She is invoked for a happy death. Feast Dec. 4.

Barbarelli, Giorgio: see GIORGIONE

Barbari, Jacopo de' (yā'kōpō dā bārba'rē), c. 1440-1516, Germano-Dutch painter and engraver, b. Venice. Barbari was a major link between North European and Italian art, his and Dürer's works reveal a mutual influence. After 1500 he was court painter to rulers in principalities in Germany and the Netherlands, painting portraits, genre scenes, and complex allegorical works. He also showed great skill as an engraver, often treating mythological subjects and the nude. Barbari's still life *Dead Bird* (1504) is in Munich. His name is also given as Jacob Walch.

Barbarossa (bar'barō'sā) [Ital., =red-beard], surname of the Turkish corsair Khayr ad-Din (c. 1483-1546). Barbarossa and his brother Aruj, having seized (1518) Algiers from the Spanish, placed Algeria under Turkish suzerainty. He extended his conquests to the rest of the Barbary States. Between 1533 and 1544, as admiral of the Turkish fleet under Sulayman I, he twice defeated Andrea Doria and ravaged the coasts of Greece, Spain, and Italy. His able son Hasan (d. 1572) succeeded him in Algeria. See biography by E. D. S. Bradford (1969).

Barbarossa, Frederick: see FREDERICK I, Holy Roman Emperor

Barbary ape: see MACAQUE

Barbary Coast, waterfront area of San Francisco, Calif., in the years after the 1849 gold rush. Gamblers, gangsters, prostitutes and confidence men flourished, and the brothels, saloons, and disreputable boardinghouses made the Barbary Coast—named after the pirate coast of North Africa—notorious throughout the world.

Barbary States, term used for the North African states of TRIPOLITANIA, TUNISIA, ALGERIA, and MOROCCO. From the 16th cent. Tripolitania, Tunisia, and Algeria were autonomous provinces of the Turkish Empire. Morocco pursued its own independent development. The corsair BARBAROSSA and his brothers led the Turkish conquest to prevent the region from falling to Spain. A last attempt by Holy Roman Emperor Charles V to drive out the Turks failed in 1541. The piracy carried on thereafter by the Muslims of North Africa began as part of the war against Spain. In the 17th and 18th cent., when the Turkish hold on the area grew weaker, the raids

became less military and more commercial in character. The booty, ransom, and slaves that resulted from attacks on Mediterranean towns and shipping and from occasional forays into the Atlantic became the main source of revenue for local Muslim rulers. All the major European naval powers made attempts to destroy the corsairs, and British and French fleets repeatedly bombarded the pirate strongholds. Yet, on the whole, countries trading in the Mediterranean found it more convenient to pay tribute than to undertake the expensive task of eliminating piracy. Toward the end of the 18th cent. the power of the piratical states diminished. The United States and the European powers took advantage of this decline to launch more attacks. American opposition resulted in the TRIPOLITAN WAR. After the Napoleonic wars, European opinion clearly favored destroying the pirates. In 1816 Lord EXMOUTH with an Anglo-Dutch flotilla all but ended the naval power of the dey of Algiers. An ultimatum from the European Congress of Aix-la-Chapelle (1819) compelled the bey of Tunis to give up piracy. The Tunisian fleet was subsequently sent to help the Ottomans in Greece and was destroyed (1827) at the battle of Navarino. In 1830, France, after a three-year blockade of Algiers, began the conquest of Algeria. The Ottoman Turks were able to reassert (1835) direct control over Tripolitania and end piracy there. About the same time the sultans of Morocco who had occasionally encouraged piracy were forced by France, Great Britain, and Austria to give up plans to rebuild the Moroccan fleet, and North African piracy was at an end. See BLAKE, ROBERT, and DUQUESNE ABRAHAM.

Barbault, Anna Letitia (Atkin) (bar'böld), 1743-1825, English poet and editor. In 1774 she married Rochemont Barbault and with him opened a boarding school. Her *Hymns in Prose* for children, widely read and translated into several languages, was followed by *Early Lessons* (both 1781). She edited works of Collins, Akenside, and Richardson and the 50-volume edition of *British Novelists* with short biographies and critical notes.

Barbazan, Arnaud Guillaume, seigneur de (arnō' gēyōm' sānyōr' dā bārbazān'), c. 1360-1431, French general in the Hundred Years War. He was called *le chevalier sans reproche* [the knight without blame]. A leader of the Armagnacs (see ARMAGNACS AND BURGUNDIANS) and a staunch supporter of the dauphin, the future King Charles VII, Barbazan defended (1420) Melun against the English and was held prisoner by them from 1420 to 1430. After his release he fought successfully against the English and Burgundians and was made governor of Champagne and Brice. He died fighting in Lorraine.

barbecue [West Indian or South American], in the United States, traditionally an open-air gathering, political or social, where an ox or a hog is roasted whole over a pit of glowing embers and food and drink are liberally enjoyed. The term *barbecue* also refers to the meat being roasted. In the modern barbecue smaller cuts of meat dipped in or basted with a highly seasoned sauce may be used. As an American institution it seems to be of Southern origin, the word having been used in Virginia prior to 1700.

barbed wire, wire composed of two zinc-coated steel strands twisted together and having barbs spaced regularly along them. The need for barbed wire arose in the 19th cent. as the American frontier moved westward into the Great Plains and traditional fence materials—wooden rails and stone—became scarce and expensive. Of the many early types of barbed wire, that invented in Illinois in 1873 by Joseph F. Glidden proved most popular. The advent of barbed-wire fences on the plains transformed the cattle industry, ending the open range to a large extent and making possible the introduction of blooded cattle. The transformation was not without protests, which often led to bloodshed. In the 20th cent. barbed wire gained importance as an instrument of defense through its use in wartime for entanglements and obstacles. Barbed-wire fences have been replaced in some applications by other types, e.g., woven-wire fences.

barbel: see CARP

Barb  -Marbois, Fran  ois, marq  is de (fr  nswa' m  rk  ' d   b  rb  ' m  rbw  '), 1745-1837, French statesman. He held diplomatic posts in Europe and, during the American Revolution, in the United States. After holding a governmental post in Saint-Domingue (Santo Domingo), he returned to France and was active in the French Revolution. Suspected of royalist sympathies, he was deported (1797) to French Guiana. He was released by Napoleon I, who

made him director and then minister of the treasury. Barb  -Marbois negotiated the treaty by which Louisiana was ceded to the United States. Under the Bourbon restoration he was briefly (1815-16) minister of justice and keeper of the seals. See E. W. Lyon, *The Man Who Sold Louisiana* (1942).

Barber, John Warner, 1798-1885, American engraver, b. East Windsor, Conn. He opened (1823) a business in New Haven, where he produced religious and historical books, illustrated with his own wood and steel engravings. He is best known for books on state, national, and local history, in which his vivid engravings caught the flavor and appearance of city, town, and countryside in his day.

Barber, Samuel, 1910-, American composer, b. West Chester, Pa. Barber studied at the Curtis Institute of Music, Philadelphia. His music is lyrical and generally tonal, his later works are more chromatic and polytonal with striking contrapuntal elements. Among his outstanding works are a setting of Matthew Arnold's "Dover Beach" for voice and string quartet (1931), an overture to *The School for Scandal* (1931), *Adagio for Strings* (1936), two symphonies (1936, 1944), *Capricorn Concerto* for flute, oboe, and trumpet (1944) and a piano concerto (1963, Pulitzer Prize), a ballet, *Medea* (1946), *Knoxville Summer of 1915*, for soprano and orchestra (1947), derived from a segment of James Agee's novel *A Death in the Family*, a modern oratorio, *Prayers of Kierkegaard* (1954), and two operas, *Vanessa* (1956, Pulitzer Prize) and *Antony and Cleopatra* (1966), commissioned to open the new Metropolitan Opera House. See biography by Nathan Broder (1954).

Barberini, Francesco (fr  nch  s'k   b  rb  r  n  ), 1597-1679, Italian prelate and Orientalist, a cardinal of the Roman Catholic Church. He was a founder of the library at Rome noted for rare manuscripts, many of these are now in the library of the Vatican.

Barberini vase: see PORTLAND VASE

barberry, common name for the family Berberidae, and specifically for the spiny barberries (*Berberis* species). The family includes perennial herbs and

Barberry, Berberis vulgaris

shrubs found in the Northern Hemisphere. The fruit is often a colorful, winter-persistent berry. The spiny barberries are primarily Asian in origin. *B. vulgaris*, the common barberry, is naturalized in the United States and is often cultivated for hedges, but it is a host for one stage of wheat rust, a pathogen that destroys the plant. The Japanese barberry (*B. thunbergii*) is resistant. Other members of the family are the blue cohosh or papoose-root (*Caulophyllum thalictroides*), the May apple (genus *Podophyllum*, the common American wild flower is *P. peltatum*), and the Oregon grape (*Mahonia aquifolium*), an evergreen shrub that is the floral emblem of Oregon. The edible berries of these three are sometimes used for condiments and jellies. The barberry family is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Ranunculales.

Barberton, city (1970 pop. 33,052), Summit co., NE Ohio, an industrial suburb of Akron, on the Tuscarawas River, inc. 1892. Automobile tires and other rubber products are among its manufactures. Lake Anna is in the city.

Barbey d'Aureville, Jules Am  d  e (zh  l   mad  ' b  rb  ' d  rv  y  '), 1809?-1889, French writer and critic. An aristocrat and monarchist, he supported himself by journalism, his output of critical and polemical articles was enormous. He favored Balzac, early admired Baudelaire, and harshly criticized naturalism. His novels and stories, set in his native Cotentin, are notable portrayals of provincial life.

and tragic struggle. Perhaps best remembered is *Les Diaboliques* (1874, tr 1925), hallucinatory tales with a Satanic motif.

Barbier, Antoine Alexandre (aŋtwaŋ' alɛksaŋ'drɑ barbyɑ'), 1765-1825, French bibliographer and government librarian. Barbier was one of a committee appointed to collect works suppressed by the Revolution. He later became librarian to Napoleon I. His outstanding work was a great bibliography of anonymous and pseudonymous works in French and Latin (1806-8, 3d ed 1872-79).

Barbieri, Giovanni Francesco: see GUERCINO

Barbirolli, Sir John (bɑr' bɑrɔ'lɪ), 1899-1970, English conductor and cellist, b London. After being cellist (1920-24) in the International String Quartet, he organized the Barbirolli String Orchestra. Barbirolli held positions as conductor of the British National Opera Company (1926), the Covent Garden Opera Company (1930-33), the Scottish Orchestra, and the Leeds Symphony (1933-36). In 1937 he succeeded Toscanini as conductor of the New York Philharmonic-Symphony Orchestra (1937-42). After 1943, Barbirolli conducted the Halle Orchestra, Manchester, and was knighted in 1949. He became conductor of the Houston Symphony Orchestra in 1961. Barbirolli was noted for sensitive musical interpretation and for his transcriptions of early music for the modern orchestra. See biographies by Charles Reid and Michael Kennedy (both 1971).

barbiturate (bɑrbɪtʃ'əraɪt'), any one of a group of drugs that act as DEPRESSANTS on the central NERVOUS SYSTEM. High doses depress both nerve and muscle activity and inhibit oxygen consumption in the tissues. In low doses barbiturates act as SEDATIVES, i.e., they have a tranquilizing effect, increased doses have a hypnotic or sleep-inducing effect, and still larger doses have anticonvulsant and anesthetic activity. The mechanism of action on the central nervous system is not known. The barbiturates are all derivatives of barbituric acid, which was first prepared in 1864 by the German organic chemist Adolf von Baeyer. The drugs differ widely in the duration of their action, which depends on the rapidity with which they are distributed in body tissues, degraded, and excreted. Ultrashort-acting barbiturates such as Pentothal are often used as general anesthetics. Seconal and Nembutal are short-acting barbiturates, Amytal is intermediate in duration of action, and Luminal, or phenobarbital, is a long-acting derivative. Barbiturates are commonly used as sleeping pills. Certain personality types may develop a psychological dependency on them that can lead to physiological tolerance and addiction and even death by overdose (see DRUG ADDICTION AND DRUG ABUSE). Barbiturate addicts must be withdrawn from the drug gradually to avoid severe withdrawal symptoms such as convulsions. Although barbiturates have a sedative or tranquilizing action, they are not analgesic, i.e., they do not relieve pain.

Barbizon school, an informal school of French landscape painting that flourished c 1830-1870. Its name derives from the village of Barbizon, a favorite residence of the painters associated with the school. Theodore Rousseau was the principal figure of the group, which included the artists Jules Dupre, Diaz de la Peña, Constant Troyon, and Charles Daubigny. These men reacted against the conventions of classical landscape and advocated a direct study of nature. Their work was strongly influenced by 17th-century Dutch landscape masters including Ruysdael, Cuyp, and Hobbema. Corot and Millet are often associated with the Barbizon group, but in fact Corot's poetic approach and Millet's humanitarian outlook place them outside the development of the school. The Barbizon painters, with their insistence on a relatively straightforward rendering of landscape, helped prepare for the subsequent development of the impressionist schools. Paintings of the Barbizon school were very popular with American collectors of the late 19th and early 20th cent and influenced American painters of this period. The school is well represented in American collections, notably the Corcoran Gallery, the Isaac Delgado Museum of Art, New Orleans, the Metropolitan Museum, and the Museum of Fine Arts, Boston. See American Art Assn, *Master Prints of the Barbizon School* (1970), study by Jean Bouret (tr 1973).

Barbon, Praise-God see BAREBONE, PRAISE-GOD

Barbosa, Ruy (rɔɔ'ɛ barbɔ'sɑ), 1849-1923, Brazilian jurist, writer, and statesman. He was largely responsible for the republican constitution of Brazil and was the champion of law and liberty under recurrent dictatorships. A noted internationalist, he distinguished himself as head of the Brazilian delegation to the 1907 peace conference at The Hague and

was elected (1908) to the World Court. As a writer, Barbosa has been regarded as the greatest stylist in the Portuguese language. See C. W. Turner, *Ruy Barbosa* (1945).

Barbour, John (bɑr'bɔr), c 1316?-1395, Scottish poet. He was archdeacon of Aberdeen from 1355 until his death. His romance, *The Bruce* (1375), celebrating Scotland's emancipation from England, recounts the heroic deeds of Robert I and Sir James Douglas. The poem was meant to be read as history and shows remarkable accuracy. Barbour's authorship of a fragmentary *Troy-Book* and the *Bulk of Alexander* is disputed.

Barbuda, British West Indies. see ANTIGUA

Barca, surname, probably meaning lightning, given members of a powerful Carthaginian family. see HAMILCAR BARCA, HANNIBAL, HASDRUBAL

Barcelona (barsə'lɔ'nə, Span. barthə'lɔ'nə), city (1970 pop 1,745,142), capital of Barcelona prov and chief city of Catalonia, NE Spain, on the Mediterranean Sea. Situated on a plain between the Llobregat and Besos rivers and lying between mountains and the sea, Barcelona is the second largest city of Spain, its largest port, and its chief commercial and industrial center. It is also the seat of a university (founded 1430) and many other educational institutions. Textiles, machinery, automobiles, locomotives, airplanes, and electrical equipment are the chief manufactures. It was founded by the Carthaginians, and, according to tradition, it supposedly derives its name from the great BARCA family of Carthage. The city flourished under the Romans and Visigoths, fell to the Moors (8th cent), and was taken (801) by Charlemagne, who included it in the Spanish March. In the 9th to 10th cent the march became independent under the leadership of the powerful counts of Barcelona, who wrested lands to the south from the Moors, thus acquiring all Catalonia. The counts also won suzerainty over several fiefs in S France. The marriage of Count Raymond Berengar IV to the heiress of Aragon united (1137) the two lands under one dynasty, the title count of Barcelona was subsequently borne by the kings of Aragon, who made the city their capital, and later the kings of Spain. Under its strong municipal government Barcelona vastly expanded both its Mediterranean trade, becoming a rival of Genoa and Venice, and its cloth industry and flourished as a banking center. Reaching its peak around 1400, the city later shared in the general decline of Catalonia, but enjoyed a period of prosperity as the embarkation point of the armies of Emperor Charles V. It was repeatedly (1640-52, 1715, 1808-14) occupied by the French. Barcelona was always the stronghold of Catalan separatism and was the scene of many insurrections. It was the center of the Catalan revolt (1640-52) against Philip IV of Spain. Later it also became the Spanish center of socialism, anarchism, syndicalism, and other radical political beliefs. It was the capital of the Catalan autonomous government (1932-39) and the seat of the Spanish Loyalist government from Oct., 1938, until its fall to Franco on Jan. 26, 1939. Barcelona remains a center of separatism and political liberalism, in the 1950s, it was the scene of sporadic demonstrations against the Franco regime. Present-day Barcelona is the cultural center of Spain. A handsome modern city, it has broad avenues, bustling traffic, and striking new buildings. Its old city, with winding, narrow streets (Roman walls are still visible), has many historic structures, including the imposing Cathedral of Santa Eulalia (14th-15th cent) with its fine cloisters, the Church of Santa Maria del Mar, the city hall, and the *Lonja* or exchange. Also notable is the Church of the Sagrada Família (begun 1882), designed by Antonio Gaudí.

Barclay, Alexander (bɑr'klɑ), 1475?-1552, Scottish clergyman and poet. Although the first to write pastoral eclogues in English, he is best known for *The Ship of Fools* (1509), a translation and elongation of Sebastian Brant's widely popular poem *Das Narrenschiff*.

Barclay, John, 1734-98, minister of the Church of Scotland and founder of the BEREANS or Barclayites. His *Without Faith, without God* (1769) and other works were not acceptable to his presbytery, and he was prohibited from preaching. His adherents then united in independent congregations, and Barclay became minister of the one at Edinburgh. Later he organized a Berean congregation in London.

Barclay, Robert, 1648-90, Scottish apologist for the Society of Friends (Quakers). He wrote many controversial works but is best known for his great treatise *An Apology for the True Christian Divinity*, which appeared in Latin in 1676 and in English two

years later. The duke of York (later James II) granted a patent of the province of East Jersey to 12 members of the Society of Friends, Barclay was nominal governor (1682-88), but he never went to America. His collected works were published in 1692 as *Truth Triumphant*. See biographies by M. C. Cadbury (1912) and D. E. Trueblood (1967).

Barclay de Tolly, Mikhail, Prince (mɛkhəyɛl', bɑr'klɪ' dɑ tɔ'lɪɛ), 1761-1818, Russian field marshal, of Scottish descent. He gained prominence in the Napoleonic Wars, became minister of war in 1810, and commanded the Russian forces against Napoleon in 1812. His policy of continuous retreat into the heart of Russia and his defeat at Smolensk (Aug. 17-18) resulted in his being replaced by Kutuzov, but his successor, recognizing the soundness of the strategy, followed the same policy. After Kutuzov's death (1813) he again commanded the Russian forces and distinguished himself at Leipzig and in the capture of Paris.

Bar Cochba, Simon: see BAR KOKBA, SIMON

bard, in Wales, term originally used to refer to the order of minstrel-poets who composed and recited the poems that celebrated the feats of Celtic chieftains and warriors. The term *bard* in present-day usage has become synonymous with poet, particularly a revered poet.

Bard College, at Annandale-on-Hudson, N.Y., founded 1860 as St. Stephen's College for men, rechartered 1935 as Bard College, became coeducational in 1944, affiliated with Columbia Univ. 1928-44. A small, progressive college, Bard stresses independent study.

Bardeen, John, 1908-, American physicist, b Madison, Wis., grad Univ of Wisconsin (B.S., 1928, M.S., 1929), Ph.D. Princeton, 1936. He was a research physicist at the Bell Telephone Laboratories from 1945 to 1951. In 1951 he became professor of electrical engineering and physics at the Univ of Illinois. He is known for his studies of semiconductivity and other aspects of solid state physics. He shared with Walter H. Brattain and William Shockley the 1956 Nobel Prize in Physics for their work in developing the transistor. He also shared the 1972 Nobel Prize in physics with Leon Cooper and John Schrieffer for development of a theory of SUPERCONDUCTIVITY, becoming the first person to win a Nobel Prize twice in the same field.

Bardesan (bɑrdəsə'nɛz), 154?-222?, Christian philosopher and poet of Syria, missionary among the Armenians. Conflicting traditions report him both as defender of the faith against various Gnostic sects and as a heretic and founder of BARDESANISM.

Bardia see BARDIYAH, Libya

Bardiya or **Bardia** (both bɑrdɪə'a, bɑrdɪə), town, NE Libya, a port on the Mediterranean Sea, near the Egyptian border. During World War II it was the most strongly defended Italian position in the British campaign (Dec., 1940-Feb., 1941) in Libya. The town changed hands several times before being captured permanently by the British in Nov., 1942.

Bardstown, city (1970 pop 5,816), seat of Nelson co., central Ky., SE of Louisville, in a rich farm area, settled 1775, inc. 1788. The city has distilleries, flour and lumber mills, and clothing factories. It was a center for early missionary work in the Mississippi valley and the seat of religious institutions founded by Bishop J. B. M. David, a French missionary. The monument to the American inventor John Fitch, whose grave is there, was erected by the U.S. Congress. Nearby is "Federal Hill" (built 1795-1818), the manor house of John Rowan, it is said that his cousin, Stephen Foster, wrote *My Old Kentucky Home* there. Other places of interest in the area include the Cathedral of St. Joseph (1816-19), which has paintings said to have been given by Louis Philippe of France, and the Abbey of Our Lady of Gethsemane, a Trappist monastery founded in 1848. In the Civil War the city was occupied (Sept., 1862) by Gen. Braxton Bragg's invading Confederate army. The city has wide, tree-lined streets and many early-19th-century houses.

Barebone or Barbon, Praise-God (both bɑr'bɔn), 1596?-1679, English lay preacher and leather merchant. Soon after 1630 he became leader of half of a Baptist congregation that had split over the issue of infant baptism. Barebone favored this practice and wrote a treatise arguing its legitimate scriptural basis. An effective preacher, he attracted large congregations to his house in Fleet Street and acquired a reputation for rabble rousing. He was referred to by his many detractors variously as a Brownist, Anabaptist, and Fifth Monarchy man, but his actual religious beliefs are unclear. In April, 1653, the army dissolved the Rump Parliament, and in July Oliver

Cromwell and his provisional council assembled 140 "godly men" from amongst the nominees of the independent congregations. Barebone was London member in this Nominated Parliament, which was called in derision Barebone's Parliament. Actually his part in the proceedings was insignificant. The body was composed largely of religious reformers who initiated a series of measures regarded as radical by most of their compatriots. The Parliament met from July until December, when the moderate members willingly and the radical members under compulsion resigned their powers into Cromwell's hands. They had accomplished little. Barebone actively opposed the Restoration in 1660 and remained a staunch republican.

Bareilly (bārā'īlē), city (1971 pop. 299,629), Uttar Pradesh state, N central India, on the Ramganga River. It is a district administrative headquarters and a sugar-refining and cotton-trading center. Founded in 1657, Bareilly was the capital (1707-20) of the Hindu Rohilla kingdom. It was ceded to Great Britain in 1801.

Barentsburg (bā'rəntsboörg), town, Spitsbergen island, Svalbard. A coal-mining settlement, it was established (1912) by a Norwegian company. Its mines have been worked by the Dutch (1921-26) and since 1932 by the USSR. It was totally destroyed (Sept., 1943) by German battleships but quickly rebuilt.

Barentsøya (bā'rənts-o'ya) or **Barents Island**, island of Svalbard, 513 sq mi (1,329 sq km), in Barents Sea between Spitsbergen and Edgeøya. The island rises to 1,302 ft (397 m).

Barents Sea, arm of the Arctic Ocean, N of Norway and E USSR, partially enclosed by Franz Josef Land on the north, Novaya Zemlya on the east, and Svalbard on the west. Its waters are warmed by the remnants of the North Atlantic Drift, so that its ports, including Murmansk and Vardö, are ice-free all year. The sea was named for Willem Barentz, the Dutch navigator.

Barentz or Barents, Willem (both vī'ləm bā'rənts), d. 1597, Dutch navigator. He made three voyages (1594, 1595, 1596-97) in search of the Northeast Passage to Asia. He reached Novaya Zemlya on the first two expeditions. On the third he accidentally discovered Spitsbergen, rounded the north point of Novaya Zemlya, and was caught in the ice. After the arctic winter the crew started for the mainland in two small boats. Barentz died on the way. The extent of his explorations and the accuracy of his charts made him one of the most important of all arctic explorers. The meteorological data that Barentz collected is still consulted today.

Barere de Vieuxaz, Bertrand (bèrrān' bārē' də vyozak'), 1755-1841, French revolutionary. A member of the Revolutionary National Assembly and of the Convention, he moved from a moderate to a radical stand, voting for the execution of King Louis XVI. He was a member of the Committee of Public Safety, the dictatorial body that ruled France for a time during the Revolutionary Wars. When the moderates in the Convention turned against Maximilien ROBESPIERRE, one of the leaders of the committee and perpetrator of the REIGN OF TERROR (June, 1794), Barere deserted his colleague. Nevertheless, Barere was imprisoned for his role in the Terror. Escaping from prison, he remained in hiding for several years but reappeared as a secret agent of Emperor Napoleon I. Banished (1815) after the Bourbon restoration, he returned in the reign of Louis Philippe. He left memoirs. See biography by Leo Gershow (1962).

Baretti, Giuseppe Marc'Antonio (jōzēp'pā markāntō'nyō bārēt'tē), 1719-89, Italian writer and lexicographer. Baretti held various official positions in several Italian cities while making regular contributions to periodicals. In 1751 he went to London, where he was active in literary and cultural circles and where he wrote an Italian grammar and a biographical dictionary of Italian authors. His *Dictionary of the English and Italian Languages* (1760) remained the best of its kind until the 20th cent. Returning to Italy in 1760, Baretti published a bi-monthly iconoclastic review of books, *La Frusta letteraria* [the literary scourge]. The Venetian government eventually suppressed the journal, and Baretti returned to London, where he published amusing and perceptive descriptions of his travels. He is considered largely responsible for the popularity of Italian literature in England in the 18th cent.

Barfrush, see BABOL, city, Iran.

barge, large boat, generally flat-bottomed, used for transporting goods. Most barges on inland waterways are towed, but some river barges are self-propelled. There are also sailing barges. On the Great

Lakes and in the American coastal trade, huge steel barges are used for transporting bulk cargoes such as coal. Large flat-bottomed barges called *lighters* are used for transporting cargo to or from a vessel that cannot be berthed at a pier or dock, LASH (for lighter-aboard ship) vessels are equipped to receive and unload lighters on board and thus reduce the time spent in port. Barge towing, done in the past by men or by horses or mules, is now accomplished mostly by steam or motor tugboat or by other, self-propelled barges. In use since the dawn of history, barges were common on the Nile in ancient Egypt. Some were highly decorated and used for carrying royalty, use of such state barges persisted in Europe until modern times.

Bargello (barjē'lō), 13th-century palace in Florence, Italy, which houses the national museum. Once the residence of the highest city official but later used as a prison and as the office of the chief of police (*bar-gello*), it was restored in 1859 to receive the art treasures of the city. The Bargello is famous for its courtyard and its Renaissance sculptures, including works by Michelangelo, Verrocchio, Donatello, the Della Robbias, Cellini, and others.

Barham, Richard Harris (bār'əm), pseud. **Thomas Ingoldsby** (īng'gəlbzē), 1788-1845, English humorist, grad Oxford. Ordained a minister in 1813, he became a minor canon of the Chapel Royal in 1824. In 1837 he began in *Bentley's Miscellany*, under his pseudonym, a series of parodies of country superstitions, medieval legends, and contemporary foibles. Barham had a lively invention, a gift of creating suspense, and an unusually discerning sense of the ludicrous. *The Ingoldsby Legends* were first published in book form in 1840.

Bar Harbor, town (1970 pop. 3,716), SE Maine, on MOUNT DESERT ISLAND and on Frenchman Bay, settled 1763, inc. 1796. It was one of the most famous resorts in New England during the 19th cent. Bar Harbor is a port of entry, with ferry connections to Yarmouth, N.S., during the summer. In Oct., 1947, a large part of the town was destroyed by a forest fire. Acadia National Park, which covers most of Mount Desert Island, is nearby.

Bar-Hebraeus, Gregorius (bār-hēbrē'ās), 1226-86, Syrian scholar, bishop of the JACOBITE CHURCH. Partly Jewish in ancestry, his original name was Abu-l-Faraj. His most celebrated work is a chronicle in Syriac of the world from Adam down. His commentaries (in Arabic and Syriac) on Aristotle were widely known among Arabic-speaking scholars.

Barhumite (barhyō'mīt, bār'hyō-) see BAHURIM.

Barì (bā'rē), city (1971 pop. 356,733), capital of Bari prov. and of Apulia, S Italy, on the Adriatic Sea. It is a major seaport and an industrial and commercial center. Manufactures include chemicals, textiles, printed materials, and petroleum. Probably of Illyrian origin, Bari became a Greek and then a Roman colony. It later was controlled by the Goths, the Lombards, and the Byzantines. The Normans conquered Bari in 1071. The city became the chief city of Apulia, and many Crusaders sailed from there. Enfeoffed to the kingdom of Naples, Bari, during the Middle Ages, was a duchy ruled by powerful lords, including the Hohenstaufens and the Sforzas of Milan. It was badly damaged in World War II. Noteworthy buildings include the Romanesque basilica (1087-1197), a major place of pilgrimage, with relics of St. Nicholas of Bari (see NICHOLAS, SAINT), the Romanesque cathedral (12th cent.), and the Hohenstaufen castle (1233). The city has a university founded in 1924.

Bariah (bār'ā), one of the house of David. 1 Chron. 3:22.

Barim, island, Arabia. see PERIM.

Baring, British family of bankers. Sir Francis Baring (1740-1810) founded (1763) the John and Francis Baring Company, which he renamed Baring Brothers and Company in 1806. At first the firm acted as import and export agents for others, but it soon became an independent merchant bank. Sir Francis, a close associate of William Pitt the Younger, helped finance the Napoleonic Wars and underwrote marine insurance. He was succeeded by his son Alexander Baring (later 1st Baron Ashburton, 1774-1848), who was a pioneer in the financing of United States trade. He was (1834) president of the Board of Trade in the first administration of Sir Robert Peel and was raised to the peerage in 1835. He was the British commissioner sent to the United States in 1842 to negotiate the WEBSTER-ASHBURTON TREATY. The family continued to manage the firm and by 1890 its importance to the British government was such that the Bank of England guaranteed their debts to save

them from bankruptcy when Argentina defaulted (1890) on bond payments. Members of the Baring family were also notable public servants. The more important members of the family include Thomas George Baring, 1st earl of Northbrook (1826-1904), a Liberal statesman who served as a successful viceroy of India (1872-76), Evelyn Baring, 1st earl of CROMER, Maurice BARING (1874-1945), author, and George Rowland Stanley Baring, 3d earl of Cromer, (1918-), governor of the Bank of England (1961-66) and ambassador to the United States (1971-74). The family still controls Baring Brothers and Company. See R. W. Hidy, *The House of Baring in American Trade and Finance, 1763-1861* (1949).

Baring, Maurice (bār'ing), 1874-1945, English author. After a career in the diplomatic service, he turned to journalism in 1904. A war correspondent during the Russo-Japanese War, he wrote several books on Russia, including *A Year in Russia* (1905-6) and *The Russian People* (1911). In 1919, following service as staff officer in World War I, he began writing novels. His chief books include *C* (1924), *Daphne Adeane* (1926), and *Tinker's Leave* (1927). He also wrote poetry and plays.

Barisal (barī'sāl'), city (1969 est. pop. 79,300), S Bangladesh, on the Ganges River delta. It is an important river port, a transshipment point for jute and rice, and a market for betel nuts and fish. There are also flour, rice, oilseed, and jute mills. Barisal has three colleges affiliated with the Univ. of Dacca. The "Barsal guns," unexplained sounds resembling distant thunder or cannon, are a curious local phenomenon, they may have a seismic origin.

Barisan (barē'san'), volcanic mountain range, c. 1,000 mi (1,600 km) long, paralleling the western coast of Sumatra island, Indonesia. It rises to Mt. Kerintji (12,467 ft/3,800 m high). Numerous lakes are found in the mountains, including Toba, the largest in Indonesia.

barite (bār'it), **barytes** (bār'ītēz) [New Lat., from barium], or **heavy spar**, a white, yellow, blue, red, or colorless mineral. It is a sulfate of barium, BaSO₄, found in nature in tabular crystals or in granular or massive form. The mineral is abundant and is found widely distributed throughout the world. It occurs often mixed with other minerals in veins. It is insoluble in water, and this property is made use of in testing for the SULFATE radical. It is practically insoluble under ordinary conditions in all the usual chemical reagents. Barite is used as a commercial source of barium and many of its compounds. Ground barite is used as a filler in the manufacture of linoleum, oilcloth, rubber, and plastics. Finely ground barite is used to make a thixotropic mud for sealing oil wells during drilling. Prime white, a bleached barite, is used as a pigment in white paint but is not as satisfactory as blanc fixe, a chemically precipitated barium sulfate, or LITHOPONE, a mixture of barium sulfate, zinc sulfide, and zinc oxide.

Barito (barē'tō), river, c. 550 mi (890 km) long, rising in the mountains of central Borneo, Indonesia, and flowing generally S to the Java Sea. Banjarmasin is the head of ocean-going navigation. The wide floodplain of the lower Barito is intensely cultivated and contains one of Indonesia's largest rubber plantations.

baritone or **barytone** (both bār'itōn), male VOICE, in a lighter and higher range than a bass but lower than a tenor. The term is also an alternate name for the viola da gamba.

barium (bār'ēəm) [Gr., =heavy], metallic chemical element, symbol Ba, at no 56, at wt 137.34, m.p. probably about 850°C, b.p. probably about 1140°C, sp. gr. 3.5 at 20°C, valence +2. Barium is a soft, silver-white, chemically active, poisonous metal with a face-centered cubic crystalline structure. It is an ALKALINE-EARTH METAL in group IIa of the PERIODIC TABLE. Its principal ore is BARITE (barium sulfate), it also occurs in the mineral witherite (barium carbonate). The pure metal is obtained by the electrolysis of fused barium salts or, industrially, by the reduction of barium oxide with aluminum. Barium is often used in barium-nickel alloys for spark-plug electrodes and in vacuum tubes as a drying and oxygen-removing agent. Barium oxidizes in air, and it reacts vigorously with water to form the hydroxide, liberating hydrogen. In moist air it may spontaneously ignite. It burns in air to form the peroxide, which produces hydrogen peroxide when treated with water. Barium reacts with almost all of the nonmetals, all of its water-soluble and acid-soluble compounds are poisonous. Barium carbonate is used in glass, as a pottery glaze, and as a rat poison. Chrome yellow (barium chromate) is used as a paint pigment and in safety matches. The chlorate and nitrate are used in

pyrotechnics to provide a green color. Barium oxide strongly absorbs carbon dioxide and water; it is used as a drying agent. Barium chloride is used in medicinal preparations and as a water softener. Barium sulfide phosphoresces after exposure to light; it is sometimes used as a paint pigment. Barite, the sulfate ore, has many industrial uses. Because barium sulfate is virtually insoluble in water and acids, it can be used to coat the alimentary tract to increase the contrast for X-ray photography without being absorbed by the body and poisoning the subject. Barium salts give a characteristic green color in the FLAME TEST. Barium metal was first isolated in 1808 by Sir Humphry Davy by electrolysis.

barium sulfate: see **BARITE**

Bar-jesus, called **Elymas** (ēl'īmās), Jewish sorcerer at Paphos who tried to divert a prospective Christian convert and was cursed with blindness. Acts 13 6-12.

Bar-jona (bar-jō'nə), patronymic of St. Peter. Mat 16:17. Peter's father is called Jonas (KJV) and John (RSV). John 21:15,16,17. He is called Jona (KJV) in John 1:42.

bark, outer covering of the stem of woody plants, composed of waterproof cork cells protecting a layer of food-conducting tissue—the phloem or inner bark (also called bast). As the woody stem increases in size (see **CAMBIUM**), the outer bark of inelastic dead cork cells gives way in patterns characteristic of the species. It may split to form grooves, shred, as in the cedar, or peel off, as in the sycamore or the shagbark hickory. A layer of reproductive cells called the cork cambium produces new cork cells to replace or reinforce the old. The phloem (see **STEM**) conducts sap downward from the leaves to be used for storage and to nourish other plant parts. "Girdling" a tree, i.e., cutting through the phloem tubes, results in starvation of the roots and, ultimately, death of the tree; trees are sometimes girdled by animals that eat bark. The fiber cells that strengthen and protect the phloem ducts are a source of such textile fibers as hemp, flax, and jute; various barks supply tannin, cork (see **CORK OAK**), dyes, flavorings (e.g., cinnamon), and drugs (e.g., cocaine and quinine). The outer bark of the paper birch was used by the American Indians to make baskets and canoes.

bark or barque (both *bark*), sailing vessel with three masts, of which the mainmast and the foremast are square-rigged while the mizzenmast is fore-and-aft-rigged. Although the word was once used to mean any small boat, later barks were sometimes quite large (up to 6,000 tons). In addition to the standard three-masted bark there are also four-masted barks (fore-and-aft-rigged on the aftermast) and barkentines, or three-masted vessels with the foremast square-rigged and the other masts fore-and-aft-rigged. Large numbers of barks were employed in carrying wheat from Australia to England before World War I, and in 1926 the bark *Beatrice* sailed from Fremantle, Western Australia, to London in 86 days.

bark cloth, primitive fabric made in tropical and subtropical countries from the soft inner bark of certain trees. It has been made and used in parts of Africa and India, the Malay Peninsula, Samoa, the Hawaiian Islands, and the Fiji Islands and perhaps reached its highest perfection in Polynesia and parts of Central America. Lengths of branches or of young stems are cut from trees, such as the fig, the breadfruit, or the paper mulberry. The outer bark is removed, the inner bark is cut in narrow strips and then alternately soaked and beaten with a grooved or carved wooden mallet, or beetle, until the fibers are well matted and become thin and flexible. Gum is sometimes added, and pieces may be joined and beaten together to form large sheets. The peeling and beetling are usually done by the men, the decorating, by the women. Patterns, often elaborate, may be sketched or may be applied by block printing or by leaves dipped in dye and pressed on the cloth. The cloth may be gummed or oiled to make it waterproof. Tapa cloth is a fine variety made in the Pacific islands. Bark cloth is used for loincloths, skirts, draperies, and wall hangings; in thick layers it makes an excellent bed. So ancient is the art of making the cloth that it is deeply involved in religious and ceremonial life. In Borneo a strip of the cloth signifies mourning. In Malawi it has traditionally formed the initiation dress of girls. In India some sects prescribe bark cloth as the dress of a religious recluse.

Barker, Eugene Campbell, 1874-1956, American historian, b. Walker Co., Texas. His distinguished teaching career, begun in 1899, was almost entirely at the Univ. of Texas. An outstanding social historian, Barker wrote about the period of American set-

tlement in Texas and about the Texas Revolution. Notable among his works are a biography of Stephen F. Austin (1925, repr. 1968), *Mexico and Texas 1821-1835* (1928, repr. 1965), and an edition (with Amelia W. Williams) of the writings of Sam Houston (8 vol., 1938-43, repr. 1969). See biography by W. C. Pool (1971).

Barker, George (George Granville Barker), 1913-, English poet, b. Essex, England. He has taught in Japan and the United States as well as in England. His highly dramatic poems are often concerned with themes of remorse and pain. Barker's published works include *30 Preliminary Poems* (1933), *Eros in Dogma* (1944), *News of the World* (1950), *The True Confession of George Barker* (1950), *Collected Poems* (1957), *The View From a Blind I* (1962), *Thurgarton Church* (1969), and *The Alphabetical Zoo* (1972).

Barker, Harley Granville: see **GRANVILLE-BARKER**

Barker, James Nelson, 1784-1858, American playwright, b. Philadelphia. In 1838, Van Buren appointed him comptroller of the Treasury, and with slight interruptions he worked in the Treasury Dept. until his death. He wrote 10 plays, five of which have survived in print. The best were *The Indian Princess* (1808), *The Court of Love* (1836, pub. in 1817 as *How to Try a Lover*), and *Superstition* (1824), a tragedy set in colonial New England. His dramatization (1812) of Scott's *Marmion* had extraordinary success on the stage for 30 years. Aside from his merits as a dramatist, Barker is important for his use of American material and themes, unusual in his period. See biography by P. H. Musser (1929, repr. 1970).

Barking, borough (1971 pop. 160,499), Greater London, SE England. Barking was created in 1965 by the merger of portions of the municipal boroughs of Barking and Dagenham. The borough has a power plant and a Ford Motor Company plant as well as engineering, chemical, paint, wood, and other industries. The remains of a Benedictine abbey (c. 670) are there.

Barkla, Charles Glover (glū'vər bā'klə), 1877-1944, English physicist. He was professor of natural philosophy at Edinburgh from 1913. For his discovery of the characteristic X rays of elements he received the 1917 Nobel Prize in Physics. He evolved the laws of X-ray scattering and the laws governing the transmission of X rays through matter and excitation of secondary rays.

Barkley, Alben William, 1877-1956, Vice President of the United States (1949-53), b. Graves Co., Ky. After being admitted (1901) to the bar, he served as prosecuting attorney (1905-9) and judge (1909-13) for McCracken Co., Ky., and was U.S. Representative (1913-27) and U.S. Senator (1927-49) from Kentucky. A loyal Democrat, he was majority leader in the Senate from 1937 to 1946. He became Vice President under Truman in 1948. In 1954, Kentucky returned him to the Senate. See his autobiography, *That Reminds Me* (1954).

Bar Kokba, Simon, or Simon Bar Cochba (kōk'ba) [Heb. =son of the star], d. A.D. 135, Hebrew hero and leader of a major revolt against Rome under Hadrian (132-135). He may have claimed to be a Messiah, the Talmud relates that Akiba ben Joseph credited him with this title. His personality and the facts of his life are surrounded by legend. He is sometimes called Simon the Prince of Israel. At first he successfully defeated the Roman armies, but the tide turned against him with the victories of the Roman general Julius Severus, and he was killed at Bethar. Israeli archaeologists have found a number of letters in his handwriting.

Barkos (bā'kōs), ancestor of a family of Nethinim. Ezra 2:53, Neh. 7:55.

Barlaam and Josaphat (bā'laəm, jō'səfāt), legend popular in medieval times. It corresponds in part to the legend of Buddha. Versions of the story have been found in nearly every language. At the birth of Josaphat (or Josaph), the son of the Indian king Abenner, it was prophesied that the young prince was destined for greatness not as a royal leader but as a holy man. The king did all that was possible to stop the prophecy from coming true, but the prince, through the teachings of the monk Barlaam, was converted to religion (according to Western legend, Christianity). After the death of Abenner, Josaphat abdicated the throne and lived out the remainder of his days with Barlaam, as a religious recluse. See the standardized Greek text with translation by G. R. Woodward and Harold Mattingly (1914).

Barlach, Ernst (ēmst bār'lakh), 1870-1938, German expressionist sculptor, graphic artist, and writer. After studying at the Dresden Art Academy he lived in

Paris (1895-96) and in Berlin, Hamburg, and other German cities. A trip to Russia in 1906 gave him impetus to his art. Barlach pioneered in the introduction of expressionism into Germany. Though the power of his simple, angular, and compact forms, he communicated intense emotion and compassion. From clay modeling he turned to working in carving and woodcutting. Many of his works were destroyed by the Nazis, however, some remain. In Lüneburg and the Busch-Reisinger Museum, Cambridge, Mass., Barlach illustrated some of his plays and plays. See his *Three Plays* (tr. 1964), study by Carl D. Carls (1969).

Bar-le-Duc (bar-la-duk'), town (1968 pop. 20,384), capital of Meuse dept., NE France, in Lorraine. It has textile mills, iron foundries, printing plants, and metallurgical and food-processing industries. Situated in the picturesque Ornain valley, Bar-le-Duc has preserved many old houses (16th, 17th, and 18th cent.). It has a 15th-century church and one from the 13th and 14th cent. It was the capital of the county (later duchy) of Bar, an irregularly shaped area stretching from the Marne to the Luxembourg frontier. The duchy passed (15th cent.) to René of Anjou, later also duke of Lorraine. Bar thereafter shared the history of Lorraine, with which it passed to France in 1766.

Barletta (barlēt'a), city (1971 pop. 75,329), Apulia, S. Italy, on the Adriatic Sea. It is a seaport and a commercial and industrial center. Salt is mined nearby, and wine is produced. Barletta passed to the Goths after the fall of the Roman Empire. Later controlled by the Byzantines and the Lombards, it became a Norman city in the later 12th cent. and prospered (14th-15th cent.) with its large merchant fleet. Noteworthy buildings include the Romanesque-Gothic cathedral (12th-14th cent.), the Church of Santo Sepolcro (13th cent.), and a castle (mainly 13th cent.).

barley, annual cereal plant (*Hordeum vulgare* and sometimes other species) of the family Gramineae (GRASS family), cultivated by man probably as early as any cereal. It was known to the ancient Greeks, Romans, Chinese, and Egyptians and was the chief bread material in Europe as late as the 16th cent. It has a wide range of cultivation and matures even at high altitudes, since its growing period is short, however, it cannot withstand hot and humid climates. Today barley is typically a special-purpose grain with many varieties rather than a general market crop. It is a valuable stock feed (often as a corn substitute) and is used for malting when the grain is of high quality. It is a minor source of flour and breakfast foods. Pearl barley is often used in soups. In the Middle East a limited amount of barley is eaten like rice. In the United States most spring barley comes from the western states and most winter barley is grown in the southeastern states for autumn and spring pasture and as a cover crop. Barley is subject to several diseases including smut and rust. Barley is classified in the division MAGNOLIOPHYTES, class Liliatae, order Cyperales, family Gramineae.

Barlow, Joel, 1754-1812, American writer and diplomat, b. Redding, Conn., grad. Yale, 1778. He was one of the CONNECTICUT WITS and a major contributor to their satirical poem *The Anarchiad* (1786-87). His own epic, *The Vision of Columbus* (1787), brought him fame in America and Europe and was revised later as *The Columbiad* (1807). Inspired by his friend Thomas Paine, he wrote *Advice to the Privileged Orders* (1792), urging that the state must represent not a class but the people and must be responsible for the welfare of the individual. His *Letter to the National Convention of France on the Defects in the Constitution of 1791* won him French citizenship. His best-known lighter work is a mock eulogy, *The Hasty-Pudding* (1793). Appointed U.S. consul to Algiers in 1795, Barlow succeeded in releasing many American prisoners and in negotiating treaties with Algiers, Tunis, and Tripoli. Sent to Europe in 1811 to negotiate a commercial treaty with Napoleon I, he was caught in the disastrous retreat of the armies from Moscow and died from exposure. See biography by J. L. Woodress (1958, repr. 1969).

Barmecides: see **HARUN AR-RASHID**

Bar Mitzvah (bar mīts'və) [Aramaic, =son of the Commandment], Jewish ceremony in which the young male is initiated into the religious community and performs his first act as an adult, the reading in the synagogue of a part of the weekly portion of the Torah. According to a tradition dating to the Talmudic period, this is to be done at the age of 13 years and a day. Today the ceremony consists of two parts, the religious rite that surrounds the reading and the social celebration that follows it, which is

considered a Seudat Mitzvah, a feast in celebration of the fulfillment of a commandment. The 20th cent has seen the introduction of the Bas, or Bat, Mitzvah, a comparable ceremony for the young female, by the Reform and Conservative groups and to a much lesser extent by the Orthodox. The exact nature of both the Bar and Bas Mitzvah ceremonies varies from community to community according to local traditions (e.g., Ashkenazic, Sephardic, Oriental).

barn, abbr b, in physics, unit of nuclear cross section, i.e., the effective target presented by a NUCLEUS for collisions leading to nuclear reactions, it is equal to 10^{-24} square centimeters. The barn is approximately the size of the geometric cross section of an atomic nucleus, the term was coined because an effective cross section that large would present a target "as big as a barn," i.e., an easy target for nuclear bombardment. In practice, effective cross sections of nuclei for many reactions are measured in millibarns (10^{-3} barn) because, for most interactions, only a small fraction of collisions cause reactions.

Barnabas, Saint (bār'nābas), Christian apostle. He was a Cypriot and a relative of St. Mark, his forename was Joseph (or Joseph). Barnabas was a founder of the church at Antioch and was the companion of St. Paul on his first missionary journey. Acts 4:36, 37, 9:27, 11:22-30, 12:25, 13-15, 1 Cor 9:6, Gal 2:19, 13, Col 4:10. He is said to have been martyred in Cyprus. One of the oldest Christian PSEUDEPIGRAPHS is an epistle attributed to Barnabas. Feast June 11.

barnacle, common name of the sedentary crustacean animals constituting the subclass Cirripedia. Barnacles are exclusively marine and are quite unlike any other crustacean because of the permanently attached, or sessile, mode of existence for which they are highly modified. Typical barnacles attach to the substrate by means of an exceedingly adhesive cement, produced by a cement gland, and secrete a shell, or carapace, of calcareous (limestone) plates, around themselves. Colonies of such barnacles form conspicuous encrustations on wharves, boats, pilings, and rocky shores. They range in length from under 1 in. (2.5 cm) to 30 in. (75 cm). Their shells are commonly yellow, orange, red, pink, or purple, sometimes with striped patterns. Because of their sedentary life and enclosing shells, barnacles were thought to be mollusks until 1830, when their larval stages were discovered. Much of what is known about barnacles is the result of research by Charles Darwin, who published a monumental work on the subject in the 1840s. Barnacles with a calcareous shell (order Thoracica) include the gooseneck barnacles, which are attached to the substrate by means of a stalk, or peduncle, and the acorn, or rock, barnacles, which are attached directly to the substrate. The stalk of gooseneck barnacles is simply an elongation of the attached end of the animal's body. In some gooseneck barnacles the stalk as well as the body is covered by calcareous plates, in others it is a naked leathery or horny structure. A gooseneck barnacle found in large numbers on ships and pilings is *Lepas*, which has a leathery stalk and flattened shell and looks rather like a small clam attached by its siphon. *Balanus* is an acorn barnacle commonly found on rocks; it has a thick conical shell attached at its wide base, with an opening at the top. As in many of the acorn barnacles, the plates of the surrounding carapace form an impenetrable wall, and the opening is equipped with two movable plates that can be pulled down to close off the body completely. In both gooseneck and acorn barnacles the feathery legs of the animal may sometimes be seen protruding through the carapace opening. When the animal feeds, these jointed legs, called cirri, sweep organic particles and minute planktonic organisms toward the mouth, which is located deeper inside the shell. The attached end of the animal is its anterior, or head region. The barnacle has been described as a shrimplike animal standing on its head in a limestone house and kicking food into its mouth with its feet. Barnacles lack gills, gas exchange occurs through the cirri and the body wall. Some shelled barnacles are commensal, attaching themselves to living animals, such as whales, porpoises, turtles, crustaceans, and echinoderms. The gooseneck barnacle *Conchoderma* may be found growing on the acorn barnacle *Coronula*, which grows on the skin of whales. Besides the shelled barnacles there are naked barnacles (orders Acrothoracica and Rhizocephala), which live on, and in some cases parasitize, other invertebrate animals. There are also shell-less boring barnacles (order

Acrothoracica), which live inside holes that they drill in shells and corals. Although nearly all other crustaceans have separate sexes, most barnacles are HERMAPHRODITES, with cross-fertilization between adjacent individuals being the rule. Some species, however, have dwarf males, which are parasitic on female or hermaphroditic individuals. The fertilized egg develops into a free-swimming larva, called a nauplius larva, of the basic crustacean type, with paired antennae. This form then molts to become a cypris, or bivalve, larva, which eventually attaches itself to a suitable substrate by its first pair of antennae and undergoes METAMORPHOSIS into an adult. Barnacles are economically significant because they settle on ship hulls and harbor installations, the resulting encrustation of the ships greatly increases friction, diminishing speed and increasing fuel consumption. Ships are treated with plastic coating or with antifouling paints containing copper or mercury to prevent or diminish encrustation. Barnacles are classified in the phylum ARTHROPODA, class Crustacea, subclass Cirripedia.

Barnard, Christian Neething, 1923-, South African surgeon. The son of a Dutch Reformed minister, Barnard studied medicine at the Univ. of Cape Town (M.B. 1946, M.D. 1953), then came to the United States in 1955 to improve his surgical technique under Owen H. Wangenstein at the Univ. of Minnesota. While in Minneapolis he performed his first heart operation. Returning to Cape Town, he was appointed director of surgical research at the Groote Schuur Hospital, where he made medical history on Dec. 3, 1967, when he completed the first human heart transplant. Barnard designed artificial heart valves, wrote extensively on the subject of congenital intestinal atresia, and developed surgical procedures relating to organ transplants. See Peter Hawthorne, *The Transplanted Heart* (1968) and L. E. Leopold, *Dr. Christian N. Barnard, The Man With the Golden Hands* (1971).

Barnard, Edward Emerson, 1857-1923, American astronomer, b. Nashville, Tenn., grad. Vanderbilt Univ., 1887. From 1887 to 1895 he was astronomer at Lick Observatory in California, and from 1895 he was professor of practical astronomy at the Univ. of Chicago and astronomer at Yerkes Observatory. The discoverer of 16 comets, Jupiter's fifth satellite (1892), and BARNARD'S STAR (1916), he was given distinguished recognition by the Academy of Sciences of France and the Royal Astronomical Society of Great Britain. His photographs of comets, planets, nebulae, and the Milky Way are notable contributions to astronomy.

Barnard, Frederick Augustus Porter, 1809-89, American educator and mathematician, b. Sheffield, Mass., grad. Yale, 1828. After tutoring at Yale and teaching in institutions for the deaf and mute, he joined the faculty of the Univ. of Alabama, serving as professor of mathematics and natural philosophy (1837-48) and as professor of chemistry and natural philosophy (1848-54). From 1854 to 1856 he was professor of mathematics and natural philosophy at the Univ. of Mississippi. He served there as president (1856-58) and chancellor (1858-61), but resigned at the outbreak of the Civil War to return to the North. After a period of research in astronomy and after work as head of the map and chart department of the U.S. Coast Survey, he was selected to succeed Charles King as president of Columbia College (now Columbia Univ.) During his long administration (1864-89), Columbia grew from a small undergraduate college of 150 students into one of the nation's great universities, with an enrollment of 1,500. He was instrumental in expanding the curriculum, adding departments and fostering the development of the School of Mines (founded 1864, now included in the School of Engineering). He extended the elective system and advocated equal educational privileges for men and women. Barnard College, the woman's undergraduate unit of Columbia, was named for him and opened shortly after his death. Barnard was active in founding the American Association for the Advancement of Science and the National Academy of Sciences. He edited *Johnson's New Universal Cyclopaedia* (1876-78) and wrote many addresses, articles, books, and pamphlets in the fields of mathematics, physics, economics, and education. His annual reports on Columbia, outstanding discussions of the significance of current educational progress, were edited by W. F. Russell in *The Rise of a University*, Vol. I (1937). See memoirs by John Fulton (1896).

Barnard, George Grey, 1863-1938, American sculptor, b. Bellefonte, Pa. He studied engraving then sculpture, first at the Art Institute of Chicago, then

in the École des Beaux-Arts, Paris. A strong Rodin influence is evident in his early work, such as *Two Natures* (Metropolitan Mus.). In 1912 he completed several figures for the new state capitol at Harrisburg, Pa. A colossal statue of Lincoln in 1917 was the subject of heated controversy because of its rough-hewn features and slouching stance. It is now in Manchester, England, and a replica is in Cincinnati. Interested in medieval art, Barnard gathered discarded fragments of Gothic works from French villages. He established this collection near his home in Washington Heights, New York City, in a building that he called the CLOISTERS. Others of Barnard's sculptures are *The God Pan* (Columbia Univ.), *The Hower* (Cairo, Ill.), and *Rising Woman and Adam and Eve* (both Rockefeller estate, at Pocantico Hills, N.Y.). At the time of his death he was at work on the 100-ft (30-km) *Rainbow Arch*, a memorial to peace.

Barnard, Henry, 1811-1900, American educator, b. Hartford, Conn., grad. Yale, 1830. He studied law and was admitted to the bar in 1835. As a member (1837-39) of the Connecticut legislature, he originated and secured the passage in 1838 of an act to provide for the better supervision of the common schools. Horace Mann had carried through a similar reform in Massachusetts in 1837, and the two men became leaders in the movement to reform the common schools of the country. Barnard was secretary of the Connecticut board of commissioners of common schools from 1838 to 1842. He performed pioneer work in school inspection, recommendation of textbooks, organization of teachers' institutes and associations of parents and teachers, and the framing of additional legislative measures on education. He also edited the *Connecticut Common School Journal* and made valuable reports, including a survey of the existing school system. A political reversal in Connecticut in 1842 abolished his office and entire program. In 1843, Barnard was selected to survey the common school system of Rhode Island and instituted similar reforms there, as well as starting school libraries and revising examination methods. In 1849 he returned to Connecticut, where his program had been reestablished, to serve as superintendent of schools and principal of the new state normal school at New Britain. Ill. health compelled his resignation in 1855. In 1858 he accepted the chancellorship of the Univ. of Wisconsin, and in two years there he did much for the state's common school system. He became president of St. John's College, Annapolis, in 1866, but resigned in 1867 to become the first U.S. commissioner of education. Barnard had long urged the establishment of a Federal agency to gather and disseminate educational information and statistics, which had been collected for the first time in the census of 1840. As commissioner he planned and organized the work of this agency and prepared extensive reports on education in this country and abroad and on school legislation. Barnard resigned in 1870. He continued the publication of the *American Journal of Education* (31 vol., 1855-81, reissued in 1902 with an additional volume dated 1882). This journal, subsidized by Barnard, included translations of many previously unavailable European educational classics. Approximately 50 of these treatises were reprinted as Barnard's "Library of Education." See his *Memoirs on Teachers and Educators* (1861, repr. 1969), R. C. Jenkins and G. C. Warner, *Henry Barnard: An Introduction* (1937), and J. S. Brubacher, ed., *Henry Barnard on Education* (1931, repr. 1965).

Barnard College: see COLUMBIA UNIV.

Barnardo, Thomas John, 1845-1905, British social reformer. Pioneering in the care of destitute children, he founded (1867) in London the East End Juvenile Mission. In 1870, with the aid of the 7th earl of Shaftesbury, he opened a boys' home, the first of his famous Dr. Barnardo Homes. These soon spread throughout Great Britain and the British possessions. There are presently over 100 homes in Britain and others in Australia and Canada. Barnardo was instrumental in securing the passage (1891) of parliamentary legislation for child welfare. See biographies by Arthur Williams (3d ed. 1966) and Gladys Williams (1966).

Barnard's star, star with the largest observed PROPER MOTION (annual angular shift in position), located in the constellation Ophiuchus, 1970 position R.A. 17^h56^m, Dec. +4°36'. The star's large proper motion, 10.28", is due in part to the fact that it is the second-nearest star, being at a distance of 5.98 light-years. Barnard's star, discovered in 1916 by E. E. Barnard, is a faint red dwarf star of SPECTRAL CLASS M5, lying near the bottom of the main sequence in the HERTZSPRUNG-RUSSELL DIAGRAM. Its apparent MAGNITUDE is

The key to pronunciation appears on page xi

barom or baron, Michael (mishel) baron' or baronid(N'), 1965-1-279, one of the first great French actors & protege of Moliere, he acted at the Hotel de Bourgoines and at the Comedie Francaise. He brought a naturalness to the bombastic acting style established by Moliere. In 1691 he retired at the age of 60.

which is mounted on a drum rotated by a clock-work. Each barotmeter usually provides one week's record. See BAROMETER.

Baroja y Nessi, Pio (pi'õ bar'õhã è nã'sã), 1879-1956, Spanish novelist from the Basque Province, member of the group of writers known as the GENERATION OF '98. He left medicine to devote himself to literature and came to be the most popular Spanish novelist of the 20th cent. Of his several trilogies, the most widely read abroad concerns the underworld of Madrid—*La lucha por la vida* [the struggle for existence] (1904), comprising *La busca* (tr. *The Quest*, 1922), *Malta hierba* (tr. *Weeds*, 1923), and *Aurora roja* (tr. *Red Dawn*, 1924). The longest cycle (22 vol.) has a historical background and is known as *Memorias de un hombre de acción* [memories of a man of action]. Baroja's novels are forceful though loosely constructed, characterized by a spare yet lyrical style and an undercurrent of social discontent.

Barometer (bar'õm'etãr), instrument for measuring atmospheric pressure. It was invented in 1643 by the Italian scientist Evangelista Torricelli, who used a column of water in a tube 34 ft (10.4 m) long. This inconvenient water column was soon replaced by

95 Slight oscillations in its motion indicate that it would have to be planets rather than dim stars because the mass of each is small—at most equal to that of Jupiter.

Barnato, Barnett (barnatō), 1852–97, South African financier, b London. Of Jewish origin, his name originally was Barney Isaacs, he first called himself Barney Barnato when he performed as a comedian.

He went to South Africa in 1873 and made a fortune by buying worked-out diamond mines in the Kimberley area and mining the abandoned blue earth. He increased his fortune by speculation in diamond and gold mines until he was maneuvered by Cecil Rhodes into merging the Kimberley interests with Rhodes's De Beers interests. He was also plunged into Cape politics and served in the Parliament there. He committed suicide. See biography by Richard Lewinsohn (1938).

Barnaul (barnawōl'), city (1970 pop 439,000), capital of Altai Krai, SW Siberian USSR, on the Ob River. A port and major railway junction, Barnaul is in the heart of the Kuznetsk steppe, an agricultural area where wheat, corn, and sugar beets are grown. The city's chief industries produce cotton textiles, artificial fibers, and machinery. Barnaul was founded in 1771 as a silver-smelting center.

Barnave, Antoine Pierre Joseph Marie (antwān' pyēr zhōzef' mārē' barnāv), 1761–93, French revolu-

tionary. A member of the States-General of 1789, he was a brilliant spokesman of the Jacobins. When King Louis XVI and the queen fled in 1791, Barnave was one of those sent to bring him back from Varennes to Paris. This experience awakened royalist sympathies in Barnave and led to his correspondence with Marie Antoinette seeking to establish a constitutional monarchy, he broke with the Jacobins and became a leader of the Feuillants. Condemned by the Revolutionary Tribunal, he was guillotined. His introduction of a *la révolution française* (in Cuvier, 1843) explains the Revolution as the result of the evolution of the bourgeoisie. See biography by E. D. Bradley (1915), O. von Heidesheim, and *The Letters of Marie Antoinette, Fersen, and Barnave* (1913), tr (1926).

Barnburners, radical element of the Democratic

party in New York state from 1842 to 1848, opposed to the conservative Hunkers. The name derives from the fabled Dutchman who burned his barn to rid it of rats; by implication, the Barnburners would destroy corporations and public works to do away with the abuses they foster. Among their leaders were C. C. Campbell, Elias Wright, Azariah C. Flagg, and Samuel J. Tilden. Opposed to the extension of slavery, the Barnburners seceded from the Democratic state organization when the Hunkers captured the state convention at Syracuse in 1847. Refused recognition at the Democratic national convention of 1848, they nominated Martin Van Buren for President and endorsed the Free-Soil Party candidate, Charles Francis Adams (1807–86), for Vice President. Largely because of this Democratic split, the Whig candidate, Zachary Taylor, defeated the regular Democratic Lewis Cass. After 1848 some Barnburners joined the Free-Soilers, who merged with the new Republican party; others returned to the Democratic party. See H. D. A. Donovan, *The Barnburners* (1925).

Barnegat Bay (bar'negāt), arm of the Atlantic Ocean, c 30 mi (50 km) long, E N J, entered through Barnegeat inlet between Long Beach island and Island Beach Peninsula. A lighthouse off the coast replaced the Barnegat Light house in 1930.

Barnes, Albert, 1798–1870, American Presbyterian clergyman, b Rome, N Y. From 1830 he was pastor of the First Church in Philadelphia, mother church of the Presbyterian denomination in America in the schism (1837–70) in Presbyterianism between the strict Calvinists and those whose views had become tinged with New England liberalism, Barnes's opinions and writings placed him with the liberal wing. His commentaries on biblical books, published as *Notes Explanatory and Practical* (rev ed, 6 vol, 1872), attracted wide attention.

Barnes, Barnabe, 1569?–1609, English poet. His major work is *Parthenophil and Parthenophe* (1593), a collection of sonnets, madrigals, elegies, and odes. He also wrote *A Divine Century of Spiritual Sonnets* (1595) and *The Devil's Charter* (1607), a tragedy on the life of Pope Alexander VI.

Barnes, Duna (dōon'a), 1892–, American author, b Cornwall, N Y. She is best known for her novel *Nightwood* (1936), which, in its sense of horror and decay, has been likened by T. S. Eliot to an Elizabethan tragedy. Barnes also wrote several one-act plays.

produced by the Provincetown Players in 1919–20. Her other works include *Ryder* (1928), a novel, collections of short stories and poems including *A Night Among Horses* (1929) and *Selected Works* (1962), and *The Amphion* (1958), a tragedy in verse.

Barnes, Harry Elmer, 1889–1968, American historian and sociologist, b Auburn, N Y. He received his Ph.D. from Columbia in 1918 and taught economics, sociology, and history at various institutions of higher learning, notably at the New School for Social Research. His wide interests generally centered on the main themes of the development of Western thought and culture. His ability to synthesize information from various fields into an intelligible pattern showing human development profoundly affected the teaching of history. Notable among the works that show his remarkable scope are *Social History of the Western World* (1921), *Psychology and History* (1925), *History and Social Intelligence* (1926), *History of Western Civilization* (1935), *An Intellectual and Cultural History of the Western World* (with some contributions from others, 1937), 3d rev (1965), and *Social Thought from Love to Science* (with Howard Becker, 3d ed rev and enl 1961). See Arthur Goddard, ed., *Harry Elmer Barnes* (1968).

Barnes, Juliana. See *BARNERS*, JULIANA.

Barnes, William, 1801–86, English poet and philologist. After a career as a schoolmaster, he took holy orders in 1847. He is best known for his poems in local Dorset dialect, which began to appear in newspapers in 1833. His *Poems of Rural Life in the Dorset Dialect* were published in three series between 1844 and 1862. Besides a *Philological Grammar* (1854), he wrote other books on the English language. See his *Selected Poems* (ed by Geoffrey Gimson, 1950), study by Giles Dagdale (1953).

Barnes, Samuel Augustus (barnē), 1844–1913, English clergyman and social worker. As vicar of St. Jude's, Whitechapel, in the slums of London, he pioneered in the social settlement movement. Town-hall, the first settlement house, was opened in 1884 with Barnes as its first warden. He was also active in the university extension movement in 1894. He was made a canon. His wife, Henrietta Octavia Barnes, 1851–1936, was especially interested in housing and helped found a model garden suburb at Hampstead. She collaborated in some of her husband's books, notably *Practicable Socialism* (1888) and wrote his biography (1918). In 1924 she was created Dame Commander of the British Empire.

part of the new metropolitan county of South York-mills, and other industries. In 1974, Barnsley became

Barnstable (barn'stabel), town (1970 pop 19,842), seat of Barnstable co, SE Mass, inc 1639. It is a resort town on Cape Cod. Candies are produced there. Barnstable is made up of seven villages, including Hyannis. Points of interest include the home of the Revolutionary War patriot James Otis, in West Barnstable, the John F. Kennedy Memorial, and several 18th-century buildings. From colonial times until the middle of the 19th century Barnstable had a prosperous coastal and overseas shipping trade.

Barnstable (barn'stabel), municipal borough (1971 pop 17,342), Devonshire, SW England, on the Taw River estuary. The river is spanned there by a 16-arch stone bridge dating from the 13th cent. Barnstable is the chief marketing town of North Devon and a tourist center. Gloves, pottery, bricks, tiles, furniture, and lace are manufactured. Barnstable once carried on a large woollen export trade with the American colonies. John Gay, famous for *The Beggar's Opera*, was born in Barnstable.

Barnum, Phineas Taylor, 1810–91, American showman, b Bethel, Conn. As a youth Barnum worked at diverse sales jobs and managed a boarding house. He made his first sensation in 1835 when he bought and exhibited Joice Heth, a slave who claimed she was 161 years old (she was about 80) and had been the nurse of George Washington. In 1842 he opened the American Museum in New York City and immediately became famous for his extravagant advertisements. Among his exhibits of freaks. Among his great attractions were the Fiji Mermaid (formed by joining the upper half of a monkey to the stuffed lower half of a fish), "General Tom Thumb," who was viewed by over 20 million people, and the original siamese twins, Chang and Eng. In 1850, Barnum managed the American tour of the Swedish singer Jenny Lind and, with his talent for publicity, made it a huge financial success for her and for himself. In 1855 he retired from show business, he served as mayor of Bridgeport, Conn., and in the Connecticut legislature. Driven into bankruptcy by unwise business ventures, he reopened the American Museum and then organized his famous circus, "The Greatest Show on Earth," which opened in Brooklyn, N Y, in 1871. In 1881 he merged with his most successful competitor, James A. Bailey, and under the name Barnum and Bailey the circus continued for a generation after Barnum's death. The stellar attraction of the circus was Jumbo, the 6½-ton African elephant that Barnum purchased from the London Zoo despite the furious protests of English elephant fanciers, including Queen Victoria. The elephant was stuffed and is on exhibit at the Barnum Museum of Natural History (est 1883 at Tufts Univ in honor of Barnum, who was one of its trustees). His autobiography was published in 1855 and went through many editions. He also wrote *Humbugs of the World* (1865), *Struggles and Triumphs* (1869), and *Money Getting* (1888). See his autobiography, ed by W. R. Browne (1927), repr 1961), biographies by Raymond Fitzsimons (1970) and Neil Harris (1972).

Barocchio, Giacomo. See *VIGNOLA*, GIACOMO DA.

Barocci or Baroccio, Federico (fēdēricō' bārōtchē-cho), c 1530–1612, Italian painter, b Urbino, where he was continually employed throughout his life. In the 1550s he traveled to Rome and was influenced by the art of Raphael, Michelangelo, and Taddeo Zuccaro. His mature works reflect Baroque tendencies. Noted for his skill as a portraitist, he also executed a small number of important engravings. Among his more notable achievements are Saint Sebastian (c 1557, cathedral, Urbino), frescoes (1561–63) in the Vatican, and *The Last Supper* (1592–99, Santa Maria sopra Minerva, Rome). A large collection of his drawings is in the Uffizi. See monograph by Harald Olsen (repr, 1962).

Baroda (bārō'dā), former native state, now incorporated in Gujarat state, W central India. It is a prosperous area on a fertile alluvial plain. Its chief city, Baroda (1971 pop 467,422), a district administrative center on the Vishwamini River, has cotton-textile, chemical, and metal industries, an oil refinery, and a fertilizer plant. There are several colleges.

Barograph, instrument used to make a continuous recording of atmospheric pressure. The pressure-sensitive element, a partially evacuated metal cylinder, is linked to a pen arm in such a way that the vertical displacement of the pen is proportional to the changes in the atmospheric pressure. The pen traces a record of pressure versus time on a chart.

9.5 Slight oscillations in its motion indicate that it has one or possibly two unseen companions, which would have to be planets rather than dim stars because the mass of each is small—at most equal to that of Jupiter

Barnato, Barnett (barnə'tō), 1852-97, South African financier, b London. Of Jewish origin, his name originally was Barney Isaacs, he first called himself Barney Barnato when he performed as a comedian. He went to South Africa in 1873 and made a fortune by buying worked-out diamond mines in the Kimberley area and mining the abandoned blue earth. He increased his fortune by speculation in diamond and gold mines until he was maneuvered by Cecil Rhodes into merging the Kimberley interests with Rhodes's De Beers interests. He was also plunged into Cape politics and served in the Parliament there. He committed suicide. See biography by Richard Lewinsohn (tr 1938)

Barnaul (barnə'ool'), city (1970 pop 439,000), capital of Altai Krai, SW Siberian USSR, on the Ob River. A port and major railway junction, Barnaul is in the heart of the Kulunda steppe, an agricultural area where wheat, corn, and sugar beets are grown. The city's chief industries produce cotton textiles, artificial fibers, and machinery. Barnaul was founded in 1771 as a silver-smelting center.

Barnave, Antoine Pierre Joseph Marie (aNTwā' pyēr zhōzēf' marē barnāv'), 1761-93, French revolutionary. A member of the States-General of 1789, he was a brilliant spokesman of the JACOBIENS. When King Louis XVI and the queen fled in 1791, Barnave was one of those sent to bring him back from Varennes to Paris. This experience awakened royalist sympathies in Barnave and led to his correspondence with MARIE ANTOINETTE. Seeking to establish a constitutional monarchy, he broke with the Jacobins and became a leader of the FEUILLETS. Condemned by the Revolutionary Tribunal, he was guillotined. His *Introduction à la révolution française* (in *Œuvres*, 1843) explains the Revolution as the result of the evolution of the bourgeoisie. See biography by E D Bradby (1915), O G von Heidenstam, ed., *The Letters of Marie Antoinette, Fersen, and Barnave* (1913, tr 1926).

Barnburners, radical element of the Democratic party in New York state from 1842 to 1848, opposed to the conservative HUNKERS. The name derives from the fabled Dutchman who burned his barn to rid it of rats, by implication, the Barnburners would destroy corporations and public works to do away with the abuses they foster. Among their leaders were C C Cambreleng, Silas Wright, Azariah C FLAGG, and Samuel J TILDEN. Opposed to the extension of slavery, the Barnburners seceded from the Democratic state organization when the Hunkers captured the state convention at Syracuse in 1847. Refused recognition at the Democratic national convention of 1848, they nominated Martin VAN BUREN for President and endorsed the FREE SOIL PARTY candidate, Charles Francis ADAMS (1807-86), for Vice President. Largely because of this Democratic split, the Whig candidate, Zachary Taylor, defeated the regular Democrat, Lewis CASS. After 1848 some Barnburners joined the Free-Soilers, who merged with the new Republican party, others returned to the Democratic party. See H D A Donovan, *The Barnburners* (1925).

Barnegat Bay (bar'nəgāt), arm of the Atlantic Ocean, c 30 mi (50 km) long, E N J, entered through Barnegat Inlet between Long Beach Island and Island Beach Peninsula. A lightship off the coast replaced the Barnegat Lighthouse in 1930.

Barnes, Albert, 1798-1870, American Presbyterian clergyman, b Rome, N.Y. From 1830 he was pastor of the First Church in Philadelphia, mother church of the Presbyterian denomination in America. In the schism (1837-70) in Presbyterianism between the strict Calvinists and those whose views had become tinged with New England liberalism, Barnes's opinions and writings placed him with the liberal wing. His commentaries on biblical books, published as *Notes Explanatory and Practical* (rev ed, 6 vol, 1872), attracted wide attention.

Barnes, Barnabe, 1569?-1609, English poet. His major work is *Parthenophil and Parthenophe* (1593), a collection of sonnets, madrigals, elegies, and odes. He also wrote *A Divine Century of Spiritual Sonnets* (1595) and *The Devil's Charter* (1607), a tragedy on the life of Pope Alexander VI.

Barnes, Djuna (jōōn'ə), 1892-, American author, b Cornwall, N.Y. She is best known for her novel *Nightwood* (1936), which, in its sense of horror and decay, has been likened by T S Eliot to an Elizabethan tragedy. Barnes also wrote several one-act plays

produced by the Provincetown Players in 1919-20. Her other works include *Ryder* (1928), a novel, collections of short stories and poems including *A Night Among Horses* (1929) and *Selected Works* (1962), and *The Antiphon* (1958), a tragedy in verse.

Barnes, Harry Elmer, 1889-1968, American historian and sociologist, b Auburn, N.Y. He received his Ph.D. from Columbia in 1918 and taught economics, sociology, and history at various institutions of higher learning, notably at the New School for Social Research. His wide interests generally centered on the main themes of the development of Western thought and culture. His ability to synthesize information from various fields into an intelligible pattern showing human development profoundly affected the teaching of history. Notable among the works that show his remarkable scope are *Social History of the Western World* (1921), *Psychology and History* (1925), *History and Social Intelligence* (1926), *History of Western Civilization* (1935), *An Intellectual and Cultural History of the Western World* (with some contributions from others, 1937, 3d rev ed 1965), and *Social Thought from Lore to Science* (with Howard Becker, 3d ed rev and enl 1961). See Arthur Goddard, ed., *Harry Elmer Barnes* (1968).

Barnes, Juliana. see BERNERS, JULIANA

Barnes, William, 1801-86, English poet and philologist. After a career as a schoolmaster, he took holy orders in 1847. He is best known for his poems in Dorset dialect, which began to appear in local newspapers in 1833. His *Poems of Rural Life in the Dorset Dialect* were published in three series between 1844 and 1862. Besides a *Philological Grammar* (1854), he wrote other books on the English language. See his *Selected Poems* (ed by Geoffrey Grigson, 1950), study by Giles Dugdale (1953).

Barnes, former municipal borough, SE England. See RICHMOND UPON THAMES.

Barnet, borough (1971 pop 303,578) of Greater London, SE England. The borough was created in 1965 by the merger of the urban districts of Barnet, East Barnet, and Friern Barnet, and the municipal boroughs of Finchley and Hendon. Although mainly residential, the borough manufactures automobile and aircraft parts, electrical components, and beverages. At the battle of Barnet (1471) during the Wars of the Roses, Edward IV of the House of York defeated the Lancastrian Richard Neville, earl of Warwick. Warwick died in the fighting.

Barnett, Samuel Augustus (bar'nēt), 1844-1913, English clergyman and social worker. As vicar of St Jude's, Whitechapel, in the slums of London, he pioneered in the social settlement movement. Toynbee Hall, the first SETTLEMENT HOUSE, was opened in 1884 with Barnett as its first warden. He was also active in the university extension movement. In 1894 he was made a canon. His wife, Henrietta Octavia Barnett, 1851-1936, was especially interested in housing and helped found a model garden suburb at Hampstead. She collaborated in some of her husband's books, notably *Practicable Socialism* (1888) and wrote his biography (1918). In 1924 she was created Dame Commander of the British Empire.

Barneveldt, Johan van Olden. see OLDENBARNEVELDT, JOHAN VAN

Barney, Joshua, 1759-1818, American naval officer and privateer, b Baltimore. He entered the navy early in the American Revolution, engaged in many feats of daring, and was captured by the British three times, his most famous exploit was the capture (1782) of the *General Monk* in Delaware Bay. From 1796 to 1802 he served with distinction in the French navy. In the War of 1812 he engaged in large-scale privateering. In July, 1814, he was given the task of checking the British advance up Chesapeake Bay. For several weeks he slowed the drive on Washington, and when the British did disembark, he rushed with some 400 sailors to Bladensburg, where Gen William Winder was in command. In the battle on Aug. 24, the American lines quickly broke, Barney and his men stayed behind to cover the retreat. Their gallant defense was soon broken, and Barney was wounded and captured. See biographies by W F Adams (1912), R D Paine (1924), and Hulbert Footner (1940).

Barnfield, Richard, 1574-1627, English poet. His entire output consists of three small books of poetry written before he was 25. *The Affectionate Shepherd* (1594), *Cynthia* (1595), and *The Encomion of Lady Pecunia* (1598). The lyric "As I fell upon a day" is perhaps his most notable work.

Barnsley, county borough (1971 pop 75,330), West Riding of Yorkshire, N England. It is the railroad center of a coal region and has ironworks, linen

mills, and other industries. In 1974, Barnsley became part of the new metropolitan county of South Yorkshire.

Barnstable (barn'stəbəl), town (1970 pop 19,842), seat of Barnstable co., SE Mass., inc 1639. It is a resort town on Cape Cod. Candles are produced there. Barnstable is made up of seven villages, including Hyannis. Points of interest include the home of the Revolutionary War patriot James Otis, in West Barnstable, the John F. Kennedy Memorial, in Hyannis, and several 18th-century buildings. From colonial times until the middle of the 19th cent. Barnstable had a prosperous coastal and overseas shipping trade.

Barnstaple (barn'stəpəl), municipal borough (1971 pop 17,342), Devonshire, SW England, on the Taw River estuary. The river is spanned there by a 16-arch stone bridge dating from the 13th cent. Barnstaple is the chief marketing town of North Devon and a tourist center. Gloves, pottery, bricks, tiles, furniture, and lace are manufactured. Barnstaple once carried on a large woolen export trade with the American colonies. John Gay, famous for *The Beggar's Opera*, was born in Barnstaple.

Barnum, Phineas Taylor, 1810-91, American showman, b Bethel, Conn. As a youth Barnum worked at diverse sales jobs and managed a boarding house. He made his first sensation in 1835 when he bought and exhibited Joice Heth, a slave who claimed she was 161 years old (she was about 80) and had been the nurse of George Washington. In 1842 he opened the American Museum in New York City and immediately became famous for his extravagant advertising and his exhibits of freaks. Among his great attractions were the Fiji Mermaid (formed by joining the upper half of a monkey to the stuffed lower half of a fish), "General TOM THUMB," who was viewed by over 20 million people, and the original Siamese Twins, Chang and Eng. In 1850, Barnum managed the American tour of the Swedish singer Jenny LIND and, with his talent for publicity, made it a huge financial success for her and for himself. In 1855 he retired from show business, he served as mayor of Bridgeport, Conn., and in the Connecticut legislature. Driven into bankruptcy by unwise business ventures, he reopened the American Museum and then organized his famous circus, "The Greatest Show on Earth," which opened in Brooklyn, N.Y., in 1871. In 1881 he merged with his most successful competitor, James A. Bailey, and under the name Barnum and Bailey the circus continued for a generation after Barnum's death. The stellar attraction of the circus was Jumbo, the 6½-ton African elephant that Barnum purchased from the London Zoo despite the furious protests of English elephant fanciers, including Queen Victoria. The elephant was stuffed and is on exhibit at the Barnum Museum of Natural History (est 1883 at Tufts Univ in honor of Barnum, who was one of its trustees). His autobiography was published in 1855 and went through many editions. He also wrote *Humbugs of the World* (1865), *Struggles and Triumphs* (1869), and *Money Getting* (1883). See his autobiography, ed by W R Browne (1927, repr 1961), biographies by Raymond Fitzsimons (1970) and Neil Harris (1973).

Barocchio, Giacomo. see VIGNOLA, GIACOMO DA

Barocci or Baroccio, Federico (fādārē'gō barōt'-chē, -chō), c 1530-1612, Italian painter, b Urbino, where he was continually employed throughout his life. In the 1550s he traveled to Rome and was influenced by the art of Raphael, Michelangelo, and Taddeo Zuccaro. His mature works reflect baroque tendencies. Noted for his skill as a portraitist, he also executed a small number of important engravings. Among his more notable achievements are *Saint Sebastian* (c 1557, cathedral, Urbino), frescoes (1561-63) in the Vatican, and *The Last Supper* (1592-99, Santa Maria sopra Minerva, Rome). A large collection of his drawings is in the Uffizi. See monograph by Harald Olsen (repr, 1962).

Baroda (barō'dā), former native state, now incorporated in Gujarat state, W central India. It is a prosperous area on a fertile alluvial plain. Its chief city, *Baroda* (1971 pop 467,422), a district administrative center on the Vishvamitri River, has cotton-textile, chemical, and metal industries, an oil refinery, and a fertilizer plant. There are several colleges.

barograph, instrument used to make a continuous recording of atmospheric pressure. The pressure-sensitive element, a partially evacuated metal cylinder, is linked to a pen arm in such a way that the vertical displacement of the pen is proportional to the changes in the atmospheric pressure. The pen traces a record of pressure versus time on a chart,

which is mounted on a drum rotated by a clockwork. Each chart usually provides one week's record. See **BAROMETER**.

Baroja y Nessi, Pio (pě'ō bārō'hā ē nās'sē), 1879–1956, Spanish novelist from the Basque Provinces, member of the group of writers known as the **GENERATION OF '98**. He left medicine to devote himself to literature and came to be the most popular Spanish novelist of the 20th cent. Of his several trilogies, the most widely read abroad concerns the underworld of Madrid—*La lucha por la vida* [the struggle for existence] (1904), comprising *La busca* (tr. *The Quest*, 1922), *Mala hierba* (tr. *Weeds*, 1923), and *Aurora roja* (tr. *Red Dawn*, 1924). The longest cycle (22 vol.) has a historical background and is known as *Memorias de un hombre de accion* [memoirs of a man of action]. Baroja's novels are forceful though loosely constructed, characterized by a spare yet lyrical style and an undercurrent of social discontent.

barometer (bārōm'ētar), instrument for measuring atmospheric pressure. It was invented in 1643 by the Italian scientist Evangelista Torricelli, who used a column of water in a tube 34 ft (10.4 m) long. This inconvenient water column was soon replaced by

height of his power only to return (1720) in perfect form to act with Adrienne **LECOUVREUR**. He wrote several plays, of which *L'Homme a bonnes fortunes* (1686) was the most popular.

Baron, Salo Wittmayer (sa'lō vīt'miār barōn'), 1895–, Jewish historian and educator, b. Galicia. He was taken as a child to Vienna, where he later studied at the university, earning doctorates in philosophy (1917), political science (1922), and law (1923), and where he was ordained at the Jewish Theological Seminary (1920). He taught history at the Jewish Teachers College in Vienna (1919–26) before going to the United States to teach at the Jewish Institute of Religion (1927–30). From 1930 to 1963 he taught at Columbia, holding the first professorship of Jewish history in an American university. Among his works are *The Jewish Community* (3 vol., 1942), *Modern Nationalism and Religion* (1947), and *Jews of the United States, 1790–1840: A Documentary History* (ed. with J. L. Blau, 3 vol., 1963). In his monumental and as yet uncompleted *A Social and Religious History of the Jews* (Vol. 1–XV, 2d ed., 1952–73), Baron stresses the social history of the Jewish people in the wider context of world history rather than their history as seen through the lives of its most prominent figures.

Baronius, Caesar (bārō'nēas), 1538–1607, Italian ecclesiastical historian, cardinal of the Roman Catholic Church. He went to Rome c. 1557 and soon came under the tutelage of St. Philip Neri. His chief work is *Annales ecclesiastici a Christi nato ad annum 1198* [ecclesiastical annals from the Nativity to 1198]. It is erudite and complete, revealing the author as a remarkably honest scholar, although it was directed against the Protestant arguments, Protestants as well as Catholics concede that Baronius never suppressed a fact. He was a strong defender of the Holy See. He was largely responsible for the Roman martyrology. Baronius became superior of the Oratory (1593) on St. Philip Neri's death, cardinal (1596), and librarian of the Vatican, he was confessor to Pope Clement VIII. It is said that only the hostility of the Spanish, aroused when Baronius questioned the authenticity of their claims to Sicily, prevented Baronius from becoming pope.

Barons' War, in English history, war of 1263–67 between King HENRY III and his barons. In 1261, Henry III renounced the PROVISIONS OF OXFORD (1258) and the Provisions of Westminster (1259), which had vested considerable power in a council of barons, and reasserted his right to appoint counselors. The barons led by Simon de MONTFORT, earl of Leicester, finally resorted to arms in 1263 and forced the king to reaffirm his adherence to the Provisions. In 1264 a decision in favor of the crown by Louis IX of France as arbitrator led to a renewal of war, but Montfort defeated Henry's forces in the battle of Lewes, and the king once again submitted to government by council. Early in 1265, Montfort summoned his famous representative PARLIAMENT to strengthen his position, which was threatened by the possibility of an invasion by Henry's adherents abroad. The invasion did not take place, but an uprising against Montfort of the Welsh "Marchers" (Englishmen along the Welsh border) led to his defeat by the king's son (later EDWARD I) at Evesham. Montfort was killed in the battle, but some baronial resistance continued until 1267. The barons had failed to establish their own control over the crown, but they had helped prepare the way for the constitutional developments of the reign of Edward I. See R. F. Treharne, *The Baronial Plan of Reform* (1932, repr. 1972), F. M. Powicke, *King Henry III and the Lord Edward* (1947).

baroque (bārōk'), in art and architecture, style developed in Europe, England, and Latin America during the 17th and early 18th cent. Although the restrained and classical works created by most French and English artists look very different from the exuberant style favored elsewhere, both trends share to varying degrees certain characteristics. Essential among these is an emphasis on unity, a balance achieved among diverse parts. Through the technical brilliance of its artists, the baroque revealed a remarkable harmony of media wherein architecture took on the fluid, plastic aspects of sculpture and both buildings and sculpture employed the CHIAROSCURO effects of painting. During the baroque there was also in art an extraordinary emphasis on grand scale or the superhuman quality of massive figures. Works of the baroque age engage the beholder in physical and emotional participation. In painting and sculpture this was achieved by means of highly developed ILLUSIONISM. This device served to enhance an unequalled sense of drama, energy, and movement of forms. These characteristics are

clearly embodied in the works of three of the giants of the baroque, Pietro da Cortona, Bernini, and Rubens. In architecture the interest in size, impressiveness, and the overwhelming ordering of a dignified environment is most clearly seen at Versailles or in Bernini's elliptical piazza in front of St. Peter's in Rome. Sweeping and multiple rhythms abound in the art of Italy, Germany, Austria, Spain, and Latin America. Buildings of the period are composed of great curving forms with undulating facades or ground plans of unprecedented complexity, as in the churches of Borromini and Wren. Some are created with intricate views through layers of architecture and alternations of light and shade, as in the buildings of Guarini and Hardouin-Mansart. The movement of water was exploited, and fountains, hitherto thin streams, became exciting forms, issuing forth joyous geysers and cascades. The effects of deep space interested many artists including Ruisdael, Guercino, Bacciocci, Pozzo, and Claude Lorrain. In their paintings space is deepened in interior scenes by representing long files of rooms, with extended views outside through open doors or windows, as in the works of Velázquez and de Hooch. Dramatic effects are achieved both with highly contrasting areas of light and shadow in the works of Caravaggio, Zurbaran, Georges de la Tour, and Rembrandt and with masses defined by color in either the clear calm tones of Vermeer and Philippe de Champaigne or the warm and shimmering colors of Rubens, Claude Lorrain, and Pietro da Cortona. In no other period is light so important for suggesting supernatural illusions in painting and sculpture. Light effects are exploited in architecture to heighten sculptural qualities, most conspicuously in Venetian churches and in buildings in Spain and Portugal and their colonies. Baroque sculptors felt free to combine different materials within a single work and often used one material to simulate another. Bernini's St. Theresa succumbs on a dull-finished marble cloud in an alabaster and marble niche in which bronze rays descend from a hidden source of light. Many figures of the mourning Virgin in Spain and Latin America cry glass tears. A fascination with emotional states permeates baroque art. The Carracci, Poussin, and Georges de la Tour portrayed restrained feeling, in accordance with the academic principles of dignity and decorum, after 1625, others, including Bernini, Puget, Rembrandt, Montañes, and Cano, depicted religious ecstasy, anguish, or individual psychology. Although history painting, allegories, and portraits were still considered the most noble subjects, landscape painting was practiced by Annibale Carracci, Ruisdael, Hobbema, Rembrandt, Claude Lorrain, and Rosa. Genre scenes and still life became the major preoccupation of van Laer, Steen, de Hooch, Terborch, Vermeer, and the Le Nain family. Caravaggio and his early followers are especially significant for their naturalistic treatment of unidealized, ordinary people. For convenience the baroque period is divided into three parts.

Early Baroque, c. 1590–c. 1625 The early style was preeminent in Rome where the Carracci and Caravaggio diverged decisively from the preceding late-mannerist artificialities. The Carracci painted heroic figures, modeled from nature and classical antiquity. Caravaggio's dramatic narratives were implemented by a forceful, economic style, remarkable for the use of chiaroscuro. The Carracci school anticipated the opulent excitement of works by Lanfranco and Guercino as well as the markedly classical works of Domenichino and Reni. Caravaggio's followers, including Ribera, Terbrugghen, and Vouet, spread interest in realism and dramatic light throughout Europe. Rubens's early work reveals profound Italian influence. Bernini's early mannerism opened out to express a new vigor, freeing him to render with stunning precision realistic details and textures.

High Baroque, c. 1625–c. 1660 Italian art was dominated by Bernini, Borromini, and Pietro da Cortona, exemplifying the exuberant trends, while Poussin, Claude Lorrain, Sacchi, and Duquesnoy represented the classicist trends. This period produced an astonishing number and variety of artists of the first rank, including Rembrandt, Rubens, Velázquez, Vermeer, Hals, Van Dyck, Ruisdael, and Zurbaran.

Late Baroque, c. 1660–c. 1725 In Italy and Spain after c. 1660, sculptors and painters, e.g., Murillo and Preti, used lighter, softer colors and replaced the clearly organized forms and volumes of the high baroque with flickering patterns and figures. Italy lost its position of artistic dominance to France, and gradually the massive forms of the baroque yielded to the lighter, more graceful outlines of the ROCCO. See articles about individual artists, e.g., **BERNINI**. See Ru-

Aneroid barometer

mercury, which is denser than water and requires a tube about 3 ft (0.9 m) long. The mercurial barometer consists of a glass tube, sealed at one end and filled with pure mercury. After being heated to expel the air, it is inverted in a small cup of mercury called the cistern. The mercury in the tube sinks slightly, creating above it a vacuum (the Torricellian vacuum). Atmospheric pressure on the surface of the mercury in the cistern supports the column in the tube, which varies in height with variations in atmospheric pressure and hence with changes in elevation, generally decreasing with increases in height above sea level. Standard sea-level pressure is 14.7 lb per sq in. (1,030 grams per sq cm), which is equivalent to a column of mercury 29.92 in. (760 mm) in height; the decrease with elevation is approximately 1 in. (2.5 cm) for every 900 ft (270 m) of ascent. In weather forecasting, barometric readings are plotted on base maps so that analyses of weather-producing pressure systems can be made. At a given location a storm is generally anticipated when the barometer is falling rapidly; when the barometer is rising, fair weather may usually be expected. The aneroid barometer is a metallic box so made that when the air has been partially removed from the box the surface depresses or expands with variation of air pressure on it; this motion is transmitted by a train of levers to a pointer which shows the pressure on a graduated scale. A **BAROGRAPH** is a self-recording aneroid barometer in which a pen traces a continuous pressure record on a cylindrical chart which revolves by clockwork. An **ALTIMETER**, an instrument for measuring altitude, is often an aneroid barometer calibrated to indicate altitude.

Baron or Boyron, Michel (mēshēl' bārōn' or bwārōn'), 1653–1729, one of the first great French actors. A protégé of Molière, he acted at the Hôtel de Bourgogne and at the Comédie Française. He brought a naturalness to the bombastic acting style established by Montfleury. In 1691 he retired at the

great comedienues of her day, she appeared under the management of the Frohmans and acted with Lawrence Barrett and Edwin Booth. The Barrymores' older son, **Lionel Barrymore**, 1878-1954, b. Philadelphia, first appeared in minor roles in the company of Louisa Lane Drew, his grandmother, and John Drew, his uncle. A much admired character actor, he is best remembered for his work in films, e.g., *Dinner at Eight* (1933), *You Can't Take It with You* (1938), and in 15 Dr. Kildare films. He received an Academy Award in 1931 for his performance in *A Free Soul*. His portrayal of Scrooge in Dickens's *Christmas Carol* won him a wide radio audience from 1936. In later life, crippled and confined to a wheelchair, he became known for his portrayals on radio. A man who loved art and music more than the theater, he composed over 100 unpublished musical pieces and was a member of the American Society of Etchers. He also wrote a novel, *Mr. Cantonwine: a Moral Tale* (1953). See his autobiography, *We Barrymores* (1951). His sister, **Ethel Barrymore**, 1879-1959, b. Philadelphia, also began her career under the auspices of her relatives. After an engagement with Henry Irving in London she returned to New York City, where, under the Frohman banner, she appeared in Clyde Fitch's *Captain Jinks of the Horse Marines* (1901) and achieved instant success. Although her original desire was to become a concert pianist, she made the theater her home and gained a reputation as an actress of dignity and warmth. Her most endearing portrayal was in *The Corn Is Green* (1940-42). Her work in films was limited, although in 1944 she won an Academy Award for best supporting actress in *None But the Lonely Heart*. A theater bearing her name was opened in 1928 in New York City. See her autobiography, *Memories* (1955). Their younger brother, **John Barrymore**, 1882-1942, b. Philadelphia, tried his hand at painting and cartooning before turning to the stage. After his debut in 1903, he became a matinee idol to millions of playgoers and movie fans because of his dashing nature and good looks. His portrayal of Hamlet in 1922 electrified the public. After 1912 most of his work was confined to films and radio, his last appearance, in 1939, was on the stage in *My Dear Children*, a pathetic burlesque of his baroque private life. He was four times married, his tempestuous personality passed on to two of his four children, Diana and John, Jr. (John Drew Barrymore), who also became actors. Diana died at the age of 38, shortly after the publication of her autobiographical *Too Much Too Soon* (1958). See John Barrymore's autobiography, *Confessions of an Actor* (1926), biography by Alma Powers-Waters (1941), Gene Fowler, *Good Night, Sweet Prince* (1943). Lionel, Ethel, and John Barrymore appeared together only once, in the movie *Rasputin and the Empress* (1932). *The Royal Family* (1934), a play by Edna Ferber and George S. Kaufman, is based, to some extent, on the Barrymore family. See Hollis Alpert, *The Barrymores* (1964).

Barsabas (bar'sabās), surname of JOSEPH BARSABAS and JUDAS BARSABAS.

Barstow, city (1970 pop. 17,442), San Bernardino co., SE Calif., on the dry Mojave River, founded in the 1880s as a silver-mining town, inc. 1947. Railroad shops, the Goldstone interplanetary tracking station, and nearby U.S. marine corps supply centers are major employers. Barstow is an outfitting point for expeditions into Death Valley. A junior college is there.

Bart, Jean (zhaN bar), 1650-1702, French naval hero, b. Dunkirk. Of a seafaring family, he enlisted in the Dutch navy but entered French service as a privateer at the outbreak of the Dutch War (1672). In 1686 he was commissioned a navy captain. As a reward for his spectacular exploits, particularly in the War of the Grand Alliance, he was ennobled (1694) and made a rear admiral (1696) by King Louis XIV.

Bartas, Guillaume de Salluste Du. see DU BARTAS.

Barth, Heinrich (hīn'rikh bart), 1821-65, German explorer in British service. After traveling (1845-47) through the Levant and N Africa, he entered the service of the British government. He joined (1849) an expedition to the W. Sudan. He visited the Fulani and the Hausa and discovered the upper Benue River. After exploring the Chad region he turned westward and made his way through Kano and Sokoto to Gwandu, in N. Nigeria. Barth's interest in the Islamic culture of W. Africa led him on to Timbuktu where he stayed eight months before returning (1855) to England. His *Travels and Discoveries in North and Central Africa* (5 vol., 1857-58, in English and German) is a masterpiece of narrative and geographic research.

Barth, John, 1930-, American novelist, b. Cambridge, Md., grad. Johns Hopkins (B.A. 1951, M.A. 1952). He has been professor of English at the State University of New York at Buffalo since 1965. Barth's novels, experimental and often comic, reflect his anger and despair with the ludicrous, meaningless world of the 20th cent. He has a particular genius for parody. *The Sot-Weed Factor* (1962) is a deft parody of historical novels. *Giles Goat-Boy* (1966) is a massive satirical allegory in which the world is a large university. Barth's other works include the novels *The Floating Opera* (1956) and *The End of the Road* (1958), and *Chimera* (1972), three novellas.

Barth, Karl, 1886-1968, Swiss Protestant theologian, one of the leading thinkers of 20th-century Protestantism. He taught in Germany, where he early opposed the Nazi regime. In 1935 when he refused to take the oath of allegiance to Adolf Hitler, he was retired from his position at the Univ. of Bonn and deported to Switzerland. There he continued to expound his views, known as dialectical theology or theology of the word. Barth's primary object was to lead theology back to the principles of the Reformation. For Barth, modern theology with its assent to science, immanent philosophy, and general culture and with its stress on feeling, was marked by indifference to the word of God and to the revelation of God in Jesus Christ, which he thought should be the central concern of theology. In the confrontation between man and God, which was Barth's fundamental concern, the word of God and His revelation in Christ is His only means of revealing Himself to humans, he argued that people must listen in an attitude of awe, trust, and obedience. This theological position is also related to those of Emil Brunner, Friedrich Gogarten, and Rudolf Bultmann, although Barth's position is the more orthodox. Barth's writings include *Der Römerbrief* (1918, tr. *The Epistle to the Romans*, 1933), *Das Wort Gottes und die Theologie* (1924, tr. *The Word of God and the Word of Man*, 1928), *Credo* (1935, tr. 1936), and *Die Kirchliche Dogmatik* (Vol. I-IV, 1932-1962, tr. *Church Dogmatics*, Vol. I-IV, 1936-62). See Wilhelm Pauck, *Karl Barth, Prophet of a New Christianity?* (1931), Herbert Hartwell, *The Theology of Karl Barth: An Introduction* (1965), J. F. Andrews, comp., *Karl Barth* (1969), J. S. Bowden, *Karl Barth* (1971), R. E. Willis, *The Ethics of Karl Barth* (1971).

Barthélemy, Auguste Marseille (ögust' marsä'ya bartäl'mē'), 1796-1867, French poet. With his friend Joseph Mery he wrote several brilliant and popular political satires, including *La Villefiade* (1827), *Napoleon en Égypte* (1828), and *Le Fils de l'homme* (1829), a poem on Napoleon II, for which Barthélemy was briefly imprisoned. A political chameleon, he celebrated the Revolution of 1830 in *L'insurrection*, only to attack the July Monarchy in his short-lived (1831-32) journal *Némésis*.

Barthélemy, François, marquis de, 1747?-1830, French statesman. While minister to Switzerland, he negotiated the Treaties of Basel (1795), which took Prussia and Spain out of the French Revolutionary Wars. Elected to the Directory (1797), he was arrested in the coup d'état of 18 Fructidor (Sept. 4, 1797) and was deported to French Guiana. He soon escaped, returned to France, and supported Napoleon. In 1814 he went over to the Bourbons, who raised him to the peerage.

Barthelme, Donald (bar'thēlm), 1931-, American writer, b. Philadelphia. He has been ranked by critics with those modern writers who, like Kafka, have found the actual world so unreal that traditional modes of fiction can no longer reflect or describe it. Hence Barthelme uses language and symbol to fit his own private vision of an absurd reality. His stories are replete with parodies of advertising jargon and hip talk, counterfeit footnotes, typographical extravagances, telegraphic sketches, and interviews. Barthelme's works include the novel *Snow White* (1967), the short-story collections, *Unspeakeable Practices*, *Unnatural Acts* (1968), *City Life* (1970), *Sadness* (1972), and a collection of non-fiction pieces, *Guilty Pleasures* (1974).

Bartholdi, Frédéric Auguste (frädär'ek' ögust' bartöldē'), 1834-1904, French sculptor, b. Colmar, Alsace. He studied painting under Ary Scheffer but turned to sculpture. Among his many works is a colossal group, *Switzerland Succoring Strasbourg*, presented by France to Switzerland and now at Basel. His monuments and statues include those of Martin Schongauer at Colmar, Vergeretorix at Clermont-Ferrand, and Lafayette and Washington at Paris Union Square, New York City, has his sculpture of Lafayette. Bartholdi's colossal *Lion of Belfort* commemorates the heroic defense of Belfort in 1870-71

and is carved from the rock flanking the citadel. His best-known work is *Liberty Enlightening the World* (see LIBERTY, STATUE OF), erected on Bedloe's Island, New York Bay, and dedicated in 1886.

Bartholin (bart'ölēn), renowned Scandinavian family. **Kaspar Bartholin**, 1585-1629, b. Sweden, was a Danish physician. He was professor of medicine and later of theology at the Univ. of Copenhagen and author of a textbook of anatomy, *Institutiones anatomicae* (1611). His son, **Thomas Bartholin**, 1616-80, physician, naturalist, and philologist, was professor of mathematics and of anatomy at the Univ. of Copenhagen. He was the first to describe the entire lymphatic system. **Kaspar Bartholin**, 1655-1738, a son of Thomas Bartholin, also a professor at the Univ. of Copenhagen, is credited with discovering the glands of Bartholin (a pair of glands of the vagina) and an accessory duct of the sublingual salivary gland.

Bartholomaeus Anglicus: see BARTHOLOMEW DE GLANVILLE.

Bartholomew, Saint (bart'höl'ämēōō), one of the Twelve Disciples, usually identified with NATHANAE. Nathanael is a given name, Bartholomew an Aramaic patronymic meaning "son of Talmai." Mat. 10:3, Mark 3:18, Luke 6:14, Acts 1:13. Tradition makes N. India his missionary field and Armenia the place of his martyrdom, either by faying, beheading, or crucifixion. Feast Aug. 24.

Bartholomew de Glanville or Bartholomaeus Anglicus (bart'höl'ämē'ās āng'glīkōs), fl. c. 1250, English Friar Minor. He taught theology at Paris, and he was the author of *De proprietatibus rerum* (first pub. c. 1470), a famous medieval encyclopedia of natural history.

Barthou, Louis (lwē bartōō'), 1862-1934, French cabinet minister and man of letters. He held portfolios in numerous cabinets after 1894 and was briefly premier in July-August, 1913. His government was responsible for the law that increased military service from two to three years. In 1934 he became foreign minister in the cabinet of Gaston Doumergue. Barthou sought to strengthen the French position in Eastern Europe. He was welcoming King Alexander of Yugoslavia at Marseilles when a Croatian nationalist assassinated (Oct., 1934) both the king and Barthou. A man of culture and learning, Barthou was the author of several biographies, notably one of Victor Hugo (tr. 1919). See Allen Roberts, *The Turning Point* (1970).

Bartimaeus (bartimē'ās), blind man to whom Jesus restored sight. Mat. 20:29-34, Mark 10:46-52, Luke 18:35-43.

Bartlesville, city (1970 pop. 29,683), seat of Washington co., NE Okla., on the Caney River, inc. 1897. It is a distribution center for a ranching and rich oil-producing area. Petroleum production, marketing, and research have been major enterprises since the first well was tapped in 1897. Of interest are the Price Tower, a concrete and glass building with cantilevered floors, designed by Frank Lloyd Wright, and the Nellie Johnstone oil well, a replica of the first commercial oil well in the state. A U.S. Bureau of Mines energy research center is in the city.

Bartlett, John, 1820-1905, American compiler and publisher, b. Plymouth, Mass. While he worked in his university book store in Cambridge, he compiled the invaluable *Familiar Quotations* (1855), which ran through nine editions in his lifetime and has been revised and enlarged several times since. Bartlett joined the publishing firm of Little, Brown & Company in 1863 and in 1878 became senior partner. His Shakespeare concordance (1894) is still a standard work.

Bartlett, Josiah, 1729-95, political leader in the American Revolution, signer of the Declaration of Independence, b. Amesbury, Mass. He practiced medicine in Kingston, N.H., and was a delegate to the provincial assembly (1765-75) and the provincial congress (1775) before serving in the Continental Congress (1775-76, 1778). He returned to New Hampshire, held judicial posts, advocated (1788) the adoption of the Federal Constitution, and was chief executive of the state (1790-94). Bartlett, N.H., is named for him.

Bartlett, Robert Abram, 1875-1946, American arctic explorer, b. Briggs, near St. John's, N.F., Canada. He accompanied Robert E. Peary on the expeditions of 1897-98 and 1905-6, and in 1908-9 he accompanied Peary to lat. 87° 47' N and was the last white man from whom Peary parted to make his dash for the North Pole. Bartlett commanded the *Karluk* on the expedition headed by Vilhjalmur Stefansson in 1913-14. The vessel was frozen in ice near Point Barrow and drifted until it was crushed by ice near Wrangel Island. Bartlett crossed to Siberia for help.

and returned to rescue 13 members of the party. Later he commanded on many arctic voyages of his own, making an annual cruise from 1925 to 1941. His exploring and scientific work in Greenland was especially notable, and he was widely known and admired. See his *Log of Bob Bartlett* (1928), biography by Paul Sarnoff (1966).

Bartlett, Samuel Colcord, 1817-98, American Congregational clergyman and educator, b. Salisbury, N.H., grad. Dartmouth College, 1836. He studied at Andover Theological Seminary and was ordained in 1843. He was professor (1858-77) of biblical literature and sacred theology at the Chicago Theological Seminary and from 1877 to 1892 was president of Dartmouth.

Bartlett, William Henry, 1800-1854, English painter and illustrator. After four visits to the United States, Bartlett illustrated a book, *American Scenery* (1840), with panoramic vistas of the American landscape. During his travels, he also executed drawings of Jerusalem for a book about the Holy Land. See study by A. M. Ross (1973).

Bartók, Béla (bā'la bār'tök, Hung. bā'lo bōr'tök), 1881-1945, Hungarian composer and collector of folk music. He studied (1899-1903) and later taught piano at the Royal Academy, Budapest. In 1905 he and Zoltán Kodály began to collect folk music of Eastern Europe, and throughout his life Bartók devoted much attention to folk music of varied origin. As a composer he gained his first success with his mime play *The Wooden Prince* (1914-16). An opera, *Duke Bluebeard's Castle* (1911), and a ballet, *The Miraculous Mandarin* (1919), also gained notice. He became better known, however, for his compositions for piano, for violin, and for orchestra. Among his piano works are a set of progressive studies called *Mikrokosmos* (1926-27) and a concerto for two pianos and orchestra (1938), which he performed with his second wife, Ditta, in New York in 1943. Bartók's important orchestral works include *Music for Strings, Percussion and Celesta* (1936) and *Concerto for Orchestra* (1943). Utilizing in varying degrees folk elements, atonality, and traditional techniques, Bartók achieved an original modern style, which has had a great influence on 20th-century music. In 1940 he emigrated to the United States and was commissioned by Columbia Univ. to transcribe a large collection of Yugoslav folk melodies. He spent his last years in poverty and neglect, but after his death his fame grew steadily. Among his studies of folk music that have been published in English are *The Hungarian Folk Song* (tr. 1931) and *Serbo-Croatian Folk Songs* (with A. B. Lord, 1951). See his letters, ed. by Janos Demeny (1971), biographies by Halsey Stevens (rev. ed. 1964), Agatha Fassett (1958, repr. 1971), and Josef Ujfalussy (tr. 1972), studies by Emil Haraszti (1938) and Serge Moureaux (tr. 1953).

Bartolini, Lorenzo (lōrēn'tsō bār'tōlē'nē), 1777-1850, Italian neoclassical sculptor, studied in Florence and Paris. His most imposing creation is the Niccolò Demidoff monument in Florence. Napoleon commissioned many works from him. Among these was a colossal portrait bust of the emperor (Bastia), which is typical of Bartolini's prodigious output in this field.

Bartolommeo di Pagholo del Fattorino, Fra (fra bār'tōlōmē'ō dē pa'gōlō dēl fat'tōrē'nō), 1475-1517, Italian painter, also called Baccio della Porta. Under the influence of Savonarola, he joined (1500) the Dominican order. He abandoned art for a while, but resumed practice in 1504, becoming the leading Florentine master for a number of years. He visited Venice (1508) and Rome (1514). Influenced by the art of Raphael, he adapted the classic equilibrium of composition and harmony of color typical of the High Renaissance. He executed a number of paintings together with Albertinelli. Among his works are *Annunciation* (cathedral, Volterra), *Vision of St. Bernard* (Florence Acad.), *God the Father Adored by Mary Magdalen and St. Catherine* (Lucca), two panels of the *Marriage of St. Catherine* (Louvre and Pitti Palace, Florence).

Bartolozzi, Francesco (frānchēs'kō bār'tōlōzē'sē), 1727-1815, Italian engraver. In Florence he studied drawing and painting and formed a lifelong friendship with Cipriani, most of whose plates he later engraved. In 1764 he went to London, where he became one of the original members of the Royal Academy. He was responsible for the vogue in England of the stipple technique of engraving, which greatly improved methods of reproduction.

Barton, Benjamin Smith, 1766-1815, American physician and botanist, b. Lancaster, Pa., studied at the College of Philadelphia, at Edinburgh, and at

Gottingen (M.D., 1789). He taught at the College of Philadelphia and, after it merged with the Univ. of Pennsylvania, succeeded Benjamin Rush. Barton's chief works were *Elements of Botany* (1803), the first botanical textbook published in the United States, and *Collections for an Essay toward a Materia Medica of the United States* (1798-1804).

Barton, Clara, 1821-1912, American humanitarian, organizer of the American Red Cross, b. North Oxford (now Oxford), Mass. She taught school (1839-54) and clerked in the U.S. Patent Office before the outbreak of the Civil War. She then established a service of supplies for soldiers and nursed in army camps and on the battlefields. She was called the Angel of the Battlefield. In 1865 President Lincoln appointed her to search for missing prisoners; the records she compiled also served to identify thousands of the dead at Andersonville Prison. In Europe for a conference at the outbreak of the Franco-Prussian War (1870), she went to work behind the German lines for the International Red Cross. She returned to the United States in 1873 and in 1881 organized the American National Red Cross, which she headed until 1904. She worked for the President's signature to the Geneva treaty for the care of war wounded (1882) and emphasized Red Cross work in catastrophes other than war. Among her writings are several books on the Red Cross. See biographies by Ishbel Ross (1956) and W. E. Barton (1969).

Barton, Sir Edmund, 1849-1920, Australian jurist and statesman. He held high political offices in New South Wales, was a leader in the movement for Australian federation, and became the first prime minister of the Commonwealth of Australia in 1901. He was knighted in 1902 and the next year was appointed justice of the High Court.

Barton, Elizabeth, 1506?-1534, English prophet, called the Maid of Kent or the Nun of Kent. She was a domestic servant. After a period of illness, she began (c.1525) to go into trances and to utter prophecies, which were claimed to be of divine origin. She entered a convent in Canterbury, and, under the influence of Edward Bocking, her prophecies became increasingly dangerous politically. In particular she foretold dire consequences to King Henry VIII should he divorce Katharine of Aragon and marry Anne Boleyn. Bocking probably hoped to stir an uprising against the king, but his protégée was arrested (1533) and brought to confess herself an impostor. She and her accomplices were put to death. See biography by Alan Neame (1971), study by E. J. Devereux (1966).

Bartow, city (1970 pop. 12,891), seat of Polk co., central Fla., inc. 1882. The economy is based on the production of phosphate and the raising of citrus fruit and cattle. Bartow was established in 1853 on the site of a fort built in the Seminole War (see SEMINOLE INDIANS).

Bartram, John, 1699-1777, pioneer American botanist, b. near Darby, Pa. He had no formal schooling but possessed a keen mind and a great interest in plants. In 1728 he purchased land along the banks of the Schuylkill River near Philadelphia and planted there the first botanical garden in the United States; it still exists as a part of the Philadelphia park system. He made journeys in the Alleghenies and the Catskills and in the Carolinas and Florida in search of new plants. Among his correspondents were nearly all the great European botanists of the day. By exchanging specimens with them, Bartram introduced many American plants into Europe and established some European species in the New World. To his home and gardens came the famous Americans of his day and many distinguished European travelers. His *Observations* (1751) records a trip to Lake Ontario, and the journal of his Florida trip (1765-66) was published in William Stork's *Description of East Florida* (3d ed. 1769). His name is commemorated in a genus of mosses, *Bartramia*. See Ernest Earnest, *John and William Bartram* (1940) and Ann Sutton, *Exploring with the Bartrams* (1963).

Bartram, William, 1739-1823, American naturalist, b. Philadelphia, son of John Bartram. He is known chiefly for his *Travels* (1791), in which he describes his journey (1773-77) through the Carolinas, Georgia, and Florida and the Indian country to the west. His book vividly portrays the plants and wildlife of the country and lists 215 native birds, the most complete list of that time. Bartram's influence is seen in the works of Wordsworth, Coleridge, Chateaubriand, and other writers who found his book an unexcelled source of descriptions of the American wilderness and its inhabitants.

Bartsch, Adam von (Johann Adam Bernhard von Bartsch) (a'dam fən barch), 1757-1821, Austrian engraver, etcher, and writer. His critical catalogue, *Le Peintre Graveur* (21 vol., 1803-21), is still authoritative. Bartsch executed over 500 plates from his own designs and from those of others.

Baruch (bā'rāk) 1. Jeremiah's scribe, for whom the book of BARUCH is named. 2. Judahite Neh. 11:5. 3. Builder of the wall Neh. 3:20. 4. Signer of the Covenant Neh. 11:5.

Baruch, Bernard Mannes (bār'ōk'), 1870-1965, U.S. financier and government adviser, b. Camden, S.C. He grew rich through stock-market speculation before he was 30. In World War I he advised on national defense and was (1918-19) chairman of the War Industries Board. In World War II he became (1942) special adviser to James F. Byrnes and wrote the report (1943) on post-war conversion. As U.S. Representative to the U.N. Atomic Energy Commission (1946) he formulated plans for international control of atomic energy. See his autobiography *Baruch* (2 vol., 1957-60), biography by W. L. White (1950, repr. 1970).

Baruch, biblical book included in the Old Testament of the Western canon and Septuagint, but not included in the Hebrew Bible and placed in the Apocrypha in the Authorized Version. It is named for a Jewish prince Baruch (fl. 600 B.C.), faithful friend of JEREMIAH the prophet and editor of his book Jer. 32:12-16, 36, 43:3, 45. Baruch contains the following parts: a message from the exiled Jews to the Jews still at home (1-3:8), including a prayer for Palestinian Jews to use, confessing sin and asking divine mercy, an exhortation to wisdom (3:9-4:4), including a famous messianic allusion (3:37), a consolation of Jerusalem (4:5-5:9) containing a lament, finally chapter 6, which is a letter of Jeremiah (sometimes called the Epistle of Jeremy) warning the exiles against idolatry. The extant ancient versions of Baruch are in Greek, but Hebrew was probably the original language. Critics disagree greatly over the dates of Baruch, some see it as a collection of works by several authors. For the Apocalypse of Baruch, see PSEUDEPIGRAPHIA. For bibliography, see APOCRYPHA.

Baruch College, division of the City University of New York, coeducational, founded 1919 as the school of business administration of City College. Its name was changed to the Bernard M. Baruch School of Business and Public Administration in 1953. In 1968 it became a separate liberal arts college within the City University of New York (see NEW YORK, CITY UNIVERSITY OF).

Bary, Heinrich Anton de: see DE BARY.

Barye, Antoine Louis (āntwān' luvē bārē'), 1796-1875, French animal sculptor. Son of a Parisian goldsmith, he followed his father's trade as a youth. In 1832 he exhibited at the Salon his *Lion and Serpent* (Tuileries), which won him recognition, but only late in life did he achieve fame and free himself from debt. His simple, romantic, and forceful studies of animals or groups of animals were often small and designed for commercial reproduction in bronze. They enjoyed an international popularity and are still highly prized. Well-known examples of his work are *Tiger and Gavia*, *Jaguar and Hare*, *The-seus and the Minotaur* (all Louvre), and *Centaur and Lapith* (Tuileries). He is also represented in the Metropolitan Museum and in the Brooklyn Museum. See Charles S. Smith, *Barbizon Days* (1902, repr. 1969).

baryon (bār'ēōn") [Gr. = heavy], class of ELEMENTARY PARTICLES that includes the PROTON, the NEUTRON, and a large number of unstable, heavier particles, known as hyperons. From a technical point of view, baryons are strongly interacting fermions, i.e., they experience the strong nuclear FORCE and are described by the Fermi-Dirac statistics, which apply to all particles obeying the Pauli EXCLUSION PRINCIPLE. All members of the baryon family of particles adhere to the law of conservation of baryon family number (see CONSERVATION LAWS, in physics), the baryon family number is +1 for ordinary baryons and -1 for antibaryons (see ANTIPARTICLE). In any particle interaction, the sum of the baryon family numbers of the interacting particles must equal the sum for the resulting particles. In reactions involving only nucleons, this law requires that the total number of nucleons be the same before and after the reaction. In addition to the nucleons (protons and neutrons), other members of the baryon family include the lambda (Λ), sigma (Σ), delta (Δ), xi (Ξ), and N particles, as well as a series of higher-mass recurrences of each of these particles. These recurrences may be considered excited states of the lowest-mass member of the series.

barytes* see BARITE

barytone* see BARITONE

Barzillai (barzil'āi) 1 Chief in Gilead who was friendly to David 2 Sam 17:27-29, 19:31-39, 1 Kings 2:7, Ezra 2:61, Neh 7:63 2 The father-in-law of Saul's daughter MERAB

Barzun, Jacques (zhak bar'zan), 1907-, American writer and educator, b. France, grad. Columbia (B.A., 1927, Ph.D., 1932). Barzun moved to the United States in 1919. A student of law and history, he began teaching history at Columbia in 1928. He was appointed professor in 1945 and dean of the graduate faculties in 1955. In 1958 Barzun was made dean of faculties and provost. He has written and edited critical and historical studies on a wide variety of subjects; they include *Race* (a *Study in Modern Superstition* (1937)), *Darwin, Marx, Wagner* (1941), *Romanticism and the Modern Ego* (1945), *The Teacher in America* (1945), *The House of Intellect* (1959), *Classic, Romantic, and Modern* (1961), *Science: The Glorious Entertainment* (1964), *The American University* (1968), *Berlioz and the Romantic Century* (3d ed. 1969), and *The Use and Abuse of Art* (1974).

basal metabolism* see METABOLISM

basalt (basōlt', bās'ōlt'), fine-grained ROCK of volcanic origin, dark gray, dark green, brown, or black in color. Basalt is an igneous rock, i.e., one that has congealed from a molten state. It is the most abundant rock in volcanic LAVA. Most of the world's great lava flows, e.g., the Deccan trap in India, the Iceland flows, and the Columbia River plateau of the NW United States, are basaltic rock. Basalt contains a high percentage of iron and magnesium. Some basalts are porphyritic, i.e., they contain large crystalline structures called phenocrysts embedded in a matrix called a groundmass (see PORPHYRY). Phenocrysts are usually formed in the molten lava before eruption and are often composed of the minerals olivine and PYROXENE. Where molten basalt cools rapidly, as at the earth's surface, fine-grained rocks are formed, if chilling and solidification are very rapid, the groundmass may even be glassy. Basalt may be compact or vesicular, i.e., porous because of gas bubbles contained in the lava while it is solidifying. If the vesicles become filled subsequently with secondary minerals, e.g., quartz or calcite, the rock is called amygdaloidal basalt. Igneous rocks of basaltic composition called gabbros are coarse-grained rocks formed by slow cooling in large underground masses. They are common in the Adirondack Mts. of New York State. Diabase, sometimes called dolerite, is a dark-colored igneous rock intermediate in texture between gabbros and basalt. It is common in formations such as SILLS, which are bodies of igneous rock that when molten ascended into a vertical fissure, and DIKES, which are bodies of igneous rock that when molten filled a bedding plane, or horizontal fissure. Diabase sills make up such Triassic period formations as the Palisades of the Hudson River and similar bodies of the Connecticut River valley (see TRIASSIC PERIOD). When subjected to metamorphism, i.e., very high temperatures and very great pressures, basalt is transformed into various kinds of SCHISTS including hornblende schist. Basalt universally underlies the sediment cover in the world's oceans as evidenced by the basaltic makeup of such midocean islands as the Hawaiian Islands and Iceland, and by samples of lava flows found in drill cores recovered by vessels of the DEEP SEA DRILLING PROJECT and the now defunct Project Mohole. Seismic studies indicate that an irregular layer of basaltic rock underlies the granite-like rocks of the earth's continents. Crystalline rocks returned from the moon by Apollo astronauts were similar in many respects to terrestrial basalts. Fine-grained basaltic lunar rocks were vesicular, with glass-lined pits on exposed surfaces that have been interpreted as micrometeorite impact scars. Coarse-grained basaltic rocks were also found. Lunar rocks differed from terrestrial basalts in lacking water and ferric iron, and were significantly higher in titanium and iron content.

Bascama (bās'kāmā), unidentified town, E of the River Jordan, where Jonathan the Maccabee was killed 1 Mac 13:23-26

Bascom, Henry Bidleman, 1796-1850, American Methodist minister and college president, b. Hancock, N.Y. At the age of 17 he became a preacher in the Ohio Methodist Conference and was a frontier circuit rider. Bascom was chaplain (1824-26) in the U.S. Congress, president (1827-29) of Madison College, Uniontown, Pa., professor (1832-42) of moral science at Augusta College, Augusta, Ky., and president (1842-49) of Transylvania Univ., Lexington, Ky. He played an important role at the convention of

1844, which split the Methodist Church over the question of slavery and resulted in the organization of the Methodist Episcopal Church, South. In 1850 he was elected a bishop of that church. He is the author of *Methodism and Slavery* (1847).

base: see ACIDS AND BASES

baseball, the "national game" of the United States. It derives its name from the four bases on the wide, flat (except for a slight rise at the pitcher's mound) playing field (the diamond). Horsehide-covered hard balls, wooden bats, and padded gloves (the catcher and chief umpire wear additional protective material) constitute the basic equipment. A game is played by two opposing teams of nine players each—a pitcher, a catcher, four infielders, and three outfielders. Once replaced in a particular game, a player may not again take part in that contest. The umpires rule on the plays of the game. To win, a team must score more runs in nine innings than its opponent, a run being made when a player completes a circuit of the bases. If the score is tied at the end of nine innings, play continues until one team has scored more runs than the other in an equal number of innings. Although earlier rules existed, the American and National leagues adopted joint playing rules in 1904, amendments having been introduced since then. A form of baseball, doubtless derived from the English games of cricket and rounders, was played in the early 19th cent., and the children's game "one old cat" existed before that time. Baseball was played largely in the northeastern states before the Civil War, and Alexander Cartwright, who set (c. 1845) bases at 90 ft (27.43 m) apart, and Henry Chadwick, who wrote (1858) the first rule book, were important in the development of the game. The report (1907-8) of a commission headed by A. G. Mills declaring that Abner Doubleday created the modern game in 1839 at Cooperstown, N.Y., has been refuted by some authorities. Baseball made great headway in New York City and the neighboring regions, and in 1845 the Knickerbocker Baseball Club, the first organized team, was formed in New York. The National Association of Baseball Players, the first governing body of the sport, was formed in 1858. The sport was popular with Union soldiers during the Civil War, and after the war professional teams banded together in associations. Today there are two main professional baseball associations that together form the major leagues, along with approximately 20 associations of lesser teams that make up the minor leagues. The older of the two major leagues, the National League (organized 1876), is at present made up of the Atlanta Braves, Chicago Cubs, Cincinnati Reds, Houston Astros, Los Angeles Dodgers, Montreal Expos (the first major league team outside the United States), New York Mets, Philadelphia Phillies, Pittsburgh Pirates, St. Louis Cardinals, San Diego Padres, and San Francisco Giants. In 1900 the Western League regrouped as the American League and three years later gained recognition as the second major league. The American League is composed of the Baltimore Orioles, Boston Red Sox, California Angels, Chicago White Sox, Cleveland Indians, Detroit Tigers, Kansas City Royals, Milwaukee Brewers, Minnesota Twins, New York Yankees, Oakland Athletics, and Texas Rangers. The locations of major league franchises were stable for 50 years until 1953, when the Boston Braves moved to Milwaukee and became the first major league team W of Chicago and St. Louis. During the rest of the 1950s a number of other teams continued the westward migration, largely made possible by the expansion of intercity air travel. The 1960s were another period of change. At the beginning of that decade there were eight teams in each of the major leagues, by 1969 each league had grown to include two divisions of six teams each, for a total of 24 teams. Since 1903 the National and American league champion teams have met in an annual series of games, known as the world series, to decide the world's championship. The winners of the world series were 1903, Boston Red Sox, 1904, no series because the New York Giants of the National League refused to play the Boston Red Sox of the American League, 1905, New York Giants, 1906, Chicago White Sox, 1907-8, Chicago Cubs, 1909, Pittsburgh Pirates, 1910-11, Philadelphia Athletics, 1912, Boston Red Sox, 1913, Philadelphia Athletics, 1914, Boston Braves, 1915-16, Boston Red Sox, 1917, Chicago White Sox, 1918, Boston Red Sox, 1919, Cincinnati Reds, 1920, Cleveland Indians, 1921-22, New York Giants, 1923, New York Yankees, 1924, Washington Senators, 1925, Pittsburgh Pirates, 1926, St. Louis Cardinals, 1927-28, New York Yankees, 1929-30, Philadelphia Athletics, 1931, St. Louis

Cardinals, 1932, New York Yankees, 1933, New York Giants, 1934, St. Louis Cardinals, 1935, Detroit Tigers, 1936-39, New York Yankees, 1940, Cincinnati Reds, 1941, New York Yankees, 1942, St. Louis Cardinals, 1943, New York Yankees, 1944, St. Louis Cardinals, 1945, Detroit Tigers, 1946, St. Louis Cardinals, 1947, New York Yankees, 1948, Cleveland Indians, 1949-53, New York Yankees, 1954, New York Giants, 1955, Brooklyn Dodgers, 1956, New York Yankees, 1957, Milwaukee Braves, 1958, New York Yankees, 1959, Los Angeles Dodgers, 1960, Pittsburgh Pirates, 1961-62, New York Yankees, 1963, Los Angeles Dodgers, 1964, St. Louis Cardinals, 1965, Los Angeles Dodgers, 1966, Baltimore Orioles, 1967, St. Louis Cardinals, 1968, Detroit Tigers, 1969, New York Mets, 1970, Baltimore Orioles, 1971, Pittsburgh Pirates, and 1972-74, Oakland Athletics. Some of the minor leagues—notably the International League, the Pacific Coast League, and the Texas League—also hold postseason play-offs. The "Black Sox" scandal, involving eight Chicago White Sox players charged with bribery in the 1919 world series, led the committee of baseball executives to appoint (1921) Judge Kenesaw M. Landis to the new post of baseball commissioner. Landis replaced the three-man National Commission, which had ruled professional organized baseball since 1903. Albert B. (Happy) Chandler was elected (1945) to succeed Landis, who had died in office. Other commissioners were Ford C. Frick (1951-65) and William D. Eckert (1965-69). In 1969, Bowie Kuhn was elected to a seven-year term. Night baseball games, introduced in the major leagues in 1935, are now scheduled more frequently than day games. The all-time major league single-game attendance record of 84,587 was set by the Cleveland Indians in 1954. Since the 1960s baseball's position as the national game has eroded. Many minor league teams have disbanded, average attendance at major league games has declined, and the sport has suffered from the criticism that it is too slow, especially in comparison to football, basketball, and ice hockey, the other major professional sports in the United States. In response, baseball executives have promulgated certain reforms in an effort to revitalize interest in the game. Most notable among these has been the tenth player, or designated hitter, experiment introduced into the American League during the 1973 season. Changing social conditions have also forced major league baseball to make changes. In 1947, Jackie Robinson of the Brooklyn Dodgers became the first Negro to play in the major leagues. Prior to that time, Negro ballplayers had been restricted to playing in the segregated Negro Leagues. Baseball's reserve clause, the contractual stipulation that binds a player to his club for as long as the latter desires, has been the subject of three Supreme Court cases (1922, 1953, 1972). In all three cases the Court refused to overturn the reserve clause, ruling that baseball is a sport and not a business, and as such is not subject to Federal antitrust laws. In 1973 major league baseball experienced the first strike in its history. Stemming from a dispute over the size of the players' pension fund, the strike delayed the season's start by 13 days and forced the cancellation of 86 games. Baseball is also played by semiprofessional, amateur, club, college, and school teams. It has achieved considerable popularity in Japan as well as Cuba, Puerto Rico, Mexico, and other Latin American countries. Softball, a form of baseball in which a larger ball and a smaller infield are required, is also popular among amateurs. A number of professional baseball's greatest figures have been elected to the National Baseball Hall of Fame, built (1939) at Cooperstown, N.Y. Among the more famous names in the history of professional baseball are Henry L. Aaron, Grover C. Alexander, Adrian C. (Cap) Anson, John F. (Home Run) Baker, Lawrence P. (Yogi) Berra, Frank L. Chance, Tyrus R. (Ty) Cobb, Gordon S. (Mickey) Cochrane, Edward T. Collins, Joseph E. Cronin, Jerome H. (Dizzy) Dean, William M. (Bill) Dickey, Joseph P. (Joe) DiMaggio, Robert W. A. (Bob) Feller, James E. (Jimmy) Foxx, Frank R. Frisch, Henry L. (Lou) Gehrig, Joshua Gibson, Henry B. (Hank) Greenberg, Robert M. (Lefty) Grove, Rogers Hornsby, Carl O. Hubbell, Miller J. Huggins, Walter P. Johnson, Willie Keeler, William F. Klem, Sanford (Sandy) Koufax, Napoleon (Larry) Lajoie, Walter J. V. (Rabbit) Maranville, Joseph V. McCarthy, Cornelius McGillicuddy (Connie Mack), John J. McGraw, Mickey Mantle, Roger Maris, Christopher (Christy) Mathewson, Willie Mays, Stanley F. (Stan) Musial, Melvin T. (Mel) Ott, Satchel Paige, Jackie Robinson, George H. (Babe) Ruth, George H. Sisler, Warren E. Spahn, Tristram E. (Tris) Speaker, Charles D. (Casey) Stengel, William H. (Bill) Terry, John S. Vander Meer, John P. (Honus) Wagner, Paul G. (Big Poison) Wan-

er, Theodore S (Ted) Williams, and Denton T (Cy) Young See Douglass Wallop, *Baseball* (1969), Roger Angell, *The Summer Game* (1972), Leonard Koppett, *All About Baseball* (rev ed 1974), *Baseball Encyclopedia* (rev ed 1974)

Basedow, Johann Bernhard (yōhān' bērn'hārt bā'-zādō), 1723-90, German educator, b Hamburg, educated in Hamburg and at the Univ of Leipzig. Later he taught in Denmark (1753) and Germany (1761) but became involved in controversies aroused by his unorthodox religious writings. In 1774 his *Elementarwerk* was published with funds raised by popular subscription, and Basedow opened at Dessau a school called the Philanthropinum, where the methods of elementary education outlined in this text were employed. Drawing upon the writings of Comenius, Locke, and Rousseau, Basedow emphasized realistic teaching and introduced nature study, physical education, and manual training. He resigned in 1778 because of disagreements with his staff, and the school closed in 1793. His reforms were widely influential, however, and similar institutions were established throughout Germany and Switzerland.

Basel (bā'zāl) or **Basle** (bāl), Fr *Bâle*, canton, N Switzerland, bordering on France and West Germany. It is bounded in the N by the Rhine River (which becomes navigable in the canton) and in the S by the Jura mts. Although it has industries, Basel is mainly a region of fertile fields, meadows, orchards, and forests. Its inhabitants are German-speaking and Protestant. The canton has been divided since 1833 into two independent half cantons—**Basel-Land** (1970 pop 240,889), 165 sq mi (427 sq km), generally comprising the rural districts, with its capital at Liestal, and **Basel-Stadt** (1970 pop 234,945), 14 sq mi (36 sq km), virtually coextensive with the city of Basel (1970 pop 212,857) and its suburbs. Divided by the Rhine, the city consists of Greater Basel (left bank), which is the commercial and intellectual center, and Lesser Basel, where industry is concentrated. Basel is a major economic center and the chief rail junction and river port of Switzerland. It is also a financial center. The city is the seat of the Swiss chemical and pharmaceutical industry and of the Swiss Industries Fair, it also has an important publishing industry. Other products are metal goods, foodstuffs, and silk textiles. Founded by the Romans (and named *Basilia*), it became an episcopal see in the 7th cent. It passed successively to the Alemanni, the Franks, and to Transjurane Burgundy. In the 11th cent. it became a free imperial city and the residence of prince-bishops. The celebrated Council of Basel (see separate article) met there in the mid-15th cent. Basel joined the Swiss Confederation in 1501 and accepted the Reformation in 1523. Although expelled from the city, the bishops continued to rule the bishopric of Basel (including *PORRENTURY* and *DELÉMONT*, which in 1815 became part of Bern canton). The oppressive rule of the city's patriciate over the rest of the canton led to revolts (1831-33) and the eventual split into two cantons. One of the oldest intellectual centers of Europe, Basel has through its university (founded 1460 by Pius II) attracted leading artists, scholars, and teachers. It was the residence of Froben, Erasmus, Holbein the Younger, Calvin, Nietzsche, and the Bernoulli family. Jakob Burckhardt and Leonhard Euler were born there. Among the city's noted structures are the cathedral (consecrated 1019), in which Erasmus is buried, the medieval gates, several guild houses, the 16th-century town hall, and an art gallery with a valuable collection of Holbein's works.

Basel, Council of, 1431-49, first part of the 17th ecumenical council in the Roman Catholic Church. It is generally considered to have been ecumenical until it fell into heresy in 1437, after that it is regarded as an anticonciliar. Its chief importance lies in the contest between council and pope for supremacy. The Council of Constance had seen the rise of the conciliar theory, the doctrine that the ultimate authority in the church rests upon the general council, to which the pope must be subject. It had been the plan to have frequent councils, but that of Basel was the first of importance to follow Constance, that of Pavia-Siena (1423-24) having accomplished little. Pope Martin V convoked the council but died soon afterward, and it was his successor, *EUGENE IV*, who confirmed the convocation. Various problems were brought before the council: the settlement of the difficulties with the *HUSSITES*, reform in the church, particularly financial reform, and the matter of negotiations for the union of the Eastern church and the Western church. Even though he had convened it, Eugene was suspicious of the council, fearing that

in the question of the *Hussites* it might reawaken doctrinal questions already regarded as settled. Therefore, he ordered the council dissolved almost immediately. This marked the outbreak of trouble between the council and the pope that was not to end until the council did. Holy Roman Emperor *SIGISMUND*, who desired the settlement of *Hussite* disputes from the council and desired coronation at the hands of the pope, acted as mediator. The council pronounced its supremacy over the pope and in 1433 reached the zenith of its power. Fearing schism, Eugene was driven to granting more and more concessions, but any compromise reached was temporary. The continual assertion of the conciliar supremacy led to the institution of a process against the pope for disobedience and ultimately to the papal denunciation of the council in the bull *Doctores gentium* (1437). The council, which thus became heretical, had accomplished a good deal. The *Compactata* had marked a compromise with the *Hussites*, the annates and various papal taxes had been declared illegal, church organization and finance had been reformed. In order to meet with delegates from the East on the question of reunion, Eugene summoned the council to Ferrara (see *FERRARA-FLORENCE, COUNCIL OF*). The council at Basel continued to function as an anticonciliar. Finally the process against Eugene was carried through, and the council elected *AMADEUS VIII* of Savoy pope (called Antipope Felix V). The allegiance of most temporal rulers was still given to Eugene, although the reforms of Basel were adopted by the French at Bourges and incorporated into the Pragmatic Sanction of Bourges; the council was not itself approved. The German king Frederick III (who was later crowned Holy Roman emperor) remained neutral, but in 1448 his pressure upon the city forced the delegates to retire to Lausanne. Felix, with only scattered support, abdicated in 1449, submitting to Eugene's successor, Nicholas V. The council recognized the legitimate pope and dissolved itself, thus ending the threat of antipapal conciliarism.

Basel-Land and Basel-Stadt: see *BASEL, Switzerland*

basenji (basēnjē), breed of medium-sized *HOUND* whose origins can be traced back several thousand years to Africa and the courts of the Egyptian pharaohs. It stands about 17 in (43.2 cm) high at the shoulders and weighs about 23 lb (10.4 kg). Its short, silky coat may be colored chestnut red, black, or black and tan, with white chest, feet, and tip of tail. The basenji has two unique characteristics: it does not bark but utters a sound that has been described as a chortle or whine, and, in the manner of a cat, it cleans its own body. Possessing a keen sense of smell, the basenji was used in its native Africa as a hunter but is now commonly kept as a house pet. See *DOG*.

Bashan (bā'shān), fertile region E of the Jordan from the latitude of Haifa northward to that of Tyre. It was conquered by the Israelites and given to the half tribe of Manasseh. Scholars believe the Bashan culture, essentially Amorite, shows traces of Indo-Iranian and Hittite influence. Now occupied by the Druses, it forms a part of Syria. Deut 3:11, Num 21:33, 2 Kings 10:33, Ps 22:12, 68:15, Amos 4:1.

Bashan-havoth-jair: see *HAVOTH-JAIR*

Bashemath (bā'sh'amāth), wife of Esau. Gen 26:34, 36:23.

Bashkir Autonomous Soviet Socialist Republic (bāshkēr') or **Bashkiria** (bāshkēr'ēa), autonomous region (1970 pop 3,819,000), 55,444 sq mi (143,600 sq km), E European USSR, in the S Urals, occupying the Belaya River basin. Ufa is the capital, other important cities are *STERLITAMAK*, *BELORETSK*, and *ISHIMBAY*. The Trans-Siberian and South Siberian railroads cross the republic. Bashkiria forms the eastern part of the Volga-Ural petroleum region and also has natural gas, coal, salt, iron, gold, copper, zinc, bauxite, and manganese deposits. The drilling, refining, and processing of oil is the predominant economic activity. About 40% of the land is forested, and sawmilling and the production of plywood and paper are important. Grains (especially wheat, rye, and oats) are the chief agricultural products. The republic's population is made up mainly of Bashkirs (about 25%), Russians (constituting a majority), and Tatars. The Bashkirs, a mixture of Finno-Ugric, Turkic, and Mongolian tribes, are a Muslim people who speak a Turkic language very close to Tatar. Historically, the Bashkirs were controlled by the Volga Bulgars and the Golden Horde, and later by the khans of Kazan, Nogai, and Siberia. In 1557, during the reign of Ivan IV, they came under Muscovite rule. The Russians founded Ufa in 1574 and began

colonization, dispossessing the Bashkirs, who revolted numerous times during the next two centuries (notably under Pugachev in 1773-75). In 1917 a Bashkir national government was formed, but the region experienced heavy fighting between the Red and White armies in the aftermath of the Russian Revolution. In 1919, Bashkiria was made the first autonomous Soviet republic.

basic oxygen process, method of producing *STEEL* from a charge consisting mostly of pig iron. The charge is placed in a furnace similar to the one used in the *BESSEMER PROCESS* of steelmaking except that pure oxygen instead of air is blown into the charge to oxidize the impurities present. One desirable feature of this process is that it takes less than an hour, and is thus much faster than the open-hearth process, another important method of steelmaking. A second advantage is that a major by-product is carbon monoxide, which can be used as a fuel or in producing various chemicals, such as acetic acid. The basic oxygen process also produces less air pollution than methods using air.

Basidiomycete: see *FUNGI*

Basie, Count (William Basie), 1904-, American jazz pianist, band-leader, and composer, b Red Bank, N.J. After working in dance halls and vaudeville in New York City, Basie moved to Kansas City, a major jazz center. There he joined Walter Page's Blue Devils in 1927, moving to Bennie Morton's band in 1929. He formed his own band in 1935, and for 40 years it has produced a distinctive sound marked by a powerful yet relaxed attack. Basie's provocative piano style is characterized by a predominant right hand. Among the many pieces he has composed for his band is "One O'Clock Jump."

Basil, Saint: see *BASIL THE GREAT, SAINT*

Basil I (Basil the Macedonian), c 813-886, Byzantine emperor (867-86). His ancestors probably were Armenians or Slavs who settled in Macedonia. He became (c 856) the favorite of Emperor *MICHAEL III*. In 866, Basil, with the aid of Michael, assassinated Michael's uncle and chief minister, Bardas, and was made coemperor. Michael's feeling toward Basil began to change and in 867 Basil had him murdered and had himself proclaimed emperor. Thus the Macedonian dynasty of the East, which lasted until 1056, was founded. A capable ruler, Basil reformed the finances, modernized the law of Justinian I by introducing a new code, the *Basilica*, protected the poorer classes, and restored the military prestige of the empire. Byzantine art and architecture entered their second golden age during his rule. A major event of his reign was the dissension between the Roman and the Eastern churches. In order to prevent an open break, Basil restored (867) to the patriarchate *IGNATIUS OF CONSTANTINOPLE*, who had been deposed in favor of *PHOTIUS*. On Ignatius' death, Basil reinstated (877) Photius, causing strained relations but not a full break with Rome. Basil in 865 had divorced his wife and married the mistress of Michael III. He was succeeded by his son Leo VI.

Basil II, c 958-1025, Byzantine emperor (976-1025), surnamed *Bulgaroktonos* [Bulgar slayer]. With his brother, Constantine VIII, he nominally succeeded his father, Romanus II, in 963, but had no share in the government during the rule of the usurping generals *NICEPHORUS II* (963-69) and *JOHN I* (969-76). Primarily a soldier, Basil exercised virtually sole rule from 976, while his debauched brother was emperor only in name. Basil suppressed (976-89) a series of revolts of the great landowners led by Bardas Sclerus and revived and strengthened the laws directed against them by *ROMANUS I*. He annexed (1018) Bulgaria, although leaving it some measure of autonomy, and later extended the eastern frontier of his empire to the Caucasus. During his reign the schism between the Roman and the Eastern churches widened. Basil was succeeded by Constantine VIII (reigned 1025-28) and by Constantine's daughter Zoë.

Basil III, Russian ruler: see *VASILY III*

basil (bā'zəl), any plant of the genus *Ocimum*, tender herbs or small shrubs of the family *Labiatae* (*MINT* family), mostly of Old World warm regions and cultivated for the aromatic leaves. The basil of Keats's "Isabella" (and of Boccaccio's story) is the common or sweet basil (*O. basilicum*), once considered medicinal. This is the species usually used for seasoning; it is grown commercially chiefly in the Mediterranean area. There are also the holy basil, venerated in India, the bush basil, and related plants sometimes called basil. Basil is classified in the division *MAGNOLIOPHYTES*, class *Magnoliopsida*, order *Lamiales*, family *Labiatae*.

Basilan (basē'lan), island, 494 sq mi (1,279 sq km), northernmost and largest of the Sulu Archipelago, the Philippines. It is closely associated with the city of Zamboango on Mindanao island, just across the 10-mi (16-km) wide Basilan Strait. Major sources of income are sea products, coconut, timber, and rubber. The Univ. of the Philippines maintains a vast rubber plantation there. With neighboring islets, Basilan forms the Basilan island group. The inhabitants are chiefly Muslim.

Basildon, urban district (1971 pop. 129,073), Essex, E. England. The southern portion is Basildon New Town, a planned community with many factories. There are light engineering, chemical, and joinery works, milk-bottling and printing plants, and clothing and carbon-black factories.

Basile, Giovanni Battista (jōvan'ne bat-tēs'ta basē'lā), 1575-1632, Italian writer. Basile held several important official positions, devoting his spare time to the study of folklore. He is known for his *Lu Cunta de li cuntr* [the tale of tales] (1634-36), a collection of folk and fairy tales written in the Neapolitan dialect in a vigorous, exuberant style. The collection, usually referred to as *Il Pentamerone* because its framework is similar to Boccaccio's *Decameron*, recounts 50 tales told to a prince and his bride by ten women during a five-day period. Cinderella, Rapunzel, Snow White, and many other fairy-tale characters make their first appearance in its pages.

Basilian monks (basē'lē'ān), monks of the Eastern Church. They follow the Rule of St. Basil the Great, which has been universal among them since the 7th cent. They have no centralized government; the rule treats proper monastic living, not organization. Their monasteries are collections of small cells, the whole group being called a *laura*. The chief monastery is the Great Laura of Mt. Athos, another famous Orthodox monastery is St. Catherine on Mt. Sinai. There are Basilians in communion with the pope. The chief figure of Basilian history is the reformer St. Theodore of Studium. See also **MONASTICISM**.

basilica (basē'lī'kə), large building erected by the Romans for transacting business and disposing of legal matters. Often rectangular in form with a roofed hall, the building usually contained an interior colonnade, with an apse at one end or at each end. The central aisle tended to be wide and was higher than the flanking aisles, so that light could penetrate through the clerestory windows. The oldest known basilica was built in Rome in 184 B.C. by the elder Cato. Other early examples are the Basilica Porcia in Rome and one at Pompeii (late 2d cent. B.C.). Probably the most splendid Roman basilica is the one constructed during the reign of Maxentius and finished by Constantine after 313. In the 4th cent. Christians began to build edifices for worship that were related to the form of the basilicas. These had a center nave with one aisle at each side and an apse at one end; on this platform sat the bishop and priests. Basilicas of this type were built not only in

Western Europe but in Greece, Syria, Egypt, and Palestine. A good example of the Oriental basilica is the Church of the Nativity at Bethlehem (6th cent.). The finest basilicas in Rome were St. John Lateran and St. Paul's-outside-the-Walls (4th cent.), and San Clemente (6th cent.). Gradually there emerged the massive Romanesque churches, which still retained the fundamental plan of the basilica.

Basilicata (bazē'lē'kə'tā), region (1971 pop. 602,389), 3,856 sq mi (9,987 sq km), S Italy, bordering on the Tyrrhenian Sea in the southwest and on the Gulf of Taranto in the southeast. It forms the instep of the Italian "boot." POTENZA is the capital of Basilicata, which is divided into Potenza and Matera provs (named for their capitals). The region is crossed by the Lucanian Apennines; its main river is the Bradano. Because of a dry climate and a scarcity of ground water, farming is difficult, although it is the occupation of most inhabitants of the generally poor region. Olives, plums, and cereals are grown, and sheep and goats are raised. There is also some fishing. The transportation network is very limited, and commerce and industry are minimal. Basilicata corresponds to most of ancient LUCANIA and to part of ancient SAMNIUM. Rome took the region in 272 B.C.; it later passed in turn to the Lombards, to the Byzantines, and (11th cent.) to the Norman duchy of Apulia, of which MELFI (now in Basilicata) was the capital. Although later a part of the kingdom of Naples, Basilicata was controlled by virtually independent feudal lords. Malaria, still a scourge on the coasts, caused the flourishing coastal towns to be abandoned in the early Middle Ages. In the 20th cent. there have been reclamation works and social and land reforms in Basilicata, but many of the inhabitants have emigrated to foreign countries (especially the United States) or have taken jobs in the industrial cities of N Italy. The region has suffered numerous earthquakes.

Basilides (basē'lī'dēz), fl. 120-145, Gnostic teacher of Alexandria. He wrote *Exegitica* (his personal gospel with 24 books of commentary) and poems. He claimed to possess a secret tradition handed down from St. Peter and St. Matthias. The Basilidean sect of Gnosticism attracted many followers.

Basilikon Doron (basē'lī'kon dō'rən) [Gr., = royal gift], book written by James VI of Scotland (subsequently James I of England) as a guide for the conduct of his son Henry when he became king. The work was completed in manuscript in 1598 and published the following year. James warned Henry of meddling ministers and expounded the doctrine of the divine right of kings. Henry died in 1612 and did not ascend the throne. See edition by James Craigie (1944-50).

Basileus (bā'sīlēs'kəs), d. c. 477, usurper at Constantinople (475-76). He was responsible for the failure of the expedition sent (468) against the Vandals by his brother-in-law Leo I. He usurped the throne during the reign of Zeno, but his extortions and Monophysite tendencies led to his overthrow and execution when Zeno recovered his throne.

basilisk see **IGUANA**

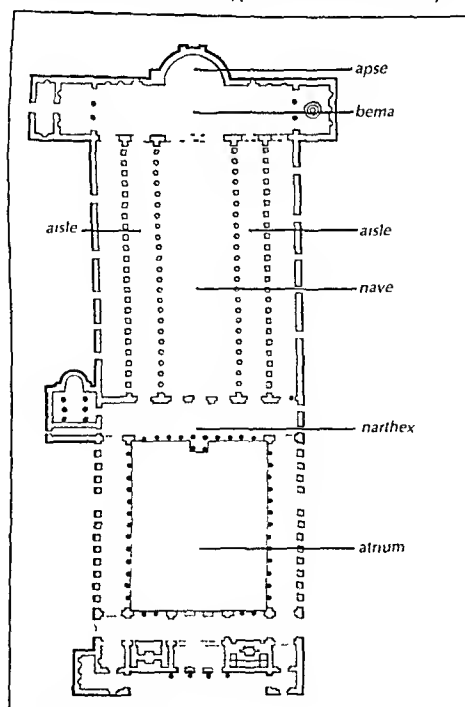

Basil the Great, Saint (bā'zīl, bā'-), c. 330-379, Greek prelate, bishop of Caesarea in Cappadocia, Doctor of the Church and one of the Four Fathers of the Greek Church. He was a brother of St. Gregory of Nyssa. In his student days at Athens he knew Julian, later Roman emperor, and began his lifelong friendship with St. Gregory Nazianzen. Converted to the religious life by his sister, St. Macrina, he withdrew (c. 357) to a retreat in Pontus. There he wrote much of the *Longer Rule* and of the *Shorter Rule*, on these the life of the **BASILIAN MONKS** is based. Through his rules Basil was a spiritual ancestor of St. Benedict. As counselor (365) and successor (370) of Eusebius, bishop of Caesarea and head of most of the church in Asia Minor, Basil established Nicene orthodoxy over Arianism in the Byzantine East. His revision of the liturgy is occasionally used in the Byzantine rite. His works *On the Holy Ghost* and *Against Eunomius* are elegant, acute defenses of the Catholic system. In the West his feast is June 14. See his letters tr. by R. J. Deferrari (4 vol., 1926-34), studies by G. L. Prestige (1956), E. Amand de Mendieta (1965), and M. G. Murphy (1971).

Basingstoke (bā'zīngstōk), municipal borough (1971 pop. 52,502), Hampshire, S. central England, on the North Downs. Formerly a market town trading in silk and woollens, it now has several industries, including the manufacture of agricultural machinery, precision tools and instruments, leather, clothing, and drugs. The borough is growing rapidly, largely because of a spillover from London's population. In

871, Alfred defeated the Danes at nearby Basing. Basingstoke is mentioned as a royal manor in the Domesday Book. Oliver Cromwell won a victory at Basing in 1645.

Baskerville, John, 1706-75, English designer of type and printer. He and CASLON were the two great type designers of the 18th cent. in England. He began his work as printer and publisher in 1757 and in 1758 became printer to Cambridge Univ. Baskerville's first volume was a quarto edition of Vergil. His type faces introduced the modern, pseudoclassical style, with level serifs and with emphasis on the contrast of light and heavy lines. This style influenced that of the DIDOT family in France and that of BODONI in Italy. Books printed by Baskerville are typically large, with wide margins, made with excellent paper and ink. His masterpiece was a folio Bible, published in 1763. The first wove paper used for printing books was made to his order. After his death his wife operated the press until 1777. Then most of his types were purchased by Beaumarchais and were used in his 70-volume edition of Voltaire. The matrices, long lost, were rediscovered and in 1953 were presented to the Cambridge Univ. Press. Among Baskerville's publications in the British Museum are Aesop's *Fables* (1761), the Bible (1763), and the works of Horace (1770). See biographies by William Bennett (1939) and Henry Evans (1953), bibliography by Philip Gaskell (1959).

basketball, game played generally indoors by two opposing teams of five players each. At each end of the court—usually about 92 ft (28 m) long and 50 ft (15 m) wide—is a bottomless basket made of white cord net and suspended from a metal ring, 18 in. (46 cm) in diameter, which is attached 10 ft (3.05 m) above the floor (usually hardwood) to a backboard. Players may pass, throw, bat, roll, or dribble (bounce) the ball but may not run with it. Players of one team seek to advance the ball into position for shooting it through one basket (the ball must enter from above) and to keep the opposition from scoring through the other basket. Each field goal, or basket, scores two points. Illegal body contact is penalized by awarding free throws—counting one point for each made—to players fouled. There is a limit—five in amateur, six in professional play—to the number of fouls a player may commit before he is disqualified from a game. International and collegiate basketball games are played in two 20-min halves. Basketball was originated in the United States, in 1891, by Dr. James NAISMITH, then a physical education instructor at the YMCA college in Springfield, Mass. Today it is one of the leading American sports, attracting well over 30 million spectators a year, and has been enthusiastically adopted throughout the world. In 1937 one of the most important and far-reaching rule changes was made, when the center jump after each score was eliminated. This greatly speeded up the game, increased scoring, and reduced some of the advantage enjoyed by taller players. Another measure designed to reduce the importance of height is the rule (adopted 1968) against "dunking," or ramming the ball directly into the basket from above, in intercollegiate play. Height, however, continues to be an important asset in basketball. The game is a major sport in American colleges, and such postseason collegiate tournaments as the National Invitation Tournament (begun 1938) and the National Collegiate Athletic Association championships (begun 1939) attract wide attention. The latter tournament, held to determine the nation's best collegiate basketball team, was dominated by the University of California at Los Angeles during the late 1960s and early 1970s. Between 1967 and 1973, UCLA won a record-setting seven straight national championships, and had over 60 consecutive victories in regular competition. Another important factor in the popularizing of basketball was the presentation of college games in large public arenas, begun (1934) with double-headers in Madison Square Garden, New York City. The popularity of college basketball continued to grow until serious scandals hit the sport in 1951. Investigations disclosed that in games in Madison Square Garden and elsewhere college players had been bribed by gamblers to "fix" games (i.e., arrange the final scores to a gambler's advantage). Within the next ten years further investigations resulted in the conviction of more than 100 athletes from colleges throughout the country. Since the scandals college basketball has been able to cultivate a more positive image and has grown in popularity. Although an exhibition basketball game was played at the 1904 Olympics, it was not until 1936 that the sport became a regular part of the

Floor plan of a basilica

games International competition differs from American collegiate and professional basketball in that the area directly in front of the basket, known as the free throw lane or the three-second area, is cone-shaped rather than rectangular. International basketball is also considered rougher and involves more physical contact than the American game. The United States dominated almost every major international basketball competition until 1972, when the Soviet Union defeated the U.S. team for the Olympic gold medal, in spite of official American protests that the Soviet team was illegally allowed to score a basket after the game had ended. Professional basketball was begun (1896) in New York City and has since grown very popular. The merger (1949) of the National Basketball League and its rival the Basketball Association of America into the National Basketball Association (NBA) led to great development of the game. The NBA consists of 18 teams in four divisions. The teams are Atlanta Hawks, Boston Celtics, Buffalo Braves, Chicago Bulls, Cleveland Cavaliers, Detroit Pistons, Golden State Warriors, Houston Rockets, Kansas City-Omaha Kings, Los Angeles Lakers, Milwaukee Bucks, New York Knicks, New Orleans Jazz, Philadelphia 76ers, Phoenix Suns, Portland Trail Blazers, Seattle SuperSonics, Washington Bullets. Professional basketball's popularity led to the establishment (1967) of the American Basketball Association (ABA), a rival league to the NBA. The ABA is composed of ten teams in two divisions. The ABA teams are Carolina Cougars, Denver Rockets, Indiana Pacers, Kentucky Colonels, Memphis Tams, New York Nets, San Antonio Spurs, San Diego Conquistadors, Utah Stars, and Virginia Squires. Economic competition between the two leagues resulted in lucrative first-year contracts for many college stars, some of whom were signed for as much as one million dollars. The expense of this bidding war led NBA and ABA owners to seek congressional approval for a merger, although such a plan is opposed by the players, who expect to gain much from interleague competition. The professional game, with 12-min quarters, has adapted its rules, adding a 24-sec time limit for the offensive team to make a shot. A time limit has long been a feature of international competition. The most famous of all the professional teams were the Original Celtics of New York City, the Boston Celtics between 1957 and 1965, and the Harlem Globetrotters, an independent touring team. There are modifications in basketball rules for high school and women's play. See W. R. Alheim, *Beginning Basketball for Men* (1968), Leonard Koppett, *24 Seconds to Shoot* (1968), Bob Cousy, *Basketball* (1970), Pete Axthelm, *The City Game* (1971), Dale Hanson, *Basketball* (1972), B. L. Webb, *The Basketball Man*, James Naismith (1973), Zander Hollander, ed. *The Modern Encyclopedia of Basketball* (rev. ed. 1973).

basket makers, name given to the members of an early North American Indian culture in the Southwest, predecessors of the PUEBLO INDIANS. Because of the cultural continuity from the basket makers to the Pueblos, they are jointly referred to by archaeologists as the Anasazi culture. They are so called because of their extensive practice of basketmaking, by covering the baskets with clay and baking them hard they created fireproof containers. One system of dating places their arrival in the area as early as 1500 B.C. They seem to have been at first nomadic hunters, using wooden clubs, hunting sticks, and the ATLATL. They lived chiefly in houses with adobe floors and learned to grow corn and squash, probably from southern neighbors in Mexico. As they developed a more extensive agriculture, they dug pits and lined them with stone for grain storage and later built substantial dwellings lined with slabs of stone. At some time, perhaps c. 500 B.C., they were succeeded in the area by the ancestors of the Pueblo Indians, who probably absorbed many of them. Some basket makers may have moved and may have been the ancestors of other Indian tribes. Archaeologists divide the time of their culture into the Basket Maker and Modified Basket Maker periods, in the latter period they turned increasingly to agriculture. See INDIANS, NORTH AMERICAN.

basketry, art of weaving or coiling and sewing flexible materials to form vessels or other commodities. The materials used include twigs, roots, strips of hide, splints, osier willows, bamboo splits, cane or rattan, raffia, grasses, straw, and crepe paper. Discoveries in the U.S. indicate that the use of clay-covered baskets for cooking probably led to making pottery, while in the Andaman Islands pottery was evidently made first. In Egypt baskets used

for storing grain in 4000 or 5000 B.C. have been excavated. The tombs of Etruria have yielded ancient specimens, and these, as well as much later Roman baskets, display weaving strokes still in use. Basketry has been employed by primitive peoples for rude huts, which they daubed with clay, and for articles of dress and adornment, granaries, traps, boats, cooking utensils, water vessels, and other utilities. There are two types of baskets—woven and coiled or sewn—but variety is afforded by the many different strokes, forms, and methods of decoration. There are many large commercial basket-weaving establishments, but basketry is still a popular home industry and is taught in schools and as occupational therapy in hospitals.

Baskin, Leonard, 1922–, American sculptor, graphic artist, and teacher, b. New Brunswick, N.J. In sculptural and graphic works that are figurative in style, Baskin's images of a corrupt, bloated mankind retain an element of sardonic humor. His woodcuts are celebrated for their power and expressiveness. Among his notable prints are *Mid-Century Monster* and *The Poet Laureate*, his sculpture *Man with a Dead Bird* is in the Museum of Modern Art, New York City. Since 1953 Baskin has taught at Smith College. His works, often reproduced, are represented in many of the world's major museums. Baskin founded the Gehenna Press, noted for fine typography, in Northampton, Mass. See his *Sculpture, Drawings and Prints* (1970).

basking shark, large, plankton-feeding shark, *Cetorhinus maximus*, inhabiting many oceans of the world, especially in temperate regions. Found singly or in schools of up to 100, it spends much of its time on or just below the surface, cruising slowly with its dorsal fin breaking water. It reaches a length of 40 ft (12 m) and weighs up to 8,500 lb (3,900 kg)—among fishes it is second in size only to the whale shark. It feeds by filtering out plankton as water passes into its mouth and out of the gills. Its gill openings are greatly enlarged to accommodate a large volume of water, and its throat is lined with numerous slender structures called gill rakers. These rakers, which are attached to the inside of the gill arches, form a fine mesh that serves as a strainer. The basking shark has a torpedo-shaped body, a nearly symmetrical tail fin, and long, conspicuous gill slits. Its color ranges from gray to black or brown. It is fished commercially, mostly by harpooning; its flesh is used for fish meal and its liver oil for certain tanning processes. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Chondrichthyes, order Selachii, family Ceterorhinidae.

Basle, Switzerland. See BASEL.

Basmath (bās'māth), daughter of Solomon. 1 Kings 4:15.

Basque language (bāsk), tongue of uncertain relationship spoken by about 800,000 people, most of whom live in NE Spain and some of whom reside in SW France. The language has eight dialects. Speakers of Basque are, for the most part, bilingual, and the chances for the survival of the language are not good. Basque is definitely not an Indo-European tongue. Some scholars believe it is descended from Aquitanian, which was spoken on the Iberian peninsula and in S Gaul in ancient times. Other linguists think Basque is akin to the CAUCASIAN LANGUAGES and suggest that its speakers came from Asia Minor to Spain and Gaul c. 2000 B.C. However, no relationship between Basque and any other language has been established with certainty. The alphabet used for Basque employs Roman letters. The first printed book in Basque appeared in the 16th cent. Basque is both agglutinative and polysynthetic. In an agglutinative language, different linguistic elements, each of which exists separately and has a fixed meaning, are often joined to form one word. In a polysynthetic language, a number of word elements are joined together to form a composite word that functions like a sentence or phrase in Indo-European languages, but each element has meaning usually only as part of the sentence or phrase and not as a separate item. See William J. Entwistle, *The Spanish Language, Together with Portuguese, Catalan, and Basque* (2d ed. 1962).

Basque Provinces, Basque *Euzkadi*, Spain. Vascongadas, comprising the provinces of Álava, Guipúzcoa, and Vizcaya (1970 pop. 1,876,787), N Spain, S of the Bay of Biscay and bordering on France in the northeast. The region includes the W Pyrenees and is bounded in the southwest by the Ebro River. It is crossed by the Cantabrian Mts. (In a wider sense the name also applies to other territories largely inhabited by Basques: Spanish Navarre and Basses-Pyrénées dept. in France.) Bilbao, capital of Vizcaya

prov., is the largest Basque city and one of the chief industrial centers of Spain. Other cities include San Sebastián, capital of Guipúzcoa prov., Vitoria, capital of Álava prov., and historic Guernica. In the densely populated coastal provinces of Vizcaya and Guipúzcoa the chief occupations are the mining of iron, lead, copper, and zinc, and metalworking, shipbuilding, and fishing. The minerals are exported mainly to England. Álava is primarily agricultural; corn and sugar beets are grown, and wine and apple cider are made. For the history of the three provinces up to 1936, see BASQUES. Shortly after the outbreak of the Spanish civil war in 1936 the central government granted the three provinces autonomy. The Basque nationalist leader, Jose Antonio de Aguirre, was elected president of the autonomous government. The Basques defended their newly won status with their customary heroism and fervor, but a large part of their territory was soon in insurgent hands. The fighting was over by Sept. 1937. The new Franco regime abolished Basque autonomy, but to this day Basque nationalism remains strong. Protests and strikes are common, and terrorists, operating from headquarters in other European countries, stage frequent attacks.

Basques (bāsk), people of N Spain and SW France. There are about 1,774,000 Basques in the three Basque provs and Navarre, Spain, over 100,000 in Labourd, Soule, and Lower Navarre, France, and communities of various sizes in Central and South America and other parts of the world. Many preserve their ancient language, which is unrelated to any other tongue. They have guarded their ancient customs and traditions, although they have played a prominent role in the history of Spain and France. The origin of the Basques, almost certainly the oldest surviving ethnic group in Europe, has not yet been determined, but they antedate the ancient Iberian tribes of Spain, with which they have been erroneously identified. Genetically and culturally, the Basque population has been relatively isolated and distinct, perhaps since Paleolithic times. Primarily free peasants, shepherds, fishermen, navigators, miners, and metalworkers, the Basques have also produced such figures as St. Ignatius of Loyola, St. Francis Xavier, and Francisco de Vitoria. Before Roman times, the Basque tribes, little organized politically, extended further to the north and south than at present. But the core of the Basque country resisted Romanization and was only nominally subject to Roman rule. Christianity was slow in penetrating (3d–5th cent.). Once converted, the Basques remained fervent Roman Catholics, but they have retained a certain tradition of independence from the hierarchies of Spain and France. The Basques withstood domination by the Visigoths and Franks. Late in the 6th cent. they took advantage of the anarchy prevailing in the Frankish kingdom and expanded northward, occupying present-day Gascony (Lat. *Vasconia*), to which they gave their name. The duchy of Vasconia, formed in 601 and chronically at war with the Franks, Visigoths, and Moors, was closely associated with, and at times dominated by, Aquitaine. In 778 the Basques, who had just been reduced to nominal vassalage by Charlemagne, destroyed the Frankish rearguard at Roncevaux, but they subsequently recognized Louis the Pious, king of Aquitaine, as their suzerain. The duchy of Gascony continued, but the Basques early in the 9th cent. concentrated in their present habitat and in 824 founded, at Pamplona, the kingdom of Navarre, which under Sancho III (1000–1035) united almost all the Basques. Although Castile acquired Guipúzcoa (1200), Álava (1332), and Vizcaya (1370), the Castilian kings recognized the wide democratic rights enjoyed by the Basques. GUERNICA was the traditional location of Basque assemblies. With the conquest (1512) of Navarre by Ferdinand the Catholic, the Basques lost their last independent stronghold. After the 16th cent., Basque prosperity declined and emigration became common, especially in the 19th cent. Basque privileges remained in force under the Spanish monarchy, but in 1873 they were abolished because of the Basques' pro-Carlist stand in the Carlist Wars. To regain autonomy, the Basques supported nearly every political movement directed against the central authority. In the civil war of 1936–39, the Basque Provinces, not including Navarre, defended the republican government, under which they had autonomous status. The Basques of Navarre supported the Franco forces. The Franco government, once in power, for the most part discouraged Basque political and cultural autonomy, although Basque nationalism has retained its appeal to the Basques. The trial of Basque nationalists in

1970 caused serious political conflicts in Spain, and the years following have been increasingly marked by unrest and violence by and against the Basque separatist organization. See Rodney Gallop, *A Book of the Basques* (1930, repr 1970).

Basra (būs'ra), Arabic *al Basrah*, city (1965 pop 313,327), SE Iraq, on the Shatt al Arab. Basra is the only port in Iraq. Its commercially advantageous location, near oil fields and 75 mi (121 km) from the Persian Gulf, has made it prosperous. Since 1948 many oil refineries have been built in the city. Petroleum products, grains, wool, and dates are exported. Basra was founded (A.D. 636) by the caliph Umar I. It was a cultural center under Harun ar-Rashid and declined with the decay of the Abbasid caliphate. Its possession was long contested by the Persians and the Turks. After World War I the construction of a rail line to Baghdad and the building of a modern harbor restored the city's importance. It is the seat of a branch of the Univ. of Baghdad. The name also appears as Bassora, Bussora, and Busra.

Bas-Rhin (ba-rān'), department (1968 pop 827,367), E France, in N Alsace. STRASBOURG is the capital and the commercial and industrial center.

Bass, Sam, 1851-78, American desperado, b. near Mitchell, Ind. He went (c 1870) to Denton, Texas, where he worked at various jobs before he became an outlaw. He was a road agent and train robber around Deadwood, S. Dak., for a time, then returned to Texas, where he gained notoriety as a train robber. One of his gang informed on him, and when Bass arrived to rob the bank at Round Rock he was mortally wounded by the Texas Rangers. His career and especially his death provided material for frontier ballads. See biographies by Wayne Gard (1936, repr 1969) and C. L. Martin (1880, repr 1956, 1968).

bass, common name applied to various fishes of the families Serranidae (sea basses) and Centrarchidae (black basses and sunfishes). The sea basses are a large, diverse, and important family of perchlike fishes with oblong, rather compressed bodies. All basses are carnivorous and most are marine, although several species are found in fresh water (see SUNFISH). Sea basses inhabit warm and temperate seas throughout the world and are highly valued as game and food fishes. Along the Atlantic coast as far north as Cape Cod is found the common, or black, sea bass, a sluggish bottom fish averaging 6 lb (2.7 kg) in weight and 18 in (45 cm) in length. Offshoots of the sea basses and classified with them are the white basses, including the striped bass (or rockfish) and the white perch, both found in fresh and brackish waters from Florida to Canada, the white bass of the Mississippi valley and the Great Lakes, and the similar but smaller yellow bass, found in the same range. The Pacific sea basses include the giant sea bass, or Pacific jewfish, a bulky bottom fish that reaches a weight of 600 lb (270 kg) and a length of 7 ft (2.1 m), as well as the 2-ft (60-cm) kelp and sand basses. The GROUPERS are an important genus of large tropical sea basses. Very closely allied to the sea basses are the tripletails, with prominent anal and dorsal fins, and the robalo, or snook, widely distributed in tropical American salt waters. Basses are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, families Serranidae and Centrarchidae.

bass (bās), in musical harmony, the part of lowest pitch. The term is used for the lowest-pitched male VOICE and for instruments of low pitch, such as bass clarinet, bass drum, French horn, bassoon (bass oboe), and bass trombone.

Bassano, Jacopo (ya'kōpō bas-sa'nō), c 1515-1592, Venetian painter, whose original name was Jacopo, or Giacomo, da Ponte, b. Bassano, Italy. Bassano first studied with his father, Francesco da Ponte, and then went to Venice. There he was influenced by Titian and Lorenzo Lotto, but he soon evolved a more turbulent mannerist style. Returning to Bassano c 1540, he established a thriving workshop producing works primarily on biblical themes. Into his paintings, which were characterized by a dramatic intensity, he introduced vignettes of country life. He was among the first Italian painters to depict animals, farmhouses, and landscapes. Jacopo's works include *Jacob's Return to Canaan* (Ducal Palace, Venice), *Dives and Lazarus* (Cleveland Mus.), *Acteon and the Nymphs* (Art Inst., Chicago), *Annunciation to the Shepherds* (National Gall. of Art, Washington, D.C.). See study by Pietro Zampetti (tr 1958). Of Jacopo's four sons, his most worthy followers were Francesco Bassano, 1549-92, whose biblical and pastoral scenes were similar in style to his father's, and Leandro Bassano, 1558-1623, who

Painted altarpieces and portraits as well as pastoral GENRE. The Cleveland Museum of Art has his *Pieta*. **Bassano del Grappa** (bas-sa'nō dēl grap'pa), city (1971 pop 35,187), Venetia, NE Italy, on the Brenta River. It is an agricultural, commercial, and industrial center. First mentioned c 998, the city came under several lords before passing to Venice in 1404. In Sept., 1796, Napoleon I defeated the Austrians there. The Da Ponte family of painters, called the Bassano family after the city, had a flourishing school there in the 16th cent., and many of their works remain in the city. In the 17th and 18th cent. the Remondini printing plant was famous throughout Europe. Of note are a 13th-century castle, a wooden covered bridge (13th cent., rebuilt numerous times including 1945), and a number of fine old churches and villas.

Bassein (bāsēn', -sān'), town (1969 est. pop 175,000), S Burma, on the Bassein River. Lying at the western edge of the Irrawaddy delta, Bassein is accessible to large vessels; it is also the terminus of a branch of the main railroad line. The town is a rice-milling and export center; teak and bamboo are also handled. The British established a fort at Bassein in 1852. It was occupied by the Japanese during World War II.

Basses-Alpes: see ALPES-DE-HAUTES-PROVENCE.

Basses-Pyrénées: see PYRÉNÉES-ATLANTIQUE.

Basse-Terre (bastēr'), town (1969 est. pop 16,000), capital of GUADELOUPE dept., French West Indies. It is a port that ships the products of the surrounding agricultural area. Founded by the French in 1643, it retains its French colonial atmosphere, but its commercial prosperity passed to Pointe-à-Pitre in the late 18th cent.

Basseterre, town (1970 est. pop 14,000), capital of SAINT KITTS-NEVIS, on St. Kitts island, British West Indies. It is one of the chief commercial depots of the Leeward Islands. Sugar refining is the leading industry. Basseterre was founded by the French in 1627.

basset hound, breed of short-legged, long-bodied HOUND developed centuries ago in France. It stands from 12 to 15 in (30.1-38.1 cm) high at the shoulder and weighs from 25 to 50 lb (11.3-22.7 kg). The short, dense coat is usually black, tan, or white or any combination of these colors. The basset was perfected to hunt such game as rabbits, fox, squirrels, and pheasant in very heavy ground cover, the shortness of its legs allows it to keep its head to the scent with a minimum of difficulty. It has also been trained to hunt raccoons and opossum and to retrieve. Renowned for its scenting ability, which is second only to that of its close relative the bloodhound, the basset is still popular as a slow but efficient hunter. It is also raised as a pet. See DOG.

Bassett, James, 1834-1906, American Presbyterian missionary, b. Canada. In 1872, under the auspices of the American Board, he founded the first American mission at Teheran, Persia. Under his supervision other mission stations were founded, and in 1882 he became senior missionary and head of the Eastern Mission of Persia. He wrote *Persia, the Land of the Imams* (1886) and *Persia, Eastern Mission* (1890).

Bassett, John Spencer, 1867-1928, American historian, b. Tarboro, N.C. He was professor of history at Trinity College (now Duke Univ.) from 1893 to 1906 and then at Smith from 1906 to 1928. His first writings were mostly monographs on North Carolina history. Bassett founded (1902) the *South Atlantic Quarterly*. Chief among his writings are *The Federalist System, 1789-1801* (1906, repr 1968, Vol. II in the "American Nation" series), *The Life of Andrew Jackson* (1911, repr 1967), and *The Middle Group of American Historians* (1917). He also edited much original material, including *The Writings of "Colonel" William Byrd* (1901), *Selections from the Federalist* (1921), *The Southern Plantation Overseer as Revealed in His Letters* (1925, repr 1968), and *The Correspondence of Andrew Jackson* (7 vol., 1926-35).

Bassompierre, François, baron de (fraNswa' barōN' dā basōNpyēr'), 1579-1646, marshal of France. Under King Henry IV he distinguished himself in the army and as a courtier, and after Henry's death he remained loyal to the queen, Marie de' Medici, during her regency. Subsequently he was ambassador to Spain, to England, and to Switzerland, and he fought against the HUGUENOTS in 1621-22 and 1627-28. Because of his opposition to Cardinal Richelieu and his alleged part in an intrigue he was imprisoned (1631) in the Bastille until after the cardinal's death (1643). During his captivity he wrote valuable memoirs.

bassoon (bāsōōn'), double-reed woodwind instrument that plays in the bass and tenor registers. Its B-

ft (2.4-m) conical tube is bent double, the instrument thus being about 4 ft (1.2 m) high. It evolved from earlier double-reed instruments in the 16th

Bassoon

cent. and by 1600 was common throughout Europe. When the orchestra developed in the 17th cent., the bassoon was one of the original woodwinds included and has been indispensable ever since. It was much improved in the 19th cent. in both France and Germany, the French and German bassoons have since differed from each other appreciably in tonal quality and construction. Although used in chamber music, the bassoon has only a small literature as a solo instrument. When played staccato it can have a humorous effect that has been frequently exploited by composers. The contrabassoon, also called double bassoon, is pitched an octave below the bassoon. Fingering is the same for both. The contrabassoon's tube, more than 16 ft (4.9 m) long, is doubled back upon itself four times. First made by Hans Schreiber of Berlin in 1620, it was used by Handel, Haydn, and Beethoven. Technical imperfections hindered any extensive use until a German, Wilhelm Heckel, in the late 19th cent. improved its construction and intonation, producing the model in general use today.

Bassora: see BASRA, Iraq.

Bass Strait (bās), channel, 80 to 150 mi (129-241 km) wide, between Tasmania and Victoria, SE Australia, connecting the Indian Ocean and Tasman Sea. Port Phillip Bay and Melbourne are on the northwest coast. Bass Strait is an important fishing area. The discovery of the strait by English explorer George Bass in 1798 proved that Tasmania was not a part of the Australian continent.

bass viol (bās vi'ol), properly, the largest instrument of the VIOL family. The term now refers most often to the DOUBLE BASS.

basswood: see LINDEN.

Bast (bāst), ancient Egyptian cat goddess. At first a goddess of the home, she later became known as a goddess of war. The center of her cult was at Bubastis. Her name also appears as Ubast.

bast: see BARK.

bastard, person born out of wedlock whose legal status is illegitimacy. In CIVIL LAW countries and in about half the states of the United States, the union of the parents in marriage after birth makes the child legitimate. Unlike civil law, which granted bastards certain rights, English COMMON LAW treated them almost as persons outside the law and left their care to poorhouses. At common law a bastard has no right to inherit property from his mother or father except by specific designation (e.g., in a will). Recently their condition has been much improved by statute. It is presumed that any child born to a married woman, or within competent time after termination of the marriage, is the child of her husband. If, however, it can be proved that it was physically impossible for the husband to have been the

father (e.g., because of nonaccess to the wife), he may bring action to establish the illegitimacy of the child. For the status of children born to annulled marriages, see NULLITY OF MARRIAGE, HUSBAND AND WIFE. See also LEGITIMATION.

Bastenaken: see BASTOGNE, Belgium

Bastia (băstă'ă), city (1968 pop. 50,100), NE Corsica, France, on the Tyrrhenian Sea. It is the island's largest city and chief commercial center. It has a thriving export industry, sawmills, and cigarette and food-processing plants. Founded (14th cent.) as a fort by the Genoese, it was the capital of Corsica until 1791. Its citadel (16th–17th cent.) and its many 18th-century buildings are tourist attractions.

Bastian, Adolf (ă'dôlf băst'yăn'), 1826–1905, German anthropologist. Often called the father of ethnography, he recorded his observations of peoples and cultures in *Der Mensch in der Geschichte* [man in history] (1860). His concept of "elemental ideas" as common to mankind but varying in form according to "folk ideas" of a given area foreshadows the culture-area theory of modern anthropology. His influence was transmitted through the works of Franz BOAS and others. Bastian's important studies appeared in the *Zeitschrift für Ethnologie*, which he helped to found and edit, and in *Ethnologische Forschungen* (1871–73).

Bastiat, Frédéric (irădă'rek' băstyă'), 1801–50, French economist. In his *Harmonies of Political Economy* (1850, tr. 1860) he developed the classical theories of economic individualism and laissez-faire. A popular and controversial writer, he vigorously supported free trade. There are several translations of his essays called *Sophismes économiques* (1847–48). See studies by Dean Russell (1959 and 1965) and G. C. Roche, 3d (1971).

Bastidas, Rodrigo de (rôthre'gô dă băstê'thăs'), c.1460–1526, Spanish conquistador in Colombia. In 1501, accompanied by BALBOA and Juan de la COSA, he discovered the mouths of the Magdalena River. Because of difficulties with the Spanish crown, it was 1525 before he returned to found SANTA MARTA. He prohibited exploitation of the Indians and so dissatisfied his followers that they tried to murder him. Wounded, he fled to Santo Domingo, but bad weather forced him to land in Cuba, where he died.

Bastille (băstêl') [O Fr. = fortress], fortress and state prison in Paris, located, until its demolition (started in 1789), near the site of the present Place de la Bastille. It was begun c.1369 by Hugh Aubriot, provost of the merchants [mayor] of Paris under King Charles V. Arbitrary and secret imprisonment by LETTRE DE CACHET gave rise to stories of horror, but actually the Bastille was generally used for persons of influence, and its regime for most political prisoners was mild. As a symbol of absolutism the Bastille was hated. It had strategic importance, for its guns commanded one of the gates of Paris. On July 14, 1789, a Parisian mob stormed the Bastille in the hope of capturing ammunition. The governor, the marquis de Launey, was killed, the seven inmates, none of them political prisoners, were freed. This first spontaneous act of the people of Paris opened the way for the lower classes in the French Revolution. The event acquired symbolic significance, and July 14—Bastille Day—became the national holiday of republican France.

Bastogne (băstô'nyă), Flemish Bastenaken, town (1970 pop. 6,816), Luxembourg prov., SE Belgium, in the Ardennes and near the border of the duchy of Luxembourg. It is a market town noted for its hams and is a rail junction. In World War II during the Battle of the Bulge (Dec., 1944–Jan., 1945) it was held mainly by a U.S. division, against intensive bombardment by the Germans and generally overwhelming odds, until relieved by the U.S. 3rd Army. Nearby are military cemeteries and the Mardesson monument to the U.S. soldiers who died in battle.

Bastrop (băst'rôp'), city (1970 pop. 14,713), seat of Morehouse parish, NE La., founded c.1845. An industrial city in a cattle, farm, and timber area, Bastrop is the center of the huge Monroe natural gas field (discovered 1916). Its principal manufactures are paper, wood pulp, wood products, and chemicals.

Basutoland: see LESOTHO

bat, winged mammal of the order Chiroptera, which includes between 1,000 and 2,000 species classified in about 200 genera and 17 families. Bats range in size from a wingspread of over 5 ft (150 cm) to a wingspread of less than 2 in. (5 cm). They are found in nearly all parts of the world but are most numerous in the tropics; there are about 30 species in the United States. Bats are the only mammals capable of

true flight, that is, flight powered by muscular movement as distinct from gliding. The wing is a double membrane of skin stretched between the enormously elongated bones of four fingers and extending along the body from the forelimbs to the hind limbs and from there to the tail. The thumb is small, clawed, and free from the membrane. The hind limbs are small and may be rotated in such a way that the knees bend backward rather than forward, as in other mammals, this is presumably an adaptation for take off and flight. The body of the bat is mouselike and usually covered with fine fur. The face varies greatly from one species to another, many species have complex appendages on the snout and projections, or false ears, in front of the true ears, the ears themselves are often very large and elaborately convoluted. These facial structures are part of the sensory apparatus that receives sound vibrations. Nearly all bats are nocturnal and many live in caves, although they see well, they rely primarily on their highly developed hearing, using echolocation (sonar) to avoid collisions and to capture insects in flight. The bat emits high-pitched sounds (up to 50,000 hertz) that echo from any object it encounters; the echo provides the bat with information about the size, shape, and distance of the object. The rate at which bats emit these squeaks is sometimes as high as 200 per sec. Blinded bats easily find their way through complex obstacle courses, but deafness leaves them helpless. Bats at rest hang head down, grasping a twig or crevice with their clawed feet, they take off into flight from this position. Some bats are solitary, living in caves, crevices, hollow trees, or attics, other species are communal, with thousands or even millions of bats roosting together in a cave or on branches in a section of forest. In some species of communal bats, the entire colony leaves the roost together in the evening and returns together in the morning, in others, individuals come and go at different times. Bats of northern regions migrate, hibernate, or both in winter. In most species, males and females do not associate except during the mating season. Females of most species bear a single young in the summer of each year. The young are then carried by the mothers for a few days, after which they are left in the roost when not nursing, they begin to fly in a few weeks. The life span of some bats is 20 years in captivity. The bat order is divided on anatomical grounds into two major divisions, or suborders, the Megachiroptera, or FRUIT BATS, found only in the Old World tropics, and the Microchiroptera, or insect-eating bats, with a worldwide distribution. The fruit bats include the largest species of bat, the flying foxes, which may weigh 2 or 3 lbs (9 to 14 kg). Their diet is confined almost entirely to fruit, nectar, and pollen. The insect-eating bats include the smallest bat species. Despite the name, some of these bats live wholly or largely on fruit, a large number eat insects and, in some cases, larger animals. Members of several species catch fish as they skim over water, and the South American VAMPIRE BATS feed exclusively on blood. The most common bats of the temperate Northern Hemisphere are the Old World horseshoe bats (*Rhinolophus*), characterized by one or two horseshoe-shaped facial appendages, the cosmopolitan little brown bats (*Myotis*), big brown bats, or serotines (*Eptesicus*), and pipistrelles (*Pipistrellus*). The last three, all represented by species in North America, belong to the plain-nosed bat family (Vespertilionidae), characterized by a lack of appendages on the snout. There are over a dozen species of *Myotis* in North America, the common little brown bat, *M. lucifugus*, is distributed over the entire continent from Alaska and Labrador to the S. United States. A colonial bat, it is found in many habitats, including houses. It is about 2½ in. (6.3 cm) long without the tail and weighs about ¼ oz (7 grams). The North American big brown bat, *Eptesicus fuscus*, of similar distribution, is about three times as heavy, with a wingspread of 12 in. (30 cm). Large, solitary North American bats of wide distribution are the hoary bat, *Lasiurus cinereus*, yellow-brown with silver frosting, and the red bat, *L. borealis*, which is a striking brick-red color. Both have soft, thick fur and roost in trees. The freetail bats (family Molossidae) are a cosmopolitan group of communal bats characterized by a long tail extending well beyond the end of the wing membrane. Among them are the guano bats (*Tadarida*), which live in enormous colonies. Their excrement, called GUANO, accumulates in great quantities in their roosting places and is commercially valuable as fertilizer. Most New World freetail bats are tropical, but several are found in the S. United States. One of

these, the Mexican freetail bat (*Tadarida brasiliensis*), is noted for its colonies in the Carlsbad Caverns of New Mexico, numbering an estimated 9 million individuals. When these bats leave the caves together it takes about 20 min for the entire column to make its exit. This family also includes the mastiff bats (*Eumops*), largest of the North American bats, with a wingspread of 18 in. (46 cm). Most bats are economically valuable because of the large number of insects they consume. Bats are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Chiroptera. See R. W. Barbour and W. H. Davis, *Bats of America* (1969), W. A. Wimsatt, ed., *Biology of Bats* (2 vol., 1970).

Bataan (bătăn', -lăn', bătă-ăn'), peninsula and province (1970 pop. 214,131), W. Luzon, the Philippines, between Manila Bay and the South China Sea. Balanga is the provincial capital. A mountainous, thickly jungled region, it has some of the best bamboo forests in the Philippines. There is a pulp and paper mill, a large fertilizer plant, and an oil refinery (established there in 1961). Subsistence farming is carried on. Early in World War II (Dec., 1941–Jan., 1942), the U.S.-Filipino army withdrew to Bataan, where it entrenched and, despite the lack of naval and air support, fought a gallant holding action that upset the Japanese timetable for conquest. The army was crippled by starvation and disease when it was finally overwhelmed on April 9, 1942. The U.S. and Filipino troops captured there were subjected to the long, infamous "Death March" to the prison camp near Cabanatuan, thousands perished. Homage is annually paid these victims on Bataan Day, a national holiday, when large groups of Filipinos solemnly rewalk parts of the death route. The battleground of Bataan is now a national shrine. See also CORREGIDOR. See S. L. Falk, *Bataan: The March of Death* (1962), Robert Conroy, *The Battle of Bataan: America's Greatest Defeat* (1969).

Batalha (bătă'lyă) [Port. = battle], town (1970 municipal pop. 6,673), W. central Portugal, just S of Leiria, in Estremadura. It has a magnificent Dominican monastery and church (Santa Maria da Vitoria), built by John I of Portugal to commemorate his victory (1385) over John I of Castile at nearby Aljubarrota. The monastery is now a national museum.

Batalpashinsk: see CHERKESK, USSR.

Batanes, the Philippines. See BATAN ISLANDS.

Batangas (bătăn'găs), city (1970 pop. 927,290), capital of Batangas prov., SW Luzon, the Philippines. An important port on the Calumpian River near its mouth on Batangas Bay, it has a large oil refinery and serves a fertile farm area noted for its fruits, cacao, and coffee. Tourist attractions in Batangas province include Lake Taal, with its active volcano (which erupted in 1965, causing extensive damage and many deaths), and the popular summer resort city of Tagaytay.

Batan Islands (bătăn'), island group (1970 pop. 11,425), 76 sq mi (197 sq km), northernmost of the Philippine islands. They include the islands of Itbayat, Batan, Sabtang, and a number of islets, and comprise the province of Batanes. Basco is the provincial capital. The Batan Islands are separated from Taiwan by the Bashi Channel (50 mi/80 km wide). Coal is mined, and fishing is an important industry. In World War II, Batan Island was the site of the first Japanese landing in the Philippines (Dec. 8, 1941).

Batavi (bătă'vî), ancient Germanic tribe that settled (1st cent. B.C.) in the Rhine delta. Batavian regiments served under Rome, although this relationship was interrupted in A.D. 70 by the anti-Roman conspiracy of CIVILIS, one of their leaders. The tribal name was revived in 1795 to designate Holland, particularly the BATAVIAN REPUBLIC.

Batavia: see DJAKARTA, Indonesia.

Batavia, city (1970 pop. 17,338), seat of Genesee co., N.Y., inc. 1915. It was laid out in 1801 by Joseph Ellicott, agent for the Holland Land Company. Situated in a farm area, Batavia has industries producing television sets, die castings, shoes, road equipment, paper boxes, and heating equipment. The city was a center of the Anti-Masonic movement in the 19th cent.

Batavian Republic, name for the Netherlands in the years (1795–1806) following conquest by the French during the FRENCH REVOLUTIONARY WARS. The United Provinces of the Netherlands were reconstituted as the Batavian Republic in 1795 and remained under French occupation and tutelage. In 1801, Napoleon imposed a new constitution on the republic, which was financially drained by French requisitions, and in 1806 he transformed Batavia into the kingdom of Holland under the domain of his brother Louis BO-

NAPARTE *Batavia*, which derives from the *BATAVI*, an ancient Germanic tribe, is still used occasionally as a name for Holland

Bate, William Brimage, 1826–1905, U.S. politician and Confederate general, b. Castalian Springs, Tenn. He served in the Mexican War and was involved in Tennessee politics before entering the Confederate army in 1861. In a spectacular career Bate rose from private to major general and served with distinction in six major campaigns. He was elected governor of Tennessee in 1882 and reelected in 1884. He served in the U.S. Senate from 1887 to 1905. See biography by Park Marshall (1908)

Bates, H. E. (Herbert Ernest Bates), 1905–74, English author, b. Rushden, Northamptonshire. During World War II he served with the Royal Air Force. A good storyteller, Bates had the ability to render the sense of a particular place and time and was noted for his descriptions of the English countryside. Among his many novels are *Fair Stood the Wind for France* (1944), *The Jacaranda Tree* (1949), and *The Triple Echo* (1970). See his autobiography (3 vol., 1969, 1971, 1971)

Bates, Henry Walter, 1825–92, English naturalist and explorer. In 1848 he went with A. R. Wallace to Brazil, where he explored the upper Amazon, returning in 1859 with some 8,000 new zoological species. He was the first to state a plausible theory of MIMICRY. His great work was *The Naturalist on the River Amazon* (1863). From 1864, Bates was assistant secretary of the Royal Geographical Society.

Bates, Katharine Lee, 1859–1929, American author, b. Falmouth, Mass., grad. Wellesley, 1880. She was professor of English literature at Wellesley (1891–1925). Her hymn, "America the Beautiful," first appeared in the *Congregationalist* magazine on July 4, 1895. Besides several books of poems, she wrote scholarly works and books for children. See biography by D. W. B. Burgess (1952).

Bates College, at Lewiston, Maine, coeducational, founded 1855 as Maine State Seminary, chartered as a college 1864. It was the first Eastern college to admit women students.

batfish: see ANGLER

Bath, city (1971 pop. 84,545), Somerset, SW England, in the Avon River valley. Since 1974, it has been part of the new nonmetropolitan county of Avon. Britain's leading winter resort, Bath has the only natural hot springs in the country. There are also engineering, printing, bookbinding, wool-weaving, and clothing industries. In the 1st cent. A.D., the Romans discovered the natural springs and named the site *Aquae Solis* ("waters of the sun"), and built elaborate lead-lined baths with heating and cooling systems (first excavated in 1755). In Saxon times the city was destroyed and the baths buried. From the time of Chaucer until the Tudor era, Bath had a flourishing wool and cloth industry. In the 18th cent. Richard (Beau) Nash, establishing social standards equal to those of London society, and the architect John Wood and his son transformed Bath into England's most fashionable spa. The Woods, using Bath stone from nearby quarries, built Queen Square, the Circus, and the Royal Crescent, all excellent examples of Georgian architecture. The Assembly Rooms, of the same period, were destroyed by air raids in World War II but later restored. Near Bath is a museum of American arts and crafts.

Bath, city (1970 pop. 9,679), seat of Sagadahoc co., SW Maine, on the west bank of the Kennebec River near its mouth on the Atlantic, settled c. 1670, inc. as a city 1847. It is a port of entry, with a fine harbor. Once a great shipbuilding center, it still has active shipyards and marine manufactures, but summer tourism is becoming increasingly important. Champlain and others visited or passed near this site when exploring the Kennebec River, and at nearby Popham Beach a short-lived colony was established (1607) by George Popham. Shipbuilding began early, many clipper ships were constructed in the 19th cent., and the Bath Iron Works began producing steel warships and commercial vessels in the 1880s. The city flourished, particularly during World Wars I and II, when a large number of destroyers were built. There is a marine museum, and many fine old mansions remain.

batolith, enormous mass of intrusive igneous rock, that is, rock made of once-molten material that has solidified below the earth's surface. Batholiths usually are granitic in composition, have steeply inclined walls, and are without any visible floors, they commonly extend over areas of thousands of square miles. One of the larger single batholiths in North America is the Coast Range

batolith of W. Canada and Alaska, encompassing an area of about 73,000 sq mi (182,500 sq km). Important batholiths in the United States include the Idaho batholith, 18,000 sq mi (45,000 sq km), and the Sierra Nevada batholith, 16,000 sq mi (40,000 sq km). In New England, the White Mountain and Sterling batholiths encompass a total of 1,200 sq mi (3,000 sq km). Batholiths are formed in mountain regions at great depth in the earth's crust and thus are exposed at the surface only after considerable erosion of the overlying mountain mass. The formation and emplacement of batholiths is one of the most perplexing and controversial subjects in geology. Some batholiths appear to have been emplaced by a process called magmatic stoping, in which liquid magma works its way upward in the crust by shattering and breaking large blocks of the roof of the magma chamber by means of thermal or mechanical wedging. These blocks of country rock may sink and ultimately be melted into the hot magma, or they may survive and be incorporated into the batholith as xenoliths. Other batholiths appear to have formed by the alteration of earlier-formed sedimentary or metamorphic rocks into granite without melting. This theoretical process, called granitization, has many supporters, since field studies sometimes show a close relationship between structures found in the granite and the surrounding country rock in many batholiths.

Báthory (ba'tòrë), Pol. *Batory*, Hungarian noble family. Stephen Báthory, 1477–1534, a loyal adherent of JOHN I of Hungary (John Zápolya), was made (1529) voivode [governor] of TRANSYLVANIA. His youngest son became (1575) king of Poland (see STEPHEN BATHORY, king of Poland) and was succeeded as prince of Transylvania by his brother, Christopher Bathory, 1530–81. Christopher married Elizabeth, sister of Stephen BOCSKAY. His son and successor, Sigismund Bathory, 1572–1613, was mentally unbalanced. At first a loyal vassal of the Hapsburg king of Hungary (Holy Roman Emperor Rudolf II), he crushed (1594) the pro-Turkish faction of nobles and was recognized by Rudolf as hereditary prince. In 1597, he abdicated in favor of Rudolf but returned to assume power in Aug., 1598. The following March he abdicated in favor of his cousin, Andrew Cardinal Bathory (d. 1599), but again reversed his decision and, with the help of Stephen Bocskay, returned to power as a vassal of Sultan Muhammad III. He abdicated definitively in 1602 (in favor of Rudolf) and retired to Silesia. Elizabeth Bathory, d. 1614, a niece of Stephen Bathory, is celebrated in legend and history as a female werewolf. She is said to have slaughtered more than 600 virgins in order to renew her youth by bathing in their blood. She was incarcerated in 1610 and died in prison. See biography by Valentine Penrose (tr. 1970), Baring Gould, *Book of Werewolves* (1865). Gabriel Báthory, 1589–1613, a nephew of Andrew Cardinal Bathory, became prince of Transylvania in 1608. His harsh regime provoked a rebellion by the nobles, and he was murdered. By the marriage of his niece Sophia (d. 1680) to George II Rákoczy, the two families were united.

Bath-rabbim (bāth-rāb'īm), gate in Heshbon. Song 7:4

baths, in architecture. Ritual bathing is traceable to ancient Egypt, to prehistoric cities of the Indus River valley, and to the early Aegean civilizations. Remains of bathing apartments dating from the Minoan period exist in the palaces at Knossos and Tiryns. The ancient Greeks devised luxurious bathing provisions, with heated water, plunges, and showers. Bathing in public facilities, or *thermae*, was developed by the Romans to a unique degree. *Thermae*, probably copied after the Greek *gymnasia*, had impressive interiors, with rich mosaics, rare marbles, and gilded metals. Water, brought by aqueducts, was stored in reservoirs, heated to various temperatures, and distributed by piping to the bath apartments. Certain rooms were kept heated by means of furnaces which sent hot air into lines of flues beneath floors and in the walls. There are ruins of public baths in Pompeii, and in Rome there exist extensive remains of the *thermae* of Titus (A.D. 80), of Caracalla (A.D. 212–35), and of Diocletian (A.D. 302).

Bath-sheba (bāth'-shēbā, -shē'bā), wife of Uriah the Hittite. David seduced her, effected the death of her husband, and then married her. Her second son by David was Solomon. 2 Sam. 11, 12, 1 Kings 1, 2, Mat. 16. Bath-shua 1 Chron. 3:5

Bath-shua (bāth-shō'ā), same as BATH SHEBA

Bathurst, city (1971 pop. 17,169), New South Wales, SE Australia, on the Macquarie River. It is an agricultural market with food processing and other light

industries and railroad workshops. Founded in 1815 and named for the earl of Bathurst, then British colonial secretary, it was the first settlement on the western side of the Blue mts. Bathurst is the seat of Roman Catholic and Anglican bishoprics.

Bathurst, city (1971 pop. 16,674), N. N. B., Canada, on Chaleur Bay at the mouth of the Nepisiguit River. A popular beach resort, it is also the center of an area of lead, zinc, and copper mines and has large pulp, paper, and lumber mills.

Bathurst: see BANJUL, Gambia

Bathurst Island, c. 1,000 sq mi (2,590 sq km), Northern Territory, N. Australia, near Melville Island, between the Timor and Arafura seas. There is an aboriginal reservation on the island.

Bathurst Island, 7,609 sq mi (19,707 sq km), in the Arctic Archipelago, Franklin dist., Northwest Territories, N. Canada. It is the present site of the North Magnetic Pole.

batik (bat'ek'), method of decorating fabrics practiced for centuries by the natives of Indonesia. It consists of applying a design to the surface of the cloth by using melted wax. The material is then dipped in cool vegetable dye, the portions protected by the wax do not receive the dye, and when the wax is removed in hot water the previously covered areas display a light pattern on the colored ground. Remains of clothing found in Java indicate that the same or similar patterns have been in use for about 1,000 years and are handed down in families. Certain designs were traditionally reserved for royalty and high officials. Motifs are geometric or are based on conventionalized natural objects. Cotton cloth is generally used, and some silk. Batik was first brought into Europe by Dutch traders. In the 19th cent., Western craftsmen adopted the art.

Batista y Zaldivar, Fulgencio (fóolhēn'sēō bat'ē'stā ē saldē'var), 1901–73, president of Cuba (1940–44, 1954–58). An army sergeant, Batista took part in the overthrow of Gerardo MACHADO in 1933 and subsequently headed the military and student junta that ousted Carlos Manuel de CESPEDES and installed Ramon GRAU SAN MARTIN. Made chief of staff of the army, he increased its size and power and soon became de facto ruler, launching a three-year plan of economic and social rehabilitation. In 1940, with support from the extreme left, he was elected president and subsequently ruled with a considerable degree of democratic equity. He accepted the defeat of his candidate when Grau won in the election of 1944. However, in 1952, when Batista was a presidential candidate, he seized power through a coup just prior to the election. An election was held in 1954 and Batista, unopposed and employing dubious methods, won easily. Discontent with his regime led to several uprisings, notably that of Fidel CASTRO. Pressed by the rebels and after a mock election (1958) had failed to calm the populace, Batista fled Cuba (Jan., 1959) for the Dominican Republic and thence to Portugal and Madeira. He died in Spain.

Batley, municipal borough (1971 pop. 42,004), West Riding of Yorkshire, N. central England. In 1974, it became part of the new metropolitan county of West Yorkshire. Heavy woollens, shoddy, and other textiles are the chief manufactures, tiles, carpets, mattresses, felt, biscuits, and machinery are also produced. The Bagshaw Museum in Batley illustrates the history of clothmaking. Joseph Priestley, the radical minister and scientist, attended Batley Grammar School.

Batlle y Ordóñez, José (hōsā' bat'yā' ē órdō'nyās), 1856–1929, president of Uruguay (1903–7, 1911–15). A journalist and the head of the Colorado party, Batlle was a campaigner for political reform. In his second term he initiated radical legislation to increase public welfare and substitute government for the anarchism that had plagued Uruguay since the winning of independence. Among his most significant proposals were universal adult suffrage, labor reforms, and the decentralization of the executive into a junta modeled after the Swiss federal council. The constitution of 1917, framed under his influence, curbed the power of the executive and provided for socialist government, a trend not interrupted until TERRA became president in 1931. See study by M. I. Vanger (1963).

Batoche (bātōsh'), historic site, central Sask., Canada, on the South Saskatchewan River. During Riel's Rebellion, Louis Riel made his headquarters there, and the rebels were routed on May 12, 1885.

Batoni, Pompeo Girolamo (pōmpē'ō jērō'lamō batō'nē), 1708–87, Italian painter. Batoni studied and worked in Rome. His paintings tend toward the

neoclassical, a style foreshadowing that of Mengs. Among his notable works are *The Education of Achilles* (Uffizi), *Aeneas and His Family Fleeing Troy* (Turin), and *Mary Magdalen* (Louvre). Batoni is noted also for his portraits, including many of the reigning popes of his day.

Baton Rouge (băt'ən rōzh) [Fr. = red stick], city (1970 pop 165,963), state capital and seat of East Baton Rouge parish, SE La., on a bluff along the eastern bank of the Mississippi River, inc. 1817. It is a busy deepwater port of entry, an important transportation, distributing, and commercial center for a large oil, natural gas, and farm area, and a major oil-refining hub. There are large petrochemical industries, food-processing plants, machine shops, foundries, and ironworks. Baton Rouge was founded in 1719 when the French built a fort on that strategic spot along the river. The settlement was ceded to Great Britain in 1762, captured by the Spanish in 1779, and acquired by the United States in 1815 (following a brief period when it was a part of Spanish Florida). It became state capital in 1849. In the Civil War it was captured by Farragut after the fall of New Orleans (May, 1862), a Confederate attempt to recover it failed (Aug., 1862). It has notable antebellum houses. The old capitol (1882), built in the Gothic style of the original that was burned in the Civil War, still stands; a new 34-story capitol was occupied in 1932. Also of interest are the governor's mansion, the old arsenal museum, and the Huey Long grave and memorial. The city has an arts and science center with a planetarium, several museums, a zoo, and a symphony orchestra. It is the seat of Louisiana State Univ. and Agricultural and Mechanical College and of Southern Univ. and Agricultural and Mechanical College.

Batory: see STEPHEN BATHORY and BATHORY, family

Battambang (băt'əmbāng), city (1967 est. pop. 43,000), capital of Battambang prov., W Cambodia, in a great rice-growing area. The second largest city in Cambodia, it is a market center with numerous rice mills. Textiles are also made. The city is on both the highway and railroad linking Phnom Penh with Thailand, after the outbreak (1970) of civil war in Cambodia, the Battambang-Phnom Penh road was a prime target of the Khmer Rouge insurgents, who, by capturing it, severed Phnom Penh from its major source of rice. Battambang was acquired by Thailand in 1809 and returned to Cambodia in 1907. A technical university is located in the city.

Battenberg (băt'ənbörg), German princely family, issued from the morganatic union of Alexander, a younger son of Louis II, grand duke of Hesse-Darmstadt, and Countess Julia von Hauke, who was created (1858) princess of Battenberg. Their oldest son, Louis (1854-1921), an admiral in the British navy, was created marquess of Milford Haven and married a granddaughter of Queen Victoria. During World War I he renounced (1917) his German title and anglicized his name as Mountbatten. His daughter Louise married Gustavus VI, king of Sweden. Another daughter, Alice, married Prince Andrew of Greece, third son of King George I of Greece; their son Philip was created duke of Edinburgh and married (1947) Princess Elizabeth of England (later Queen Elizabeth II). Louis MOUNTBATTEN is the son of the 1st marquess of Milford Haven. The second son of Prince Alexander of Hesse-Darmstadt was (1879-86) prince of Bulgaria (see ALEXANDER). A third son, Henry, married Beatrice, daughter of Queen Victoria of England; their daughter, Victoria, married Alfonso XIII of Spain. See ALDEN HATCH, *The Mountbattens* (1965) and EDWARD SPIRO, *From Battenberg to Mountbatten* (1966).

Battery, the park, 21 acres (8.5 hectares), southern tip of MANHATTAN island, New York City, site of Dutch and English fortifications. Castle Clinton, a fort built in 1808 for the defense of New York harbor, was ceded to the city in 1823 and renamed Castle Garden. It was remodeled and served as a noted amusement hall and opera house. Swedish soprano Jenny Lind made her U.S. debut on its stage in 1850. From 1855 to 1892 it served as an immigration station, and from 1896 to 1914 it housed an aquarium. After World War II the park was remodeled, and Castle Clinton became a national monument (see NATIONAL PARKS AND MONUMENTS, table). The park also contains a war memorial and a statue of Giovanni da Verrazano, who discovered New York harbor. Boats to Liberty Island leave from the park.

battery, in law, the unpermitted touching by an aggressor, or by some force put in motion by an aggressor, of any part of the person of another or of anything worn or carried by another. Every consummated ASSAULT is a battery. To be the basis for a suit,

contact must be intended by the aggressor, it must be such that a reasonable man would consider it offensive, and there must be no consent on the part of the one affected. Consent is assumed for the ordinary and customary contacts that are necessary in everyday life. Gross negligence may be considered by the court as providing the intention necessary to constitute a battery. Actual physical injuries need not be sustained in order to support an action (e.g., a doctor who performs an operation without consent can be sued for battery, even though the patient is benefited by the operation). The term "assault and battery" refers to a criminal offense, the unlawful touching of another with the intention of committing an injury.

battery, electric, term commonly used for an electric cell such as the dry-cell flashlight battery but more correctly for a group of cells connected to act as a source of direct electric current at a given voltage. A cell consists of two ELECTRODES immersed in

Lead storage cell. At the lead-dioxide electrode, electrons from the circuit combine with lead dioxide and sulfuric acid to form lead sulfate and water. At the spongy-lead electrode, lead reacts with sulfate ions to form lead sulfate and release electrons.

an ELECTROLYTE, which acts chemically upon the electrodes to produce current. Batteries consisting of carbon-zinc dry cells connected in various ways (as well as batteries consisting of other types of dry cells) are used to power such devices as lanterns, transistor radios, and portable public-address systems. A battery called the storage battery is generally of the wet-cell type, i.e., it uses a liquid electrolyte and can be recharged many times, unlike the ordinary dry-cell battery, which uses a paste electrolyte and can be recharged few times, if at all. The storage battery consists of several cells connected in series. Each cell contains a number of alternately positive and negative plates separated by the liquid electrolyte. The positive plates of the cell are connected to form the positive electrode; similarly, the negative plates form the negative electrode. In the process of charging, the cell is made to operate in reverse of its discharging operation, i.e., current is forced through the cell in the opposite direction, causing the reverse of the chemical reaction that ordinarily takes place during discharge, so that electrical energy is converted into stored chemical energy. The storage battery's greatest use is in the automobile. In the United States the lead storage battery is commonly used; the nickel-cadmium battery, although far more costly, is also in wide use. The cell of the lead storage battery consists of alternate plates of lead (negative electrode) and lead coated with lead dioxide (positive electrode) immersed in an electrolyte of sulfuric acid solution, when fully charged, it produces a voltage of between 2.0 and 2.5 volts. In the discharging process lead sulfate is deposited on both the negative and the positive electrodes, while the sulfuric acid electrolyte becomes weaker. Another type of storage cell, called the Edison cell, has a nickel oxide positive plate and an iron negative plate suspended in a solution of potassium and lithium hydroxides. Because of its capacity to withstand abuse and its longer effective life, the Edison cell is preferred to the lead cell for railroad signal and lighting service. See FUEL CELL, SOLAR CELL.

Battle, rural district (1971 pop. 33,563), East Sussex, SE England. The town grew up on the site (then a moorland) of the battle of HASTINGS (1066). The victorious William the Conqueror built Battle Abbey to commemorate the event. The abbey is now a girls' school, but ruins can be seen.

battle, wager of: see ORDEAL.

Battle above the Clouds see CHATTANOOGA CAMPAIGN.

Battle Creek, city (1970 pop. 38,931), Calhoun co., S Mich., at the confluence of the Kalamazoo and Battle Creek rivers, settled 1831, inc. as a city 1859. It is an agricultural trade center and is known for its cereals, pet foods, and biscuits. Other manufactures include valves, pumps, farm equipment, trucks, registers, paper products, and brass and wire goods. Battle Creek Sanitarium (founded by Dr. J. H. Kellogg in 1886 as the Health Reform Institute), a natural history museum, a bird sanctuary, a state park, and Kellogg Community College are in or near the city. There is also a civil defense staff college, the training center for U.S. civil defense directors.

Battleford, town (1971 pop. 1,803), N central Sask., Canada, at the confluence of the Battle and North Saskatchewan rivers. Battleford is one of the oldest towns in the central part of the province. It served as the capital (1876-83) of the Northwest Territories and figured prominently in Riel's Rebellion of 1885.

Battle of Britain, in World War II, series of air battles between Great Britain and Germany, fought over Britain from Aug. to Oct., 1940. As a prelude to a planned invasion of England, Germany attacked British coastal defenses, radar stations, and shipping. On Aug. 24 the attack was shifted inland to Royal Air Force installations and aircraft factories in an effort to gain control of the air over S. England. Failing to destroy the RAF, the Germans began (Sept. 7) the night bombing, or blitz, of London. Heavy night bombings of English cities continued into October, when the attack was shifted back to coastal installations. The Germans gradually gave up hope of invading England, and the battle tapered off by the end of October. Though heavily outnumbered, the RAF put up a gallant defense, radar, used for the first time in battle, played an important role. The Germans lost some 2,300 aircraft, the RAF lost some 900. The Battle of Britain was the first major failure of the Germans in World War II. See DEREK WOOD and DEREK DEMPSTER, *The Narrow Margin* (1961, repr. 1967), ALEXANDER MCKEE, *Strike from the Sky* (1960, repr. 1971), RICHARD COLLIER, *Eagle Day* (1966), TELFORD TAYLOR, *The Breaking Wave* (1967), PETER TOWNSEND, *Duel of Eagles* (1970).

Battle of the Bulge, popular name in World War II for the German counterattack in the Ardennes, Dec., 1944-Jan., 1945. It is also known as the Battle of the Ardennes. On Dec. 16, 1944, a strong German force, commanded by Marshal von Rundstedt, broke the thinly held American front in the Belgian Ardennes sector. Taking advantage of the foggy weather and of the total surprise of the Allies, the Germans penetrated deep into Belgium, creating a dent, or "bulge," in the Allied lines and threatening to break through to the N. Belgian plain. Simultaneously, the main Allied supply port of Antwerp was subjected to intensive bombardment by V-2 rockets. An American force held out at Bastogne, even though surrounded and outnumbered. The U.S. 1st and 9th armies, temporarily under Field Marshal Montgomery, attacked the German salient from the north, while the U.S. 3d Army attacked it from the south. Improved flying weather (after Dec. 24) facilitated Allied counterattacks. By Jan. 16, 1945, the German forces were destroyed or routed, but not without some 77,000 Allied casualties. See J. S. D. EISENHOWER, *The Bitter Woods* (1969), P. ELSTOB, *Hitler's Last Offensive* (1971).

Battle of the Spurs 1 Fought in 1302 near Courtrai, Belgium, between the rebellious Flemish towns, led by Bruges, and an army sent by Philip IV of France, who had annexed Flanders in 1301. The French were totally defeated. The spurs taken from the fallen French knights formed so huge a trophy that they gave the battle its name. 2 Won in 1513 by the English under Henry VIII over the French, at Guinegate, N. France. This second battle received its name possibly because of the speedy flight of the French cavalry.

battleship, large, armored warship equipped with the heaviest naval guns. The battleship evolved from the ironclad warship of the mid-19th cent. By 1872 the French were building iron and steel warships, and in 1876 the British started construction of two all-steel war vessels. Development continued in range, size, and accuracy of armament. The H.M.S. *Dreadnought*, which was completed in 1906, was the first modern battleship and introduced the "all-big-gun" class of warship. She was armed with ten 12-in. (30.5-cm) guns and was powered by steam turbines, which developed a speed of 21 knots. The battleship became the major capital unit in modern navies and in World War I and at the beginning of World War II was extensively employed in naval en-

gagements. However, with the development of new aerial tactics, such as dive bombing, and the introduction (1941) of aircraft carriers as the major unit of a naval attack force, battleships became nearly obsolete. The fate of the battleship as a major weapon in modern warfare was sealed on Dec 7, 1941, when Japanese carrier-borne aircraft attacked and sank the greater part of the U.S. navy's battleships at Pearl Harbor. Shortly after the Korean War the last battleships of the British and American navies were decommissioned. The U.S. navy, during part of the Vietnam War, used one battleship, the *New Jersey*, for shore bombardment and antiaircraft defense. See Siegfried Breyer, *Battleships and Battle Cruisers, 1905-1970* (tr. 1973).

Batu Khan (ba'tōō kan), d. 1255, Mongol leader, a grandson of Jenghiz Khan. In 1235, Batu became commander of the Mongol army assigned to the conquest of Europe; his chief general was Subutai. Batu crossed the Volga, sending part of his force to Bulgaria but most of it to Russia. By 1240 he had Moscow and Kiev in his grasp, and in the following two years he conquered Hungary and Poland and invaded Germany. His recall to Karakorum in 1242 to participate in the election of a grand khan is sometimes said to have saved Europe from subjection to the Mongols. Batu died while preparing additional campaigns. The domain he established is known as the Kipchak khanate. In Russia it came to be known as the GOLDEN HORDE, because of the gorgeous tents in which the army camped.

Batumi (batōō'mī) or **Batum** (batōōm'), city (1970 pop. 101,000), capital of Adjara Autonomous Republic, SE European USSR, in Georgia, on the Black Sea near the Turkish border. A major port and trade center, it is also the terminus of the Trans-Caucasian RR, the Crimean-Caucasian steamship line, and an oil pipeline. Batumi is an important petroleum-shipping port and has oil refineries, shipyards, and food-processing plants. Site of the ancient Greek colony of Batis, the city belonged to Georgia in the Middle Ages, fell to the Turks in the late 16th cent., and passed to Russia in 1878.

Batwa: see PYGMY

Bat Yam (bat yam), city (1972 pop. 99,800), W central Israel, on the Mediterranean Sea, near Tel Aviv-Jaffa. It is a seaside resort and an industrial center. The city was founded in 1926 and originally called Bayit VeGan [Heb., =home and garden].

Baucis: see PHILEMON AND BAUCIS

Baudelaire, Charles (sharl bōdlār'), 1821-67, French poet and critic. His poetry, classical in form, introduced symbolism (see SYMBOLISTS) by establishing symbolic correspondences among sensory images (e.g., colors, sounds, scents). The only volume of his poems published in his lifetime, *Les Fleurs du mal* (1857, enlarged 1861, 1868, several Eng. tr., *The Flowers of Evil*), was publicly condemned as obscene, and six of the poems were suppressed. Later recognized as a masterpiece, the volume is especially remarkable for the brilliant phrasing, rhythm, and expressiveness of its lyrics. Baudelaire's erratic personality was marked by moodiness, rebelliousness, and an intense religious mysticism. His life was burdened with debts, misunderstanding, illness, and excesses, and his work unremittingly reflects inner despair. The main theme is the inseparable nature of beauty and corruption. A collection of poetic prose pieces was published posthumously as *Petits Poèmes en prose* (1869). As poet and critic Baudelaire earned distinction in literary circles. Believing criticism to be a function of the poet, he wrote perceptive appraisals of his contemporaries. His criticism was collected posthumously in *Curiosités esthétiques* (1868) and *L'Art romantique* (1869). He felt a great affinity to Poe, whose works he translated and brought to the attention of the French public. One of the great figures of French literature, Baudelaire has also been a major influence in other Western poetry. See his letters (tr. by S. Morini and F. Tuten, 1970), his intimate journal (tr. by Christopher Isherwood, 1947), and selected letters (tr. and ed. by L. B. and F. E. Hyslop, 1957), biography by Enid Starkie (rev. ed. 1958), studies by Jean-Paul Sartre (1950, repr. 1972) and M. A. Ruff (1965).

Baudouin (bōdōōān'), 1930-, king of the Belgians (1951-), son of LEOPOLD III. He joined his father in exile (1945-50) in Switzerland. After their return to Belgium his father's unpopularity led to Baudouin's appointment (1950) as regent, and on Leopold's abdication (1951) Baudouin ascended the throne. In 1960 he married Fabiola de Mora y Aragon, a Spanish noblewoman.

Bauer, Georg: see AGRICOLA, GEORGIUS

Bauer, Harold, 1873-1951, Anglo-American pianist. He was first a successful violinist, but in 1892 he

studied the piano with Paderewski and then earned international recognition as a pianist. He also promoted chamber music and exercised a strong influence on American musical life. See his memoirs (1948).

Baugh, Samuel Adrian (Sammy Baugh) (bō), 1914-, American football player, b. Temple, Texas. An All-American backfield star at Texas Christian Univ., he turned professional (1937) to play with the Washington Redskins. Baugh's precision passing gained for him the nickname of "Slinging Sammy." He established many professional passing and punting records before retiring in 1952. Baugh coached the New York Titans of the American Football League in 1960 and 1961, and in 1964 the Houston Oilers of the same league.

Bauhaus (bou'hous), school of art and architecture in Germany. The Bauhaus revolutionized art training by combining the teaching of the pure arts with the study of crafts. It was founded at Weimar in 1919 and headed by Walter GROPIUS, with a faculty including Paul Klee, Lyonel Feininger, Wassily Kandinsky, László Moholy-Nagy, and Marcel Breuer. The teaching plan insisted on functional craftsmanship in every field with a concentration on the industrial problems of mechanical mass production. Bauhaus style was characterized by economy of method, by a severe geometry of form, and by design that took into account the nature of the materials employed. The school's concepts aroused vigorous opposition from leading politicians and academicians. In 1925 the Bauhaus moved to the more friendly city of Dessau, where Gropius designed special buildings to house the various departments. Gropius resigned in 1928 to return to private architectural practice, and the leadership was continued by the architect Johannes Meyer, who in turn was replaced in 1930 by Mies van der Rohe. In the summer of 1932 the opposition to the school had increased to such an extent that the city of Dessau withdrew its support. The school was then moved to Berlin, where the faculty endeavored to carry on their ideas, but in 1933 the Nazi government closed the school entirely. The Bauhaus ideas, enveloping design in architecture, furniture, weaving, and typography, among others, had by this time found wide acclaim in many parts of the world and especially in the United States, where many of the instructors went to encourage and practice further work with the same ideals. The Chicago Institute of Design, founded by MOHOLY-NAGY, most completely carried on the teaching plan of the Bauhaus. See Walter Gropius, *The New Architecture and the Bauhaus* (rev. ed. 1955), H. M. Wingler, *The Bauhaus*, ed. by Joseph Stein (1969), Marcel Franciscano, *Walter Gropius and the Creation of the Bauhaus* (1971).

Bauhin, Gaspard (gaspar' bōān'), 1560-1624, Swiss botanist and doctor of medicine, of French descent. His early classification of plants by genus and species in his chief work, the *Pinax theatri botanici* (1623), anticipated the binomial arrangement of Linnaeus. Bauhin reformed anatomical nomenclature, especially that of muscles. His elder brother, Jean Bauhin, 1541-1613, was also a botanist and doctor of medicine. A genus of plants, *Bauhinia*, was named for the brothers.

Bauld, Cape: see GREAT NORTHERN PENINSULA, Canada

Baum, Lyman Frank (bōm), 1856-1919, American journalist, playwright, and author of juvenile stories, b. Chittenango, N.Y. While working as a newspaperman in South Dakota he wrote his first book, *Father Goose* (1899), which became an immediate best-seller. In 1900 he published his most famous work, *The Wonderful Wizard of Oz*, a story about a little girl carried by a cyclone to the magical land of Oz. His dramatization of the book was produced in 1902, the story was also made into an extraordinarily popular motion picture in 1938. Baum published 13 other stories of Oz, including *Ozma of Oz* (1907) and *The Scarecrow of Oz* (1915). See *The Annotated Wizard of Oz*, ed. by M. P. Hearn (1973).

Baumann, Oskar (ōs'kar bou'man), 1864-99, Austrian explorer in Africa. He traveled up the Congo River to Stanley Falls (1885) and the following year explored Fernando Po, in the Gulf of Guinea. After accompanying a party to Mt. Kilimanjaro in 1888, he explored (1890) East Africa for the German East Africa Society. He took a party (1892-93) to Lake Victoria where he found the Kagera River to be the chief tributary of the lake and the ultimate source of the Nile.

Baumeister, Willi (vil'ē bou'mishtər), 1889-1955, German artist. Influenced by primitive art and Miró's SURREALISM, Baumeister created abstractions that contain mechanical and organic forms. In later

works (e.g., *Reddish Relief with Sand*, 1950, Baumeister Coll., Stuttgart) he included ideographic signs in his compositions.

Baumeler, Joseph Michael. see BIMELE, JOSEPH MICHAEL

Baungsgård, Hilmer (hīl'mər bouns'gōr), 1920-, Danish politician. A businessman, he was president of the youth organization of the Social-Liberal party (1948-50) and a member of the executive of the Social-Liberal party (1948-57), serving (1954-57) as its vice-president. He was elected to parliament in 1957. From 1961 to 1964, Baungsgård headed the ministry of commerce. He became prime minister in 1968, he resigned in 1971 when his center-right coalition lost its parliamentary majority over economic issues, especially inflation, taxation, and balance of payment deficits.

Baur, Ferdinand Christian (fēr'dīnant krīs'tēan bour), 1792-1860, German Protestant theologian. He was from 1826 on the theological faculty of Tübingen. He became convinced of Hegel's philosophy of history and studied Christian history and doctrines and the Bible from that point of view. In New Testament criticism he rejected the authenticity of most of the books, using philosophical and literary criteria. His methods and disciples were referred to as the Tübingen School. See study by P. C. Hodgson (1966).

Bautzen (bou'tsən), city (1970 pop. 43,670), Dresden district, SE East Germany, on the Spree River. It is an industrial city, a rail junction, and the center of a kaolin-quarrying region. Manufactures include machinery, textiles, chemicals, leather and paper goods, and railroad cars. Bautzen was founded in the 10th cent. and was contested in the 11th and 12th cent. by Poland, Meissen, Brandenburg, and Bohemia. It eventually passed to Bohemia, was burned (1634) in the Thirty Years War, and passed (1635) with LUSATIA to Saxony. Noteworthy landmarks include a 13th-century church and numerous 18th-century buildings. In 1813, Napoleon I defeated a Russo-Prussian army nearby.

Baux, Les (lā bō), village (1968 pop. 91), Bouches-du-Rhône dept., SE France, in Provence. Nearby are the ruins of a medieval town. The once flourishing town, carved out of dazzling white limestone, was the seat of a powerful feudal family. Destroyed by gunfire in 1632 as a stronghold of enemies of the crown, its ruins are a great tourist attraction. Bauxite, first discovered (1821) there and named accordingly, is mined in the vicinity.

bauxite, mixture of hydrated aluminum oxides usually containing oxides of iron and silicon in varying quantities. A noncrystalline substance formerly thought to be a mineral, bauxite is claylike and earthy and ranges in color from white to deep brown or red according to the nature and quantity of its components. Bauxite occurs characteristically in pisolitic form, i.e., composed of small, round concretions. Its composition varies, alumina constituting from about 50% to about 70%. Bauxite is widely distributed, important deposits occurring in Africa, South America, the USSR, the West Indies, France (notably at Baux, where it was first discovered and from which it received its name), and the United States (Alabama, Arkansas, and Georgia). It is the chief source of aluminum and of its compounds, including alumina, alums, and alundum. It is used in the preparation of abrasives and as a refractory for spark plugs and furnace linings.

Bavai (bāv'āi, bāv'ā'i), the same as BINNUI 1.

Bavaria, Ger. *Bayern*, state (1970 pop. 10,479,000), 27,239 sq mi (70,549 sq km), 5 West Germany. MUNICH is the largest state of West Germany. Bavaria is bordered by Czechoslovakia on the east, by Austria on the southeast and south, by Baden-Württemberg on the west, by Hesse on the northwest, and by East Germany on the north. A region of rich, softly rolling hills, it is drained by several rivers (notably the Main, Danube, Isar, and Inn) and is bounded by mountain ranges (especially the Bavarian Alps and the Bohemian Forest). Bavaria is divided into seven administrative districts: Upper and Lower Bavaria, Upper, Middle, and Lower FRANCONIA, SWABIA, and the Upper PALATINATE. Until the early 19th cent. Bavaria did not include Swabia and Franconia, which have separate histories. Upper Bavaria, with Munich as its capital, rises to the Bavarian Alps, along the Austrian border, and culminates in the ZUGSPITZE, West Germany's highest peak. Between the Alps and the BOHEMIAN FOREST, which forms the border with Czechoslovakia, lies the Franconian Jura plateau, traversed by the Danube. Lower Bavaria comprises part of this plateau and part of the Bohemian Forest. Franconia, in N Bavaria, includes the Frankenwald, the FICHELGEIRGE, and the

Main valley Swabia, in SW Bavaria, is part of the Danubian plateau. The Upper Palatinate, in NE Bavaria, is separated from Czechoslovakia by the Bohemian Forest. The population of Bavaria is about 70% Catholic. Forestry and agriculture are important occupations, wheat, barley, sugar beets, and dairy goods are the leading products. Industry is centered in Munich, Nuremberg, Augsburg, Hof, Ingolstadt, Erlangen, and Schweinfurt. Major industrial products include glass and ceramics, iron and steel, paper, chemicals, machinery, textiles, clothing, optical instruments, petroleum, and motor vehicles. Bavarian beer is world famous. Toys and musical instruments are made by craftsmen. Salt, graphite, iron ore, and lignite are the chief mineral resources. The scenic beauties and the picturesque local customs and costumes of the Bavarian Alps attract many tourists. Among the resorts are Garmisch-Partenkirchen, Berchtesgaden, and the spas Bad Kissingen and Bad Reichenhall. Bayreuth is a cultural center, and Augsburg, Nuremberg, Bamberg, and Würzburg are historic and artistic centers. There are universities at Munich, Regensburg, Würzburg, and Erlangen-Nuremberg.

From the Romans to the Wittelsbachs The borders of Bavaria have varied considerably in its history. The region was inhabited by Celts when Drusus conquered it (15 B.C.) for Rome. The Bajuarii (see GERMAN) invaded it (6th cent. A.D.) and set up the duchy to which they gave their name. It was one of the five basic or stem duchies of medieval Germany. Irish and Scottish monks began the Christianization of the area, and it was completed (8th cent.) by St. Boniface. In 788, Charlemagne defeated Duke Tassilo III and added Bavaria to his empire. From 817 to 911, Bavaria was ruled by the Carolingians LOUIS THE GERMAN, CARLOMAN (d. 880), ARNULF, and LOUIS THE CHILD. In 911 the duchy (then comprising, roughly, Bavaria proper, present-day Austria, and part of the Upper Palatinate) came under indigenous rulers. Frequent Magyar inroads were stopped (955) by Emperor OTTO I, who in 947 had given Bavaria to his brother Henry. Henry's grandson was duke of Bavaria when he was elected (1002) German king as Henry II. After his accession Bavaria was ruled by various houses, but in 1070 Emperor Henry IV gave the fief to Welf, or Guelph, d'Este IV (see ESTE), who began the dynasty of the GUELPHS. From the 9th to the 12th cent. the Bavarian dukes, of whatever house, were at the center of the rebellions of the great German princes against the imperial authority. To reduce their power Emperor OTTO II in 976 stripped the duchy of all but present-day Upper and Lower Bavaria and the Tyrol. When in 1137 the Guelph HENRY THE PROUD acquired Saxony in addition to Bavaria, CONRAD III deposed him and gave Bavaria to the BABENBERG rulers of Austria. Frederick II restored (1156) Bavaria to HENRY THE LION but in 1180 deposed the rebellious Guelph and bestowed the duchy (from which he detached considerable territory in what is now Austria) on Otto of Wittelsbach. The political history of Bavaria, much reduced in importance, became that of the WITTELSBACH family, which ruled until 1918.

Bavaria under the Wittelsbachs The Wittelsbach fiefs, including the Rhenish Palatinate (acquired in 1214), were almost always divided among the numerous branches of the dynasty. Under the Wittelsbach emperor LOUIS IV (reigned 1328-47), Bavaria was briefly reunited. Duke Albert IV (1467-1508), who again united Bavaria (except the Rhenish Palatinate), introduced the law of primogeniture, thus Bavaria entered the Reformation period much strengthened. The triumph of Catholicism in Bavaria proper was crucial for its later history. Duke Maximilian I (1597-1651) headed the Catholic League in the Thirty Years War and was rewarded with the Upper Palatinate and the rank of elector. The agricultural wealth and the strategic position of Bavaria made it a coveted prize and a frequent battleground then and later. Bavaria was overrun by foreign armies, notably in the War of the SPANISH SUCCESSION, the War of the AUSTRIAN SUCCESSION, the War of the Bavarian Succession (1778, by which Bavaria lost the Inn Quarter to Austria), and the French Revolutionary Wars. Elector Maximilian IV Joseph, who in 1799 united all Wittelsbach lands, allied himself with Napoleon I, joined the CONFEDERATION OF THE RHINE, and in 1806 was proclaimed king of Bavaria as MAXIMILIAN I. In 1813, Maximilian abandoned Napoleon and joined the allies, who at the Congress of Vienna (1814-15) left him in possession of virtually all of present-day Bavaria, including the Rhenish Palatinate. During the period of reaction that followed in Europe, Bavaria stood out for its relatively liberal government. The liberal constitution of 1818 lasted exactly a century. King Louis I (1825-48), dethroned

by the mild revolution of 1848, was succeeded by the able MAXIMILIAN II (1848-64) and the brilliant but insane LOUIS II (1864-86). All three rulers had a passion for the arts, science, and architecture. The reputation of Bavaria, particularly Munich, as a cultural center dates from their reigns. The abolition in 1848 of guild restrictions opened the way for industrialization. At the same time, the rural prosperity of Bavaria and the strong influence of the Catholic Church (which predominates except in the Upper Palatinate and in Middle Franconia) accentuated the hostility of Bavaria toward the rising power of Prussia. Bavaria sided with Austria in the Austro-Prussian War (1866). Defeated in that war, it acknowledged Prussian leadership, sided with Prussia against France in 1870-71, and joined (1871) the German Empire. As the chief German state after Prussia, Bavaria retained separatist tendencies.

Bavaria since World War I King LOUIS III, successor to the mad OTTO I, was dethroned in Nov., 1918, by Kurt EISNER, who established a socialist republic. The assassination (Feb., 1919) of Eisner led to a Communist revolution (April, 1919), which was bloodily suppressed by the German army. Bavaria then joined the Weimar Republic. In the early 1920s, Munich became the center of the National Socialist (Nazi) movement, in 1923 the National Socialists made an abortive attempt (Beer Hall Putsch) in that city to seize power. Catholic Bavaria as a whole gave little support to the movement until Adolf Hitler came to national power in 1933. Under the National Socialist regime Bavaria lost its autonomy. After World War II the Rhenish Palatinate was separated from Bavaria and was later made part of the state of Rhineland-Palatinate. A new constitution for Bavaria was drawn up in 1946. Since the founding of the Federal Republic of Germany in 1949, the conservative Christian Social Union, allied nationally with the Christian Democratic Union, has been the strongest Bavarian political party.

Bavarian Succession, War of the, between Austria and Prussia, 1778-79. With the extinction of the Bavarian line of the house of WITTELSBACH on the death of Elector Maximilian Joseph in 1777, the duchy of Bavaria passed to the elector palatine, Charles Theodore, of the Sulzbach line. However, by a secret treaty with Holy Roman Emperor Joseph II, who wished to strengthen imperial and Austrian influence in Germany, Charles Theodore ceded Lower Bavaria to Austria and Austrian troops occupied the area. Charles Theodore had no legitimate issue, but his heir presumptive, Duke Charles of Zweibrücken, on the advice of Frederick II of Prussia, protested the transfer of this portion of his inheritance. Prussia, allied with Saxony, declared war on Austria and invaded Bohemia. No serious engagement took place, and the war ended with the Congress of Teschen (1779). Austria renounced its claims but retained the Inn quarter, a small but fertile and densely populated triangle of land along the border between Bavaria and Austria. Prussia's claims to Ansbach and Bayreuth were recognized, and Saxony received monetary compensation. The conflict has been called the Potato War because Prussian troops spent time picking potatoes in the fields.

Bax, Sir Arnold, 1883-1953, English composer, studied at the Royal Academy of Music, London. His early works, in an elaborately chromatic style, did not find great favor with the public, but works in a simpler style, composed after 1910, brought him recognition as an outstanding composer. French impressionism, Celtic folklore, and the work of Richard Wagner all influenced his compositions, which include seven symphonies, many tone poems, chamber music, concertos, ballets, songs, and choral works. He was knighted in 1937 and became Master of the King's Music in 1941. See his autobiography, *Farewell My Youth* (1943).

Bax, Ernest Belfort, 1854-1926, English socialist philosopher. He studied music and philosophy in Germany. In England, influenced by Marxist and other radical thought, he became active in socialist groups, especially the Social Democratic Federation. He left this to help found (1885), with William Morris, the Socialist League, but returned when the League veered toward anarchism. With Morris he wrote *Socialism: Its Growth and Outcome* (1893). His other writings include *The Problem of Reality* (1893, rev. ed. 1914), *The Fraud of Feminism* (1913), and *The Real, the Rational, and the Alogical* (1920). See his autobiography (1918).

Baxter, Richard, 1615-91, English nonconformist clergyman. Ordained in 1638, he began his ministry at Kidderminster in 1641. He sided with Parliament when the civil war broke out and served (1645-47) as a chaplain in Cromwell's army, where he urged

moderation in both religious and political opinions. At the Restoration, Baxter was chosen by Charles II as one of the royal chaplains. He took a leading part at the Savoy Conference (1661), where he tried to provide means that would permit moderate dissenters to stay in the Church of England. He declined an offer of the bishopric of Hereford, and with the passage of the Act of Uniformity (1662) he left the Church of England. Despite the persecution of nonconformist ministers, Baxter continued to preach, his followers were known as Baxterians. After a trial conducted with great brutality by Judge Jeffreys, he was imprisoned for 18 months on the charge of having libeled the Church of England in his *Paraphrase of the New Testament* (1685). Among Baxter's voluminous works are *The Saints' Everlasting Rest* (1650), *Gildas Salvianus, the Reformed Pastor* (1656), and *A Call to the Unconverted* (1657). His autobiographical *Reliquae Baxterianae* (1696) was edited (1925) by J. M. L. Thomas. See biography by F. J. Powicke (2 vol., 1924-27), study by Hugh Martin (1954).

bay: see LAUREL, MAGNOLIA

Bayamo (bayā'mō), city (1970 pop. 71,660), Oriente prov., SE Cuba. Its economy is based on sugarcane and cattle. Founded in 1513, Bayamo was an inland port until the 19th cent. A former center of revolutionary movements, it gave its name to the Cuban national anthem, *el Himno Bayamés*. Both the Ten Years War (1868-78) and the successful revolt of 1895 began in Bayamo. Carlos Manuel de Cespedes and Tomas Estrada Palma were born in the city.

Bayamón (bayāmōn'), town (1970 pop. 147,552), NE Puerto Rico, a residential and industrial suburb of San Juan. Founded in 1772, it is one of the oldest settlements on the island.

Bayar, Celâl (jäläl' ba'yār), 1884-, Turkish statesman. The son of a religious leader and teacher, Bayar joined the nationalist movement after the Young Turk revolution. Kemal Atatürk's colleague after World War I, he held several ministerial positions (1921-37), he supervised the Greek-Turkish exchange of population (1923). In 1937 he became premier, but he resigned the post after Atatürk's death (1938). In 1946 he founded with Adnan Menderes and others the Democratic party, which came to power in 1950. He then became president of the republic and was reelected in 1954 and 1957. Ousted in 1960 by Cemal Gürsel, he was tried for violating the constitution and sentenced to death. The sentence was commuted to life imprisonment in 1961. Bayar was released because of ill health in 1964 and pardoned in 1966.

Bayard, James Asheton (bī'ard), 1767-1815, U.S. Representative (1797-1803) and Senator (1805-13) from Delaware, b. Philadelphia. Admitted to the bar in 1787, he began practice at Wilmington, Del. Bayard, a prominent Federalist, played a leading part in securing Thomas Jefferson's election as President over Aaron Burr in 1801. Of an independent mind, he, unlike other Federalists, supported the Nonimportation Act of 1806 and the War of 1812, although he had used all his influence to prevent hostilities. In 1814 he served on the commission that negotiated the Treaty of Ghent (see GHENT, TREATY OF) ending the War of 1812. His papers were edited (1915, repr. 1970) by Elizabeth Donnan. See Morton Borden, *The Federalism of James A. Bayard* (1954).

Bayard, James Asheton, 1799-1880, U.S. Senator from Delaware (1851-64, 1867-69), b. Wilmington, Del., son of James Asheton Bayard (1767-1815). His Unionist sentiments led him into the new Republican party, but he bitterly opposed the dominant radical Republicans and in 1864 he resigned. He was elected again, however, and served (1867-69) as a Democrat and supporter of President Andrew Johnson's Reconstruction policy. His son, Thomas Francis Bayard, was elected to succeed him in the U.S. Senate.

Bayard, Pierre du Terrail, seigneur de (bā'ard, pyēr du tēr'ya sānyor' də bāyar'), c. 1474-1524, French military hero, called *le chevalier sans peur et sans reproche* [the knight without fear or blame]. He exhibited bravery and genius as a commander in all the important battles of the ITALIAN WARS, from Fornovo (1495) to the Sesia, in which he was killed. His defense of Mezières (1521) saved central France from an imperial invasion. See biography by Samuel Shellabarger (1928, repr. 1971).

Bayard, Thomas Francis, 1828-98, U.S. statesman, b. Wilmington, Del., son of James Asheton Bayard (1799-1880). He began his law practice at Wilmington (1851). An active Democrat, Bayard was elected U.S. Senator (1869) to succeed his father and was reelected in 1875 and 1881. He became Secretary of

State during Cleveland's first administration Bayard was much concerned with Anglo-American relations He became ambassador to Great Britain during Cleveland's second term See study by C C Tansill (1940, repr 1969)

Bayard (bā'ərd), Ital *Barardo* (bayar'dō), in chivalric romance, a bay horse, remarkable for his spirit and for his unique ability to fit his size to his rider He appears in the 12th-century French epic *Renaud de Montauban* and in later tales of *ROLAND* by Boiardo, Ariosto, and Tasso

bayberry, common name for the Myricaceae, a family of trees and shrubs with aromatic foliage, found chiefly in temperate and subtropical regions The waxy gray berries of the North American wild or cultivated bayberry shrubs (chiefly *Myrica cerifera*) are used to make fragrant bayberry candles, scented soap, and sealing wax, bayberry is also called candleberry and wax myrtle Sweet gale (*M. gale*), a bog plant, yields tannic acid Sweet fern (*Comptonia peregrina*) is a North American shrub found chiefly in the E United States and cultivated elsewhere in dry, sandy areas Its foliage is used for medicines and tea Bayberry is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Myricales

Bay City. 1 City (1970 pop 49,449), seat of Bay co, S Mich, a port of entry on the Saginaw River at its mouth on Saginaw Bay (an inlet of Lake Huron), inc 1859 with the consolidation of several settlements along the river Its harbor handles considerable Great Lakes and ocean shipping Bay City is the industrial, marketing, and shipping center of a rich farm area that yields sugar beets, potatoes, and dairy products It grew as a great lumbering center, and when the forests were depleted (after 1890) it turned to diversified manufacturing Delta College is in nearby University Center The vicinity is rich in Indian relics A state park and two state forests are in the area 2 City (1970 pop 11,733), seat of Matagorda co, S Texas, near the Colorado River and the Gulf of Mexico, inc 1894 It is a shipping and industrial center for a region that produces oil, gas, sulfur, beef cattle, rice, cotton, soybeans, and grain sorghums There are petrochemical plants and grass and turf farms in the city The county museum is there, and Matagorda Bay and several Gulf beaches are nearby

Bayer process, procedure for obtaining alumina from the aluminum ore bauxite The alumina can then be used for various industrial purposes or smelted to provide aluminum The first step in the process is the mixing of ground bauxite into a solution of sodium hydroxide By applying steam and pressure in tanks containing the mixture, the bauxite slowly dissolves The alumina released reacts with the sodium hydroxide to form sodium aluminate After the contents of the tank have passed through other vessels where the pressure and temperature are reduced and impurities are removed, the solution of sodium aluminate is placed in a special tank where the alumina is precipitated out The precipitate is removed from the tank, washed, and heated in a kiln to drive off any water present The residue is a commercially pure alumina

Bayes, Thomas, 1702-61, English clergyman and mathematician The son of a Nonconformist minister, he was privately educated and earned his livelihood as a minister to the Nonconformist community at Tunbridge Wells Although he wrote on theology, e.g., *Divine Benevolence* (1731), Bayes is best known for his two mathematical works, *Introduction to the Doctrine of Fluxions* (1736), a defense of the logical foundations of Newton's calculus against the attack of Bishop Berkeley, and "Essay Towards Solving a Problem in the Doctrine of Chances" (1763) The latter, a pioneering work, attempts to establish that the rule for determining the probability of an event is the same whether or not anything is known antecedently to any trials or observations concerning the event

Bayeux (bāyō', Fr bayo'), town (1968 pop 12,871), Calvados dept, N France, in Normandy, near the English Channel It is a farm and communications center, noted for its lace industry A Roman town and episcopal see from the 4th cent, it was burned (1105) by Henry I of England Sections of its Romanesque church withstood the fire and form a part of the remarkable Gothic cathedral built for the most part in the 13th cent The town is particularly famous for its museum containing the Bayeux tapestry In World War II, Bayeux was the first French city liberated by the Allies (June 6, 1944)

Bayeux tapestry. This so-called tapestry is in fact an embroidery that chronicles the Norman conquest of England by William the Conqueror in 1066 It is a

long, narrow strip of coarse linen, 230 ft by 20 in (70 m by 51 cm), embroidered in worsteds of eight colors in couching and stem stitch The embroidery is a valuable document on the history and the costumes of the time Its prominence and date have long been disputed Tradition attributes it to Queen Matilda, wife of William the Conqueror, and her handmaidens, but it is now thought to be of somewhat later origin and possibly the work of English embroiderers The embroidery is preserved in the Bayeux Museum See Sir Eric Maclagan, *The Bayeux Tapestry* (1945), Frank Stenton and others, *The Bayeux Tapestry* (1957, repr 1965)

Bayh, Birch Evans (bī), 1928-, U S Senator (1963-), b Terre Haute, Ind A Democratic member of the Indiana state assembly (1955-62), he served as minority leader (1957-58, 1961-62) and as speaker (1959-60) Elected (1962) to the U S Senate, Bayh became (1963) chairman of the subcommittee on constitutional amendments of the Judiciary Committee He was credited with formulating the 25th Amendment to the Constitution on presidential succession, which was ratified in 1967 In 1969 and 1970, Bayh led the successful fight against confirmation of the nominations of Clement F Haynsworth and G Harrold Carswell to the Supreme Court He is the author of *One Heartbeat Away* (1968)

Bay Islands, Span *Islas de la Bahía*, archipelago, 144 sq mi (373 sq km), off the north coast of Honduras, in the Caribbean Sea The archipelago makes up a department of Honduras Of the three principal islands (Roatan, Guanaja, and Utila), Roatan is the largest and the port of entry Guanaja was visited by Columbus in 1502 The climate is sultry The chief products are fruits and logwood, which English logcutters exploited as early as the 17th cent British garrisoning of the islands in 1848 led to unrest, which was partially settled by the CLAYTON-BULWER TREATY (1850) and relinquishment of British rights (1859) to Honduras Dissatisfied, the English islanders sided with the American filibuster William Walker The population today retains many English characteristics

Baykal or Baikal (both bī'kal'), lake, 12,160 sq mi (31,494 sq km), SE Siberian USSR It is the largest freshwater lake of Eurasia, with a width up to 50 mi (80 km) and a length of c 395 mi (640 km) Its maximum depth is 5,714 ft (1,742 m), making Baykal the world's deepest lake There are numerous feeder streams (notably the Selenga), but the only outlet is the Angara River, whose great volume is harnessed by a hydroelectric station at nearby Irkutsk Lake Baykal is navigable and is used to float timber Surrounded by beautiful mountain scenery, it is rich in fish, including many unusual species Although it is known for its crystal-clear waters, the lake is now in danger of pollution because of recent industrial development in Siberia The Trans-Siberian RR skirts the lake's southern shores Between Lake Baykal and the upper Amur River lies the region known as Transbaykalia

Bayle, Pierre (pyër bāl), 1647-1706, French rationalistic philosopher Born a Huguenot, he converted to Roman Catholicism and then returned to Protestantism To avoid French intolerance of Protestants, he moved in 1681 to Rotterdam, where he lived for most of the rest of his life Trained as a philosopher and with a strong background in theology, Bayle supported Calvinism but was also an advocate of religious toleration, contending that morality was independent of religion His chief work was *Dictionnaire historique et critique* (1697), a compendium of biographies with comprehensive and detailed criticisms by Bayle His views had a profound influence on the French and German ENLIGHTENMENT, especially on the authors of the *Encyclopédie* and on the English deists See K C Sandberg, *At the Crossroads of Faith and Reason* (1966), H E Smith, *The Literary Criticism of Pierre Bayle* (1971)

bayleaf: see LAUREL

Baylis, Lilian see OLO VIC

Bayliss, Sir William Maddock (bā'lis), 1860-1924, English physiologist At University College, London, he investigated the mechanism of heart action, circulation, and digestion With E H Starling he discovered, in 1902, secretin, a hormone produced in the small intestine, and developed a theory of hormone action He wrote *Principles of General Physiology* (1914) and *The Vaso-Motor System* (1923)

Baylor, Robert Emmett Bledsoe, 1793?-1873, American jurist, founder of Baylor Univ, b Kentucky He served in the War of 1812, studied law, and served in the Kentucky legislature Moving (1820) to Alabama, he served in the Alabama legisla-

ture and was (1829-31) a U S Representative from Alabama before moving again (1839), this time to Texas He was a district and supreme court judge in the Republic of Texas and was prominent in drafting the state constitution, which became operative upon the annexation of Texas He became a state judge under the new constitution Baylor was also a Baptist preacher and is chiefly remembered because he drew up and secured passage of a charter for a college that became Baylor Univ

Baylor University, mainly at Waco, Texas, coeducational, chartered and opened 1845 by Baptists (see BAYLOR, ROBERT E B) at Independence, moved 1886 and absorbed Waco Univ (chartered 1861) The library has a noted Robert Browning collection Frank Lloyd Wright designed a theater center at Dallas for the graduate school The university's medical school was founded (1900) as part of the Univ of Dallas, and it became affiliated with Baylor in 1903 In 1943 it moved to Houston, and in 1969 it became a separate corporation under the title of Baylor College of Medicine It was in connection with the Baylor Univ medical school that Michael De Bakey did his pioneer work in artificial heart implantation and heart transplantation Baylor Univ maintains a medical center at Dallas, but there is no medical school

Bayne, Stephen Fielding, Jr. see LAMBETH CONFERENCE

Bay of Pigs Invasion, 1961, an unsuccessful invasion of Cuba by Cuban exiles, supported by the U S government On April 17, 1961, an armed force of about 1,500 Cuban exiles landed in the Bahía de Cochinos (Bay of Pigs) on the south coast of Cuba Trained since May, 1960, in Guatemala by members of the Central Intelligence Agency (CIA) with the approval of the Eisenhower administration, and supplied with arms by the U S government, the rebels intended to foment an insurrection in Cuba and overthrow the Communist regime of Fidel Castro The Cuban army easily defeated the rebels and by April 20, most were either killed or captured The invasion provoked anti-U S demonstrations in Latin America and Europe and further embittered U S-Cuban relations Poorly planned and executed, the invasion subjected President Kennedy to severe criticism at home Cuban exile leader Jose Miro Cardona, president of the U S-based National Revolutionary Council, blamed the failure on the CIA and the refusal of Kennedy to authorize air support for the invasion In Dec, 1962, Castro released 1,113 captured rebels in exchange for \$53 million in food and medicine raised by private donations in the United States See K E Meyer and Tad Szulc, *The Cuban Invasion* (1962), H B Johnson, *The Bay of Pigs* (1964)

Bay of Whales see ROSS SEA, ANTARCTICA

Bayonne (bayōn'), town (1968 pop 45,175), Pyrénées-Atlantiques dept, SW France, in Gascony, on the Adour River near its entrance into the Bay of Biscay Despite a shifting sandbar at the mouth of the Adour, it is a seaport, exporting sulfur The town also has metallurgical, chemical, aeronautical, leather, and wood industries French and Spanish, as well as Basque, are spoken there At Bayonne, Napoleon I forced Charles IV and Ferdinand VII of Spain to abdicate (1808) At the end of the Peninsular War, Bayonne successfully resisted a British siege Bayonne gives its name to the bayonet, invented there in the 17th cent The Cathedral of Bayonne (13th cent) is copied from those of Soissons and Rheims There is a Basque museum and a fine arts museum, left to the city by the painter Bonnat, who was born there Parts of the town's Roman and medieval walls are preserved, as are Vauban's fortifications (17th cent)

Bayonne (bāyōn'), city (1970 pop 72,743), Hudson co, NE N J, on a 3-mi (4.8-km) peninsula, inc 1869 It has oil and chemical industries Its huge oil refineries (operating since 1875) are supplied by a branch of the oil pipeline from the Southwest On Bayonne's 9-mi (14.5-km) waterfront is a large U S naval dry dock and supply depot Dutch traders came to this site c 1650, the British gained possession in 1664 The city is connected to Staten Island by Bayonne Bridge (1,675 ft/511 m long, opened 1931)

bayou (bī'ō, bī'ōō) [Louisiana Fr, from Choctaw *bayuk*=small stream], term used mainly in U S Gulf states, especially Louisiana and Mississippi, to describe a stationary or sluggishly moving body of water that was once part of a lake, river, or gulf and is swampy or marshy in nature Bayou is sometimes used as a synonym for oxbow lake

Bay Psalm Book, common hymnal of the Massachusetts Bay colony Written by Richard Mather,

John Eliot, and Thomas Weld, it was published in 1640 at Cambridge as *The Whole Book of Psalms Faithfully Translated into English Metre*. The announced effort of the authors to make a literal rendering at the expense of elegance is successful if the crudity of the verse be a criterion. This was the first book published in the Thirteen Colonies. See Zoltan Haraszti, *The Enigma of the Bay Psalm Book* (1956).

Bayreuth (bīrōit'), city (1970 pop. 64,536), capital of Upper Franconia, Bavaria, S West Germany, on the Red Main River. It is an industrial center, its manufactures include textiles, metals, and machinery. Founded in the mid-12th cent., Bayreuth belonged to a branch of the Hohenzollern family from 1248 to 1791, when it was annexed by Prussia. It was taken by France in 1807 and passed to Bavaria in 1810. Richard Wagner lived in Bayreuth from 1872 to 1883, and annual music festivals of international importance are held in the Festspielhaus, an opera house designed by Wagner and built in 1872-76. Wagner and Franz Liszt are buried in Bayreuth.

Bayreuth Festival, also called the Richard Wagner Festival, annual season of performances of Wagner's works, held in the Bavarian town of Bayreuth. In about 1851, Wagner began to visualize a festival theater that would be devoted to the performance of great German works for the theater. In 1876 the Wagner Festival Theatre (the Festspielhaus) was completed at Bayreuth, and the first festival took place. Planned by Wagner himself, the Festspielhaus is an amphitheater with many notable features, including a sunken, covered orchestra pit and unusually fine acoustics. Despite the composer's original intention, the Bayreuth Festival presents performances only of Wagner's works, usually *Parsifal*, the "Ring" cycle, and one other work. The festivals were interrupted for seven years after World War II but resumed in 1951.

bay rum, aromatic liquid used chiefly as a cosmetic and a perfume. It originated in the West Indies, where it was prepared by distillation from rum and bay leaves. It is now commonly a mixture of oil of bay (from a bayberry), alcohol, water, oil of pimento, and oil of orange peel.

Bayrut: see BEIRUT, Lebanon.

Bay Shore, uninc. city (1970 pop. 11,119), Islip township, Suffolk co., SE N.Y., on the south shore of Long Island, at the widest point of Great South Bay, founded 1708. It is noted as a fishing and duck-hunting center and has some light industry. A ferry runs from there to Fire Island.

Baytown, city (1970 pop. 43,980), Harris co., S Texas, at the head of Galveston Bay, on the Houston ship channel, inc. 1948 after the consolidation of Goose Creek, Pelly, and Baytown. Large volumes of oil are produced in the area, refined in Baytown, and shipped throughout the world. The city also has chemical, synthetic-rubber, and steel industries. A junior college is there.

Bay Village, city (1970 pop. 18,163), Cuyahoga co., NE Ohio, a suburb of Cleveland, inc. 1903. It is a residential community with some light industry.

Baza (ba'tha), town (1970 pop. 19,990), Granada prov., S Spain, in Andalusia. It is a food-processing center for a fertile farm area noted especially for its cattle. Baza has flour mills, tanneries, and textile industries. An important city of the Moorish kingdom of Granada, it fell to the Spaniards in 1489 after a year-long siege.

Bazaine, Achille François (ashēl' fraNswa' bazān'), 1811-88, French army officer. He served in Algeria, Crimea, Lombardy, and Mexico, and in the FRANCO-PRUSSIAN WAR he was given (Aug., 1870) the supreme command by Emperor Napoleon III. Unequal to the task, Bazaine allowed his army, which was entrenched at Metz, to be surrounded by the Prussians. The attempt of Marshal MACMAHON to rescue him led to the disaster of Sedan. Bazaine then entered questionable diplomatic intrigues with the Germans, which led to his capitulation at Metz (Oct. 27). Convicted of treason in 1873, he was sentenced to 20 years of seclusion but escaped. He spent the rest of his life in Italy and Spain. See Philip Guedalla, *The Two Marshals: Bazaine, Petain* (1943).

Bazan, Álvaro de see SANTA CRUZ, ÁLVARO DE BAZAN, MARQUÉS DE.

Bazan, Emilia Pardo see PARDO BAZÁN.

Bazard, Saint-Amand (sāNtāmaN' bazār'), 1791-1832, French socialist. He founded (1818) a republican society, *Les Amis de la vérité* [Friends of Truth], and was a member of the CARBONARI. Bazard plotted (1821-22) for the overthrow of the monarchy but was unsuccessful. He adopted the socialistic doctrines of Claude Henri de SAINT-SIMON and, with EN-

FANTIN, headed the Saint-Simonian movement until 1831.

Bazargic: see TOLBUKHIN, Bulgaria.

Baziotes, William (bāzēō'tēz), 1912-64, American painter, b. Pittsburgh. Baziotes's works of the 1940s and 50s are largely abstract images, usually with brooding, primitive qualities encompassed in rich and muted colors. He taught in New York City at several schools including the Brooklyn Museum Art School and New York Univ. Representative works are *Dragon* (Metropolitan Mus.) and *The Dwarf and Pompeii* (both Mus. of Modern Art, New York City).

Bazlith (bāz'lith), family in the return from exile Neh. 7:54. This is the Bazluth of Ezra 2:52.

bazooka, in warfare, portable, lightweight metal tube from which rockets are launched, usually operated by two men. It is used by infantry as an anti-tank weapon and also for attacking pillboxes and bunkers. In general, the bazooka is a short-range weapon with low accuracy, however, it gives the individual soldier the means of destroying heavily armored vehicles and fortified positions. An American invention, it was widely used in World War II—first by the Allies and later by the Germans—and in the Korean War by the UN forces. Since then, bazookas have largely been replaced by recoilless weapons and antitank missiles. In modern warfare, the first major use of the rocket as a weapon was in the bazooka. See ROCKET.

Bazzi, Giovanni Antonio: see SODOMA, IL.

BCS theory: see SUPERCONDUCTIVITY.

bdellium (dēl'ēam), aromatic gum RESIN obtained from trees of the genus *Commiphora* (or *Balsamodendron*). It is similar to myrrh. Bdellium is used in medicines and perfumes.

Be, chemical symbol of the element BERYLLIUM.

Beach, Mrs. H. H. A., 1867-1944, American composer and pianist, b. Henniker, N.H. Her maiden name was Amy Marcy Cheney. She received her piano training in the United States, and she toured both there and in Europe. In composition she was largely self-taught. Her *Gaelic Symphony* (1896) was the first symphony by an American woman. She composed more than 150 works, including a piano concerto, chamber music, choral pieces, and well-known songs such as "Ah, Love but a Day" and "The Year's at the Spring." Her music is in the traditional romantic style of the 19th cent.

Beach, Moses Yale, 1800-1868, American journalist, b. Wallingford, Conn. As a young man he invented a rag-cutting machine and a gunpowder engine. In 1838 he bought the New York *Sun* from his brother-in-law, Benjamin Day, for whom he had been working as production manager. The *Sun's* chief competitor in the penny-paper field was the New York *Herald*, edited by James Gordon BENNETT. The two rival papers used ingenious means to get news fast—the *Sun* even kept carrier pigeons in a special house atop its building. Costs, especially during the Mexican War, mounted so much that at a conference in Beach's office the editors of a number of New York newspapers established the New York Associated Press to cooperate in securing the news. Beach is credited with the first European edition of an American paper, the weekly *American Sun* (1848), and with starting the newspaper syndicated article. In 1848 he turned the New York *Sun* over to his sons, Moses Sperry Beach and Alfred E. Beach. See F. M. O'Brien, *The Story of the Sun* (1928, repr. 1968).

beach, mobile deposit of sediment subject to wave action at the shore of an ocean or lake. Most beaches are composed of SAND or GRAVEL and extend from the level of the surf at lowest tide landward to the effective limit of wave action that marks the edge of the COAST. Essentially rivers of sediment moved by waves and currents, beaches display many common features. Seaward of the surf is the offshore zone, which commonly contains a trough and an offshore bar. The foreshore is a seaward-sloping surface extending from the low tide limit of the beach to the crest of a ridge, called the berm, that is formed by storm waves. The foreshore is the active portion of the beach affected by breaking waves that send water running up and down it, called swash and backwash, respectively. The slope angle of the foreshore is related to the size of the beach material and the vigor of the waves. The backshore extends landward from the berm as a broad terrace or gently landward-sloping surface, perhaps broken by one or more beach ridges. The presence of a cliff or dune complex landward of the backshore permits a clear demarcation of the edge

of the coast. Most of the sediment making up a beach is supplied by rivers or by the erosion of cliffs along the coast. Beaches undergo a cyclical migration of sand between the beach and the offshore zone caused by the changing character and the direction of approach of the waves. During the summer, waves cause the beach to extend seaward, while in the winter they cut it back, creating a winter berm high on the beach. In addition, the action of tides causes shorter cycles of cut and fill. Along low sandy coasts, such as the Eastern and Gulf coasts of the United States, a long, narrow beach is commonly separated from the coast by a narrow lagoon. This configuration is called a barrier beach. Where the beach extends from land and terminates in open water it is called a spit or a hook. Waves approaching the shore obliquely move the sediment along the beach in a zigzag pattern called longshore transport. It is estimated that an average of 200,000 to 800,000 cubic yards (150,000 to 600,000 cubic meters) of sand are moved per year along beaches in this fashion. Since beaches are mobile deposits, they owe their existence to a constant replenishment of sand. In many coastal areas of the United States a deficiency in the supply of sand is resulting in serious erosion problems. Artificial replenishment by pumping sand onto the beach from offshore is one solution to erosion problems.

beach grass or marram grass, any species of the genus *Ammophila*, perennial grasses used to control the shifting of sand dunes, thereby protecting sandy coastal areas. The European beach grass (*A. arenaria*) has been used to hold dunes in Europe and was early planted at Cape Cod to bind the sands; later it was used at Golden Gate Park and elsewhere in the United States. The American beach grass (*A. breviligulata*) is native to dunes of the Great Lakes and much of the eastern seacoast. Beach grasses have creeping rootstocks which rapidly form an extensive root system. Beach grasses are classified in the division MAGNOLIOPHYTES, class Liliatae, order Cyperales, family Gramineae.

Beachy Head, high chalk cliffs (575 ft/175 m), on the south coast of East Sussex, S England. The battle of Beachy Head, in the War of the Grand Alliance, was fought (1690) between an Anglo-Dutch fleet under the earl of Torrington and the French fleet under the comte de Tourville. Although the French won, they failed to exploit their victory over the damaged opponent to deal a decisive blow to Anglo-Dutch seapower. Torrington, meanwhile, was court-martialed for retreating but, arguing that his action prevented an invasion, was acquitted.

Beacon, city (1970 pop. 13,255), Dutchess co., SE N.Y., on the east bank of the Hudson River opposite Newburgh, settled 1663, inc. as a city in 1913 when Fishkill Landing and Matteawan villages were united. Beacon has textile and related industries, other varied manufactures, and a large industrial research firm. An incline railway ascends Mt. Beacon, site of a towering monument to the Revolutionary soldiers who built signal fires there to warn of the coming of the British. A state hospital for the criminally insane is in the city. Beacon's historic buildings include the Madam Brett homestead (1709).

Beaconsfield, Benjamin Disraeli, 1st earl of: see DISRAELI, BENJAMIN.

beaded lizard: see GILA MONSTER.

Beadle, George Wells, 1903-, American geneticist, b. Wahoo, Nebr., grad. Univ. of Nebraska (B.S., 1926, M.S., 1927), Ph.D. Cornell, 1931. Beadle taught (1931-36) biology at the California Institute of Technology, where he also began genetic research on the fruit fly, *Drosophila*, in T. H. Morgan's laboratory. He was later chairman (1946-61) of the biology department there, and in 1961 he became chancellor of the Univ. of Chicago. Beadle shared with Joshua Lederberg and E. L. Tatum the 1958 Nobel Prize in Physiology for work with Tatum on the bread mold *Neurospora crassa*, which showed that genes control the cell's production of enzymes and thus the basic chemistry of the cell. See George Beadle and Muriel Beadle, *The Language of Life* (1966).

bead test, test used in the identification of certain metals. Some metallic ions that cannot be identified by a FLAME TEST are identified by a bead test. The test can also be used to confirm the results of a flame test. The borax bead test is the most common. A small loop is formed at the end of a platinum wire. The loop is cleaned with concentrated hydrochloric acid and dipped in powdered borax, then heated in the flame of a Bunsen burner until the borax melts, forming a bead. The bead is dipped into a tiny amount of the compound to be tested and is reheat-

ed in the flame. The metal borate that is formed colors the bead. Some metals and the colors they produce in an oxidizing flame are chromium, green, cobalt, blue, copper, blue-green, iron, yellow to brown, manganese, violet, nickel, reddish-brown. If too much of the unknown compound is used, the bead may be opaque and the color difficult to determine. A different color is often obtained in a reducing flame. Several metals may give the same color. Some metals give only colorless or gray beads. A test similar to the borax bead test is often made using microcosmic salt. Results of the bead test may be confirmed by other methods of CHEMICAL ANALYSIS.

beagle, breed of small, compact HOUND developed over centuries in England and introduced into the United States in the 1870s. It stands between 10 and 15 in (25.4–38.1 cm) high at the shoulder and weighs between 20 and 40 lb (9.1–18.1 kg). The breed is divided into two varieties on the basis of size: those under 13 in (33 cm) in height and those between 13 and 15 in (33–38.1 cm). The beagle's short, close-lying, harsh coat is usually colored black, tan, and white. Once widely used, either singly or in packs, to hunt hares, today it is more popular as a field-trial competitor and pet. See DOG.

Beagle, naval vessel. See DARWIN, CHARLES ROBERT.

Beale, Edward Fitzgerald, 1822–93, American frontiersman, b. District of Columbia. During the Mexican War, Beale was in California, where he aided Stephen W. Kearny in the battle of San Pasqual by crawling through the lines with Kit Carson to get help. Later, during one of several trips across the continent, Beale was the first to bring east the news of the California gold strike. Appointed (1852) superintendent of Indian affairs in California and Nevada, he served well. In the Southwest, he is best remembered for a curious experiment in 1857 with camel transportation while doing one of many surveys. Beale was briefly (1876–77) also minister to Austria-Hungary. See biography by Stephen Bonsal (1912), L. B. Lesley, ed., *Uncle Sam's Camels* (1920).

Bealiah (bēālīʾa), warrior who joined David at Ziklag. 1 Chron 12:5.

Bealoth (bēʾālōth) [Heb., =fem. pl. of BAAL], town, S Judah. Joshua 15:24. At 1 Kings 4:16 RSV has Bealoth, but KJV translates "in Aloth."

Bean, Roy, c. 1825–1903, legendary American frontier judge, b. Mason co., Ky. He left Kentucky in 1847 to seek his fortune in California. Soon, however, he was managing a trading post in Chihuahua, Mexico. In 1849 he was chased back into U.S. territory for cattle rustling. During the Civil War, Roy Bean aided the Confederate cause by joining a band of lawless irregulars. After the war he followed the construction camps of the Southern Pacific RR as a saloonkeeper and gambler. In 1882, Bean settled at the Texas camp of Vinegaroon, had it renamed Langtry (for the English actress Lily Langtry), named himself justice of the peace (to which he added the title "the law west of the Pecos"), and set up court in his saloon, the Jersey Lily. He there began to dispense justice with the aid of one law book and a six-shooter. As a judge, Bean rendered arbitrary and unorthodox decisions, usually tempered with wit and common sense. See biographies by C. L. Sonnichsen (1943, repr. 1953) and E. Lloyd (rev. ed. 1967).

bean, name applied to the seeds of leguminous trees and shrubs and to various leguminous plants of the family Leguminosae (PUSE family) with edible seeds or seed pods (legumes). The genera and species encompassed by the term *bean* are many and variable. The broad beans (*Vicia faba*, of the vetch genus), the SOYBEAN types (*Glycine max*), and a few lesser species were the only beans known to the Old World before the discovery of America, by which time the Indians had already developed most of the bean types still used today, e.g., the lima beans, kidney beans, string beans, shell beans, and pea beans. All these are species and varieties of *Phaseolus*, the "true" bean genus, the hereditary history of most is unknown, and hence the taxonomic distinctions are often still uncertain. In general, beans are warm-season annuals (although the roots of tropical species tend to be perennial) that grow erect (bush types) or as vines (pole or running types). The plants are easily cultivated but susceptible to several diseases, e.g., rusts, blights, wilts, and bean anthracnose (a fungus). Field beans are mostly the bush type and are used as stock feed. This has also become the principal use of the ancient large-seeded broad bean (called also the horse or Windsor bean), still widely grown in Europe but seldom as food for man. The common garden beans comprise several bush types and most of the pole types, the most often cultivated and most varied species, *P. vulgaris*,

is familiar as both types. *P. vulgaris* is the French haricot and the Spanish FRIJOLE. String beans, snap beans, green and yellow wax beans, and some kidney beans are eaten as whole pods, several kidney beans, pinto beans, pea beans, and many other types are sold as mature dry seeds. The lima or butter beans (*P. lunatus*, including the former *P. limensis*), usually pole but sometimes bush types, have a long history; they have been found in prehistoric Peruvian graves. The sieva is a type of lima. The scarlet runner (*P. multiflorus*), grown in Europe for food, is mainly an ornamental vine in North America. The tepary (*P. acutifolius latifolius*), a small variety long grown by Indians in the SW United States, has been found better suited to hot, arid climates and more prolific than the frijole. Other beans are the hyacinth bean or lablab (*Dolichos lablab*), grown in the Orient and the tropics for forage and food and cultivated in North America as an ornamental vine, the asparagus bean or yard-long bean (*Vigna sesquipedalis*), grown as a curiosity, and the velvet bean (*Stizolobium*), cultivated in the S United States as a forage and cover crop. The CAROB, the COWPEA or black-eye bean, and the CHICK-PEA or garbanzo are among the many other legumes sometimes considered beans. The sacred bean of India is the seed of the Indian lotus (of the WATER LILY family). Because seeds contain much protein, beans are useful as a meat substitute, and in different parts of the world are a characteristic item—often a staple—of the national fare. Baked beans, cooked for hours with pork or molasses or both, are a traditional New England dish. The Greeks and Romans used the broad bean for balloting—black seeds to signify opposition and white seeds agreement. This custom lingered in England in the election of the king and queen for Twelfth Night and other celebrations and was taken to the New World colony at Massachusetts Bay, where Indian beans were used. Beans are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Leguminosae.

bean beetle, common name for a destructive beetle, *Epilachna varivestris*, of the LADYBIRD BEETLE family. Although nearly all other members of this family are beneficial carnivores, the bean beetle attacks leguminous plants, especially beans. Both larva and adult feed on the undersides of leaves and sometimes on the pods. The adult is yellow, with black spots, the yellow, oval-bodied larva has forked spines. Bean beetles overwinter as adults and in early spring lay masses of 10 to 50 eggs on the undersides of leaves. One to four generations occur annually, each requiring about a month to mature. Since most damage occurs during July and August, early-maturing beans suffer the least damage. Removing old bean plants helps to destroy overwintering beetles, although many escape to nearby sheltered areas. Chemical insecticides are used for control. Before 1920 the bean beetle, also called Mexican bean beetle, was found only in the SW United States, but it now occurs throughout most of the United States, except on the Pacific coast. It is classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Coccinellidae.

bean weevil, common name for a well-known cosmopolitan species of beetle (*Acanthoscelides obtectus*) that attacks beans and is thought to be native to the United States. It belongs to the family Bruchidae, the seed beetles. The bean weevil is small, about 1/4 in (0.4 cm) long, and stout-bodied, with a short broad snout and shortened wing covers (elytra). The adults attack legumes either in storage or in the field and may even completely destroy them. The grubs, or larvae, hatch from eggs laid in holes that have been chewed by the female into stored beans or into pods in the field. In heavy infestations there may be two dozen or more newly hatched larvae in one bean. When full-grown, the larvae form pupae in the eaten-out cavity. As many as six generations are produced in a single season, and in storage breeding continues as long as there is available food left in the beans and a warm temperature. The larvae can be killed by fumigation or by heating the seeds to 145°F (63°C) for two hours. Bean weevils are classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Bruchidae.

Bear river, 350 mi (563 km) long, rising in the Uinta Mts., NE Utah, and flowing in a U-shaped course NW through Wyoming and Idaho, then S into Utah to enter Great Salt Lake. A perennial stream, the Bear played an important role in the development of the region by the Mormons in the mid-1800s. The Bear irrigates c. 50,000 acres (20,230 hectares). At the river's mouth is Bear River National Wildlife Reserve.

bear, large mammal of the family Ursidae in the order Carnivora, found almost exclusively in the Northern Hemisphere. Bears have large heads, bulky bodies, massive hindquarters, short, powerful limbs, very short tails, and coarse, thick fur. They walk on the entire sole of the foot and normally move with a slow, ambling gait. However, they are capable of moving with great speed when necessary and some achieve bursts of 35 mi (56 km) per hr. Most bears can climb trees and swim well. They stand on the hind feet to reach objects with their paws. They have large, strong, non-retractile claws, used for catching prey and for digging. Their teeth are adapted to grinding as well as tearing. Nearly all species are omnivorous, feeding on fruits, roots and other plant matter, honey, carrion, insects, fish, and small mammals. Adult bears are solitary except during the mating season. Groups may feed together where quantities of food are available, but there is little social contact. In cold climates bears sleep through most of the winter in individual dens made in caves or holes in the ground. This sleep is not a true hibernation, as the bear's metabolism remains in a normal state and it may wake and emerge during warm spells. The young, usually twins, are born during winter in a very immature state. Cubs stay with their mothers for about a year, and females usually mate only every other year. Bears are not generally subject to predation, unless they are in a weakened condition. A bear is a formidable adversary and may attack a human if it is injured or startled. The brown bear of Eurasia, *Ursus arctos*, is extinct in much of Western Europe, but small numbers survive in some wooded sections of that region and larger numbers in Russia and N Asia. The Russian variety was the bear most often trained to dance and box by traveling showmen in the past. The North American brown bears, including the Kodiak bear and GRIZZLY BEAR, are regarded by many authorities as varieties of *U. arctos*. Brown bears are dish-faced, i.e., their muzzles curve upward in profile. Their shoulders are humped. They range in color from yellow-brown to nearly black, with much color variation among different varieties, local populations, and individuals. Most varieties do not climb well. The Kodiak bear, or big brown bear, is the largest living member of the Carnivora, sometimes reaching a length of 9 ft (2.7 m), a shoulder height of 4 1/2 ft (1.40 cm), and a weight of over 1,600 lb (730 kg). It is found along the south coast of Alaska and, like the Siberian brown bear, eats large numbers of salmon during salmon runs. The most widespread and numerous North American bear is the so-called black bear, *U. americanus*, found in Alaska, Canada, the Great Lakes region, mountainous areas of the United States, and on the Gulf Coast. American black bears range in color from light brown to black; in northern regions there are gray and nearly white forms. Their muzzles are always cinnamon brown and are straight in profile. They are further distinguished from brown bears by their smaller size and by their hindquarters, which are higher than their shoulders. Males are usually about 6 ft (1.90 cm) long and weigh about 500 lb (230 kg). The Asian black bear, or moon bear, *Selenarctos thibetanus*, is found in forests from central Asia and the Himalayas to Japan. The sun bear, *Helarctos malayanus*, is found in tropical forests of SE Asia. Smallest of the bears, it is about 4 ft (1.20 cm) long and weighs about 100 lb (45 kg). It spends much time in trees and is fond of honey; it is sometimes called honey bear (a name also applied to the KINKAJOU). The sloth bear, *Melursus ursinus*, is a medium-sized bear of the forests of S India and Sri Lanka. The POLAR BEAR, *Thalarctos maritimus*, is an almost exclusively carnivorous species of the arctic regions. The only bear of the Southern Hemisphere is the spectacled bear, *Tremarctos ornatus*, of the Andes mts.; it is so called from the light-colored circles around its eyes. Bears are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Ursidae. See Richard Perry, *Bears* (1970).

bearberry, any plant of the northern and alpine genus *Arctostaphylos* of the family Ericaceae (HEATH family), especially *A. uva-ursi*, a trailing evergreen sometimes cultivated as a ground cover. The small, leathery leaves yield a medicinal astringent and a dye. They were used for tobacco by the Indians, who also utilized the mealy red berries for food and beverages. This Northern Hemisphere genus is most abundant in arid areas, where many of the shrubby species (called manzanita in the West) are common chaparral plants. Other plants are also sometimes called bearberry. Bearberry is classified in the divi-

sion MAGNOLIOPHYTA, class Magnoliopsida, order Ericales, family Ericaceae

Beard, Charles Austin, 1874–1948, American historian, b near Knightstown, Ind. A year at Oxford as a graduate student gave him an interest in English local government, and after further study at Cornell and Columbia universities he wrote, for his doctoral dissertation at Columbia, *The Office of Justice of the Peace in England* (1904, repr 1962). While teaching (1904–17) history and politics at Columbia, he joined James Harvey ROBINSON in promoting the teaching of history that would encompass all aspects of civilization, including economics, politics, the intellectual life, and culture. Together they wrote *The Development of Modern Europe* (1907) and compiled an accompanying book of readings. Beard was especially concerned with the relationship of economic interests and politics. His study of the conservative economic interests of the men at the Federal Constitutional Convention, *An Economic Interpretation of the Constitution* (1913), caused much stir; he also wrote *Economic Origins of Jeffersonian Democracy* (1915, repr 1965) and *The Economic Basis of Politics* (1922). His interest in city government led to *American City Government* (1912) as well as the long standard *American Government and Politics* (1910). After resigning from Columbia in World War I, he helped to found the New School for Social Research, was director (1917–22) of the Training School for Public Service in New York City, and was an adviser on administration in Tokyo after the disastrous Japanese earthquake of 1923. Beard wrote *A Charter for the Social Sciences in the Schools* (1932), which had an enormous influence on the teaching of history. He became widely known to the general reading public through *The Rise of American Civilization* (2 vol., 1927, repr 1933) and its sequels (Vol III and Vol IV), *America in Midpassage* (1939) and *The American Spirit* (1943), all written in collaboration with his wife, Mary Ritter Beard (1876–1958). This panoramic work is an example of the broad historical view that Beard championed, the great store of fact is laid open with easy and graceful literary style. With his wife he also later wrote a brief survey, *The Beards' Basic History of the United States* (1944, rev ed 1960). Mary R. Beard, a historian in her own right, was particularly interested in feminism and the labor movement and wrote a number of works on the subjects, notably *Women's Work in Municipalities* (1915), *A Short History of the American Labor Movement* (1920), *On Understanding Women* (1931), and *Woman as Force in History* (1946). Charles A. Beard, much criticized as a radical in his earlier years, was just as much criticized by the liberals in his later years for his violent opposition to Franklin D. Roosevelt's administration, especially in the struggle over the Supreme Court and in foreign policy. Beard's last work was *President Roosevelt and the Coming of the War, 1941* (1948, repr 1968). See studies by B. C. Borning (1962) and Richard Hofstadter (1968, repr 1970).

Beard, Daniel Carter, 1850–1941, American illustrator and naturalist, b Cincinnati, Ohio, studied at the Art Students League, New York City. He illustrated many books (among them the first edition of Mark Twain's *Connecticut Yankee at King Arthur's Court*) and taught animal drawing. He became interested in work for boys, and his best-known book, *The American Boys' Handy Book*, was published in 1882. One of the founders (1910) of the Boy Scouts of America, he served for the remainder of his life as national scout commissioner. To boys all over the country he was known as Uncle Dan. Mt. Beard, adjoining Mt. McKinley, is named for him. In addition to many articles on woodcraft and nature study, Beard wrote *Boy Pioneers and Sons of Daniel Boone* (1909), *American Boys' Book of Wild Animals* (1921), and *Wisdom of the Woods* (1927). See his autobiography, *Hardly a Man Is Now Alive* (1939).

beard, hair on the lower portion of the face. The term *mustache* refers to hair worn above the upper lip. Attitudes toward facial hair have varied in different cultures. In ancient Egypt, as well as Turkey and India, the beard was regarded as a sign of dignity and wisdom. Beards were continued into the Greek civilization until the 4th cent. B.C., when Alexander the Great ordered his soldiers shaved. The Romans, however, actually introduced the practice of regular shaving. The belief that the beard denotes wisdom was widespread in ancient China, and the cult of the beard has been dominant in Middle Eastern cultures from ancient times to the recent past. As a symbol of virility and status, the beard has often acquired religious significance. Muhammad enjoined his followers to grow beards, the Sikhs of India are not permitted to remove a single hair from

their bodies, and the patriarchs of the tribes of Israel were bearded. Hindus, on the other hand, have traditionally been clean-shaven. Prior to the 7th cent., most Anglo-Saxons wore beards, but with the spread of Christianity, beards were discouraged. However, since that time beards of all sizes and shapes have appeared and disappeared with the cycles of fashion. The guardsman's *mustache* of the 18th and early 19th cent. was the sign of an army man, and after 1830 the beard became the emblem of the French radicals. In the 20th cent. beards and mustaches were generally out of fashion until the 1960s when, together with long hair, they became popular with young people. See Reginald Reynolds, *Beards* (1950).

Bearden, Romare, 1914–, American painter, b Charlotte, N.C. Bearden grew up in Harlem and, in his work, has attempted to come to terms with everyday experiences of blacks in America. His themes are frequently religious and are rendered in vibrant, flat planes of color combined with photographic elements. His work is represented in the Museum of Modern Art, New York City.

Beardsley, Aubrey Vincent, 1872–98, English illustrator and writer, b Brighton. One of the foremost of modern illustrators, Beardsley exemplifies the aesthetic movement in English art of the 1890s (see DECADENTS). Largely self-taught and at first inspired by the Pre-Raphaelites, he was later influenced by art forms ranging from Greek vase painting and Japanese woodcuts to the French ROCCO. In his short working span of only six years, he developed a superbly artificial and graphic manner, expressed in flat, linear black and white designs. His works were often macabre in subject matter, by turns erotic and cruel in emphasis. The art editor of the famous *Yellow Book* quarterly (1894–96), Beardsley also edited and contributed some of his best work to Leonard Smithers's periodical, *The Savoy*, and illustrated many books including Wilde's *Salome* (1894), Pope's *Rape of the Lock* (1896), Aristophanes' *Lysistrata* (privately pub., 1896), and Jonson's *Volpone* (1898). His fiction, distinguished by an elaborate and erudite prose style, was collected and published in 1904 as *Under the Hill*. Criticized for the erotic character of his work and condemned for his association with Oscar Wilde, Beardsley fell from public favor. Ravaged by tuberculosis, he died at the age of 26. Beardsley had many imitators but his work remains unique. See his *Early Works* (1899, repr 1967) and *Later Works* (1901, repr 1967), his letters, ed by J. L. Duncan and W. G. Good (1970), study by B. Reade (1967).

beardtongue: see FIGWORT

bearing, machine part designed to reduce FRICTION between moving parts. It is also used to support moving loads. There are two main kinds of bearings: the antifriction type, such as the roller bearing and the ball bearing, operating on the principle of rolling friction, and the plain, or sliding, type, such as the journal bearing and the thrust bearing, employing the principle of sliding friction. Roller bearings are either cylindrical or tapered (conical), depending upon the application, they overcome frictional resistance by a rolling contact and are suited to large, heavy assemblies. Ball bearings are usually found in light precision machinery where high speeds are maintained, friction being reduced by the rolling action of the hard steel balls. In both types the balls or rollers are caged in an angular grooved track, called a race, and the bearings are held in place by a frame, commonly called a pillow block or plummer block. Ball bearings or roller bearings reduce friction more than sliding bearings do. Other advantages of antifriction bearings include ability to operate at high speeds and easy lubrication. A journal bearing usually consists of a split cylindrical shell of hard, strong metal held in a rigid support and an inner cylindrical part of soft metal, which holds a rotating shaft, or journal. A self-aligning journal bearing has a spherically shaped support that turns in a socket to adjust to movements of the shaft. Slight misalignment of the shaft can be accommodated in the ordinary journal bearing by wearing of the soft bearing material, often an alloy of tin or lead. Less frequently used are aluminum alloys, steel, cast iron, or a thin layer of silver covered with a thin coating of a soft bearing material. Ideally, a film of lubricant, normally oil, separates journal and bearing so that contact is prevented (see LUBRICATION). Bearings that are not split are called bushings. A thrust bearing supports an axial load on a shaft, i.e., a force directed along a shaft's length. It may be a plate at the end of a shaft or a plate against which the collar on the shaft pushes. Large thrust bearings, such as those used to transmit the motive

force of a ship's propeller from the shaft to the hull, have blocks that are separated from the collar on the shaft by wedge-shaped spaces. Oil swept up by these spaces separates the metal surfaces. Graphite bearings are used in high-temperature situations. Certain plastics make satisfactory self-lubricating bearings for low speeds and light loads and, if additionally lubricated, work at higher speeds and carry greater loads. Rubber and a naturally oily wood, *Iignum vitae*, are used in water-lubricated bearings. Watches and other precision instruments have glass or sapphire pivot bearings. In gas-lubricated bearings a film of gas separates the bearings from the moving machine parts.

Bear Island, Svalbard. See BJØRNØYA.

Bear Mountain, peak, 1,284 ft (391 m) high, SE N.Y., overlooking the Hudson River. The Bear Mt. section of the Palisades Interstate Park, with facilities for both summer and winter sports, is popular among New York City residents. The remains of Fort Clinton, dating from the Revolutionary War, are there. The Bear Mt. Bridge crosses the Hudson River. This suspension bridge, 2,257 ft (688 m) long, was opened in 1924 and was acquired by the state of New York in 1940.

Béarn (bārn'), former province, SW France, in the Pyrenees. It is now the inland part of Pyrénées-Atlantiques dept. Its valleys are well cultivated, and cattle are bred. Pau replaced Orthez as the capital in the 15th cent. The Bearnese are related to the Basques but speak French. Bearn was part of Roman Aquitania. It came (6th cent.) under the control of GASCONY, and was made (9th cent.) a county. In 1290 it passed to the counts of Foix, who later became kings of Navarre, and in 1484 to the house of ALBRET. Protestantism was imposed by Jeanne d'Albret. When her son became Henry IV of France, Bearn passed to the crown. However, it remained autonomous until 1620, when Louis XIII annexed it as an anti-Protestant measure. With the Basque districts of French or Lower Navarre, it became a French province under the jurisdiction of the parlement of Navarre, which sat at Pau.

beas's-breech: see ACANTHUS

Beas (bē'as), river, 250 mi (402 km) long, rising in the Himalayas and flowing generally southwest through the fertile Kulu valley and the Siwalik Hills to join the Sutlej River, S of Amritsar, N India, the easternmost of the "five rivers" of the Punjab. The Beas marked the eastern limit of Alexander the Great's invasion of India in 326 B.C.

beast epic: see BESTIARY

beat generation, term applied to certain American artists and writers who were popular during the 1950s. Essentially anarchic, members of the beat generation rejected traditional social and artistic forms. They sought immediate expression in multiple, intense experiences and beatific illumination like that of some Eastern religions (e.g., Zen Buddhism). In literature they adopted rhythms of simple American speech and of so-called progressive jazz. Among those associated with the movement are the novelists Jack Kerouac and Chandler Brossard, numerous poets (e.g., Kenneth Rexroth, Allen Ginsberg, Lawrence Ferlinghetti, and Gregory Corso), and others, many of whom have worked in and around San Francisco. Perhaps the only true nihilist of the group is William Burroughs. During the 1960s "beat" ideas and attitudes were absorbed by other cultural movements, and those who practiced the "beat" life style were called "hippies."

beatification: see CANONIZATION

Beatitudes [Lat., = blessing], eight blessings uttered by Jesus at the opening of the Sermon on the Mount (Mat. 5:3–12). Some, counting verses 11–12 apart from verse 10, say there are nine. In the parallel passage, Luke 6:20–26, only four of the blessings appear, with four corresponding woes. See also Mat. 11:6, Luke 7:23, John 20:9.

Beatles, The, English rock music group formed in the late 1950s and disbanded in 1970. The members were John Lennon (1940–) guitar and harmonica, Paul McCartney (1942–) guitar and piano, George Harrison (1943–) guitar and sitar, and Ringo Starr (Richard Starkey) (1940–) drums. All were born in Liverpool, England. Influenced by such American performers as Chuck Berry, Little Richard, and Elvis PRESLEY, The Beatles dominated ROCK MUSIC in the 1960s, eventually disbanding when they felt their possibilities as a group were exhausted. The lyrics and music for most of their songs were written by Lennon and McCartney. The group burst on the international rock music scene in 1961. Their initial appeal derived as much from their wit, Edwardian clothes, and moplike haircuts as from their music.

By 1963 they were the objects of wild adoration and were constantly followed by crowds of shrieking adolescent girls. By the late 1960s, "Beatlemania" had abated somewhat, and The Beatles were highly regarded by a broad spectrum of music lovers. From 1963 to 1970 the group released 18 record albums that clearly document its musical development. The early recordings, such as *Meet The Beatles* (1964), are remarkable for their solid rhythms and excitingly rich, tight harmony. The middle albums, like *Rubber Soul* (1965) and *Revolver* (1966), evolved toward social commentary in their lyrics ("Eleanor Rigby," "Taxman") and introduce such instruments as the cello, trumpet, and sitar. In 1967, *Sgt. Pepper's Lonely Hearts Club Band* marked the beginning of The Beatles' final period, which is characterized by electronic techniques and allusive, drug-inspired lyrics. The group acted and sang in four films: *A Hard Day's Night* (1964), *Help!* (1965), *Magical Mystery Tour* (1967), and *Let It Be* (1970), all of these are outstanding for their exuberance, slapstick, and satire. The Beatles also supplied voices for the full-length animated cartoon, *Yellow Submarine* (1968). After they disbanded, all The Beatles continued to compose and record songs. See Hunter Davies, *The Beatles* (1968), Richard Dillelo, *The Longest Cocktail Party* (1972), Wilfred Mellers, *Twilight of the Gods* (1974).

Beaton, Cecil Walter Hardy, 1904–, English scenery and costume designer, photographer, writer, and painter. Since designing his first stage show in 1935, Beaton has worked on numerous productions, including *Lady Windermere's Fan*, *Vanessa* (opera), *Gigi* (film, 1951), *My Fair Lady* (stage, 1956, film, 1964), and *Coco* (1969). He has also written and illustrated many books. See his autobiographical *The Wandering Years* (1962) and *Memoirs of the 40s* (1973).

Beaton or Bethune, David (both bē'tan), 1494–1546, Scottish churchman, cardinal of the Roman Catholic Church. He was the nephew of James Beaton, archbishop of St. Andrews. He was made cardinal in 1538 and succeeded his uncle as archbishop and primate of Scotland in 1539. Beaton arranged the marriage of James V and Mary of Guise and tried to assume the regency for Mary Queen of Scots (1542), but James HAMILTON, 2d earl of Arran, seized power. The following year Arran renounced Protestantism and sided with Beaton, who crowned Mary Beaton became chancellor of Scotland and ably opposed the designs of HENRY VIII of England. Beaton's relentless persecution of Scottish reformers led to the execution of George WISHART in 1546, and in reprisal the cardinal himself was murdered in his castle two months later.

Beatrice (bē'ātrīs), city (1970 pop. 12,389), seat of Gage co., SE Neb., on the Big Blue River, inc. as a city 1873. It is on the old OREGON TRAIL and is the trading and industrial center for a grain, dairy, and livestock area. Its manufactures include metal goods, farm and garden equipment, fertilizers, hardware and electric products, store fixtures, and dairy products. John J. Pershing College is in Beatrice. Nearby is the Homestead National Monument (see NATIONAL PARKS AND MONUMENTS, table).

Beatrice Portinari (bē'ātrīs, Ital. bāātrē'chā pōrtēnārē), 1266–90, Florentine woman believed to be the Beatrice of the *Divine Comedy* and *Vita nuova* of DANTE. He first saw Beatrice when he was nine years old and she remained his ideal and inspiration until his death in 1321. Her identity has been the cause of much controversy.

Beatrix, 1938–, crown princess of the Netherlands. The oldest daughter of Queen Juliana of the Netherlands and of Prince Bernhard of Lippe-Biesterfeld, she received a law degree from the Univ. of Leyden in 1961. In 1966 she married a German, Claus von Amsberg, and the following year she gave birth to a son, Willem Alexander Claus, the first prince of Orange in the line of succession since 1884. She now has two other sons.

Beattie, James (bā'tē), 1735–1803, Scottish poet and essayist. Educated at Marischal College, Aberdeen, he later became professor of moral philosophy there. His fame in his own lifetime rested on two works, *Essay on the Nature and Immutability of Truth* (1770), an attack on Hume, and an autobiographical poem, written in Spenserian stanzas, entitled *The Minstrel* (1771–74). In describing the formation of a poet's mind, *The Minstrel* places particular emphasis on the effect of nature, the poem influenced the 19th-century romantics, particularly Lord Byron.

Beatty, David Beatty, 1st Earl (bē'tē), 1871–1936, British admiral. He served with distinction in Egypt

and the Sudan (1896–98) and in the Boxer Uprising (1900) in China. Made rear admiral in 1910, he commanded successful naval actions early in World War I at Heligoland Bight (1914) and at Dogger Bank (1915). His battle cruiser squadron lured the German fleet into position for an engagement with the British grand fleet under Admiral John Jellicoe at the battle of JUTLAND (1916). Beatty commanded (1916–19) the fleet and was (1919–27) first sea lord of the navy. He was created Earl Beatty in 1919.

Beauce (bōs), region, in Orleanais, N France, in the Paris Basin, between the Seine and Loir rivers. It now comprises Eure-et-Loir dept and parts of Loiret and Loir-et-Cher depts. It is the "granary of France"—a vast, limestone plateau covered with wheat fields. Beets, potatoes, barley, and oats are also grown. The region shared the history of the county of Chartres, Chartres is its only important city. Little Beauce, between the Loir and the Loire rivers, is also a rich wheat area, Vendôme is the center.

Beauchamp, Guy de: see WARWICK, GUY DE BEAU CHAMP, EARL OF.

Beauchamp, Richard de: see WARWICK, RICHARD DE BEAU CHAMP, EARL OF.

Beauchamp, Thomas de: see WARWICK, THOMAS DE BEAU CHAMP, EARL OF.

Beaufort, Edmund: see SOMERSET, EDMUND BEAU-FORT, 2D DUKE OF.

Beaufort, François de Vendôme, duc de (fraNswā' də vaNdom' duk də bōfōr'), 1616–69, French courtier and politician, grandson of King Henry IV of France and his mistress Gabrielle d'ESTRÉES. Implicated in the conspiracy of the Marquis de CINQ MARS against Louis XIII's minister Cardinal Richelieu, he fled (1642) to England but returned after Richelieu's death. He was one of the important, a clique opposing Richelieu's successor, Cardinal Mazarin, and was imprisoned from 1643 to 1648. A leader of the FRONDE, he was nicknamed King of the Markets because of his popularity with the Parisian mob. Exiled in 1652, he was later recalled and given command (1666) of the French fleet against the Turks and the Barbary pirates.

Beaufort, Henry (bō'fōrt), 1377?–1447, English prelate and statesman. The son of John of Gaunt, duke of Lancaster, and his mistress (later wife) Catherine Swynford, he was half brother to Henry IV. He was declared legitimate (1397) and made bishop of Lincoln (1398) by Richard II, and under Henry IV, served as chancellor (1403–4) and became (1404) bishop of Winchester. On the accession of his friend Prince Henry as Henry V, Beaufort again was chancellor (1413–17). At the Council of Constance, Beaufort swung (1417) English influence to help elect Pope Martin V, but Henry refused to let him accept the pope's reward of a cardinalate. When in 1422 the infant HENRY VI succeeded to the throne, Beaufort became involved in a vigorous struggle for power with Humphrey, duke of GLOUCESTER. Beaufort's enormous wealth (he loaned money to the government for the war in France) and political skill gave him the advantage, and he served again as chancellor (1424–26). Made a cardinal (1426) and papal legate, he preached a crusade against the Hussites in Bohemia in 1429, but the troops he raised were diverted to join the English army in France. In 1431 he crowned Henry VI as king of France in Paris. Beaufort defeated (1432) an attempt by Gloucester to remove him from the see of Winchester and by 1437 enjoyed complete ascendancy. He and his faction, which was later led by William de la Pole, 4th earl and 1st duke of Suffolk (see under POLE, family), sought to end the French wars.

Beaufort, Margaret, countess of Richmond and Derby (bō'fōrt, dar'bē), 1443–1509, English noblewoman, mother of Henry VII. She was the daughter and heiress of John, 1st duke of Somerset, and great-granddaughter of John of Gaunt, duke of Lancaster. She was married three times to Edmund Tudor, earl of Richmond, who was Henry's father, to Henry Stafford, and to Thomas, Lord Stanley, afterwards earl of Derby. Renowned for her philanthropy, she endowed professorships of divinity at Oxford and Cambridge and with the help of her confessor, John Fisher, founded Christ's College and St. John's College, Cambridge. She was the patron of many religious houses and of William Caxton and Wynkyn de Worde.

Beaufort Sea (bō'fōrt), part of the Arctic Ocean, N of Alaska and Canada, between Point Barrow, Alaska, and the Canadian Arctic Archipelago. The Mackenzie River flows into the sea, which is always covered with pack ice. It was first explored by the Canadian Vilhjalmur Stefansson in 1914.

Beaufort's scale: see WIND.

Beaufort West (bō'fōrt), town (1970 pop. 17,730), Cape Province, S Republic of South Africa, in the Great KARROO. The town has some light industry and is the trade and distribution center for nearby farms where sheep, grain, and fruit are raised. It is also a resort. Beaufort West was founded in 1818 and in 1837 became the first municipality in South Africa.

Beauharnais, Alexandre, vicomte de (alēksaN'dra vēkōNt' də bōarnā'), 1760–94, French general, b. Martinique. He fought with the colonials in the American Revolution and, as a supporter of the French Revolution, was a commander in the French Revolutionary Wars. A moderate member of the National Assembly, he was guillotined in the REIGN OF TERROR. His widow later became the empress JOSEPHINE.

Beauharnais, Eugène de (ozhēn'), 1781–1824, French general, son of Alexandre and Josephine de Beauharnais (Empress JOSEPHINE). He served ably in the campaigns of his stepfather, NAPOLEON I, distinguishing himself at Marengo and Lutzen, where he rallied the outnumbered troops. The emperor made him viceroy of Italy in 1805 and officially adopted him the following year. His court at Milan was brilliant, his administration in Italy capable. Beauharnais married a Bavarian princess, and after Napoleon's downfall he lived in Munich under the titles of duke of Leuchtenberg and prince of Eichstatt.

Beauharnais, Hortense de (ōrtaNs'), 1783–1837, queen of Holland (1806–10), daughter of Alexandre and Josephine de Beauharnais and wife of Louis BO NAPARTE. She was the mother of Napoleon III and—by her lover, the comte de Flahaut—of the duc de MORNAY. See Constance Wright, *Daughter to Napoleon* (1961).

Beauharnais, Josephine de: see JOSEPHINE.

Beauharnois, Charles de la Boische, marquis de (sharl də la bwash markē' də bōarnwa'), 1670–1749, French governor of New France (1726–46). Despite the loss in 1745 of Louisbourg to the British, which caused his replacement, Beauharnois's rule was generally peaceful and prosperous. He returned to France in 1747 and served as a naval official.

Beauharnois (bōhar'nwa), city (1971 pop. 8,704), S Que., Canada, on Lake St. Louis, a broadening of the St. Lawrence River. Furniture, metal alloys, and chemicals are produced in the city. Beauharnois is at the eastern outlet of the Beauharnois Canal, part of the St. Lawrence Seaway System, and is the site of a large hydroelectric development.

Beaujeu, Anne de: see ANNE DE BEAUJEU.

Beaujolais (bōzhōlā'), hilly region, Rhône dept., E central France, W of the Saône between Mâcon and Lyons. It is one of the great wine areas of France, famous for its red wine. Villefranche-sur-Saône, the historic capital, is a leading textile center. Lyons is the industrial hub of the region. Beaujolais was once the fief of the powerful lords of Beaujeu (a small town which gave the region its name). Annexed to the crown in 1531, it was incorporated into Lyonnais prov.

Beaumanoir, Philippe de Remi, sire de (fēlēp' də ramē' sēr də bōmanwar'), c. 1250–1296, French poet and jurist, a writer of medieval law texts. He was a judicial officer at Clermont and Senlis. His *Coutumes de Beauvoisis* [customary laws of the region of Beauvais] is an important source for medieval French law and social customs.

Beaumarchais, Pierre Augustin Caron de (pyēr ōgustāN' karōN' də bōmarshā'), 1732–99, French dramatist. Originally a watchmaker with a scant education, he adopted his title from his first wife, and rose to wealth and position among the nobility. His two successful comedies were *Le Barbier de Séville* (1775), which was the basis of an opera by Rossini, and *Le Mariage de Figaro* (1784), which was the source of an opera by Mozart. Brilliant in their clever dialogue and intricate plots, they satirize the privileges and foibles of the upper class. Beaumarchais was famous as a litigant, and the pamphlets he wrote about his cases were witty and effective. One of them (1774) narrated an incident about his sister, which served as the basis of Goethe's *Clavigo*. Beaumarchais's employment as a secret agent by the monarchy led to his involvement in the American Revolution as a supplier of arms. The payment expected in return was never forthcoming, and the claims of Beaumarchais against the Americans were settled only in 1835 through a grant by Congress to his heirs. Another costly venture was a 70-volume edition of Voltaire (pub. 1785–90, though volumes bear dates 1784–89). See biographies by Paul Frischauer (tr. 1935, repr. 1970) and Cynthia Cox (1963), study by J. B. Ratermanis (1961).

Beaumont, Francis (bō'mōnt), 1584?–1616, English dramatist. Born of a distinguished family, he studied at Oxford and the Inner Temple. His literary reputation is inseparably linked with that of John FLETCHER, with whom he began collaborating about 1606. It is generally agreed that of the two, Beaumont possessed the superior poetic gift and talent for comedy. The plays usually ascribed to him as sole author are *The Woman Hater* (published 1607) and the burlesque *Knight of the Burning Pestle* (c 1607). After his marriage in 1613 he retired to his estate in Kent and ceased writing for the stage.

Beaumont, William, 1785–1853, American physician and army surgeon, b. Lebanon, Conn. He was privately educated and in 1812 was licensed to practice in Vermont. His *Experiments and Observations on the Gastric Juice and the Physiology of Digestion* (1833, fac ed 1929, with biographical essay by Sir William Osler, repr 1941) was an exhaustive account of a case famous in medical history. In 1822, while serving as post surgeon on Mackinac Island, Beaumont was called to treat Alexis St. Martin, a youth of 19 whose abdomen had been torn open by an accidental gunshot at close range. All efforts to close the wound failed, although St. Martin recovered his health and strength. Later, when he realized what a unique opportunity this was to study the digestive process, Beaumont, with the assent of his sometimes rebellious patient, began a series of experiments that completely revolutionized the knowledge of the subject. In all, about 238 experiments were reported, starting at Mackinac Island in 1825 and continuing at intervals over a number of years at Plattsburgh, N.Y., at Fort Crawford (Prairie du Chien, Wis.), and at Washington, D.C. See J. S. Myer, *Life and Letters of Dr. William Beaumont* (1912, new ed 1939).

Beaumont, city (1970 pop 115,919), seat of Jefferson co., Texas, a port of entry on the Sabine-Neches Waterway, inc 1838. A ship channel (completed 1916, reconstructed 1927) provides the facilities of a modern deepwater port, with shipyards and large storage tanks. Beaumont is an important industrial and shipping center and a great oil city, with giant refineries and petrochemical complexes. Other industries are based on the forests and vast farmlands of the area. There are rice mills, granaries, lumber and paper plants, meat-packing houses, and huge metal works. The lush pine forests were the base of the lumbering that began there before the Civil War. Shipbuilding followed, and as livestock raising and rice farming spread in the surrounding area, Beaumont became an important processing and transportation center. Its life was revolutionized in 1901 when the world's first great oil gusher came in at nearby Spindletop, a 58-ft (18-m) granite shaft marks the spot, now a national historic site. The city is the seat of Lamar Univ. It has a pioneer museum, an oil museum, and an art center. Annual events include a horse show, a river festival, and a rodeo.

Beaune (bōn), town (1968 pop 17,377), Côte-d'Or dept., E France, in Burgundy. It is a noted center for Burgundy wines, with a wine school and wine research facilities. Its manufactures include winemaking equipment. Beaune flourished as a residence of the dukes of Burgundy. Its textile industry was ruined when the revocation of the Edict of Nantes expelled (1685) the Protestant craftsmen. Beaune, a circular city with 15th-century ramparts, has a Romanesque church (12th cent.) with 15th-century Flemish tapestries. Its famous *hôtel Dieu* was founded (1443) by Chancellor Nicolas Rolin, a patron of Roger van der Weyden, whose *Last Judgment* it contains.

Beauport (bōpōr'), city (1971 pop 14,681), S Que., Canada, on the St. Lawrence River. It is a suburb of Quebec city. Settled in 1634, it is one of the oldest communities in Canada.

Beauregard, Pierre Gustave Toutant (bō'rigārd), 1818–93, Confederate general, b. St. Bernard parish, La., grad West Point, 1838. As engineer on the staff of Winfield Scott in the Mexican War, he figured prominently in the taking of Mexico City. He later did engineering work in Louisiana, and for five days in Jan., 1861, he was superintendent of West Point. Beauregard, resigning from the army in February, was soon made a Confederate brigadier general and was given command at Charleston, where he ordered the firing on FORT SUMTER. Assuming command of the army in NE Virginia (June), he was second in command to J. E. JOHNSTON at the first battle of BULL RUN (July 16, 1861) and was promoted to full general. He was sent to the West in 1862 and succeeded to the command of the Army of Tennessee upon the death of A. S. JOHNSTON at the battle of SHILOH. He retreated to Corinth, which he shortly

abandoned to Halleck's superior army. Ill health and friction with Jefferson Davis, whom he had criticized after Bull Run, resulted in his removal from command. After a rest he was charged with the defense of the South Carolina and Georgia coast, which he ably held against Union attacks, particularly those on Charleston in 1863. In May, 1864, Beauregard reinforced Lee in Virginia. He defeated B. F. Butler at DREWRY BLUFF and held Petersburg against Grant until Lee arrived. In the closing months of the war he was in the Carolinas with J. E. Johnston. After the war Beauregard was a railroad president, manager of the Louisiana state lottery, and for many years adjutant general of that state. His superior engineering abilities overshadowed his deficiencies as a field commander. See his *Mexican War reminiscences* ed by T. H. Williams (1956, repr 1969), *A Roman, Military Operations of General Beauregard* (1884), biographies by H. Basso (1933) and T. H. Williams (1955).

Beauséjour, Fort: see FORT BEAUSÉJOUR, N 8, Canada.

Beauvais (bōvā'), town (1968 pop 49,347), capital of Oise dept., N France. Tractors, ceramic tiles, textiles, and musical instruments are among its many manufactures. A Roman town and an early episcopal see, it flourished in the Middle Ages and again after the 17th cent., when Colbert established the state tapestry industry there. It was the center of the Jacquerie revolt in 1358, and in 1472 its citizens resisted Charles the Bold of Burgundy. Jeanne Hachette, who earned her surname for the hatchet with which she helped to repel the Burgundians, is commemorated in a yearly celebration. Beauvais was severely damaged in both World Wars, in June, 1940, its tapestry factory was destroyed, and the industry was moved to Paris. The city still retains its Cathedral of St. Pierre, begun in 1227 as the highest building in Christendom but never completed. Its choir vault (154 ft/47 m), the highest of all Gothic vaults, was finished after it fell in 1284, the transept was completed in 1548.

Beauvoir, Simone de (sēmōn' də bōv'vār'), 1908–, French author. A leading exponent of the existentialist movement, she is closely associated with Jean-Paul SARTRE. Beauvoir taught philosophy at several colleges until 1943, after which she devoted herself to writing. Her novels *All Men Are Mortal* (1946, tr 1955), *The Blood of Others* (1946, tr 1948), and *The Mandarins* (1955, tr 1956) are interpretations of the existential dilemma. Among her most celebrated works is the profound analysis of the status of women, *The Second Sex* (1949–50, tr 1953). Her study *The Marquis de Sade* (tr 1953), is a brilliant, perceptive portrait. Her monumental treatise *The Coming of Age* (1970, tr 1972) is an exhaustive historical consideration of the social treatment of the aged in many cultures. Beauvoir's autobiographical writings include *Memoirs of a Dutiful Daughter* (1958, tr 1959), *The Prime of Life* (tr 1962), *Force of Circumstance* (1963, tr 1964), *A Very Easy Death* (1964, tr 1966), and *All Said and Done* (tr 1974). See study by Elaine Marks (1973).

Beaux, Cecilia (bō), 1863–1942, American figure and portrait painter, b. Philadelphia, studied in Philadelphia under William Sartain and Eakins, in Paris in the Julian and Lazar schools. A skilled technician, she won many honors through her long career. She painted, among other celebrities, Henry James, Clemenceaux, and Cardinal Mercier. Well-known paintings include *The Dancing Lesson* (Art Inst., Chicago), *Sita and Sarita* (Corcoran Gall.), *Portrait of Mrs. Dupont* (Mus. of Fine Arts, Boston), and self-portrait (Uffizi). See her autobiography, *Background with Figures* (1930).

Beaux-Arts, École des: see ÉCOLE DES BEAUX-ARTS.

beaver, large aquatic RODENT, *Castor fiber*, known for its engineering feats. It was once widespread in N and central Eurasia except E Siberia, and in North America from the arctic tree line to the S United States. It is the largest living rodent except the capybara, and is distinguished by its extremely broad, horizontally flattened tail. Beavers are 3 to 4 ft (91–120 cm) long, including the tail (12 in/30.5 cm long, 6 in/15.2 cm wide), and about 15 in (38 cm) high at the shoulder, they usually weigh about 60 lb (27 kg). Their long, dense fur is reddish brown to nearly black, the naked, scaly tail is black. Both sexes have scent glands, located in a pouch in the anal region. The musky secretion, castoreum, which may function as a sexual attractant, was once believed to have medicinal properties, and the glands, or castors, were of commercial value. Beavers build lodges up to 3 ft (91 cm) high and 5 ft (1.5 m) wide of sticks and mud, the entrances are below water level, with ramps leading to the living quarters, located on a

platform above water level. They may also build burrows in banks with underwater entrances. They create deep ponds, or maintain the water level in old ones, by building dams across streams. These are made of sticks and logs, and the upper surfaces are reinforced with stones and mud. Materials are gathered by collecting wood and felling small trees by gnawing, often the beavers dig canals for floating these to the right spot. Most, if not all, of these activities are done mechanically, as a result of instinct, captive animals persist in building useless dams, and even in the wild beavers will attempt to reinforce solid, manmade dams with sticks. Although they form monogamous families and live in colonies, there is little social contact among beavers and they work independently. A colony consists of a cluster of lodges, each occupied by a family of the parents and their last two litters. The beavers sleep by day and spend the night foraging for food and building or repairing their structures. They feed on a variety of aquatic and shore plants, surviving in winter largely on bark. Sticks for winter food are stored in the lodges and under water. Excellent swimmers, they can stay under water for up to fifteen minutes. When alarmed, a beaver slaps the water with its tail, making a loud noise that sends other beavers hurrying to the safety of deep water. Females give birth to two to eight young in the spring, these mature in two years. Beavers are responsible for creating many of the woodland ponds that support lush vegetation and eventually become meadows. They have been extensively trapped for their pelts, once considered the most valuable of furs, and were exterminated over a large part of their range. However, because of their great importance in maintaining the natural environment, they have been reintroduced in many areas of North America and Russia, and are now increasing in numbers. The MOUNTAIN BEAVER of W North America is not a true beaver, but a nonaquatic rodent of a different family. Beavers are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Castoridae. See Lars Wilson, *My Beaver Colony* (tr 1968), Grey Owl, *Pilgrims of the Wild* (1935, repr 1971).

Beaverbrook, William Maxwell Aitken, 1st Baron, 1879–1964, British financier, statesman, and newspaper owner, b. Canada. The son of a Scottish Presbyterian clergyman, he grew up near Beaverbrook, N 8. He made a fortune in business and was probably a millionaire when he went to England in 1910. There he immediately entered political life as a member of Parliament and secretary to a fellow Canadian, Conservative leader Andrew Bonar Law. Politically ambitious, he was involved in the intrigues that led to the replacement (1916) of Herbert Asquith as prime minister by David Lloyd George. He was not given a place in the new cabinet, but he received a peerage (1917). Beaverbrook obtained control of the *Daily Express* (1916) and the *Evening Standard* (1923) and began the *Sunday Express* (1918). Both in Parliament and in his newspapers he advocated strong imperial ties and free trade within the empire, regardless of commercial agreements with other countries, but he never succeeded completely in his attempts to have his imperial isolationist policies adopted by the Conservative party. In World War II, Lord Beaverbrook was prominent in Winston Churchill's coalition government as minister of aircraft production (1940–41), minister of supply (1941–42), minister of war production (Feb., 1942), special envoy to the United States on supplies (1942), and lord privy seal (1943–45). After the fall of the Churchill government in 1945, he continued his supervision of his newspapers. His books include *Success* (1922), *Politicians and the War 1914–1916* (1928), *Men and Power 1917–1918* (1956), and *Friends* (1959). See biographies by Thomas Driberg (1956) and A. J. P. Taylor (1972).

Beaver Dam, city (1970 pop 14,265), Dodge co., SE Wis., on Beaver Dam Lake, in a productive farm and dairy area, inc 1856. There is a foundry in Beaver Dam. Stoves, metal goods, and shoes are made, and peas and sweet corn are canned there.

Beaver Falls, city (1970 pop 14,375), Beaver co., W Pa., on falls of the Beaver River near its junction with the Ohio, settled c 1793, inc 1868. A steel center in an area of coal mines, natural gas deposits, and clay pits, it is known especially for its cold-drawn steel. The plates for U.S. currency are manufactured there. The city was founded on an Indian trail that later became a pioneer road. It is the seat of Geneva College.

Beaver Island, 14 mi (23 km) long, from 3 to 6 mi (4.8–9.6 km) wide, off N Mich., in Lake Michigan. It is the largest island of the Beaver Archipelago and

has forests, lakes, beaches, and a harbor at St James village. The island's permanent inhabitants are mostly fishermen. James J. Strang had a Mormon settlement there from 1847 to 1856.

Beaverton, city (1970 pop 18,577), Washington co., NW Oregon, a residential suburb of Portland, in a farm area, inc 1893. It has some electronic manufactures.

Bebai (bēbā'ī), head of a family in Zerubbabel's return. Ezra 2:11, 8:11, 10:28, Neh 7:16, 10:15.

Bebel, August (ou'gōöst bā'bəl), 1840-1913, German Socialist leader. A wood turner by trade, he became a Marxian Socialist under the influence of Wilhelm Liebknecht. At a congress at Eisenach (1869) he was instrumental in founding the German Social Democratic party, which he later represented in the Reichstag and which he led virtually single-handedly for many years. His antimilitarism and his social program earned him the hatred of Bismarck. In 1872, Bebel and Liebknecht, tried on false charges of treason, were sentenced to two years' imprisonment, but Bebel's prison sentence only solidified his control over the Social Democrats, and he was reelected to the Reichstag. In 1875 he helped to unite the Lassalle group with the Social Democrats. Among his writings are *Women and Socialism* (1883, tr 1910), which was highly influential among German workers, and his autobiography (1910-14, abr tr 1912, repr 1973).

Bebington (bēb'īngtən), municipal borough (1971 pop 61,488), Cheshire, W central England. In 1974, it became part of the new metropolitan county of Merseyside. Its frontage on the Mersey River is part of the Port of Liverpool. The borough includes Bromborough and Eastham, both of great antiquity, and Port Sunlight, an industrial area with soap factories. Bebington also has freestone quarries and manufactures chemicals and margarine. The Church of St Andrew, on a site occupied since Saxon times, dates from the 14th and 16th cent.

Bec (bēk), former Benedictine abbey, near the village of Bec-Hellouin, Eure dept., N France, in Normandy. Founded in the 11th cent. by LANFRANC, and later directed by ANSELM, who became (1078) the abbot, it was one of the most famous medieval schools. It declined after the Hundred Years War, was suppressed in the French Revolution, and fell into ruin.

Beccafumi, Domenico di Pace (dōmē'nēkō dē pā'chā bāk-kāfōō'mē), 1486-1551, Italian mannerist painter and sculptor, also called Il Meccherino. He studied painting in Siena and Rome and was a versatile engraver and sculptor. He is best known for his frescoes in the city hall in Siena and for his designs of scenes from the Old Testament for the pavement of Siena Cathedral. Among his other works are *Holy Family* (Pitti Palace, Florence) and some fine sculptural work for the Siena Cathedral. *Nativity of the Virgin*, *Descent into Limbo*, and *St Michael* (all in Siena) exemplify the peculiar spatial and lighting effects of mannerism. *Holy Family with Angels* is in the National Gallery of Art, Washington, D.C.

Beccaria, Cesare Bonesana, marchese di (chē'zārā bōnāzā'nā mār-kā'zā dē bēk-karē'ā), 1738-94, Italian criminologist, economist, and jurist, b Milan. Although of a retiring disposition, he held, in the Austrian government, several public offices, the highest being counselor of state. Through these and through his writings he influenced local economic reforms and stimulated penal reform throughout Europe. As a young man he published (1764) his famous *Essay on Crimes and Punishments* (tr 1767, 2d American ed 1819, repr 1953). The book, widely acclaimed in Western Europe, was one of the first arguments against capital punishment and inhuman treatment of criminals. His ideas especially influenced Jeremy Bentham and the utilitarians. He made original contributions to economic theory, applying mathematics to economics, analyzing population problems, and anticipating the wage and labor theories of Adam Smith. Much of this work appears in *Elementi di economia pubblica* (1804), a posthumous collection of his lectures (1768-70) in political economy at Milan. See Marcello Maestro, *Caesare Beccaria and the Origins of Penal Reform* (1973).

Beccaria, Giambattista (jām'bāt-tē'stā bāk-kārē'ā), 1716-81, Italian physicist. He joined the Priest order in 1732 and studied in Rome and Narni. After teaching at various Italian universities he became professor of physics at Turin in 1748. Against the Cartesians there, he upheld Franklin's electrical theories, which he systematized and disseminated in his important *Dell'elettricità* (1753). His contributions in-

clude a classification of luminous discharges, the invention of the electrical thermometer, and the collection of data on atmospheric electricity.

Béchar (bāshār'), formerly **Colomb-Béchar** (kōlōn'-), town (1966 pop 46,505), capital of La Saoura dept., W Algeria. It is an important administrative center in a mining (coal, copper, magnesium, iron) and industrial region. Béchar also serves as a major shipping point for coal. The town was established in 1905 as a French military post to control the then-turbulent Algerian-Moroccan border.

bêche-de-mer (bēsh-dā-mār') see SEA CUCUMBER.

Becher (bē'kār) 1 Son of Benjamin. Gen 46:21, 1 Chron 7:6,8. In 1 Chron 8:1 "his first-born" should perhaps be read "Becher", cf BOCHERU. See BICHRI. 2 Son of Ephraim. His descendants are called Bachrites. Num 26:35. Bered 1 Chron 7:20.

Becher, Johannes Robert (yōhā'nəs rō'bērt bēkh'-ər), 1891-1958, German poet and essayist. Becher's anti-imperialist poetry, notably *Der Leichnam auf dem Thron* [the corpse on the throne] (1925), led to exile (1935-45) in the USSR. There he continued to write, producing such volumes of poetry as *Wiedergeburt* [rebirth] (1940) and *Deutschland ruft* [Germany calls] (1942). After the war his writings on socialist humanism and the artist's responsibility to society contributed to the literature of East German socialism. They include *Heimkehr* [homecoming] (1946), *Neue deutsche Volkslieder* [new German folk songs] (1950), *Macht der Poesie* [poetic power] (1955), and *Das poetische Prinzip* [poetic principle] (1957).

Bechet, Sidney (bāshā'), 1897-1959, American jazz musician, b New Orleans, La. He began his professional career with his brother Leonard's band in 1911. Later he played with many other bands, including that of King Oliver. Although Bechet played clarinet with vigorous elegance, his most remarkable achievement was his approach to the most difficult of the saxophones, the soprano. His style was marked by a trumpetlike attack, a broad, flaring tone, and a rich vibrato. He lived in Europe for the last 20 years of his life. See his autobiography, *Treat It Gentle* (1959).

Bechorath (bēkō'rāth), ancestor of Saul. 1 Sam 9:1.

Bechuanaland. see BOTSWANA.

Beck, Dave, 1894-, American labor leader, president of the TEAMSTERS UNION (1952-58), b Stockton, Calif. A laundry-truck driver, Beck began his union career in 1924 and was a vice president (1940-47) and then executive vice president (1947-52) of the International Brotherhood of Teamsters. He was elected president of the teamsters in 1952, and by virtue of his office he became a vice president and member of the executive council of the AFL and of its successor, the AFL-CIO. In 1957, after Beck was called before a Senate committee investigating labor racketeering, the AFL-CIO conducted its own investigation and found Beck guilty of misuse of union funds. Expelled from the AFL-CIO, he did not seek another term as president of the international union and was succeeded by James R. Hoffa. In 1957 a Washington state court found Beck guilty of stealing union funds, and in 1959 he was also found guilty of federal income tax evasion. Beck served a prison term of two years, from 1962 to 1964.

Beck, Julian, 1925-, American theatrical director, actor, and producer, b New York City. He married Judith Malina, 1926-, also an American theatrical director, actor, and producer, b Germany. Together they founded the Living Theater in 1947. Their productions are highly imaginative and often involve improvisation. Perhaps their most controversial work is *Paradise Now* (1968), an orgasmic critique of American life that involves nudity and audience participation. Their other productions include *The Connection* (1959), *The Brg* (1963), *Faust Foutu* (1960), *In the Jungle of the Cities* (1960), and *Antigone* (1968). See Judith Malina's autobiography, *The Enormous Despair* (1972), Renfrew Neff, *The Living Theatre USA* (1970).

Beck, Ludwig (lōō'vīkh bēk), 1880-1944, German general, leader of resistance to Hitler. A highly cultivated career soldier, he served on the general staff during World War I and by 1933 had become in effect head of the army general staff. He opposed Hitler's plans for aggression and his attempts to destroy the independence of the army. In 1938 he resigned in protest against the planned attack on Czechoslovakia. With Carl F. GOERDELER he thereafter conspired to overthrow the regime. Their efforts were repeatedly frustrated until July 20, 1944, when a bomb was placed in Hitler's conference room. Hitler escaped. Beck was arrested and shot. See Allen W. Dulles, *Germany's Underground* (1947).

Becker, Carl Lotus, 1873-1945, American historian, b Blackhawk co., Iowa. He taught history at Dartmouth College (1901-02), at the Univ of Kansas (1902-16), and at Cornell Univ (1917-41). After retirement he was professor emeritus and university historian at Cornell. Among his early works were monographs such as his *History of Political Parties in the Province of New York, 1760-1776* (1909), but his real forte was the analysis of thought and philosophy in action, exemplified by his studies on the American Revolutionary period (e.g., *The Declaration of Independence*, 1922, repr 1942) and in the broader study, *The Heavenly City of the Eighteenth-Century Philosophers* (1932). His deep concern with the use of history for the betterment of international relations and of mankind was shown in his *How New Will the Better World Be?* (1944). His works are remarkable as much for the quiet originality of his thought as for the purity and lucidity of his impeccable literary style. See collection of his letters (ed by Michael Kammen, 1974), biographies by C. W. Smith (1956, repr 1973) and B. T. Wilkins (1961, repr 1967), Cushing Strout, *The Pragmatic Revolt in American History* (1958, repr 1966).

Becket, Thomas: see THOMAS À BECKET, SAINT.

Beckett, Samuel, 1906-, Anglo-French playwright and novelist, b Dublin. Beckett studied and taught in Paris before settling there permanently in 1937. He has written primarily in French, frequently translating his works into English himself. His first novel, *Murphy* (1938), typifies his later works. It portrays with precision an individual's entrapment by increasingly grotesque situations in his apparently normal world. The oddity of these situations is intensified in Beckett's subsequent novels including *Watt* (1942-44), the trilogy *Molloy* (1951), *Malone Dies* (1951), and *The Unnamable* (1953), *How It Is* (1961), and *The Lost Ones* (1972). In his theater of the absurd, Beckett combines poignant humor with an overwhelming sense of anguish and loss. Best-known and most controversial of his dramas are *Waiting for Godot* (1952) and *Endgame* (1957), which have been performed throughout the world. Beckett's other works include a major study of Proust (1931), the plays *Krapp's Last Tape* (1959) and *Happy Days* (1961), a screenplay, *Film* (1969), short stories, *Breath* (1966) and *Lessness* (1970), collected shorter prose in *Stories and Texts for Nothing* (tr 1967) and *No's Knife* (1967), volumes of collected writings, *More Pricks than Kicks* (1970) and *First Love and Other Shorts* (1974), and *Poems* (1963). Beckett was awarded the 1969 Nobel Prize in Literature. His *Collected Works* (16 vol.) was published in 1970. See studies by Martin Esslin, ed (1965), John Fletcher (1967, 2d rev ed 1970), Ruby Cohn (1972 and 1973), and High Kenner (1968 and 1973).

Beckford, William, 1760-1844, English author. A wealthy dilettante, Beckford had a great desire to ascend to the nobility. Unfortunately his erratic and strange behavior often worked against his ambitions. About 1796 he built in Wiltshire an extravagant Gothic castle, Fonthill Abbey, where he lived in mysterious seclusion and earned himself the reputation of an eccentric. Although not deeply interested in politics, he served in the House of Commons from 1784 to 1794 and from 1806 to 1820. Beckford is chiefly remembered today for the Oriental romance *Vathek*, a bizarre tale about the adventures of the shockingly cruel Caliph Vathek. The book was written in French but was first published (1786) in English translation. He was also the author of several books of travel and two burlesques on the sentimental novels of his day, *The Elegant Enthusiast* (1796) and *Azemias* (1797). See biography by P. Summers (1966), study by A. Boyd (1962).

Beckley, city (1970 pop 19,884), seat of Raleigh co., W Va., inc 1927. Its major industries are coal mining, agriculture, tourism, and the production of electronic equipment. A state park is nearby. The city holds an annual Appalachian Arts and Crafts Festival.

Beckmann, Max (maks bēk'mān), 1884-1950, German painter. A member of the Berlin SECESSION from 1908 to 1911, he was impressionistic in his early style. A subsequent expressionistic phase was altered c 1917 by the savage NAV OBJECTIVITY of George Grosz. Beckmann developed a richer, more personal, and more symbolic art in the 1920s. The power of his allegorical expression increased through the war years, which he spent in Amsterdam. Beckmann spent his last three years in New York City where he taught at the Brooklyn Museum School. His well-known triptych, *Departure* (1932-35), is in the Museum of Modern Art, New York City.

Becque, Henry François (aNrē' frāNswā' bēk'), 1837-99, French dramatist. His plays, which portrayed Parisian life in realistic detail, influenced French naturalistic drama. Among them are *Les Corbeaux* (1882) and *La Parisienne* (1885), translated in the volume *The Vultures, The Woman of Paris, The Merry-go-round* (1913).

Bécquer, Gustavo Adolfo (gōōstā'vō ādōl'fō bā-kēr'), 1836-70, Spanish poet and writer of romantic tales. Bécquer's work is considered to be among the best 19th-century lyric poetry. Orphaned at 10, unhappy in love and marriage, and living in poverty for most of his brief life, he came to be lonely and introspective. His celebrated *Rimas* (1860, tr. 1908) is a suite of poems characterized by the melancholy and resigned bitterness of the romantics. His finest prose works include the tale *Los Ojos Verdes* [the green eyes], a collection of legends, *Leyendas* (1860-64), and a group of literary letters, *Desde mi celda* [from my cell] (1864). Bécquer died of pneumonia and hepatitis at 34. See Angel Flores, *Anthology of Spanish Poetry* (1961), study by Enrique Ruiz Forrells (1970).

Becquerel (bēkarēl'), family of French physicists. **Antoine Cesar Becquerel**, 1788-1878, was a pioneer in electrochemical science. He was professor of physics at the Museum d'Histoire naturelle from 1838 until his death. Becquerel made a special study of the voltaic cell, telegraphy, and magnetism and wrote several books on these subjects. His second son, **Alexandre Edmond Becquerel**, 1820-91, succeeded his father, in 1878, as professor at the Museum d'Histoire naturelle. Known for his studies in light, photochemistry, and phosphorescence (for which he invented the phosphoroscope), Alexandre wrote *La Lumière, ses causes et ses effets* (1867-68). His son, **Antoine Henri Becquerel**, 1852-1908, was professor at the École polytechnique, Paris, from 1895. He studied atmospheric polarization and the influence of the earth's magnetism on the atmosphere. In 1896 he discovered RADIOACTIVITY in URANIUM, the Curies made further investigations of the phenomenon and shared with Becquerel the 1903 Nobel Prize in Physics (see CURIE, family).

bed. Article of furniture used for sleeping upon. A litter of dried grasses and animal skins placed on the floor or in a shallow depression or chest was used for sleeping by prehistoric and primitive peoples. In ancient Babylonia, Assyria, and Egypt, people of wealth slept on ornate bedsteads of wood, stone, ivory, or metal, laced with wickerwork or other resilient material on which rested rush mattresses. The Greeks used couches and mattresses that were often stuffed with wool or feathers. The Romans developed different types of beds for sleeping and for reclining. In Europe during the Middle Ages only the nobility used bedsteads, these were light frames easily carried on expeditions or sojourns in the lord's various residences. Canopies were suspended from wall or ceiling, covers and draperies were of the richest fabrics. In the 15th cent., separate bed-chambers became common, bedsteads with high, ornately carved headboards had elaborate canopies supported on four posts and were enclosed with rich hangings. Children and servants often slept in cradles or on low pallets or trundle beds, which were concealed by day under the principal bed. In England especially, monumental beds came into fashion in the 15th cent. the Great Bed of Ware (c. 1580) measured 10 by 11 ft (3.1 by 3.4 m). The 17th cent. saw the development of a variety of forms—luxurious great beds with testers (or canopies) of many sizes and shapes, couches with adjustable headpieces, beds that turned up against the wall, cupboard beds concealed by doors or shutters. In the 18th cent. both beds and hangings became lighter and more graceful. In the 19th cent. the sleigh bed with curved ends was popular, and in the latter half of the century cast-iron and brass bedsteads and woven wire, link, and vertical coil springs were common. Modern developments include the inner-spring mattress, a number of space-saving varieties (such as sofa beds), and hospital beds with adjustable parts for raising and lowering patients. An invention of the 1970s is the water bed, which consists of a frame holding a puncture-proof mattress filled with water. In parts of the Orient, rugs piled on the floor serve as beds, the Japanese sleep between quilts spread on the floor matting. Ceremonial beds have been used since ancient Egyptian times. In the 17th cent. it became customary to receive guests while lying in bed. The "Bed of Justice" was a cushioned seat used by the kings of France in the parliament chamber.

Bedad (bē'dād), father of HADAD 2.

Bedan (bē'dān) 1 Otherwise unknown deliverer of Israel 1 Sam 12:11. The Septuagint reading, Barak, may be correct. 2 Manassite 1 Chron 7:17.

Bedaresi or **Bedersi**, **Yedayah ben Abraham** (yēdiā', bādārā'sē, bādēr'-), 1270-1340, Jewish poet and philosopher, b. Beziers, France. His most successful poem was the didactic *Examination of the World*, of which many translations have been made, among them one in English by Rabbi Tobias Goodman (London, 1806).

bedbug, any of the small, blood-sucking BUGS of the family Cimicidae, which includes about 30 species distributed throughout the world. Bedbugs are flat-bodied, oval, reddish brown, and about 1/4 in. (6 mm) long. They emit an unpleasant-smelling oily secretion from two glands on their undersurface. All are parasites of warm-blooded animals. The common human bedbug of temperate regions, *Cimex lectularis*, is largely nocturnal, spending the day in crevices in walls and furniture and in bedding. Its bite causes irritation in many individuals, but it is not known to transmit diseases. It will feed on other mammals and poultry when humans are not available and can live up to a year without feeding. Maturation from egg to adult takes about two months in warm conditions, there may be three or four generations a year. Control methods include steaming, spraying, and fumigating. Another parasite of humans, *C. hemipterus*, is common in the Old World tropics. A North American species, *Haematosiphon inodora*, parasitizing poultry, will also bite humans. Other species attack bats and various kinds of bird. Bedbugs are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera, family Cimicidae. See publications of the U.S. Dept. of Agriculture.

Beddoes, Thomas Lovell, 1803-49, English poet and dramatist. After graduating from Oxford, he studied medicine and anatomy at Göttingen. His writings, inclined toward the macabre and grotesque, include *The Improvisatore* (1821, three stories in verse) and two plays, *The Bride's Tragedy* (1822) and *Death's Jest-Book* (1850). The first collected edition of his poems appeared posthumously in 1851. See his complete works (ed. with an introduction by H. W. Donner, 1950).

Bede, Saint (bēd), or **Baeda** (bē'dā), 673?-735, English historian, a Benedictine monk, called the Venerable Bede. He spent his whole life at the monasteries of Wearmouth (at Sunderland) and Jarrow and became probably the most learned man in Western Europe in his day. His writings, virtually a summary of the learning of his time, consist of theological, historical, and scientific treatises. Like a modern scholar, he consulted many documents, discussed their relative reliability, and duly cited them as sources—practices then most unusual. His theological works are commentaries on the Scriptures in the light of the interpretations of the Church Fathers. He wrote biographical works such as the life of St. Cuthbert (in prose and verse) and the *History of the Abbots* (of Wearmouth and Jarrow). His *Ecclesiastical History of the English Nation*, written in Latin prose, remains an indispensable primary source for English history from 597 to 731. It gives the most thorough and reliable contemporary account of the triumph of Christianity and of the growth of Anglo-Saxon culture in England. He also relates the political events that had bearing on these developments. The *Ecclesiastical History* has been many times translated, the best edition of the text is in *Beda opera historica* (ed. by Charles Plummer, 1896). The best known of Bede's scientific treatises are those on chronology, held as standard for many years. Long venerated in the church, Bede was officially recognized as a saint in 1899 and was named Doctor of the Church, the only Englishman so honored. Feast May 27. See the collection of essays, *Bede: His Life, Times, and Writings* (ed. by A. Hamilton Thompson, 1935, repr. 1966), E. C. Duckett, *Anglo-Saxon Saints and Scholars* (1967), study by P. H. Blair (1970).

Bedeiah, Jew married to a foreign wife. Ezra 10:35.

Bedersi, **Yedayah ben Abraham**: see BEDARES.

Bedford, Brian, 1935-, English actor. Bedford has performed on stage in England and the United States, notably in *Five Finger Exercise* (1958, New York debut), *The Knack*, *The Misanthrope* (1969), *Private Lives* (1969), *Hamlet* (1970), *School for Wives* (1972), and *Jumpers* (1974). His few films include *The Pad* (1966) and *Grand Prix* (1967).

Bedford, Francis Russell, 5th duke of: see RUSSELL, family.

Bedford, Francis Russell, 2d earl of: see RUSSELL, family.

Bedford, Francis Russell, 4th earl of: see RUSSELL, family.

Bedford, Gunning, Jr., 1747-1812, American political leader, b. Philadelphia. Settling in Delaware, Bedford became a member of the local legislature, attorney general (1784-89), and a delegate to the Continental Congress (1783-85). At the Federal Constitutional Convention (1787) he opposed a strong central government and was a vigorous champion of the rights of small states.

Bedford, John of Lancaster, duke of, 1389-1435, English nobleman, third son of Henry IV of England and brother of Henry V. At the death (1422) of his brother and succession of his 9-month-old nephew, Henry VI, Bedford was designated as regent of France and protector of England. While he was in France his duties in England were to be performed by his younger brother Humphrey, duke of Gloucester. Bedford devoted himself to the affairs of France. In his attempt to make permanent the English occupation of France, he gave the country an able, if severe, administration, but his position was undermined by the waverings of his ally, PHILIP THE GOOD, duke of Burgundy, and by the victories of JOAN OF ARC, whose execution during his term of office has injured his reputation. He died shortly after the conclusion of a separate peace between Philip and King Charles VII of France, a major setback to the English. His death deprived England of the only man powerful and respected enough to keep balance between the court's hostile factions.

Bedford, John Robert Russell, 13th duke of: see RUSSELL, family.

Bedford, John Russell, 4th duke of: see RUSSELL, family.

Bedford, John Russell, 1st earl of: see RUSSELL, family.

Bedford, Sybille, 1911-, English writer, b. Charlottenberg, Germany. She has worked as a legal reporter for various publications, covering such events as the Auschwitz trials and the trial of Jack Ruby. Her novels can be called socio-historical and usually concern the interaction between character and events. They include *A Legacy* (1956), *A Favorite of the Gods* (1963), and *A Compass Error* (1968). Bedford was for 35 years a close friend of Aldous Huxley and is the author of his official biography (Vol. 1, 1973).

Bedford, William Russell, 5th earl and 1st duke of: see RUSSELL, family.

Bedford, municipal borough (1971 pop. 73,064), county town of Bedfordshire, central England, on the Ouse River. It is an important industrial center, diesel engines, pumps, turbines, agricultural machinery, electrical equipment, and transistors are the chief manufactures. Bedford, a battlefield for Britons and Saxons in the 6th cent., was the scene of an important Saxon defeat in 571. St. Peter's Church contains examples of Saxon stone carvings. John Bunyan is commemorated by a chapel on the site of a building where he preached in the 17th cent. Bedford School, in existence since the 12th cent., is one of the largest public schools in England. In 1974, Bedford was included in the new nonmetropolitan county of Bedfordshire.

Bedford. 1 City (1970 pop. 13,087), seat of Lawrence co., S Ind., inc. 1889. Bedford limestone, which is shipped all over the world, is quarried there. The city also has several small industrial plants and a foundry. Beside the limestone quarries, points of interest include old stone buildings and houses and many carvings. Nearby is a state fish hatchery. 2 Town (1970 pop. 13,513), Middlesex co., E. Mass., a residential suburb of Boston, settled c. 1637, inc. 1729. Several pre-Revolutionary houses remain. 3 City (1970 pop. 17,552), Cuyahoga co., NE Ohio, a suburb of Cleveland, settled c. 1813 on the site of a Moravian settlement (1786), inc. as a city 1931. Although chiefly residential, it also has plants manufacturing office furniture, china, rubber goods, auto parts, processed foods, tools, and fixtures. 4 City (1970 pop. 10,049), Tarrant co., N. Texas, settled c. 1843, inc. 1954.

Bedford Heights, city (1970 pop. 13,063), Cuyahoga co., N. Ohio, a suburb of Cleveland, inc. 1951.

Bedfordshire or **Bedford**, county (1971 pop. 463,493), 473 sq. mi. (1,225 sq. km), central England. It is also called Beds. The county town is BEDFORD. The terrain is generally flat, with low chalk hills in the south. The region, drained by the Ouse River, is fertile, and more than four fifths of the area is under cultivation, agriculture is the chief occupation. The production of cereals, especially wheat, and the raising of livestock are of equal importance with market gardening for London. Bedford, LUTON, and

DUNSTABLE are the chief manufacturing towns (hats, automobiles, electrical equipment, precision instruments, machinery, and ball bearings). The county was a refuge for Protestants from the European continent during the ENGLISH CIVIL WAR. The Puritan writer and preacher John Bunyan preached at Bedford. Bedfordshire was reorganized (1974) as a non-metropolitan county.

Bédier, Joseph (zhōzēf' bādya'), 1864-1938, French authority on medieval literature. He was professor at the Collège de France and a member of the French Academy. His reconstruction, in modern French, of the Roman de *Tristan et Iseult* (1900) brought him fame for its scholarship and beauty. His theory of the origin of the medieval epic, developed in *Les Légendes épiques* (4 vol., 1908-13), was widely accepted until recent years.

Bedlam: see BETHLEM ROYAL HOSPITAL

Bedlingtonshire, urban district (1971 pop. 28,167), Northumberland, NE England. The district includes the towns of Bedlington, Netherton, and West Sleekburn and part of the port of Blyth. Coal mining, brickmaking, and the manufacture of concrete products, shirts, and gloves are the chief industries. There is also some agriculture. The Bedlington terrier is bred in the district.

Bedlington terrier, breed of long-legged, lithe TERRIER developed in the eastern Border districts of England in the 19th cent. It stands about 16 in. (40.6 cm) high at the shoulder and weighs from 22 to 24 lb (9.9-10.8 kg). Its thick, wiry outercoat is trimmed back to the fleecy undercoat for exhibition. The hair when trimmed is no longer than 1 in. (2.5 cm) on the body, absent on the ears except for a fringe on the tips, and, on the head, formed into a topknot that gradually tapers to the nose. The overall appearance when clipped for show resembles that of a sheep. In color the coat may be solid blue, liver, sandy, or any of these marked with tan. Most authorities believe the Bedlington was produced by crossing the old rough-coated terrier with the whippet. Originally raised to hunt vermin, badger, and fox, and often used in organized dogfights, the Bedlington was later taken into the home as companion and pet. See DOG.

Bedloe's Island: see LIBERTY ISLAND

Bedny, Demyan (dyīmyan' byēd'nyē), 1883-1945, Soviet verse writer, whose original name was Yefim Pridvorov. He wrote a vast number of widely acclaimed topical poems and propaganda jingles, exhorting the peasantry to hate foreign enemies and religious traditions. In 1936, *The Heroes*, his satire on Russian legendary figures, cost him his popularity.

Bedouin (bēd'ōōīn) [Arab, =desert dwellers], primarily nomad Arab peoples of the Middle East, where they form about 10% of the population. They are of the same Semitic stock as their sedentary neighbors (the fellahin, see ARABS) and share with them a devout belief in ISLAM and a distrust of any but their own local traditions and way of life. Camel and sheep breeding provide their main livelihood. Land is divided into recognized tribal orbits within which are roving family groups. The tribe is a community of equals headed by a sheikh. Among the Bedouin, hospitality and simple, immediate justice are first rules of conduct. Although Bedouin have traditionally avoided agricultural work, settlement policies of the various Middle Eastern states in the 20th cent. have forced many of them into a sedentary life. See Emanuel Marx, *Bedouin of the Negev* (1967), Edward Nevins and Theon Wright, *World Without Time* (1969).

Beds, England: see BEDFORDSHIRE

bedstraw: see MADDER

Bedworth, urban district (1971 pop. 40,535), Warwickshire, central England. It is a residential and industrial area. Coal mining and brickmaking are the major economic activities. George Eliot was born nearby at Arbury.

Będzin (bēn'jēn), Ger. *Bendzin* (bēn'tsīn), town (1970 pop. 42,787), SE Poland, on the Czarna Przemsza River, a tributary of the Vistula. It is a coal-mining center and has industries producing metal products, machinery, chemicals, and electrical equipment. Founded in the 14th cent., Będzin was situated on the Wrocław-Kraków trade route. The first coal mine in the Upper Silesian basin opened at Będzin in 1785. The town passed to Prussia in 1795 and to Russia in 1815; it was returned to Poland in 1919. In Będzin are the ruins of a 13th-century castle.

bee, name for flying INSECTS of the superfamily Apoidea, in the same order as the ants and the wasps.

Bees are characterized by their enlarged hind feet, typically equipped with pollen baskets of stiff hairs for gathering pollen. They usually have a dense coat of feathery hairs on the head and thorax. In many, the lip forms a long tube for sucking nectar. Bees feed on pollen and nectar, the latter is converted to HONEY in the bee's digestive tract. There are about 20,000 species of bees. They may be solitary, social, or parasitic in the nests of other bees. The solitary bees (which do not secrete wax) are called carpenter, plasterer, leaf-cutting, burrowing, and mason bees according to the material or method used to construct nests for their young. The groups of social bees, including altogether about 400 species, are the bumblebees, the stingless bees, and the honeybees. Bumblebees belong to the genus *Bombus*. In the tropics, bumblebee colonies continue for many years, but in temperate regions the workers and the drones die in the fall. Only the young, fertilized queens live through the winter, in hibernation. In the spring they begin new colonies, often laying their eggs in the deserted nests of field mice and chipmunks. The stingless bees are chiefly tropical. Some species release a caustic liquid that burns the skin. The honeybee commonly raised for production of honey and wax in many parts of the world is *Apis mellifera*, of Old World origin. Honeybees build nests, or combs, of wax, which is secreted by glands in the abdomen. They store honey for future use in the hexagonal cells of the comb. In the wild the nests are made in caves or hollow trees, but beekeepers provide nesting boxes, called hives. Beekeeping is called apiculture. A typical colony consists of three castes: the large queen, who produces the eggs, many thousands of workers (sexually undeveloped females), and a few hundred drones (fertile males). At the tip of a female bee's abdomen is a strong, sharp lancet, or sting, connected to poison glands. In the queen, who stings only rival queens, the sting is smooth and can be withdrawn easily; in the worker bee the sting is barbed and can rarely be withdrawn without tearing the body of the bee, causing it to die. The workers gather nectar, make and store honey, build the cells, clean, ventilate (by fanning their wings), and protect the hive. They also feed and care for the queen and the larvae. They communicate with each other (for example, about the location of flowers) by performing dances in specific patterns. The workers live for only about six weeks during the active season, but those that hatch (i.e., emerge from the pupa stage) in the fall live through the winter. The drones die in the fall. A newly hatched queen is followed aloft in a nuptial flight by the drones, only one of which impregnates her, depositing millions of sperm that are stored in a pouch in her body. The drone dies, and the queen returns to the hive, where for the rest of her life (usually several years) she lays eggs continuously in the cells. A developing bee goes through the larva and pupa stages in the cell and emerges as an adult. The larva is fed constantly by the worker bees; the pupa is sealed into the cell. Fertilized eggs develop into workers, unfertilized eggs become drones. A fertilized egg may also become a queen if the larva is fed royal jelly, a glandular secretion thought to contain sex hormones as well as nutrients, until she pupates. Worker larvae receive this food only during the first three days of larval life, afterward receiving bee bread, a mixture of pollen and honey. When a hive becomes overcrowded a swarm may leave with the old queen and establish a new colony. The old colony in the meantime rears several new queens. The first queen that hatches stings the others to death in their cells, if two emerge at once, they fight until one is killed. Mating then occurs. Bees are of inestimable value as agents of cross-pollination, and many plants are entirely dependent on particular kinds of bees for their reproduction (such as red clover, which is pollinated by the bumblebee, and many orchids). In many cases the use of insecticides for agricultural pest control has had the unwelcome side effect of killing the bees necessary for maintaining the crop. Bee venom has been found to have medicinal properties. Toasted honeybees are eaten in some parts of the world. Bees are classified in the phylum ARTHROPODA, class Insecta, order Hymenoptera, superfamily Apoidea. See Maurice Maeterlinck, *The Life of the Bee* (1913), E. W. Teale, *The Golden Throng* (1940), Karl von Frisch, *The Dance Language and Orientation of Bees* (1965, tr. 1967), Martin Lindauer, *Communication Among Social Bees* (rev. ed. 1971).

bee balm, name for several herbs, especially *Melissa officinalis* and *Monarda didyma*, both typical perennials of the family Labiatae (MINT family) named for

their aromatic fragrance, attractive to bees and hummingbirds. *Melissa* [Gr., =bee] *officinalis*, called bee balm or lemon balm, was introduced to North America from the Mediterranean area, where it has long been cultivated for its lemonlike odor and flavor and, formerly, as a curative for many ailments. The leaves and the oil distilled from them (known as melissa or balm) are widely used for seasonings and beverages. *Monarda didyma*, called bee balm, or Oswego tea, is native to E North America and was used, along with other species of *Monarda*, by the Indians and colonists for tea. It is also cultivated as an ornamental for its terminal cluster of red blossoms (sometimes pink in garden varieties). Oswego tea is similar and closely related to wild BERGAMOT. The names bergamot and balm are also used for other plants. Bee balm is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales, family Labiatae.

Beebe, Charles William (bē'bē), 1877-1962, American ornithologist, explorer, and author, b. Brooklyn, N.Y., B.S. Columbia, 1898. He became (1899) curator of ornithology and later (1919) director of the department of tropical research at the New York Zoological Society, retiring in 1952. He made expeditions to Central and South America, the Orient, and the West Indies, and in 1934 he made a record descent of 3,028 ft (923 m) in a bathysphere. Among his numerous books are *Galapagos* (1923), *Beneath Tropic Seas* (1928), *Half Mile Down* (1934), and *Unseen Life of New York* (1953).

beech, common name for the Fagaceae, a family of trees and shrubs mainly of temperate and subtropical regions in the Northern Hemisphere. The principal genera—*Castanea* (CHESTNUT and CHINQUAPIN), *Fagus* (beech), and *Quercus* (OAK, including the

American beech, *Fagus grandifolia*

(cork oak)—form a dominant part of temperate woodland vegetation and are highly valued throughout the world for hardwood timber. Some of their species are also cultivated for their edible fruits and as ornamental and shade trees. The beeches have distinctive smooth, silvery gray bark and pale green leaves that turn golden in autumn and are often winter-persistent. The tough, strong, easily worked wood is used for furniture, flooring, crating, and woodenware. Beechnuts have a sweet flavor but are now seldom eaten except locally in poorer areas of Europe. Swine are often loosed in beech forests to fatten on the nuts (called mast). The American beech (*F. grandifolia*) grows in rich soil over much of the NE United States and Canada. A slow-growing tree, it is declining in abundance through lumbering and through beech bark disease, a fungus infection that attacks the tree through holes bored in its bark by a scale insect. The blue, or water, beech is an American HORNBEAM of the birch family. The European beech (*F. sylvatica*) is an important forest tree, especially in S and Central Europe, and is valued for its wood and for an oil extracted from the nuts. Several of its varieties have reddish brown or purplish leaves and are cultivated in America as ornamentals, e.g., the purple and copper beeches. The beeches of the Southern Hemisphere, mostly of the antarctic regions, belong to the small genus *Nothofagus*; several are also used

for timber or grown as ornamentals. The beech family is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Fagales.

Beecham, Sir Thomas, 1879-1961, English conductor. Beecham was educated at Oxford but did not attend any formal music school. Early in his career as conductor and producer, he introduced his fellow countrymen to the operas of Richard Strauss, many Russian operas, and the Russian ballet. In 1932 he organized the London Philharmonic Orchestra, forging it into one of the world's finest orchestras, and in 1933 he became artistic director of Covent Garden Opera, London. A frequent conductor, until 1942, of the Halle Orchestra, Manchester, he later appeared (1942-43) with the New York Philharmonic-Symphony Orchestra and with the Metropolitan Opera, New York. In 1946 he organized the Royal Philharmonic Orchestra, London. He wrote a biography (1960) of Delius, whose music he championed, and he also excelled at interpreting Mozart, Handel, and Berlioz. For his services to British music, Beecham was knighted in 1915; he also had enormous international influence. His versatility and high standards of excellence are attested to by numerous recordings. See his autobiography (1943), biography by Charles Reid (1962).

Beecher, Catharine Esther, 1800-1878, American educator, b. East Hampton, N.Y., daughter of Lyman Beecher. She first taught in New London, Conn., and in 1824 founded a girls' school in Hartford. Later she organized the Western Female Institute in Cincinnati (1832) and similar institutions in Quincy, Ill., Milwaukee, and Burlington, Iowa. Author of works on religion, health, and domestic science (which she introduced in her schools), Beecher was indefatigable in the promotion of liberal education for women, although she opposed woman suffrage. See biographies by M. E. Harveson (1932, repr. 1969) and K. K. Sklar (1973).

Beecher, Henry Ward, 1813-87, American Congregational preacher, orator, and lecturer, b. Litchfield, Conn., son of Lyman Beecher and brother of Harriet Beecher Stowe. He graduated from Amherst in 1834 and attended Lane Theological Seminary, Cincinnati. After two pastorates in Indiana, he accepted a call in 1847 to the newly organized Plymouth Church (Congregational) in Brooklyn, N.Y. Every important issue of the day was discussed on his platform. He was a leader in the antislavery movement, a proponent of woman suffrage, and an advocate of the theory of evolution. Beecher became editor of the *Independent* in 1861 and of the *Christian Union* in 1870. In 1863 he visited England, where his lectures were influential in gaining a more sympathetic understanding of the Union cause. Enthusiasm, imaginative insight, a strong interest in his fellow man, ready wit, and an easy command of English produced a convincing eloquence. The sensational lawsuit brought against him by Theodore Tilton for adultery ended after a long trial (1875) with disagreement of the jury. Beecher's friends acclaimed him victor. Despite the trial, Beecher remained influential for the rest of his life. His published works include *The Life of Jesus, the Christ* (1871) and *Evolution and Religion* (1885). See biographies by Lyman Abbott (1904, repr. 1969) and Paxton Hibben (1942, repr. 1973), study by W. G. McLoughlin (1970).

Beecher, Lyman, 1775-1863, American Presbyterian clergyman, b. New Haven, Conn., grad. Yale, 1797. In 1799 he became pastor at East Hampton, N.Y. While serving (1810-26) in the Congregational Church at Litchfield, Conn., he published his six sermons on intemperance, which passed through many American and English editions. Beecher helped to found (1816) the American Bible Society. In 1826 he was called to the Hanover St. Church, Boston, where his revival services created excitement. He was president of Lane Theological Seminary, Cincinnati, from 1832 to 1852. His liberal views not infrequently placed him in sharp opposition to the conservative group in the Presbyterian Church. Of his 13 children, Henry, Charles, Edward, Thomas, Harriet Beecher Stowe, and Catharine Esther Beecher won wide recognition. See his *Collected Works* (1852-53) and his *Autobiography* by B. M. Cross (1864, new ed. 1961), biography by S. C. Henry (1974).

Beechey, Frederick William, 1796-1856, British admiral and Arctic explorer. He accompanied an expedition N of Spitsbergen in 1818 and wrote an account of it in his *Voyage of Discovery towards the North Pole* (1843). He accompanied W. E. Parry to the Canadian arctic regions in 1819, and in 1825-28 he commanded the *Blossom* in its explorations of

the NW Alaska coast and search for the Northwest Passage. On this voyage he reached Point Barrow and explored Hotham inlet. He also surveyed the North African, South American, and Irish coasts.

Beech Grove, city (1970 pop. 13,468), Marion co., central Ind., inc. 1906. Primarily residential, it has some manufacturing.

Beeckman, Isaac (bā'k'mān), 1588-1637, Dutch physicist. An early proponent of mathematical reasoning and experimental verification in natural philosophy, he contributed to the modern conception of inertia and free fall and discovered an important hydrodynamic law concerning the rate of flow of water from a vessel. Although his recorded scientific work is largely confined to his *Journal* (diary) and notes, he influenced scientific development through his personal acquaintance with such famous contemporaries as René Descartes, Pierre Gassendi, and Marin Mersenne, and through his rectorship of the Latin school at Dordrecht.

bee-eater, any of the brightly colored, insect-eating birds of the family Meropidae. They range in length from 6 to 14 in. (15-36 cm). The plumage of many species is predominantly green but usually includes a variety of other bright colors. Many species have a black stripe running from the eye to the base of the long, sharp bill. They are found throughout the tropical and warm-temperate Old World but are most numerous in the tropical regions of Africa and Asia. Some species are migratory, and the few that breed in temperate areas, such as *Merops apiaster*, the common, or European, bee-eater, winter in the tropics. Most of the Meropidae are gregarious, and the birds of some species travel in flocks of hundreds or thousands of individuals. The nests of most species are colonial burrows, excavated in the sand of riverbanks or road grades. Bee-eaters catch insects on the wing; they subsist primarily upon bees and wasps. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Coraciiformes, family Meropidae.

beef, flesh of mature cattle prepared for food. It is an excellent source of protein, minerals, and vitamins. It has become one of the chief products of the MEAT PACKING industry and is sold either chilled, frozen, or cured. The leading beef consumers, as well as exporters, are Argentina, Australia, Canada, New Zealand, and the United States. The carcasses, after being dressed, are split in half along the back and then cut into fore- and hindquarters. In the United States, beef usually reaches local dealers in this form and is cut by them into portions, e.g., shank, round, rump, loins (roasts and steaks), flank, rib (roasts), chuck, plate, and brisket. In addition, the heart, kidneys, liver, tongue, stomach wall (tripe), and tail are edible. The best beef comes from steers (castrated males) and heifers (females that have not calved). The meat should be a clear, light-red color, firm and well marbled with fat. Beef from older cattle is converted into various products, such as beef extract, sausage, corned beef, and canned or potted products.

Beefeaters, popular name for the YEOMEN OF THE GUARD and for the warders of the Tower of London. Both wear colorful uniforms modeled after those of the Elizabethan period.

bee fly, name for the small to medium sized FLIES of the family Bombyliidae, many of which resemble bees in appearance and behavior. This MIMICRY provides bee flies with some measure of protection against predators that have learned to avoid the sting of true bees. A bee fly has a stout, hairy body and long proboscis. In many species the body and wings are strikingly marked in yellow and brown. Most are very swift fliers and buzz loudly like a bee if caught in a net. They seek heat and are often found flying close to the ground in dry, sandy regions. The adults feed on nectar and hover above flowers like bees. The larvae feed on larvae or pupae of other insects; they are beneficial as parasites of harmful species. Beelike flies are also found in other families. The syrphid flies (family Syrphidae), also called hover flies and flower flies, are a large, cosmopolitan group of beelike and wasplike flies. Many syrphid flies bear a very close resemblance to a particular bee or wasp species. Many of the robber flies (family Asilidae) resemble bumblebees. All of these are true flies; they are classified in the phylum ARTHROPODA, class Insecta, order Diptera.

Beefmaster cattle: see BRAHMAN CATTLE

Beehive (star cluster): see PRAESEPE

Beeliada (bē'ēlī'ādā), the same as ELIADA 1.

Beelzebub (bēēl'zabab), in the Bible see SATAN

bee moth, greater wax moth, or honeycomb moth, common name for an insect pest of honey-

combs. Bee moths do damage during their larval stages, injuring combs and honey. The moth *Galleria mellonella* belongs to the subfamily Galleriinae of the family Pyralidae, in which the females characteristically lay their eggs in beehives. The adult moths have brownish front wings with wing-spans of about 1 in. (2.5 cm). Eggs are laid in masses in the crevices of the hive. The newly hatched larvae tunnel into the combs, leaving a complex of silken galleries behind; they also puncture the wax caps of honey cells causing honey leakage and making the punctured comb honey unmarketable. Normally, the moths attack only abandoned beehives, or active ones in which the bee colony has been weakened, e.g., as a result of disease or starvation. Another well-known but smaller member of the subfamily is the lesser wax moth, *Achroia grisella*, which has the same type of scavenging habits as the greater wax moth. Bee moths are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Pyralidae, subfamily Galleriinae.

Beer, George Louis, 1872-1920, American historian, b. Staten Island, N.Y. He was a tobacco importer for 10 years but also lectured on European history at Columbia from 1893 to 1897. After 1903 he devoted himself to continuing his economic historical studies of British colonial policy. His works revolutionized history-writing about the American colonies. These were, notably, *The Commercial Policy of England toward the American Colonies* (1893, repr. 1948), *British Colonial Policy, 1754-1765* (1907), *Origins of the British Colonial System, 1578-1660* (1908, repr. 1959), and *The Old Colonial System, Part I* (1912). He was also a practical expert on colonial problems, and he is sometimes credited with the first employment of the word *mandate* in its modern usage. He was one of the corps of U.S. experts at the Paris Peace Conference and was a member of the League of Nations mandates commission.

Beer, Thomas, 1889-1940, American author, b. Council Bluffs, Iowa, grad. Yale, 1911, and studied law at Columbia, 1911-13. He is best remembered for his biographies of Stephen Crane (1923) and Marcus (Mark) Hanna (1929) and his witty study of American manners in the 1890s, *The Mauve Decade* (1926). Some of his realistic short stories were collected by Wilson Follett in *Mrs. Egg and Other Barbarians* (1947).

Beer (bē'ar) 1 Unidentified place, to which Gideon's son Jotham fled Judges 9:21. 2 Unidentified place, E of the Dead Sea between the Arnon and the Jordan, where Israel camped and dug a well. Num. 21:16-18. The little song quoted is one of the oldest poetic pieces in the Bible. See BEER-ELIM.

beer, alcoholic beverage made by brewing and fermenting cereals, especially malted barley, usually with the addition of HOPS as a flavoring agent and stabilizer. One of the oldest of alcoholic beverages, beer was well known in ancient Egypt. At first brewed chiefly in the household and monastery, it became in late medieval times a commercial product and is now made by large-scale manufacture in almost every industrialized country, especially Great Britain, West Germany, Czechoslovakia, and the United States. It is less popular in southern or wine-producing areas. Although British, European, and American beers differ markedly in flavor and content, brewing processes are similar. A mash, prepared from crushed malt (usually barley), cereal adjuncts such as rice and corn, and water, is heated and rotated in the mash tun to dissolve the solids and permit the malt enzymes to convert the starch into sugar. The solution, called wort, is drained into a copper vessel, where it is boiled with the hops (which provide beer with its bitter flavor), then run off for cooling and settling. After cooling, it is transferred to fermenting vessels where yeast is added, converting the sugar into alcohol. Modern beers, lighter than ancient, contain about 3% to 6% alcohol. The term *ale*, once used for a beer made without hops, is now applied in Great Britain to any light-colored beer. In the United States, ale is a pale, strongly hopped malt beverage. Most American beers are stored for several weeks or months before marketing, hence the name *lager beer* [Ger. *Lager*=storage place]. Bock beer, said to take its name from Einbeck, Prussia, where it was first made, is a heavier, darker beer commonly drunk in the spring. Porter is a strong, dark ale brewed with the addition of roasted malt to give flavor and color. Stout, darker and maltier than porter, has a more pronounced hop aroma and may attain an alcoholic content of 6% to 7%.

Beera (bē-ē'ra), Asherite 1 Chron. 7:37

Beerah (bē-ē'ra), Reubenite 1 Chron. 5:6

Beerbohm, Sir Max (bēr'bōm), 1872–1956, English essayist, caricaturist, and parodist. He contributed to the famous *Yellow Book* while still an undergraduate at Oxford. In 1898 he succeeded G. B. Shaw as drama critic for the *Saturday Review*. A charming, witty, and elegant man, Beerbohm was a brilliant parodist and the master of a polished prose style. His works include *A Christmas Garland* (1912), a collection of parodies on such authors as Joseph Conrad and Thomas Hardy, *Zuleika Dobson* (1911), an amusing satire on Oxford, *Seven Men* (1919), stories, and *And Even Now* (1920) and *Mainly on the Air* (1947), essays. Beerbohm was accomplished at drawing, and he published several volumes of excellent caricatures, including *The Poet's Corner* (1904) and *Rossetti and His Circle* (1922). He was knighted in 1939 on his return from Italy, where he had lived from 1910. See collections ed. by S. C. Roberts (1962) and Lord David Cecil (1971), biographies by S. N. Behrman (1960) and Lord David Cecil (1964), studies by John Felstiner (1972) and Bohun Lynch (1974).

Beer-elim (bē'ar-ē'lim), unidentified place, perhaps the same as BEER 2 and certainly in the same region. Isa 15:8.

Beeri (bē-ē'rī) 1 Father of Esau's wife, Judith. Gen 26:34. 2 Father of Hosea, the prophet. Hosea 1:1.

Beer-lahai-roi: see LAHAI-ROI.

Beernaert, Auguste (ōgust' bārnart', bār'nart'), 1829–1912, Belgian statesman. A member of the liberal wing of the Catholic party, he served in several cabinets and was premier from 1884 to 1894. Beernaert promoted electoral reform and legislation to improve labor conditions. He was a delegate to the Hague Peace conferences (1899, 1907), and he shared the 1909 Nobel Peace Prize with Estournelles de Constant.

Beeroth (bē-ē'rōth, bē'tī-) 1 City important as a road station, now Bireh (Jordan). Joshua 9:17, 18:25, 2 Sam 4:2, 23:37, Ezra 2:25, Neh 7:29. 2 Same as BENE-JAAKAN.

Beers, Clifford Whittingham, 1876–1943, American founder of the mental hygiene movement, b. New Haven, Conn., grad. Sheffield Scientific School, Yale, 1897. After the publication of *A Mind That Found Itself* (1908), an autobiographical account of his confinement in a mental institution, he had the support of the medical profession and others in the work to prevent mental disorders. He was a leader in the field until his retirement in 1939.

Beersheba (bērshē'bā, bē'rshēbā) [Heb., =seven wells or well of the oath], city (1972 pop. 84,100), S Israel, principal city of the Negev Desert. It is the trade center for surrounding settlements and for BEDOUINS, who hold a weekly market in Beersheba. Construction is the city's main industry. Manufactures include chemicals, textiles, ceramics, glass, plastics, and food products. Beersheba is an important rail and road hub for S Israel. The city was one of the southernmost towns of biblical Palestine, hence the expression "from Dan to Beersheba," meaning the whole of Palestine. It is especially connected, in the Bible, with Abraham, Hagar, Isaac, Jacob, and Elijah. A well believed to have been dug by Abraham when he made his covenant with Abimelech is in the city. Beersheba flourished during the late Roman and Byzantine eras but was deserted soon thereafter. It was merely a group of wells for Bedouin flocks when the Ottoman Turks reestablished it c. 1900 as an administrative center for Negev tribes. Beersheba was the first city taken by the British in the Palestine campaign (1917) of World War I. Under the British mandate (1922–48) it was a city (Bir-es-Seba) inhabited by about 4,000 Muslim Arabs. Given to the Arabs in the partition of Palestine (1948), it was retaken by Israel in the Arab-Israeli War of 1948 and grew rapidly thereafter. Beersheba is the seat of the Arid Zone Research Institute, a biological institute and museum concerned with desert plant and animal life, and a municipal museum devoted to the history of the city. Remnants of a fortress and shards of the Bronze Age have been found nearby at Tell el-Sheba, the most ancient site of Beersheba.

Beer's law [for August Beer], physical law stating that the quantity of light absorbed by a substance dissolved in a nonabsorbing solvent is directly proportional to the concentration of the substance and the path length of the light through the solution, the law is sometimes also referred to as the Beer-Lambert law or the Bouguer-Beer law. Beer's law is commonly written in the form $A = \epsilon c l$, where A is the absorbance, c is the concentration in moles per liter, l is the path length in centimeters, and ϵ is a constant of proportionality known as the molar ex-

inction coefficient. The law is accurate only for dilute solutions; deviations from the law occur in concentrated solutions because of interactions between molecules of the solute.

Beesh-terah: see ASHTAROTH.

Beeson, Jack, 1921–, American composer, b. Muncie, Ind. Beeson studied at the Eastman School of Music and privately in New York with Bela Bartok. Since 1967 he has been MacDowell Professor of Music at Columbia Univ. Beeson has written songs and choral pieces, piano sonatas, a symphony (1959), and several operas, including *Hello Out There!* (1954), *The Sweet Bye and Bye* (1957), *Lizzie Borden* (premiered by the New York City Opera in 1965), and *My Heart's in the Highlands* (premiered on television in 1970). His vocal works, set to a catholic choice of texts, are marked by a varied stylistic approach unified by attention to contrapuntal lines and instrumental color.

Beeston and Stapleford, urban district (1971 pop. 63,498), Nottinghamshire, central England. There are large pharmaceutical plants and factories that produce boilers, telecommunication equipment, fluorescent lights, textiles, pencils, cardboard boxes, and clothing. The Stapleford churchyard has an ancient Saxon cross, thought to be the oldest Christian memorial in the country.

beeswax: see WAX.

beet, biennial or annual root vegetable of the family Chenopodiaceae (GOOSEFOOT family). The beet (*Beta vulgaris*) has been cultivated since pre-Christian times. Among its numerous varieties are the red, or garden, beet, the sugar beet, Swiss chard, and several types of mangel-wurzel and other stock feeds. Both the roots and the foliage of the red beet are edible, as is the foliage of Swiss chard and similar varieties. The easily stored roots of the mangel-wurzel [Ger., =beet root] are much used for fodder in Europe and Canada and to a lesser extent in the United States. The biennial beet is one of the root crops most often used in crop rotation. The foliage of the sugar beet and of several other beet varieties is also used as feed. The sugar beet, cultivated commercially throughout the temperate zone, today provides about one third of the world's sugar. Since the 18th cent. selective breeding has raised the root's sucrose content from 2 or 4% to 15 and even 20% and has increased its resistance to disease. In the United States the sugar beet is grown extensively in the West from Michigan to Idaho and California, and mechanical harvesting has reduced production costs sufficiently for beet sugar to compete with cane sugar. The solution of extracted beet sugar in water is treated similarly to cane juice for refinement and granulation, but it has no valuable by-products. Beets are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Caryophyllales, family Chenopodiaceae.

Beethoven, Ludwig van (lūd'wīg vān bāt'ōvən, Ger. lōt'vīkh fan bāt'hōfən), 1770–1827, German composer. He is universally recognized as one of the greatest composers who ever lived. Beethoven's work crowned the classical period and also effectively initiated the romantic era in music. He is one of the few artists who genuinely may be considered revolutionary. Born in Bonn, Beethoven showed remarkable talent at an early age. His father, a court musician, subjected him to a brutal regimen, hoping to exploit him as a child prodigy. While this plan did not succeed, young Beethoven's gifts were recognized and nurtured by his teachers and by members of the local aristocracy. In 1787, Beethoven first visited Vienna, at that time the center of the music world. There he performed for Mozart, whom he greatly impressed. In 1792, Haydn invited him to become his student, and Beethoven returned to Vienna, where he was to remain permanently. However, Beethoven's unorthodox musical ideas offended the old master, and the lessons were terminated. Beethoven studied with several other eminent teachers, including Antonio Salieri, but was developing according to his own singular genius and could no longer profit greatly from instruction. Both his breathtaking piano virtuosity and his remarkable compositions won him favor among the enlightened aristocracy congregated at Vienna, and he enjoyed their generous support throughout his life. They were tolerant, too, of his notoriously boorish manners, careless appearance, and towering rages. His work itself was widely accepted, if controversial, and from the end of the 1790s Beethoven was not dependent on patronage for his income. The year 1801 marked the onset of Beethoven's tragic affliction, his deafness, which became progressively worse and, by 1817, total. Public performance even-

tually became impossible, but his creative work was not restricted. Beethoven never married, however, he was stormily in and out of love all his life, always with women unattainable because of marriage or station. His personal life was further complicated when he was made the guardian of his nephew Karl, who caused him much anxiety and grief but to whom he nevertheless remained fondly attached. Beethoven's work may be divided into three fairly distinct periods. The works of the first period include the First (1800) and Second (1802) Symphonies, the first three piano concertos (1795–1800), the first group of string quartets (1800), and a number of piano sonatas, among them the Pathétique (1798) and the Moonlight Sonata (1801). Although the compositions of the first period have Beethoven's unmistakable breadth and vitality, they are dominated by the tradition of Haydn and Mozart. Beginning about 1802, Beethoven's work took on new dimensions. The premiere in 1805 of the massive Third Symphony, known as the Eroica (composed 1803–4), was a landmark in cultural history. It signaled a definitive break with the past and the birth of a new era. The length, structure, harmonies, and orchestration of the Eroica all broke the formal conventions of classical music, unprecedented too was its intention—to celebrate human freedom and nobility. The symphony was originally dedicated to Napoleon, who at first symbolized to Beethoven the spirit of the French Revolution and the liberation of mankind, however, when Napoleon proclaimed himself emperor, the disillusioned composer renamed his work the "Heroic Symphony to celebrate the memory of a great man." The works of Beethoven's middle period, his most productive, include the Piano Concertos No. 4 (1806) and No. 5 (Emperor Concerto, 1809), the Razumovsky Quartets (1806), his Ninth Sonata for violin, the Kreutzer Sonata (1803), and his one Violin Concerto (1806), the Fourth through Eighth Symphonies (1806–12), a number of piano sonatas, among them the Waldstein and the Appassionata (both 1804). His sole opera, *Fidelio*, was produced in its first version in 1805 and in its final form in 1814. Beethoven wrote four overtures for the opera, three of them known as the Leonore Overture. He also composed overtures to Collin's *Coriolan* (1807) and to Goethe's *Egmont* (1810). From about 1813 to 1820 there was some slackening in Beethoven's productivity, probably due in part to difficulties concerning his nephew. Beethoven's final period dates from about 1816 and is characterized by works of greater depth and complexity. They include the demanding, nearly symphonic Hammerklavier sonata (1818) and the other late piano sonatas, the monumental Ninth Symphony (1817–23) with its choral finale based on Schiller's *Ode to Joy*, and the *Missa Solemnis* (1818–23). The last five string quartets and the Grosse Fuge (also for quartet), composed in his last years, are considered by many music lovers to be Beethoven's supreme creations, and by some the most sublime music ever composed. Beethoven died, after a long illness, in the midst of a fierce thunderstorm, and legend has it that the dying man shook his fist in defiance of the heavens. A prolific composer, Beethoven produced, in addition to the works mentioned, sonatas for violin and piano and for cello and piano, string and piano trios, music for wind instruments, miscellaneous piano works, including the popular bagatelle *Fur Elise* (1810), over 200 songs, a number of shorter orchestral works, and several choral pieces. His influence on subsequent composers was immeasurable. Aside from his architectonic innovations and expansion of the classical sonata and symphony, he brought to music a new depth and intensity of emotion which was emulated by later romantic composers but probably never surpassed. See his letters, ed. by Emily Anderson (3 vol., tr. 1961), biographies by A. F. Schindler (tr. 1966) and Martin Cooper (1970), studies by D. F. Tovey (1945) and W. S. Newman (1971), Elliot Forbes, ed., *Thayer's Life of Beethoven* (2 vol., rev. ed. 1967), H. C. R. Landon, ed., *Beethoven: A Documentary Study* (1970), Denis Arnold and Nigel Fortune, ed., *The Beethoven Reader* (1971).

beetle, common name for INSECTS of the order Coleoptera, which, with over 250,000 described species, is the largest of the insect orders. Beetles have chewing mouthparts and well-developed antennae. They are characterized by a front pair of hard, opaque, waterproof wings called elytra, which usually meet in a straight line down the middle of the back. The elytra cover the rear pair of membranous flight wings, protecting them and the body from mechanical damage and desiccation. Beetles are poor flyers compared with many other insects, but

they are well adapted for surviving rigorous conditions. They are found everywhere except in oceans and near the poles, and they occupy nearly every kind of habitat. Most are terrestrial, but some are underground tunnelers and some live in water. These WATER BEETLES are often confused with water bugs, but the latter all have sucking mouthparts. Beetles range in size from under 1 mm ($\frac{1}{32}$ in.) to over 15 cm (6 in.) long; tropical species are the largest. Most are dull, but members of several beetle families are brilliantly colored, some with a metallic or iridescent sheen. The majority of beetles are plant eaters, but there are also many predators and scavengers and a few parasites. Many beetles are highly destructive pests of crops and gardens (e.g., JAPANESE BEETLE, POTATO BEETLE, BOLL WEEVIL), but others are beneficial predators of harmful insects (e.g., LADYBIRD BEETLES). The largest of the many beetle families is the SCARAB BEETLE family, with over 20,000 species, among these are the dung beetles, which are invaluable scavengers. WEEVILS are plant-eating beetles with mouthparts elongated into snouts bearing jaws at their ends. The FIREFLIES are luminescent beetles. BLISTER BEETLES, including the so-called Spanish fly, produce irritating secretions. Beetles are classified in the phylum ARTHROPODA, class Insecta, order Coleoptera.

Beets, Nicolaas (nē'kōlas bāts), 1814-1903, Dutch author. He translated Byron into Dutch and was fairly well known as a poet when his *Camera Obscura* (1839), published under the pseudonym Hildebrand, won great popularity. This series of nostalgic sketches of everyday life reflected Beets's wide powers of observation.

beet sugar. see BEET, SUCROSE

Beeville, city (1970 pop. 13,506), seat of Bee co., S Texas, settled in the 1830s, inc. 1908. Long a cow town, Beeville is the trade center of an agricultural county. A junior college is there, and a naval air training station is nearby.

Beggars of the Sea. see GUEUX

beggar-tick: see BUR MARIGOLD

beggarweed or tick trefoil, leguminous plant (*Desmodium purpureum*) native to the West Indies and sown in the S United States for green manure and for forage; it has high nutritive value and is palatable to stock. The pods are covered with tiny hooked hairs and cling as burs. Other species of the genus are weeds often called by the same names, as are some other weeds with burs. Beggarweed is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

Beghards (bē'gārdz), religious associations of men in Europe, organized similarly to the BEGUINES. They resembled a Franciscan group, with whom they were later often confused. Of unknown origin, they first appeared at Louvain in 1220 and soon spread throughout the Netherlands and into Germany, France, and Italy. Although they survived into the 15th cent., they were from the beginning unpopular and mistrusted. The Beghards were condemned by the Council of Vienne (1311), allegedly for teaching that those who gain perfection in this life cannot commit sin and therefore cannot be blamed for any act. This idea was foreshadowed in the Albigensian teachings. The Beghards were also influenced by the pantheism of a mystical sect, the Brothers of the Free Spirit, which flourished about Cologne.

begonia (bīgōn'yə), any plant of the large genus *Begonia* and common name for the family Begoniaceae, mostly succulent perennial herbs of the American tropics cultivated elsewhere as bedding or pot plants and easily propagated by stem and leaf cuttings as well as by seed. Some kinds are grown as house plants for their showy, variously colored leaves—red, pink, or yellow flowers, sometimes double. There are a large number of hybrids. Begonias are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Violales, family Begoniaceae.

Begovat. see BEKABAD, USSR

Begunes (bā'gēnz'), religious associations of women in Europe, established in the 12th cent. The members, who took no vows and were not subject to the rules of any order, were usually housed in individual cottages and devoted themselves to charitable works; their community was called a beguinage. Until the 14th cent., numerous women of high social standing went into the communities. From Belgium and the Netherlands the movement extended across France and Germany. During the earlier years, their services to society brought the Begunes favor and protection from secular and church authorities, but in the 13th and 14th cent.

accusations of heresies and immorality among them as well as among the BEGHARDS, the corresponding bands of men, led to the scattering of the members. The character of the surviving communities eventually changed, in some localities taking the form of almshouses for needy spinsters. See study by E. W. McDonnell (1954, repr. 1969).

Behaim, Behem, or Boeheim, Martin (all bā'hīm), b. 1436? or 1459?, d. 1506?, German traveler and cosmographer. He studied (possibly under Regiomontanus) astronomy, navigation, and mathematics. He went to Portugal as a merchant c. 1480 and may have gone on an expedition along the west coast of Africa. In 1486 he went to Fayal in the Azores. He is believed to have developed an astrolabe and other devices for the use of navigators, but is best known for the terrestrial globe that he made in 1492 and gave to his native city Nuremberg (it is now in the Germanic Museum there). The globe is inaccurate and does not represent the best geographical information of the period.

Beham (bā'hām) or **Peham** (pā-), name of two German Renaissance artists, brothers, who were both influenced by Dürer and later by Italian art. **Hans Sebald Beham**, 1500-1550, engraver, etcher, and miniaturist, with his brother was banished from Nuremberg for freethinking in 1525. After some vicissitudes he settled in Frankfurt c. 1532. His rare paintings have less interest than his engravings, of which he executed about 300, together with hundreds of etchings and woodcuts in a delicate technique. The subject matter varies from a *Virgin and Child* (1520) to the *Labors of Hercules and Farmers' Dances*. His brother, **Barthel Beham**, 1502-40, painter, engraver, and woodcut designer, worked, as did Hans Sebald for a time, for the dukes of Bavaria. His painted portraits are well known, that of Leonhard von Eck is in the Metropolitan Museum. His mature prints show clear composition and excellent technique. They include *Virgin at the Window* and portraits of King Ferdinand I and his brother, Emperor Charles V.

Behan, Brendan (bē'hān), 1923-64, Irish dramatist. A notoriously outspoken and uninhibited man, he joined the Irish Republican Army in 1937 and was twice imprisoned for political offenses. His first play, *The Quare Fellow* (1956), a somewhat somber drama of prison life, was followed by *The Hostage* (1958), a wild and joyous farce set in a brothel. *Brendan Behan's Island: an Irish Sketch-Book* (1962) is a miscellaneous collection. See his autobiographical *Borstal Boy* (1958), biographies by his brother Dominic Behan (1966) and Ulick O'Connor (1971).

Behar, India. see BIHAR

behavior, in biology. see ETHOLOGY

behavior group therapy: see GROUP PSYCHOTHERAPY

behaviorism, school of psychology seeking to explain animal and human behavior entirely in terms of observable and measurable responses to stimuli. Introduced by the American psychologist J. B. WATSON in 1913, it is based on the early mechanistic concepts of Democritus and Epicurus and the later beliefs of Hobbes. Behaviorism is modern, however, in its subjection of psychology to the laboratory technique. Watson, in his insistence that behavior is a physiological reaction to environmental stimuli, denied the value of introspection and of the concept of consciousness as unscientific and saw mental processes as bodily movements, even when unperceived, in this view, thinking is subvocal speech. The conditioned-reflex experiments of the Russian physiologists Pavlov and Bekhterev had a central place with the behaviorists, who considered that all emotions—aside from rage, fear, and love—were conditioned by habit and could be learned or unlearned. Behaviorism became influential in the United States between World War I and World War II, and was an important antidote to philosophical speculation. The American behaviorist B. F. Skinner rejects the unobservable completely and concerns himself purely with the relationship of observable behavior patterns to stimuli or rewards. See J. B. Watson, *Behaviorism* (1930) and *Behavior* (1967), B. F. Skinner, *The Behavior of Organisms* (1938), Walden Two (1948), *Beyond Freedom and Dignity* (1971), and *About Behaviorism* (1974), B. B. Wolman, ed., *Dictionary of Behavioral Science* (1973).

Behem, Martin: see BEHAİM, MARTIN

behemoth (bē'hīmōth, bīhē'-) [Heb., =plural of *beast*], animal mentioned in Job 40:15-24, probably the hippopotamus.

Behistun Inscription (bāhīstōon', bā-, bēhīs'tōon) or **Bisitun Inscription** (bēsītōōn', bēsa-), cuneiform text, the decipherment of which was the key

to all cuneiform script and opened to scholars the study of the written works of ancient Mesopotamia. The inscription in Old Persian, in Susian (the Iranian language of Elam), and in Assyrian is chiseled on the face of a mountainous rock c. 300 ft (90 m) above the ground at Behistun, Persia (modern W Iran). A bas-relief depicting Darius I with a group of captive chiefs is carved together with the inscription. Although the rock was known in ancient times (Diodorus attributed the carvings to Semiramis), it was not until 1835 that Sir Henry RAWLINSON scaled it and copied the inscriptions. Rawlinson translated the Persian section of the inscription, which later led to the entire decipherment of the Assyrian text.

Behmen, Jakob. see BOEHME, JAKOB

Behmenites: see BOEHME, JAKOB

Behn, Aphra (ā'frā bān, bēn), 1640-89, first professional female English author. Little is known of her early life, but there is evidence that c. 1658 she married a London merchant of Dutch descent named Behn. After the death of her husband, Aphra Behn became an English spy in the Dutch Wars (1665-67), adopting the pseudonym Astrea, under which she later published much of her verse. Her career as a secret agent was unsuccessful, and she returned to England exhausted and penniless, forced even to serve time in debtors' prison. By 1670 her first play had been performed, and by 1677 she gained her much desired fame with the eminently successful production of *The Rover*. All her plays are noted for their broad, bawdy humor. Despite her success as a playwright, however, her best literary achievement can be found in her novels. The most notable of these is *Oroonoko* (1688), a heroic love story, the first philosophical novel in English. Aphra Behn was famous for her life style as well as her works, her denial of woman's subservience to man and her high-living, bohemian existence has led critics to describe her as the George Sand of the Restoration and a forerunner of the feminist movement. Her literary reputation declined rapidly in the 18th cent., but Montague Summers's collected edition of her work (6 vol., 1915) revived an interest in her. See study by G. Woodcock (1948) and biography by F. M. Link (1968).

Behrens, Peter (pā'tər bā'rəns), 1868-1940, German architect, influential in Europe in the evolution of the modern architectural style. He established before World War I a predominantly utilitarian type of architecture that at the same time achieved qualities of clarity and impressiveness. His factory buildings were among the earliest European works to base a simple and effective style upon the frank terms of modern construction. Behrens is known also for residences, for workers' apartment houses in Vienna, for the Abbey of St. Peter at Salzburg, and for his pioneering work in industrial design. Among his pupils were the Swiss architect Le Corbusier and the Germans Walter Gropius and Ludwig Mies van der Rohe.

Behring, Emil Adolph von (ā'mēl ā'dōlf fən bār'īng), 1854-1917, German physician. He worked with Kitasato at Koch's laboratory in Berlin and from 1895 was professor of hygiene at Marburg. A pioneer in serum therapy, following the work of P. P. É. Roux, he demonstrated immunization against diphtheria (1890) and tetanus (1892) by injections of antitoxins (a word he introduced) that he developed with Kitasato. For this work he received the 1901 Nobel Prize in Physiology and Medicine.

Behrman, S. N. (Samuel Nathaniel Behrman) (bār'mən), 1893-1973, American dramatist, b. Worcester, Mass., grad. Harvard 1916. His sophisticated comedies often reflect the turbulence of 20th-century society. They include *The Second Man* (1927), *Serena Blandish* (1928), *Ram from Heaven* (1934), *No Time for Comedy* (1939), *Fanny* (1954) with Joshua Logan, and *Lord Pengo* (1962). His books include an autobiography, *The Worcester Account* (1954), and a biography of Max Beerbohm (1960).

Beida: see AL BAYDA, Libya

Beiderbecke, Leon Bismarck (Bix Beiderbecke), (bī'dərbēk), 1903-31, American jazz cornetist, pianist, and composer, b. Davenport, Iowa. Mainly self-taught, he was influenced by recordings of the Original Dixieland Jazz Band and by the music of King Oliver, Louis Armstrong, and Jimmie Noone. His cornet playing, noted for its brilliant phrasing and its clarity of tone, soon won him a reputation. A sensitive, lonely man driven by artistic ambition, he was forced to play in the large commercial bands. Unhappy and restless, he changed jobs often, drank heavily, was frequently ill, and finally died of pneumonia. His piano compositions, including *In a Mist*,

were influenced by Debussy. See C. H. Wareing and George Garlick, *Suglas for Be de Beckle* (1953), biographies by Burnett James (1951) and R. M. Sponer and P. R. Evans (1974).

Beira (bā'ra), region and former province, N central Portugal, S of the Douro River. The old capital was GOVIA. The province extended to the Atlantic coast between the Douro and the Mondego and SE of the Mondego to the upper Tagus. The region is now occupied by the provinces of Beira Alta (capital VISEU), Beira Baixa (capital Castelo Branco) and part of Beira Litoral (capital Coimbra) and is further subdivided into the districts of Aveiro, Viseu, Coimbra, Guarda, and Castelo Branco. The region is traversed by the Serra da Estrela, Portugal's highest mountain range. Grapes, fruits and olives are grown. Industries include fishing and the manufacture of textiles and forest products. The area had been recovered from the Moors even before Portugal was formed, but Moorish attacks continued into the 13th cent. Later Beira was contested in the incessant Portuguese-Castilian wars.

Beira (bē'ra), city (1950 pop. 58,970), capital of Manica e Sofala district, E central Mozambique, a seaport on the Mozambique Channel (an arm of the Indian Ocean) at the mouth of the Punguô River. A commercial center, the city grew (beginning in 1891) as the terminus of a railroad into the interior, and it handles the foreign trade of Rhodesia and Malawi as well as of Mozambique. It is also a popular beach resort.

beira: see *ANTHONY*.

Beirut (bē'rūt), Arab *Bayrut*, Fr. *Beirut*, city (1972 est. pop. 720,000), W Lebanon, capital of Lebanon on the Mediterranean Sea at the foot of the Lebanon Mts. Beirut is an important port and financial center with food processing industries. It is a Phoenician city and was called in ancient times Berytus. It became known after 1500 B.C. as a trade center. Beirut was prominent under the Seleucids but became more important under the Romans when it was not only a commercial town—with a large trade in wine and linens—but also a colony with some territory. In the 3d cent. A.D. Beirut had a famous school of Roman law. It declined after an earthquake in 551. Beirut was captured by the Arabs in 635. The Crusaders under Balwin I took the city in 1110, and it was part of the Latin Kingdom of Jerusalem until 1291, despite a siege by Saladin and the Egyptians in 1182. After 1517 the Druses controlled the city under the Ottoman Empire. In the 19th cent. it was one of the centers of the revolt of Muhammad Ali of Egypt against the Turks. Ibrahim Pasha took it for the Egyptians (1830) but in 1840 the French and British bombarded and captured the city, enabling the Turks to return. It was taken (1918) by French troops in World War I. Beirut became the capital of Lebanon in 1920 under the French mandate. It is the seat of the American Univ. of Beirut (1866) and Lebanese Univ. (1951).

beisa: see *OSY*.

Beisan: see *EET-S-E-N, Is'ra'el*.

Beissel, Johann Conrad (vō'hān kōn'rāt bī'sel) 1690–1768, founder of the Seventh-Day Baptist community at Ephrata, Pa. Emigrating (1720) from Germany, he settled first with the German Baptists or Dunkards, in Germantown, Pa. He soon moved to the Conestoga Valley, where he preached to the German settlers. Beissel published (1728) a tract on his conviction that Saturday was the true Sabbath. With his followers he established (c.1728–1733) at EPHRATA a semimonastic religious community that became well known in colonial times. Over 400 of Beissel's hymns were printed, most of them in the *Turtel-Taupe* (1747), the Ephrata hymnal. See biography by W. C. Klein (1942).

Beit, Alfred (bit) 1853–1905, South African financier, b. Hamburg. He went to South Africa in 1875, grew rich from the development of diamond mines and was a colleague and lieutenant of Cecil Rhodes in Rhodesia. A philanthropist, he founded a chair for colonial history at Oxford Univ. and made many gifts for educational purposes in London, Hamburg and South Africa.

Beja (bā'zha), town (1970 municipal pop. 37,205), S Portugal, capital of Beja dist. and Baixa Alentejo. It is an important trade and manufacturing center. Beja was important under the Romans, who called it Pax Julia. The Moors used it as a fortress city, until the Portuguese recovered it in 1162. Notable landmarks are the 14th-century citadel and the 15th-century Monastery of the Conception.

Bejaia (bē'jā), formerly *Bougie* (bōōzhē'), city (1956 pop. 49,930), N Algeria, a port on the Gulf of

Bejaia (an arm of the Mediterranean Sea). The northern terminus of the Hassi Messaoud oil pipeline from the Sahara. Bejaia is the principal port of the W. Mediterranean. Exports as well as crude petroleum, include iron, phosphates, wines, dried figs and plums. The city also has textile and cork industries. A minor port in Cartagena and Roman times, Bejaia was the Roman Sadia. It became the capital of the Vandals in the 5th cent. It later disappeared but was re-founded by the Berbers in the 11th cent. and became an important port and cultural center. After Spanish occupation (1510–55) the city was taken by the Ottoman Turks. Until it was captured by the French in 1833, Bejaia was a stronghold of the Barbary pirates (see *BARBARY STATES*). City landmarks include a 15th-century mosque and a casbah (fortress) built by the Spanish in 1545.

Béjart or Bèjard (bō'hē bēzhār'), French name of actors associated with MOLIERE who joined their amateur company, Les Enfants de Famille. Their professional debut in Paris (1643) was as the *l'usurier* in *Théâtre*. This failed (1645) and the company returned to the provinces only to triumph on their return in 1653. The eldest of the family was Joseph Béjart, c.1616–1659. His sister Madeleine Béjart, 1618–72, a fine actress and virtual manager of the company, was Molieres' mistress. The sister Genevieve Béjart, 1624–75, and brother Louis Béjart, 1633–78, were also actors in the company. Louis retired in 1670 and was the first of Molieres' actors to receive a pension. Armande Grésinde Béjart, c.1640–1700, Madeleine's sister or daughter, married Moliere in 1662 and trained on him, played most of his heroines. The death of Moliere (1673) caused a momentary collapse of the Kings' Troupe, as the company was called, but Molieres' widow and the actor La Grange procured the absorption by their group of one of the two rival Parisian companies, the troupe of the Théâtre du Marais. At the same time they lost the Palais Royal, the theater they had had since 1660. From its new quarters the company was known as the Hôtel Guénégaud troupe. In 1693 the troupe was merged with its only rival, the company of the Hôtel de Bourgogne. The resultant company was called the *Comédie Française*. See Rosamond Gilder, *Enter the Actress* (1931).

Bekabad (bēk'ābād), formerly Begovat (bēgōvāt'), city (1959 est. pop. 60,000), Tashkent oblast, Uzbekistan, Central Asia, on the Syr Darya River. It is an important industrial center, with large iron and steel mills and cement works. The Farshand dam and hydroelectric plant, just upstream from Bekabad, is a major source of electricity and irrigation water for Uzbekistan.

Bek-Budi, USSR, see *KARST*.

Beke, Charles Tiltstone (pēk) 1820–1874, English explorer and author. In Ethiopia in 1840–43 he mapped c.70,000 sq mi (181,300 sq km) of the country, determined the approximate course of the Blue Nile and compiled vocabularies of 14 languages and dialects. He wrote *Origines Soudanaises* (1834), *The Sources of the Nile* (1860), and *The British Captives in Abyssinia* (1865). His *Discoveries of Sirai in Arabia and of Arabian* appeared posthumously, and his widow published (1874) a summary of his works.

Békéscsaba or Csaba (bēk'ēshchō'bō) city (1970 pop. 55,403), SE Hungary. The commercial center for a silk-raising, tobacco-growing and hog-breeding region, Békéscsaba has meat-packing plants and flour and hemp mills. Other industries produce textiles, farm implements, and cement. The city is also a road and rail hub. It was founded in the 13th cent. but later destroyed by the Turks. In the 18th cent. Slovak settlers helped restore Békéscsaba, and the city still has a large Slovak population. Landmarks include a 13th-century Roman Catholic church, a Lutheran cathedral (testifying to the city's tradition of Lutheranism), and a museum.

Bekesy, Georg von (gā'ōrk fōn bēk'ēshē), 1899–1972, American physiologist, b. Budapest, Hungary, grad. Univ. of Budapest (Ph.D. 1923). He was (1923–45) a physicist in the research laboratory of the Hungarian telephone system and also taught (1932–45) at the Univ. of Budapest. From 1947 to 1949 he was a research professor at the Caroline Institute, Stockholm. In 1949 he became senior research fellow in the psychoacoustic laboratory at Harvard. He was awarded the 1951 Nobel Prize in Medicine and Physiology for his work on the physical mechanism of stimulation within the cochlea, a snail-shaped cavity of the inner ear.

Bel (bāl, bēl), deity of the MIDDLE EASTERN RELIGIONS. The name is a cognate of that of BAL. For Bel, see *Bible*, see *ESL AND THE DRAGON*.

Bela IV (bē'la, bē'la), 1205–70, king of Hungary (1235–70), son and successor of Andrew II. He tried to curtail the power of the magnates and set out to recover the crownlands his father had given to supporters. Confronted by the menace of the Mongol invasion, he sent unheeded appeals to Pope Gregory IX and Holy Roman Emperor Frederick II, but he was crushingly defeated at Mohács on the Sava River in 1241. Perishing after the withdrawal of the invaders, he repopulated the country by inviting foreign colonization. In a battle (1245) with the last Babenberg duke of Austria, the duke was killed but the Austrians were victorious. Bela's long struggle for OTTOMAN king of Bohemia for Austria and Styria ended (1260), and his last years were disturbed by the rebellion of his son, later king STEPHEN V.

Bela (bē'la) 1. First king of Edom. Gen. 36:32, 1 Chron. 1:43. 2. Benjamin's first son. Num. 26:38, 1 Chron. 7:6–8. 3. Belshazzar. Gen. 40:21, 3. Belshazzar. 1 Chron. 5:8. 4. City. See *ESL AND THE DRAGON*.

Belah (bē'la), the same as BELA 2.

Bela Kun: see *KUN, BELA*.

Belalcázar, Sebastián de: see *EL MOCHAL, SEBASTIÁN DE*.

Bel and the Dragon, custom name for Dan. 14, a chapter placed in the Apocrypha in the Authorized Version of the Bible (see *DANIEL*). Verses 1–22 tell of the Babylonian fool Bel, ministered to by priests who secretly consume food left for it, thus deceiving the king and the people. Daniel reveals the fraud, and priests and fool are destroyed on the king. Verses 23–42 tell of a dragon, i.e., a great beast or monster, worshiped as a god. Daniel kills him and is thrown to the lions. The prophet Habakkuk is brought miraculously to the den by an angel to minister to him. Daniel is preserved and the Babylonian king recognizes the power of the God of Daniel.

Belasco, David, 1853–1931, American theatrical manager and producer, b. San Francisco. He was actively connected with the theater from his youth and while associated with Dion Boucicault in Virginia City, Nev. He was first exposed to scenic realism. At 19 he became stage manager of the Baldwin Theatre in San Francisco. His first venture as a playwright was when in 1880 in association with James A. Hume, he toured the country in *Hearts of Oak*, a play adapted by them from an old melodrama. Connections with the Frohman brought him to New York City in association (1882–84) with the Madison Square Theatre and later (1886–90) as stage manager of the Lyceum. He became an independent producer in 1895. Known for his minute details and spectacular stage settings, Belasco showed inventiveness in his use of stage lighting. A creator of stars, he was lucratively associated with Mrs. Leslie Carter, David Warfield, Blanche Bates, Frances Starr, Ina Claire and Lenore Lavinia. His plays most adaptations were vehicles for his actors and for his lavishly settings. His most successful writing combinations were with Hume, Franklin Fols, Fern C. De Ville and John Luther Long. In 1907 he built the Stuyvesant Theatre, later known as the Belasco, during his fight against the Theatrical Syndicate of the 1890s. The New York Public Library has his collection of theatrical materials. He wrote *The Theatre through Its Stage Door* (1919, repr. 1959). See his plays, ed. by R. H. Bal (1943, repr. 1965) biographies by Craig Timberlake (1954) and William Winter (2 vol., 3d ed. 1925, repr. 1972).

Belaúnde Terry, Fernando (fām'ān'ōs bēlō'undē tā'rē) 1912–, president of Peru (1963–68). A successful architect, he served in the chamber of deputies (1945–48), formed the Popular Action party in 1956 and ran unsuccessfully for president the same year. In the 1962 elections he ran a close second behind Victor Raúl Haya de la Torre; the elections were annulled and rescheduled for 1963, at which time Belaúnde won. Despite an opposition congress, he effected social, educational, and land reforms, opening up the rich interior to settlement by constructing a vast highway system across the Andes, established a self-help program for the Indians and encouraged industrial development. However, an inflationary spiral set in and Belaúnde antagonized nationalist army leaders by failing to expatriate U.S.-controlled oil fields and operations. Deposed by an army coup in 1968, he fled to the United States, where he subsequently taught architecture at Harvard and Columbia. See his autobiography, *Peru's Own Conquest* (1959, tr. 1955).

Belaya (bē'lā'ya) [Rus. =white], river, c.680 mi (1,100 km) long, Bashkir Autonomous Republic, E European USSR. It rises in the Ural mts. and winds generally NW past Beloretsk, Serikhtamak where it

becomes navigable), and Ufa to join the Kama River. There are important oil fields in the Belaya River valley near Ufa.

Belaya Tserkov (tser'kof), Ukrainian *Bila Tserkva*, city (1970 pop 109,000), W central European USSR, in the Ukraine, on the Ros River. It is a rail junction and an industrial and commercial center. Industries include food processing and the manufacture of machinery, shoes, and building materials. The city was founded in 1032 and was the headquarters of the Ukrainian Cossacks in the 17th cent. It passed to Russia in 1793.

Belcher Islands, c 1,110 sq mi (2,870 sq km), in E Hudson Bay, SE Keewatin dist., Northwest Territories, Canada, off W Quebec. Flaherty Island is the largest of the tundra-covered group.

Belém (bal'AN') or **Pará** (pará'), city (1970 pop 603,267), capital of Para state, N Brazil, on the Para River. Belém, the chief commercial center and port of the vast Amazon River basin, handles the Amazonian produce (chiefly rubber, Brazil nuts, cacao, and timber) and has processing plants. An airport and a coastal railroad enhance the trade of Belém, which is also connected with Brasília by a railroad and highway. Belém [Port. = Bethlehem] was founded by Portuguese in 1616 as Santa Maria de Belém do Grão Para and was a military post for the defense of N Brazil against French, English, and Dutch pirates. It reached a peak of feverish prosperity during the wild-rubber boom in the late 19th and early 20th cent., then suffered a depression that was alleviated by diversification and planned development in the 1930s. Prosperity increased also after World War II with the improvement of communications within the Amazon region. The city is known for its Goeldi museum, with ethnological and zoological collections of the Amazon basin. It also has an open air market, a botanical garden brilliant with exotic flowers, a modern leprosarium, and a state university. The government palace and the cathedral were built in the 18th cent., and there is a 17th-century Jesuit church.

Belfast (belfást'), county borough (1971 pop 360,150), capital of Northern Ireland, county town of Co. Antrim, mainly in Co. Antrim but partly in Co. Down. It is on Belfast Lough, an inlet of the North Channel of the Irish Sea, and at the mouth of the Lagan River. The harbor, 8.5 mi (13.7 km) long, is navigable to the largest ships. The great shipyards of the Harland and Wolff Company in Belfast have built some of the world's largest ocean liners. The city is also the center of the Irish linen industry; other industries include tobacco and food processing, packaging, and the manufacture of rayon, aircraft, tools and machinery, yarn, clothing, carpets, and rope. Agricultural and livestock products are the chief exports. Belfast was founded in 1177 when a castle in defense of a ford over the Lagan was built, but the present city is a product of the Industrial Revolution. French HUGUENOTS, coming there after the revocation of the Edict of NANTES (1685), stimulated the growth of the town's linen industry. Serious rioting between Catholics and Protestants has scarred the city many times since the 19th cent. Belfast and the surrounding country were subjected to heavy air raids in 1941. Queen's Univ. (founded 1845), a college of technology, and Victoria College (founded 1859), a pioneer in women's education, are in Belfast. The Protestant Cathedral of St. Anne is notable. The Parliament House of Northern Ireland is at Stormont, a suburb of Belfast.

Belfort (bäfor', bē-, bēl-), city (1968 pop 55,833), capital of the Territory of Belfort (a department), E France, in Alsace. An important industrial and transportation center, it has large cotton mills and metalworks. A major fortress town since the 17th cent., it commands the Belfort Gap, or Burgundy Gate, between the Vosges and the Jura mts., thus dominating the roads from France, Switzerland, and Germany. An Austrian possession, Belfort passed to France by the Peace of Westphalia (1648) and was fortified by Vauban. During the Franco-Prussian War (1870-71) the garrison withstood a siege of 108 days. Partly in acknowledgment of this heroism, the Germans left Belfort and the surrounding territory to France when they annexed the rest of Alsace. The many Alsations who then took refuge in the town contributed significantly to its industrial growth. The siege is commemorated by a huge statue, the *Lion of Belfort*, by Bartholdi.

Belfort, Territory of, department (1968 pop 118,450), E France, in Alsace, on the Swiss border. The city of Belfort is the capital.

Belgae see GAUL

Belgaum (bēlgoum'), town (1971 pop 213,830), Karnataka state, SE India. It is an educational and district administrative center and agricultural market that trades in food grains, sugarcane, cotton, tobacco, oilseed, and milk products. Belgaum also has a military cantonment.

Bel Geddes, Norman. see GEDDES, NORMAN BEL

Belgian Congo: see ZAIRE

Belgian horse, one of the largest breeds of DRAFT HORSES of pure European descent. It has a long history, antedating the Christian era, but became especially popular during the Middle Ages. In the 15th and 16th cent. the breed was exported from Belgium to many European countries and became popular as a general working horse. It was not imported to the United States until the 1800s and it was slow to gain favor there because of its ungainly appearance. The breed is characterized by a husky, barrel-like appearance and brute strength. It is generally sorrel or chestnut in color, stands just under 17 hands (68 in / 170 cm) and weighs over 2,000 pounds (900 kg).

Belgian literature. For literature in Flemish (Dutch), see DUTCH and FLEMISH LITERATURE. The writings of French-speaking Belgians, of whom the chief are MAETERLINCK and VERHAEREN, belong to FRENCH LITERATURE. See also WALLOONS.

Belgian Malinois (mālinwā'), a breed of medium-sized WORKING DOG developed in Belgium at the turn of the 20th cent. It stands from 22 to 26 in (55.9-66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6-27.2 kg). The smooth, straight coat is short except for longer hair around the neck, on the back of the thighs, and on the tail. It is brindled fawn in color with a black mask. One of three closely related types of sheepherding dogs from Belgium, the Malinois is distinguished from the other two, the Belgian sheepdog and the Belgian Tervuren, by coat and color only. In addition to being used for its herding abilities, the Malinois has frequently been trained as a police dog. See DOG.

Belgian sheepdog, sometimes called Groenendael, breed of sturdy WORKING DOG developed from a wide assortment of sheepherding dogs in Belgium in the early 20th cent. It stands from 22 to 26 in (55.9-66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6-27.2 kg). Its long, straight coat is black, sometimes with white markings on the chin, forehead, and feet. As a result of such developments as the widespread use of fencing, the increasing availability of rail transportation, and a decline in the threat of marauding animals, the necessity for sheepherding dogs began to decline in Belgium toward the end of the 19th cent. Dog breeders began to turn their attention to the show ring. Of the widely divergent types of herding dogs in existence, three varieties differing only in coat and color were finally bred true, i.e., the Belgian Malinois, Belgian sheepdog, and Belgian Tervuren. All were shown under the name "Belgian sheepdog" until 1959 when they were designated separate breeds by the American Kennel Club. See DOG.

Belgian Tervuren (tāvūn'), breed of medium-sized WORKING DOG perfected in Belgium in the early 20th cent. It stands from 22 to 26 in (55.9-66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6-27.2 kg). Its long, straight, dense coat may vary in shade from fawn to russet mahogany; the hair tips are always black. Developed from a widely interbred stock of Belgian sheepherding dogs, the Tervuren emerged as one of several distinct varieties, differing from the Groenendael BELGIAN SHEEPDOG in color only. It is a relatively rare breed in the United States today. See DOG.

Belgium (bēl'jam), Flemish *Belgie*, Fr *La Belgique*, constitutional kingdom (1970 pop 9,694,991), 11,781 sq mi (30,513 sq km), NW Europe. BRUSSELS is the capital. ANTWERP is the chief commercial center and one of the world's great ports. Other important cities are GHENT and LIÈGE. Belgium is bordered on the N by the Netherlands and the North Sea, on the E by West Germany and the Grand Duchy of Luxembourg, and on the W and SW by France. The terrain is low lying except in the Ardennes mts. in the south. Belgium comprises two ethnic and cultural regions, generally called Flanders and Wallonia—Flanders embracing the northern provinces of EAST FLANDERS, WEST FLANDERS, ANTWERP, LIMBURG, and part of BRABANT, and Wallonia comprising the remainder of Brabant, HAINAUT, LIÈGE, LUXEMBOURG, and NAMUR. The dividing line runs roughly east-west just S of Brussels. Flemish (a Dutch dialect) is the official language in Flanders, while French is official in the south. The French-speaking people are now com-

monly called WALLOONS, although the term once referred chiefly to those people in the Liège area who spoke Walloon, a French dialect. Brussels is bilin-

gual, and German is spoken in a small section of Liège prov., notably at Eupen and Malmédy. Belgium is one of the most densely populated and highly industrialized areas in Europe, emphasis is on heavy industry. Coal mining and the production of steel, chemicals, and cement are concentrated in the Sambre and Meuse valleys, in the BORINAGE around Mons, Charleroi, Namur, and Liège, and in the Campine coal basin. Liège is a great steel center. Iron and steel constitute Belgium's largest single export item (in 1972 the country ranked ninth in world production of crude steel). Belgium also has an old, established metal-products industry; manufactures include bridges, heavy machinery, industrial and surgical equipment, motor vehicles, rolling stock, machine tools, and munitions. Shipbuilding is centered in Antwerp. Chemical products include fertilizers, dyes, pharmaceuticals, and plastics; the petrochemical industry, concentrated near the oil refineries of Antwerp, has mushroomed since World War II. Textile production, which began in the Middle Ages, now includes cotton, linen, wool, and synthetic fibers; carpets and blankets are important manufactures. Ghent, KORTRIJK, TOURNAI, and VERVIERS are all textile centers; MECHELEN, BRUGES, and Brussels are celebrated for their lace. Other old and important industries include diamond cutting (Antwerp is the world's largest diamond center), glass production, and the processing of leather and wood. Belgian industry is heavily dependent upon imports for its raw materials. Some iron is mined in the southeast, but most is imported, especially from the Lorraine basin in France and its extension in Luxembourg. Zinc deposits once supported an active nonferrous metal industry, but the deposits have been exhausted, and the industry now utilizes imported materials. Other nonferrous metal products, made from imported raw materials, include copper, lead, and tin. Coal is Belgium's only significant mineral resource, but production has recently declined in favor of other fuels and cheaper imported coal. Native limestone supports the cement industry. Industrial centers are linked with each other and with the main ports of Antwerp and Ghent by the Meuse and Scheldt rivers and their tributaries, by a network of canals (notably the ALBERT CANAL), and by the densest railroad net of continental Europe. In shipping and transit trade Belgium is among the world's leading countries, the economy depends upon its exports. Agriculture, while engaging only a small percent of the working force, is important. Except in the marshy Campine and in the heavily forested Ardennes there is much fertile and well-watered soil. The chief crops are cereals (oats, rye, wheat, barley). Sugar beets, potatoes, and flax are also grown, and there is truck farming near the large cities. Cattle raising and dairying (especially in Flanders) are important. Flowers and chicory, grown as a winter vegetable, are valuable crops. Processed foods include beet sugar, cheese and other dairy items, and canned vegetables. Beer is made from rich hops. Many cities (most notably Bruges and Ghent) have preserved their medieval architecture and art, which attract thousands of tourists annually. The North Sea coast is also popular in summer, but the once fashionable spas in the Ardennes are less frequented now.

were influenced by Debussy See C H Wareing and George Garlick, *Bugles for Beiderbecke* (1958), biographies by Burnett James (1961) and R M Sudhalter and P R Evans (1974)

Beira (bã'ra), region and former province, N central Portugal, S of the Douro River The old capital was COIMBRA The province extended to the Atlantic coast between the Douro and the Mondego and SE of the Mondego to the upper Tagus The region is now occupied by the provinces of Beira Alta (capital VISEU), Beira Baixa (capital Castelo Branco) and part of Beira Litoral (capital Coimbra) and is further subdivided into the districts of Aveiro, Viseu, Coimbra, Guarda, and Castelo Branco The region is traversed by the Serra da Estrela, Portugal's highest mountain range Grains, fruits, and olives are grown Industries include fishing and the manufacture of textiles and forest products The area had been recovered from the Moors even before Portugal was formed, but Moorish attacks continued into the 13th cent Later Beira was contested in the incessant Portuguese-Castilian wars

Beira (bã'y'ra), city (1960 pop 58,970), capital of Manica e Sofala district, E central Mozambique, a seaport on the Mozambique Channel (an arm of the Indian Ocean), at the mouth of the Pungoe River A commercial center, the city grew (beginning in 1891) as the terminus of a railroad into the interior, and it handles the foreign trade of Rhodesia and Malawi as well as of Mozambique It is also a popular beach resort

beira' see ANTELOPE

Beirut (bārōō't'), Arab Bayrut, Fr Beyrouth, city (1972 est pop 720,000), W Lebanon, capital of Lebanon, on the Mediterranean Sea, at the foot of the Lebanon Mts Beirut is an important port and financial center with food processing industries It was a Phoenician city and was called in ancient times Berytus It became known after 1500 B C as a trade center Beirut was prominent under the Seleucids but became more important under the Romans, when it was not only a commercial town—with a large trade in wine and linens—but also a colony with some territory In the 3d cent A D Beirut had a famous school of Roman law It declined after an earthquake in 551 Beirut was captured by the Arabs in 635 The Crusaders under Baldwin I took the city in 1110, and it was part of the Latin Kingdom of Jerusalem until 1291, despite a siege by Saladin and the Egyptians in 1182 After 1517 the Druses controlled the city under the Ottoman Empire In the 19th cent it was one of the centers of the revolt of Muhammad Ali of Egypt against the Turks Ibrahim Pasha took it for the Egyptians (1830), but in 1840 the French and British bombarded and captured the city, enabling the Turks to return It was taken (1918) by French troops in World War I Beirut became the capital of Lebanon in 1920 under the French mandate It is the seat of the American Univ of Beirut (1866) and Lebanese Univ (1951)

beisa' see ORYX

Beisan, see BET SHEAN, Israel

Beissel, Johann Conrad (yō'han kōn'rat bī'səl), 1690-1768, founder of the Seventh-Day Baptist community at Ephrata, Pa Emigrating (1720) from Germany, he settled first with the German Baptists, or Dunkards, in Germantown, Pa He soon moved to the Conestoga Valley, where he preached to the German settlers Beissel published (1728) a tract on his conviction that Saturday was the true Sabbath With his followers he established (c 1728-1733) at EPHRATA a semimonastic religious community that became well known in colonial times Over 400 of Beissel's hymns were printed, most of them in the *Turtel-Taube* (1747), the Ephrata hymnal See biography by W C Klein (1942)

Beit, Alfred (bīt), 1853-1906, South African financier, b Hamburg He went to South Africa in 1875, grew rich from the development of diamond mines, and was a colleague and lieutenant of Cecil Rhodes in Rhodesia A philanthropist, he founded a chair for colonial history at Oxford Univ and made many gifts for educational purposes in London, Hamburg, and South Africa

Beja (bã'zha), town (1970 municipal pop 37,205), S Portugal, capital of Beja dist and Baixa Alentejo It is an important trade and manufacturing center Beja was important under the Romans, who called it Pax Julia The Moors used it as a fortress city, until the Portuguese recovered it in 1162 Notable landmarks are the 14th-century citadel and the 15th-century Monastery of the Conception

Bejaia (bēj'ā), formerly **Bougie** (bōōzhē'), city (1966 pop 49,930), N Algeria, a port on the Gulf of

Bejaia (an arm of the Mediterranean Sea) The northern terminus of the Hassi Messaoud oil pipeline from the Sahara, Bejaia is the principal oil port of the W Mediterranean Exports, aside from crude petroleum, include iron, phosphates, wines, dried figs, and plums The city also has textile and cork industries A minor port in Carthaginian and Roman times, Bejaia was the Roman Saldae It became the capital of the Vandals in the 5th cent It later disappeared but was refounded by the Berbers in the 11th cent and became an important port and cultural center After Spanish occupation (1510-55), the city was taken by the Ottoman Turks Until it was captured by the French in 1833, Bejaia was a stronghold of the Barbary pirates (see BARBARY STATES) City landmarks include a 16th-century mosque and a casbah (fortress) built by the Spanish in 1545

Béjart or **Bejard** (both bāzhar'), French family of actors associated with MOLIÈRE, who joined their amateur company, Les Enfants de Famille Their professional debut in Paris (1643) was as the Illustre-Théâtre, this failed (1645) and the company returned to the provinces only to triumph on their return in 1658 The eldest of the family was **Joseph Béjart**, c 1616-1659 His sister **Madeleine Béjart**, 1618-72, a fine actress and virtually the manager of the company, was Molière's mistress Their sister, **Genevieve Béjart**, 1624-75, and brother, **Louis Béjart**, 1630-78, were also actors in the company Louis retired in 1670, and was the first of Molière's actors to receive a pension **Armande Gresinde Béjart**, c 1640-1700, Madeleine's sister or daughter, married Molière in 1662 and, trained by him, played most of his heroines The death of Molière (1673) caused a momentary collapse of the King's Troupe, as the company was called, but Molière's widow and the actor La Grange procured the absorption by their group of one of the two rival Parisian companies, the troupe of the Théâtre du Marais At the same time they lost the Palais Royal, the theater they had had since 1660 From its new quarters the company was known as the Hôtel Guenegaud troupe In 1680 the troupe was merged with its only rival, the company of the HÔTEL DE BOURGOGNE The resultant company was called the COMÉDIE FRANÇAISE See Rosamond Gilder, *Enter the Actress* (1931)

Bekabad (byēkabad'), formerly **Begovat** (byēgōvat'), city (1969 est pop 60,000), Tashkent oblast, Uzbekistan, Central Asian USSR, on the Syr Darya River It is an important industrial center, with large iron and steel mills and cement works The Farkhand dam and hydroelectric plant, just upstream from Bekabad, is a major source of electricity and irrigation water for Uzbekistan

Bek-Budi, USSR see KARSHI

Beke, Charles Tilstone (bēk), 1800-1874, English explorer and author In Ethiopia in 1840-43 he mapped c 70,000 sq mi (181,300 sq km) of the country, determined the approximate course of the Blue Nile, and compiled vocabularies of 14 languages and dialects He wrote *Origines Biblicae* (1834), *The Sources of the Nile* (1860), and *The British Captives in Abyssinia* (1865) His *Discoveries of Sinai in Arabia and of Midian* appeared posthumously, and his widow published (1874) a summary of his works

Békéscsaba or **Csaba** (bā'kăshchō'bō), city (1970 pop 55,408), SE Hungary The commercial center for a silk-raising, tobacco-growing, and hog-breeding region, Bekescsaba has meat-packing plants and flour and hemp mills Other industries produce textiles, farm implements, and cement The city is also a road and rail hub It was founded in the 13th cent but later destroyed by the Turks In the 18th cent Slovak settlers helped restore Bekescsaba, and the city still has a large Slovak population Landmarks include a 13th-century Roman Catholic church, a Lutheran cathedral (testifying to the city's tradition of Lutheranism), and a museum

Bekesy, Georg von (gā'ōrk fən bēk'ishē), 1899-1972, American biophysicist, b Budapest, Hungary, grad Univ of Budapest (Ph D 1923) He was (1923-46) a physicist in the research laboratory of the Hungarian telephone system and also taught (1932-46) at the Univ of Budapest From 1947 to 1949 he was a research professor at the Caroline Institute, Stockholm In 1949 he became senior research fellow in the psychoacoustic laboratory at Harvard He was awarded the 1961 Nobel Prize in Medicine and Physiology for his work on the physical mechanism of stimulation within the cochlea, a snail-shaped cavity of the inner ear

Bel (bāl, bēl), deity of the MIDDLE EASTERN RELIGIONS The name is a cognate of that of BAAL For Bel in the Bible, see BEL AND THE DRAGON

Bela IV (bā'la, bē'la), 1206-70, king of Hungary (1235-70), son and successor of Andrew II He tried to curtail the power of the magnates and set out to recover the crownlands his father had given to supporters Confronted by the menace of the Mongol invasion, he sent unheeded appeals to Pope Gregory IX and Holy Roman Emperor Frederick II, but he was crushingly defeated at Mohi on the Sajó River in 1241 Returning after the withdrawal of the invaders, he repopulated the country by inviting foreign colonization In a battle (1246) with the last Babenberg duke of Austria, the duke was killed but the Austrians were victorious Bela's long struggle with OTTOCAR II, king of Bohemia, for Austria and Styria ended (1260) in defeat His last years were disturbed by the rebellion of his son, later King STEPHEN V

Belah (bē'la), the same as BELA 2

Béla Kun: see KUN, BÉLA

Belalcázar, Sebastián de. see BENALCÁZAR, SEBASTIÁN DE

Bel and the Dragon, customary name for Dan 14, a chapter placed in the Apocrypha in the Authorized Version of the Bible (see DANIEL) Verses 1-22 tell of the Babylonian idol Bel, ministered to by priests who secretly consume food left for it, thus deceiving the king and the people, Daniel reveals the fraud, and priests and idol are destroyed by the king Verses 23-42 tell of a dragon, i e , a great beast or monster, worshiped as a god, Daniel kills him and is thrown to the lions The prophet Habakkuk is brought miraculously to the den by an angel to minister to him, Daniel is preserved, and the Babylonian king recognizes the power of the God of Daniel

Belasco, David, 1853-1931, American theatrical manager and producer, b San Francisco He was actively connected with the theater from his youth, and while associated with Dion Boucicault in Virginia City, Nev , he was first exposed to scenic realism At 19 he became stage manager of the Baldwin Theatre in San Francisco His first venture as a playwright was when, in 1880, in association with James A Herne, he toured the country in *Hearts of Oak*, a play adapted by them from an old melodrama Connections with the Frohmans brought him to New York City in association (1882-84) with the Madison Square Theatre and later (1886-90) as stage manager of the Lyceum He became an independent producer in 1895 Known for his minutely detailed and spectacular stage settings, Belasco showed inventiveness in his use of stage lighting A creator of stars, he was lucratively associated with Mrs Leslie CARTER, David Warfield, Blanche Bates, Frances Starr, Ina Claire, and Lenore Ulric His plays, mostly adaptations, were vehicles for his actors and for his lavish settings His most successful writing combinations were with Herne, Franklyn Fyles, Henry C De Mille, and John Luther LONG In 1907 he built the Stuyvesant Theater, later known as the Belasco, during his fight against the Theatrical Syndicate of the 1890s The New York Public Library has his collection of theatrical materials He wrote *The Theatre through Its Stage Door* (1919, repr 1969) See his plays, ed by R H Ball (1940, repr 1965), biographies by Craig Timberlake (1954) and William Winter (2 vol, 3d ed 1925, repr 1972)

Belaúnde Terry, Fernando (fārnā'dō bālaōn'dā tā'rē), 1912-, president of Peru (1963-68) A successful architect, he served in the chamber of deputies (1945-48), formed the Popular Action party in 1956, and ran unsuccessfully for president the same year In the 1962 elections, he ran a close second behind Víctor Raúl HAYA DE LA TORRE, the elections were annulled and rescheduled for 1963, at which time Belaunde won Despite an opposition congress, he effected social, educational, and land reforms, opened up the rich interior to settlement by constructing a vast highway system across the Andes, established a self-help program for the Indians, and encouraged industrial development However, an inflationary spiral set in, and Belaunde antagonized nationalistic army leaders by failing to expropriate U S-controlled oil fields and operations Deposed by an army coup in 1968, he fled to the United States, where he subsequently taught architecture at Harvard and Columbia See his autobiography, *Peru's Own Conquest* (1959, tr 1965)

Belaya (byēl'aya) [Rus , =white], river, c 880 mi (1,420 km) long, Bashkir Autonomous Republic, E European USSR It rises in the Ural mts and winds generally NW past Beloretsk, Sterlitamak (where it

omes navigable), and Ufa to join the Kama. There are important oil fields in the Belaya valley near Ufa.

Yva Tserkov (tsēr'kaf), Ukrainian *Bila Tserkva*, (1970 pop 109,000), W central European USSR, on the Ukraine, on the Ros River. It is a rail junction, an industrial and commercial center. Industries include food processing and the manufacture of tinware, shoes, and building materials. The city was founded in 1032 and was the headquarters of Ukrainian Cossacks in the 17th cent. It passed to Russia in 1793.

Yukon Islands, c.1,110 sq mi (2,870 sq km), in Edson Bay, SE Keewatin dist., Northwest Territories, Canada, off W Quebec. Flaherty Island is the best of the tundra-covered group.

Belém (balān') or **Pará** (parā'), city (1970 pop 326,700), capital of Pará state, N Brazil, on the Pará River. Belem, the chief commercial center and port of the vast Amazon River basin, handles the Amazonian produce (chiefly rubber, Brazil nuts, cacao, and timber) and has processing plants. An airport and a coastal railroad enhance the trade of Belem, which is also connected with Brasília by a railroad and highway. Belem [Port. = Bethlehem] was founded by Portuguese in 1616 as Santa Maria de Belém do Para and was a military post for the defense of Brazil against French, English, and Dutch pirates. It reached a peak of feverish prosperity during the wild-rubber boom in the late 19th and early 20th cent., then suffered a depression that was alleviated by diversification and planned development in the 1930s. Prosperity increased also after World War II with the improvement of communications within the Amazon region. The city is known for its Goeldi museum, with ethnological and zoological collections of the Amazon basin. It also has an open air market, a botanical garden brilliant with exotic flowers, a modern leprosarium, and a state university. The government palace and the cathedral were built in the 18th cent., and there is a 17th-century Jesuit church.

Belfast (belfāst'), county borough (1971 pop 360,150), capital of Northern Ireland, county town of Co. Antrim, mainly in Co. Antrim but partly in Co. Down. It is on Belfast Lough, an inlet of the North Channel of the Irish Sea, and at the mouth of the Lagan River. The harbor, 8.5 mi (13.7 km) long, is navigable to the largest ships. The great shipyards of the Harland and Wolff Company in Belfast have built some of the world's largest ocean liners. The city is also the center of the Irish linen industry; other industries include tobacco and food processing, packaging, and the manufacture of rayon, aircraft, tools and machinery, yarn, clothing, carpets, and rope. Agricultural and livestock products are the chief exports. Belfast was founded in 1177 when a castle in defense of a ford over the Lagan was built, but the present city is a product of the Industrial Revolution. French HUGUENOTS, coming there after the revocation of the Edict of Nantes (1685), stimulated the growth of the town's linen industry. Serious rioting between Catholics and Protestants has scarred the city many times since the 19th cent. Belfast and the surrounding county were subjected to heavy air raids in 1941. Queen's Univ. (founded 1845), a college of technology, and Victoria College (founded 1859), a pioneer in women's education, are in Belfast. The Protestant Cathedral of St. Anne is notable. The Parliament House of Northern Ireland is at Stormont, a suburb of Belfast.

Belfort (bāfōr', bē-, bēl-), city (1968 pop 55,833), capital of the Territory of Belfort (a department), E France, in Alsace. An important industrial and transportation center, it has large cotton mills and metalworks. A major fortress town since the 17th cent., it commands the Belfort Gap, or Burgundy Gate, between the Vosges and the Jura mts., thus dominating the roads from France, Switzerland, and Germany. An Austrian possession, Belfort passed to France by the Peace of Westphalia (1648) and was fortified by Vauban. During the Franco-Prussian War (1870-71) the garrison withstood a siege of 108 days. Partly in acknowledgment of this heroism, the Germans left Belfort and the surrounding territory to France when they annexed the rest of Alsace. The many Alsations who then took refuge in the town contributed significantly to its industrial growth. The siege is commemorated by a huge statue, the *Lion of Belfort*, by Bartholdi.

Belfort, Territory of, department (1968 pop 118,450), E France, in Alsace, on the Swiss border. The city of Belfort is the capital.

Belgae. see GAUL.

Belgaum (bēlgoum'), town (1971 pop 213,830), Karnataka state, SE India. It is an educational and district administrative center and agricultural market that trades in food grains, sugarcane, cotton, tobacco, oilseed, and milk products. Belgaum also has a military cantonment.

Bel Geddes, Norman. see GEDDES, NORMAN BEL.

Belgian Congo: see ZAIRE.

Belgian horse, one of the largest breeds of DRAFT HORSES of pure European descent. It has a long history, antedating the Christian era, but became especially popular during the Middle Ages. In the 15th and 16th cent. the breed was exported from Belgium to many European countries and became popular as a general working horse. It was not imported to the United States until the 1800s and it was slow to gain favor there because of its ungainly appearance. The breed is characterized by a husky, barrel-like appearance and brute strength. It is generally sorrel or chestnut in color, stands just under 17 hands (68 in/170 cm) and weighs over 2,000 pounds (900 kg).

Belgian literature. For literature in Flemish (Dutch), see DUTCH and FLEMISH LITERATURE. The writings of French-speaking Belgians, of whom the chief are MAETERLINCK and VERHAEREN, belong to FRENCH LITERATURE. See also WALLOONS.

Belgian Malinois (mālinwa'), a breed of medium-sized WORKING DOG developed in Belgium at the turn of the 20th cent. It stands from 22 to 26 in (55.9-66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6-27.2 kg). The smooth, straight coat is short except for longer hair around the neck, on the back of the thighs, and on the tail. It is brindled fawn in color with a black mask. One of three closely related types of sheepherding dogs from Belgium, the Malinois is distinguished from the other two, the Belgian sheepdog and the Belgian Tervuren, by coat and color only. In addition to being used for its herding abilities, the Malinois has frequently been trained as a police dog. See DOG.

Belgian sheepdog, sometimes called Groenendael, breed of sturdy WORKING DOG developed from a wide assortment of sheepherding dogs in Belgium in the early 20th cent. It stands from 22 to 26 in (55.9-66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6-27.2 kg). Its long, straight coat is black, sometimes with white markings on the chin, forechest, and feet. As a result of such developments as the widespread use of fencing, the increasing availability of rail transportation, and a decline in the threat of marauding animals, the necessity for sheepherding dogs began to decline in Belgium toward the end of the 19th cent. Dog breeders began to turn their attention to the show ring. Of the widely divergent types of herding dogs in existence, three varieties differing only in coat and color were finally bred true, i.e., the Belgian Malinois, Belgian sheepdog, and Belgian Tervuren. All were shown under the name "Belgian sheepdog" until 1959 when they were designated separate breeds by the American Kennel Club. See DOG.

Belgian Tervuren (tāvūrn'), breed of medium-sized WORKING DOG perfected in Belgium in the early 20th cent. It stands from 22 to 26 in (55.9-66 cm) high at the shoulder and weighs from 50 to 60 lb (22.6-27.2 kg). Its long, straight, dense coat may vary in shade from fawn to russet mahogany, the hair tips are always black. Developed from a widely interbred stock of Belgian sheepherding dogs, the Tervuren emerged as one of several distinct varieties, differing from the Groenendael BELGIAN SHEEPDOG in color only. It is a relatively rare breed in the United States today. See DOG.

Belgium (bēljəm), Flemish *Belgie*, Fr. *La Belgique*, constitutional kingdom (1970 pop 9,694,991), 11,781 sq mi (30,513 sq km), NW Europe. BRUSSELS is the capital. ANTWERP is the chief commercial center and one of the world's great ports. Other important cities are GHENT and LIÈGE. Belgium is bordered on the N by the Netherlands and the North Sea, on the E by West Germany and the Grand Duchy of Luxembourg, and on the W and SW by France. The terrain is low lying except in the Ardennes mts. in the south. Belgium comprises two ethnic and cultural regions, generally called Flanders and Wallonia—Flanders embracing the northern provinces of EAST FLANDERS, WEST FLANDERS, ANTWERP, LIMBURG, and part of BRABANT, and Wallonia comprising the remainder of Brabant, HAINAUT, LIÈGE, LUXEMBOURG, and NAMUR. The dividing line runs roughly east-west just S of Brussels. Flemish (a Dutch dialect) is the official language in Flanders, while French is official in the south. The French-speaking people are now com-

monly called WALLOONS, although the term once referred chiefly to those people in the Liege area who spoke Walloon, a French dialect. Brussels is bilin-

gual, and German is spoken in a small section of Liege prov., notably at Eupen and Malmedy. Belgium is one of the most densely populated and highly industrialized areas in Europe, emphasis is on heavy industry. Coal mining and the production of steel, chemicals, and cement are concentrated in the Sambre and Meuse valleys, in the BORINAGE around Mons, Charleroi, Namur, and Liège, and in the Campine coal basin. Liège is a great steel center. Iron and steel constitute Belgium's largest single export item (in 1972 the country ranked ninth in world production of crude steel). Belgium also has an old, established metal-products industry, manufactures include bridges, heavy machinery, industrial and surgical equipment, motor vehicles, rolling stock, machine tools, and munitions. Shipbuilding is centered in Antwerp. Chemical products include fertilizers, dyes, pharmaceuticals, and plastics, the petrochemical industry, concentrated near the oil refineries of Antwerp, has mushroomed since World War II. Textile production, which began in the Middle Ages, now includes cotton, linen, wool, and synthetic fibers, carpets and blankets are important manufactures. Ghent, KORTRIJK, TOURNAI, and VERVIERS are all textile centers, MECHELEN, BRUGES, and Brussels are celebrated for their lace. Other old and important industries include diamond cutting (Antwerp is the world's largest diamond center), glass production, and the processing of leather and wood. Belgian industry is heavily dependent upon imports for its raw materials. Some iron is mined in the southeast, but most is imported, especially from the Lorraine basin in France and its extension in Luxembourg. Zinc deposits once supported an active nonferrous metal industry, but the deposits have been exhausted, and the industry now utilizes imported materials. Other nonferrous metal products, made from imported raw materials, include copper, lead, and tin. Coal is Belgium's only significant mineral resource, but production has recently declined in favor of other fuels and cheaper imported coal. Native limestone supports the cement industry. Industrial centers are linked with each other and with the main ports of Antwerp and Ghent by the Meuse and Scheldt rivers and their tributaries, by a network of canals (notably the ALBERT CANAL), and by the densest railroad net of continental Europe. In shipping and transit trade Belgium is among the world's leading countries, the economy depends upon its exports. Agriculture, while engaging only a small percent of the working force, is important. Except in the marshy Campine and in the heavily forested Ardennes there is much fertile and well-watered soil. The chief crops are cereals (oats, rye, wheat, barley). Sugar beets, potatoes, and flax are also grown, and there is truck farming near the large cities. Cattle raising and dairying (especially in Flanders) are important. Flowers and chicory, grown as a winter vegetable, are valuable crops. Processed foods include beet sugar, cheese and other dairy items, and canned vegetables. Beer is made from rich hops. Many cities (most notably Bruges and Ghent) have preserved their medieval architecture and art, which attract thousands of tourists annually. The North Sea coast is also popular in summer, but the once fashionable spas in the Ardennes are less frequented now.

The Beginnings of Belgium Belgium takes its name (in general use only since the late 18th cent.) from the Belgae, a people of ancient GAUL. The Roman province of Belgica was much larger than modern Belgium. There the FRANKS first appeared in the 3d cent. A.D. The Carolingian dynasty had its roots at HERSTAL, in Belgium. After the divisions (9th cent.) of Charlemagne's empire Belgium became part of LOTHARINGIA and later of the duchy of Lower Lorraine, which occupied all but the western part of the LOW COUNTRIES. In the 12th cent. Lower Lorraine disintegrated, the duchies of Brabant (see BRABANT, DUCHY OF) and LUXEMBOURG and the bishopric of Liege took its place. The histories of these feudal states and of FLANDERS and Hainaut constitute the medieval history of Belgium. The salient development was the rise of the cities (e.g., Ghent, Bruges, and Ypres) to virtual independence and to economic prosperity through their wool industry and their trade. In the 15th cent. all of present Belgium passed to the dukes of BURGUNDY, who strove to curtail local liberties. At the same time the wool industry declined, mainly because of English competition. With the death (1482) of MARY OF BURGUNDY a period of foreign domination began (see NETHERLANDS, AUSTRIAN AND SPANISH for the period from 1477 to 1794). Belgium was occupied by the French during the FRENCH REVOLUTIONARY WARS and transferred from Austria to France by the Treaty of CAMPO FORMIO (1797). After the defeat (1815) of Napoleon at Waterloo, just S of Brussels, Belgium was given to the newly formed kingdom of the Netherlands (the decision had been made at the Congress of Vienna, see VIENNA, CONGRESS OF). Under King WILLIAM I of the Netherlands, the Belgians resented measures that discriminated against them in favor of the Dutch, especially in the areas of language and religion. A rebellion broke out in Brussels in 1830, and Belgian independence was declared. William I invaded Belgium but withdrew when France and England intervened in 1832. *The Kingdom of Belgium* Belgian independence was approved by the European powers at the London Conference of 1830-31 (see under LONDON CONFERENCE). In 1831, Prince Leopold of Saxe-Coburg-Gotha was chosen king of the Belgians and became LEOPOLD I. A final Dutch-Belgian peace treaty was signed in 1839, and the "perpetual neutrality" of Belgium was guaranteed by the major powers, including Prussia, at the London Conference of 1838-39. The new country was among the first in Europe to industrialize and soon led the continent in the development of railways, coal mining, and engineering. Under the rule (1865-1909) of LEOPOLD II rapid industrialization and colonial expansion, notably in the Congo, were accompanied by labor unrest and by the rise of the Socialist party in opposition to the reactionary and clerical groups. Social conditions improved under ALBERT I (reigned 1909-34), who also granted universal and equal male suffrage (the vote was extended to all women only in 1948). After the outbreak of World War I (Aug., 1914), Germany invaded Belgium in order to attack France by the easiest route, this flagrant violation of Belgian neutrality shocked much of the world and brought Great Britain, as one of Belgium's guarantors, into the war. The unexpected resistance of the Belgians against heavy odds won widespread admiration, and German atrocities in Belgium, publicized by the Allies, played an important part in consolidating U.S. opinion against Germany. All of Belgium except a small strip in West Flanders, which served as a battle front throughout the war (see, e.g., YPRES), was conquered by Oct. 10, 1914, and the people suffered under a harsh occupation regime. The Belgian army, under the personal leadership of Albert I, fought in West Flanders and France throughout the war. Under the Treaty of Versailles after the war, Belgium received the strategically important posts of Eupen, Malmedy, and Moresnet, and a mandate over the northwestern corner of former German East Africa. In World War II, Germany, which in 1937 had guaranteed Belgian neutrality, attacked and occupied Belgium in May, 1940. King LEOPOLD III (reigned 1934-51) surrendered unconditionally on May 28, but the Belgian cabinet, in exile at London, continued to oppose Germany. German occupation inaugurated a reign of terror. Liberation by British and American troops, aided by a Belgian underground army, came in Sept., 1944. The unsuccessful German counteroffensive of Dec., 1944-Jan., 1945 (see BATTLE OF THE BULGE), caused much destruction, adding to damage previously wrought by invasion and by Allied air raids. However, the industrial plant remained relatively intact, enabling the Belgian economy to recover far more rapidly than the

others of Western Europe. The immediate political issue after the war was the return of Leopold III, who was barred from Belgium until July, 1950. Popular discontent following his return led to his abdication (July, 1951) in favor of his eldest son, BAUDOUIN. In 1960 the Belgian Congo was given its independence, with subsequent economic and political turmoil in Belgium, especially after the eruption of violence in the Congo. Long-standing tensions between the Flemish- and French-speaking elements also flared into crises throughout the 1960s, toppling several governments and making it increasingly difficult to form new ones. Sweeping constitutional reform in 1971 in effect federalized the country by creating three regions—Flanders, Wallonia, and Brussels—with a degree of autonomy in each and provisions for equal political power. The country remains culturally and linguistically divided, but unifying factors include the monarchy, which is widely respected and liked, and the Roman Catholic church, which embraces virtually the entire population and plays a powerful part in Belgian life, especially in education. There are universities in Brussels, Ghent, Liege, Louvain, Mons, and Antwerp. The country also has numerous colleges, and schools of music, architecture, and art. An economic union between Belgium and Luxembourg, formed in 1921 (the first of its kind in 20th-century Europe), has been largely superseded by the BENELUX ECONOMIC UNION, which also includes the Netherlands. An early proponent of a united Europe and a firm advocate of collective security, Belgium is headquarters for the European Common Market, for Supreme Headquarters Allied Powers Europe (SHAPE), and for the North Atlantic Treaty Organization (NATO). See Adrien de Meuse, *History of the Belgians* (tr. 1962), Henri Pirenne, *Early Democracies in the Low Countries* (tr. 1963), Theo Aronson, *The Coburgs of Belgium* (1969), F. E. Huggett, *Modern Belgium* (1969), Vernon Mallinson, *Belgium* (1969), Robert Senelle, *The Political, Economic and Social Structures of Belgium* (1970), Margot Lyon, *Belgium* (1971), D. O. Kieft, *Belgium's Return to Neutrality* (1972).

Belgorod (byél'garəd), city (1970 pop. 151,000), capital of Belgorod oblast, Ukraine, S central European USSR, on the Northern Donets River. It is a railway junction and one of the chief centers in the USSR for the manufacture of cement and construction materials. These industries are based on nearby limestone deposits, one of the world's largest iron ore deposits is also located in the area. Known since the 13th cent., Belgorod was the center of the Muscovite southern defense against Crimean Tatar attacks in the 17th cent.

Belgorod-Dnestrovsky (byél'garət-dənyěstrōf'skē), city (1967 est. pop. 29,000), SW European USSR, in the Ukraine, a port at the mouth of the Dnestr River. It is also a rail junction and a trade center for wine. Industries include fishing and fish processing, winemaking, and meat and dairy processing. Founded by Greek colonists in the 6th cent. B.C., it later passed to Rome and Byzantium. In the 9th cent. it was a Slavic trade and political center called Belgorod. The city belonged to the duchy of Galich-Volhynia in the 13th cent., to Genoa in the 14th cent., and to Moldavia in the 15th cent. The Turks acquired it in 1484 and renamed it Akkerman. It was ceded to Russia in the early 19th cent., but was held by Rumania from 1918 to 1940 and by the Germans during World War II. It has been called by its old Slavic name since its liberation by the Soviet army in 1944. The city has medical and pedagogical institutes, a 15th-century church, and the remains of a medieval fortress.

Belgrade (bél'grād), Serbo-Croatian *Beograd*, city (1971 pop. 793,072), capital of Yugoslavia and of its republic of Serbia, at the confluence of the Danube and Sava rivers. It is the commercial, industrial, political, and cultural center of Yugoslavia, as well as a transportation and communications hub. Belgrade's industries include the manufacture of metals, textiles, chemicals, machine tools, and food products. Strategically situated athwart land and river routes between Central Europe and the Balkans, Belgrade has been the target of numerous conquerors throughout history. The city grew around fortresses built by the Celts (3d cent. B.C.), Illyrians, and Romans. Under the name of Singidunum it served as the harbor for much of Rome's Danubian fleet. Captured by the Huns, Goths, Sarmathians, and Gepids, who destroyed its forts, the city was retaken by the Eastern Roman, or Byzantine, emperor Justinian in the 6th cent. A.D. It was held in the late 8th cent. by the Franks and from the 9th to 11th cent. by the Bulgars, who refortified it and named it Beligrad

("white fortress"). It was then ruled again by Byzantium before becoming the capital of Serbia in 1122. Before it fell to the Ottoman sultan Sulayman I in 1521, it was under Hungarian control. The Ottoman Turks made Belgrade their chief strategic fortress in Europe. Although the Austrians stormed it in 1688, 1717, and 1789, they were able to hold on to it only from the Treaty of Passarowitz (1718) until the Treaty of Belgrade (1739). Liberated by Karageorge and Miloš Obrenović during the Serbian uprising of 1806, Belgrade was recaptured by the Turks in 1813. The Turks finally left in 1815 but kept a garrison in the fortress until 1867. Belgrade became the capital of the kingdom of Serbia in 1882. Occupied by Austrian troops during World War I, the city was made the capital of the new kingdom of the Serbs, Croats, and Slovenes (Yugoslavia) from 1918 after the war. During World War II, Belgrade suffered much damage and extreme hardship under the German occupation. It was liberated by Yugoslav partisans, with Soviet aid, in 1944. Belgrade is noted for its fine parks, palaces, museums, and churches. The former Kalemegdan citadel is now a military museum. The 16th-century Barjak Mosque was built by Sulayman I. The city is the home of the Serbian Academy of Sciences, a university (founded 1863), a Roman Catholic archbishop, and an Orthodox Eastern patriarch.

Belgrano, Manuel (manwél' bēlgrā'nō), 1770-1820 Argentine revolutionist. Important as a political figure, he was appointed secretary of the commercial tribunal of Buenos Aires in 1794. He vigorously championed popular education and proposed economic reforms. Belgrano contributed to *Telegraf mercantil*, the first periodical (founded 1801) of the Rio de la Plata, and published (1810-11) *Correo de comercio*. He served under LINIERS against the British invaders (1806-7). A leader in the revolution of May, 1810, he was a member of the first patriot governing junta and commander of the unsuccessful expedition to Paraguay. In 1812 he succeeded Pueyrredon as commander of the Army of the North and won decisive battles at Tucuman (1812) and Salta (1813). Later in 1813 he invaded Upper Peru (now Bolivia), but after defeats at Vilcapugio and Ayohuma he was superseded (1814) by San Martín. In 1815 Belgrano was in Europe on an unsuccessful diplomatic mission. He again commanded the Army of the North from 1816 to 1819.

Belgravia (bēlgrā'vēā), fashionable residential section of Westminster, London, England. Belgravia surrounds stately Belgrave Square and touches Grosvenor Place on the east.

Belial (bē'lēāl), name applied to SATAN.

Belidor, Bernard Forest de (bērnar' fōrē' də bālē-dōr'), 1693-1761, French engineer. He wrote numerous books dealing with mathematics, artillery, and hydraulic, civil, and military engineering. One of his engineering works, a manual of rules and tables, was reprinted until 1830. His four-volume *Architecture hydraulique* (1737-53) was the first work of its kind to apply integral calculus to practical problems, its influence for the next hundred years was international in scope.

belief, in philosophy, commitment to something, involving intellectual assent. Philosophers have disagreed as to whether belief is active or passive. Rene Descartes held that it is a matter of will, while David Hume thought that it was an emotional commitment, and C. S. Peirce considered it a habit of action. Compared to faith and probability, the concept of belief has received little attention from philosophers. See Jaakko Hintikka, *Knowledge and Belief* (1962).

Belinsky, Vissarion Grigoryevich (visāryōn' grīgōr'yāvich byilyin'skē), 1811-48, Russian writer and critic. He was prominent in the group that believed Russia's hope to lie in following European patterns. Under Hegel's influence he condoned czarism and reaction for a time but returned in the 1840s to his early liberalism and repudiated the doctrine of art for art's sake. As critic for four major reviews he became the principal champion of the realistic and socially responsible new Russian literature. His emphasis on the use of literature to express social and political ideas is the basis of present-day Soviet literary criticism. Among the authors whose talents he recognized and encouraged were Gogol, Lermontov, and Dostoyevsky. A selection of his philosophical and sociological works was published in English in 1948. It includes *Letter to Gogol* (1847), a summation of his beliefs. Belinsky lived in profound poverty and died at 37 of tuberculosis. See studies by Herbert Bowman (1954, repr. 1969) and Victor Terras (1973).

Belisarius (bēlīsār'ēās), c 505-565, Byzantine general under JUSTINIAN I. After helping to suppress (532) the dangerous Nika riot (see **BLUES AND GREENS**), he defeated (533-34) the Vandals of Africa, and captured their king. In 535 he was given command of the expedition to recover Italy from the Ostrogoths. He took Naples and Rome (536) and, after some delays occasioned by a conflict of authority with NARSES, captured Milan and Ravenna (540). He fought an indecisive campaign (541-42) against KHOSRU I of Persia, and in 544 was sent back to Italy against the Goths led by TOTILA. Handicapped by Justinian's jealousy and distrust, he could do little more than hold his enemies in check, he was recalled in 548 and replaced by Narses. In 559 he emerged from retirement to drive the Bulgarians from Constantinople. He was accused (562) of a conspiracy and temporarily imprisoned but was shortly restored to favor.

Belitung (bēlēt'ōng), island (1961 pop 102,375), 1,866 sq mi (4,833 sq km), Indonesia, in the Java Sea midway between Sumatra and Borneo. It has valuable tin mines (government-owned), worked chiefly by Chinese labor. Belitung is also known for its pepper. Ceded to the British by the sultan of Palembang in 1812, it later became a Dutch possession. The chief town and port is Tanjungpandan. It was formerly called Billiton.

Belize (bālēz'), city (1970 pop 39,257), capital of British Honduras (Belize), at the mouth of the Belize River, on the Caribbean Sea. The river flows c 180 mi (290 km) generally west and is navigable almost to Guatemala, outlying cays exclude deep-draft vessels from its good harbor. Timber and wood products are exported from Belize city. Fish packing is the main industry. The city was devastated by hurricanes in 1931 and 1961.

Belknap, Jeremy (bēl'nāp), 1744-98, American historian, b Boston. A Congregational minister, he wrote history out of antiquarian interest, but showed great diligence and skill in research and considerable ability in writing. His *History of New Hampshire* (3 vol., 1784-92, repr., 2 vol., 1970) was a model of early local history. He was a leader in the founding (1794) of the Massachusetts Historical Society, the first such organization in the United States.

Belknap, William Worth, 1829-90, U.S. Secretary of War (1869-76), b Newburgh, N.Y. After practicing law in Iowa, he served in the Civil War, was a division commander under Sherman in Georgia and the Carolinas, and became a major general in 1865. An internal revenue collector in Iowa (1865-69), he was made Secretary of War by Grant. In 1876 a political scandal broke when a House committee found evidence that Belknap had indirectly received annual bribes from the trader at an Indian post. Impeachment was unanimously voted. Grant accepted Belknap's resignation. At the Senate trial, the vote was 35 "guilty," 25 "not guilty"—falling short of the two thirds necessary to convict. Of the 25, 22 declared that they voted "not guilty" on the ground that the Senate lacked jurisdiction after Belknap's accepted resignation. He later practiced law in Washington, D.C.

Bell, Alexander Graham, 1847-1922, American scientist, inventor of the telephone, b Edinburgh, Scotland, educated at the Univ of Edinburgh and University College, London, son of Alexander Melville Bell. He worked in London with his father, whose system of visible speech he used in teaching the deaf to talk. In 1870 he went to Canada, and in 1871 he lectured, chiefly to teachers of the deaf, in Boston and other cities. During the next few years he conducted his own school of vocal physiology in Boston, lectured at Boston Univ., and worked on his inventions. His teaching methods were of lasting value in the improvement of education for the deaf. As early as 1865, Bell conceived the idea of transmitting speech by electric waves. In 1875, while he was experimenting with a multiple harmonic telegraph, the principle of transmission and reproduction came to him. By March 10, 1876, his apparatus was so far developed that the first complete sentence transmitted, "Watson, come here, I want you," was distinctly heard by his assistant. The first demonstration took place before the American Academy of Arts and Sciences in Boston on May 10, 1876, and a more significant one, at the Philadelphia Centennial Exposition the same year, introduced the telephone to the world. The Bell Telephone Company was organized in July, 1877. A long period of patent litigation followed in which Bell's claims were completely upheld by the U.S. Supreme Court. With the 50,000 francs awarded him as the Volta Prize for his

invention, he established in Washington, D.C., the Volta Laboratory, where the first successful phonograph record was produced. Bell invented the phonograph, which transmitted speech by light rays, the audiometer, another invention for the deaf, the induction balance, used to locate metallic objects in the human body, and the flat and the cylindrical wax recorders for phonographs. He investigated the nature and causes of deafness and made an elaborate study of its heredity. The magazine *Science*, which became the official organ for the American Association for the Advancement of Science, was founded (1880) largely through his influence. He was president of the National Geographic Society from 1896 to 1904 and was made a regent of the Smithsonian Institution in 1898. After 1895 his interest was occupied largely by aviation. He invented the tetrahedral kite. The Aerial Experiment Association, founded under his patronage in 1907, brought together G.H. Curtiss, F.W. Baldwin, and others, who invented the aileron principle and developed the hydroplane. See biographies by C.D. Mackenzie (1928, repr. 1971) and R.V. Bruce (1973).

Bell, Alexander Melville, 1819-1905, Scottish-American educator, b Edinburgh. Bell worked out a physiological or visible alphabet, with symbols that were intended to represent every sound of the human voice. He taught elocution in Edinburgh (1843-65), lectured at the Univ of London and in Boston, and engaged in the education of deaf-mutes in Washington, D.C. He wrote about education and the science of speech. Alexander Graham Bell was his son.

Bell, Andrew, 1753-1832, British educator, b St Andrews, Scotland. After seven years in Virginia as a tutor, he returned to England, was ordained a deacon, and later (1789) became superintendent of an orphan asylum in Madras, India. Here he developed the MONITORIAL SYSTEM, which he described in a pamphlet, *Experiment in Education*, published upon his return to London (1797). Joseph Lancaster, a Quaker, established a school on similar principles, which was copied by large numbers of nonconformists. Bell organized a system of monitorial schools that taught the principles of the Established Church. See biography by Robert Southey and C.C. Southey (3 vol., 1844), J.M.D. Meiklejohn, *An Old Educational Reformer* (1881).

Bell, Clive, 1881-1964, English critic of art and literature. He was a member of the Bloomsbury group. His works include *Art* (1914), *Since Cézanne* (1922), *Landmarks in Nineteenth-Century Painting* (1927), and *Proust* (1929). Bell's wife Vanessa was the sister of Virginia Woolf. See his *Old Friends* (1956).

Bell, Sir Charles, 1774-1842, Scottish anatomist and surgeon. He became professor of anatomy and surgery at the Royal College of Surgeons, London, in 1824 and was professor of surgery at the Univ of Edinburgh from 1836. He was the first to distinguish between the motor and the sensory functions of the nerves; this work was confirmed and elaborated by Magendie in 1822. Among Bell's works is *The Nervous System of the Human Body* (1830). See his letters (ed. by his wife, 1870), biographies by Edwin Bramwell (1935) and Sir Gordon Gordon-Taylor and E.W. Walls (1958).

Bell, Gertrude Margaret Lowthian, 1868-1926, English traveler and author, one of the builders of modern Iraq, grad Oxford, 1887. From 1899 she journeyed extensively in Persia, Anatolia, and Syria and early in 1914 reached Hail in the Arabian Desert. In World War I she placed her unmatched knowledge of Middle Eastern conditions at the disposal of the British government and in 1915 was appointed to the intelligence service. As liaison officer of the Arab Bureau in Iraq and assistant political officer, her aid was invaluable. She knew and worked with T.E. Lawrence and was largely responsible for the selection of Faisal I as king of Iraq. She founded and directed the national museum of Baghdad. Her writings include *Poems from the Divan of Hafiz* (1897), *The Desert and the Sown* (1907), *Amurath to Amurath* (1911), *Palace and Mosque at Ukhaidir* (1914), *The Arab of Mesopotamia* (1917), and *Persian Pictures* (1928, pub. anonymously as *Safar Nameh*, 1894). See her *Letters* (new ed. 1947), *Earlier Letters* (ed. by Elsa Richmond, 1937), biographies by Josephine Kamm (1956) and Anne Northgrave (1958).

Bell, John, 1797-1869, American statesman, b near Nashville, Tenn. A leading member of the Nashville bar, he served in the U.S. House of Representatives (1827-41), was speaker in 1834, and for a few weeks in 1841 was Secretary of War under President William Henry Harrison. At first a Jacksonian, Bell broke with Jackson in the fight over the Bank of the United

States and ultimately became the chief leader of the Whigs in Tennessee, dominating state politics for nearly two decades. As U.S. Senator (1847-59), he was the leader of the conservative Southern element that, though supporting slavery, placed the Union first. He admitted the right of Congress to prohibit slavery in the territories, supported the Compromise of 1850, objected to the Kansas-Nebraska Bill, and opposed the admission of Kansas under the Le-compton Constitution. In 1860, Bell was the presidential candidate of the moderate CONSTITUTIONAL UNION PARTY and won the electoral votes of Tennessee, Kentucky, and Virginia. The lower South seceded with Lincoln's election, but Bell held Tennessee in the Union until after the firing on Fort Sumter. Bell counseled resistance to the Union invasion, but, disheartened and in ill health, he took no active part in the Civil War. See biography by J.H. Parks (1950).

Bell, John Joy, 1871-1934, Scottish author. He wrote a number of humorous stories and plays, frequently in dialect, of life in Glasgow, but is best remembered for his story *Wee Macgregor* (1902).

Bell, city (1970 pop 21,836), Los Angeles co., S Calif., inc. 1927. It is chiefly residential, with many small businesses and some light manufacturing.

bell, in music, a percussion instrument consisting of a hollow metal vessel, often cup-shaped with an outward-flaring rim, damped at one end and set into vibration by a blow from a clapper within or from a hammer without. A portable set of bells, usually not more than 15 in number, tuned to the intervals of the major scale, is today called a chime. A carillon is a larger stationary set with chromatic intervals and as many as 70 bells, which are played from a keyboard. Harmonies and effects of shading, not possible on a chime, are part of the art of carillon playing—an art for which there is a school in Belgium. The bells of a carillon must be tuned with more accuracy than those of a chime, the best modern craftsmen can tune the fundamental (known as the hum note), the octave (known as the strike note), the twelfth, and the fifteenth with perfect accuracy. An interesting and unexplained illusion manifest in bells is their apparent pitch (strike note); the pitch the observer hears can often be scientifically proved to be different from any of the pitches produced by the bell. Bells have been known in all metal-using cultures and civilizations and have been used in connection with all major religions except Muhammadanism. Many legends and traditions are associated with bells, which have been used for signaling, in dancing, and as protective charms. Apparently originating in Asia, bells were early employed for religious purposes and by the 6th cent. were used in Christianity. Early bells were baptized, in the belief that dedication to Christian service gave power to ward off lightning. A set of bells tuned to a musical scale and called *cymbala* were used in the Middle Ages for musical instruction and to accompany chant in churches. In the 13th cent., tower bells were attached to clocklike mechanisms to strike the hours, the carillon developed out of the Belgian *voorslag* of the 15th cent., a set of bells attached to a large tower clock that played a tune before striking the hour. In the Low Countries, where the making and playing of carillons centered, the principal cities vied over the size and complexity of their instruments. A peak in carillon making was reached in the work of the brothers Frans (1609-67) and Pieter (1619-80) Hemony of Amsterdam. The carillonneur's art flourished until the 18th cent., declining during the French Revolution, when many carillons were melted to make armaments. In England carillon playing was overshadowed by the science of change ringing, which became popular in the 17th cent. In this practice a group of ringers, using a peal (or set) of bells tuned to the diatonic scale, ring the bells in various stated

Bell

orders, not repeating any order. The result is a complex but not melodious sound. The bell is swung full circle, being sounded by a clapper within, thus giving a more resonant sound than in carillon playing, wherein a hammer strikes a stationary bell. Toward the end of the 19th cent. English bellmakers rediscovered the secrets of tuning that had been used by the 17th-century Dutch and Flemish craftsmen. This, with improvements in methods of striking, in placement of the bells, and in action of the keyboard, has made 20th-century carillons the finest in existence. Active in a renaissance of carillon music was Jef Denijn (1862-1941), carillonneur of Mechlin. Since World War I many carillons have been installed in the United States, outstanding is that of the Riverside Church, New York (1930), whose 20.5-ton bourdon bell is the largest ever cast in England. The largest bell in the world was the Great Bell of Moscow, cast in 1734, it was broken in a fire in 1737. See R. P. Price, *The Carillon* (1933), P. D. Peery, *Chimes and Electric Carillons* (1948), W. G. Wilson, *Change Ringing* (1965), S. N. Coleman, *Bells* (1928, repr. 1971).

Bella, Stefano della (stāfa'nō dēl'la bēl'la), 1610-64, Italian engraver, b. Florence. First copying the manner of Jacques Callot, his style changed somewhat when he traveled to Rome, Paris, and the Netherlands. He was adept at landscapes, battle pieces, and animal portraits, although most of his numerous works were designs for festivities and ballets. French theatrical design was considerably influenced by his light, sophisticated style. His drawings are well represented in the Royal Library at Windsor.

belladonna (bēlādōn'ə) or **deadly nightshade**, poisonous perennial plant, *Atropa belladonna*, of the family Solanaceae (NIGHTSHADE family), which also includes the potato. Native to Europe and now grown in the United States, the plant has reddish, bell-shaped flowers and shining black berries. Extracts of its leaves and fleshy roots act to dilate the pupils of the eye and were once used cosmetically by women to achieve this effect. (The name *belladonna* is from the Italian meaning "beautiful lady.") The plant extract contains the alkaloids ATROPINE, SCOPOLAMINE, and hyoscyamine. Belladonna has also been used since ancient times as a poison and as a sedative, in medieval Europe large doses were used by witchcraft and devil-worship cults to produce hallucinogenic effects (see PSYCHOTOMIMETIC DRUGS). Other species of the potato family such as henbane (*Hyoscyamus niger*), mandrake (*Mandragora officinarum*), and Jimson weed (*Datura stramonium*) also contain one or more of the alkaloids present in belladonna. The active substances act physiologically to depress the parasympathetic NERVOUS SYSTEM. Belladonna is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Polemoniales, family Solanaceae.

belladonna lily: see AMARYLLIS

Bellaire (bēl'ār'), city (1970 pop. 19,009), Harris co., SE Texas, inc. 1918. It is a suburb of Houston.

Bellamy, Edward (bēl'āmē), 1850-98, American author, b. Chicopee Falls (now part of Chicopee), Mass. After being admitted to the bar he tried his hand at journalism and contributed short stories of genuine charm to various magazines. These were later collected as *The Blind Man's World* and *Other Stories* (1898). His novels—*Dr. Heidenhoff's Process* (1880), *Miss Ludington's Sister* (1884), and *The Duke of Stockbridge* (1900)—were followed by *Looking Backward, 2000-1887* (1888), which overshadowed his other work and brought him fame. This utopian romance pictured the world in A.D. 2000 under a system of state socialism. Much of the book's appeal lies in its unpretentious style and its vivid picture of the imagined society. The work sold over a million copies in the next few years and resulted in the formation of "Nationalist" clubs throughout the nation and the founding of the *Nationalist* monthly (1888-91). Bellamy himself founded and edited the *New Nation* (1891-94), a weekly. *Equality*, a sequel to *Looking Backward*, appeared in 1897. See biographies by S. E. Bowman (1958) and A. E. Morgan (1944, repr. 1974).

Bellamy, Joseph, 1719-90, New England clergyman, b. Cheshire, Conn. A follower of Jonathan Edwards and a powerful revivalist of the GREAT AWAKENING, he preached in Bethlelem, Conn., for 52 years. Bellamy wrote *True Religion Delineated* (1750) and pamphlets in opposition to the Half-Way Covenant.

Bellarmino, Saint Robert (bēlār'mīn), 1542-1621, Italian theologian, cardinal, Doctor of the Church, and a principal influence in the Catholic REFORMATION. His full name was Roberto Francesco Romolo

Bellarmino. He joined the Jesuits (1560) and taught at Louvain (1569-76) and at the Roman College (1576). In 1599 he was made cardinal and from 1601 to 1605 he was archbishop of Capua. His theological works (in Latin) were polemical and widely noticed. One, the most lucid modern exposition of Catholic doctrine, called forth many Protestant replies. In another, a reply to the work of William Barclay, Cardinal Bellarmine uses the analogy, taken from THOMAS AQUINAS, of body and soul to show the relative interdependence and importance of the state and the church. As Jesuits nearly always were, Cardinal Bellarmine was uncompromisingly ultramontane (see ULTRAMONTANISM). He was an admirer of Galileo and a moderating influence at his trial. His devotional works have been translated frequently into English. Pope Pius XI canonized him in 1930 and declared him a Doctor of the Church the following year. Feast May 13. See biography by James Brodrick (rev. ed. 1966).

Bellary (bālār'ē), town (1971 pop. 125,127), Karnataka state, SE India. It is a district administrative center. Iron and manganese deposits are nearby. Its manufactures include cotton textiles, brassware, and agricultural implements. Until the 16th cent. it was the center of the Hindu kingdom of Vijayanagar.

Bellatrix, bright star in the constellation ORION, Bayer designation Gamma Orionis, 1970 position R.A. 5^h23^m5^s, Dec. +6°19'. A bluish-white giant of SPECTRAL CLASS B2 III, its apparent MAGNITUDE of 1.63 makes it one of the 25 brightest stars in the sky. Its distance from the earth is about 500 light-years. Bellatrix marks the left shoulder of Orion. The name is Latin for "female warrior."

Bellay, Du': see DU BELLAY

bellbird: see COTINGA

Belle-Alliance (bēl'-alyāns'), village, central Belgium, near Waterloo. The battle of Waterloo (see WATERLOO CAMPAIGN), where Napoleon I was defeated in June, 1815, is sometimes known, particularly in Germany, as the battle of Belle-Alliance.

Belleau, Remy (rāmē' bēlō'), 1528-77, French poet of the Pleiade (see under PLEIAD). His *Bergerie* (1565), a collection of poems in a framework of prose, celebrates nature in sonnets, odes, eclogues, and hymns.

Belleau Wood (bēl'ō, bēlō'), forested area in Aisne dept., N France, E of Château-Thierry. The scene of a victory over the Germans after hard fighting (June 6-25, 1918), involving chiefly U.S. troops, it was dedicated in 1923 as a permanent memorial to the American war dead.

Belleek ware (bālēk'), pottery with a highly lustrous and often iridescent glaze. It is made at Belleek, Co. Fermanagh, Northern Ireland.

Bellefontaine (bēlfōn'tīn, -fōn'tīn), city (1970 pop. 11,255), seat of Logan co., W central Ohio, settled 1818, inc. 1835. It is a trade and rail center for a farm area. Its industries include printing and the manufacture of automobile bearings, small motors, tools, and electrical equipment. East of the city is Campbell Hill, the highest point in Ohio (1,550 ft/472 m).

Bellefontaine Neighbors, city (1970 pop. 13,987), St. Louis co., E Mo., a residential suburb of St. Louis, founded c. 1819, inc. 1950.

Belle Fourche (bēl'fōʃh), river, c. 290 mi (470 km) long, rising in NE Wyo., flowing NE and then E to the Cheyenne River in W 5 Dak. The Belle Fourche project provides flood control and recreation facilities as well as irrigating c. 57,000 acres (23,070 hectares) in South Dakota. DEVILS TOWER NATIONAL MONUMENT overlooks the Belle Fourche River in Wyoming.

Bellegarde, Heinrich, Count von (hīn'rīkh, fən bēlgard'), 1756-1845, Austrian soldier and statesman. He fought against the French in the French Revolutionary and Napoleonic Wars in Germany, Italy, and Switzerland, rising to general of cavalry in 1800. In 1806 he was made field marshal. From 1809 to 1813, Bellegarde was governor general of Galicia. He commanded (1813-15) Austria's armies in Italy and also served (1814-15) as governor of Lombardy and Venetia. From 1820 to 1825 he was president of the Austrian council of war and minister of state.

Belle Glade, city (1970 pop. 15,949), Palm Beach co., SE Fla., near the southern tip of Lake Okeechobee, inc. 1928. Belle Glade is a trade and processing center for a truck farm, sugarcane, and cattle area. An agricultural experiment station is nearby.

Belle-Isle, Charles Louis Auguste Fouquet, duc de (sharl lwē ōgust' fōōkă' duk də bēl-ēl'), 1684-1761, marshal of France and diplomat, grandson of Nicolas Fouquet. His support of the claims of

Charles of Bavaria (Holy Roman Emperor Charles VII) was in part responsible for France's entry into the War of the AUSTRIAN SUCCESSION. The war's outcome made him unpopular, although his masterly retreat from Prague had saved the French army from surrender (1742-43). As minister of war (1758-61) he did much to reorganize the army.

Belle Isle, Strait of (bēl'il'), c. 35 mi (60 km) long and from 10 to 15 mi (16-24 km) wide, between the island of Newfoundland and Labrador, Canada. The northern entrance to the Gulf of St. Lawrence, it is deep and free of rocks and shoals, ice blocks it from November to June. There is a strong tidal current. The tiny rock island Belle Isle (700 ft/213 m high), at the Atlantic entrance, has a lighthouse and is the first land sighted by ships from Europe.

Bellerophon (bēlēr'āfōn, -fən), in Greek mythology, son of Glaucus, originally called Hippocoon. He changed his name after he murdered a countryman and was forced to flee to exile. He became a suppliant at the court of King Proetus of Argos, whose wife fell in love with him. When he rejected her advances, she vengefully told Proetus that Bellerophon had tried to seduce her. Proetus sent him to Iobates, king of Lycia, with a sealed message requesting the death of its bearer. Iobates gave Bellerophon the seemingly impossible task of killing the Chimera, a beast that was part lion, part goat, part dragon. Bellerophon, however, with the aid of the flying horse Pegasus, killed the monster. Iobates sent him on other difficult missions, but finally decided that Bellerophon was favored by the gods and gave him his daughter in marriage. At the height of his prosperity, however, Bellerophon tried to ride Pegasus to the throne of the gods atop Mt. Olympus, and Zeus in anger caused Pegasus to throw him to the ground. Bellerophon then wandered alone, crippled, blind, and humiliated, until he died.

belles-lettres [from the French for literature, literally "fine letters"], literature that is appreciated for the beauty, artistry, and originality of its style and tone rather than for its ideas and informational content. Earlier the term was synonymous with *literature*, referring particularly to fiction, poetry, drama, criticism, and essays. However, *belles-lettres literature* has come to mean light, artificial writing and essays extolling the beauties of literature.

Belleville, city (1971 pop. 35,128), SE Ont., Canada, on Lake Ontario. Machinery, automotive accessories, optical lenses, and cheddar cheese are made there. Belleville is the seat of Albert College and the Ontario School for the Deaf.

Belleville 1 City (1970 pop. 41,699), seat of St. Clair co., SW Ill., inc. 1819. Coal mines there produce more than 5 million tons a year. Belleville also has farm-related industries and a great variety of manufactures, including mining equipment, industrial furnaces, machinery, dies and castings, beer, stoves, and clothing. It is the seat of a junior college. Scott Air Force Base (est. 1917 for flight instruction, now headquarters of the Military Air Transport Service) is to the northeast. 2 Town (1970 pop. 34,643), Essex co., NE N.J., on the Passaic River, settled c. 1680, set off from Newark 1839, inc. 1910. Electrical equipment, fire extinguishers, water pumps, and precision instruments are among its manufactures. John Stevens's boat, built there in 1798 for the run to New York, contained one of the country's first steam engines.

Bellevue (bēl'vyōō) 1 City (1970 pop. 19,449), Sarpy co., E Nebr., a suburb of Omaha, on the Missouri River, inc. 1855. It has a meat-packing plant. The oldest city in the state, Bellevue was a trading post in the early 1800s and the site of a Presbyterian Indian mission in the 1840s and '50s. The Strategic Aerospace Museum is in the city. 2 Borough (1970 pop. 11,586), Allegheny co., SW Pa., a residential suburb of Pittsburgh, on the Ohio River, settled 1802, inc. 1867. 3 City (1970 pop. 61,102), King co., W Wash., opposite Seattle on Lake Washington, inc. 1953. Concrete and gravel, control systems, food products, and electronics parts are manufactured there. It is connected with Seattle by two four-lane floating bridges. A junior college is there.

Bellevue Hospital, municipal, in New York City. Bellevue developed from a "Publick Workhouse and House of Correction" commissioned in 1734. The establishment changed sites several times before 1811, when the site upon which it now stands was purchased. In 1860 the Bellevue Hospital Medical College, the first of its kind in the United States, was founded. The first nurses' training school in the United States was established there in 1873 and grew into one of the best-known nursing schools in

the nation. The largest U.S. city hospital, Bellevue is a noted psychiatric therapy and research center. Other programs of note include radiation therapy and physical and occupational rehabilitation programs. Until 1968, Bellevue was affiliated with the medical schools of Columbia Univ. (from 1882), New York Univ. (1882), and Cornell Univ. (1898), in that year Columbia and Cornell withdrew, leaving the hospital in sole affiliation with the New York Univ. Medical Center. See Page Cooper, *The Bellevue Story* (1948).

Bellflower, city (1970 pop. 51,454), Los Angeles co., S Calif.; inc. 1957. It is mainly residential with some light industry.

bellflower or **bluebell**, name commonly used as a comprehensive term for members of the Campanulaceae, a family of chiefly herbaceous annuals or perennials of wide distribution, characteristically found on dry slopes in temperate and subtropical areas. Members of the largest genus (*Campanula*), predominantly of the Northern Hemisphere, are called campanulas, bellflowers (for the delicate, bell-shaped blossoms), or bluebells (for the prevailing color of the flowers). Among the most popular cultivated species are the harebell, or bluebell of Scotland (*C. rotundifolia*), native to Eurasia and North America, and the Canterbury bells (*C. medium*), native to S. Europe. (The names bluebell and harebell are also used for *Scilla nonscripta* of the lily family.) Venus's looking-glass (genus *Specularia*) is found in the Mediterranean area and throughout North America. The giant bellflower (*Ostrowskya magnifica*), native to central Asia, attains a height of 8 ft (2.4 m); it is cultivated in the Puget Sound region. The family Lobeliaceae (lobelia family) is sometimes grouped with the bellflower family as a single taxonomic unit. The bellflower family is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Campaniales.

Bell Gardens, city (1970 pop. 29,308), Los Angeles co., S Calif., a suburb of Los Angeles, inc. 1961. Manufactures include paper products and electrical equipment.

Belli, Giuseppe Gioacchino (jōōzēp'pā jōāk-kē'nō bēl'ī), 1791-1863, Italian poet. Born in Rome into poverty, Belli earned his living as a government clerk. He drew from his knowledge of plebeian life in writing more than two thousand humorous and satirical sonnets. Belli described the vast panorama of Roman society in colorful dialect. His poetry is noted for its vigorous realism. Little known outside Rome, Belli's work was not published during his lifetime.

belligerency (balī'arənsē), in international law, status of parties legally at war. Belligerency exists in a war between nations or in a civil war if the established government treats the insurgent force as if it were a sovereign power. The rules of international law as formulated at the HAGUE CONFERENCES require that belligerency between states be preceded by an absolute declaration of war or an ultimatum prescribing the terms on which the issuing power will refrain from war. When belligerency has been established, the relations between the warring powers are determined by the laws of war (see WAR LAWS). In civil wars if the insurgent force is granted belligerency rights, neutral nations generally abstain from supplying or helping either the established government or its opponent. An example of this practice is found in the NEUTRALITY proclamations issued by European powers in the American Civil War. Neutral nations may refuse to recognize the belligerency of an insurgent, however, and in this way preserve the right to claim any damages that may accrue against the established government for having failed to suppress the rebellion without delay. Under its charter, the United Nations recognizes as legitimate only wars that are fought in self-defense, or for the collective enforcement of the UN Charter. All other wars are regarded as illegal acts of aggression. The United Nations also considers civil wars as threatening to international peace, and, when possible, takes measures to end such hostilities (e.g., Kashmir, Palestine, Korea, Congo, Cyprus). See W. L. Gould, *An Introduction to International Law* (1957).

Bellingham 1. Town (1970 pop. 13,967), Norfolk co., S Mass., in a farm region, inc. 1719. 2. City (1970 pop. 39,375), seat of Whatcom co., NW Wash., a port of entry on Bellingham Bay, one of the best landlocked harbors on the Pacific coast, near Canada, inc. 1904. It is an important shipping point for lumber, pulp, paper, and canned and frozen fruit. Settled in 1852 as Whatcom, it merged with three adjoining towns to form Bellingham in 1903. Western Washington State College, Bellingham Technical

School, and Whatcom Museum of History and Art are in the city, which also has many scenic parks. An Indian reservation is nearby, and Moran State Park is on Orcas Island in Bellingham Bay.

Bellini (bēl-lē'nē), illustrious family of Venetian painters of the Renaissance. **Jacopo Bellini** (yā'-kōpō), c. 1400-1470, was a pupil of Gentile da Fabriano. He worked in Padua, Verona, Ferrara, and Venice. Many of his greatest paintings, including the enormous *Crucifixion* for the Cathedral of Verona, have disappeared. Several of his Madonnas (Uffizi, Louvre, Academy, Venice) are still extant. Jacopo's sketches in two notebooks (Louvre and British Mus.) are his most important legacy. They reveal a variety of interests, including problems of perspective, landscapes, and antiquity. His son **Gentile Bellini** (jāntē'lā), 1429-1507, studied with him and with Mantegna, working in Padua and then in Venice. He excelled in portraiture and in depicting ceremonial processions. His paintings, such as *The Procession in the Piazza of San Marco* and *The Miracle of the True Cross* (both Academy, Venice), are valued for their faithful representation of contemporary Venetian life. In 1479 Gentile was sent by the state to the court of Muhammad II in Constantinople. Subsequently an Oriental flavor appeared in several of his paintings, including the portrait of Muhammad II (National Gall., London), the portrait of a Turkish artist (Gardner Mus., Boston), and *St. Mark Preaching at Alexandria* (Brera, Milan). The last was completed by his brother, **Giovanni Bellini** (jōvān'nē), c. 1430-1516, who was first active in Padua where he worked with his father and brother. Also influenced by Mantegna, who became his brother-in-law in 1454, Giovanni painted the *Agony in the Garden* (National Gall., London), the *Crucifixion* (Correio Mus., Venice), and several Madonnas (Philadelphia Mus. and Metropolitan Mus.). Whereas Mantegna and Jacopo and Gentile Bellini were known chiefly as admirable draftsmen, Giovanni developed another style. His sumptuous coloring and fluent, atmospheric landscapes had a great effect upon Venetian painting, especially upon his pupils Giorgione and Titian. He created several imposing altarpieces, best known are those of the Frari and San Zaccaria in Venice and the *St. Job* (now in the Academy, Venice). Other examples of his art are several fine portraits such as the *Doge Loredano* (National Gall., London). He painted *St. Francis in Ecstasy* (Frick Coll., New York City) and *St. Jerome* (National Gall. of Art, Washington, D.C.), as well as some allegorical fantasies such as the *Restello* series (Academy, Venice). He also created mythological scenes, including *The Myth of Orpheus* and *The Feast of the Gods* (both National Gall. of Art, Washington, D.C.). The zestful *Feast*, one of his last pictures, was painted in 1514 for Isabella d'Este, with finishing touches added by Titian. See Giles Robertson, *Giovanni Bellini* (1968). Hans Tietze, *The Drawings of the Venetian Painters* (1944, repr. 1970).

Bellini, Vincenzo (vēnchān'tsō bēl-lē'nē), 1801-35, Italian opera composer. He acquired his musical training from his grandfather and father, and began composing religious and secular music in his childhood. His first opera, *Adelson e Salvini*, was successfully performed in 1825. His most celebrated works are the operas *La Sonnambula* and *Norma* (both 1831). In their profusely melodic style they exemplify the bel canto tradition of the 18th cent., and their roles demand great virtuosity of the singers. Bellini's last opera, *I Puritani* (1835), was influenced by the dramatic style of French grand opera.

Bellinzona (bēl-lēntō'nā), town (1970 pop. 16,979), capital of Ticino canton, S. Switzerland, on the Ticino River, near the Italian border. It is a picturesque old town and a hub of transalpine traffic. Beverages and linoleum are produced. Possibly a Roman settlement, Bellinzona belonged at times to Lombardy, Como, Milan, France, and the Four Forest Cantons. In 1798 it became the capital of the Bellinzona canton under the HELVETIC REPUBLIC and the capital of Ticino in 1803. The town is dominated by three castles (13th-15th cent.) of the dukes of Milan.

Bell Island, island (1971 pop. 658), SE N.F., Canada, in Conception Bay. The island is 6 mi (9.7 km) long and 3 mi (4.8 km) wide. Its famous undersea iron mines were closed in 1966 after having been worked for 72 years.

Bellman, Carl Michael (mē'kāl bēl'mān), 1740-95, Swedish poet, protégé of Gustavus III. His early poetry was chiefly religious. His dithyrambic odes in *Fredmans Epistlar* (1790) and *Fredmans Sångar* (1791) include bacchanals, pastorals, and comic pieces. Sometimes Bellman wrote music for his

verse, but more often he borrowed French melodies and music from contemporary plays. See H. W. Van Loon and Grace Castagnetta, *The Last of the Troubadours* (1939).

Bellmawr (bēlmār'), residential borough (1970 pop. 15,618), Camden co., SW N.J., inc. 1926.

bell metal: see BRONZE.

Bellmore, uninc. residential town (1970 pop. 18,431), Nassau co., SE N.Y., on SW Long Island.

Bello, Andrés (āndrās' bā'yō), 1781-1865, South American intellectual leader, b. Venezuela. In 1810 he was sent with Bolívar on a mission to London, where he remained for 19 years as a diplomat, teacher, and writer. Politically, he was influenced by Jeremy Bentham. He reflected a new attitude in Hispanic-American letters, initiating the movement for intellectual independence from Europe. Called to a governmental post in Chile, he soon became a leader in Chilean education and reorganized the university at Santiago, becoming (1843) its rector. Many of his learned works, such as *Gramática de la lengua castellana* (1847) and *Principios de derecho internacional* (1844, revised from an earlier work), became textbooks, and he was author of a code of civil law for Chile. He wrote many poems in the neoclassical style.

Belloc, Hilaire (Joseph Hilaire Pierre Belloc) (bēl'ōk), 1870-1953, English author, b. France. He became a British subject in 1902, and from 1906 to 1910 was a Liberal member of Parliament for South Suffolk. Poet, essayist, satirist, and historian, he wrote from the Roman Catholic viewpoint. Among his works are *The Bad Child's Book of Beasts* (1896), *The Path to Rome* (1902), *Marie Antoinette* (1910), *The Jews* (1922), *The Cruise of the Nona* (1925), and *Napoleon* (1922). He was a close friend of G. K. Chesterton and with him founded the *New Witness*, a weekly political newspaper. Christened "the Chesterbelloc" by G. B. Shaw, the two were the inventors and propagators of distributism, a medieval, anticapitalist, and anti-Fabian socialist philosophy.

Bellmont, Richard Coote, earl of, 1636-1701, colonial governor of New York, Massachusetts, and New Hampshire, b. Ireland. He arrived (1698) in New York at a time when a more unified administration of colonial affairs was being attempted. His administration was uneventful, but his endeavors to enforce the trade laws and to suppress piracy brought him the enmity of the aristocratic party in New York. He was noted for his arrest of William Kidd, whom he had originally commissioned as a pirate hunter.

Bellona: see MARS.

Bellotto, Bernardo (bērnār'dō bāl-lōt'ō), 1720-80, Venetian architectural and landscape painter, also called Canaletto, after his uncle and teacher CANALETO. His paintings, at first resembling those of his master, are numerous and may be seen in most of the leading European museums. They usually depict scenes in the cities in which Bellotto resided. In 1747 he was appointed court painter at Dresden and in 1770 painter to Stanislaus II at Warsaw. See Stefan Kozakiewicz, *Bernardo Bellotto* (tr., 2 vol. 1972).

Bellow, Saul, 1915-, American novelist, b. Lachine, Que., grad. Northwestern Univ., 1937. Born of Russian-Jewish parents, he grew up in the slums of Montreal and Chicago. His writings, reflecting an intellectual and moral approach to life, are marked by a concern for the struggles of the individual in an indifferent society. His best-known novels include *The Adventures of Augie March* (1953), *Herzog* (1964), and *Mr. Sammler's Planet* (1970). Among his other works are the novels *Dangling Man* (1944), *The Victim* (1947), *Seize the Day* (1956), *Henderson the Rain King* (1959), and a play, *The Last Analysis* (1964). See studies by K. M. Opdahl (1967), J. J. Clayton (1968), and Irving Malin (1969).

Bellows, George Wesley, 1882-1925, American painter, draftsman, and lithographer, b. Columbus, Ohio, son of an architect and builder. In his senior year he left Ohio State Univ. to study painting under Robert Henri in New York City. Bellows never visited Europe and seemed uninfluenced by the currents affecting his European contemporaries, but he actively supported independent art movements in New York City. His work has a direct, self-conscious realism and has survived because of its humanity and sincere conviction. *Forty-two Kids* (Corcoran Gall., Washington, D.C.), *Up the River* (Metropolitan Mus.), *Stag at Sharkey's* (Mus. of Art, Cleveland), and a portrait of the artist's mother (Art Inst., Chicago) are characteristic paintings. Bellows revived lithography in the United States, and his prints are as important as his paintings. *Billy Sunday*, *Dance in a Mad House*, and *Dempsey and Firpo* are

American classics. He was a noted teacher at the Art Students League, New York City. See collection of his lithographs by Emma S. Bellows (1927), studies by Peyton Boswell, Jr. (1942), C. H. Morgan (1965), and M. S. Young (1973).

Bellows, Henry Whitney, 1814-82, American clergyman, b. Boston. From 1839 until his death he was pastor of the First Congregational Society, Unitarian (later Church of All Souls) in New York City. Bellows organized and administered the U.S. Sanitary Commission, which served the sick and wounded of the Civil War. He was one of the founders of Antioch College. Among his books are *The Treatment of Social Diseases* (1857) and *Restatements of Christian Doctrine* (1860).

bellows, expandable, gas-tight chamber used to pump or store a gas. One of the simplest and most familiar types of bellows is the manual one used for providing a forced draft to a fire. The expandable chamber consists of a leather bag with pleated sides. The bag is fixed between handles in such a way that they can be used to make it expand and contract. The inlet and outlet vents are provided with valves so that air must enter through the first and leave through the second. The device thus comprises a simple air pump. One of the major uses of the bellows has been to provide a draft for fires that are used to help extract a metal from its ore. In a device such as an aneroid barometer a small bellows is filled with a known amount of gas that expands and contracts in response to changes in external pressure. This small bellows is coupled to some form of indicating or recording device. Another use of the bellows has been to provide wind for such musical instruments as the accordion and older pipe organs.

Belluno (bĕl-lōō'nō), city (1971 pop. 34,520), capital of Belluno prov., Venetia, NE Italy, on the Piave River at the foot of the Dolomites. It is an agricultural and manufacturing center. A Roman town, it later belonged to various lords and was a free commune before voluntarily submitting to Venetian rule (1404-1797). The city has a 16th-century cathedral with a beautiful baroque bell tower and a Renaissance city hall.

Belluschi, Pietro (pyĕ'trō bālōō'skĕ), 1899-, Italian-American civil engineer, designer, and architect. Belluschi served as dean and professor at the Massachusetts Institute of Technology's school of architecture and planning (1951-65). He has designed numerous residential and office buildings, including the Equitable Building in Portland, Ore. (1948) and the Juilliard School of Music, part of the LINCOLN CENTER FOR THE PERFORMING ARTS in New York City. The latter reveals an interesting use of dark glass.

Bellville, town (1970 pop. 48,494), Cape Prov., 5 South Africa, a suburb of Cape Town. Situated in a major wheat-growing region, the city ships wheat and manufactures processed lumber and synthetic textiles. Bellville was founded in 1861 and named for Charles Bell, surveyor general of Cape Colony (1848-72). The Univ. of the Western Cape and Peninsula Technical College there are primarily for Coloured students.

Bellwood, village (1970 pop. 22,096), Cook co., NE Ill., inc. 1900. Among its manufactures are electrical equipment and metal and asphalt products.

Belmondo, Jean-Paul (zhaN-pōl bĕlmōNdō'), 1933-, French film actor, b. Neuilly-sur-Seine. He was an amateur boxer before turning to acting. Belmondo first gained fame in *Breathless* (1960), playing a restless, flippant young hoodlum. His other films include *Moderato Cantabile* (1960), *That Man from Rio* (1964), *Pierrot le Fou* (1965), *The Mississippi* (1968), *Borsolino* (1970), and *Stavisky* (1974).

Belmont. 1 City (1970 pop. 23,667), San Mateo co., W Calif., a residential suburb midway between San Francisco and San Jose, laid out 1851, inc. 1926. The College of Notre Dame (est. 1851) is there. 2 Town (1970 pop. 28,285), Middlesex co., E Mass., a residential suburb of Boston, settled 1636, inc. 1859. James Russell Lowell often visited the region.

Belmonte, Juan (hwan bĕlmōn'tā), 1892-1962, Spanish matador, b. Seville. He is generally considered the greatest matador of all time, as remarkable for the poetry of his motion in the bullfight as for his speed and dexterity. He is said to have "invented" modern bullfighting with his daring, revolutionary style, which kept him almost constantly within a few inches of the bull. Between 1913 and 1936, when he finally retired (he had retired twice before, in 1922 and 1934), he was gored and slashed innumerable times. In 1919 he fought 109 corridas, a record number. His years of rivalry (1914-20) with the great JOSÉ LITO, known as the Golden Age of Bull-

fighting, ended with José Lito's fatal goring. See his autobiography (as told to Manuel Chaves Nogales, tr. 1937), biography by Henry P. B. Baerlein (1934).

Belo Horizonte (bāl'ōōrēzōN'tī) [Port. = beautiful horizon], city (1970 pop. 1,235,001), capital of Minas Gerais state, E Brazil. The distributing and processing center of a rich agricultural and mining region, Belo Horizonte is the nucleus of a burgeoning industrial complex, its chief manufactures are steel, steel products, and textiles. Gold, manganese, and precious stones (including diamonds) of the surrounding region are processed in the city. Belo Horizonte is also a transportation hub, with direct highway connections with Brasília, São Paulo, and Rio de Janeiro. One of the most important inland cities of the republic, it was Brazil's first planned metropolis and was built (1895-97) to replace Ouro Preto as the state capital. With its wide, tree-lined avenues, skyscrapers, and spacious parks, and with its beautiful surroundings and bracing climate, Belo Horizonte is a fashionable resort. It is also a leading cultural center, with a historical museum, three universities, and numerous libraries and sports stadiums. The Chapel of São Francisco, with paintings by Cândido Portinari, is famous.

Beloit (bĕlōit'), city (1970 pop. 35,729), Rock co., 5 Wis., on the Rock River, inc. 1846. It lies in an agricultural area. Beloit's manufactures include shoes, papermaking machinery, diesel engines, desalinization equipment, electrical equipment, and pumps. A trading post was established on the site in 1824 for trade with the Winnebago Indians, and in 1837 the first permanent settlers arrived from New England. Beloit College, founded in 1846, is in the city. Roy Chapman Andrews, the U.S. naturalist and explorer, was born in Beloit.

Belon, Pierre (pyĕr bālōN'), 1517-64, French naturalist. Besides an account of his travels in the Middle East, he wrote monographs on fishes and other aquatic animals, on conifers, and on birds. In *L'Histoire des oyseaux* (1555) his comparison of the skeletons of birds and man foreshadows comparative anatomy.

Belopolsky, Aristarkh Apollonovich (ārī'stārkh āpālōn'āvich byalōpōl'skĕ), 1854-1934, Russian astrophysicist, grad. Univ. of Moscow (1877). He worked at the Moscow Observatory and from 1888 at the Pulkovo Observatory, where he became vice director in 1908. He was among the first Russians to study the sun and stars spectroscopically. He discovered important features of pulsating stars and studied the rotation of Jupiter and of Saturn's rings. A tireless observer, he determined the nature of various binary star systems and the radial velocities of many stars.

Beloretsk (byĕlōrĕtsk'), city (1969 est. pop. 66,000), W Siberian USSR, in the Urals and on the Belaya River. One of the oldest industrial cities of the Urals region, Beloretsk is a metallurgical center, with industries that produce steel wire and cables. The city was founded in 1762.

Belorussia (byĕ'lārōō'sĕā) or **Belorussian Soviet Socialist Republic**, constituent republic (1970 pop. 9,003,000), c. 80,150 sq. mi. (207,600 sq. km), W central European USSR. MINSK is the capital, other important cities are Gomel, Vitebsk, Mogilev, Bobruysk, Grodno, and Brest. Belorussia borders on Poland in the west, on the Lithuanian and Latvian republics in the north, on the Russian Soviet Federated Socialist Republic in the east, and on the Ukraine in the south. Much of Belorussia is a hilly lowland, drained by the Dnepr, Western Dvina, and Neman rivers. The climate is moderate humid continental, with warm summers and cold winters. More than one third of the land is covered with peat and other swampy soils, notably in the Pripyat Marshes in the south; peat, the republic's most valuable mineral resource, is used for fuel, for fertilizer, and in the chemical industry. Belorussia also has deposits of limestone, clay, sand, chalk, dolomite, phosphorite, and rock and potassium salt. Forests cover another third of the land, and lumbering is an important occupation. Potatoes, flax, hemp, sugar beets, rye, oats, and wheat are the chief agricultural products. The main branches of industry produce machinery, motor vehicles, chemicals, textiles, and electrical equipment. About 80% of the population are Belorussians, Russians, Poles, Jews, Ukrainians, and Lithuanians are the republic's largest minorities. Eastern Orthodoxy is the predominant religion, but there are some Roman Catholics. The region now constituting Belorussia was colonized by East Slavic tribes from the 5th to the 8th cent. It fell (9th cent.) under the sway of Kiev and was later (12th cent.) subdivided into several Belorussian principalities forming part of the Kievan state. Kiev's destruction by the

Mongols in the 13th cent. facilitated the conquest (early 14th cent.) of Belorussia by the dukes of Lithuania. The region became part of the grand duchy of Lithuania, which in 1569 was merged with Poland. The large Jewish population (later decimated by the Germans during World War II) settled in Belorussia in the 14th cent. The region flourished under Lithuanian rule, but after the Polish-Lithuanian union Belorussia lost its relative importance, and its ruling classes became thoroughly polonized. Through the Polish partitions of 1772, 1793, and 1795, all Belorussia passed to the Russian Empire. It suffered greatly during the wars (16th-18th cent.) between Poland and Russia and in the Napoleonic invasion of 1812 (during which it was laid waste by retreating Russian forces). Great poverty under Russian rule, notably among the Jews, led to mass emigration to the United States in the 19th cent. A battlefield in World War I and in the Soviet-Polish War of 1919-20, Belorussia experienced great devastation. In March, 1918, the Belorussian National Rada in Minsk proclaimed the region an independent republic, but in Jan., 1919, the Soviet government proclaimed a Belorussian Soviet Socialist Republic at Smolensk, and soon the Red Army occupied all of Belorussia. In 1921 the Treaty of Riga, which ended the Soviet-Polish War, awarded W Belorussia to Poland. The eastern and larger part formed the Belorussian SSR, which joined the USSR in 1922. In Sept., 1939, the Soviet army overran W Belorussia and incorporated it into the Belorussian SSR. Occupied by the Germans during World War II, Belorussia was one of the most devastated areas of the USSR. In 1945 its western border was adjusted slightly in favor of Poland, but the 1939 frontier remained essentially unchanged. The republic has a separate seat in the United Nations. Its name also appears as Byelorussia or Bielorussia, and it is sometimes called White Russia.

Belovo (byĕlō'va), city (1970 pop. 108,000), S central Siberian USSR. One of the largest industrial centers of the Kuznetsk Basin, it has a zinc plant and a thermal power station. There are coal mines nearby.

Belphegor: see BAAL-PEOR.

Belshazzar (bĕlshāz'ār), according to the Bible, son of NEBUCHADNEZZAR and last king of Babylon. Dan. 5.1. At his feast, handwriting appeared on the wall, and Daniel interpreted it as a prophecy of doom, that night Babylonia fell to Cyrus. Dan. 5.

Belt, Great, and Little Belt, straits: see STORE BÆLT, strait, Denmark.

belt, girdle or band worn around the body, originally to confine loose garments. Later the girdle became a decorative accessory and was used to carry belongings. The Greeks and Romans wore ornamental cords and bands of many materials, including metal. The medieval belt displayed brilliant goldwork and gems, it carried the purse, dagger, sword, and other personal belongings of the wearer. Since then the belt has varied in style and importance. It has been symbolic of strength, of alertness, and of integrity. In folklore belts have often been accorded supernatural power.

Beltshazzar (bĕltshāz'ār), in the book of DANIEL, Babylonian name of the prophet Daniel.

Belfraffio, Giovanni Antonio: see BELTRAFFIO.

Beltrami, Eugenio (āōōjĕnyō bāltra'mē), 1835-99, Italian mathematician. He is famous for his work on non-euclidean geometry, electricity, and magnetism.

Beltville swine, two breeds of swine developed at the agricultural research center of the U.S. Department of Agriculture in Beltville, Md. The breeds are designated Beltville No. 1 and Beltville No. 2. Beltville No. 1 was developed by crossing Danish Landrace and Poland China swine. It is black in color with uniformly distributed white markings. Beltville No. 2 was developed from crosses using Danish Yorkshire, Duroc, Landrace, and Hampshire breeds. Its color is solid red with a white underline and occasional black spotting; its length is about the same as that of a Yorkshire.

beluga (bālōō'gā) or **white whale**, small, toothed northern WHALE, *Delphinapterus leucas*. The beluga may reach a length of 19 ft (5.8 m) and a weight of 4,400 lb (2,000 kg). It has a small, round head, with a short, broad, beaklike snout, and a flexible neck; its flippers are short, broad, and rounded, and it lacks a dorsal fin. It produces a variety of noises and is sometimes called a sea canary. The young are born with dark fur but become almost pure white in maturity. Belugas winter in the Arctic Ocean, feeding upon crustaceans, fish, and squid; they are often found in groups of several hundred individuals. They mate in spring, and in summer they enter

northern rivers. The young are born after a gestation period of 14 months, one calf every second year. The beluga is hunted by the Eskimo for food and by commercial whalers for its hide, which is known as porpoise hide. Beluga is also the common name of the largest of the STURGEONS. Beluga whales are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Cetacea, family Monodontidae.

Belvedere (bĕl'vĕdĕr, Ital. bĕlvĕdĕ'rĕ), court of the Vatican named after a villa built (1485–87) for Innocent VIII. The villa was decorated with frescoes by Pinturicchio and others; a chapel painted by Mantegna was demolished when the villa was made part of the Museo Pro-Clementino at the end of the 18th cent. The Belvedere court, connecting the villa and the Vatican, was designed (1503–4) by Bramante for Julius II to include an architectural garden, a permanent theater, a museum building, and a statue court. The Laocoön, discovered in 1506, was placed in the statue court; in 1511 the Apollo Belvedere (see under APOLLO, in Greek religion) was installed in a special niche. When Bramante died in 1514, only a portion of the Belvedere was completed; many modifications were made under a succession of architects including Giuliano Sangallo, Raphael, Peruzzi, and Antonio Sangallo. Now a museum, the Belvedere still contains the Laocoön and the Apollo as well as other rare works of classical antiquity. See study by James S. Ackerman (1954).

Belvidere (bĕl'vīdĕr'), city (1970 pop. 14,061), seat of Boone Co., N Ill., on the Kishwaukee River, inc. 1847. It is a farm trade center with food-processing industries, machine shops, and a huge automobile assembly plant.

Bely, Andrei (andrĕ' byĕ'lĕ), pseud. of Boris Nikolayevich Bugayev, 1880–1934, Russian writer. A leading SYMBOLIST, he had a close but stormy relationship with Aleksandr BLOK. His poems are collected in the four-volume *Symphonies* (1901–8), his best prose is in the novels *The Silver Dove* (1910) and *Petersburg* (1912, tr. 1959) and in *Kotik Letayev* (1920), an autobiographical novel in the manner of James Joyce. He was an experimenter—his involved style often mixes realism and symbolism in complex forms. In his later years Bely was influenced by Rudolph STEINER's anthroposophy. He accepted the Soviet regime, but his works were not well received by Soviet critics. By the mid-1970's Western critics had discovered Bely, and several proclaimed him the most important Russian writer of the 20th cent. In 1974 new translations of *The Silver Dove* and *Kotik Letayev* were published in the United States, and a section of the International Slavic Conference, held in Banff, Canada, was devoted to Bely's works.

Belzoni, Giovanni Battista (jōvĕn' nĕ bāt-tĕs'tā bĕl'sōn'), 1778–1823, Italian archaeologist. He lived (1803–12) in England and there invented a hydraulic machine, which he introduced into Egypt in 1815. Becoming interested in archaeology, he opened (1817) the rock temple of Abu-Simbel, and he discovered (1817) the tomb of Seti I at Thebes. His discoveries are recorded in his *Narrative* (1820). See biography by Stanley Mayes (1961).

Bembo, Pietro (pyĕ'trō bĕm'bō), 1470–1547, Italian humanist, cardinal of the Roman Catholic Church. A favorite of the Medici, he was secretary to Pope Leo X and was made a cardinal by Paul III. Bembo was for many years the arbiter of Italian letters, insisting that classical traditions be preserved. He was responsible for editions of Petrarch and Dante and helped establish the language of Tuscany as the standard literary Italian. He wrote the *History of Venice* (1551), a disquisition on platonic love, *Gli Asolani* (1505, tr. 1954), inspired by Plato's *Symposium*, a book of lyric verse (Rime, 1530) in Latin and Italian, and *Prose della volgar lingua* [prose in the vernacular] (1525).

Bemidji (bami'jĕ), city (1970 pop. 11,490), seat of Beltrami Co., N central Minn., on lakes Bemidji and Irving, through which flows the Mississippi River, inc. 1896. It is in a summer and winter resort and sport fishing area; tourism is the major industry. The city is also a trade and marketing center for the dairy farms of the region, and has lumber, wood-product, and boat manufactures. On the lakeshore stands an 18-ft (5.5-m) figure of Paul Bunyan and his ox. Bemidji State College is in the city.

Bemis, Samuel Flagg, 1891–1973, American historian, b. Worcester, Mass. He received his Ph.D. from Harvard in 1916 and taught history at various schools before becoming Farnum professor of diplomatic history at Yale (1935). In 1945 he was appointed Sterling professor of history and interna-

tional relations. Considered one of the nation's leading diplomatic historians, he twice received the Pulitzer Prize, once for history, *Pinckney's Treaty* (1926, rev. ed. 1960), and once for biography, *John Quincy Adams and the Foundations of American Foreign Policy* (1950). His other works include *Jay's Treaty* (1923, 2d ed. 1962), *The Diplomacy of the American Revolution* (1935), *A Diplomatic History of the United States* (1936, 5th ed. 1965), *The Latin American Policy of the United States* (1943), and *John Quincy Adams and the Union* (1956). He was the editor of *The American Secretaries of State and Their Diplomacy* (18 vol., 1963–72).

Bemis Heights, battle of: see SARATOGA CAMPAIGN

Ben, Levite porter under David. 1 Chron. 15:18.

Ben-abinadab (bĕn-abĭn'adĕb) see ABINADAB 4.

Benaiah (bĕnĕ'ya) 1 One of David's warriors, faithful in David's old age to Solomon. 2 Sam. 8:18, 20:23, 23:20–23, 1 Kings 1:2, 1 Chron. 11:22–25, 18:17, 27:5, 6. 2 Warrior under David. 2 Sam. 23:30, 1 Chron. 11:31, 27:14. 3 Levite. 1 Chron. 15:18, 20:16, 5. 4 Priest. 1 Chron. 15:24, 16:6. 5 Simeonite. 1 Chron. 4:36. 6 Asaphite. 2 Chron. 20:14. 7 Levite of the reign of Hezekiah. 2 Chron. 31:13. 8 Father of Pelatiah. Ezek. 11:1, 13:9, 10, 11, 12. Jews who had married foreign wives. Ezra 10:25, 30, 35, 43.

Benalcázar or **Belalcázar**, Sebastián de (sábĕstyan' dĕ bĕnĕlká'thār, bĕlĕl-), c.1479–1551, Spanish conquistador. After accompanying Columbus on his third voyage (1498), Benalcázar served in Darien and Nicaragua before joining Francisco PIZARRO in the conquest of Peru (1532). Setting out from PIURA, he forestalled Pedro de Alvarado in support of Diego de ALMAGRO, the elder, and entered (1533) the Indian stronghold of Quito, founded Guavaquil, and marched (1535) into SW Colombia in search of EL DORADO. While in Colombia he founded Pasto and Cali. In 1539 he tried unsuccessfully to ally himself with FEDERMANN against JIMÉNEZ DE QUESADA. Journeying to Spain with them to settle accounts, Benalcázar returned (1541) as governor of Popayan prov. Between 1541 and 1548 he aided Vaca de Castro against Diego de Almagro, the younger, and then helped Nuñez Vela and Pedro de la Gasca against Gonzalo Pizarro. For executing the leader of a neighboring province that he claimed as his, Benalcázar was tried (1550) and convicted. On his way to appeal to the Council of the Indies he died of fever in Cartagena.

Ben-ammi (bĕn-ām'ī), son of Lot by his younger daughter, eponym of the Ammonites. Gen. 19:38.

Benares, India see VARANASI

Benavente y Martínez, Jacinto (hāthĕn'tō bĕn'āvēn'tā ē mār'tĕnĕth), 1866–1954, Spanish dramatist, b. Madrid. He was awarded the 1922 Nobel Prize in Literature. His best-known play is *Los intereses creados* (1907, tr. *Bonds of Interest*, 1917), a farce written on the pattern of the Italian commedia dell'arte. In 1916 he wrote a second part to this play, *La ciudad alegre y confiada* [the gay and confident city]. *La malquerida* (1913, tr. *The Passion Flower*, 1920), on the Phaedra theme, was popular with the public and the critics. His plays fall into four classes: social satires, psychological dramas, children's plays, and allegorical-morality plays. He was at his best in sparkling satires of aristocratic and upper middle-class life. See study by Marcelino Peñuelas (tr. 1969).

Ben Bella, Ahmed (ākhmĕd' bĕn bĕl'ĭā), 1919–, Algerian statesman. After World War II he joined the Algerian nationalist movement and soon became a leader of its terrorist faction. He later (1952–56) served as director of the movement. Imprisoned (1956–62) for his activities, he became Algeria's first premier after independence was declared in 1962. In 1965, Ben Bella's government was toppled in a coup led by Houari BOUMÉDIENE.

Benbow, John (bĕn'bō), 1653–1702, English admiral. Some of the stories of his exploits seem to be legendary, but he did command the fleet and successfully fight the French at Saint-Malo (1693) and Dunkirk (1696) and the Spanish in the West Indies (1698). In 1702 he engaged in a four-day running fight with a French fleet in the Caribbean off Santa Marta. During this battle his flagship, the *Breda*, was deserted by all but one of his fleet, and Benbow himself was fatally wounded. Several of the disobedient captains were later court-martialed and shot.

Benchley, Robert Charles, 1889–1945, American humorist, b. Worcester, Mass., grad. Harvard, 1912. He was drama critic of *Life* (1920–29) and of the *New Yorker* (1929–40). Benchley was known for a series of short satirical films that he wrote, directed, and acted in himself. His books, which are rich in anecdotes and clever interpretations of everyday

situations, include *Of All Things* (1921), *My Ten Years in a Quandary* (1936), and *Benchley beside Himself* (1943).

Bend, city (1970 pop. 13,710), seat of Deschutes Co., W. central Oregon, on the Deschutes River, at the eastern foot of the Cascade Range, inc. 1904. Lumbering is the primary industry, and tourism is also important. It is the seat of a junior college and the headquarters for Deschutes National Forest. A U.S. silviculture laboratory is in Bend, and nearby pumice fields offer moon-like terrain for a lunar base research facility, which carries on study and training projects there.

Benda, Georg Franz (gĕ'ōrkh frānts bĕn'dā), 1722–95, Bohemian composer. Benda, whose Bohemian name was Jiří Antonín Benda, came from a musical family that moved to Prussia in 1742. His brother, the violinist Franz (in Bohemian, František) Benda, became a favorite of Frederick II. Benda is best known for his melodramas—dramatic works in which a speaking part is set against orchestral music—and singspiels.

Benda, Julien (zhūlyān' bān'dā'), 1867–1956, French novelist and critic. A humanist and rationalist, he led a sustained attack against the romantic philosophy of his time, especially that of Bergson. The novel *The Yoke of Pity* (1912, tr. 1913) won him recognition. In *The Treason of the Intellectuals* (1927, tr. 1928) he accused his contemporary thinkers of abandoning truth and succumbing to political passions. *La Jeunesse d'un clerc* (1936) and *Un Régulier dans le siècle* (1938) recapitulate his intellectual life.

Benda, Wladyslaw Theodor (vlād'islāf), 1873–1948, Polish American painter and illustrator, b. Poland. He studied at the Art Academy in Cracow and in Vienna, San Francisco, and New York City. In addition to decorative works and many illustrations for magazines and books, he created modern masks, used in the theater, they were first seen in Greenwich Village Follies (1920). Benda wrote *Masks* (1945).

Ben Day, or Benday, process: see PRINTING

Bendery (bĕndĕ'yĕrĕ), city (1969 est. pop. 68,000), SW European USSR, in Moldavia, a port on the Dniestr River. It is a rail hub and a trade center for timber, fruits, and tobacco. Industries include the production of foodstuffs, electrical apparatus, footwear, and textiles. Historically important as the gateway of Bessarabia, the city was founded on the site of a 14th-century Genoese colony that the Rumanians called Tigî. Captured from Moldavia by the Turks in 1538 and renamed Bendery, it became a fortress on the Dniestr. It was captured by Russia in 1812. Between the world wars, Bendery belonged to Rumania; it was transferred to the USSR in 1940 but was occupied by Rumanian troops from 1941 to 1944.

Bendigo (bĕn'dĭgō), city (1971 pop. 31,927), Victoria, SE Australia. Founded in 1851 during the gold rush, Bendigo was the center for the greatest goldfield in Victoria. Mining continues, but the city is now an industrial, railroad, and commercial center in a livestock and dairy-farming region. Textiles, bricks, and pottery are manufactured in Bendigo.

bends: see OXCOMPRESSION SICKNESS

Bene-herak (bĕ'nĕ-bĕ'rāk), town, central Israel, near Tel Aviv. Joshua 19:45. It was famous for its academy under Rabbi Akiba's direction; today it has six Talmudic academies. The name is also spelled Bene Herak.

Benedek, Ludwig von (lōōt'vĭkh fən bā'nĕdĕk'), 1804–81, Austrian general. Entering the army in 1822, he served in the suppression of the Polish insurrection of 1846, in the Austrian campaigns of 1848–49 in Italy and Hungary, and in the Italian War of 1859. In the Austro-Prussian War (1866), he reluctantly accepted, under imperial pressure, an appointment to command the army of the North, although he felt inadequately prepared to direct troops in the unfamiliar territory of Bohemia. He suffered a crushing defeat at the battle of Königgratz (Sadowa). After his court-martial was stopped by imperial command, von Benedek was permitted to retire to Graz, provided he would make no attempt to rehabilitate himself.

Benedetti, Giovanni Battista (jōvĕn' nĕ bāt-tĕs'tā bĕnĕdĕt'tĕ), 1530–90, Italian mathematician and physicist. An important forerunner of Galileo, Benedetti had diverse interests, including mechanics, music, hydrostatics, astronomy, astrology, and gnomonics (the science of sundials). His work on falling bodies, first outlined in 1552, helped lay the basis for the overthrow of Aristotelian physics in the 17th cent. Like Galileo, he held that bodies of the same

material fall through a given medium at the same speed, regardless of their weight. His most important scientific work is the *Diversarum speculationum* (1585).

Benedetti, Vincent (vāNsaN'), 1817–1900, French diplomat, b. Corsica, made a count by Napoleon III. He was ambassador to Prussia from 1864 to 1870. In an interview (1870) at Ems with King William I (later German emperor), he asked the king to disapprove formally and permanently the candidacy of a Hohenzollern prince for the Spanish throne. The episode was so altered in Bismarck's version of the EMS DISPATCH that it became an immediate cause of the Franco-Prussian War.

Benedetto da Majano (bānādēt'tō da maya'nō), 1442–97. Italian sculptor and architect of the Florentine school. His pulpits, altarpieces, and other church furniture are beautifully executed. Examples of his work are in Santa Croce and the Palazzo Vecchio, Florence, and in San Domenico, Siena. He completed the tomb of Mary of Aragon (Naples), begun by Antonio Rossellino.

Benedict, Saint, d. c. 547, Italian monk, founder of the BENEDICTINES, called Benedict of Nursia, b. Norcia (E of Spoleto), Italy. He went to Rome to study, then withdrew to Subiaco to live as a hermit, after three years he was renowned for his holiness. He started an establishment of monks, a set of cells of 13 monks each. This he finally left, and at MONTE CASSINO, in an old pagan holy place, he started the first truly Benedictine monastery. The product of Benedict's experience appears in the Rule of St. Benedict (in Latin), the chief rule in Western MONASTICISM, used always by Benedictines and by Cistercians as well. Its 73 chapters (with Prologue) are original, personal, and full of a spirit of common sense. They set forth the central ideas of Benedictine monasticism. St. Benedict's sister, St. Scholastica, was a religious also. Feast March 21. See St. Gregory I, *Life and Miracles of St. Benedict* (tr. by O. J. Zimmerman and B. R. Avery, 1969), Dom John Chapman, *Saint Benedict and the Sixth Century* (1929, repr. 1971), Paul Delatte, *The Rule of St. Benedict* (tr. 1950), Theodore Maynard, *Saint Benedict and His Monks* (1954), Leonard von Matt, *Saint Benedict* (1961).

Benedict XI, d. 1304, pope (1303–4), an Italian (b. Treviso) named Niccolò Boccasini, successor of Boniface VIII. Prior to his election he had been master general of the Dominican order. As pope he was able to conciliate many of the enemies Boniface had made, chiefly Philip IV of France, whose excommunication he rescinded. However, he would not yield on the excommunication of Boniface's assassins, Sciarra Colonna and Philip's emissary, Nogaret. The Colonna faction controlled Rome, and Benedict withdrew to Perugia, a prelude to the flight of the papacy to Avignon under Benedict's successor, Clement V, in 1309. Benedict was beatified in 1638.

Benedict XIII, antipope. See LUNA PEDRO DE.

Benedict XIV, 1675–1758, pope (1740–58), an Italian (b. Bologna) named Prospero Lambertini, successor of Clement XII. Long before his pontificate he was renowned for his learning. In 1728 he became a cardinal. He was much interested in the Eastern churches and began (with the bull *Etsi pastoralis*, 1742) the modern papal legislation that favors the Eastern rites and prohibits activity that is likely to Latinize them. He beautified Rome and restored monuments, and he was munificent to Bologna. He patronized learning and welcomed scholars and artists to his court. He denounced the cruelty to the Indians in the disbanding of the Paraguay REDUCTIONS. He was succeeded by Clement XIII.

Benedict XV, 1854–1922, pope (1914–22), an Italian (b. Genoa) named Giacomo della Chiesa, successor of Pius X. He was made archbishop of Bologna in 1907 and cardinal in 1914, two months before his election as pope. His conduct in World War I was one of the strictest neutrality, and he had the respect of all belligerents. He originated several proposals for peace. Benedict was lavish in charity toward war victims, and he founded the Vatican service for prisoners of war. During his pontificate France and England resumed diplomatic relations with the Holy See. He was succeeded by Pius XI. See biography by W. H. Peters (1959).

Benedict, Ruth Fulton, 1887–1948, American anthropologist, b. New York City, grad. Vassar, 1909, Ph.D. Columbia, 1923. She was a student and later a colleague of Franz Boas at Columbia, where she taught from 1924. She did fieldwork among American Indians and studied contemporary European and Asian cultures. Her works emphasize the con-

cepts of cultural configuration, national character, and the role of culture in individual personality formation. Her widely read books helped popularize the concept of CULTURE and attacked racism and ethnocentrism. She is the author of *Concept of the Guardian Spirit in North America* (1923), *Patterns of Culture* (1934), *Zuni Mythology* (1935), *Race Science and Politics* (rev. ed. 1943), and *The Chrysanthemum and the Sword: Patterns of Japanese Culture* (1946). A collection of her work and biographical data was edited by Margaret Mead under the title *An Anthropologist at Work* (1959, repr. 1966). See biography by Margaret Mead (1974).

Benedict Biscop (bīś'kəp), c. 628–690, English monk. He founded the monasteries of Wearmouth (at Sunderland) and Jarrow, and he was abbot of St. Peter's, Canterbury. Bede was his pupil.

benedictine (bēnədīk'tēn), sweet LIQUEUR originated in 1510 by Benedictine monks at Fecamp, France, and now manufactured by a secular concern on the grounds of the old abbey. Every bottle bears the initials of the Latin dedication *Deo Optimo Maximo* [to God most good, most great]. The exact formula of benedictine remains a secret.

Benedictines, monks of the Roman Catholic Church, following the rule of St. BENEDICT [Lat. abbr., = O S 8]. Their first establishment was at MONTE CASSINO, Italy, which came to be regarded as the symbolic center of Western MONASTICISM. St. Benedict's rule was novel in monastic life in replacing austerity by moderation. The monastery, or ABBEY, was conceived as a devout Christian family of men, with the abbot as father. The monks swore to live in the house until death. The whole of Benedictine life was experienced in common, the waking hours being devoted principally to worship and work, especially manual labor. The greatest of the early Benedictines was Pope St. Gregory I, whose espousal of the life had great influence. He sent St. Augustine of Canterbury to convert Anglo-Saxon England to Christianity and to introduce Benedictine life. In the 8th cent. the English Benedictines St. Willibrord and St. Boniface evangelized Frisia and Germany. In this expansion of Christendom the abbey served as an outpost, a unit of both Latin culture (including Western agricultural methods) and Christian religion. The Benedictines were also active within the area that had been Latin for centuries—their preservation of books was a critical service. In the 10th cent. a reform began at the abbey of Cluny, France, although this led to the setting up of a separate organization (see CLUNIAN ORDER), it deepened the long-standing Benedictine tendencies to emphasize the liturgy, study, and education. A Benedictine reform, or reaction, in 1098, resulted in a new foundation, the CISTERCIANS. Throughout the centuries, however, the Benedictine houses have occupied a central position in Western religious orders. They are organized as a loose federation of congregations, each congregation being a collection of geographically related abbeys or monasteries that are mainly autonomous. Benedictine work in liturgy has been outstanding. The abbeys at Solesmes and Beuron in particular have established a spiritual life centered around sung liturgy. They are responsible for the restoration of Gregorian melodies (plain chant) and their universal use today in the Roman Catholic Church. Permanent Benedictine establishments in the United States began in the 1840s. There are presently over 10,000 male Benedictines, with some 2,300 living in 42 foundations in the United States. There are also Benedictine nuns. See E. C. Butler, *Benedictine Monachism* (2d ed. 1924, repr. 1962), L. J. Daly, *Benedictine Monasticism* (1965).

benediction [Lat., = blessing], solemn blessing usually administered in the name of God by a priest or a minister. The temple worship at Jerusalem had fixed forms of benedictions, and Christians have always given them an important place in ceremony, especially at the end of a ritual. Protestants have abandoned many of the blessings of the Roman Catholic Church, such as the apostolic benediction by the pope and his delegates and benediction of the dying. **Benediction of the Blessed Sacrament**, a popular extralitururgical service of Roman Catholics, consists of a blessing of the people by the priest with the Host exposed in a monstrance.

Benedict's solution, deep-blue alkaline solution used to test for the presence of the ALDEHYDE functional group, —CHO. The substance to be tested is heated with Benedict's solution, formation of a brick-red precipitate indicates presence of the aldehyde group. Since simple sugars (e.g., glucose) give a positive test, the solution is used to test for the presence of glucose in urine, a symptom of diabe-

tes. One liter of Benedict's solution contains 173 grams sodium citrate, 100 grams sodium carbonate, and 17.3 grams cupric sulfate pentahydrate. It reacts chemically like Fehling's solution, the cupric ion (complexed with citrate ions) is reduced to cuprous ion by the aldehyde group (which is oxidized), and precipitates as cuprous oxide, Cu₂O.

Benedict the Black, Saint, d. 1589, Sicilian Negro friar. Born a slave, he became a hermit and later a Franciscan lay brother. Although illiterate, his humility and extraordinary powers as spiritual director caused him to be made Superior. He has erroneously been called Benedict the Moor. He was canonized in 1807. Feast April 4.

Benedictus (bēnədīk'tas), hymn of Zachary, taken from Luke 1:68–79. It begins in Latin, "Benedictus Dominus Deus Israel" [blessed be the Lord God of Israel]. It is used at funerals and at lauds in the Roman Catholic Church and at morning prayer in the Church of England. Part of the SANCTUS is also called *Benedictus*.

Benediktsson, Bjarni (bīyar'nē bēnēdīkt'sōn), 1908–70, Icelandic statesman. A lawyer, he was a vocal advocate of Iceland's independence from Denmark, and became a member of the central committee of the Independence party in 1936. Elected mayor of Reykjavik in 1940, he held a number of important government and diplomatic posts after World War II. He was minister of foreign affairs and justice (1947–53), minister of justice and education (1953–56), and minister of justice (1959). The head of the Independence party from 1961, he served as prime minister from 1963 until 1970, when he was killed in a fire.

benefice, in canon law, a position in the church that has attached to it a source of income, also, more narrowly, that income itself. The occupant of a benefice receives its revenue (temporalities) for the performance of stipulated duties (spiritualities), e.g., the celebration of Mass. He receives the free use of such revenue but is expected to convert into good works any income in excess of his personal needs. Benefices are normally bestowed for life. Canon law forbids plurality of benefices, i.e., the holding of more than one benefice, but papal dispensations have made many exceptions to this rule. Benefices were originally in the form of land donations made to the church by wealthy laymen. Today the revenue of a benefice may come also from government salaries, investments, or the offerings of the faithful. Benefices are common in Europe but are practically unknown in the United States. The Church of England makes extensive use of the beneficiary system, the benefice in England is also called a living. The value of benefices led to many abuses (see SIMONY) and frequent conflict between secular and ecclesiastical authorities in the Middle Ages.

benefit of clergy, term originally applied to the exemption of Christian clerics from criminal prosecution in the secular courts. The privilege was established by the 12th cent., and it extended only to the commission of felonies. The ecclesiastical courts did not inflict capital punishment except in rare cases, in which event those adjudged guilty were turned over to local secular authorities for enforcement of the sentence (see CANON LAW). In the ecclesiastical courts the severest sentences usually were degradation and the imposition of penances. Many criminals posed as clerics to obtain benefit of clergy. In England the privilege was soon extended to all clerks, i.e., literate persons. Since the first verse of Psalm 51 was the test of literacy, violators of the law would memorize the text. The ecclesiastical courts lost all jurisdiction over criminal acts in 1576, and thereafter clerics were tried by the secular courts and, under statute law, were either discharged or sentenced to a year's imprisonment. Early in the 18th cent. the reading test was abolished and all persons were allowed to claim this privilege for the first conviction of felony, later the privilege was extended generally to peers and women. Benefit of clergy thus mitigated the severities of English criminal law, which imposed the death penalty for many offenses now deemed trivial. Criminal law was ameliorated in the early 19th cent., and in 1827 benefit of clergy was abolished as being no longer necessary. In the United States it was abolished in 1790 for all Federal crimes, and c. 1850 it disappeared from the state courts. The term "benefit of clergy" has come in popular usage to mean sanction of the clergy, particularly in the phrase "marriage without benefit of clergy." See L. C. Gabel, *Benefit of Clergy in England in the Later Middle Ages* (1929, repr. 1969), Lincoln Bouscaren and A. C. Ellis, *Canon Law* (1946), J. R. Cameron, *Frederick William Maitland and the History of English Law* (1961).

Bene Israel or Beni Israel (both bā'nē) [Heb. = sons of Israel], Jewish community of India, numbering some 12,000 persons living mostly in and near Bombay city and about 12,000 who have settled in Israel since 1948. According to their own legend, they are descended from Jews who fled persecutions in Palestine in the 2d cent. B.C. Some scholars believe, however, that they are descended either from Babylonian Jews who migrated for reasons of trade or from Yemenite Jews who fled the persecutions of Muhammad, the latter hypothesis would explain the use of the name Bene Israel, which is found in the Koran as a favorable reference to Jews. The Bene Israel are referred to in the travel accounts of Benjamin of Tudela (10th cent.) and Marco Polo (13th cent.). When the Bene Israel were rediscovered by Westerners in the late 18th cent. their customs were substantially like those of the Hindus except that they kept the Sabbath and several Jewish festivals and circumcised boys on the eighth day after birth. The only Hebrew they were said to know was the prayer, "Hear, O Israel, the Lord our God, the Lord is one!" Wealthy Jews established schools to instruct the Bene Israel in Hebrew and Judaism, and in time their religious practices became similar to those of Jews throughout the world. See Schifra Stinzow, *The Bene Israel of Bombay* (1971).

Bene-jaakan (bēn'ē-jā'kän), halting place in the wilderness Num. 33:31, 32. Beeroth Deut. 10:6.

Benelux Economic Union, economic treaty among Belgium, Luxembourg, and the Netherlands, established in 1958 by a 50-year treaty. The treaty represented years of efforts aimed at establishing an economic union among these countries. As early as 1922, the Belgium-Luxembourg Economic Union was formed. In 1944 these two countries and the Netherlands concluded a customs union that went into force in 1948. The treaty of 1958 brought together all of the previous agreements, and in 1960, when it took effect, a fully integrated Benelux was formed. The goal of the union was the free movement of workers, capital, goods, and services among the countries involved.

Beneš, Eduard (ē'dō'art bē'nēsh), 1884-1948, Czechoslovakian president (1935-38, 1946-48). As a student at Prague Univ. he adopted the political and social philosophy of T. G. Masaryk. Later he studied in France, taught sociology and economics at Prague, and joined (1915) Masaryk in exile in Paris to work for Czechoslovak independence. After the breakup of the Austro-Hungarian Monarchy at the end of World War I, he represented Czechoslovakia at the Paris Peace Conference of 1919. As foreign minister (1918-35), premier (1921-22), leader of the Czech National Socialist party (a liberal and nationalist party, unlike its German namesake), and right-hand man of Masaryk, Beneš influenced both national and European politics. The *LITTLE ENTENTE* and the Czech alliance with France were essentially his work. He became (1935) president of Czechoslovakia at Masaryk's retirement but resigned (1938) after the dismemberment of his country by the *MUNICH PACT* and went into exile. After the outbreak of World War II he resumed (1940) the title president and headed, in London, a provisional government at war with Germany. Returning to Prague in 1945, he was confirmed in office and was reelected (1946) president. After the Communist coup of Feb. 1948, he reluctantly endorsed the new regime, but resigned in June on the ground of illness, refusing to sign the new constitution. He died shortly afterward. Among his writings are *My War Memoirs* (tr. 1928, repr. 1971), *Democracy Today and Tomorrow* (1939, in English), and *Memoirs of Dr. Eduard Beneš* (tr. 1954, repr. 1972).

Benét, Stephen Vincent (bēnā'), 1898-1943, American poet and author, b. Bethlehem, Pa., grad. Yale, 1919, brother of William Rose Benét. Benét is most famous for *John Brown's Body*, a long narrative poem of the Civil War, which won a Pulitzer Prize in 1929. By the time he left college Benét had already published several volumes of verse. After graduation he rapidly produced more poetry—*Heaven and Earth* (1920), *A Ballad of William Sycamore* (1923), and other volumes—and several novels, of which *Jean Huguonot* (1923) and *The Spanish Bayonet* (1926) are the best. In 1928 he published *John Brown's Body*. A vivid, impressionistic, patriotic poem, it reveals not only Benét's mastery of the ballad form but also his detailed knowledge of Civil War history. Later volumes of verse include *Ballads and Poems* (1931) and *The Burning City* (1936). His short stories, particularly "The Devil and Daniel Webster," are among the best of their time. Al-

though much of Benét's work has been criticized for its unevenness and lack of depth, his writings exhibit a genuine passion for America and a deep interest in its folklore and history. *Western Star*, a long narrative poem about the westward migration left unfinished at his death, was published in 1943 (Pulitzer Prize, 1944). See his selected works (2 vol., 1942), letters, ed. by C. A. Fenton (1960), biographies by C. A. Fenton (1958) and P. E. Stroud (1962).

Benét, William Rose, 1886-1950, American poet and editor, b. Brooklyn, grad. Yale, 1907, brother of Stephen Vincent Benét. He was associated as editor or assistant editor with the *Century Magazine*, the *Literary Review* of the New York *Evening Post*, and the *Saturday Review of Literature* (which he helped found in 1924). His books include such collections of poetry as *Merchants from Cathay* (1913), *The Great White Wall* (1916), and *Man Possessed* (1927), a novel, *The First Person Singular* (1922), a volume of essays, *Wild Gossings* (1927), and an anthology, *The Reader's Encyclopedia* (1948). He also coedited *The Oxford Anthology of American Literature* (1938). His autobiographical verse-narrative, *The Dust Which Is God* (1941), won the 1942 Pulitzer Prize in poetry. His second wife was the poet, Elinor Wylie, whose poems he edited in 1932.

Benevento (bānāvā'nō), city (1971 pop. 59,016), capital of Benevento prov., in Campania, S. Italy. It is a trade center for wine and tobacco. Farm machinery, optical instruments, liqueur, and nougat are manufactured. A leading town of Samnium, Benevento became under the Romans an important trade center on the Apennine Way. It was the capital of a powerful Lombard duchy (6th-11th cent.) that extended over much of S. Italy. Except for short periods of foreign occupation, the city was under papal rule from the 11th cent. to 1860. In 1266, Charles of Anjou defeated Manfred, King of Sicily, near Benevento. Noteworthy structures of the city include the cathedral (11th-13th cent., restored after being severely damaged in World War II), a triumphal arch erected (114 A.D.) for Trajan, a Roman theatre (2d cent. B.C.), and the Church of Santa Sofia, with a 12th-century cloister.

Benevoli, Orazio (ō'ra'tsyō bānāvō'lē), 1605-72, Italian composer. From 1646 until his death Benevoli was *maestro di cappella* at the Vatican. He wrote a large quantity of sacred music, much of it scored for many vocal parts—a mass (1628) for Salzburg Cathedral has 52 vocal parts. Benevoli was strongly influenced by Palestrina in his use of harmony.

Ben Ezra, see IBN EZRA, ABRAHAM BEN MEIR.

Bengal (bēng-gōl', bēn-), region, 77,442 sq. mi. (200,575 sq. km), E. India and Bangladesh, on the Bay of Bengal. The inland sections are mountainous, with peaks up to 12,000 ft (3,660 m) high in the northwest, but most of Bengal is the fertile land of the Ganges-Brahmaputra alluvial plains and delta. Along the coast are richly timbered jungles, swamps, and islands. The heavy monsoon rainfall and predominantly warm weather make possible two harvests a year. In the 3d cent. B.C., Bengal belonged to the empire of ASOKA. It became a political entity in the 8th cent. A.D. under the Buddhist Pala kings. In the 11th cent. the Hindu Sena dynasty arose from the remnants of the Pala empire. Bengal was conquered (c. 1200) by Muslims of Turki descent. When the Portuguese began their trading activities (late 15th cent.), Bengal was a part of the Muslim MUGOL empire. The British East India Company made its first settlement in 1642 and extended its occupation by conquering the native princes and expelling the Dutch and French. Muslim control of Bengal ended with the defeat of Siraj-ud-Daula by British forces under Robert CLIVE at the Battle of Plassey in 1757. Under British control, Bengal was a presidency of India. At various times the neighboring provinces of Assam, Bihar, and Orissa were administered under the Bengal presidency. The population, which speaks mainly Bengali, is ethnically quite homogeneous but is almost equally divided between Muslims and Hindus. When India was partitioned in 1947, the presidency was divided along the line approximately separating the two main concentrations of the religious communities. **West Bengal** (1971 pop. 44,440,095), 33,928 sq. mi. (87,874 sq. km), with its capital at CALCUTTA, became a state of India. It is bordered by Bangladesh and the state of Assam on the east, Bhutan and Sikkim on the north, the states of Bihar and Orissa on the west, and the Bay of Bengal on the south. A highly industrialized region, it has jute mills, steel plants, and chemical industries, all mainly centered in the Hooghlyside industrial complex. Coal is mined and petroleum is exploited. In 1950, West Bengal absorbed the state of

Cooch Behar. In more recent years, disputes between Hindus and Muslims, further complicated by droves of refugees from Bangladesh (formerly East Pakistan) and agitation by Maoist groups called Naxalites, have created political instability. **West Bengal** is governed by a chief minister and cabinet responsible to a bicameral legislature with one elected house and by a governor appointed by the president of India. In the 1972 local elections Prime Minister Gandhi's New Congress party ended the decade-old dominance of the Communist Party of India-Marxist, also known as the Left Communists, who broke away from the more conservative and pro-Soviet Communist party **East Bengal**, overwhelmingly Muslim in population, became East Pakistan in 1947 and the independent nation of Bangladesh in 1971.

Bengal, Bay of, arm of the Indian Ocean, c. 1,300 mi. (2,090 km) long and 1,000 mi. (1,610 km) wide, bordered on the W by Sri Lanka (Ceylon) and India, on the N by Bangladesh, and on the E by Burma and Thailand, the Andaman and Nicobar Islands separate it from the Andaman Sea, its eastern arm. The bay receives many large rivers including the Irrawaddy, Ganges-Brahmaputra, Mahanadi, Godavari, Krishna, and Cauvery, all forming fertile, heavily populated deltas. Sediment from the rivers has made the bay a shallow sea, and the waters have reduced the salinity of surface waters along the shore. Monsoon rains and destructive cyclone storms have caused great loss of life along the bay's northern coast. The main ports are Visakhapatnam, Madras, and Calcutta, India, Chittagong, Bangladesh, and Sittwe, Burma.

Bengali (bēngāl'ē), language belonging to the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See INDO-IRANIAN LANGUAGES.

Bengasi or Benghazi (both bēngā'zē), city (1970 est. pop. 170,000), capital of Bengasi district, NE Libya, the main city of Cyrenaica and a port on the Mediterranean Sea. It is primarily an administrative and commercial center. Manufactures include processed food, beverages, textiles, and cement. On the site of Bengasi the Greeks founded (7th cent. B.C.) the colony of Hesperides, which was later (3rd cent. B.C.) renamed Berenice after the wife of Ptolemy III of Egypt. Under the Romans, who conquered it in the mid-1st cent. B.C., Bengasi had a large Jewish colony. In the 5th cent. A.D. the Vandals severely damaged the city, and in the 7th cent. it was captured by the Arabs. The Ottoman Turks took the city in the mid-16th cent., and they held it until it was captured by Italy in 1911. The Italians modernized the city and enlarged its port. At the start of World War II, Bengasi had about 22,000 Italian inhabitants, but they were evacuated before the city fell to the British in late 1942. From 1951 to 1972 Bengasi was the copcapital (with Tripoli) of Libya. The city is the site of the Univ. of Libya, founded in 1955.

Bengel, Johann Albrecht (yō'hān āl'brēkht bēng'a-l), 1687-1752, German Lutheran theologian and biblical scholar. He was appointed (1713) professor in charge of a theological training school at Denkerdorf and remained there for 28 years. In this period he produced his most important works—a carefully prepared Greek text of the New Testament (1734), with an *Apparatus criticus*, which formed the point of departure for modern New Testament textual criticism, and his *Gnomon Novi Testamenti* (1742), an exegetical commentary, later translated into German and English.

Benghazi: see BENGASI, Libya.

Benguela (bēngē'lā, bēng-), city (1969 est. pop. 35,000), W. Angola, on the Atlantic. It is a rail terminus, an export point, and a commercial and fishing center. A fort was built on the site in the late 16th cent., and the city was founded in 1617. Benguela's port played an important role in slave trading.

Ben-Gurion, David (bēn-gōō'rēōn), 1886-1973, Israeli statesman, b. Poland as David Grün. He settled in Palestine in 1906. He was an active Zionist and during World War I helped to organize the Jewish Legion in support of the British. In the struggle to found an independent Jewish state in Palestine he followed a policy of cooperation with the British during World War II. After the war, however, he led the political struggle against them, authorizing the sabotage activities of the Hebrew resistance movement. During the struggle for independence (1947-48) he headed the defense effort. A founder and leader of the Mapai party and an early leader of the Histadrut, he was made (1948) the first prime minister of the newly created state of Israel, holding the

post until 1953. In 1955 he returned to the cabinet as defense minister under Moshe Sharett and later that year again became prime minister. His replacement of Sharett reflected the shift in Israeli policy toward confrontation with Israel's hostile Arab neighbors. Amid growing controversy he resigned the premiership in Feb., 1961, but was quickly returned to office. He again resigned in June, 1963. In retirement Ben-Gurion continued to be politically active, forming a splinter party from the dominant labor party, Mapai, in 1965. A selection of his writings was published as *Rebirth and Destiny of Israel* (1954), he also wrote *Israel: Years of Challenge* (1965), *Israel's Security* (1960), *The Jews in their Land* (1966), *Memoirs* (1970), *Israel: A Personal History* (1971), and *My Talks with the Arabs* (1973). See biographies by Maurice Edelman (1964), Michael Bar-Zohar (tr 1967), Ohad Zmora, ed. (1967), and Robert St. John (rev. ed. 1971).

Benha: see BANHA, Egypt

Benhadad (bēnhā'dād), kings of Damascus. 1 The son of Tabrimon, ally of ASA of Judah against Baasha of Israel. 1 Kings 15:17-20. 2 Probably the son and successor of 1, leader of the coalition that withstood Shalmaneser III of Assyria at Karkar on the Orontes, he continued the traditional enmity of his kingdom with Israel and defeated AHAAB and Jehoshaphat. He was murdered and succeeded by Hazael. 1 Kings 20, 22, 2 Kings 8:15. 3 Son of Hazael and contemporary of Jehoash of Israel, who defeated him in war. He also was Assyria's vassal. 2 Kings 13:25, Amos 1:4.

Ben-hail (bēn-hā'il), one of Jehoshaphat's princes. 2 Chron. 17:7.

Ben-hanan (bēn-hā'nān), Judahite. 1 Chron. 4:20.

Ben-hur: see HUR, 4

Beni Hasan: see BANI HASAN, village, Egypt

Beni Israel: see BENE ISRAEL

Benin (bēnēn'), city (1969 est. pop. 117,000), S Nigeria, a port on the Benue River. Rubber, palm nuts, and timber are produced nearby and processed in Benin. Furniture and carpets are also made in the city. Benin served as the capital of a black African kingdom that was probably founded in the 13th cent. and flourished from the 14th through the 17th cent. The kingdom was ruled by the *oba* (to whose family human sacrifices were made) and a sophisticated bureaucracy. From the late 15th cent. Benin traded slaves as well as ivory, pepper, and cloth to Europeans. In the early 16th cent. the *oba* sent an ambassador to Lisbon, and the king of Portugal sent missionaries to Benin. The kingdom of Benin declined after 1700, but revived in the 19th cent. with the development of the trade in palm products with Europeans. Britain conquered and burned the city in 1898 following conflicts between black African and European traders. The iron work, carved ivory, and bronze portrait busts made (perhaps as early as the 13th cent.) in Benin rank with the finest art of Africa. CIRE PERDUE casting is still practiced there. Examples of Benin art are displayed in museums in the city.

Benin, Bight of, northern arm of the Gulf of Guinea, c. 550 mi (885 km) wide, W Africa, between Cape Three Points, S Ghana, and the Niger River delta, SW Nigeria.

Beninu (bēnī'nyōō), Levite sealer of the covenant. Neh. 10:13.

Beni Suef: see BANI SUWAYF, Egypt

Benjamin. 1 Youngest son of Jacob and Rachel and ancestor of one of the 12 tribes of Israel. His mother, dying, named him Benoni (bēnō'nī) [Heb. =son of my sorrow]. He was the favorite of his family. The tribe of Benjamin was allotted the plateau of E. central Palestine lying W of the Jordan between Jerusalem and Bethel. The tribesmen were famous archers. The name survived in the High Gate of Benjamin of the Temple at Jerusalem. Saul was the most noted man of the house of Benjamin. Gen. 35:18, 42-46, 49-27, Num. 1:36, 13:9, 26:38-41, 34:21, Deut. 33:12, Joshua 18:11-28, Judges 3:15, 20-21, 1 Chron. 8:40, 12:2, 2 Chron. 14:8, 17:17. 2 Descendant of Benjamin. 1 Chron. 7:10. 3 One who was separated from a foreign wife. Ezra 10:32. 4 Repairer of the wall. Neh. 3:23. 5 Dedicator of the wall. Neh. 12:34. He may be the same person as 3 and as 4.

Benjamin, Asher, 1773-1845, American architect, b. Greenfield, Mass. His *Country Builder's Assistant* was published in 1797 and *The American Builder's Companion*, with Daniel Reynard, in 1806. Benjamin designed houses and churches in many New England towns, but his greater influence was through his books, which popularized the details of the late colonial style. His later books, *The Rudiments of Architecture* (1814) and *The Practical House Carpenter* (1830), show more Greek design.

Benjamin, Judah Philip, 1811-84, Confederate statesman and British barrister, b. Christiansted, St. Croix, Virgin Islands, of Jewish parents. His family moved (c. 1813) to Wilmington, N.C., and finally settled (1822) in Charleston, S.C. A precocious youth, Benjamin entered Yale at the age of 14 but left (1827) early in his junior year. He went to New Orleans in 1828, worked for a notary, taught English, and studied French and the law in his spare time. Admitted to the bar in Dec., 1832, he published (1834), with his friend Thomas Slidell, a digest of Louisiana appeal cases that enhanced his reputation as a rising young lawyer. His practice soon made him rich enough to become a sugar planter as well. Benjamin, a prominent Whig, served in both branches of the state legislature, was a delegate to two state constitutional conventions, and in 1852 was elected to the U.S. Senate. On the dissolution of the Whig party because of the slavery issue, he publicly proclaimed himself a Democrat (May 2, 1856), and two years later he was reelected Senator. One of the ablest defenses of Southern policy was presented in the Senate by Benjamin on Dec. 31, 1860. On Feb. 4, 1861, after Louisiana's secession, he resigned his seat. In the new Southern government, Benjamin first served as attorney general, was appointed secretary of war in Nov., 1861 (he had been acting secretary since September), and from March, 1862, to the end of the Civil War was secretary of state. Though not popular with the public, he was an intimate friend of Jefferson Davis and was known in the North as "the brains of the Confederacy." As secretary of war he was an able administrator, but was severely criticized—for the most part unjustly—for Confederate defeats early in 1862, particularly the loss of Roanoke Island, N.C. After Davis promoted him to head the state department, Benjamin worked unceasingly but unsuccessfully to secure European recognition of the Confederacy. In Feb., 1865, he proposed that slaves who willingly joined the Confederate ranks be freed. Upon the collapse of the Confederacy, Benjamin escaped by way of Florida and the West Indies to England and there established a new career in the law. He was called to the bar in 1866 and won immediate recognition with *A Treatise on the Law of Sale of Personal Property* (1868). On his retirement early in 1883 he was universally acknowledged to have been in the front rank of his profession. He died and was buried in Paris, where his wife, who was a Louisiana Creole, and his daughter had made their home since the 1840s. See biography by R. D. Meade (1943), A. L. Goodhart, *Five Jewish Lawyers of the Common Law* (1949, repr. 1971).

Benjamin, Park, 1809-64, American journalist, b. British Guiana. As owner and editor of the *New England Magazine*, he merged it (1835) with the *American Monthly Magazine* of New York and became associate editor with C. F. Hoffman. A prominent journalist of his day, he is best known as the founder (1839) of the *New World*, a weekly periodical that ran until 1845. See biography by M. M. Hoover (1948).

Benjamin Constant, Paul Henri: see ESTOURNELLES DE CONSTANT

Benjamin Franklin National Memorial, Pa. see NATIONAL PARKS AND MONUMENTS, table

Benjamin of Tudela (tōdā'la), d. 1173, Jewish traveler, b. Tudela, Spain. He traveled from 1159 to 1173 and is considered to be the first European to have reached China. His account, *Massa'oth Schel Rabbi Benjamin*, sheds light on the history of the times. An English translation was published in 1840 as *The Itinerary of Rabbi Benjamin of Tudela*. See the critical text, tr. and ed. by M. N. Adler (1964).

Ben Macdhu (măkdōō'), peak, 4,296 ft (1,309 m) high, SW Aberdeenshire, Scotland, in the Cairngorm mts., second highest peak in Scotland.

Benn, Anthony Wedgwood, 1925-, British politician. After working as a producer for the British Broadcasting Corporation (1949-50), he was elected a Labour member of Parliament in 1950. He inherited the title of Viscount Stansgate (1960) after two unsuccessful attempts to disclaim it in order to retain his seat in the House of Commons. With the passage of the Peerage Act (1963), for which he was largely responsible, he was able to renounce the title for his lifetime and regain his seat in the Commons. In Harold Wilson's first Labour government he served as postmaster general (1964-66) and minister of technology (1966-70), and he was opposition spokesman on trade and industry (1970-74). In the 1974 Labour government he was made secretary of state for industry and minister of posts and telecommunications. See his *Regeneration of Britain* (1965) and *The New Politics* (1970).

Benn, Gottfried (gôt'frēt bēn), 1886-1956, German poet and critic, a physician. His early verse and poetic dramas, such as *Der Vermessungsdingent* [the surveyor] (1919), were strongly expressionistic and even nihilistic. His later poems, among them the collection *Statische Gedichte* (1948), and his autobiography, *Doppelleben* [double life] (1950), reflect the agony and conflict of the National Socialist era. Benn's essays on aesthetics and politics are well known, and his fictional works, including *Der Ptolemaer* (1949), are more philosophical prose than tales. See study by J. M. Ritchie (1973).

Bennet, Henry: see ARLINGTON, HENRY BENNET, 1ST EARL OF

Bennett, Arnold (Enoch Arnold Bennett), 1867-1931, English novelist and dramatist. One of the great 20th-century English novelists, Bennett is famous for his realistic novels about the "Five Towns," an imaginary manufacturing district in northern England. Bennett's early career included editing the fashionable magazine *Woman* and writing literary reviews and articles. About 1900 he began to devote himself industriously to his own work, producing a series of excellent regional novels. Influenced by the NATURALISM of Zola, he depicted in great detail the grim, sometimes sordid, lives of shopkeepers and potters. His attitude toward his characters was one of affectionate sympathy, and he always managed to make their mundane lives interesting. Bennett's best work is contained in his novels of the "Five Towns," which include *Anna of the Five Towns* (1902), *The Old Wives' Tale* (1908), the trilogy *Clayhanger* (1910), *Hilda Lessways* (1911), and *These Twain* (1916). Bennett also achieved considerable success as a playwright, most notably with *Milestones* (1912), written with Edward Knoblock, and *The Great Adventure* (1913). See his journal (3 vol., 1932-33), biography by Margaret Drabble (1974), studies by John Wain (1967), K. E. Roby (1972), and James G. Hepburn (1963, repr. 1973).

Bennett, Hugh Hammond, 1881-1960, American soil scientist, b. near Wadesboro, N.C. Known as the father of soil conservation, he first proposed the theory of sheet erosion of soils in 1905. He directed national programs of soil and water conservation and wrote many articles on the subject, laying the groundwork for consideration of soil conservation by Congress. His books include *Soil Conservation* (1939) and *This Land We Defend* (1942).

Bennett, James Gordon, 1795-1872, American newspaper proprietor, b. Keith, Scotland. He came to America in 1819 and won a reputation as Washington correspondent of the *New York Enquirer* and later (1829-32) as assistant editor of the combined *Courier and Enquirer*. On May 6, 1835, he launched his *New York Herald*, a new penny paper of four four-column pages. His capital totaled \$500 and his office was a Wall St. cellar, yet in less than a year the paper sold almost 15,000 copies daily. Bennett's innovations made the *Herald* a landmark in the history of American journalism. In his brief editorials he criticized all political parties, he included new fields of news, notably that of Wall St. finance, he first established (1838) European correspondents for his paper, he first used the telegraph extensively in newspaper work, and he first used illustrations for news articles. Although the *Herald* initially gained an audience by playing up sensational and cheap news, it later earned a reputation as a full and accurate paper, particularly in the period of the Civil War, when Bennett employed 63 war correspondents and spent \$525,000 on war reporting. See Oliver Carlson, *The Man Who Made News*. James Gordon Bennett (1942).

Bennett, James Gordon, 1841-1918, American newspaper proprietor, b. New York City, son of James Gordon Bennett. Educated mostly in France, he took over (1867) from his father the management of the *New York Herald* and maintained the paper's reputation as a news gatherer. In 1869-71 he financed Henry Stanley's expedition into Africa to find David Livingstone, and from 1879 to 1881 he supported the ill-fated expedition of G. W. De Long to the arctic region. In reporting international news the *Herald* scored repeated triumphs. Its staff of brilliant reporters was famous. After 1877, Bennett lived mostly in Paris, directing his newspapers by cable, and with John W. Mackay he organized (1883) the Commercial Cable Company to handle European dispatches. He established London and Paris daily editions of the *Herald*, the Paris paper was an unprofitable, sincere attempt to promote international good will. Bennett was fond of sports, especially of

yachting, and established the James Gordon Bennett cup as a trophy in international yacht races and similar cups for balloon and airplane races. See Richard O'Connor, *The Scandalous Mr Bennett* (1962), D C Seitz, *The James Gordon Bennetts* (1928, repr 1973).

Bennett, Richard Bedford, 1870-1947, Canadian prime minister, b Hopewell, N.B. In 1927 he succeeded Arthur Meighen as leader of the Conservative party, upon the defeat of the Liberals in 1930, he became prime minister. At the imperial conference in London in 1930, he strongly urged a preferential tariff for the empire, at the conference held in Ottawa in 1932, over which he presided, his policy was partly adopted with the signing of 12 separate trade agreements of Great Britain with the dominions and of the dominions with each other. As prime minister during the depression, Bennett proposed social legislation in 1934 to lessen the widespread dissatisfaction with his government. Nevertheless, his Conservative party was defeated in 1935 and Bennett resigned. He was leader of the opposition until 1938, when he retired from politics and went to live in England. In 1941 he was raised to the peerage as 1st Viscount Bennett of Calgary, of Mickleham, and of Hopewell.

Bennett, Sir William Sterndale, 1816-75, English musician. Bennett was a friend of Mendelssohn and Schumann, both of whom influenced his work. Besides composing, he was active as a pianist and conductor. He founded the Bach Society and in 1854 gave the first public British performance of the St Matthew Passion. Bennett's compositions include a symphony, four piano concertos, and much solo piano music.

Ben Nevis (nē'vīs, nēv'īs), peak, 4,406 ft (1,343 m) high, Inverness-shire, W Scotland, overlooking Glen Nevis, highest peak of Great Britain. Ruins of an observatory are on the summit, from which there is an impressive view, especially on the northeastern side with its precipice of more than 1,450 ft (442 m).

Bennewitz, Peter: see APIANUS, PETRUS

Bennigsen, Rudolf von (rōō'dōlf fən bēn'tsən), 1824-1902, German political leader. A liberal and a nationalist from Hanover, he favored German unification under a democratic Prussian state. After Bismarck's initial successes in unifying Germany, however, he supported the chancellor and helped found (1867) the National Liberal party. President of the party until 1898, he was an important figure in the Reichstag and in the Prussian lower house.

Bennington, town (1970 pop 14,586), seat of Bennington co., SW Vt., chartered 1749, settled 1761. It includes the villages of North Bennington and Old Bennington. Major manufactures of the town are automotive batteries, paper products, electronic components, air-conditioning equipment, lubricating equipment, furniture, and lithographic products. The surrounding area has dairy farms and several ski resorts. Points of interest in Bennington include a monument that is 300 ft (91 m) high commemorating the Revolutionary War battle of Bennington (see SARATOGA CAMPAIGN), the site of the first schoolhouse in Vermont, Catamount Tavern, meeting place of the Green Mountain Boys, the site of abolitionist William Lloyd Garrison's printing shop, the Old First Church (1805), and the Walloomsac Inn, opened in 1763. Bennington College is in the town.

Bennington College, at Bennington, Vt., coeducational (originally for women), chartered 1925, opened 1932. Its curriculum is based on individual interests and needs. All students are required to devote part of their time to off-campus employment, usually relating to their course of study. Many faculty members are practicing artists, and a close relationship between students and faculty is encouraged.

Benno, Saint, d 1106, German prelate. He was bishop of Meissen and an ardent supporter of Pope Gregory VII against Holy Roman Emperor Henry IV, and the emperor had him deposed. He was reinstated on Gregory's death by GIBERT OF RAVENNA (the antipope Clement III). He later shifted his allegiance to Gilbert's adversary, Pope Urban II. Luther was greatly displeased at the canonization (1523) of Benno. St Benno is a patron of Munich. Feast June 16.

Beno (bē'nō), Levite 1 Chron 24:26,27

Benoît de Sainte-More or **Benoît de Sainte-Maure** (bēnwā' də sānt-mōr'), 1154-73, French trouvère. He was the author of the *Roman de Troie*, a romance in 30,000 verses based on historical accounts by Dares and Dictys. It became a primary source of medieval versions of the Trojan legend,

notably the story of *TROILUS*. At the order of Henry II of England, Benoît also wrote a rhymed *Chronique des ducs de Normandie*.

Benoni (bēnō'nī) see BENJAMIN 1

Benoni (bānō'nē), town (1970 pop 149,563), Transvaal, NE South Africa, on the WITWATERSRAND. It is the distribution center for a gold-mining district. The chief manufacture is electrical equipment. Benoni was founded in 1904. During the violent Witwatersrand miners' strike of 1922, through which white miners sought in vain to prevent mine owners from employing cheaper black African labor, heavy fighting occurred in the town between miners and the South African military. Benoni has commercial and technical schools.

Benozzo Gozzoli: see GOZZOLI, BENOZZO

Bensenville, village (1970 pop 12,833), Cook and Du Page counties, NE Ill., a suburb of Chicago, inc 1894. It has varied light manufactures. O'Hare International Airport is nearby.

Benson, Arthur Christopher, 1862-1925, English author, eldest son of Archbishop Benson. He was master at Eton (1885-1903) and at Magdalene College, Cambridge (1915-25). His works include poetry, novels, essays, notably from *A College Window* (1902), critical studies, and biographies of his father and brother Hugh. See his *Memoirs and Friends* (1924), selections from his diary (ed. by Percy Lubbock, 1926).

Benson, Edward Frederic, 1867-1940, English author, 3d son of Archbishop Benson. He wrote several biographies and reflections on contemporary society, but he is chiefly remembered for his lightly satirical novels, notably *Dodo* (1893) and the series about Lucia Pillson, the first of which was *Queen Lucia* (1920). His archaeological work in Athens (1892-95) resulted in two novels on Greece, *The Vintage* (1898) and *The Capsina* (1899).

Benson, Edward White, 1829-96, archbishop of Canterbury, educated at Trinity College, Cambridge. He was appointed (1877) the first bishop of Truro, and in 1882 he was appointed archbishop of Canterbury. His clerical writings include *Cyprian* (1897) and *Apocalypse* (1900). Three of his four sons became notable literary figures—A C Benson, E F Benson, and R H Benson. See biography by A C Benson (1899).

Benson, Ezra Taft, 1899-, U.S. Secretary of Agriculture (1953-61), b Whitney, Idaho. An extension economist and marketing specialist at the Univ of Idaho (1930-38) and executive secretary of the National Council of Farmer Cooperatives (1939-44), he was chairman of the board of trustees of the American Institute of Cooperatives when appointed Secretary of Agriculture. His policies—among other things he opposed rigid price supports at 90% of parity in favor of flexible price supports—brought him much criticism, even from Republican Congressmen. In 1959 farm belt members of the Republican National Committee sought Benson's resignation. He refused, stating that he would continue to fight to oust government from agriculture. A devout Mormon, he became (1943) a member of the Council of Twelve (the Apostles). Benson wrote *Farmers at the Crossroads* (1956), *Freedom to Farm* (1960), *Title of Liberty* (1964), and *An Enemy Hath Done This* (1969). See his *Cross Fire: The Eight Years with Eisenhower* (1962), biography by Wesley McCune (1958).

Benson, Robert Hugh, 1871-1914, English author and clergyman, 4th son of Archbishop Benson. He was converted to Roman Catholicism in 1903 and ordained the next year. In 1911, as a monsignor, he became privy chamberlain to Pope Pius X. His works include the novels *By What Authority?* (1904) and *Richard Raynal* (1906), and *Paradoxes of Catholicism* (1913). See biography by A C Benson (1915).

Bent, Charles, 1799-1847, American frontiersman, b St Louis. He entered the fur trade of the Missouri River and became one of the mountain men. His interests turned to the Southwest, and he led expeditions on the Santa Fe Trail. Charles Bent was the senior partner of a trading firm that included Ceran St Vrain as well as William Bent and others of the seven Bent brothers. The company was one of the most prominent on the frontier, and BENT'S FORT was one of the most famous American trading posts. Because of his high standing, Charles Bent was chosen as governor of New Mexico after the American occupation in the Mexican War. He was murdered at Taos in an uprising of Indians and Mexicans.

Bent, James Theodore, 1853-97, English explorer and archaeologist. He engaged in archaeological research on the coast of Asia Minor (1888-89), the

Bahrein Islands (1889), Cilicia Trachia (1890), Mashonaland (1891), Ethiopia (1893), and the Arabian peninsula (1893-97), where he mapped the Hadramaut region. He wrote *The Ruined Cities of Mashonaland* (1892), *The Sacred City of the Ethiopians* (1893), and *Southern Arabia* (1900).

Bent, William, 1809-69, American frontiersman, b St Louis. One of the younger brothers of Charles Bent, he was for many years the manager of BENT'S FORT, while Charles Bent lived mainly in Taos. William Bent was one of the most widely known and highly respected traders in the West. He scouted for Stephen W. Kearny and Sterling Price in the Mexican War. In 1849 he destroyed the fort, building another farther down the Arkansas River (1853).

bent grass, any species of the genus *Agrostis* of the family Gramineae (GRASS family), chiefly slender, delicate plants native to cool climates. Many are used for forage or lawns. Important species naturalized from Europe include the creeping bent (*A. palustris*), a lawn and putting-green grass, colonial bent (*A. tenuis*), frequently used in lawn mixtures, and especially, redtop (*A. alba*), called also fionn and herd's-grass. Redtop, a perennial with reddish panicles, is much used (often mixed with clover) for pasture and hay in NE America; it is also effective in erosion control. The cloud grass (*A. nebulosa*), native to Spain, is cultivated for use as an EVERLASTING. Bent grass is classified in the division MAGNOLIOPHYTES, class Liliatae, order Cyperales, family Gramineae.

Bentham, George (bēn'tham), 1800-1884, one of the greatest of English systematic botanists, nephew of Jeremy Bentham. He wrote *Handbook of British Flora* (1858) and (with W J Hooker) *Genera Plantarum* (1862-83) and handbooks on the flora of several British possessions.

Bentham, Jeremy, 1748-1832, English philosopher, jurist, political theorist, and founder of UTILITARIANISM. Educated at Oxford, he was trained as a lawyer and was admitted to the bar, but he never practiced; he devoted himself to the scientific analysis of morals and legislation. His greatest work was his *Introduction to the Principles of Morals and Legislation* (1789), which shows the influence of Helvetius and won Bentham recognition throughout the Western world. His utilitarianism held that the greatest happiness of the greatest number is the fundamental and self-evident principle of morality. This principle should govern our judgment of every institution and action. He identified happiness with pleasure and devised a moral arithmetic for judging the value of a pleasure or a pain. He argued that self-interests, properly understood, are harmonious and that the general welfare is bound up with personal happiness. Bentham's contribution to theoretical ethics has had less lasting effect than his thorough application of utilitarian principles to economics, jurisprudence, and politics. Devoting himself to the reform of English legislation and law, he demanded prison reform, codification of the laws, and extension of political franchise. The 19th-century reforms of criminal law, of judicial organization, and of the parliamentary electorate owe much to the influence of Bentham and his disciples. See his *Correspondence*, ed. by T L Sprigge and L R Christie (3 vol., 1968-71), John MacCunn, *Six Radical Thinkers* (1964), studies by M P Mack (1963) and David Lyons (1973).

Bentinck, William. see PORTLAND WILLIAM BENTINCK, 1ST EARL OF

Bentinck, Lord William Cavendish (bēn'tingk, -tik), 1774-1839, British administrator in India. He served in the Napoleonic Wars and was (1803-7) governor of Madras. He was appointed governor general of Bengal in 1827, assuming the title governor general of India in 1833. Bentinck was strongly influenced by British utilitarianism and introduced many reforms in the interest of the people. He admitted Indians to important office, fostered communication and education, and revised the system of landholding. He also abolished SUTTEE and began suppression of the THUGS. See biography by John Rosselli (1974).

Bentinck, Lord William George Frederick Cavendish, 1802-48, English politician and sportsman, known as Lord George. Although he entered Parliament in 1826, he was known primarily for his horse-racing activities until in 1846 he emerged as a leading opponent of the repeal of the corn laws. His brilliant leadership, with DISRAELI, of the protectionists was cut short by his sudden death.

Bentinck, William Henry Cavendish: see PORTLAND, WILLIAM HENRY CAVENDISH BENTINCK 3D DUKE OF

Bentivoglio (bān'tēvō'lyō), Italian noble family, one of several powerful clans in the struggle for control of BOLOGNA during most of the 15th cent. Its greatest member was Giovanni II, who was lord—in fact if not in name—from 1462 until 1506, when Pope Julius II took Bologna. Giovanni II maintained a splendid court and beautified his city. After its exile from Bologna the family resided in Ferrara and produced several important prelates.

Bentley, Eric, 1916–, American critic, editor, and translator, b. England, grad. Oxford, 1938, Ph.D. Yale, 1941. A highly regarded critic, particularly of the drama, Bentley is the author of *A Century of Hero-Worship* (1944), *The Playwright as Thinker* (1946), *Bernard Shaw* (1947), *What Is Theatre?* (1956), *The Importance of Scrutiny* (1964), and *Theatre of War* (1972). He is also known for his translations of plays of Bertolt Brecht and Luigi Pirandello and for his editions of collected plays, including *The Classic Theatre* (4 vol., 1958–61). He was drama critic for the *New Republic* from 1952 to 1956. From 1953 to 1969 he was Brander Matthews professor of dramatic literature at Columbia.

Bentley, Richard, 1662–1742, English critic and philologist. He was largely responsible for the high standards of textual criticism in the work of his many followers, and he is generally considered the greatest of English classical scholars. His exposure of a 14th-century forgery, *The Epistles of Phalaris*, is his most celebrated work. See biography by Adam Fox (1954).

Bentley, William, 1759–1819, American Unitarian clergyman, b. Boston. From 1783 until his death he was pastor of East Church, Salem, Mass. His *Diary* (4 vol., 1905–14), covering the years 1784–1819, is a valuable historical source.

Benton, Thomas Hart, 1782–1858, U.S. Senator (1821–51), b. Hillsboro, N.C. He moved to Tennessee in 1809, was admitted to the bar in 1811, and served (1809–11) in the state senate. In 1815, Benton went to St. Louis, where he became editor of the *Missouri Enquirer*, established a thriving law practice, and won political prestige. He entered the U.S. Senate on Missouri's admission to the Union in 1821 and was four times reelected. A supporter from 1824 of Andrew Jackson, with whom he had been at odds, Benton was a power in the administrations of Jackson and Martin Van Buren. He played one of the most prominent parts in the successful war on the Bank of the United States. A rigid "hard money" man (he delighted in the sobriquet "Old Bullion"), Benton had the ratio of silver to gold revised from 15 to 1 to 16 to 1 in 1834 and thus brought gold into circulation again. Congress defeated his resolution requiring that the public lands be paid for in hard money only, but Jackson immediately legalized the idea in an executive order (1836), the famous Specie Circular, which Benton drew up. His currency measures, intended to discourage continued land speculation and thereby encourage actual settlement of the West, were supported by Eastern workingmen, who wished to be paid in specie rather than in notes of uncertain value. Benton also supported all legislation that aided settlers and favored the development of the West, including reduction in the price of government lands, suppression of land speculation, westward removal of the Indians, and internal improvements. He advocated government support of Western exploration, with which he was intimately connected through the expeditions of John Charles FRÉMONT, who married one of his four daughters, Jessie Benton FRÉMONT. The Oregon country especially interested him, and he protested the joint occupation with Britain. Yet he insisted that the 49th parallel (the line established) was the only boundary the United States could rightfully claim and deplored the Democratic campaign slogan of 1844—"Fifty-four forty or fight." As to Texas, although he had protested the 1819 treaty with Spain as one in which the United States gave up its rights to that region, he could not acquiesce in the intrigues that led to the annexation of Texas and the Mexican War. Benton had early come to favor the gradual abolition of slavery, and with the ascendancy of the proslavery Democrats he lost influence in the party. His antislavery sentiments ran counter to majority opinion in Missouri at that time, and with his opposition to the proslavery features of the Compromise of 1850 he was defeated for a sixth term. He returned to Congress as a U.S. Representative (1853–55) but after voting against the Kansas-Nebraska Act in 1854 he was again defeated for reelection. In 1856 he was also defeated for the governorship of Missouri. He compiled *An Abridgment of the Debates of Congress from 1789 to 1856* (16 vol.,

1857–61) and wrote the autobiographical *Thirty Years' View* (2 vol., 1854–56). See biographies by Theodore Roosevelt (1886, repr. 1968), W. N. Chambers (1956, repr. 1970), and W. M. Meigs (1904, repr. 1970).

Benton, Thomas Hart, 1889–1975, American regionalist painter, b. Neosho, Mo., grandnephew of Sen. Thomas Hart Benton and son of Congressman Maecenas E. Benton. In 1906 and 1907 he attended the Art Institute of Chicago and at 19 went to Paris, where he remained five years. On his return to the United States, he designed movie sets, managed an art gallery, and continued to paint. The best-known American muralist of the 1930s and early 40s, he executed murals for the New School of Social Research and the Whitney Museum, both in New York City, the Missouri statehouse, Jefferson City, Mo., and the Post Office Dept. and Dept. of Justice buildings, Washington, D.C. He is noted for his dramatization of American themes. His style is graphic, strong in color, repetitious and insistent in the use of rhythmic line. *July Hay* (1943) is in the Metropolitan Museum. Benton taught painting at several colleges and art schools. See his autobiographical *An Artist in America* (1951, rev. ed. 1968) and *An American in Art* (1969).

Benton, city (1970 pop. 16,499), seat of Saline co., central Ark., founded 1836. Its chief industry, aluminum mining and refining, is based on the extensive high-grade bauxite deposits found in the area. Nearby is a state hospital.

Benton Harbor, city (1970 pop. 16,481), Berrien co., SW Mich., on Lake Michigan at the mouth of the St. Joseph River and opposite its twin city, St. Joseph, Ind. 1869. Its temperate climate has made it the center of Michigan's fruit industry. Fruit is canned and shipped, and home appliances, metal products, cranes, and machine tools are made. The nearby lake and beaches attract vacationers, and the city itself is a popular health resort. The House of David, a religious colony founded there in 1903, has numerous business and farm holdings. The city is the seat of a junior college. A fish hatchery and Warren Dunes State Park are nearby.

bentonite (bēn'tānīt) see CLAY

Bent's Fort, trading post of the American West, on the Arkansas River in present-day SE Colorado, E of Rocky Ford and La Junta and several miles above the mouth of the Purgatoire. The trading company headed by Charles BENT and Ceran St. Vrain, one of the most successful in the West, also included William BENT and two other Bent brothers. They had their first post in the area in 1826 and in 1833 moved to the completed fort, often called Bent's Old Fort. Because William Bent was the manager and chief trader in all the years of its prosperity, it is also sometimes called Fort William. Within its adobe walls came all the famous mountain men of the later period, as the fort on the mountain branch of the Santa Fe Trail came to dominate the trade of all the Indian tribes S of the Black Hills as well as that of the Mexicans and the arriving Americans. Kit Carson was a hunter there from 1831 to 1842. S. W. Kearny and Sterling Price each briefly used the fort for their troops in the Mexican War. According to the generally accepted story, the Indian trade fell off and William Bent attempted to sell the fort to the U.S. government, he reached no satisfactory conclusion and in anger abandoned the fort and set the powder in it on fire, partially destroying it. In any case the fort was abandoned by 1852. William Bent erected a new establishment farther down the Arkansas in 1853. That post (Bent's New Fort) he leased to the government in 1860. Fort Lyon was afterward built around it. See D. S. Lavender, *Bent's Fort* (1954, repr. 1968).

Bent's Old Fort National Historic Site: see NATIONAL PARKS AND MONUMENTS (table)

Benue (bānwā'), river, W Africa, chief tributary of the Niger. It flows c 670 mi (1,080 km) W from the United Republic of Cameroon into the Niger River at LOKOJA, Nigeria. The Benue, which carries much commercial traffic, is almost entirely navigable by power-driven boats in August and September, the height of the rainy season. In 1854, William B. Baikie piloted a steamer c 400 mi (640 km) upstream from Lokoja.

Ben Yehudah, Elezer (ēlī'zār bēn yēhōō'dā), 1858–1922, Jewish scholar and leader, b. Lithuania. He settled in Palestine as early as 1881, where he dedicated himself to the revival of Hebrew as the national language. His outstanding scholarly achievement is the *Dictionary of Ancient and Modern Hebrew* (16 vol.), which includes all the Hebrew words used throughout the various periods of He-

brew literature, omitting the words of Aramaic and foreign origin and adding new words that he coined to meet modern needs. He also founded the Hebrew Language Council, an institution devoted to promoting and regulating the development of the Hebrew language. In 1953 it was transformed into the Academy of Hebrew Language. See Robert St. John, *Tongue of the Prophets: the Life Story of Elezer Ben Yehuda* (1952).

Benz, Karl (bēnts), 1844–1929, German engineer, credited with building the first automobile powered by an internal-combustion engine. The car, driven in Mannheim in 1885 and patented in 1886, had three wheels, an electric ignition, and differential gears and was water-cooled. As a result of a merger in 1926, Benz's company became Daimler-Benz AG, the manufacturer of the Mercedes-Benz automobile. See St. J. C. Nixon, *The Invention of the Automobile* (Karl Benz and Gottlieb Daimler) (1936), Eugen Diesel, *From Engine to Autos* (tr., 1960).

benzaldehyde (bēnzāl'dahīd) or **benzenecarbon-al** (bēn'zēnkar'bānəl), C_6H_5CHO , colorless liquid ALDEHYDE with a characteristic almond odor. It boils at $180^\circ C$, is soluble in ethanol, but is insoluble in water. It is formed by partial oxidation of benzyl alcohol, and on oxidation forms benzoic acid. It is called oil of bitter almond, since it is formed when amygdalin, a glucoside present in the kernels of bitter almonds and in apricot pits, is hydrolyzed, e.g., by crushing the kernels or pits and boiling them in water, glucose and hydrogen cyanide (a poisonous gas) are also formed. It is also prepared by oxidation of toluene or benzyl chloride or by treating benzal chloride with an alkali, e.g., sodium hydroxide. Benzaldehyde is used in the preparation of certain aniline dyes and of other products, including perfumes and flavorings.

Benzedrine (bēnz'īdrēn'), trade name for the drug AMPHETAMINE

benzene (bēn'zēn, bēnzēn'), colorless, flammable, toxic liquid with a pleasant aromatic odor. It boils at $80.1^\circ C$ and solidifies at $5.5^\circ C$. Benzene is a HYDROCARBON, with formula C_6H_6 . The simplest picture of the benzene molecule, proposed by the German chemist Friedrich Kekulé (1865), is a hexagon of six carbon atoms joined by alternating single and double bonds and each bearing one hydrogen atom, symbolized by . However, modern studies have

shown that the six carbon-carbon bonds are all of equal strength and distance, thus the double-bond electrons do not belong to any particular bonds but rather are delocalized about the ring, with the result that the strength of each bond is between that of a single bond and that of a double bond (see CHEMICAL BOND). Benzene is the parent substance of the AROMATIC COMPOUNDS, a large and important group of organic compounds. It is the first of a series of hydrocarbons known as the benzene series, formed by the substitution of methyl groups, CH_3 , for the hydrogen atoms of the benzene molecule. The second member of the series is TOLUENE, $C_6H_5CH_3$, from which TRINITROTOLUENE is derived, and the third member is XYLENE, $C_6H_4(CH_3)_2$, a solvent. In xylene and other benzene derivatives in which two of the hydrogens have been replaced, there are three possible arrangements of the substitution groups, in the *ortho* (o) configuration the groups are on adjacent carbon atoms, in the *meta* (m) configuration the groups are separated by one carbon atom, and in the *para* (p) configuration the groups are on opposite sides of the ring. The three forms of xylene (dimethylbenzene) are shown below.

In addition to derivatives formed by the substitution of other groups for one or more of the hydrogen atoms of the benzene ring, two or more rings may be joined together, as in NAPHTHALENE, ANTHRACENE, and PHENANTHRENE, or other atoms, such as nitrogen, may be substituted for carbon atoms in the ring, as in PYRIDINE (C_5H_5N) and PYRIMIDINE ($C_4H_4N_2$). Among the important derivatives of benzene are PHENOL, ANILINE, and PICRIC ACID. Benzene and the other aro-

matic hydrocarbons are obtained for industrial purposes from the distillation of coal tar, a by-product in the manufacture of coke, and from petroleum by special cracking methods. They are used in the manufacture of plastics and synthetic rubber and of dyes and drugs.

benzene, dimethyl: see XYLENE

benzene, 1,2,3-trihydroxy-, IUPAC name for pyrogallol. See GALLIC ACID

benzenecarbonal, IUPAC name for BENZALDEHYDE

benzene hexachloride: see INSECTICIDE

benzine (bĕn'zĕn, bĕnzĕn'), colorless, highly flammable liquid. It is used as a cleaning agent because it is a solvent for organic substances such as fats, oils, and resins and is also used in the preparation of certain dyes and paints. Benzine is a mixture of hydrocarbons, chiefly alkanes such as pentane and hexane. It is obtained by the fractional distillation of PETROLEUM.

benzoate of soda: see SODIUM BENZOATE

Ben-zoheth (bĕn-zō'hĕth), Judahite 1 Chron 4:20
benzoic acid (bĕnzō'ik), C₆H₅CO₂H, crystalline solid organic acid that melts at 122°C and boils at 249°C. It is the simplest aromatic carboxylic acid (see ARYL GROUP and CARBOXYL GROUP). In addition to being synthesized from a variety of organic compounds (e.g., benzyl alcohol, benzaldehyde, toluene, and phthalic acid), it may be obtained from resins, notably gum BENZOIN. It is used largely for making its salts and esters, most notably sodium benzoate, which is widely used as a preservative in foods and beverages and as a mild antiseptic in mouthwashes and toothpastes.

benzoic acid, 2-hydroxy-, IUPAC name for SALICYLIC ACID

benzoic acid, 3,4,5-trihydroxy-, IUPAC name for GALLIC ACID

benzoin (bĕn'zōin, -zō'īn) or **benzoinum** (bĕnzōin'əm), balsamic RESIN, the dried exudation from the pierced bark of various species of the benzoin tree (*Styrax*) native to Sumatra, Java, and Thailand, appearing as red-brown to yellow-brown tears. Because of its fragrant odor it is used in perfume and sometimes in incense. The benzoic acid present in it gives it value in medicine as an antiseptic, as a stimulant, and, in certain respiratory diseases, as an inhalant. Among the several varieties are Siam benzoin and Sumatra benzoin. Siam benzoin is considered finer, since it has a high content of benzoic acid; Sumatra benzoin contains cinnamic acid.

Ben-Zvi, Yizhak (yī'tsh'hak bĕn-tsvĕ), 1884-1963, president of Israel (1952-63), b. Russia, originally named Issac Shimshelevitz. A Zionist, he fled Russia in 1905 because of his activities in the Jewish self-defense movement and settled (1907) in Palestine. With David Ben-Gurion and other Zionist leaders he helped create the Jewish state. In 1952 he succeeded Chaim Weizmann as president of Israel; he was reelected in 1958 and again in 1962. He died in office in 1963. He was a historian and a scholar of note in the field of Jewish ethnology. His writings include *The Moslem World and the Arab World* (1937), *The Exiled and the Redeemed* (new ed. 1961), and *The Hebrew Battalions* (Letters (1969)).

Beograd: see BELGRADE, Yugoslavia

Beolco, Angelo (anjĕ'lō bāōl'kō), 1502-42, Italian actor and playwright. While managing farms belonging to his family, Beolco had much contact with Paduan peasants, with whom he was deeply sympathetic. Their way of life formed the background for his rustic comedies featuring the peasant "Ruzzante," the name commonly given Beolco himself. Using the Paduan dialect, he brought great descriptive powers to his witty depiction of country life.

Beor (bĕ'ōr) 1 Father of Balaam Num 22:5 Bosor 2 Peter 2:15 2 Father of BELA 1

Beowulf (bĕ'awōōlf), oldest English epic, probably composed in the early 8th cent. by an Anglian bard in the vicinity of Northumbria. It survives in only one manuscript, written A.D. c. 1000 by two scribes and preserved in the British Museum in the collection of Sir Robert Cotton. The materials for the poem are derived mainly from Scandinavian history, folk tale, and mythology. Its narrative consists of two parts: the first relates Beowulf's successful fights with the water monster Grendel and with Grendel's mother, the second narrates the hero's victory in his old age over a dragon and his subsequent death and funeral at the end of a long life of honor. These events take place entirely in Denmark and Sweden. The poem contains a remarkable fusion of pagan

and Christian elements and provides a vivid picture of old Germanic life. It is written in a strongly accentual, alliterative verse. See *The Beowulf Poet: A Collection of Critical Essays*, ed. by D. K. Fry (1968), studies by Kenneth Sisam (1965), J. C. Pope (rev. ed. 1966), E. B. Irving (1968), and Ritchie Girvan and Rupert Bruce-Mitford (1971).

Beppu (bĕp'pōō), city (1970 pop. 123,786), Ōita prefecture, NE Kyushu, Japan, on Beppu Bay. It is a major fishing port and a tourist resort noted for its numerous hot springs.

Berachiah (bĕr'ākī'ā), variant form of BERECHIAH

Berachya ben Natronai ha-Nakdan: see BEREKHAH

Beraiah (bĕr'ā'ā), Benjamite 1 Chron 8:21

Béranger, Pierre Jean de (pyĕr zhaN də bāraN-zhā'), 1780-1857, French lyric poet. He was a protégé of Lucien Bonaparte and a friend of some of the most eminent men of his day. His first collection of songs, published in 1815, was immediately popular. He fitted his verse to popular melodies, and he used his poems largely to express republican and Bonapartist ideas, for which he was twice imprisoned. Some of his most popular pieces are "Le Roi d'Yvetot," "Ce n'est plus Lisette," "Le Grenier," and "Le Dieu des bonnes gens." See translations by William Walsh (1888) and Beranger's autobiography (1857).

Berar, India: see MADHYA PRADESH

Berat (bĕrat') or **Berati** (bĕratĕ), town (1970 pop. 25,700), capital of Berat prov., S central Albania. It is a commercial center (producing foodstuffs, textiles, and leather products) and the seat of a bishop of the Albanian Orthodox Church. There is an oil field nearby. Built probably on the site of ancient Antipatrea, Berat fell to the Serbs in 1345 and to the Turks in 1440. A citadel, rebuilt by the Byzantines in the 13th cent., overlooks the town, which has a 15th-century mosque and several old churches. The autocephalic Albanian Orthodox Church was proclaimed there in 1922.

Berbera (bŭrbəra), city (1963 est. pop. 12,000), N Somalia, a port on the Gulf of Aden. The city, which was first described in the 13th cent. by Arab geographers, was taken in 1875 by the rulers of Egypt, when they withdrew in 1884 to fight the Mahdi in Sudan. Britain took Berbera. It served until 1941 as the winter capital of British Somaliland.

Berbers, aboriginal Caucasoid peoples of N Africa. They inhabit the lands lying between the Sahara and the Mediterranean Sea and between Egypt and the Atlantic Ocean. The Berbers form a substantial part of the populations of Libya, Algeria, and Morocco. Except for the nomadic TUAREG, the Berbers are small farmers, living under a loose tribal organization in independent villages. They have developed local industries (iron, copper, lead, pottery, weaving, and embroidery). The Berbers are Sunni Muslims, and their native languages are of the Hamitic group, but most literate Berbers also speak Arabic, the language of their religion. Berber languages are spoken by over 10 million people, not all of whom are considered ethnic Berbers. Despite a history of conquests, the Berbers have retained a remarkably homogeneous culture, which, on the evidence of Egyptian tomb paintings, derives from earlier than 2400 B.C. The alphabet of the only partly deciphered ancient Libyan inscriptions is close to the script still used by the Tuareg. The origins of the Berbers are uncertain, although many theories have been advanced relating them to the Canaanites, the Phoenicians, the Celts, the Basques, and the Caucasians. In classical times the Berbers formed such states as MAURETANIA and NUMIDIA. Until their conquest in the 7th cent. by Muslim Arabs, most of the Berbers were Christian (also, a sizable minority had accepted Judaism), and many heresies of the early African church, particularly Donatism, were essentially Berber protests against the rule of Rome. Under the Arabs, the Berbers became Islamized and soon formed the backbone of the Arab armies that conquered Spain. However, the Berbers repeatedly rose against the Arabs, and in the 9th cent. they supported the FATIMID dynasty in its conquest of N Africa. After the Fatimids withdrew to Egypt, N Africa was plunged into an anarchy of warring Berber tribes that ended only when the Berber dynasties, the ALMORAVIDS and the ALMOHAIDS, were born. With the disintegration of these dynasties, the Berbers of

the plains were gradually absorbed by the Arabs, while those who lived in inaccessible mountain regions, such as the Aures, the Kabylia, the Rif, and the Atlas, retained their culture and warlike traditions. When the French and the Spanish occupied much of N Africa, it was the Berbers of these mountainous regions who offered the fiercest resistance. In more recent times the Berbers, especially those of the Kabylia, assisted in driving the French from Algeria. See Ernest Gellner, *Saints of the Atlas* (1969), Ernest Gellner and Charles Micaud, ed., *Arabs and Berbers* (1972), John Waterbury, *North for the Trade* (1972).

Berbice: see GUYANA

Berceo, Gonzalo de (gŏntha'lō thā bārthā'ō), c. 1198-1265?, earliest known Spanish medieval poet. He was a religious in a Benedictine monastery who wrote prolifically on saints and other figures important in the history of the church. His devotion to the Virgin is expressed in 25 poems entitled *Milagros de Nuestra Señora* [miracles of Our Lady] (c. 1245-60). See study by J. E. Keller (1972).

Berchem (bĕr'khəm), city (1970 pop. 50,241), Antwerp prov., N Belgium, an industrial suburb of Antwerp.

Berchet, Giovanni (jŏvan'nĕ bĕrkĕt'), 1783-1851, Italian patriot and poet. He conspired to free Lombardy from Austria and was exiled. He wrote stirring patriotic ballads of a romantic type and rhymed romances, such as *Giulia* and *Matilde*.

Berchtesgaden (bĕrkht'sgā'dən), town (1970 est. pop. 4,300), Bavaria, SE West Germany, in the Bavarian Alps. It is a popular winter and summer resort. Salt has been mined there since the 12th cent. At the nearby Obersalzberg is the site of Hitler's residence, the Berghof.

Berchtold, Leopold, Graf von (lā'ōpōlt graf fən bĕrkht'ōlt), 1863-1942, Austro-Hungarian foreign minister (1912-15). During the BALKAN WARS he successfully worked for the creation of an independent Albania to block Serbian access to the Adriatic Sea. After the assassination (June 28, 1914) of Archduke Francis Ferdinand at Sarajevo, he directed the reckless policy that precipitated World War I. Although Serbia made a conciliatory reply to his harsh ultimatum, Berchtold pressed for full acceptance; he probably even magnified a border incident in order to secure Emperor Francis Joseph's signature to the declaration of war on Serbia. See S. B. Fay, *The Origins of the World War* (2d ed. 1936).

Berdichev (byīrdyĕ'chĭf), Ukrainian *Berdychiv*, city (1969 est. pop. 61,000), SW European USSR, in the Ukraine, on the Gnolopyat River. It is a rail junction and the industrial and trade center of an area where sugar beets are raised. Engineering, sugar refining, tanning, and the manufacture of foodstuffs are the major industries. Founded in the 14th cent., Berdichev passed to Lithuania in 1546 and to Poland in 1569; Russia acquired it in 1793. During the 18th cent., Berdichev was an important Ukrainian commercial city and a center of Jewish Hasidism. Landmarks include a fortified Carmelite monastery (17th cent.) that is now a museum.

Berdyaev, Nicholas (bĕrdyĕ'āf), 1874-1948, Russian theologian and religious philosopher, b. Kiev. After an early period as a Marxist, Berdyaev became prominent in a brilliant circle of Russian intellectuals famous in their time for their interest in Russian Orthodoxy. Forced into exile in 1922, Berdyaev attracted similar circles in Berlin and Paris. He wrote prolifically and gained wide recognition. He decried the dehumanization of man by modern technology and believed that man fulfills himself in the free, creative act. Fond of dichotomies, Berdyaev discussed history in terms of eschatology and the human in terms of the divine. He believed in the ideal of the Godmanhood. Among his many works are *The End of Our Time* (tr. 1933), *The Destiny of Man* (tr. 1937), *Slavery and Freedom* (tr. 1944), *Dream and Reality: an Essay in Autobiography* (tr. 1950), *Truth and Revelation* (tr. 1953). See biographies by Donald Lowrie (1960), Michael Vallon (1960), and M. M. Davy (1964, tr. 1967), studies by Fuad Nucho (1966) and C. S. Calian (1968).

Berdiansk (bĕr'dyānsk'), city (1970 pop. 100,000), S European USSR, in the Ukraine on the Berdiansk Gulf of the Sea of Azov. It is a port and a rail terminus. Industries include fishing and fish processing, flour milling, oil refining, and the production of machinery, cables, and clothing. Berdiansk is also a health and seaside resort. The city was founded in 1827. From 1939 to 1958 it was called Osipenko. Medical and teachers colleges are in the city.

Berea or **Beroea** (both *bērē'a*) 1 Town, near Jerusalem 1 Mac 9:4 It is probably identical with **BEROTH** 1. 2 See **VEROIA**, Macedonia 3 See **ALEPPO**, Syria

Berea (*bārē'a*), city (1970 pop 22,396), Cuyahoga co., NE Ohio, a suburb of Cleveland, settled 1809, inc as a city 1930 Berea was once famous for its sandstone quarries Baldwin-Wallace College is in the city

Berea College, at Berea, Ky., coeducational, founded 1855 by John G. Fee as a one-room district school, chartered 1866 and became a college in 1869 Each student works a minimum of 10 hours a week to help pay expenses The school owns and the students operate a bakery, laundry, printing shop, and hotel The campus includes extensive farm and forest lands

Bereans or **Beroeans** (both *bārē'anz*), members of a Protestant religious sect founded in Scotland by John BARCLAY c 1773 They took their name from the community mentioned in Acts 17:10-13 They held the main Calvinist doctrines and placed great emphasis on the study of the Scriptures The sect is almost extinct

Berechiah (*bēr'ākī'a*) 1 Son of Zerubbabel 1 Chron 3:20 2 Father of MESHULLAM 3, 4 Levites, perhaps the same person 1 Chron 9:16, 15:23 5 Important Ephraimite 2 Chron 28:12 6 Father of Asaph the psalmist 1 Chron 15:17 Berachiah 1 Chron 6:39 7 Father of Zechariah the Minor Prophet Zech 1:1, 7 In Mat 23:35 the name Barachias is probably a textual insertion, for the Zechariah being referred to is almost certainly ZECARIAH 2, not Zechariah the Minor Prophet

Berechiah ben Natronai ha-Nakdan (*bērākī'a bēn natrōnī' ha-nak'dan*), fl 12th or 13th cent., French Jewish fabulist, biblical commentator, philosopher, grammarian, and translator His first name also appears as Berachya He is best known for his collection of fables in rhymed prose, *Mishlei Shualim* (tr. by Moses Hadas, *Fables of a Jewish Aesop*, 1967), derived from the French collection *Ysopet* of Marie de France (c 1170), from the now lost Latin translation of Aesop, *Romulus*, and from several oriental sources His *Sefer Mazref* (tr. by Sir Herman Gollancz, *The Ethical Treatises of Berachya*, 1902) is a summary of the ethical views of Saadia and several other GAONIM

Berengar II (*bēr'ing-gār*), d 966, marquis of Ivrea In 950 he made himself and his son joint kings of Italy, but his great unpopularity and his attempt to force ADELAIDE, his predecessor's widow, to marry his son, brought the intervention (951) of OTTO I of Germany Berengar swore fealty to Otto in 952 Later he ravaged Italy and intrigued with Pope JOHN XII against Otto, who captured and imprisoned Berengar in 963

Berengar of Tours (*bēr'ing-gār*), c 1000-1088?, French theologian, also called Berenger and Berengarius, b Tours He was archdeacon of Angers (c 1040-1060) After studying at Chartres, he returned to Tours to become head of its cathedral school Berengar is said to have denied the Real Presence in the EUCHARIST His defiance of authority angered his contemporaries, particularly LANFRANC Berengar was defended by Pope GREGORY VII and Peter Damian He wrote a reply to Lanfranc, *De Sacra Coena*, which was condemned He was declared a heretic, but became reconciled with the church before his death Berengar's controversy with the church brought about a more explicit formulation of the doctrine of the Eucharist See A J Macdonald, *Berengar and the Reform of Sacramental Doctrine* (1930)

Berenice (*bērānī'sē*), b c 340 B.C., d 281 or 271 B.C., consort and half sister of Ptolemy I, king of ancient Egypt A Macedonian, she was the widow of Philip, one of the officers of Alexander the Great, and was by this marriage the mother of Magas, king of Cyrene, Antigone, wife of Pyrrhus of Epirus, and Theoxena, wife of Agathocles, ruler of Syracuse She was a niece of Ptolemy's first wife, Eurydice, whom she accompanied to Egypt and soon supplanted in Ptolemy's affections Berenice, whose portrait appears with that of Ptolemy on many medals, was the mother by him of Ptolemy II and Arsinoe II

Berenice, c 273-221 B.C., queen of ancient Cyrene and Egypt She was the daughter and successor of King Magas of Cyrene Objecting to her mother's choice of a husband for her after her father's death, Berenice led a successful revolt and put her suitor to death In 247 B.C. she married Ptolemy III, thereby effectively annexing Cyrene to Egypt According to

Callimachus and Catullus, he named a constellation after her, Berenice's Hair (Coma Berenices) After her husband's death she ruled jointly with their son, Ptolemy IV, until he had her put to death

Berenice, c 280-246 B.C., queen-consort of ancient Syria, wife of Antiochus II She was called Berenice Syria She was the daughter of Ptolemy II, and her marriage (252) to Antiochus II marked a temporary cessation in the wars between the Egyptian monarchs and the Seleucids On the death of Antiochus, however, Laodice, the king's divorced first wife, brought about the death of Berenice and her infant son before Berenice's brother, Ptolemy III, could arrive New war resulted

Berenice, fl 6 B.C., Jewish princess, daughter of Costobarus and Salome, sister of Herod the Great She was married to her cousin Aristobulus and bore him a son, Herod Agrippa I She was accused of having instigated the murder of her husband by Herod the Great in 6 B.C. Later she married Theudion, a brother-in-law of Herod the Great After Theudion was put to death for plotting against Herod, she married Archelaus

Berenice, b. A.D. c 28, Jewish princess, daughter of Herod Agrippa I A very beautiful woman, she was often involved in intrigue After her first husband died, she was married to her uncle Herod of Chalcis After his death (A.D. 48) she lived in incest with her brother, Herod Agrippa II, causing some scandal Her third husband was Polemon II, a king in Cilicia, whom she abandoned, returning to Herod Agrippa II It was before her and Agrippa that Paul appeared at Caesarea (Acts 25:23) In the struggle between Rome and Judaea both she and her brother espoused the Roman cause She attracted the attention of the emperor Titus, and after the destruction of Jerusalem (A.D. 70) he apparently planned to marry her The great unpopularity of the Jews with the Romans forced him to withdraw from the match Titus' dilemma is the subject of Racine's play *Berenice*

Berenice, city of ancient Cyrenaica see **BENGASI**

Berenice, ancient city of Egypt, on the Red Sea Founded by Ptolemy II and named in his mother's honor, it commanded the trade with Arabia

Berenson, Bernard (*bēr'ənsən*), 1865-1959, American art critic and connoisseur of Italian art, b Lithuania, grad Harvard, 1887 An expert and an arbiter of taste, he selected for art collectors innumerable paintings, many of which are now in museums A testament to his taste may be seen in the Gardner Museum in Boston He was associated for many years with the British art dealer Lord Duveen as chief art adviser Berenson settled (c 1900) in Settignano, near Florence, Italy, where he built up a fine art collection and library He was noted as a brilliant conversationalist and wit His home, I Tatti, became a mecca for European and American intellectuals and was willed to Harvard Univ Some of Berenson's early publications are still used in the study of art history, though later scholars have criticized many of his judgments Among his many writings are *Venetian Painters of the Renaissance* (1894), *Lorenzo Lotto* (1895), *Florentine Painters of the Renaissance* (1896), *Central Italian Painters of the Renaissance* (1897), *Drawings of the Florentine Painters* (1903), *North Italian Painters of the Renaissance* (1907), *Sketch for a Self-Portrait* (1949), *Rumor and Reflection* (1952), *The Passionate Sightseer* (1960), *Sunset and Twilight* (1967), *Diaries 1947-1958*, ed. by Nicky Mariano (1963), and *Italian Pictures of the Renaissance* (repr 1972) See biographies by Sylvia Sprigge (1960) and Nicky Mariano (1966)

Beresford, John (*bēr'zīfərd, -īs-*), 1738-1805, Anglo-Irish Protestant politician He entered the Irish Parliament in 1760, became a privy councillor (1768), a commissioner of revenue (1770), and chief revenue commissioner (1780) Committed to the continued political dominance of his own class in Ireland, he was a strong supporter of and chief adviser on Irish affairs to William Pitt He advocated both a commercial treaty that emphasized economic dependence on England and the parliamentary union of England and Ireland, the eventual passage (1800) of which he steered through the Irish Parliament The extent of his personal power and patronage provoked his brief dismissal (1795) by the 2d earl of FITZWILLIAM, who was attempting to reassert the role of the lord lieutenant, but Fitzwilliam was recalled and Beresford reinstated He sat in the united British Parliament until 1802

Beresford, William Carr Beresford, Viscount, 1768-1854, British general He served with distinction in Egypt (1801-3) and participated (1806) in the

capture of Cape Colony (Cape Province, South Africa) from the Dutch He captured Buenos Aires in 1806 but held it only briefly before it was retaken by Jacques de LINIERS Beresford occupied Madeira (1807) and for a time was governor of the island Joining Arthur Wellesley (later duke of Wellington) in Portugal (1808), he successfully reorganized the Portuguese army and was prominent throughout the PENINSULAR WAR Created viscount in 1823, he was master general of ordnance in Wellington's cabinet from 1828 to 1830

Berezina (*byērāzēna'*), river, c 380 mi (610 km) long, rising in NW Belorussia, E central European USSR It flows generally S past Borisov and Bobruysk into the Dnepr River It is navigable for most of its length The heroic retreat across the Berezina of the remnants of Napoleon's Grand Army took place near Borisov from Nov 26 to Nov 29, 1812 Despite the loss of more than 20,000 men, the crossing—effected under heavy Russian attack—saved Napoleon and his forces from capture

Berezniki (*bīryēznīkē'*), city (1970 pop 145,000), E European USSR, a port on the Kama River Situated in an area rich in potassium salts, Berezniki is one of the main industrial centers of the Urals and contains a huge chemical combine The city was founded as a sodium plant in 1883

Berg, Alban (*al'ban bērk*), 1885-1935, Austrian composer In his youth he taught himself music but in 1904 he became the pupil and close friend of Arnold Schoenberg Later Berg himself taught privately in Vienna He adopted atonality and later the 12-tone technique of Schoenberg, although he tempered it with the lyric and dramatic qualities of the Viennese romantic tradition His masterpiece, the opera *Wozzeck* (based on the play by Georg Buchner, Berlin, 1925), aroused strenuous protest, but it has since been acclaimed as a major work of the 20th-century musical stage He left unfinished another symbolic and erotic opera, *Lulu* (based on two plays by Wedekind, Zurich, 1937), which adhered more strictly to the 12-tone principle than did *Wozzeck* His Violin Concerto (Barcelona, 1936) was his last completed work He also wrote songs and chamber music See his letters to his wife, ed and tr by Bernard Grun (1971), biographical studies by H. F. Redlich (1957) and Willi Reich (tr 1965)

Berg (*bērk*), former duchy, W West Germany, along the right bank of the Rhine River between the Ruhr and Sieg rivers Dusseldorf was its chief city A county in the 12th cent., Berg passed (1348) to the dukes of JÜLICH and in 1380 was made a duchy In 1423 the duchies of Berg and Jülich were united On the extinction (1511) of the Berg-Jülich line, Berg passed to Duke John III of Cleves (see **CLEVES, DUCHY OF**), whose line died out in 1609, setting off a virulent struggle over succession that contributed to the outbreak of the Thirty Years War (1618-48) In 1614, Berg was awarded to the Palatinate-Neuburg branch of the Bavarian house of Wittelsbach, the award was confirmed in the Treaty of Cleves (1666) Ceded to France in 1806, Berg was raised to a grand duchy by Napoleon I in favor of Joachim Murat The Congress of Vienna assigned (1815) the duchy to Prussia

Bergamo (*bēr'gamō*), city (1971 pop 127,181), capital of Bergamo prov., in Lombardy, N Italy, in the foothills of the Alps It is an industrial center and an agricultural market Manufactures include machinery, textiles, and cement Originally a Gallic town, Bergamo became an independent commune in the 12th cent It came under the rule (1329-1427) of the Visconti and then of Venice until 1797, when it was included in the Cisalpine Republic Bergamo is divided into two sections the old, hilltop town and the modern, lower sector Noteworthy buildings in the old town include a Romanesque church (12th cent.), the beautiful Renaissance Colleoni chapel (15th cent.), and a 14th-century baptistery

bergamot (*būrgəmət'*) [from Bergamo, Italy], citrus tree (*Citrus bergamia*) grown chiefly in Italy, belonging to the family Rutaceae (RUE family) From the rind of the bergamot orange is extracted an essential oil used in perfumes and eau de Cologne Various North American plants of the Labiatae (MINT family) are also called bergamot because of their bergamotlike fragrance Chief among these is *Monarda fistulosa*, or wild bergamot, closely related to the Oswego tea, or **BEE BALM**, which it resembles The name bergamot is also applied to a variety of pear True bergamot is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Sapindales, family Rutaceae

Bergen, East Germany see **RÜGEN**

Bergen (bĕr'gən), city (1970 pop. 113,351), capital of Hordaland co., SW Norway, situated on inlets of the North Sea. It is Norway's third largest city and a major shipping and shipbuilding center. Other manufactures include processed food, textiles, steel, machinery, and electrical equipment. Founded c 1070 by Olaf III (Olaf Kyrre), Bergen soon became the largest city of medieval Norway. It was often the royal seat, and the earliest coronations took place there. The city became an establishment of the HANSEATIC LEAGUE in the mid-14th cent. The Hansa merchants, enjoying extraterritorial privileges, imposed their unpopular rule on Bergen until 1560, and thereafter continued to have influence until the late 18th cent. During the disturbances accompanying the Reformation (16th cent.), most of the city's old churches and monasteries were destroyed. However, Bergen remained Norway's leading city until the rise of Oslo in the 19th cent. The center of Bergen was rebuilt after a severe fire in 1916. Nevertheless, the city retains many impressive monuments of its medieval past. One of its most famous buildings is Bergenhus fortress, which contains Haakon's Hall (1261), it was rebuilt after being heavily damaged in World War II. Other old buildings include the Quay, a group of wooden quayside houses rebuilt in their medieval style after a fire in 1702, St. Mary's Church (12th cent.), Fantoft Stavkirke (12th cent.), and, just south of Bergen, the 12th-century ruins of Norway's first Cistercian monastery. One of the chief cultural and educational centers of Norway, Bergen has a university (founded 1948), a school of economics and business administration, several scientific institutes, and a Hanseatic museum. Bergen's theater was founded (1850) by the composer and violinist Ole Bull and gained international recognition under such directors as Ibsen and Bjørnson. The dramatist Ludvig Holberg (1684) and the composer Edvard Grieg (1843) were born in Bergen.

Bergen, N.J. see JERSEY CITY

Bergenfield, borough (1970 pop. 33,131), Bergen co., N.E. N.J., inc. 1894. It is mainly residential with some light industry. Its Old South Church was built in 1799.

Bergen op Zoom (bĕr'gən ȯp zōm'), town (1971 pop. 39,612), North Brabant prov., SW Netherlands, on the Zoom River near its confluence with the Eastern Scheldt. It is a commercial and fishing port and its industries manufacture chemicals, machinery, and refined sugar. Bergen op Zoom was chartered c 1260 and was a major commercial rival of Antwerp until the 16th cent. It was repeatedly besieged by the Spanish and French in the wars that took place from the 16th to the 18th cent. and by the English in 1814. There are several historic buildings, notably the town hall (14th cent.), a 15th-century church (Groote Kerk), and the Markiezenhof palace.

Berger, Victor Louis, 1860-1929, American Socialist leader and Congressman, b. Austria-Hungary. After studying at the universities of Budapest and Vienna, he emigrated (1878) to the United States and settled in Milwaukee. After 1892 he devoted himself to Socialist politics and journalism, editing the Milwaukee *Vorwärts* (1892-98) and a weekly that became (1911) the influential Milwaukee *Leader*. With Eugene V. Debs he pioneered in creating the American Socialist party. His leadership brought (1910) the Socialists control of Milwaukee for many years and made Berger the first Socialist member of Congress (1911-13). Reelected twice (1918, 1919), he was excluded by Congress on grounds of sedition, for which he was sentenced (1918-19) to a 20-year prison term. The decision was reversed by the U.S. Supreme Court in 1921, and he was allowed to take his seat when reelected in 1922. Again elected in 1924 and 1926, he was defeated in 1928. *Voice and Pen* (1929) is a collection of his speeches and editorials. See U.S. Congress, House, Special Committee on Victor L. Berger Investigation, *Case of Victor L. Berger of Wisconsin* (Hearings (1919 and 1921, repr. 1972), study by S. M. Miller (1973)).

Bergerac, Cyrano de, see CYRANO DE BERGERAC

Bergerac (bĕrzhă'k'), town (1968 pop. 28,015), Dordogne dept., SW France, in Périgord, on the Dordogne River. It is a farm-trade and processing center. It also has boiler works, foundries, and shoe and clothing plants. Possessed by the English in the 14th cent., it was recovered in 1450 by the French. It became a Protestant stronghold and was taken (1621) by Louis XIII. A tobacco museum and an experimental tobacco institute are there.

Bergh, Henry, 1811-88, American philanthropist, b. New York City. His abhorrence of human cruelty toward animals led him to found (1866) the American Society for the Prevention of Cruelty to Animals.

This organization, the first of its kind in the country, was granted the authority to enforce local animal protection laws by the New York state legislature in the same year. In 1875, with Elbridge T. Gerry and others, he helped form the Society for the Prevention of Cruelty to Children. See Zulma Steele, *Angel in Top Hat* (1942).

Bergisch-Gladbach (bĕr'gish-glăt'bakh'), city (1970 pop. 49,558), North Rhine-Westphalia, W. West Germany, chartered 1856. Manufactures of this industrial city include paper and metal goods, wool, pharmaceuticals, and electrical equipment.

Bergman, Hjalmar (yal'mär bĕr'yămän), 1883-1931, Swedish novelist, dramatist, and short-story writer. A popular and prolific writer, Bergman wrote from the background of an unhappy childhood and chronic mental depression. His works are characterized by insight into the ambivalence of human emotions. Bergman's individual style combines a basically pessimistic view with ironic humor, as in the play *Swedenhielms* [the Swedenhielm family] (1925) and the novels *God's Orchid* (1919, tr. 1924) and *The Head of the Firm* (1924, tr. 1936). See his *Four Plays* (tr. 1968).

Bergman, Ingmar (ing'mar bĕr'yămän), 1918-, Swedish film and stage writer, director, and producer. Bergman is esteemed as creator of numerous films remarkable for their Nordic expressionism, sensuous imagery, and irony. Not long after his first film script, for *Torment* (1945), he was allowed complete creative control over his films, working within small budgets. He assembled a group of players and technicians whom he used repeatedly in films and stage works. Although his films are largely concerned with man's search for God and the triumph of evil, none of them is without humor. Some, like *The Devil's Eye* (1960), treat the comic vagaries of love. His foremost films include *The Seventh Seal* (1956), *Wild Strawberries* (1957), *The Virgin Spring* (1959), and the trilogy *Through a Glass Darkly* (1961), *Winter Light* (1962), and *The Silence* (1963). Later films, *Persona* (1966), *Shame* (1968), *The Passion of Anna* (1970), *Cries and Whispers* (1972), and *Scenes from a Marriage* (1974), reflect a growing pessimism, an emphasis on personal relationships, and an increasingly lyric and personal visualization. See *Four Screenplays of Ingmar Bergman* (tr. 1960), *Ingmar Bergman's Trilogy* (1968), biography by Birgitta Steene (1967), study by Vernon Young (1971).

Bergman, Ingrid, 1915-, Swedish actress, b. Stockholm. Bergman acted first in Sweden, then in Hollywood after 1939. She specialized in portrayals of strong, dignified, and sophisticated women. Her performance in *Joan of Lorraine* (1946) on stage was widely acclaimed. After 1949 she appeared in Italian, German, and French films. Her most notable films include *Intermezzo* (1939), *Casablanca* (1942), *For Whom the Bell Tolls* (1943), *Notorious* (1946), and *The Visit* (1964). She won Academy Awards for *Gaslight* (1944) and *Anastasia* (1956). Bergman was married to Roberto Rossellini. See L. J. Quirk, *Films of Ingrid Bergman* (1970).

Bergman, Torbern Olof (tōōr'bärn ȯlōv bĕr'yămän), 1735-84, Swedish chemist, physicist, and mineralogist. A professor at the Univ. of Uppsala from 1758, he developed a theory of chemical affinity, made improvements in the methods of chemical analysis (especially blowpipe analysis) and in the classification of rocks, and did important research in crystallography. He wrote a Dissertation on Elective Attractions (1775, tr. 1785). His collected works, *Essays, Physical and Chemical*, appeared in six volumes (1779-81, tr. 1791).

Bergognone (bĕrgōnyō'nā) or **Borgognone** (bōr-), fl. 1450-1523, Italian painter, known also as Ambrogio Stefani da Fossano. His most important works are the frescoes in the Certosa di Pavia. His luminous and often charming paintings are in the National Gallery, London, the Louvre, the Metropolitan Museum, and the National Gallery of Art, Washington, D.C. Other works have remained in the churches of Bergamo, Lodi, Milan, and Pavia.

Bergson, Henri (āNré' bĕrgsōN'), 1859-1941, French philosopher. He became a professor at the Collège de France in 1900, devoted some time to politics, and, after World War I, took an interest in international affairs. He is well known for his brilliant and imaginative philosophical works, which won him the 1927 Nobel Prize in Literature. Among his works that have been translated into English are *Time and Free Will* (1889), *Matter and Memory* (1896), *Laughter* (1901), *Introduction to Metaphysics* (1903), *Creative Evolution* (1907), *The Two Sources of Morality and Religion* (1932), and *The Creative Mind* (1934). Bergson's philosophy is dualistic—the world con-

tains two opposing tendencies—the life force (*élan vital*) and the resistance of the material world against that force. Man knows matter through his intellect, with which he measures the world. He formulates the doctrines of science and sees things as entities set out as separate units within the stream of becoming. In contrast with intellect is intuition, which derives from the instinct of lower animals. Intuition gives us an intimation of the life force which pervades all becoming. Intuition perceives the reality of time—that it is duration directed in terms of life and not divisible or measurable. Duration is demonstrated by the phenomena of memory. See H. W. Carr, *The Philosophy of Change* (1914, repr. 1970), H. M. Kallen, *William James and Henri Bergson* (1914), Ben-Ami Scharfstein, *Roots of Bergson's Philosophy* (1943), I. W. Alexander, *Bergson, Philosopher of Reflection* (1957), Thomas Hanna, ed., *The Bergsonian Heritage* (1962), P. A. Y. Gunter, *Bergson and the Evolution of Physics* (1969).

Berhampur (bār'həmpōr), town (1971 pop. 117,635), Orissa state, E central India. Rice, sugarcane, silk, gold-embroidered turbans, and leather goods are the main products. Berhampur was formerly a British military post.

Beri (bĕr'i), Asherite 1 Chron. 7:36

Beria, Lavrenti Pavlovich (lavrĕn'tyĕ pav'lāvich bār'ĕā), 1899-1953, Russian Communist leader, b. Georgia (now Georgian SSR). He rose to prominence in the Cheka (secret police) in Georgia and the Transcaucasus, became party secretary in these areas, and in 1938 became head of the secret police. As commissar (later minister) of internal affairs, Beria wielded great power, and he was the first in this post to become (1946) a member of the politburo. After Stalin's death (March, 1953), Beria was made first deputy premier under Premier Malenkov, but the alliance was shaky, in the ensuing struggle for power Beria was arrested (July) on charges of conspiracy. He and six alleged accomplices were tried secretly and shot in Dec., 1953. See biography by Thaddeus Wittlin (1972).

Beriah (bĕr'īā) 1 Son of Asher, eponym of the Berites Gen. 46:17, Num. 26:44, 51. 1 Chron. 7:30. 2 Son of Ephraim 1 Chron. 7:23. 3 Benjamite 1 Chron. 8:13, 16. 4 Levite 1 Chron. 23:10, 11.

beriberi (bĕr'ĕbĕr'ē), deficiency disease occurring when the human body has insufficient amounts of thiamine (vitamin B₁). The deficiency may result from improper diet (e.g., ingestion of highly refined grains instead of the whole kernels), from poor absorption of thiamine (as in chronic diarrhea), from conditions which increase the vitamin requirements of the body (e.g., hyperthyroidism, pregnancy, fever), or from poor utilization (as in liver disease). In some instances (e.g., alcoholism) the deficiency arises from a combination of several or of all of these factors. Since thiamine is essential for the proper metabolism of carbohydrate and fat and for the normal functioning of enzymes and nervous tissue, the symptoms of the disorder are primarily those of neurological and gastrointestinal disturbances. In severe cases the heart becomes affected, and the nervous disorder may lead to paralysis and death. The disorder is rarely found in the West, occurring only among alcoholics and other groups who exist on grossly inadequate diets. It is a common malady in parts of Asia where the diet consists mainly of polished white rice. The usual treatment is administering dosages of thiamine.

Bering, Vitus Jonassen (vē'tōōs yō'nāsən bār'ing), 1681-1741, Danish explorer in Russian employ. In 1725 he was selected by Peter I to explore far NE Siberia. Having finally got men and supplies across Siberia, Bering in 1728 sailed N through Bering Strait but sighted no land and did not recognize the importance of the strait. Later in 1728, setting out from Kamchatka, he was driven from his course and discovered the southern route around Kamchatka. He returned to St. Petersburg, arriving in 1730. Bering then drew up a large scheme of exploration, which gained the support of the government. Under his general command various units of a huge expedition set out to map the far reaches of the Siberian arctic regions. Much was accomplished, but at great expense and with no immediate prospects of profit. Bering himself headed an expedition across the sea to Alaska. In 1741 he commanded the *St. Peter* while Aleksey Ilich Chirikov (d. 1748) commanded the *St. Paul*. They set out, rounded Kamchatka, founded the town of Petropavlovsk, and then sailed west. The vessels were separated. Bering sighted the St. Elias Mts. in Alaska on July 16, and the scientist Georg Wilhelm Steller led a landing party. Bering

then sailed W past the Aleutian Islands. The weather was bad, and almost all the crew had scurvy when the ship was wrecked on the shore of Bering Island, which they mistook for the coast of Kamchatka. There on Dec 8 Bering died. The few survivors of his crew repaired a small vessel from the *St Peter* and managed to reach Kamchatka in the summer of 1742. The *St Paul* under Chirikov had also sighted land and had halted on the way westward at one of the Aleutian Islands, possibly Attu, before returning to Kamchatka in Oct., 1741. See F. A. Golder, *Bering's Voyages* (2 vol., 1922-25, Vol. II is a translation of Steller's journal), studies by C. Goodhue (1944), R. W. Murphy (1961), and P. Lauridsen (tr. 1969).

Bering Island (bĕr'ĭng, bĕr'-), Rus. *Beringa*, largest of the Komandorski Islands, c 55 mi (90 km) long and up to c 15 mi (20 km) wide, off Kamchatka peninsula, E Far Eastern USSR, in the Bering Sea. It is low and treeless and is subject to severe windstorms. Nikolskoye is the chief town. Vitus Bering, sailing in the *St Peter*, was shipwrecked and died there.

Bering Sea, c 878,000 sq mi (2,274,020 sq km), northward extension of the Pacific Ocean between Siberia and Alaska. It is screened from the Pacific proper by the Aleutian Islands. The Bering Strait connects it with the Arctic Ocean. The sea's largest embayments are the Gulf of Anadyr, Norton Sound, and Bristol Bay. The Anadyr River enters the sea from the west and the Yukon River from the east. The warm Japan Current has little influence on the Bering Sea, which has much ice, it can usually be traversed only from June to October. The sea has many islands, notably Nunivak, St. Lawrence, Hall, St. Matthew, and the Pribilof Islands (all owned by the United States) and the Komandorski Islands (USSR). The sea was explored by the Russian Dezhnev in the 17th cent., but not until after the voyages of Vitus Bering (1728, 1741) was the fur-seal wealth of the Bering Sea made widely known. The whole region was under the control of the Russian American Company, but it proved impossible to prevent mariners from other nations from getting the skins of the seals and the sea otters. The question of protecting the seals became (1886) the subject of a bitter international incident called the **Bering Sea Fur-Seal Controversy**. The seal herd that summered in the Pribilof Islands wintered farther south, when returning north in the spring they could be taken in the open sea. The pelagic (open-sea) sealing, practiced by Canadian and other sealing vessels, greatly reduced the herd and threatened its extinction. The Alaska Commercial Company, which had a U.S. monopoly on the sealing, protested to the U.S. government, and in 1886 several Canadian vessels were seized and were condemned by a court at Sitka, Alaska. The legal basis for such action was the claim that Russia had controlled all the Bering Sea and that the control had passed to the United States with the purchase of Alaska in 1867, by claiming to exercise jurisdiction beyond the three-mile limit the United States had invoked the doctrine of *mare clausum* (closed sea) for the first time. This was not accepted by the British, and a move to settle the matter of protection by international agreement was blocked by the Canadians. The matter was referred to an international court of arbitration, which, meeting in Paris, declared in 1893 against the U.S. claim and awarded \$473,151 in damages to the owners of the seized vessels. It also imposed some restrictions on pelagic sealing, but these were ineffective. In 1911, Great Britain, Russia, Japan, and the United States agreed to prohibit pelagic sealing, sealing in the Pribilofs was put completely under U.S. supervision. For several years sealing was stopped completely, and then it was resumed but only under careful restrictions. Gradually the herd has been built up again. The 1911 agreement also prohibited the killing of sea otters, which are, however, almost extinct today.

Bering Strait, c 55 mi (90 km) wide, between extreme NE Asia and extreme NW North America, connecting the Arctic Ocean and the Bering Sea. It is usually completely frozen over from October to June. The Diomed Islands are in the strait. The narrowness of the strait makes it possible for small boats to cross from Chukchi Peninsula, NE USSR, to Seward Peninsula in Alaska. Since Alaska and Siberia were connected in the distant past, the usual theory is that the ancestors of the American Indians crossed the land bridge to North America. The strait is named for the Danish explorer Vitus Bering, who traversed it in 1728.

Berio, Luciano (lōō'cha-nō bĕr'yō), 1925-, Italian composer, b. Oneglia. After studying at the Milan Conservatory and working as coach and conductor

in Italian opera houses, Berio was introduced to SERIAL MUSIC by Luigi DALLAPICCOLA in 1952. A non-dogmatic use of serialism pervades all of his music for traditional instruments. In 1954, Berio began working in ELECTRONIC MUSIC at the Milan Radio with Bruno MADERNA. Among his works are *Sequenzas I-VI* (1958-70), each for a different solo instrument, *Circles*, for mezzo, harp, and percussion to poems of E. E. Cummings, several pieces with texts by James Joyce, *Visage* (1961), for electronically manipulated voice, *Sinfonia* (1968), for orchestra and voices, and *Opera* (1970), for mixed media.

Berites (bĕr'ĭt) see BICHR

Berith (bĕr'ĭth), abbreviation of BAAL-BERITH

Berkeley, George (bär'klē, būr-), 1685-1753, Anglo-Irish philosopher and clergyman, b. Co. Kilkenny, Ireland. Educated at Trinity College, Dublin, he became a scholar and later a fellow there. Most of Berkeley's important work in philosophy was done in his younger years. His *Essay Towards a New Theory of Vision* (1709), *A Treatise Concerning the Principles of Human Knowledge* (1710), and the famous *Three Dialogues Between Hylas and Philonous* (1713) are among his more important works. At considerable personal sacrifice he organized a movement to establish a college in the Bermudas to convert the American Indians, going to Rhode Island in 1728 to wait for promised support. This support never came, and after three years he returned to England. He was made bishop of Cloyne in 1734. Berkeley in his subjective idealism went beyond Locke, who had argued that such qualities as color and taste arise in the mind while primary qualities of matter such as extension and weight have existence independent of the mind. Berkeley held that both types of qualities are known only in the mind and that therefore there is no existence of matter independent of perception (*esse est percipi*). The observing mind of God makes possible the continued apparent existence of material objects. God arouses sensations in us in a regular coherent order. Selves and God make up the universe. Berkeley felt that his argument constituted a complete disproof of atheism. He believed that qualities, not things, are perceived and that the perception of qualities is relative to the perceiver. See edition of his works by A. A. Luce and T. E. Jessop (9 vol., 1948-57), biography by A. A. Luce (1949), studies by D. M. Armstrong (1960) and I. C. Tipton (1974).

Berkeley, John, 1st Baron Berkeley of Stratton, 1602-78, English army officer and courtier. A royalist, he fought in numerous engagements in the English civil war and later, through association with the duke of York (later James II), won great political advancement. Raised to the peerage in 1658, he was appointed lord president of Connaught for life in 1661 and one of the proprietors of NEW JERSEY in 1664. From 1670 to 1672 he was lord lieutenant of Ireland.

Berkeley, Sir William, 1606-77, colonial governor of Virginia. Appointed governor in 1641, he arrived in Virginia in 1642. Berkeley defeated the Indians and the Dutch, extended explorations, and encouraged agriculture, but so persecuted dissenters that many of them left the colony. An uncompromising royalist, he made Virginia a haven for supporters of Charles I and declined to recognize the Commonwealth. Berkeley was deposed by a Puritan force from England in 1652 and lived quietly on his Virginia plantation until the Restoration in 1660, when he was reappointed governor. His second term as governor was marred by great domestic discontent and strife. A drop in tobacco prices brought great economic suffering to the colony. At the same time it was charged that Berkeley was showing favoritism toward a small group of friends and depriving the freemen of their rights. When, in addition, Berkeley refused to take the measures demanded by the frontiersmen for protection against the Indians, BACON'S REBELLION broke out. Temporarily forced to flee, Berkeley regained power after Bacon's premature death and ordered the hanging of many of Bacon's followers. The executions were carried out in defiance of a royal commission that had arrived with pardon for all except Bacon. Finally he yielded to the commission's order that he return to England, where he died discredited. See T. J. Wertenbaker, *Virginia under the Stuarts, 1607-1688* (1914), Wilcomb Washburn, *The Governor and the Rebel* (1957).

Berkeley (bŭrk'lē) 1 City (1970 pop. 116,716), Alameda co., W Calif., on the eastern shore of San Francisco Bay, inc. 1878. Originally part of the Rancho San Antonio granted to the Peralta family in 1820 by the Spanish crown, the site was purchased by

Americans in 1853. The settlement, at first called Oceanview, was named Berkeley in 1866. The city's industries include food processing and the manufacture of chemicals, pharmaceuticals, and metal products. A campus of the Univ. of California and several divinity schools are in Berkeley. Points of interest include a marina, Tilden Park, University Museum, Lawrence Hall of Science, and Zellerbach Hall, an auditorium. Lawrence Radiation Laboratory, an atomic research center, is nearby. 2 City (1970 pop. 19,743), St. Louis co., E Mo., inc. 1937. Its manufactures include aircraft, truck bodies, and brake fluid. The first International Air Meet in the United States was held in Berkeley in 1910.

berkelium (bŭr'klēm) [from Berkeley], synthetic, radioactive chemical element, symbol Bk, at no. 97, mass no. of most stable isotope 247, m.p. and b.p. unknown, sp. gr. 14 (estimated), valence +3 or +4. Because pure berkelium has not been isolated in significant quantities, its physical properties are not known. It is believed to be similar to the other members of the ACTINIDE SERIES and to TERBIUM, its homolog in the lanthanide series. It is found in group IIIB of the PERIODIC TABLE. Nine isotopes of berkelium are known. Berkelium-247, the most stable isotope (half-life about 1,400 years), is difficult to produce; berkelium-249 (half-life 314 days) is more easily produced in weighable quantities and is used in studies of berkelium chemistry. The chloride, fluoride, sulfide, nitrate, sulfate, perchlorate, oxide, and dioxide have been produced. Berkelium was discovered late in 1949 by G. T. Seaborg, S. G. Thompson, and Albert Ghiorso, who produced it by bombarding americium-241 with alpha particles in the cyclotron of the Univ. of California at Berkeley. Weighable quantities of the pure element were first isolated by B. B. Cunningham and S. G. Thompson in 1958.

Berkhamstead, formerly also **Great Berkhamstead** (both bŭrk'əmstēd, bärk'-), urban district (1971 pop. 15,439), Hertfordshire, central England. Berkhamstead is mainly residential but has clothing, timber, and chemical industries. It is the site of an 11th-century royal castle in which Edgar Atheling, a claimant to the throne, submitted to William the Conqueror. Thomas a Becket lived in the castle, and Henry II held court there. John II of France was briefly imprisoned in the castle after the battle of Poitiers (1356) in the Hundred Years War. Berkhamstead also has a 16th-century grammar school.

Berkley, city (1970 pop. 22,618), Oakland co., SE Mich., a residential suburb of Detroit, inc. 1932.

Berkman, Alexander, 1870?-1936, anarchist, b. Vilna (then in Russian Poland). He emigrated to the United States c. 1887. At the time of the Homestead, Pa., strike (1892) Berkman attempted to kill Henry Clay Frick, but succeeded only in wounding him. He served 14 years of a 22-year sentence imposed for this attack. His association with Emma GOLDMAN, begun before his imprisonment, was resumed after his release. In 1917 they were arrested for obstructing the draft and in 1919 were deported to Russia. Disappointed in his hope of finding under the Bolshevik government the freedom that he sought, Berkman left Russia and in various European cities supported himself by translation. He committed suicide in Nice. His writings include *Prison Memoirs of an Anarchist* (1912, repr. 1970), *The Bolshevik Myth* (1925), *The Anti-Climax* (1925), and *Now and After the A.B.C. of Communist Anarchism* (1929).

Berkovits, Eliezer (ēl'ēā'zār bŭr'kōvĭts), 1908-, rabbi, theologian, and educator, b. Rumania. He served in the rabbinate in Berlin (1934-39), in Leeds, England (1940-46), in Sydney, Australia (1946-50), and in Boston (1950-58). In 1958 he became chairman of the department of Jewish philosophy of the Hebrew Theological College in Chicago. His writings touch upon the tensions created in the thought of a modern Orthodox Jew and Zionist between the claims of religious tradition and secular nationalism, among them are *Towards Historic Judaism* (1943), *God, Man, and History* (1959), and *A Jewish Critique of the Philosophy of Martin Buber* (1962).

Berkshire (bärk'shīr, -shar, bŭrk'-) or **Berks** (bärks), county (1971 pop. 633,457), S central England. The county town is READING. Berkshire lies almost entirely in the basin of the Thames River, which forms its northern border. It is largely agricultural, the Vale of the WHITE HORSE in the north and the Vale of Kennet in the south are the most productive areas. Chalk downs extend across the center of the county. Dairying and poultry farming are important, and Berkshire hogs are famous. Barley is the chief crop, wheat, oats, potatoes, cabbage, and kale for fodder are also raised. Industry in Berkshire has

grown rapidly since World War II. There are nuclear-research centers at Harwell and Aldermaston. Berkshire has been a transportation hub since Roman times. Modern highways run W from London through Berkshire. Part of the ancient kingdom of Wessex, Berkshire was the birthplace of King Alfred At Windsor is the famous Windsor Castle, chief residence of English monarchs for centuries. Berkshire was reorganized (1974) as a nonmetropolitan county.

Berkshire Festival, summer music festival, held since 1937 at "Tanglewood," a former estate in the adjoining towns of Stockbridge and Lenox, Mass. The Berkshire Festivals were begun in 1934 at a farm in Stockbridge. Henry Hadley conducted an orchestra composed largely of members of the New York Philharmonic-Symphony for two summers. In 1936, Serge Koussevitzky and the Boston Symphony Orchestra took over the festival. Charles Munch became musical director of the festival in 1951 and was followed by William Steinberg who conducted there through the summer of 1959. In 1974 the artistic director was Seiji Ozawa. The music shed at Tanglewood, designed by Eiel Saarinen, was opened in 1938. It seats 6,000 people and accommodates thousands of additional listeners on its vast lawns. In 1943 a summer school, the Berkshire Music Center, was begun in combination with the festival. See M. A. De Wolfe Howe, *The Tale of Tanglewood* (1945); R. Holland, *Tanglewood* (1973).

Berkshire Hills, region of wooded hills with many small lakes and streams, W Mass. The Berkshires are a southern extension of the Green Mts., but the name is generally applied to all highlands in W Massachusetts. Mt. Greylock, 3,491 ft (1,064 m), is the highest point in the hills and in the state. The Berkshire Hills have numerous summer and winter resorts, state parks, and forests. The Housatonic, Hoosic, and Westfield rivers drain the region and supply water power to manufacturing towns. Pittsfield, North Adams, Great Barrington, and Lenox are the largest towns in the Berkshires.

Berkshire swine, one of the oldest of the improved breeds of swine, originating in the county of Berkshire in S central England. The breed was imported to the United States in large numbers between 1830 and 1850 and has adapted itself to all parts of the country. Berkshires are of medium size, generally smooth, and somewhat longer in proportion to depth than other breeds. Their ears stand erect, their noses are short, and their color is black with white feet, nose, and tail.

Berlage, Hendrik Petrus (hēn'drək pā'trūs berlä-gə), 1836-1934, Dutch architect. In both his writings and architectural practice, Berlage advocated a return to simplicity of form and clarity of structure. In his Amsterdam Stock Exchange (1898-1903) and the Diamond Workers' Union Bldg. (Amsterdam 1899-1900), he introduced a flat wall surface within a Romanesque framework suggestive of the works of H. H. Richardson. Berlage took part in city planning projects for the Hague (1908) and Amsterdam (1915). His publications, e.g., *Gedanken über den Stil in der Baukunst* (1905), won him ideas great favor with the rising generation of modern architects, including the Amsterdam school and the architects of the *de Stijl*.

Berle, Adolf Augustus, Jr. (būr lē), 1895-1971, American lawyer and public official, b. Boston. Admitted to the bar in 1916, he served in World War I and was a member of the American delegation to the Paris Peace Conference. Resigning in protest against the terms of the Versailles Treaty, Berle returned to practice law in New York City and later became (1927) professor of corporate law at Columbia. As a specialist in corporation law and finance, he was a member of Franklin Delano Roosevelt's Brain Trust and helped shape much of the banking and securities legislation of the New Deal. As Assistant Secretary of State for Latin American affairs (1933-44), Berle attended many inter-American conferences and acted as spokesman for Roosevelt's Good Neighbor Policy. After serving (1945-46) as ambassador to Brazil, he resumed his professorship at Columbia and was a founder and chairman (1952-55) of the Liberal party. In 1961, Berle headed a task force for President John F. Kennedy that recommended the Alliance for Progress. His well-known writings include the classic study *The Modern Corporation and Private Property* (with G. C. Means, 1933, rev. ed. 1968), *The 20th Century Capitalist Revolution* (1954), *Tides of Crisis* (1957), *Power without Property* (1959), and *Power* (1969). A selection of his papers was edited by B. B. Berle and T. B. Jacobs (1973).

Berlichingen, Götz von (gōts' fən bër'likhīng-an), 1480-1562, German knight and adventurer. The head of a band of free soldiers, he lost (1504) his right hand in the battle of Landshut and wore an iron one in its place. His forays against various cities earned him popular fame. He reluctantly agreed to lead the peasants of Franconia during the Peasants' War (1524-26) but deserted them before their defeat. In 1542 he served with Holy Roman Emperor Charles V against the Turks and two years later fought against the French. His memoirs inspired Goethe's drama *Götz von Berlichingen* (1773).

Berlin, Irving, 1888-, American songwriter, b. Russia. Berlin's surname was originally Baline. Of his nearly 1,000 songs, *Alexander's Ragtime Band* (1911) was his first outstanding hit. In 1918, while he was in the army, he wrote, produced, and acted in *Yip, Yip, Yaphank*, which he rewrote in 1942 as *This Is the Army*. Berlin wrote songs for several of the *Ziegfeld Follies* and the *Music Box Revue* (1921-24) as well as the Broadway musicals *As Thousands Cheer* (1933), *Annie Get Your Gun* (1946), *Miss Liberty* (1949), *Call Me Madam* (1950), and *Mr. President* (1952). He was the composer of numerous film scores, and several of his stage musicals were filmed. Among the best known of his songs are "God Bless America" and "There's No Business Like Show Business." See biography by Michael Freedland (1974).

Berlin, Sir Isaiah, 1909-, English political scientist, b. Latvia. He was educated at Oxford, where he became (1932) a fellow and was later (1957-67) professor of social and political theory. In 1966 he was appointed president of Wolfson College, Oxford. In *The Hedgehog and the Fox* (1953) Berlin explored Leo Tolstoy's view of irresistible historical forces, and in *Historical Inevitability* (1954) he attacked both determinist and relativist approaches to history as superficial and fallacious. His other works include *Karl Marx* (3d ed. 1963) and *Four Essays on Liberty* (1969). He was knighted in 1957.

Berlin (būr 'līn, Ger bër'lēn'), city, former capital of Germany and of Prussia, NE Germany, on the Spree and Havel rivers. It is located within the German Democratic Republic (East Germany). In 1945 it was divided into four occupation zones. The Soviet sector, known as East Berlin, is now the capital of the German Democratic Republic. The zones assigned to the British, American, and French occupation forces now constitute West Berlin. The French occupied the northwestern part of the city, and the Americans and the British occupied the southern districts.

Historic Berlin. Berlin had its beginning in two Wendish villages, Berlin and Kölln, which were chartered in the 13th cent. and merged in 1307. It assumed importance as a Hanseatic town in the 14th cent. and became the seat of the electors of Brandenburg (after 1701, kings of Prussia). In 1486 Berlin suffered severely from the Thirty Years War (1618-48), but Frederick William (reigned 1640-88), the Great Elector, restored and improved the city. Occupied in the Seven Years War by Austrian (1757) and Russian (1760) troops and in the Napoleonic Wars by the French (1806-8), Berlin emerged from the conflicts as a center of German national feeling and an increasingly serious rival of Vienna. From the 18th and early 19th cent. date many of the distinguished monuments and buildings of the city (chiefly by Andreas SCHLÖTER and Karl Friedrich SCHINKEL), nearby POTSDAM became famous as the favorite residence of Frederick II (Frederick the Great, reigned 1740-86). The monumental Brandenburg gate, a triumphal arch in classical style, was erected during his reign. Frederick William Univ. was founded in 1810 and attracted many outstanding scholars, including Humboldt, Fichte, Hegel, and Ranke. Berlin was the center of the Revolution of 1848 against King Frederick William IV. The construction of railroads (1840-61) gave Berlin additional importance as an industrial and commercial center. In 1866 it became the seat of the North German Confederation. After Berlin was made the capital of the German Empire in 1871, it prospered and expanded rapidly and became one of the great cities of the world. The city's population had increased from 201,000 in 1819 to 914,000 in 1871, by 1900 it was 2,712,000. The German military defeat of 1918 brought on a period of social and political unrest. After the establishment (Nov., 1918) of a Socialist government, Berlin was the scene of the abortive uprising of the communist SPARTACUS PARTY (Jan., 1919) and of the conservative putsch of 1920 (see KAPP, WOLFGANG). As the capital of the Weimar Republic, Berlin suffered severe economic crises in the 1920s, but it was also a brilliant cultural capital. After

the Nazis came to power in 1933, German culture declined. Berlin remained, however, the second largest city of Europe, a notable economic, political, and educational center, and a huge inland port with a flourishing world trade. Textiles and clothing, iron and steel, chemicals, and electrical machinery were among its chief industries. It was also a large publishing center and the major communications hub of Central Europe, with six railroad stations and the airport at Tempelhof. A suburban railroad system and a large subway system facilitated internal communication. During World War II, Berlin was repeatedly bombed from the air by the Allies, but the heaviest destruction was caused by a Soviet artillery barrage of unprecedented intensity that preceded the capture (May 2, 1945) of the city by Marshal Zhukov. On May 8, Germany's unconditional surrender to the Allies was signed in Berlin.

Divided Berlin. The division of the city into sectors by the Potsdam Conference resulted in severe tension between the Soviet Union and the Western powers. The joint Allied military government (*Kommandatura*) was not successful and virtually ceased to function when the USSR informally withdrew in 1948. The status of Berlin became a major cold war issue, and attempts at international agreement ended in deadlock (see FOREIGN MINISTERS, COUNCIL OF) as the USSR sought to remove all Western (including West German) control from West Berlin and the Western powers maintained that settlement of the Berlin problem depended on reunification of Germany. In 1948, Soviet authorities established a blockade on all land and water communications between West Berlin and West Germany. The Western powers, foremost among them the United States, successfully undertook to supply West Berlin by a large-scale airlift through three air "corridors" left open to them. The blockade was withdrawn in May, 1949, and the airlift ended in Sept., 1949. In that year East Berlin was proclaimed the capital of the new German Democratic Republic, and in 1950 West Berlin was established as one of the states of the Federal Republic of Germany (of which Berlin is the de jure capital and Bonn the de facto capital). Workers rioted in East Berlin in June, 1953, and were suppressed by Soviet tanks. In the following years there were several Berlin crises, as the USSR in unilateral declarations, often accompanied by harassing actions, contested the legal basis for the Western powers' presence in and access to West Berlin. Meanwhile better living conditions in the western zone had led to a massive exodus of refugees from East to West Berlin, which was both a great embarrassment for the Communists and a serious drain on the East German labor supply. To stop the flow, the Communists in Aug., 1961, gave the division of the city a shockingly physical form by erecting a 29-mi (47-km) fortified wall along the partition line, leaving only a few closely guarded crossing points. The Western powers protested vigorously but ineffectively. East German border guards killed dozens of persons attempting to break through the barrier. War seemed near as Soviet and American tanks faced each other at the border crossings, but after 1962 the crisis eased. In Dec., 1963, the first of several agreements was reached permitting West Berliners to visit relatives in the eastern zone. Visits across the wall and access to West Berlin from West Germany were finally regularized in the Berlin accords reached among the four powers and the two Germans in 1972.

West Berlin. A state of West Germany. West Berlin (1971 est. pop. 2,130,000; 185 sq mi/479 sq km) is situated more than 100 mi (161 km) inside East Germany. Although it is theoretically the West German capital, all the institutions of government are in Bonn and its representatives in the federal parliament have no vote. West Berlin's recovery from World War II, with American and West German aid, has been impressive and has far outpaced that of East Berlin. The chief manufactures are electrical equipment, foodstuffs, clothing, and machinery. There is a large tourist industry. At the center of the city, on the elegant street the Kurfürstendamm, is the gutted tower of the Kaiser Wilhelm Memorial Church, left unrestored as a reminder of the war. To the northeast, the large Tiergarten park contains the famous Reichstag building and the Berlin zoo and the American-designed Kongress Halle. Nearby is the concert hall of the Berlin Philharmonic. West of the Tiergarten is Potsdam Square, with the new opera house and Schiller Theater. To the south is John F. Kennedy Plaza, with the Schöneberg Rathaus, housing the city government offices, and the Freiheitsglocke, a copy of the Liberty Bell. Among West

Berlin's many museums is the Dahlem Gallery in the Charlottenberg Palace, which has the bust of Nefertiti and many Rembrandts. The Free University of Berlin was founded in 1948, and many of old Berlin's educational institutions have reopened in West Berlin.

East Berlin The capital of East Germany, East Berlin (1970 est. pop. 1,085,441, 156 sq mi/404 sq km) has been far slower than West Berlin in recovering from wartime damage and achieving prosperity. Electrical goods are the leading products, and chemicals, machinery, and clothing are also produced. An extensive rebuilding program was begun in the 1960s. At the border with West Berlin, opposite the Tiergarten, is the imposing Brandenburg gate. It is the western terminus of the famous tree-lined avenue, Unter den Linden. To the E along Unter den Linden are the state opera, Humboldt Univ. (the old Frederick William Univ.), and St. Hedwig's Cathedral. At its eastern end is the immense Marx-Engels Square, where formerly stood the Royal Palace. The square is often the scene of political rallies. Across the Spree River, radiating from the Alexander Square, are Karl-Marx-Allee and Frankfurter-Allee (until 1961 Stalin-Allee), lined with ornate Moscow-style apartment buildings with shops at street level. To the south, in Trep-tow, is the Soviet Military Cemetery, with a massive statue of a Soviet soldier built partly from the ruins of Hitler's Chancellery. East Berlin also has a fine zoo (at Friedrichsfelde) and many museums. The Pergamon Museum, on Museum Island in the Spree, has an outstanding collection of classical art. See Philip Windsor, *City on Leave, a History of Berlin, 1945-1962* (1963), Henry Vizetelly, *Berlin under the New Empire* (2 vol., 1879, repr. 1968), W. H. Nelson, *The Berliners, Their Saga and Their City* (1969), Gerhard Masur, *Imperial Berlin* (1971), Otto Friedrich, *Before the Deluge. A Portrait of Berlin in the 1920s* (1972), Anne Armstrong, *Berliners. Both Sides of the Wall* (1973).

Berlin, 1 Town (1970 pop. 14,149), Hartford co., central Conn., an industrial suburb of Hartford, settled 1686, inc. 1785. Tools, metal products, and lacquers are among its manufactures. The first tinware in the United States was made there in 1740. Emma Hart Willard was born in the town. **2** (bûr'lîn) City (1970 pop. 15,256), Coos co., NE N.H., in the White Mts. at falls of the Androscoggin, inc. 1829. In a heavily forested region, it early became the site of pulp and paper mills. Rubber products are also made. Berlin, a winter sports center, has the first ski club organized (1872) in the United States. Nearby are White Mountain National Forest, several state parks, and a U.S. fish hatchery.

Berlin, Conference of, 1884-85, international meeting aimed at settling the problems connected with European colonies in Africa. At the invitation of the German chancellor Otto von Bismarck, representatives of all European nations, the United States, and Turkey met at Berlin to consider problems arising out of European penetration of W. Africa. The stated purpose of the meeting was to guarantee free trade and navigation on the Congo and on the lower reaches of the Niger. In fact, the territorial adjustments made among the powers were the important result. The sovereignty of Great Britain over S. Nigeria was recognized. The claims of the International Association, a private corporation controlled by King Leopold II of Belgium, were more or less recognized, these applied to the greater part of the Congo. These territorial awards ignored French claims to parts of the Congo and of Nigeria and the historical claim of Portugal to the mouth of the Congo. The attempts to guarantee free trade and the neutrality of the region in wartime and to set up rules for future colonial expansion in Africa were halted, but soon the agreements proved too vague to be workable. See S. E. Crowe, *The Berlin West African Conference* (1942).

Berlin, Congress of, 1878, called by the signers of the Treaty of Paris of 1856 (see PARIS, CONGRESS OF) to reconsider the terms of the Treaty of SAN STEFANO, which Russia had forced on the Ottoman Empire (Turkey) earlier in 1878. Great Britain and Austria-Hungary were the powers most insistent on revision; Russia submitted the treaty to revision only after Great Britain threatened war and Bismarck had offered to mediate as "honest broker." He was chairman of the congress. Disraeli represented Great Britain, Count Andrassy, Austria-Hungary, William Henry Waddington, France, Aleksandr Gorchakov, Russia, Count Corti, Italy, and Alexander Karatheodorî, Turkey. The agreements reached in the Treaty of Berlin and the accompanying British-Turkish pact deeply modified the Treaty

of San Stefano. Montenegro, Serbia, and Rumania were recognized as independent states, Rumania, however, was forced to cede S. Bessarabia to Russia in return for the less favored Dobruja. Greater Bulgaria, which had been created at San Stefano, was divided into N. Bulgaria, a principality under nominal Turkish suzerainty, Eastern RUMELIA, to be governed, with certain autonomous rights, by a Christian appointee of the Ottoman emperor, and Macedonia (including Adrianople), under unrestricted Turkish sovereignty. BOSNIA AND HERZEGOVINA, original cause of the Russo-Turkish War of 1877-78, were assigned to Austria-Hungary for administration and military occupation. In Asia, Russia acquired Ardahan, Batum, and Kars from Turkey. Cyprus was to be under temporary occupation by Great Britain through a separate agreement, and Crete was promised constitutional government. Other provisions included an important rectification of the Greco-Turkish boundary, the demilitarization of the lower Danube, and the protection of the Armenians and other religious minorities in Turkey. Russia was antagonized by Bismarck's handling of the conference, thereby bringing to an end the first THREE EMPERORS' LEAGUE. See C. D. Hazen, W. R. Thayer, and R. H. Lord, *Three Peace Congresses of the 19th Century* (1917), R. Albrecht-Carrie, *The Concert of Europe* (1968).

Berlin airlift, 1948-49, supply of vital necessities to West Berlin by air transport primarily under U.S. auspices. It was initiated in response to a land and water blockade of the city that had been instituted by the Soviet Union in the hope that the Allies would be forced to abandon West Berlin. The massive effort to supply the 2 million West Berliners with food and fuel for heating began in June, 1948, and lasted until Sept., 1949, although the Russians lifted the blockade in May of that year. During the around-the-clock airlift some 277,000 flights were made, many at 3-min intervals. By spring, 1949, an average of 8,000 tons was being flown in daily. More than 2 million tons of goods—of which coal accounted for about two thirds—were delivered.

Berlin Decree, 1806, decree issued in Berlin by Napoleon I on Nov. 21 in answer to the British blockade. Claiming that the British blockade of purely commercial ports was contrary to international law, Napoleon retaliated by declaring the British Isles under blockade and forbidding any trade to or from them. The Berlin Decree initiated the CONTINENTAL SYSTEM.

Berlin Wall, 29-mi (47-km) fortified concrete and wire barrier along the border between East and West Berlin, it was erected in Aug., 1961, by the East German government to halt the vast numbers of East Berliners defecting to the West and to prevent East Berliners from commuting to jobs in West Berlin, thus depleting the supply of labor in the East. The building of the wall came at a time of increased tension between the United States, Great Britain, France, and West Germany on one side, and the USSR and East Germany on the other, concerning the future status of the divided city of Berlin. Thousands of families were separated as a result of the border closing, after 1963, however, limited passage between East and West Berlin was allowed by the East German government on various holidays.

Berlioz, Louis-Hector (lwě ěktôr bërlyôz'), 1803-69, French romantic composer. He abandoned medical study to enter the Paris Conservatory as a composition student. In 1830 his *Symphonie fantastique* was first performed in Paris, marking a bold new development in program music. This work, with its recurring basic theme, departed from traditional symphonies in its loose form and highly emotional, personal style. That same year Berlioz won the coveted Prix de Rome. During the next decade in Paris he wrote the symphonies *Harold in Italy* and *Romeo and Juliet*, the opera *Benvenuto Cellini*, and a requiem. In 1842-43 he conducted concerts in Germany, Austria, England, and Russia. His outstanding "concert opera" *The Damnation of Faust* (1846) met with failure in his lifetime but is now considered a masterpiece. Another dramatic work is the gigantic opera *The Trojans*, first performed in its entirety in 1890 and successfully revived after 1920. The nonliturgical oratorio *The Childhood of Christ*, for which he also wrote the text, was completed in 1854, and it was performed with great success for almost a century. Some of Berlioz's works are scored for large numbers of instruments, not only for volume but for richness of tone color even in delicate passages. His ideas of orchestration influenced many later composers. A passionate and impetuous man, Berlioz had several love affairs and was twice

married, first to Harriet Smithson, an Irish actress. He was librarian at the Paris Conservatory, and wrote music criticism, his memoirs (ed. by David Cairns, 1969), and *Evenings with the Orchestra* (tr. 1956). His treatise on instrumentation (1844) was widely recognized as a text. See his letters, ed. by Jacques Barzun (1954), his memoirs, ed. by David Cairns (1973), biographies by J. H. Elliot (rev. ed. 1967) and Jacques Barzun (2 vol., 3d ed. 1969), studies by Ernest Newman (1910, repr. 1969), T. S. Wotton (1935, repr. 1969), and Brian Primmer (1973).

berm: see BEACH

Bermuda (bûrmyôo'da), British crown colony (1970 pop. 52,700), 20 sq mi (52 sq km), comprising some 300 coral rocks, islets, and islands (of which some 20 are inhabited), in the Atlantic Ocean, c. 570 mi (920 km) SE of Cape Hatteras, North Carolina. The capital is HAMILTON, on Bermuda (or Great Bermuda), the largest island. Smaller islands are Somerset, Ireland, and St. George. Bermuda, with its fine beaches, excellent climate, and picturesque sites, is a fashionable and popular year-round resort. Its coral reefs are the northernmost in the world. Although tourism is the economic mainstay, ship repairing and light industries are also important. Perfume concentrates, pharmaceuticals, textiles, and cut flowers are the chief exports. The population is about three-quarters black. Reputedly the first person to set foot on the islands was the Spanish navigator Juan de Bermudez (1515), but they remained uninhabited, despite visits by Spaniards and Englishmen, until Sir George Somers and a group of colonists on their way to Virginia were shipwrecked there in 1609. This incident was known to Shakespeare when he wrote *The Tempest*. Long called Somers Islands, the Bermudas were first governed by chartered companies but were acquired by the crown in 1684. The harbor of St. George was a base for privateers during the War of 1812, and the island was a center for Confederate blockade runners during the American Civil War. During World War II the islands played an important strategic role. The United States, under a 99-year lease, operates a naval and air force base. Internal self-government was granted in 1968. See William Zuill, *Bermuda Journey* (1959), Richard Joseph, *Bermuda* (1967), H. C. Wilkinson, *Adventures in Bermuda* (1933), *Bermuda in the Old Empire* (1950), and *Bermuda from Sail to Steam* (2 vol., 1973).

Bermuda chub: see RUDDERFISH

Bermuda grass, perennial pasture, lawn, and hay grass (*Cynodon dactylon*) of the family Gramineae (GRASS family), native to Africa and Asia and now common in warm regions of both hemispheres. It is the standard pasture grass in the S. United States. It is heat- and drought-resistant and grows in almost any soil that is not too wet or shady, spreading rapidly and often becoming a weed. Bermuda grass is classified in the division MAGNOLIOPHYTES, class Liliatae, order Cyperales, family Gramineae.

Bermuda Hundred, fishing village, on the peninsula at the confluence of the Appomattox and James rivers, SE Va., NE of Petersburg, founded 1613. During the Civil War the Union Army of the James was bottled up there after its defeat at Drewrys Bluff.

Bern or **Berne** (bërn), canton (1970 pop. 983,296), 2,658 sq mi (6,883 sq km), W. central Switzerland. The second most populous canton of the country, Bern comprises three sections—the Bernese Alps, or Oberland [Ger., =highlands], with many resorts and peaks, notably the Finsteraarhorn and Jungfrau, and with meadows and pastures in the valleys, the Mittelland [midlands], in the fertile northern foothills of the Alps, and including the Emmmental, and the Seeland [lake country], in the northwest, with Biel and the Bernese Jura mts. Crop and cattle raising, dairying, and tourism are the chief means of livelihood in the Oberland and the Mittelland, the Seeland is more industrialized and has manufactures of watches, wood and metal products, and textiles. The population of the canton (except in the Jura) is predominantly Protestant and German-speaking, the Jura is mostly Roman Catholic and French-speaking. The history of the canton is largely that of its capital, Bern or Berne (1970 pop. 162,405), which is also the capital of Switzerland. Situated within a loop of the Aare River, the city is a university, administrative, transportation, and industrial center. Its manufactures include precision instruments, textiles, machinery, chemicals and pharmaceuticals, and chocolate. It is also the seat of numerous international agencies, notably the Universal Postal Union (since 1875), the International Telecommunication Union (since 1869), and the International Copyright Union (since 1886). Bern was founded, according to tradition, in 1191 by Berchtold V of Zähringen as a

military post. It was made (1218) a free imperial city by Emperor Frederick II when Berchtold died without an heir. Bern grew in power and population and in 1353 joined the Swiss Confederation, of which it became the leading member. Its conquests included AARGAU (1415) and VAUD (1536), besides numerous smaller territories. The area was governed until 1798 by an autocratic urban aristocracy. Bern accepted the Reformation in 1528. When Switzerland was invaded (1798) by the French during the French Revolutionary Wars, Bern was occupied, its treasury pillaged, and its territories dismembered. At the Congress of Vienna (1815), Bern failed to recover Vaud and Aargau, but received the Bernese Jura (the former Bishopric of BASEL). A liberal constitution was adopted in 1831, and in 1848 Bern became the capital of the Swiss Confederation. The city is largely medieval in its architecture. It has a splendid 15th-century town hall, a noted minster (begun 15th cent.), and numerous other historic structures. There are many picturesque patrician houses and old guild halls. An elaborate medieval clock tower and a pit in which bears (Bern's heraldic animal for seven centuries) are kept are well known to tourists. More modern buildings include the 19th-century federal parliament building, many fine museums, and the university (1834).

Bernadette, Saint (bŭrnādēt'), 1844–79, French peasant girl who claimed to see the Virgin Mary in apparitions at a grotto near Lourdes, her home, in 1858. She was born Marie Bernarde Soubirous. The authorities, skeptical of her visions, subjected her to severe examinations and abuse. After years of unpleasantness at the hands of the curious, the skeptical, and the powerful, she was allowed to enter the convent of Notre-Dame de Nevers. There Bernadette, her health steadily worsening, spent her last days. She was canonized in 1933. Feast: April 16. See biographies by L. Cristiani (1965) and A. Stafford (1967).

Bernadotte, Count Folke (fŏl'ka bĕrnādōt', bŭr'nādōt'), 1895–1948, Swedish internationalist, nephew of King Gustavus V. He was active in the Swedish Red Cross and became its president in 1946. Early in 1945 he arranged the evacuation of Danish and Norwegian prisoners from German concentration camps and conveyed a peace offer from Heinrich Himmler to the British and U.S. authorities. Appointed (1948) United Nations mediator in Palestine, he was assassinated by Jewish extremists. Ralph Bunche succeeded him. Bernadotte wrote several autobiographical books. See biography by Ralph Hewins (1950).

Bernadotte, Jean Baptiste Jules: see CHARLES XIV king of Sweden and Norway.

Bernanos, Georges (zhŏrzh bĕrnānŏs'), 1888–1948, French novelist and polemicist. Profoundly Catholic, Bernanos attacked modern materialism and advocated a moral and ethical order based on the teachings of the Church. His novels *The Star of Satan* (1926, tr. 1940) and *The Diary of a Country Priest* (1936, tr. 1937) are powerful accounts of intense spiritual struggle and reflect his mysticism. *Dialogue des Carmélites* (1949) was adapted for the stage in 1952. A believer in monarchy, Bernanos was active in Royalist causes until the Spanish civil war. In 1938, after the Munich pact, which he considered a shameful instance of appeasement, he settled in Brazil and remained there until 1945. His political writings include *Les Grands Cimetières sous la lune* (1938, tr. *A Diary of My Times*, 1938) indicting Franco's policies in the Spanish civil war, and *Lettre aux Anglais* (1942, tr. *Plea for Liberty*, 1944). See studies by T. S. Molnar (1960), G. R. Blumenthal (1965), Peter Hebblewhite (1965), W. S. Bush (1969), and Robert Speaight (1974).

Bernard, Saint: see BERNARD OF CLAIRVAUX. SAINT BERNARD OF MENTHON. SAINT. For the two Alpine passes, see SAINT BERNARD.

Bernard VII, d. 1418, count of Armagnac, constable of France. As father-in-law of Charles d'ORLÉANS he led the Armagnac faction (see ARMAGNACS AND BURGUNDIANS) and from 1415 to 1418 was virtual ruler of France. His oppression of the Parisians, intended to check Burgundian power, caused the betrayal of Paris to John the Fearless of Burgundy, in the ensuing massacre Bernard was killed.

Bernard, Claude (klŏd bĕrnār'), 1813–78, French physiologist. He turned from literature to medicine working in Paris under Magendie and teaching at the College de France and at the Sorbonne. One of the great scientific investigators, he is known as the founder of experimental medicine because of his work on digestive processes, especially the discov-

ery of the glycogenic function of the liver and of the action of pancreatic juice, and on the vasomotor mechanism. He wrote *An Introduction to the Study of Experimental Medicine* (1865, tr. 1927). See J. M. D. Olmsted and E. H. Olmsted, *Claude Bernard and the Experimental Method in Medicine* (1952), Reino Virtanen, *Claude Bernard and His Place in the History of Ideas* (1960).

Bernard, Sir Francis (bŭrn'ārd), 1712–79, British colonial governor. He was educated at Oxford and was called to the bar in 1737. As colonial governor of New Jersey (1758–60), he did much to promote colonial solidarity and to build defense in the French and Indian Wars. Transferred to the governorship of Massachusetts, he lost popularity there because he felt it his duty to enforce the Stamp Act and other laws the colonists found objectionable. In 1769 he was recalled to England. An amateur architect, he was the designer of Harvard Hall at Harvard.

Bernardes, Diogo (dŏg'ō bĕrnār'dīsh), c. 1530–c. 1600, Portuguese poet. A follower of Sa de Miranda, he wrote melodious pastoral verse, and was one of the chief poets of the Portuguese Renaissance. The official poet on the tragic expedition that ended at Alquazarquivir, he was later pensioned.

Bernardin de Saint-Pierre, Jacques Henri (zhāk ānrē' bĕrnārdān' dā sān-pyēr'), 1737–1814, French naturalist and author. He was a friend of Rousseau, by whom he was strongly influenced. His chief work, *Études de la nature* (1784), sought to prove the existence of God from the wonders of nature, it is rich in descriptive passages, and it added specific color terms and plant names to the French language. A section of this was the sentimental prose idyll *Paul et Virginie* (1788), which attained immense vogue and influenced the French romanticists.

Bernardine of Siena, Saint (bŭrnārdīn, sĕēn'ā), 1380–1444, Italian preacher. He was a Franciscan of the Observant congregation and one of the most effective and most widely known preachers of his day. His popular, lively sermons still make good reading. He was vicar general of his congregation, and he repeatedly refused ecclesiastical preferment. St. Bernardine was one of the great promoters of devotion to the Holy Name of Jesus. His principal companion was St. John Capistran. Feast: May 20.

Bernardo del Carpio (bĕrnār'dō dĕl kār pyō), hero of medieval Spanish legend. He was supposedly the nephew of Alfonso II of Asturias, against whom he strove to secure his father's release from prison. Spanish legend has him a counterpart of the French Roland and in some versions the slayer of Roland at Roncevalles.

Bernard of Clairvaux, Saint (klārn'ō'), 1090?–1153, French churchman, mystic, Doctor of the Church. Born of noble family, in 1112 he entered the Cistercian abbey of Cîteaux, taking along 4 brothers and some 25 friends. In 1115 he headed the group sent to found a house at Clairvaux. There he remained abbot all his life, despite many efforts to move him higher. A holy life, a reputation for miraculous cures, and unusual eloquence made Bernard renowned, and he became the most powerful religious influence in France and, in time, in all Western Europe. His example and mystical theology had decisive influence on the Cistercian order, and he is sometimes called its second founder. During his lifetime 68 houses were founded out of Clairvaux alone. It was he who led the long struggle to seat Innocent II, the canonically elected pope, and persuaded Lombardy to accept Holy Roman Emperor Lothar II. He procured the condemnation of Peter Abelard and ARNOLD OF BRESCIA (1140), and he preached the Second Crusade (1146). He was the adviser of popes, especially of his friend EUGENE III. He was tireless in journeys to make peace, and he would undertake any mission or charity, however arduous or apparently trivial, thus he stopped a wave of pogroms in the Rhineland (1146), and he repeatedly saved luckless peasants from the powerful. Through his writings, St. Bernard exerted a profound influence on Roman Catholic spirituality. His deep devotion to the Virgin Mary and to the Infant Jesus is said to have founded a new strain of spirituality known as *devotio moderna*. His works consist of about 330 sermons, some 500 known letters, and 13 treatises. His style, strong and eloquent, full of biblical allusions, and intensely personal and direct, has gained him the name *Mellifluous Doctor*. Among his sermons, the series of 85 on the Canticles have been favorites (*St. Bernard on the Song of Songs*, tr. 1952). The most important treatises are *On the Steps of Humility and Pride* (c.1125; tr. by Geoffrey Webb and Adrian Walker, 1957) and *On the Love of God* (c.1127, tr. by T. L. Connolly, 1951). He

was canonized in 1174. Feast: Aug. 20. See Watkin Williams, *Saint Bernard of Clairvaux* (1952), E. H. Gilson, *The Mystical Theology of Saint Bernard* (tr. 1940), Thomas Merton, *The Last of the Fathers* (1954, repr. 1970), Henry Daniel-Rops, *Bernard of Clairvaux* (tr. 1964), O. J. Egges, *Saint Bernard, His Life and Teaching* (1971).

Bernard of Cluny (klŏn'ōnē) or **Bernard of Morlaix** (mŏrlā'), fl. 1150, French Cluniac monk, of English parentage. He wrote *De contemptu mundi* [on contempt for the world], a poem in 3,000 hexameters. On it Horatio Parker based his oratorio *Hora novissima*, and from it John Mason Neale drew the words of *Jerusalem the Golden*.

Bernard of Menthon, Saint (māntŏn'), d. 1081?, Italian churchman, founder of the Alpine hospices of SAINT BERNARD. His life was spent working among the people of the Val d'Aosta. Also known as Bernard of Montjoux, he is the patron of mountaineers. Feast: May 28.

Bernburg (bĕrn'bŏŏrk), city (1970 pop. 45,322), Halle dist., central East Germany, on the Saale River. Located in a salt-mining region, it has industries that produce food products and farm machinery. There is a 16th-century castle in the city.

Bern Convention: see COPYRIGHT.

Berne, Switzerland: see BERN.

Berners, John Bouchier, 2d Baron (bou'char, bŭrnarz'), 1467–1533, English diplomat and man of letters. A member of Parliament from 1495 to 1529, he later became chancellor of the exchequer (1516) and ambassador to Madrid (1518). He was English governor of Calais from 1520 until his death. Berners's literary work includes such translations as Froissart's *Chronicles* (2 vol., 1523–25), *Huon of Bordeaux* (1534?), and *The Golden Book of Marcus Aurelius* (1535, from a French version of Guevara's work).

Berners, Bernes, or Barnes, Juliana (bŭrn'arz, bārnz'), supposed early 15th-century author of a popular verse treatise on hunting. The treatise is included in *The Book of St. Albans* (1486), a collection treating the arts of heraldry, hawking, and field sports. If Juliana was the author, she is one of the earliest women writers in English, although tradition designates her the prioress of a nunnery in Hertfordshire, nothing is actually known of her life. See facsimile edition with introduction by William Blades (1881).

Bernese mountain dog (barnēz'), breed of sturdy working dog first brought to Switzerland by the invading Roman armies over two millennia ago. It stands from 23 to 27 in (58–69 cm) high at the shoulder and weighs from 50 to 70 lb (23–32 kg). Its long silky, slightly wavy coat is jet black with a white blaze up the face, white on the chest, feet, and tip of tail, and russet-brown or tan markings on all four legs and above the eyes. For hundreds of years in its native canton of Berne, the Bernese mountain dog was used as a draft animal by the local merchants to haul cartloads of goods to market. Today it is raised principally for show competition and as a pet. See DOG.

Bernhardi, Friedrich von (frĕ'drĭkh fan bĕrnhār'dē), 1849–1930, German general and military writer. His book *Germany and the Next War* (1912, tr. 1912) was widely publicized by the Allies as an example of Pan-Germanism and German ambition.

Bernhard of Saxe-Weimar (sāks'-wī'mār, zāks'-wī'mār), 1604–39, Protestant general in the THIRTY YEARS WAR, duke of Weimar. Under Ernst von MANSFELD and the margrave of Baden, Bernhard fought against the imperial forces in defense (1622) of the Palatinate. He served in the Netherlands and later allied himself (1631) with King Gustavus Adolphus of Sweden, after whose death at Lützen (1632) he took command. In 1633, Bernhard became joint commander of the army of the Heilbronn Confederation, created under Swedish auspices. The Swedish government also granted him the newly created duchy of Franconia, formed out of the captured German bishoprics of Würzburg and Bamberg. His capture of Regensburg (1633) made him the hero of the Protestants. In 1634 he suffered a crushing defeat by the imperial army at Nördlingen and soon afterward lost Franconia. Bernhard and his army were taken into French pay in 1635. Victories at Breisgau and Breisach (1638) brought him control over Alsace and the Upper Rhine. He died suddenly of a fever.

Bernhardt, Sarah (bŭrn'hārt, fr. bĕrnār'), 1844–1923, stage name of Rosine Bernard, French actress, b. Paris. She was brought up in a convent until she was 13, when she entered the Paris Conservatory. In 1862 she made an unsuccessful debut at the Comédie

Françoise During her appearances at the Odeon (1866-72) she attracted attention, first in *Coppee's Le Passant* (1869). With the *Comédie* (1872-80) she attained full stature with her superb portrayals of *Phedre* (1874) and of *Doña Sol* in Hugo's *Hernani* (1877). Renowned for her golden voice, she was considered the queen of French romantic and classical tragedy. Oscar Wilde called her "the divine Sarah," a designation by which she became universally known. In 1880 she began her tours of Europe, England, and the United States, in such plays as *Adrienne Lecouvreur*, *La Dame aux camélias*, and *Froufrou*. Long associated with the works of Sardou, she starred in his *Fedora*, *Theodora*, and *La Tosca*. She managed several theaters in Paris before leasing the Théâtre des Nations, renaming it the Théâtre Sarah Bernhardt. Here she revived some of her former successes and appeared in the title role of *Hamlet* (1899) and in Rostand's *L'Aiglon*, which was written for her in 1901. In 1912 she appeared in the silent films *La Dame aux camélias* and *Queen Elizabeth*. Her leg was amputated in 1915, but her career continued and she made numerous "farewell tours." An accomplished painter, poet, and sculptor, she also wrote plays in which she appeared. Among them were *L'Aveu* (1898) and *Un cœur d'homme* (1909). See her memoirs (tr. 1907), biographies by Jules Huret (1899), Maurice Baring (1934), Louis Verneuil (1942), A. W. Row (1957), Cornelia Otis Skinner (1967), and Gerda Taranow (1972).

Berni, Francesco (franchäs'kō bër'nē), 1497?-1535, Italian humorous poet, a priest. He was noted for his burlesque *capitoli*, light, often ribald verses in terza rima. He revised Boiardo's *Orlando Innamorato*, adding humorous touches and what he considered stylistic improvements. For many years Berni's rendering of Boiardo was the standard version, it has been generally discarded. For refusing to help murder Cardinal Salviati, Berni is thought to have been poisoned. One genre of satirical poetry is called *bernesco* after him.

Bernice (bër'nēs, bär'nēs'), form of the name Berenice. Bernice has been commonly used in English-speaking countries in modern times.

Bernicia (bär'nish'ä), Old English kingdom. Established in 547, it later extended from the Tees River to the Forth. In the late 6th cent. it was united with Deira to form NORTHUMBRIA.

Bernina (bër'nē'na), mountain group, part of the Rhaetian Alps on the Swiss-Italian border, SE Switzerland. Piz Bernina is the highest (13,304 ft/4,055 m) peak. The group has many glaciers, Morteratsch Glacier is the largest. The Bernina Pass, 7,645 ft (2,330 m) high, from the Upper Engadine Valley, Switzerland, to the Valtellina, Italy, is crossed by a road (built 1842-65) and a railroad (built 1907-10).

Bernini, Giovanni Lorenzo or Gianlorenzo (jōvan'nē lōrēn'sō, jän'lōrēn'sō bër'nē'nē), 1598-1680, Italian sculptor and architect, b. Naples. He was the dominant figure of the Italian BAROQUE. After receiving early training from his father, Pietro (1562-1629), an accomplished Florentine sculptor, Bernini worked mainly in Rome. Many of his early statues, such as the *David* (before 1620), *Rape of Proserpine* (1622), and *Apollo and Daphne* (1625), were done for Scipione Cardinal Borghese, one of the most important patrons of the period. These are all in the Borghese Gallery, Rome. In these masterful early works, Bernini broke with the traditions of MANNERISM. Popes Urban VIII, Innocent X, and Alexander VII gave him unparalleled opportunities to design churches, chapels, fountains, monuments, tombs, and statues. In 1629, Bernini was appointed architect of St. Peter's. He designed the ornate baldachin under the dome, the *Cathedra Petri* (the monument enshrining St. Peter's chair), and the exuberant marble decorations of the chapels and nave. From 1656 onward he worked on the great elliptical piazza and the vast, embracing arms of the colonnades in front of the church. During Innocent's papacy Bernini worked frequently for private patrons. In 1655 he was commissioned to do the magnificent fountains in the Piazza Navona. For the Vatican he created the royal staircase and the heroic equestrian statue of Constantine. He was assisted by a host of sculptors in these vast enterprises. Between 1658 and 1670 he designed three churches: San Tomaso di Villanova at Castelgandolfo, Santa Maria dell'Assunzione at Ariccia, and Sant'Andrea al Quirinale in Rome. He established a new mode, dynamically linking sculpture and architecture. In 1665, Louis XIV invited him to Paris to finish the designing of the Louvre, but Bernini's plans failed to win approval. Returning to Italy, he continued to work on St. Peter's. Much of Bernini's sculpture

combines white and colored marbles with bronze and stucco, most effectively used in Santa Maria della Vittoria, Rome, where he represented the *Ecstasy of St. Teresa*. This work exemplifies Bernini's ability to grasp the most dramatic moment from his subject's life. Often inspired by classical forms, Bernini transformed the marble block into a vital, almost breathing figure. A self-portrait drawn c. 1665 (Royal Coll., Windsor) is an example of his superb draftsmanship. As a painter he was also noteworthy, although very few of his paintings survive. Bernini was known as a wit, he wrote comedies and made numerous caricatures. All of his important work is in Rome, with the exception of the *Neptune and Triton* (Victoria and Albert Mus.) and the bust of Louis XIV (Versailles). See biography by F. Baldinucci (1682, tr. 1966), studies by H. Hibbard (1965), R. Wittkower (2d ed. 1966), and I. Lavin (1968).

Bernoulli or Bernouilli (both bër'nōyē'), name of a family distinguished in scientific and mathematical history. The family, after leaving Antwerp, finally settled in Basel, Switzerland, where it grew in fame. **Jacob, Jacques, or James Bernoulli**, 1654-1705, became professor at Basel in 1687. One of the chief developers both of the ordinary CALCULUS and of the CALCULUS OF VARIATIONS, he was the first to use the word *integral* in solving Leibniz's problem of the isochronous curve. He wrote an important treatise on the theory of probability (1713) and discovered the series of numbers that now bear his name, i.e., the coefficients of the exponential series expansion of $x/(1-e^{-x})$. He was succeeded at Basel by his brother, **Johann, Jean, or John Bernoulli**, 1667-1748, who earlier had been professor at Groningen and who was famous for his work in the field of integral and exponential calculus and was also a founder of the calculus of variations. He also contributed to the study of geodesics, of complex numbers, and of trigonometry. His collected works were published under the title *Johannis Bernoulli opera omnia*. His son, **Daniel Bernoulli**, 1700-1782, was a mathematician, physicist, and physician and has often been called the first mathematical physicist. He received his doctorate in medicine but became professor of mathematics at the St. Petersburg Academy in 1725. He was professor of anatomy and botany at Basel from 1733, later becoming professor of natural philosophy (physics). His greatest work was his *Hydrodynamica* (1738), which included the principle now known as BERNOULLI'S PRINCIPLE, and anticipated the law of conservation of energy and the KINETIC-MOLECULAR THEORY OF GASES developed more than 100 years later. He also made important contributions to probability theory, astronomy, and the theory of differential equations (solving a famous equation proposed by Riccati). Among the other noted members of the family are Nicolaus Bernoulli, 1662-1716, brother of Jacob and Johann, who was professor of mathematics at St. Petersburg; Nicolaus Bernoulli, 1695-1726, son of Johann and brother of Daniel, also a mathematician; Johann Bernoulli, 1710-90, another son of Johann (1667-1748) and brother of Daniel, who succeeded his father in the chair of mathematics at Basel and also contributed to physics; his son, Johann Bernoulli, 1746-1807, who was astronomer royal at Berlin and also studied mathematics and geography; and Jacob Bernoulli, 1759-89, another son of Johann (1710-90), who succeeded his uncle Daniel in mathematics and physics at St. Petersburg but met an early death by drowning.

Bernoulli's principle, physical principle formulated by Daniel Bernoulli, that states that as the speed of a moving fluid (liquid or gas) increases, the pressure within the fluid decreases. The phenomenon described by Bernoulli's principle has many practical applications, it is employed in the carburetor and the atomizer, in which air is the moving fluid, and in the aspirator, in which water is the moving fluid. In the first two devices air moving through a tube passes through a constriction, which causes an increase in speed and a corresponding reduction in pressure. As a result, liquid is forced up into the air stream (through a narrow tube that leads from the

Bernoulli's principle

body of the liquid to the constriction) by the greater atmospheric pressure on the surface of the liquid. In the aspirator air is drawn into a stream of water as the water flows through a constriction. Bernoulli's principle can be explained in terms of the law of conservation of energy (see CONSERVATION LAWS, in physics). As a fluid moves from a wider pipe into a narrower pipe or a constriction, a corresponding volume must move a greater distance forward in the narrower pipe and thus have a greater speed. At the same time, the work done by corresponding volumes in the wider and narrower pipes will be expressed by the product of the pressure and the volume. Since the speed is greater in the narrower pipe, the kinetic energy of that volume is greater. Then, by the law of conservation of energy, this increase in kinetic energy must be balanced by a decrease in the pressure-volume product, or, since the volumes are equal, by a decrease in pressure.

Bernstein, Eduard (ä'dōōart bër'n'shtīn'), 1850-1932, German socialist. From 1872 he was actively associated with the Social Democratic party. In 1878 he left Germany because of antisocialist legislation and spent over 20 years in exile, chiefly in England. In 1898 he aroused great discussion among German socialists by his criticisms of Marxist theories, denying the inevitability of intensification of the class struggle and the resultant collapse of the social order ending in world revolution. Returning to Berlin in 1901 he became the leader of revisionism, opposed by Karl Johann KAUTSKY. After World War I, Bernstein was unsuccessful in his attempts to unify the various factions of German socialists. The most important of his several books setting forth criticisms of Marxism is *Evolutionary Socialism* (1898, tr. 1909). See his reminiscences, *My Years of Exile* (1921), Peter Gay, *The Dilemma of Democratic Socialism* (1954), J. W. Hulse, *Revisionists in London* (1970).

Bernstein, Leonard (bër'n'stīn'), 1918-, American composer, conductor, and pianist, b. Lawrence, Mass., grad. Harvard, 1939, and Curtis Institute of Music, 1941. A highly versatile musician, he is the composer of symphonic works (the *Jeremiah Symphony*, 1944, *Age of Anxiety*, 1949, *Kaddish Symphony*, 1963), song cycles, chamber music, ballets (*Fancy Free*, 1944), musicals (*On the Town*, 1944, *Wonderful Town*, 1953, *Candide*, 1956, *West Side Story*, 1957), opera (*Trouble in Tahiti*, 1952), and choral music (*Chichester Psalms*, 1965). His *Mass* (1971), a "theater piece for dancers, singers, and players," was performed at the opening of the John F. Kennedy Cultural Center in Washington, D.C. From 1951 to 1956 he taught at Brandeis Univ. He has been soloist and conductor with many orchestras in the United States and abroad. He first conducted the New York Philharmonic-Symphony Orchestra in 1943, and from 1958 to 1970 was its musical director. Upon his retirement he was named Laureate Conductor, and now frequently appears with the Vienna Philharmonic and the Israel Philharmonic. See his *The Joy of Music* (1959) and *The Infinite Variety of Music* (1966), biographies by John Briggs (1961) and John Gruen (1968).

Bernstorff, Andreas Peter (andrās pā'tar bër'n's-tōrf), 1735-97, Danish politician, nephew of Johann Hartwig Ernst BERNSTORFF. Made (1773) foreign minister after Struensee's fall from power, he obtained from Russia the final ratification of the exchange treaty negotiated by his uncle in 1767. Removed from office in 1780 to pacify Russia, he was recalled in 1784 and was chief minister until 1797. He sought friendly relations with Sweden, kept Denmark neutral in the French Revolutionary Wars, and undertook a liberal program of social, economic, and educational reform.

Bernstorff, Johann Hartwig Ernst (yōhan' hart'-vīkh), 1712-72, Danish politician, of German (Hanoverian) origin. As minister of foreign affairs (1751-70) under FREDERICK V and Christian VII, he successfully kept Denmark at peace. In 1767 he negotiated with Russia a provisional treaty by which the Danish crown was to cede OLDENBURG to Catherine II of Russia in exchange for ducal HOLSTEIN. In 1770, Christian VII, under the influence of STRUENSEE, dismissed Bernstorff.

Bernstorff, Johann Heinrich, Graf von (hīn'rīkh graf fən), 1862-1939, German diplomat. As ambassador to the United States (1908-17), he tried to conciliate American feelings toward Germany and repeatedly warned his government that unrestricted submarine warfare would bring the United States into World War I. A member of the Reichstag from 1921 to 1928 and a delegate to the League of Nations disarmament conference (1926-31), he went into exile at Geneva after Hitler took power in Germany. His memoirs were published in 1936.

Berodach-baladan: see MERODACH BALADAN

Beroea (bērē'a), the same as BEREIA 1

Beroeans: see BEREANS

Berosus (bārō'sas), 3d cent. B.C., Babylonian priest-historian, contemporary of MANETHO. His work, in Greek, preserved Mesopotamian myths regarding creation and history. It survives in fragments quoted by Josephus and Eusebius of Caesarea.

Berothah (bērō'tha), city of Syria. Ezek. 47:16. Berothai may be the same.

Berothai (bērō'thī), city of Syria, perhaps the same as Berothah. 2 Sam. 8:8. Chun. 1 Chron. 18:8.

Berothite (bērō'thīt), inhabitant of the city Beeroth. 1 Chron. 11:39.

Berra, Yogi (Lawrence Peter Berra), 1925–, American baseball player and manager, b. St. Louis, Mo. An outstanding catcher with the New York Yankees (1946–63), he also played briefly with the New York Mets (1965). Berra was elected the American League's most valuable player in 1951, 1954, and 1955, hit 358 home runs and batted .285. In 1964 he managed the Yankees, leading them to the pennant. He managed the Mets (1972–). He was elected to the Baseball Hall of Fame in 1972. See biography by Phil Pepe (1974).

Berrettini, Pietro: see CORTONA PIETRO DA

Berrigan, Daniel, 1921–, American Jesuit priest, poet, and political activist, b. Syracuse, N.Y., brother of Philip Berrigan. Upon his ordination in 1952, he traveled to France, where he developed admiration for militant workers and supported their efforts. Returning to the United States, he taught at Brooklyn Preparatory School and Le Moyne College until, after a second trip to France (1963), he devoted his time to civil rights and antipoverty and antiwar work. Convicted in 1970 and sentenced to three years imprisonment for destroying selective service files in Catonsville, Md., in 1968, Berrigan became a fugitive but eventually was captured and sent to prison; he was granted parole in Jan. 1972. His works include a play, *The Trial of the Catonsville Nine* (1970), *The Dark Night of Resistance* (1971), his prison memoirs, *Lights On in the House of the Dead* (1974), and several volumes of poems. See biography by Richard Curtis (1974), Stephen Halpert and Tom Murray, ed., *Witness of the Berrigans* (1972).

Berrigan, Philip Francis, 1923–, American Roman Catholic priest and political activist, b. Two Harbors, Minn., brother of Daniel Berrigan. In 1950 he graduated from Holy Cross College and was ordained. Throughout the 1960s Berrigan was active in civil rights and antiwar groups, during that time he founded the Catholic Peace Fellowship. He was convicted and imprisoned for destroying selective service files in 1967 in Baltimore and in 1968 in Catonsville, Md. In 1970, while in prison, Berrigan was convicted on charges of smuggling mail out of the federal penitentiary at Lewisburg, Pa. His wife, Sister Elizabeth McAlister, whom he married secretly in 1969, was also convicted on similar charges. In 1972 the convictions were overturned. Berrigan was paroled in December of that year. See his prison writings, *Prison Journals of a Revolutionary Priest* (1970) and *Widen the Prison Gates* (1973).

Berruguete, Alonso (alōn'sō bēr-rōgā'tā), c. 1480–1561, Spanish mannerist sculptor. Probably the first in Spain to break away from the High Renaissance balance of form, he is noted for the expressive torsion of his figures. He studied with his father, Pedro Berruguete, a painter at the Spanish court. In Italy (c. 1504–c. 1517) he was strongly influenced by Michelangelo. On Berruguete's return to Spain he was appointed (1518) court painter and sculptor to Charles V. The carved altar screens for San Benito el Real (1527–32, Valladolid Mus.) and the choir stalls of the cathedral at Toledo (1539–43) are among his masterpieces. Berruguete brought the influence of Michelangelo to Spain, but his vigorous and highly original art is essentially Spanish. His work is best seen in Valladolid.

Berry, Caroline Ferdinande Louise, duchesse de (kārlōn' fērdēnāNd lwēz, dushēs' da bēre'), 1798–1870, wife of the French prince, Charles Ferdinand, duc de Berry, daughter of Francis I of the Two Sicilies. She went into exile from France after the overthrow of King Charles X, her father-in-law. Returning secretly in 1832, she organized a small, unsuccessful uprising in an attempt to win the throne for Berry's posthumous son, Henri, later known as the comte de Chambord. For these activities she was imprisoned. However, when it became obvious that the duchesse was pregnant, she was forced to reveal her secret second marriage to an

Italian count. This marriage alienated her royalist supporters, and the French government released her from prison.

Berry, Charles Ferdinand, duc de (sharl fērdēnāN', duk), 1778–1820, younger son of Charles, comte d'Artois (later Charles X of France). He served in the prince de Condé's army against the French Revolution. His assassination during the reign of King Louis XVIII—an attempt to extinguish the Bourbon line—gave the ultraroyalists the opportunity to turn Louis XVIII against the liberals. Berry's posthumous son was Henri, comte de Chambord.

Berry, Martha McChesney, 1866–1942, American educator and philanthropist, b. near Rome, Ga., Ph.D. Univ. of Georgia, 1920. Determined to provide educational opportunities for underprivileged mountain children, Berry opened (1902) a log-cabin school with five pupils. She developed this at Mt. Berry, Ga., into an institution comprising four units: a boys' school (1902), a girls' school (1909), Berry College (1926, coeducational), and a model practice school. See biography by Tracy Byers (1932, repr. 1971), H. T. Kane and I. W. Henry, *Miracle in the Mountains* (1956).

Berry (bērē'), former province, central France. Bourges, the capital, and Châteauroux are the chief towns. Cattle are raised on the Champagne Berrichonne, a semiarid plateau that covers most of the region. The valleys of the Indre and the Cher rivers are rich farming areas. A part of Roman Aquitaine, Berry was made a county in the 8th cent., and was purchased (1101) by the French crown. In 1360 it was made a duchy. It was held as an appanage by various royal princes until 1601, when it reverted to the crown.

berry: see FRUIT

Berryman, John, 1914–72, American poet and critic, b. McAlester, Okla., grad. Columbia, 1936. From 1955 until his death he was on the faculty of the Univ. of Minnesota. Although he had published several volumes of poetry and a highly regarded biography of Stephen Crane (1950), his literary reputation was not established until the appearance of *Homage to Mistress Bradstreet* (1956), a long dialogue in verse between Berryman and the ghost of Anne Bradstreet. The volumes *77 Dream Songs* (1964, Pulitzer Prize) and *His Toy, His Dream, His Rest* (1968) can be considered a two-part novel in verse in which the only speaker is a middle-aged teacher and lover named Harry, who is the universal voice of an anguished and trivial age. Berryman committed suicide in 1972. *Delusions* (1972), a volume of poems, and *Recovery* (1973), a novel, were published posthumously, in both the poet examines himself and his life—as it slips away—in intimate and harrowing detail. Berryman's other volumes of poetry include *Poems* (1942), *The Dispossessed* (1948), *Berryman's Sonnets* (1967), and *Love and Fame* (1971). See study by J. M. Linebarger (1974).

Bersimis' see BETSIAMITES, river, Canada

Bertha of the Big Foot: see BERTRADA

Berthelot, Pierre Eugène Marcelin (pyēr ūzhēn' mār'salāN' bērtālō'), 1827–1907, French chemist. He was professor at the École Supérieure de Pharmacie (1859) and at the Collège de France from 1865. In 1900 he became a member of the French Academy. A founder of modern organic chemistry, he was the first to produce organic compounds synthetically (including the carbon compounds methyl alcohol, ethyl alcohol, benzene, and acetylene), at the same time dispelling the old theory of a vital force inherent in organic compounds. He also did valuable work in thermochemistry and in explosives. His writings include *Chimie organique fondée sur la synthèse* (1860) and *Leçons sur la thermochimie* (1897).

Berthier, Louis Alexandre (lwē alēksaN'drā bērtiā'), 1753–1815, marshal of France. He served in the American Revolution and in the French Revolutionary Wars, distinguishing himself under Napoleon in Italy, where he served as chief of staff. He was twice minister of war and from 1805 was chief of staff of the Grande Armée. The emperor made him prince of Neuchâtel and Wagram and arranged his marriage with a Bavarian princess. Berthier accommodated himself to the return of the Bourbons in 1814. Torn by divided allegiance when Napoleon returned from Elba, he withdrew to Bavaria, where he killed himself or was killed on June 1, 1815.

Berthollet, Claude Louis, Comte (klōd lwē, kōnt bērtōlā'), 1748–1822, French chemist. His contributions to chemistry include the analysis of ammonia and prussic acid and the discovery of the bleaching properties of chlorine. He collaborated with An-

toine Lavoisier in his researches and in reforming chemical nomenclature and supported him in his theory of combustion. His greatest contribution was in his *Essai de statique chimique* (1803), in which he presented his speculations on chemical affinity and his discovery of the reversibility of reactions.

Bertillon system (bārtīl'yān), first scientific method of criminal identification, developed by the French criminologist Alphonse Bertillon (1853–1914). The system, based on the classification of skeletal and other body measurements and characteristics, was officially adopted in France in 1888 and soon after in other countries. Fingerprinting, added later as a supplementary measure, has largely replaced the system. See biography of Alphonse Bertillon by Henry Rhodes (1956, repr. 1969).

Bertoia, Harry (bērtōi'ya), 1915–, American sculptor and furniture designer, b. Italy. Bertoia emigrated to the United States in 1933 and joined Knoll International (1950). There he designed chairs that brought him wide acclaim. Important examples of his sculptural works are a structural screen for the Manufacturers Hanover Trust Company, New York City, and a bronze panel at Dulles International Airport, Washington, D.C.

Bertoldo di Giovanni (bārtōldō dē jōvān'ne), c. 1420–91, Italian sculptor. A pupil and assistant to Donatello and later the teacher of Michelangelo, Bertoldo was employed by the Medici to supervise instruction in sculpture and care for their collection of antique sculpture. His own works, often small bronzes, include battle scenes and mythological episodes (e.g., *Orpheus*, Bargello, Florence).

Bertrada, d. 783, Frankish queen, wife of Pepin the Short and mother of Charlemagne. She tried without success to reconcile Charlemagne and his brother Carloman. Also called Bertha of the Big Foot or Queen Goosefoot, she figures in Carolingian legend.

Bertrand de Born (būr'trānd də bōrn) or **Bertran de Born** (bēr'traN'), c. 1140–c. 1214. French TROUBADOUR of Limousin. Some of his 40 surviving poems (in Provençal) tell of his part in the struggles between Henry II of England and his sons. For his warlike role in these quarrels, Bertrand is named as a "sower of schism" in Dante's *Inferno*.

Berwald, Franz (frānts bē'rvald), 1796–1868, Swedish composer. Unable to support himself entirely by music, for a time Berwald directed an orthopedic clinic and ran a glassworks. His music, which is highly original in its use of rhythm, harmony, and orchestration, had little popular success. Berwald's orchestral music is reminiscent of work by Berlioz, although his thematic ideas are generally more concise. He wrote six symphonies and several concertos, chamber works, and operas. See Robert Layton, *Berwald* (1959).

Berwick, James FitzJames, duke of (bē'r'ik), 1670–1734, marshal of France, illegitimate son of King James II of England and Arabella Churchill, sister of the duke of Marlborough. Born and educated in France, he fought in Hungary against the Ottoman Turks. In 1687, his father, who had ascended the English throne in 1685, created him duke of Berwick. When his father was dethroned (1688), Berwick took part in the invasion of Ireland (1689) against James's successor William III, the effort was supported by King Louis XIV of France, James's ally. After the defeat in Ireland, Berwick fought for France in the War of the Grand Alliance and became (1703) a naturalized Frenchman. He subsequently helped suppress the Protestant CAMISARDS. In the War of the Spanish Succession (see SPANISH SUCCESSION, WAR OF THE), he won the decisive victory of Almansa (1707) for King Philip V of Spain, Louis XIV's grandson. In 1709 he campaigned against Prince EUGENE OF SAVOY in defense of the southeastern frontier of France, and his capture of Barcelona (1714) was the closing event of the war. During the War of the Polish Succession, he commanded (1733) the French army of the Rhine, he was killed at Philippsburg.

Berwick (bē'r'ik) or **Berwickshire** (bē'r'ikshīr), county (1971 pop. 20,750), 457 sq. mi. (1,194 km), SE Scotland. The county town is Duns. Berwick is separated from England by the Tweed River. The coastline (along the North Sea) is rocky and inhospitable. The county is divided into three geographical regions: the Merse, in the southeast, one of the most productive valleys in Scotland, the Lammermuirs, a pastoral mountainous region in the northwest, and Lauderdale, a cultivated hilly region along Leader Water in the west. The Eye is Berwick's major river. Sheep grazing, the cultivation of grains, sugar beets, and potatoes, and fishing are the chief occupations. Berwick was part of the ancient Saxon kingdom of

Northumbria For many centuries it was the scene of border strife between England and Scotland Dryburgh Abbey, in Berwick, is the burial place of Sir Walter Scott, the writer, and Earl Haig, the general In 1975, Berwick became part of the Borders region

Berwick (bûr'wîk), industrial borough (1970 pop 12,274), Columbia co., E Pa., on the Susquehanna River, in a forest and farm area, inc 1818 Clothing and mobile homes are produced in the city The region abounds in fish and game

Berwick upon Tweed (bêr'îk), municipal borough (1971 pop 11,644), Northumberland, NE England, at the mouth of the Tweed River It is a market town and seaport and is famous for its salmon fishing Grain is the chief export, oil and timber are imported Other industries are shipbuilding, engineering, sawmilling, fertilizer production, and the manufacture of tweed and hosiery The principal border town between Scotland and England, Berwick changed hands more than 13 times between 1147 and 1482, when Edward IV finally claimed it for England It did not become officially English until 1885 Of interest are the Royal Border Bridge, the old barracks, and the walls surrounding the city that were especially designed to utilize artillery guns

Berwyn (bûr'wîn), city (1970 pop 52,502), Cook co., NE Ill., a residential suburb of Chicago, on the Chicago Sanitary and Ship Canal, inc 1891 It has varied light manufactures

beryl (bêr'îl), mineral, a silicate of beryllium and aluminum, $8\text{Be}_3\text{Al}_2\text{Si}_6\text{O}_{18}$, extremely hard, occurring in hexagonal crystals that may be of enormous size and are usually white, yellow, green, blue, or colorless Beryl is commonly used as a gemstone The refractive index is low, and the stones have little or no fire The most valued variety of beryl is EMERALD An AQUAMARINE is a blue to sea-green beryl, morganites are rose-red beryls It is the principal raw material for the element beryllium and its compounds

beryllium (bar'îl'ëəm) [from beryl], rarely **glucium**, metallic chemical element, symbol Be, at no 4, at wt 9.0122, m p about 1285°C, b p 2970°C (estimated), sp gr 1.85 at 20°C, valence +2 Beryllium is a strong, extremely light, high-melting, silver-gray metal with a close-packed hexagonal crystalline structure It is an ALKALINE-EARTH METAL in group IIa of the PERIODIC TABLE Beryllium is resistant to corrosion, weight for weight, it is stronger than steel, and because of its low density (about 1/3 that of aluminum) it has found extensive use in the aerospace industry Beryllium is soluble in hot nitric acid, dilute hydrochloric and sulfuric acids, and sodium hydroxide Like aluminum and magnesium, which it resembles chemically, it readily forms compounds with other elements, it is not found free in nature However, like aluminum, it is resistant to oxidation in air, even at a red heat, it is thought to form a protective oxide film that prevents further oxidation The compounds of beryllium are sweet-tasting and highly toxic, this toxicity has limited the use of beryllium as a rocket fuel, even though it yields more heat on combustion for its weight than any other element Beryllium transmits X rays much better than glass or other metals, this property, together with its high melting point, makes it desirable as a window material for high-intensity X-ray tubes Because beryllium resists attack by liquid sodium metal, it is employed in cooling systems of nuclear reactors that use liquid sodium as the heat-transfer material, because it is a good reflector and absorber of neutrons, it is also used as a shield and as a moderator in nuclear reactors The addition of 2% to 3% of beryllium to copper makes a nonmagnetic alloy six times stronger than pure copper This alloy is used to make nonsparking tools for use in oil refineries and other places where sparks constitute a fire hazard, it is also used for small mechanical parts, such as camera shutters When beryllium is alloyed with other metals such as aluminum or gold it yields substances with a higher melting point, greater hardness and strength, and lower density than the metal with which it is alloyed Beryllium aluminum silicates, especially BERYL (of which emerald and aquamarine are varieties), constitute the chief sources of the metal Although its ores occur widely in North America, Europe, and Africa, the cost of extracting the metal limits its commercial use Beryllium may be prepared by electrolysis of its fused salts, it is prepared commercially by reduction of the fluoride with magnesium metal Beryllium was discovered in 1798 as the oxide beryllia by L N Vauquelin, a French chemist Vauquelin analyzed beryl and emerald at the urging of R J Haüy, a French mineralogist, who had noted that their optical properties were identical Beryllium was first iso-

lated in 1828 independently by F Wohler in Germany and W Bussy in France by fusing beryllium chloride with metallic potassium

Berytus: see BEIRUT, Lebanon

Berzelius, Jöns Jakob, Baron (bærzē'lēās, Swed yons ya'kôp bër-sā'lēās), 1779-1848, Swedish chemist, M D Univ of Uppsala, 1802 He was noted for his work as teacher at the medical school and other institutions in Stockholm and for his discoveries in diverse fields of chemistry He developed the modern system of symbols and formulas in chemistry, prepared a remarkably accurate table of atomic weights, analyzed numerous chemical compounds, and discovered the elements selenium, thorium, and cerium Silicon in the amorphous form was first prepared by Berzelius, and he was the first to isolate zirconium Berzelius coined the words *isomerism*, *allotropy*, and *protein* He also contributed to the science of electrochemistry and wrote numerous books See study by J Eric Jorpes (tr 1971)

Besai (bê'sā), family that returned with Zerubbabel Ezra 2:49, Neh 7:52

Besançon (bazaNsôn'), city (1968 pop 119,471), capital of Doubs dept., E France, in Franche-Comté, on the Doubs An industrial town with metallurgical, textile, and food-processing industries, it is especially famous for its clock and watch manufactures, its watch school is world renowned Of Gallo-Roman origin, Besançon was an archiepiscopal see from the 5th cent Although part of the kingdom of Burgundy, it was made (by Emperor Frederick I) a free city, with special privileges for its archbishops It maintained its independence, with interruptions, until 1648, when it passed under Spanish rule through its incorporation with Franche-Comté After Louis XIV's second conquest of Franche-Comté (1674), Besançon became (1676) the capital of his new province Although bombed during World War II, many old monuments remain Roman ruins, a cathedral (12th-16th cent), and numerous buildings in Spanish Renaissance style, notably the Palais Granvelle (birthplace of Cardinal Granvelle, now housing a museum) and the imposing town hall An intellectual center, Besançon is the seat of a university (founded 1422 in Dôle and moved to Besançon in 1691), a music academy (founded 1726), and an international music festival

Besant, Annie (bêz'ant), 1847-1933, English social reformer and theosophist, b Annie Wood She steadily grew away from Christianity and in 1873 separated from her husband, a Protestant clergyman In 1879 the courts deprived her of her children because of her atheism and alleged unconventionality As a member of the National Secular Society she preached free thought and, as a member of the Fabian society, socialism With Charles BRADLAUGH she edited the *National Reformer* and with him reprinted an old pamphlet on birth control, *The Fruits of Philosophy*, for which they were tried (1877) on a charge of immorality and acquitted In 1889 she embraced THEOSOPHY, becoming a disciple of Mme Blavatsky and, later, her biographer She pursued her mission to India, where she soon became involved in nationalist politics She founded the Central Hindu College at Benares (Varanasi) in 1898 and in 1916 established the Indian Home Rule League and became its president She was president of the Indian National Congress in 1917, but later split with Gandhi She traveled (1926-27) in England and the United States with her protegee Jiddu KRISHNAMURTI, whom she announced as the new Messiah President of the Theosophical Society from 1907, she wrote an enormous number of books and pamphlets on theosophy Her works include her autobiography (1893), *Four Great Religions* (1897), *The Ancient Wisdom* (1897), and a translation of the *Bhagavad Gita* (1905) See Theodore Besterman, *Mrs Annie Besant* (1934), A H Nethercot, *The First Five Lives of Annie Besant* (1960) and *The Last Four Lives of Annie Besant* (1963)

Besant, Sir Walter (bîzant'), 1836-1901, English novelist and humanitarian, grad Christ's College, Cambridge, 1859 He taught at the Royal College of Mauritius from 1861 to 1867 After his return to England he devoted himself to writing and to various causes, among them the improvement of the copyright laws His first novels (in collaboration with James Rice) won immediate popularity Romantic and somewhat florid in style, they include *The Golden Butterfly* (1876) and *Ready-Money Mortiboy* (1872) Many of Besant's novels, written after the collaboration with Rice, dealt with social problems, among them were *All Sorts and Conditions of Men* (1882) and *Children of Gibeon* (1886) Besant was one of the most widely read novelists of the late

19th cent He was knighted in 1895 See his autobiography (1902, repr 1971)

Beskids (bêsk'idz), Czech and Slovak *Beskydy*, Pol *Beskidy* (bêskê'dê), mountain range of the Carpathians, extending c 200 mi (320 km) along the Polish-Czechoslovakian border The highest peak, Babia Gora (Slovak *Babí Hora*) rises to 5,658 ft (1,725 m) The Dunajec River divides the range into eastern and western sections The Vistula River rises in the Western Beskids Several passes, notably Jablunkov, Dunka, and Vlára, cross the range The Beskids are heavily forested Rich in coal and once having large deposits of iron ore, the Beskids became an iron and steel center in the 18th cent, the largest plants are now located at Ostrava, Trinec, and Kladno, in Czechoslovakia There are numerous tourist attractions and winter resorts in the mountains

Besnard, Paul Albert (pôl albêr' bânar'), 1849-1934, French painter, studied with Legros and Cabanel and in Italy He enjoyed many official honors and was the last important academic painter His *Woman Warming Herself* (1866) is in the Louvre He is best known for his many mural decorations in schools and public buildings in Paris

Besodeiah (bêsôdê'ya, bêsôdêf'a), the father of MESULLAM 6

Besor (bê'sôr), stream, S Palestine 1 Sam 30:9, 10:21

Bessarabia (bêsarä'bêa), historic region, c 17,600 sq mi (45,600 sq km), SW European USSR, largely in the Moldavian Soviet Socialist Republic and in the Ukraine It is bounded by the Dneestr River on the north and east, the Prut on the west, and the Danube and the Black Sea on the south Consisting mainly of a hilly plain with flat steppes, it is an extremely fertile agricultural area, especially for wine grapes, fruits, corn, wheat, tobacco, sugar beets, and sunflowers Dairy cattle and sheep raising are also important Agricultural processing is the chief industry There are some stone quarries and lignite deposits Bessarabia's leading cities are KISHINEV and TIRASPOL in Moldavia and IZMAIL and BELGOROD DNESTROVSKY in the Ukraine The population consists of Moldavians (about two thirds), Ukrainians, Russians, Jews, and Bulgarians As the gateway from Russia into the Danube valley, Bessarabia has been an invasion route from Asia to Europe Greek colonies were planted on the Black Sea coast of Bessarabia as early as the 7th cent B C The region was later part of Roman DACIA, but after the 4th cent AD it was subject to incursions by Goths, Huns, Avars, and Magyars Slavs first settled in Bessarabia in the 7th cent in the midst of these incursions From the 9th to the 11th cent, the area was part of Kievan Russia, and in the 12th cent it belonged to the duchy of Galich-Volhynia Cumans and later Mongols overran Bessarabia, after the latter withdrew it was included (1367) in the newly established principality of Moldavia The region probably derives its name from the Walachian princely family of Bassarab, which once ruled S Bessarabia In 1513 the Turks and their vassals, the khans of the Crimean Tatars, conquered Bessarabia After the Russo-Turkish wars, the region was ceded to Russia by the Treaty of Bucharest (1812) The Crimean War resulted (1856) in Russia's cession of S Bessarabia to Moldavia, but the Congress of Berlin (1878) returned the district to Russia After the Bolshevik Revolution (1917) the anti-Soviet national council of Bessarabia proclaimed the region an autonomous republic, however, in 1918, Bessarabia renounced all ties with Soviet Russia and declared itself an independent Moldavian republic, later voting for union with Rumania Although the Treaty of Paris (1920) recognized the union, Russia never accepted it, and in 1940 Rumania was forced to cede Bessarabia to the USSR The larger part of the region was merged with the Moldavian Autonomous Soviet Socialist Republic, thus forming the Moldavian SSR, the southern and northern sections, with a predominantly Ukrainian-speaking population, were incorporated into the Ukraine The Rumanian peace treaty of 1947 confirmed Bessarabia as part of the USSR

Bessarion (bêsar'ëan), 1395?-1472, Byzantine humanist, cardinal of the Roman Catholic Church He was a leading figure at the Council of FERRARA-FLORENCE, which he attended as metropolitan of Nicaea He favored ending the schism between East and West, and when the Orthodox Church refused, he joined the Roman Catholic Church and remained in Italy He was made a cardinal in 1439, and in 1463 the pope named him patriarch of Constantinople A projected translation into Latin of Ptolemy was completed by his protégés, Purbach and REGIOMONTANUS His fine collection of Greek manuscripts was the nucleus of St Mark's library, Venice

Bessel, Friedrich Wilhelm (frēd'rikh vil'hēlm bēs'-al), 1784-1846, German astronomer and mathematician. He became (1810) director of the new observatory at Königsberg and professor of astronomy at the Univ. of Königsberg. Among his many achievements the most noted is his discovery of the parallax of the fixed star 61 Cygni. Announced in 1838, it was officially recognized in 1841 as the first fully authenticated measurement of the distance of a star. His observations had, by 1833, increased the number of accurately determined stars to 50,000. This work was continued and extended by his pupil ARGELANDER. Through observing the variations of the proper motions of Sirius and Procyon, he concluded that they possessed dimmer companions, which was verified a century later by astronomers. Bessel's works on astronomy include *Fundamenta Astronomiae* (1818) and *Astronomische Untersuchungen* (1841-42). Bessel also introduced a class of mathematical functions, named for him, which he established as a result of work on perturbation of the planets and which are widely used in applied mathematics, physics, and engineering.

Bessemer, city (1970 pop. 33,428), Jefferson co., N. central Ala., inc. 1887. Founded as a mining town, it was named after Sir Henry Bessemer, inventor of the Bessemer process. The surrounding area is rich in minerals, and the manufacture of iron and steel is still the city's major industry.

Bessemer process [for Sir Henry Bessemer], industrial process for the manufacture of steel from molten pig iron. The principle involved is that of oxidation of the impurities in the iron by the oxygen of air that is blown through the molten iron, the heat

came in contact with French rationalism and was an ardent follower of Voltaire and the Encyclopedists. Bessenyer's major importance lay in his encouraging the revival of the Hungarian language, rather than in the merits of his own works. His play *The Philosopher* (1777) was among the first modern comic works written in Hungarian. Bessenyer has been called the father of modern Hungarian literature.

Best, Charles Herbert, 1899-, Canadian physiologist, b. West Pembroke, Maine. With F. G. Banting he discovered (1921) the use of insulin in the treatment of diabetes. He was appointed professor of physiology at the Univ. of Toronto in 1929, served as associate director of the Connaught Laboratories from 1932 to 1941, and became director of the Banting and Best department of medical research at the Univ. of Toronto in 1941. With N. B. Taylor he wrote *The Living Body* (rev. ed. 1946), *The Physiological Basis of Medical Practice* (4th ed. 1946), and *The Human Body and Its Functions* (3d ed. 1956).

bestiary (bēs'chēēr'ē), a type of medieval book that was widely popular, particularly from the 12th to 14th cent. The bestiary presumed to describe the animals of the world and to show what human traits they severally exemplify. The bestiaries are the source of a bewildering array of fabulous beasts and of many misconceptions of real ones. They were the artist's guide to animal symbolism in religious building, painting, and sculpture. *Physiologus* (the naturalist), an ancient work of the type, was probably the chief source of the bestiaries. A Middle English version is translated in J. L. Weston, *The Chief Middle English Poets* (1914). Variations of the genre remain popular. Modern authors who have written bestiaries include Lewis Carroll, James Thurber, T. H. White, and Jorge Luis Borges.

Bestuzhev, Aleksandr Aleksandrovich (alyik'sān'-dar alyik'sān'drāvich byistōō'zhaf), pseud. Cossack Marlinsky, 1797-1837, Russian novelist and poet. He wrote popular romantic tales in the Byronic manner. As an officer in the guards he joined the DECEMBRISTS and was exiled to Siberia. He was later transferred to the Caucasus, where he found the material for his best novel, *Ammalat Bek* (tr. 1843).

Bestuzhev-Ryumin, Aleksey Petrovich, Count (alyik'syā' pētrō'vich byistōō'zhēv-rēō'myīn), 1693-1766, Russian statesman. With the accession (1741) of Czarina Elizabeth, he was appointed vice chancellor and (1744) grand chancellor. Directing Russian foreign policy, he attempted to unite Russia, Austria, Great Britain, and Saxony against France and Prussia, which he viewed as Russia's natural enemies. Alliances were sealed with Great Britain (1742, 1747) and Austria (1746). The Anglo-Prussian alliance of Jan. 1, 1756, and the outbreak of the Seven Years War that summer virtually nullified Bestuzhev-Ryumin's efforts. Over his strenuous objections, Russia joined (1757) a counteralliance with France and Austria. Removed (1758) from office and banished to his estate, he was recalled (1762) by Catherine II, who made him a field marshal.

Beta Centauri (bā'tā sēntōr'i) see HADAR

Beta Crucis (krōō'sis) see MIMOSA, in astronomy

Betah (bē'ta), the same as TIBHATH

Betancourt, Rómulo (rō'mōlō bētankōōr'), 1908-, Venezuelan political leader, president of Venezuela (1945-48, 1959-64). Following a stormy career as a leader of radical student groups, he founded (1935) the *Organización Venezolana*, which later became the *Partido Acción Democrática*. In 1945, Betancourt, placed in power by a military coup, declared universal suffrage, instituted social reforms, and secured for Venezuela 50% of the profits reaped by oil companies. Forced into exile in 1948 when Marcos Pérez Jiménez overthrew the constitutionally elected Rómulo Gallegos, he returned (1958) after Pérez Jiménez was ousted, and was elected president. In spite of serious opposition from extremists and disaffected army units, he continued to advance a program of economic and educational reform. He was succeeded by Raul Leoni. In 1973, Betancourt was awarded a lifetime senate seat.

beta particle, one of the three forms of natural radioactivity. Beta radiation (or beta rays) was identified and named by E. Rutherford, who found that it consists of high-speed ELECTRONS. Unlike alpha and gamma particles, whose energy can be explained as the difference of the energies of the radioactive nucleus before and after emission, beta particles emerge with a variable energy. This apparent violation of the law of conservation of energy (see CONSERVATION LAWS) led to the hypothesis that a second undetected particle, the NEUTRINO, is emitted along with the electron and shares the total available energy. In some forms of induced, or artificial, radio-

activity, the electron's ANTIPARTICLE, the positron, is emitted from the excited nucleus, the positron in this case is also called a beta particle and denoted by β^+ (the ordinary beta particle is β^-).

Beta Persei (pūr'sēi') see ALGOL

betatron: see PARTICLE ACCELERATOR

betel (bē'tal), masticatory made from slices of betel palm seeds (called betel nuts) smeared onto a betel pepper leaf together with other aromatic flavorings and lime paste and rolled up. The betel PALM (*Areca catechu*) and the betel pepper (*Piper betle* of the PEPPER family) are native to and widely cultivated in S. Asia, where betel has been chewed since ancient times and is an article of considerable commerce. Betel contains a narcotic stimulant and may have some medicinal value. Habitual chewing stains the teeth.

Betelgeuse (bē'tāljoōz'), bright star in the constellation ORION, Bayer designation α Orionis, 1970 position RA 5^h53^m, Dec. +7°24'. A red supergiant with a luminosity about 13,000 times that of the sun, it is of SPECTRAL CLASS M2 Iab. Betelgeuse is a semi-regular VARIABLE STAR with apparent MAGNITUDE ranging from 0.6 to 0.75, thus, at maximum brightness it is one of the 10 brightest stars in the sky. Betelgeuse marks the right shoulder of Orion, its distance is about 500 light-years.

Beten (bē'tēn), village of N. Palestine. Joshua 19:25

Bethabara (bēthāb'ārā), place, on the Jordan, traditionally located at a ford just above the Dead Sea, where John was baptizing when Jesus came to him. RSV. Bethany, following some ancient texts. John 1:28

Beth-anath (bēth-ā'nāth), town of N. Palestine. Joshua 19:38, Judges 1:33

Beth-anoth (bēth-ā'nōth), town, probably the modern Bayt Anun (Jordan), not far NE of Hebron. Joshua 15:59

Bethany (bēth'anē) 1 Village, at the southeastern foot of the Mount of Olives, the modern Al Ayzariyah (Jordan), 2 mi (3.2 km) E of Jerusalem. Home of Lazarus, Martha, and Mary, it was frequently visited by Jesus. It is closely associated with the final scenes of his life, and the Ascension took place near Bethany. Mat. 21:17, 26:6, Mark 11:11, 14:3, Luke 19:29, 24:50, John 11:2. See BETHABARA.

Bethany, city (1970 pop. 21,785), Oklahoma co., central Okla., inc. 1910. Its manufactures include small airplanes and tires. Bethany was settled in 1906 by members of the Nazarene church. Bethany Nazarene College is in the city.

Bethany College 1 At Lindsborg, Kansas, Lutheran Church in America, coeducational, chartered 1881 as Bethany Academy. Its present name was adopted in 1886. 2 At Bethany, W. Va., Disciples of Christ, coeducational, chartered 1840.

Beth-arabah (bēth-ār'ābā), town, in the Jordan valley near Jericho. Joshua 15:6,61, 18:22

Beth-aram (bēth-ār'ām), the same as BETH HARAN

Beth-arbel (bēth-ār'bēl), unidentified town of Palestine. Hosea 10:14

Beth-aven (bēth-ā'vēn), town of S. central Palestine, between Bethel and Michmash. Joshua 7:2, 1 Sam. 13:5, 14:23. It is probably used as an abusive name for Bethel in Hosea 4:15, 5:8, and 10:5. The prophet seems to use Aven (for Beth-aven) also in the same way. Hosea 10:8

Beth-azmaveth: see AZMAVETH

Beth-baal-meon (bēth-bā'al-mē'an), town of Moab, E of the Jordan, now called Main (Jordan), 12 mi (19 km) SW of Hisban. Joshua 13:17. Baal-meon Num. 32:38, Ezek. 25:9, 1 Chron. 5:8. Beth-meon Jer. 48:23. Beon in Num. 32:3, an otherwise unidentified place, is probably the same. Beth-baal-meon is mentioned on the Moabite stone.

Beth-barah (bēth-bā'rā), unidentified town, near Beth-shan. Judges 7:24

Beth-birei (bēth-bī'rēi), unidentified town. 1 Chron. 4:31. See BETH-LEBAOTH.

Beth-car, town, generally west of Jerusalem. 1 Sam. 7:11

Beth-dagon (bēth-dā'gōn) 1 Unidentified town of SW Palestine. Joshua 15:41. 2 Unidentified town of N. Palestine. Joshua 19:27

Beth-diblathaim see ALMON-DIBLATHAIM

Bethe, Hans Albrecht (bā'ta), 1906-, American physicist, b. Strassburg, Germany (now Strasbourg, France), educated at Frankfurt and Munich universities. In 1935 he came to the United States to teach at Cornell Univ., where he became professor in 1937. He was director (1943-46) of the theoretical physics division of the Los Alamos Atomic Scientific Labora-

Bessemer converter

of oxidation raises the temperature of the mass and keeps it molten during operation. The process is carried on in a large container called the Bessemer converter, which is made of steel and has a lining of silica and clay or of dolomite. The capacity is from 8 to 30 tons of molten iron, the usual charge is 15 or 18 tons. The converter is egg-shaped. At its narrow upper end it has an opening through which the iron to be treated is introduced and the finished product is poured out. The wide end, or bottom, has a number of perforations (tuyeres) through which the air is forced upward into the converter during operation. The container is set on pivots (trunnions) so that it can be tilted at an angle to receive the charge, turned upright during the "blow," and inclined for pouring the molten steel after the operation is complete. As the air passes upward through the molten pig iron, impurities such as silicon, manganese, and carbon unite with the oxygen in the air to form oxides, the carbon monoxide burns off with a blue flame and the other impurities form slag. Dolomite is used as the converter lining when the phosphorus content is high, the process is then called basic Bessemer. The silica and clay lining is used in the acid Bessemer, in which phosphorus is not removed. In order to provide the elements necessary to give the steel the desired properties another substance (often spiegeleisen, an iron-carbon-manganese alloy) is usually added to the molten metal after the oxidation is completed. The converter is then emptied into ladles from which the steel is poured into molds, the slag is left behind. The whole process is completed in 15 to 20 min. Bessemer steel is used for making machinery, tools, wire, and nails and is the essential modern structural steel used in steel-framework buildings. See METALLURGY.

Bessenyer, Gyorgy (dyōr'dyā bēs'shēnyā), 1747-1811, Hungarian dramatist and writer. In Vienna he

tory and in 1958 was scientific adviser to the United States at the nuclear test ban talks in Geneva. He is noted for his brilliant theories on atomic properties and in 1967 was awarded the Nobel Prize in Physics for his work on the origin of solar and stellar energy (see NUCLEOSYNTHESIS).

Bethel (bēth'āl) 1 Ancient city, central Palestine, the modern Baytān (Jordan), N of Jerusalem. According to the Bible, where it is frequently mentioned, it was originally called Luz (see LUZ 1). Abraham built his first Palestinian altar here. The name Bethel was given to Jacob's sacred stone and was then transferred to the town itself. At the time of the Judges it was a national shrine, it temporarily harbored the Ark of the Covenant. Bethel lost its preeminence as a Jewish shrine to Jerusalem, Jeroboam's attempt to establish Bethel as a rival religious capital failed. Bethel thereafter became increasingly associated with heathen worship—hence the denunciations by Amos and by Hosea, who called it BETH-AVEN by way of insult. Modern excavations have disclosed a temple wall, water gate, and palace complex, indicating the site was once a flourishing Canaanite cultic center. See Gen 12:8, 35:1-15, Judges 20:26, 27, 1 Kings 12:26-33, Amos 3:14. 2 Unidentified place, S Palestine. Joshua 12:16, 1 Sam 30:27. Chesil. Joshua 15:30. Bethul. Joshua 19:4. Bethuel. 1 Chron 4:30.

Bethel, town (1970 pop 10,945), Fairfield co., SW Conn., inc. 1855. Bethel is noted for its hat industry, which was founded c 1800. Other manufactures include garment leather, clothing, chemicals, rubber goods, metal products, power saws, and game equipment. P. T. Barnum, the showman, was born there.

Beth-emek (bēth-ē'mēk), unidentified town of NE Palestine. Joshua 19:27.

Bether (bē'thar), in the Bible, word or name of unknown significance. It has been suggested that it may mean the spice malobathron. Song 2:17.

Bethesda (bēthēz'da, -thēs'-), pool in Jerusalem, perhaps the one discovered under the Crusaders' Church of St. Anne near St. Stephen's Gate in the northeast corner of the city. Its healing properties, which made it the resort of the sick, were said to have been the result of an angel's visits. John 5:2-9.

Bethesda, uninc. city (1970 pop 71,621), Montgomery co., W central Md., a residential suburb of Washington, D.C. The area was settled in the late 17th cent. by the Scottish, English, and Irish. In 1820 they built Bethesda Presbyterian Church, from which the district takes its name. The biblical pool of Bethesda, mentioned in St. John, was a healing place. The National Institutes of Health, the National Cancer Institute, and the Naval Medical Center are in Bethesda.

Beth-ezel (bēth-ē'zēl), unidentified town. Micah 1:11.

Beth-gader (bēth-gā'dar), unidentified town. 1 Chron 2:51. The Geder of Joshua 12:13, otherwise unidentified, is perhaps the same. See CEDOR 3.

Beth-gamul (bēth-gā'mal), unidentified town of Moab. Jer 48:23.

Beth-hacerem (bēth-hāk'arēm), town, probably the modern En Kerem (Israel), SW of Jerusalem. Neh 3:14, Jer 6:1.

Beth-haran (bēth-hā'rān), town, E of the Jordan, not far northeast of its mouth into the Dead Sea. Num 32:36. Beth-aram. Joshua 13:27.

Beth-hogla or **Beth-hoglah** (both bēth-hōg'la), town, the modern Ayn Hajalah (Jordan), W of the Jordan, SE of Jericho. Joshua 15:6, 18:21.

Beth-horon (bēth-hō'rān), name of two neighboring towns on the northerly road from Lod to Jerusalem. They are the modern Beit Ur at Tahta and Beit Ur al Fawga, Jordan. In this strategic locality two historic Jewish victories were gained, by Joshua and by Judas Maccabaeus (Joshua 10, 1 Mac 3). See also Joshua 16:3, 5, 18:13, 14, 21:22, 1 Kings 9:17, 1 Chron 6:68, 7:24, 2 Chron 8:5.

Beth-jeshimoth (bēth-jēsh'īmōth), town, NE of the Dead Sea. Joshua 12:3, 13:20, Ezek 25:9. Beth-jeshimoth. Num 33:49.

Beth-lebaoth (bēth-lēb'āōth), town of S Palestine. Joshua 19:6. Lebaoth. Joshua 15:32. BETH BIREI corresponds with Beth-lebaoth in a parallel passage.

Bethlehem (bēth'lī'hēm, -lēām) [Heb., =house of bread or house of Lahm, a goddess], Arab. *Bayt Lahm*, town (1967 est. pop. 16,000), W Jordan. It is traditionally considered the birthplace of Jesus and is one of the world's great shrines. Situated on a hill in green, fertile country, Bethlehem looks across to the Dead Sea and beyond. Its inhabitants, who are mostly Christians, depend largely on pilgrims and

tourists for their livelihood. Handicrafts, fashioned from olive wood and mother-of-pearl, and embroidered goods are made in the town. Bethlehem is also the trade center for surrounding farming villages and for the pastoral nomads who inhabit the area. In the Old Testament Bethlehem was the scene of the book of RUTH and the home of David. The tomb of RACHEL is nearby. Benjamin was born near Ephrath (or Ephrath), which was either an earlier name for Bethlehem or a nearby town (Gen 35:16-20, 48:7, 1 Sam 16:17, 2 Sam 23:13-17, 1 Chron 15:19). David and his family neglected their city, which became obscure, forgotten by all except those who looked to Bethlehem for the MESSIAH, the second David (Micah 5:2). The city later became important as the birthplace of Jesus. HADRIAN desecrated (A.D. 135) the traditional place of the nativity with a grove sacred to ADONIS. In 315, Constantine destroyed the heathen grove and constructed instead the Church of the Nativity (completed 333). The church, rebuilt and enlarged by Justinian I in the 6th cent., is now shared by monks of Greek, Latin, and Armenian orders. The manger where Jesus was born is said to have been in the grotto under the church. Saint Jerome lived (386-420?) in the court of the church and produced there the Vulgate text of the Bible. From 1099 to 1187, Crusaders controlled Bethlehem, and in 1571 the city was annexed by the Ottoman Empire. It was part of the British-administered Palestine mandate from 1922 until 1948, when it joined Jordan. In the Arab-Israeli War of 1967, Bethlehem surrendered to Israeli troops without a battle.

Bethlehem, town (1970 pop. 29,460), Orange Free State, E central South Africa. It is situated in a farming and livestock area and has industries producing furniture and food products. Bethlehem was founded in 1860, and its main growth began after the railroad from Natal reached there in 1905.

Bethlehem, city (1970 pop. 72,686), Northampton and Lehigh counties, E Pa., on the Lehigh River, inc. as a city 1917. It is one of the most important centers of steel production in the United States and is the site of the Bethlehem Steel Corp. Much cement is also produced there. Bethlehem was settled in 1740-41 by Moravians and was incorporated as a borough in 1845. Threatened with destruction in 1757 by hostile Delaware and Shawnee Indians, it was saved by Paxinos, a Shawnee chief. During the Revolutionary War one of the community buildings was used as a hospital for Continental soldiers. Points of interest in Bethlehem are the Central Moravian Church (c 1803), the Schnitz House (1749), and other early Moravian buildings. An internationally famous music festival performed by the Bach Choir is held in the city. Bethlehem is the seat of Lehigh Univ. and Moravian College.

Bethlem Royal Hospital, popularly known as Bedlam, oldest institution for the care and confinement of the mentally ill in England and one of the oldest in Europe. A priory in 1247, the building was converted to its later usage c 1400. Its administration, staff, and patients were moved in 1675, in 1815, and to its present location near Croydon in 1930. The word *bedlam* has long been applied to any place or scene of wild turmoil and confusion.

Bethlen, Gabriel (bēth'lan), 1580-1629, prince of Transylvania (1613-29). He was chief adviser of Stephen BOCSKAY and was elected prince after the assassination of Gabriel BATHORY. A Protestant, though tolerant toward all religions, he allied himself (1619) with the Protestant FREDERICK THE WINTER KING and overran Hungary, of which he was elected king (1620). After Frederick's defeat at the White Mt. (1620), Bethlen signed with Holy Roman Emperor FERDINAND II the Treaty of Nikolsburg (1621), by which he renounced the royal title but retained control of seven Hungarian counties and received the rank of prince of the empire. He continued his relations with the Protestant powers opposing the emperor in the Thirty Years War and married the sister of the elector of Brandenburg, however, he kept the interests of Transylvania paramount. He was a wise administrator and encouraged the development of law and learning.

Bethlen, Count Stephen, 1874-1947?, Hungarian premier (1921-31). A Transylvanian, he entered the Hungarian parliament in 1901, and in 1919 he was a delegate to the Paris Peace Conference. Called to the premiership by Admiral Horthy, he prevented (1921), despite his monarchist leanings, the return of King Charles (Austrian Emperor Charles I) to avoid military intervention by the LITTLE ENTENTE. The chief aim of his foreign policy was the revision of the post-World-War-I Treaty of Trianon (see TRIANON,

TREATY OF), a treaty of friendship (1927) with Italy advanced this cause. Bethlen survived a scandal over the forgery of francs in 1926, but his revisionism aroused the increasing suspicion of the Little Entente powers. In 1931, French bankers offered a loan to the hard-pressed government on condition that there be an end to revisionism, and Count Bethlen resigned. He was succeeded as premier by Count Julius Karolyi. Drawn at first toward collaboration with Nazi Germany, Bethlen grew increasingly opposed to Adolf Hitler and in 1940 opposed Hungary's alliance with Germany. In 1945 he was taken by the Russians to the USSR, apparently because of his efforts at concluding a separate peace with the Western powers. He was unofficially reported to have died there in prison.

Beth-maachah: see ABEL-BETH MAACHAH.

Bethmann-Hollweg, Theobald von (tā'ōbalt fan bāt'man-hōl'vāk), 1856-1921, German chancellor. A career civil servant, he became minister of the interior (1905) and secretary of state (1907), and in 1909 succeeded Bernhard von BULOOW as chancellor. He favored some reform and worked for a comprehensive insurance law, extension of the franchise, and greater autonomy for Alsace-Lorraine; his legislative efforts were supported in the Reichstag by a coalition of conservatives and centrists. Even though he greatly increased the German peacetime army, he did not desire World War I. When it began, however, he tried to justify the German stand. He denigrated the treaty guaranteeing Belgian neutrality as "a scrap of paper." Bethmann-Hollweg tried to restrict submarine warfare and to end the war (1916) by conciliation—an attempt that led to his overthrow (1917) by Ludendorff and Hindenburg. See biography by K. H. Jarausch (1973).

Beth-marcaboth (bēth-mar'kabōth), town in Palestine, perhaps the same as MADMANNAH. Joshua 19:5, 1 Chron 4:31.

Beth-meon (bēth-mē'ōn) see BETH BAAL-MEON.

Beth-millo see MILLO.

Bethnal Green: see TOWER HAMLETS.

Beth-nimrah (bēth-nīm'rā), town of Palestine. Num 32:36, Joshua 13:27. Nimrah. Num 32:3.

Bethpage, uninc. village (1970 pop. 18,555), including Old Bethpage), Nassau co., SE N.Y., on W Long Island. Grumman Aircraft Engineering Corp. has a large plant there. A village restoration in Old Bethpage features 20 pre-Civil War buildings. A state park is to the east.

Beth-palet (bēth-pā'lat), unidentified town of S Palestine. Joshua 15:27. Beth-phelet. Neh 11:26. Its adjective is Palite. 2 Sam 23:26. See PELONITE.

Beth-pazzez (bēth-pāz'ēz), unidentified town. Joshua 19:21.

Beth-peor (bēth-pē'ōr), town of Palestine where Baal-peor was worshipped. Num 25:3, Deut 32:9, 44:36, 34:6, Joshua 13:20.

Bethphage (bēthfā'jē, -fāj), unidentified place, near Jerusalem, traditionally between Bethany and the Mount of Olives. Mat 21:1, Mark 11:1, Luke 19:29.

Beth-phelet: see BETH PALET.

Beth-rapha (bēth-rā'fā), unidentified person or place. 1 Chron 4:12.

Beth-rehob (bēth-rē'hōb), Aramaean principality or town of N Palestine. Judges 18:28, 2 Sam 10:6. Rehob. Num 13:21, 2 Sam 10:8.

Bethsaida (bēth-sā'īdā), birthplace of saints Peter, Andrew, and Philip. It was renamed Julias later. John 1:44, 12:21, Mark 6:45, 8:22, Mat 11:21, Luke 10:13. Some identify Bethsaida with the Julias just E of the Jordan and N of the Sea of Galilee, others would place it on the eastern shore of the lake, still others suppose two Bethsaiidas, one on the eastern and another on the northwestern shore.

Beth-shan (bēth-shān') or **Beth-shean** (bēth-shē'ān), ancient town, at the meeting of the Vale of Jezreel with the Jordan valley. It was the most strategic point of E Palestine, with the crossing of four roads. Judges 12:7, 1 Sam 31:10, 12, 2 Sam 21:12, 1 Kings 4:12, 1 Chron 7:29. Bethsan. 1 Mac 5:52, 12:40, 41. Excavations (1921-33) revealed settlements of the 4th millennium B.C. From the 15th cent. B.C. to the 12th cent. B.C. it was a fortified Egyptian outpost, and later it was a Philistine town until it fell to the Israelites at the time of David. In Hellenistic times it was called Scythopolis, apparently because it fell to the Scythians in the 7th cent. B.C. It was a principal city of the Decapolis and a major trade center. The Arabs who took it (638 B.C.) named it Beisan. The present-day Israeli settlement called Bet Shean is nearby. See Alan Rowe, *A Topography and History of Beth-shan* (1930), G. M. FitzGerald, *Beth shan* (1931).

Beth-shemesh (bēth-shē'mēsh) 1 The Egyptian Heliopolis Jer 43 13 2 Town of Palestine, the modern Tel Bet Shemesh (Israel), W of Jerusalem Excavations there have revealed traces of the Egyptian occupation in the 2d millennium 8 C Joshua 15 10, 21 16, 1 Sam 6 9, 1 Kings 4 9, 2 Kings 14 11, 13, 1 Chron 6 59, 2 Chron 28 18 Ir-shemesh Joshua 19 41 3 Town of Issachar Joshua 19 23 4 Unidentified town of Naphtali Joshua 19 38

Beth-shittah (bēth-shī'tā), town of Palestine, mentioned in connection with Gideon's battle against the Midianites Judges 7 22

Bethsura (bēthshyōō'ra), the same as BETH-ZUR

Beth-tappuah (bēth-tāpyōō'ā), town, c 4 mi W of Hebron, of which it was perhaps a colony, now called Taffuh (Jordan) Joshua 15 53

Bethuel (bēthyōō'āl) 1 Father of Laban and Rebecca Gen 22 23, 28 5 2 The same as BETHEL 2.

Bethul (bēth'āl), the same as BETHEL 2.

Bethulia (bēthyōō'lēā), city, Palestine, apparently located somewhere NE of Samaria, c 10 mi (16.1 km) from that city It was the scene of the principal events of the book of Judith It has been variously identified, by some even with Jerusalem

Bethune, David see BEATON, DAVID

Bethune, Mary McLeod (bathyōōn'), 1875-1955, American Negro educator, b Mayesville, S C, grad Moody Bible Institute, Chicago, 1895 The 17th child of former slaves, she taught (1895-1903) in a series of southern mission schools before settling in Florida to found (1904) the Daytona Normal and Industrial Institute for Negro Girls From 1904 to 1942 and again from 1946 to 1947, she served as president of the institute, which, after merging with Cookman Institute (1923), became Bethune-Cookman College A leader in the American Negro community, she founded the National Council of Negro Women (1935) and was director (1936-44) of Negro Affairs of the National Youth Administration In addition, she served as special adviser on minority affairs to President Franklin Delano Roosevelt At the 1945 conference that organized the United Nations, she was a consultant on interracial understanding See biography by Rackham Holt (1964)

Bethune-Cookman College, at Daytona Beach, Fla, United Methodist, coeducational The school was formed as a result of a merger (1923) of the Daytona Normal and Industrial Institute for Girls (founded 1904) and the Cookman Institute (founded 1872) It became a four-year college in 1941 Founded primarily for blacks, it is open to all qualified students

Beth-zur (bēth-zūr'), town, Palestine, N of Hebron, on the Jerusalem road It is the modern Khirbat Tubbaynah (Jordan) Excavations (1924, 1931, 1957) have revealed settlements from the 19th cent 8 C During the Hellenistic period it was important in the Maccabean campaigns Joshua 15 58, 1 Chron 2 45, Neh 3 16 Bethsura 1 Mac 4 29, 6 31, 11 65

Betjeman, John (bē'tjəman), 1906-, English poet, b London His verse combines a witty appraisal of the present with nostalgia for the past, especially the Victorian past His published collections include *Mt Zion* (1933), *Continental Dew* (1937), *Old Lights for New Chancels* (1940), *A Few Late Chrysanthemums* (1954), *High and Low* (1966), and *Collected Poems* (1971) He has also published several delightful architectural studies including *Ghastly Good Taste or a Depressing Story of the Rise and Fall of English Architecture* (1933, rev ed 1971) and *A Pictorial History of English Architecture* (1972) In 1972 he was named poet laureate of England See *Summoned by Bells* (1960), his autobiography, which is written in verse

Betonim (bē'tōnīm), unidentified town, E of the Jordan Joshua 13 26

Bet Shean (bāt shīān'), town (1972 pop 11,300), NE Israel, in the Jordan River valley, c 300 ft (90 m) below sea level Situated in a fertile farming region, it is a center for agricultural experiments Textiles are manufactured Archaeological excavations have traced settlements on the site back to the Bronze Age Bet Shean was the site of an Egyptian administrative center during the XVIII and XIX dynasties (see EGYPT), a Scythian city from c 625 to 300 B C, and the biblical city Beth-shan In 64 B C it was taken by the Romans, rebuilt, and made the center of the DECAPOLIS The modern Bet Shean was established in 1949 by Israeli settlers Archaeological finds include temples of the Canaanite Bronze Age, a Hellenistic-Roman temple, and a Byzantine monastery The town is also known as Beisan

Betsiamites or **Bersimis**, river, c 240 mi (390 km) long, rising in the highlands of E Que, Canada, and

flowing SE into the St Lawrence River at Betsiamites Two hydroelectric plants provide power, Bersimis Dam (1,050,000-kw capacity, completed 1956) impounds Lake Pimpuacan

betta (bē'tā) or **fighting fish**, small, freshwater fish of the genus *Betta*, found in Thailand and the Malay Peninsula Best known is the Siamese fighting fish, *Betta splendens* Mature males of this species are about 2 in (5 cm) long In its native waters *B. splendens* is drab with small fins, but several centuries of breeding have produced multicolored varieties with extremely enlarged decorative fins, highly prized as aquarium fishes Males of this species are extremely aggressive, and in Thailand they are used in fighting contests lasting as long as six hours, with spectators betting on the outcome Bettas thrive in shallow, sunlit areas with soft or sandy bottoms Males secrete a mucous, with which they build bubble nests After the female of a pair lays her eggs, both members transfer them to the nest, which is then guarded by the male Several hundred young hatch out in 24 to 30 days Like its relatives the GOURAMI, the CLIMBING PERCH, the betta is equipped to breathe air as well as water and must surface from time to time It is classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Anabantidae

Bettendorf, city (1970 pop 22,126), Scott co., E Iowa, on the Mississippi River, settled c 1840, inc 1903 Its manufactures include aluminum products and farm equipment

Betterton, Thomas, 1635?-1710, English actor and manager He joined Sir William D'Avenant's company at Lincoln's Inn Fields theater in 1661 and became the leading actor of the Restoration stage, the theatrical leader of his time In the role of Hamlet he was acknowledged as the greatest since Burbage After D'Avenant's death (1668), he became the head of the company and moved to the Dorset Garden theater (1671), which he partially managed, and where he was especially successful in adaptations of Shakespeare by Dryden, Shadwell, Tate, and himself Betterton managed the Drury Lane theater from 1682 until 1695, at which time he reopened a theater in Lincoln's Inn Fields, with Congreve's *Love for Love* as his first production In 1705 he moved his company to the new Haymarket theater, built for them by Sir John Vanbrugh, where he made his last appearance in 1710 Sent to Paris by James II to study French technique, Betterton adopted new ideas in his theaters, especially in regard to scene design See R W Lowe, *Thomas Betterton* (1891, repr 1972) His wife, Mary Saunderson Betterton, d 1711, was the first woman to act Shakespeare's great female characters, most notably Lady Macbeth Both are buried in Westminster Abbey See Rosamond Gilder, *Enter the Actress* (1931), Barbara Marinacci, *Leading Ladies* (1961)

Betti, Ugo (ōō'gō bāt'tē), 1892-1953, Italian dramatist and poet A judge of the Roman high court by profession, he wrote poetry and plays in his spare time and became recognized as a major literary figure only late in life Although his earliest published works were two volumes of poetry (1922 and 1932), he is remembered for his dramas He wrote 27 plays and saw 24 of them produced Among the most notable were *La padrona* [the mistress] (1927), *Frano allo scalo nord* [landslide at the north station] (1936), *Il cacciatore di anitre* [the duck hunter] (1940), *Il diluvio* [the flood] (1943), and *Delitto all'isola delle capre* [crime on goat island] (1950) Betti's outlook was predominantly pessimistic, concerned with man's moral responsibility, guilt, and forgiveness Despite his frequently moralizing tone, he is ranked second only to Pirandello among 20th-century Italian dramatists See translations of his most important plays by Henry Reed (1958), G H McWilliam (1964), and Gino Rizzo (1966)

Betto, Bernardino di see PINTURICCHIO

Beuckelszoon, Beuckelzoon, or Beukels, Jan: see JOHN OF LEIDEN

Beulah [Heb., =married, used of a woman], allegorical name for Israel Isa 62 4,5

Beust, Friedrich Ferdinand (frē'drīkh fēr'dīnānt boist), 1809-86, Saxon and Austrian politician He held various portfolios in the Saxon ministry and served as premier (1853-66), but his opposition to Bismarck forced his resignation after Saxony's defeat in the Austro-Prussian War He entered the service of Austria, becoming foreign minister (1866), prime minister (Feb., 1867), and chancellor (June, 1867) With the Hungarians Julius Andrássy and Francis Deak he negotiated the *Ausgleich* [compromise] of 1867, which resulted in the establishment of the

AUSTRO HUNGARIAN MONARCHY Created a count in 1868, Beust was dismissed in 1871, but later served as ambassador to London (1871-78) and Paris (1878-82) See his memoirs (tr 1887)

Beuthen: see BYTOM, Poland

Bevan, Aneurin (ānī'rīn bē'vān), 1897-1960, British political leader A coal miner and trade unionist, he served (1929-60) in Parliament as a member of the Labour party As minister of health (1945-51) he administered and developed the National Health Service instituted by the Labour government A leader of the party's left wing, he resigned from the government in protest against the decisions to rearm Germany and cut social services Briefly expelled from the party for insubordination in 1955, and unsuccessful in his contest with Hugh GAITSKELL for the party leadership, he was reconciled to the party and became its spokesman for colonial and foreign affairs In ensuing years he favored British diplomatic neutralism and nuclear disarmament See his autobiography (1952), biographies by M M Krug (1961) and Michael Foot (2 vol., 1962 and 1974)

bevatron: see PARTICLE ACCELERATOR

Beveland, North, and South Beveland (bā'vālānt), two former islands, Zeeland prov., SW Netherlands, in the Scheldt estuary As a result of Dutch plans for a delta to shut off most of Zeeland from the North Sea, South Beveland became a peninsula of the mainland, North Beveland was linked to the peninsula by way of Walcheren island A shipping canal connecting the Belgian port of Antwerp with the Rhine River traverses South Beveland Agriculture and livestock breeding are the mainstays of the islands' economy Dairying and the cultivation of sugar beets are the principal activities on North Beveland, which also has factories for sugar extraction South Beveland specializes in the growing of wheat, potatoes, sugar beets and fruits and is also known for its fisheries and oyster culture Wissenkerke, whose name derives from a beautiful 17th-century church, is the chief town of North Beveland, Goes, which has a 15th-century Gothic church, is South Beveland's main urban center Heavy fighting occurred on both islands during World War II

Beveridge, Albert Jeremiah, 1862-1927, U S Senator from Indiana (1899-1911) and historian, b Highland co., Ohio He was admitted to the bar (1887) and practiced law (1887-99) in Indianapolis As a Republican Senator, he supported the policies of Theodore Roosevelt With other INSURGENTS he opposed the PAYNE-ALDRICH TARIFF ACT (1909) and was defeated for reelection (1910) He became (1912) an organizer of the PROGRESSIVE PARTY, ran (1912) for governor of Indiana on the party's ticket, and lost Thereafter he devoted himself principally to writing history His thorough, sober lives of John Marshall (4 vol., 1916-19) and Abraham Lincoln (unfinished, 2 vol., 1928) are outstanding See his *Russian Advance* (1903, repr 1970), biography by John Braeman (1971), Claude Bowers, *Beveridge and the Progressive Era* (1932)

Beveridge, William Henry, 1879-1963, British economist, b India, grad Oxford, 1902 His fame as an authority on social problems was gained through investigations and writings in government service (1908-19), especially as director of labor exchanges, set up largely through his efforts, and in the food ministry, where he devised rationing during World War I Knighted in 1919, he was director of the London School of Economics from that year until 1937, when he became master of University College, Oxford *Social Insurance and Allied Services* (1942), a report prepared for the British government, proposed a social security system "from the cradle to the grave" for all British citizens In 1944 his *Full Employment in a Free Society* advocated planned public spending, control of private investment, and other measures to assure full employment He served (1944-45) as a Liberal member of Parliament and was in 1946 made 1st Baron Beveridge of Tuggal Beveridge advocated state management to complement, not replace, individual initiative This was a theme of such later writings as *Voluntary Action* (1948) and *A Defence of Free Learning* (1959)

Beverley, Robert, 1673-1722, Virginia colonial historian, author of *The History and Present State of Virginia* (1705) A substantial planter and colonial official, he wrote his book after finding numerous errors in the manuscript of a book on Virginia written by an Englishman Vigorous, honest, and not without humor, his history was an immediate success, reprinted a number of times, it served to attract immigrants to Virginia See edition by Louis B Wright (1947, repr 1968)

Beverley, municipal borough (1971 pop 17,124), administrative center of the former county of East Rid-

ing of Yorkshire, NE England, since 1974 a part of the new nonmetropolitan county of Humberside. It is primarily a market town with some shipbuilding and such light industries as the manufacture of railroad and automobile accessories and leather. The famous large minster, or monastery church (13th cent.), was attached to a monastery founded by St John of Beverley (d 721) and transformed by ÆTHELSTAN into a college of canons. It contains the tomb of the Percy family and the ancient "chair of peace," which gave sanctuary from the laws of man (The sanctuary, a privilege granted by Æthelstan, applied in a 1-mi (1.6-km) radius around the minster, it was ended at the time of the Reformation.) The town gate is of the early 15th cent., and St Mary's Church dates from the 14th cent.

Beverloo, Cornelis van: see CORNEILLE

Beverly, city (1970 pop 38,348), Essex co., NE Mass., on Massachusetts Bay, inc. as a city 1894. Its chief manufactures are shoe machinery and electronic equipment. Beverly was settled in 1626 by Roger Conant, one of the founders of Massachusetts. In 1775 the schooner *Hannah*, the first ship of the U.S. navy, was outfitted and commissioned by Gen. George Washington at Glover's Wharf in Beverly. In 1787, Beverly became the site of the first cotton mill in the United States. Points of interest include Balch house (1636), believed to be the oldest house in the United States, the John Cabot house (1781), which is preserved as a museum, and several other Colonial buildings. Beverly Farms, a residential and resort section of the city, was the summer home of Oliver Wendell Holmes. Endicott Junior College and North Shore Community College are in Beverly.

Beverly Hills, 1 City (1970 pop 33,416), Los Angeles co., S Calif., completely surrounded by the city of Los Angeles, inc. 1914. Mainly residential, it is the home of many film and television personalities. 2 Village (1970 pop 13,598), Oakland co., SE Mich., a residential suburb of Detroit, on the Rouge River, inc. 1958.

Bevin, Ernest (bēv'ən), 1881-1951, British labor leader and statesman. An orphan who earned his own living from childhood, he began a long career as a trade union official when he became secretary of the dock workers' union in 1911. In 1921, Bevin merged his own union with many others to form the powerful Transport and General Workers' Union, of which he became general secretary. From 1925 to 1940 he sat on the general council of the Trade Union Congress, serving as chairman in 1937. Bevin played a leading organizing role in the general strike of 1926, but after the failure of that strike he worked to achieve greater cooperation between labor and the employers. He was enormously influential in labor party politics in the 1930s but did not enter Parliament until invited to join Winston Churchill's coalition government in 1940. In that government he was minister of labor and national service and thus was responsible for mobilizing manpower for war uses. As foreign minister in the Labour government of 1945 to 1951, Bevin devoted himself to building up the strength of Western Europe in close cooperation with the United States and helped lay the groundwork for the North Atlantic Treaty Organization. He favored the establishment of a federated Arab-Israeli state in Palestine, but that proved impossible to achieve. See biographies by Trevor Evans (1946), Francis Williams (1952), and Alan Bullock (2 vol., 1960-1967).

Bevis of Hampton (bē'vīs), English metrical romance of the early 14th cent. that also appears in Anglo-Norman, French, Italian, Scandinavian, Celtic, and Slavonic versions. Although its adventures are made up of such stock motifs as murder, mistaken identity, and revenge, the tale is nevertheless notable for its broad humor.

Bewick, Thomas (byōō'ik), 1753-1828, English wood engraver. Bewick pioneered in the revival of original wood engraving. Among his famous early works are his illustrations for Gay's *Fables* (1779) and *Select Fables* (1784) and for Ralph Beilby's *General History of Quadrupeds* (1790). In 1789 he engraved the Chillingham Bull, considered one of his finest blocks. He is best known for his classic illustrations of Beilby's *History of British Birds* (2 vol., 1797-1804). See his memoirs (1862), studies by Austin Dobson (1884, repr 1969), Rudolph Ruzicka (1943), and Graham Reynolds (1949).

Bexhill (bēks'hīl'), municipal borough (1971 pop 32,849), East Sussex, SE England. It is a summer resort and has a 14th-century manor house and an 11th-century church.

Bexley, borough (1971 pop 216,172) of Greater London, SE England. It was created in 1965 by the

merger of the municipal boroughs of Bexley and Erith, the urban district of Crayford, and part of the urban district of Chislehurst and Sidcup. The borough has many parks and open areas. Erith and Crayford are industrial centers. There are engineering and chemical works, oil and resin refineries, flour and seed-crushing mills, cloth printshops, and factories that produce electrical equipment, building materials, cable, paper products, plywood, and plastics. Erith is also a yachting resort. Parts of the borough have histories of more than 1,000 years, and there are several old churches. Viscount Castle-reagh (1769-1822) lived at Crayford.

Bexley, city (1970 pop 14,888), Franklin co., central Ohio, inc. 1908. It is a residential community completely within the confines of Columbus.

bey (bā), general title of respect used by Turkish peoples since ancient times. Originally given to tribal leaders, it was later used by the Ottomans to denote a provincial ruler. At first the Ottoman beys were appointed, but by the 18th cent. the title had become hereditary. In Ottoman Egypt, the beys were descendants of the former Mameluke rulers.

Beyazid I (bāyazīd'), 1347-1403, Ottoman sultan (1389-1402), son and successor of Murad I. He besieged Byzantine Emperor MANUEL II at Constantinople, then overcame the Turkish rulers in E Anatolia and defeated the army of Sigismund of Hungary (see SIGISMUND, Holy Roman emperor) at NIKOPOL. Ottoman expansion led to conflict with the conqueror TAMERLANE, and the two armies met at Ankara in 1402. Beyazid's troops consisted only of Serbs and the Janissaries, since the Tatars and most of his Turkish vassals had deserted him. His army was routed, and he died as Tamerlane's prisoner. His sons fought (1402-13) each other for the succession, and MUHAMMAD I emerged victorious. The name appears in other forms, e.g., Bajazet, Bayazid, and Bayazit.

Beyazid II, 1447-1513, Ottoman sultan (1481-1512), son and successor of Muhammad II to the throne of the Ottoman Empire (Turkey). With the help of the corps of Janissaries he put down the revolt of his brother Jem, who fled to Rhodes and then was held captive, as a threat to Bayazid, first by Pierre d'AUBUSSON, then by popes INNOCENT VIII and ALEXANDER VI. Transferred to the custody of Charles VIII of France, Jem died (1495) near Naples. A peace-loving monarch, Bayazid did little to advance Ottoman power but much to further Ottoman culture. He warred (1485-91) with the Mamelukes of Egypt, to whom he lost Cilicia, and allowed Cyprus to be seized (1489) by Venice. A war (1499-1503) with Venice ended to the sultan's disadvantage, and he then renovated his army and navy. Beyazid speedily rebuilt Constantinople after it was devastated (1509) by an earthquake. In 1510 civil war broke out between Bayazid's sons SELIM I and AHMED. In 1512, Bayazid was forced to abdicate by Selim's supporters, who included the Janissaries, and Selim became sultan.

Beyazid, 1612-1638?, Ottoman prince, brother of Sultan Murad IV. Considering Bayazid a dangerous rival, Murad ordered his execution. Bayazid's death is treated in Racine's tragedy, *Bajazet* (1672).

Beyle, Marie Henri: see STENDHAL

Beyrouth: see BEIRUT, Lebanon

Beza, Theodore (bē'zə) (Theodore de Beze), 1519-1605, French Calvinist theologian. In 1548 he joined John Calvin at Geneva and soon became his intimate friend and chief aid. From 1549 to 1558, Beza was professor of Greek at Lausanne, where he wrote *De haereticis a civili magistratu puniendis* (1554), a defense of the conduct of Calvin and the Geneva magistrates in the notorious trial and burning of Servetus. In 1558 he became professor of Greek at Geneva, and in 1564 he succeeded Calvin in the chair of theology at Geneva. Beza came to be regarded as the chief advocate of all reformed congregations in France, serving with distinction at the Colloquy of Poissy (see POISSY, COLLOQUY OF). He was of great importance in aiding the edition of the Greek and Latin versions of the New Testament, and he gave Codex D, or Codex Bezae, one of the most important manuscripts of the Bible, to Cambridge Univ. He wrote various theological tracts and a biography of Calvin.

Bezai (bē'zā), family in the return from captivity. Ezra 2:17, Neh 7:23, 10:18.

Bezaleel (bēzāl'ēel, bēz'ālēl) 1 The artist of the Tabernacle in the wilderness. Ex 31:2-11, 35:30, 38:22, 1 Chron 2:20, 2 Chron 1:5. 2 Jew who had married a foreign wife. Ezra 10:30.

Bezborodko, Aleksandr Andreevich, Prince (alyk'sān'dar andrā'evich bēzbōrōd'kō), 1747-99,

Russian statesman. He became secretary of petitions under Catherine II in 1775 and from 1780 served as head of the department of foreign affairs. During Catherine's reign foreign policy was determined largely by the empress, and Bezborodko generally went along with her schemes. He devised an imaginative plan for the partition of Turkey between Russia and Austria that fitted well with Catherine's unfulfilled dream of a new Byzantine Empire. He encouraged Catherine to participate with Austria and Prussia in the last two partitions of Poland (1793, 1795), by which Russia obtained Lithuania, Courland, and the W. Ukraine. After Catherine's death (1796) her son, Paul I, made him grand chancellor, with virtual control of Russian foreign affairs. He held this post until his death.

Bezek (bē'zēk) 1 Country or city of Adoni-bezek. Judges 1:5. 2 Iviouac of Israel. 1 Sam 11:8.

Bezer (bē'zər) 1 Asherite. 1 Chron 7:37. 2 Reubenite town, E of the Jordan. Deut 4:43, Joshua 20:8, 21:36, 1 Chron 6:78. Bezer is mentioned in the Moabite stone and may be identical with BOZRAH 2.

Bezhtsa: see BRYANSK, USSR

Béziers (bāzyā'), city (1968 pop 82,271), Hérault dept., S France, in Languedoc. A communications and industrial center with an important trade in wines and liqueurs, it has ironworks, breweries, and factories making a great variety of products. An episcopal see from the 4th cent. to 1802, Béziers was involved in numerous religious wars. During the ALBIGENSIAN CRUSADE it was taken (1209) by Simon de Montfort, a horrible massacre followed. Béziers has a noted cathedral (13th-14th cent.) and some old churches.

bezique (bāzēk'), card game usually played with 128 cards by two players. Bezique developed in France and England in the 1860s and originally required only 64 cards, later there were variations for three players with a 96-card pack and for four players with 128 cards. PINOCHLE is similar and is probably derived from bezique. In the United States the most popular form is the two-handed game, known as rubicon bezique, in which four 32-card packs are shuffled together. The cards in each suit rank ace, ten, king, queen, jack, nine, eight, seven. Each player receives nine cards, and the remaining cards, face down, become the stock. Trump suit is determined by the first marriage (king and queen of the same suit) declared. The nondealer leads, and his opponent follows, playing any card he desires. Highest card of the suit led or highest trump wins the trick. The winner of a trick leads to the next trick after first drawing the top card of the stock, with his opponent then drawing the next card from the stock. Play continues with nine cards to a hand until the stock is exhausted. Certain combinations of cards score various points. The player with the most points wins and receives a bonus of 500. If the loser is rubiconed (has a total of less than 1,000 points), the winner's score includes the sum of his and the loser's final totals and a bonus of 1,000.

Bezruč, Petr (pē'r'ar bēz'rōoch), pseud of Vladimír Vašek, 1867-1958, Czech poet, called the bard of Silesia. Bezruč's fame rests solely on the *Silesian Songs* (1903, enlarged ed 1909). In these 88 stark, moving verses the poet protests the suppression by the Austrians of the Slavic peoples living between Silesia and Moravia. Bezruč was an admirer of Whitman, but his work belongs to no school. After World War II the Czech government granted him a pension.

Bezawada, India. See VIJAYAWADA

Bhabha, Homi Jehangir (pəhan'gēr bā'bā), 1909-66, Indian physicist, b. Bombay. He was educated at the Royal Institute of Science, Bombay, and at Cambridge, England, where he studied cosmic rays and atomic physics. He was the leading Indian atomic physicist of his time. In 1945 he became professor of theoretical physics and director of the Tata Institute of Fundamental Research, Bombay. He was named the first chairman (1948) of India's Atomic Energy Commission and became secretary (1954) of its atomic energy department. He was president of the UN Atoms for Peace conference in 1955.

Bhadravati (bādrā'vātē), city (1971 metropolitan area pop 101,315), Karnataka state, S India, on the Bhadra River. The city contains iron and steel plants and paper mills.

Bhagalpur (bā'gālpōor'), city (1971 pop 172,700), Bihar state, NE India, on the Ganges River. It is a district administrative center and the market for an agricultural region. Bhagalpur Univ. and the remains of Buddhist monasteries are in the city.

Bhagavad-Gīta (būg'avad-gē'tā) [skt., = song of the Lord], Sanskrit poem incorporated into the MAHABHARATA.

HARATA, one of the greatest religious classics of Hinduism. The Gita (as it is often called) consists of a dialogue between Lord KRISHNA and Prince Arjuna on the eve of the great battle of Kurukshetra. Arjuna is overcome with anguish when he sees in the opposing army many of his kinsmen, teachers, and friends. Krishna persuades him to fight by instructing him in spiritual wisdom and the means of attaining union with God (see YOGA). The main doctrines of the Gita are karma-yoga, the yoga of selfless action performed with inner detachment from its results, jñāna-yoga, the yoga of knowledge and discrimination between the lower nature of man and his soul, which is identical with the supreme self, and bhakti yoga, the yoga of devotion to a particular god—in this case, Krishna, who reveals himself to Arjuna as the avatara (incarnation) of Vishnu through his teaching and the manifestation of his cosmic form. The Bhagavad-Gita is essentially Upanishadic in content, but it differs significantly from the brahman-atman doctrine of the UPANISHADS in teaching that the highest God is personal and that love and surrender to God's grace is a better and easier spiritual path than that of pure knowledge. The Gita has been the subject of many commentaries and has been much translated. Its translators include Annie Besant, Sir Edwin Arnold, Sarvepalli Radhakrishnan, and Mohandas Gandhi. See Franklin Edgerton, *The Bhagavad Gita* (1944), Svāmī Nikhīlānanda, *The Bhagavad Gita* (1944), Vinoba Bhave, *Talks on the Gita* (1960), Eliot Deutsch, ed., *Bhagavad Gita* (1968).

Bhaktapur: see BHATGAON, Nepal

bhakti (būktī) [Skt., =devotion], theistic devotion in Hinduism. Bhakti cults seem to have existed from the earliest times, but they gained strength in the first millennium A.D. The first full statement of liberation and spiritual fulfillment through devotion to a personal god is found in the BHAGAVAD GITA. The Puranas (from the 1st cent. A.D.) further elaborated theistic ideas. Devotion to SHIVA and VISHNU and to the latter's avatara (incarnations), Rama and KRISHNA, continues to be practiced throughout India. Intense love for God and surrender to Him, reliance on His grace rather than on rituals, learning, or austerities, and the continuous repetition of His name are the means to the goal of His constant presence. The devotee may worship the chosen deity as child, parent, friend, master, or beloved. The bhakti tradition has tended to stress authentic inner feelings as opposed to institutional forms of religion and to disregard caste distinctions. Great devotees and saints such as the Alvars of S. India (a Vaishnavite group of wandering singers), Mirabai, Tukaram, Tulsi-dasa, KABIR, and CHAITANYA have continuously inspired the cults, founded their own sects, and produced a great literature of songs and poems in their vernaculars.

Bhamo (ba'mō, bamō'), town (1960 est. pop. 16,000), NE Burma, on the upper Irrawaddy River. Located c. 900 mi (1,450 km) from the sea, it is the head of navigation on the Irrawaddy. Bhamo is the market town for the surrounding hill region and is also important for its ruby mines. Formerly significant as a center of overland trade with China, it was linked in World War II by the building of the Stilwell Road to Ledo in Assam, India. Although most of the population is now Kachin, in 1884 the Burmese authorities used Chinese freebooters to repel a Kachin attack on the town.

Bharat (bārūt'), a name for the Republic of India. It is derived from Bharata, a tribe famous in Vedic tradition. Some Hindus prefer this name to that of India, a name they believe to be of foreign origin.

Bharatpur (bārūt'pūr), city (1971 pop. 69,442), Rajasthan state, N central India. It is a district administrative center and has railroad-car and glass factories. Fans and fly whisks are fashioned from ivory and sandalwood. The city is thought to have been founded in 1733 and named after Bharat, a figure in Hindu mythology. The British captured Bharatpur in 1826. The city is well known for its bird sanctuary.

Bhaskara (būs'karā), called **Acarya** (achar'yā) [Skt., =learned], b. 1114, Hindu mathematician and astronomer. According to the custom, he put his learned treatises into verse, adding, however, explanations in prose. His work *Siddhantasīromani* includes chapters on arithmetic, algebra, and astronomy that have been translated into English. He gives the first systematic exposition of the decimal system. By mentioning such items as rates of interest and the prices of slaves, he gives some indication of economic conditions in his day. He was at the head of the observatory at Ujjain.

Bhatgaon (bāt'goun) or **Bhadgaon** (bād'-), city (1971 pop. 104,703), E Nepal, in a valley c. 4,000 ft

(1,220 m) above sea level, surrounded by high Himalayan peaks. It is a processing center for the grains, vegetables, and other crops of the surrounding area. Grazing is also important. A religious center, Bhatgaon was founded in 865 by Raja Ananda Malla. When the Gurkhas conquered the Nepal valley in 1768, Bhatgaon surrendered peacefully, thereby escaping the plunder that befell Katmandu and Patan. Landmarks include many ornate temples and the well-preserved palace (c. 1700) built by King Bhupatindra Malla. The city is also called Bhaktapur. **Bhatpara** (batpa'ra), city (1970 est. pop. 160,000), West Bengal state, NE India, on the Hooghly River. Once a center of Sanskrit learning, it is now part of the vast Hooghlyside industrial complex. Jute products are the chief manufactures.

Bhattacharya, Bhabhani (bābā'nē batāchār'yā), 1906-, Indian novelist, journalist, and translator. Bhattacharya was educated in India and England and has taught and traveled in many parts of the world. The themes of his novels, written in English, are drawn from the history and modern social problems of India. Sharp with social criticism, they deal with poverty and famine, caste and intolerance, and political inequality and injustice. His first work, *So Many Hungers!* (1948), describes in shocking terms a Bengal famine and the black-market corruption it produces. In *Music for Mohini* (1952) a modern city girl is forced by means of an arranged marriage into a repressive, traditional way of life. Bhattacharya attacks the caste system in *He Who Rides a Tiger* (1954), in which an untouchable masquerades successfully as a Brahmin priest. His other major works include the novels *A Goddess Named Gold* (1960) and *Shadow from Ladakh* (1966) and translations from the Bengali of some of Rabindranath Tagore's work. Bhattacharya's novels are internationally acclaimed for their irony and perceptive social commentary.

Bhave, Vinoba (vīnōbā ba'vā), 1895-, Indian religious figure, founder of the Bhoodan Movement. Born to a Brahmin family in Maharashtra, Bhave left home while quite young to study Sanskrit in Benares (Varanasi). There he became inspired by the teachings of Mohandas K. Gandhi and soon joined him as a disciple. Far more austere and disciplined than Gandhi, Bhave was acknowledged by Gandhi as a spiritual superior. At Gandhi's request Bhave resisted British wartime regulations in 1940 and spent nearly five years in prison. After Gandhi died (1948), Bhave was widely accepted as his successor. More interested in land reform, accomplished voluntarily, than in politics, he founded in 1951 the Bhoodan Movement, or land-gift movement, and subsequently traveled thousands of miles by foot, accepting donations of land for redistribution to the landless. By 1969 the Bhoodan had collected over 4 million acres (1.6 million hectares) of land for redistribution. His writings include *The Principles and Philosophy of Bhoodan Yajna* (1955), *Talks on the Gita* (1960, 3d ed. 1964), and *The Steadfast Wisdom* (1966). See biography by Shriram Narayan (1970), T. K. Oommen, *Charisma, Stability and Change* (1972).

Bhavnagar (boun'gar), city (1971 pop. 226,072), Gujarat state, W India, on the Gulf of Cambay, the chief port on the Kathiawar peninsula. Cotton is exported. The city manufactures bricks, tiles, and metal products.

Bhilainagar (bē'līnagar) or **Bhilai** (bē'lī), city, (1971 pop. 174,557), Madhya Pradesh state, central India. It is the site of a large state-owned steel industry, built with Soviet assistance.

Bhils (bēlz), people, numbering more than 2 million, who inhabit portions of Pakistan and of W central India, especially S Rajasthan and Gujarat states. They speak an Indo-European language, Bhili, and retain a distinctive culture, much affected by, but not absorbed into, Hinduism. They were traditional enemies of the Rajputs and allies of the Moguls. See S. M. Doshi, *Bhils* (1971).

Bhilwara (bēlvārā), town (1971 pop. 82,101), Rajasthan state, NW India. The town is a district administrative center and a market for mica, wheat, maize, cotton, and wool. Stone dressing is an important occupation. Coins called *Bhilari* were formerly minted in the town.

Bholan Pass, Pakistan. See BOLAN PASS.

Bhopal (bō'pāl), former principality, Madhya Pradesh state, central India. A region of rolling downs and thickly forested hills, it is predominantly agricultural. Its Buddhist monuments include the famous stupa (3d cent. B.C.) at Sanchi. Bhopal was

founded in the early 18th cent. and was ruled from 1844 to 1926 by the begums of Bhopal, famous women leaders. Although the population was mainly Hindu, the princely family was Muslim. Bhopal became part of the state of Madhya Pradesh in 1956. The city of Bhopal (1971 pop. 309,285), the former capital of the principality and now the capital of Madhya Pradesh, was founded in 1728. It is a trade center with manufactures of cotton cloth, jewelry, and electrical goods.

Bhubaneswar (bōōbānē'swār), city (1971 pop. 105,514), capital of Orissa state, E central India, on a tributary of the Mahanadi River. A small village before it became the capital in 1947, it is now a model administrative center and the seat of Orissa Univ. of Agriculture and Technology. There are rolling mills and wire-cable works. Settlements on this site date back to the reign of ASOKA (3d cent. B.C.). The capital of the Kesharis dynasty of Orissa (5th-10th cent.) was here. Bhubaneswar, a religious center, once had c. 7,000 shrines around its sacred lake, the remains of c. 500 still stand, displaying many styles of Hindu and Buddhist art and architecture. The Lingaraja temple, with an elaborately carved tower, is the most famous.

Bhumibol Adulyadej (pōō'mēpōl' ādōōl'yādēt'), 1927-, king of Thailand (1946-), b. Cambridge, Mass. A member of the Chakri dynasty, he was at school in Switzerland when his brother, King Ananda, was killed (1946) under mysterious circumstances. Bhumibol ruled with a regent until 1950, when he was crowned and took power in his own right as Rama IX. His power is largely ceremonial. His name also appears as Phumiphon.

Bhusawal (bōōsā'val), town (1971 pop. 96,236), Maharashtra state, W central India. The town is on the Bombay-Delhi railroad. It has large railroad workshops and several cotton factories.

Bhutan (bōōtiān'), kingdom (1974 est. pop. 1,300,000), 18,147 sq mi (47,000 sq km), in the E Himalayas, bordered on the S and E by India, on the N by the Tibet region of China, and on the W by Sikkim. PUNAKA is the traditional capital, Thimbu is the official capital. Great mountain ranges, rising in the N to Kula Kangri (24,784 ft/7,554 m), Bhutan's tallest peak, run north and south, dividing the country into forested valleys with some pastureland. The perpetually snow-covered Great Himalayas are uninhabited, except for some Buddhists in scattered monasteries. Bhutan is drained by several rivers rising in the Himalayas and flowing into India. Thunderstorms and torrential rains are common; rainfall averages from 200 to 250 in (508-635 cm) on the southern plains. The valleys, especially the Paro, are intensively cultivated. The chief occupations are small-scale subsistence farming (with rice the chief crop) and the raising of yaks, cattle, sheep, pigs, and tanguns, a sturdy breed of pony valued in mountain transportation. Metal, wood, and leather working, papermaking, and the weaving of cloth, baskets, and mats are also important activities. Bhutan's people are mostly Bhotias, who call themselves Drukpas (dragon people). They are ethnically related to the Tibetans and practice a form of Buddhism closely related to the Lamaism (see TIBETAN BUDDHISM) of Tibet, many Bhutanese live in monasteries. Dzongka, the official language, is also basically Tibetan. In W Bhutan there is a sizable minority of Nepalese. Although its early history is vague, Bhutan seems to have existed as a political entity for many centuries. In the 16th cent. the Tibetans conquered and assimilated Bhutan's native tribes, and around 1630 a refugee lama from Tibet made himself the first Dharma Raja, or spiritual ruler, of Bhutan. He named a Deb

Raja, or temporal ruler, but real administrative power was soon wielded by provincial governors (*ponlops*), who reduced the Deb Raja to a figurehead. In 1720 the Chinese invaded Tibet and established suzerainty over Bhutan. Friction between Bhutan and Indian Bengal culminated in a Bhutanese invasion of Cooch-Behar in 1772, followed by a British incursion into Bhutan, but the Tibetan lama's intercession with the governor-general of British India improved relations. In 1774 a British mission arrived in Bhutan to promote trade with India. British occupation of Assam in 1826, however, led to renewed border raids from Bhutan. In 1864 the British occupied part of S Bhutan, which was formally annexed after a war in 1865, the Treaty of Sinchula provided for an annual subsidy to Bhutan as compensation. In 1907 the most powerful of Bhutan's provincial governors, Sir Ugyen Wangchuk, supported by the British, became the monarch of Bhutan, the first of a hereditary line. A treaty signed in 1910 doubled the annual British subsidy to Bhutan in return for an agreement to let Britain direct the country's foreign affairs. After India won independence, a treaty (1949) returned the part of Bhutan annexed by the British and allowed India to assume the former British role of subsidizing Bhutan and directing its defense and foreign relations, the Indians, like the British before them, promised not to interfere in Bhutan's internal affairs. After Chinese Communist forces occupied Tibet in 1950, Bhutan, because of its strategic location, became a point of contest between China and India. The Chinese claim to Bhutan (as part of a greater Tibet) and the persecution of Tibetan Buddhists led India to close the Bhutanese-Tibetan border and to build roads in Bhutan capable of carrying Indian military vehicles. In the 1960s, Bhutan also formed a small army, trained and equipped by India. The kingdom's admission to the United Nations in 1971 was seen as strengthening its sovereignty. Bhutan's monarch, the Druk Gyalpo (Dragon King), is assisted by a small advisory council. In 1954 a 130-member national assembly was created, about one fourth of its members are appointed by the king, and the rest are village headmen elected to the assembly for five-year terms. Political parties are banned, the Bhutan state congress, led by Nepalese, must operate from India. Bhutan's third hereditary ruler, King Jigme Dorji Wangchuk (reigned 1953-72), modernized Bhutanese society by abolishing slavery and the caste system, emancipating women, dividing large estates into small individual plots, and starting a secular educational system. Although Bhutan no longer has a Dharma Raja, Buddhist priests retain political influence. In 1969 the absolute monarchy gave way to a "democratic monarchy," in which the national assembly was empowered to select and remove the king and to veto his legislation. The assembly must also give the king a periodic vote of confidence. In 1972 the crown prince Jigme Singhi Wangchuk became the fourth hereditary king of Bhutan upon his father's death. He was crowned in June, 1974. See studies by Ram Rahul (1872) and Nagendra Singh (1972).

Bhutto, Zulfikar Ali (zōl'fīkar alē' bōōt'tō), 1928-, Pakistani political leader. A member of a rich and powerful family, he took a law degree in England and then returned (1953) to Pakistan, where he soon entered politics as the protégé of General Ayub Khan. Bhutto became minister of commerce in 1958 and held several other cabinet posts before becoming foreign minister in 1963. After criticizing Pakistan's agreement with India ending the 1965 war between the two countries, he left the government and formed (1967) an opposition party, the Pakistan People's party, which quickly gained great popular support. In the 1970 elections his party won a majority in West Pakistan, but candidates of East Pakistan's AWAMI LEAGUE, led by MUJIBUR RAHMAN, won an overall majority. Bhutto's refusal to meet Mujibur's demands for East Pakistan's autonomy or for participation in the government helped provoke (1971) war between East and West Pakistan (see INDIA-PAKISTAN WARS). During the war Bhutto was made foreign minister and deputy prime minister, and when Pakistan was forced to accept a cease-fire in Dec., 1971, he took over the presidency. In 1973, under a new constitution, he resigned the presidency and became prime minister, still retaining control of the country. In Feb., 1974, in an effort to normalize relations with Bangladesh (formerly East Pakistan), he recognized that country.

Bi, chemical symbol of the element BISMUTH.

Biafra, Bight of (bēā'frā), eastern bay of the Gulf of Guinea, W Africa. It extends approximately from the Niger River delta, in S Nigeria, to N Gabon. The

bight gave its name to the secessionist Eastern Region of Nigeria (1967-70).

Biafra, Republic of, secessionist state of W Africa, in existence from May 30, 1967, to Jan. 15, 1970. At the outset Biafra comprised, roughly, the East-Central, South-Eastern, and Rivers states of the Federation of Nigeria, states inhabited mainly by the IBO people. The country, which took its name from the Bight of Biafra (an arm of the Atlantic Ocean), was established by Ibos who felt they could not develop—or even survive—within Nigeria. In Sept., 1966, numerous Ibos had been massacred in N Nigeria, where they had migrated in order to engage in commerce. The secessionist state was led by Lt. Col. Chukwuka Odumegwu Ojukwu and included some non-Ibo persons. Biafra's original capital was Enugu, Aba, Umuahia, and Owerri served successively as provisional capitals after Enugu was captured (Oct., 1967) by Nigerian forces. Seeking to maintain national unity, Nigeria imposed economic sanctions on Biafra from the start of the secession, and fighting between Nigeria and Biafra broke out in July, 1967. After initial Biafran advances, Nigeria attacked Biafra by air, land, and sea and gradually reduced the territory under its control. The break-away state had insufficient resources at the start of the war—it was a net importer of food and had little industry—and depended heavily on its control of petroleum fields for funds to make purchases abroad. It lost the oil fields in the war, and more than one million of its civilian population are thought to have died as a result of severe malnutrition. At the time of its surrender on Jan. 15, 1970, Biafra was greatly reduced in size, its inhabitants were starving, and its leader, Ojukwu, had fled the country. During its existence Biafra was recognized by only five nations, although other countries gave moral or material support. Civilian groups were organized in a number of countries to publicize the case for Biafra and to raise funds for the secessionist state. See A. H. Kirk-Greene, ed., *Crisis and Conflict in Nigeria: A Documentary Sourcebook* (2 vol., 1971), Joseph Okpaku, ed., *Nigeria, Dilemma of Nationhood: An African Analysis of the Biafran Conflict* (1972).

Bialik, Hayyim Nahman (hī'yām na'mān byā'lēk), 1873-1934, Hebrew poet, publisher in Odessa, Berlin, and Tel-Aviv, b. Volhynia, Russia. As an editor and publisher Bialik spread the ideas of the enlightenment (Haskalah). His fame began with the publication (1903) of his poem "In the City of Slaughter," inspired by a pogrom in Kishinev. Bialik's style is sometimes biblical, prophetic, and majestic, sometimes simple and lyrical, he had a great effect upon modern Hebrew literature. He wrote novels, humorous songs, and sketches, some of his work is in Yiddish, but his most important writings are in Hebrew. They have been widely translated (English translations of his poems were published in 1924, 1926, and 1948). Bialik translated into Hebrew Shakespeare's *Julius Caesar*, Cervantes's *Don Quixote*, Schiller's *Wilhelm Tell* and Heine's poems.

Białowieża (byalōv'yē'zha), Rus. *Byelovezhskaya Pushcha*, large forest, c 450 sq mi (1,170 sq km), E Poland and W USSR. Its varied trees (predominantly pines) shelter many animals, including bear, deer, European bison, and tarpan horse, and it was a favorite hunting ground of Polish kings. It passed to Prussia in 1795, was annexed by Russia in 1807, but was restored to Poland in 1921. In 1939, however, the forest was incorporated into the USSR. After World War II nearly half of the region was returned to Poland. Today both sections of the forest have animal preserves. The first Polish national park was established in the center of the forest in 1921.

Białystok (byalīs'tók), city (1970 pop. 166,619), capital of Białystok prov., NE Poland. It is a leading regional manufacturing center and a railway transportation point. Noted especially for its textile industry, the city also has factories producing machinery, metal goods, ceramics, food products, and precision instruments. Founded in 1310, Białystok was taken by Prussia in 1795 and by Russia in 1807, it was returned to Poland in 1921. About half of the city's population were killed by German occupation forces during World War II. Białystok has an academy of medicine and a technical college. Historical landmarks include a 16th-century church and an 18th-century palace.

Biard, Pierre (pyēr byār), c 1567-1622, French Jesuit missionary in North America. He left a professorship of theology in Lyons to head the first Jesuit mission to Canada, coming to Port Royal (later Annapolis Royal) in Acadia in 1611. He was one of the founders (1613) of the French settlement at Bar Harbor on

MOUNT DESERT ISLAND, in what is now Maine. He and all the colonists were soon taken prisoners by Samuel ARGALL. After a long captivity and a stormy return voyage Biard finally reached France, where he was accused of being in league with his English captors. His *Relation de la Nouvelle France* (1616), which has been of much value to later historians, embodied his reply to these charges.

Biarritz (byarēt's'), town (1968 pop. 26,985), Pyrénées-Atlantiques dept., SW France, on the Bay of Biscay near the Spanish border. An ancient fishing village, it was a favorite vacation spot of Napoleon III and Empress Eugénie, whose visits sparked the growth of Biarritz into one of the world's most fashionable sea resorts.

Bias (bī'ās), fl. 6th cent. B.C., Greek sage, b. Priene. He is at best semi-legendary but was called one of the SEVEN WISE MEN OF GREECE. Many epigrams were attributed to him by ancient writers.

bias, a voltage, current, or other input applied to a device or system as a reference or to set its conditions of operation. A bias is usually steady but may vary with time, usually within a fixed and known range and with a fixed and known frequency. In electronics, the most common forms of bias are the voltage applied to the grid of an ELECTRON TUBE to set its operating conditions and the current applied to the base of a TRANSISTOR to perform the same function. In tape recording, a bias current, usually alternating with a frequency in the ultrasonic range, is mixed with the signal to be recorded to minimize distortion produced by the tape itself.

biathlon (bīāth'lōn), athletic competition in which cross-country skiers race across hilly terrain, occasionally stopping to shoot with rifles at fixed targets. The regulation course is about 12½ mi (20 km) long, and the four targets are placed at a range of 164 yd (150 m) from the athlete. Competitors are penalized for missing targets by having a standard length added to the course distance that they must complete. Originally a Swedish hunting competition, the biathlon first became an event of the Winter Olympics in 1960.

Bibai (bī'bī), city (1970 pop. 47,369), Hokkaido prefecture, central Hokkaido, Japan. It is a mining city located on the Ishikari coal field.

Bibb, William Wyatt, 1781-1820, first governor of Alabama (1817-20), b. Amelia co., Va. Graduated in medicine from the Univ. of Pennsylvania (1801), he began practice in Petersburg, Ga. He was a state legislator, U.S. Representative (1807-13), and U.S. Senator (1813-16). In April, 1817, President Monroe appointed him governor of the newly created territory of Alabama, and Bibb continued in office when the new state government was organized (1819). On his death, Thomas Bibb, a brother, succeeded him in office.

Bibbiena, Galli da: see BIBBIENA, GALLI DA.

Biber, Heinrich Ignaz Franz von (hīn'rīkh īg'nats frants fən bē'bər), 1644-1704, Austrian musician. Biber was one of the first notable Central European violinists and may have been the first to employ *scordatura*, an unusual tuning of the violin to obtain special effects. He composed much violin music, some of it programmatic, that requires great virtuosity, and also various dramatic works.

Bibescu (bībēs'kōō) or **Bibesco** (-kō), Rumanian noble family. A prominent member was George Bibescu, 1804-73, prince of Walachia (1842-48). The first to be elected to his post, he effected important financial reforms but was driven from the county in the Revolution of 1848. His brother Barbu Bibescu, 1799-1869, was adopted by Prince Stirbei, a Rumanian magnate, whose name he later assumed. He served as minister of the interior and subsequently was appointed hospodar [governor] of Walachia for a seven-year term (1849-56). In Feb., 1856, he decreed the abolition of slavery in Walachia.

Bibiena or Bibbiena, Galli da (ga'lī'da bēbyā'nā), family of Italian artists of the 17th and 18th cent. Giovanni Maria Galli da Bibiena, 1625-65, studied with Francesco Albani and painted chiefly altarpieces, examples of which are to be seen in the churches of Bologna. His son, Ferdinando Galli Bibiena, 1657-1743, the most renowned of the group, became celebrated throughout Europe for his architectural views and theatrical designs and for his magnificent decorations for public and court festivities. He wrote several treatises on architecture. A master of baroque illusionism, he created an effect of depth by extending the set pieces of his scene designs beyond the proscenium arch. Francesco Galli Bibiena, 1659-1739, brother of Ferdinando, is celebrated chiefly as the designer of great European theaters. Other members of the family include Ales-

sandro Galli Bibiena, 1687–c 1769, son of Ferdinando, a fresco painter and architect, Giuseppe Galli Bibiena, 1696–1756, second son and pupil of Ferdinando and, like him, renowned for his sumptuous decorations, designed principally for the courts and theaters of Vienna, Munich, Dresden, Bayreuth, and Prague, Antonio Galli Bibiena, 1700–1774, third son of Ferdinando, an architect and designer, and Carlo Galli Bibiena, 1728–1787, the son of Giuseppe, a painter and architect employed at many of the European courts. See A. H. Mayor, *The Bibiena Family* (1940).

Bible [Gr., =the books], name used by Christians for their Scriptures. For the composition and the canon of the Bible, see OLD TESTAMENT, NEW TESTAMENT, APOCRYPHA, PSEUDEPIGRAPHIA, articles on the several books. The traditional Christian view of the Bible is that it was all written under the guidance of God and that it is, therefore, all true, literally or under the veil of allegory. In recent times, however, the view of many Protestants has been influenced by the pronouncements of critics (see HIGHER CRITICISM), this has produced a counterreaction in the form of FUNDAMENTALISM, whose chief emphasis has been on the inerrancy of the Bible. The interpretation of the Bible is one of the principal points of difference between Protestants, who believe that individuals have the right to interpret the Bible as they read it, and the Roman Catholic Church, which teaches that it alone may interpret Scripture and that the individual may read the Bible only according to the interpretation of the church, such an interpretation is provided in the notes to the text that appear in Roman Catholic Bibles. These notes vary from edition to edition. Celebrated extant manuscripts of the Bible include Codex Vaticanus (Greek, 4th cent.), at the Vatican, Codex Sinaiticus (Greek, 4th cent.), in the British Museum, discovered by Lobegott Friedrich Konstantin von Tischendorf on Mt. Sinai, Codex Alexandrinus (Greek, 5th cent.), in the British Museum, given to King Charles I by Cyril Lucaris, and Codex Bezae (Greek and Latin, 6th cent.), at Cambridge, England, given by Theodore Beza. The most ancient fragments of the Hebrew text are the 2d cent. B.C. papyrus of Nash, discovered in 1902 in Al Fayyum, Egypt, and the DEAD SEA SCROLLS, containing several books and fragments of the Old Testament. The first great translation of the whole Bible was the VULGATE of St. Jerome, the Latin version still used by the Roman Catholic Church. The Greek text generally received in the East is, for the Old Testament, that of the SEPTUAGINT, the first translation of the Old Testament was the Aramaic TARGUM. The New Testament has come down to us in Greek. In England there were current from early times vernacular versions of parts of the Bible, especially of the Gospels, since the Gospel was often read at Mass in the vernacular after its recitation in Latin. John Wyclif was one of the first to project the publication and distribution of the Bible in the vernacular among the English people, and two translated versions go by his name. In the 15th cent. the Lollards did much to extend the use of the Wyclifite translation. The next name in the history of the English Bible is that of William Tyndale, whose translation was not from Latin, like Wyclif's, but from Hebrew and Greek. Its excellence is made evident in its use as a basis of the Authorized Version. Tyndale's New Testament (1525–26) was the first English translation to be printed. Contemporary with Tyndale was Miles COVERDALE. The second version of Coverdale and the translation of Thomas Matthew closely followed Tyndale. In 1539 the crown issued its first Bible, in the name of Henry VIII. This, the Great Bible, was done principally by Coverdale. The Geneva Bible, or Breeches Bible ("made themselves breeches," Gen. 37), was a revision of the Great Bible, financed and annotated by the Calvinists of Geneva. The Bishops' Bible (1568) was a recasting of Tyndale. The greatest of all English translations was the Authorized Version (AV), or King James Version (KJV), of 1611, made by a great committee of churchmen led by Lancelot ANDREWES and composed of many of the finest scholars in England. The beautiful English of this version has had great influence and is generally ranked in English literature with the work of Shakespeare. The phraseology of much of it is that of Tyndale. The Douay, or Rheims-Douay, Version was published by Roman Catholic scholars at Rheims (New Testament, 1582) and Douai, France (Old Testament, 1610), it was extensively revised by Richard CHALLONER. In the 19th cent. the project of revising the Authorized Version from the original tongues was undertaken by the Church of England with the cooperation of nonconformist churches. The results of this revision were

the English Revised Version and the American Revised Version (pub. 1880–90). Many scholars, either cooperatively or independently, have translated the Bible into English. In other literatures also the translation of the Bible has had formative effect on the literary language, notably the case with Martin Luther's standard German translation. Occasionally translation of the Bible has been the first or the only notable work in a language—as for instance, the translation by Ulfilas into Gothic. In the 20th cent. American biblical scholars combined to produce the notable Revised Standard Version (RSV), published in 1952 and immediately adopted by many churches. A completely new translation, the work of a joint committee of representatives of all Protestant denominations in Great Britain, aided by Roman Catholic consultants, was begun in 1946. The New Testament was first published in 1961, and the entire Bible, called The New English Bible, appeared in 1970. New Roman Catholic translations were also undertaken, the Westminster Version in England, and a complete revision of the Rheims-Douay edition sponsored by the Confraternity of Christian Doctrine in the United States. The latter, after undergoing several major revisions and retranslations, was finally published as the New American Bible (1970). In addition, an English translation of the French Catholic Bible de Jerusalem (1961) appeared as the Jerusalem Bible (1966). See F. G. Bratton, *A History of the Bible* (1959), *The Cambridge History of the Bible* (3 vol., 1963–70), J. H. P. Reumann, *The Romance of Bible Scripts and Scholars* (1965), H. J. Frank, *The Bible through the Ages* (1967).

Bible Christians, denomination of Methodists in England founded by William O'Bryan. They seceded from the Wesleyan Methodist Church (1815–19) and in 1907 were merged with two other branches in the UNITED METHODIST CHURCH.

Bible societies, an essentially Protestant movement, formed for the translation, printing, and dissemination of the Holy Scriptures. An early important organization of this kind was the Canstein Bible Society established in 1710 by Baron von Canstein at Halle, Germany. In 1780 the Bible Society was formed in England to distribute Bibles among soldiers and sailors, the name was later changed to the Naval and Military Bible Society. A pioneer and leader is the British and Foreign Bible Society founded (1804) in London, which began its work with Welsh Bibles for Thomas CHARLES. With branches throughout the world, it has distributed Bibles in hundreds of languages. In the United States the formation of Bible societies began early in the 19th cent. Delegates from these associations founded (1816) the American Bible Society, which has many affiliates. Through its work, the Bible has been translated into many languages and has been widely distributed. In 1898 in Boscobel, Wis., a meeting occurred that led to the founding of the Christian Commercial Men's Association of America, more usually known as the Gideons, International. Its program of placing Bibles in hotel rooms for use by commercial travelers and others has been widely realized and has made the organization internationally known. In 1946 more than 20 national Bible societies formed an international association known as the United Bible Societies, with headquarters in London and in Geneva, Switzerland.

Biblical Antiquities, book of. see PSEUDEPIGRAPHIA. **biblical archaeology**, term applied to the ARCHAEOLOGY of the biblical lands, especially those of the ancient Middle East. While the thousands of written texts found in the languages of the ancient Middle East illuminate the Bible itself, the artifacts uncovered by archaeologists help recreate the cultural setting of its time. Biblical archaeology developed in earnest in the early part of the 19th cent. when the British biblical scholar Edward Robinson traveled across Palestine and opened the way for study of the area. The founding (1865) of the Palestine Exploration Fund in Great Britain further encouraged research, by 1900 biblical archaeological societies had been formed in Germany, France, and the United States. The system developed by Flinders PETRIE at Tel-el-Hesi (see EGTON 2) to date pottery is of the greatest importance for the archaeology of Palestine, where spectacular monuments and written material are rarely found. Other important excavations in Palestine were undertaken at JERICHO by John GARSTANG and others, MEGIDDO, SAMARIA, GIBEON, BETH-SHAN, LACHISH, EZION-GEGER, and HAZOR. Outside of Palestine the important archaeological discoveries in the old lands of EGYPT, SUMER (see also UR), BABYLONIA (see also GILGAMESH and HAMMURABI), ASSYRIA, BYBLOS, NUZI, UGARIT, and JORDAN (see also MOABITE STONE) have done much to increase knowledge of

the Bible. The Palestine Dept. of Antiquities, founded 1918, encouraged research until the turbulent years preceding the establishment of the State of Israel in 1948, since that time some of the most important archaeological work has been conducted by Israeli archaeologists, e.g., the excavation of the ancient tel (an artificial mound formed by the debris of settlements of ancient cities) of Joppa in 1948 and 1955, and the work at Arad from 1962 to 1967. After more than 100 years of biblical archaeology, it is possible to read the Bible in a new light. It has become clear that ancient Palestine was an integral part of the whole cultural area of the ancient Middle East. Many obscurities have been cleared up, and the historical data of the Old Testament have been proved more accurate than suspected. Archaeology is less important for the New Testament because of the brevity of the period and the relative abundance of material available on it. However, the discovery of several manuscripts of the Greek New Testament of the 2d and 3d cent. and especially the DEAD SEA SCROLLS have added new evidence that the Gospels are of greater antiquity than had been thought. See Michael Du Buit, *Biblical Archaeology* (1960), G. E. Wright, *Biblical Archaeology* (1962), W. G. Williams, *Archaeology in Biblical Research* (1965), Paul Lapp, *Biblical Archaeology and History* (1969), Avraham Negev, ed., *Archaeological Encyclopedia of the Holy Land* (1972), E. M. Yamauchi, *The Stones and the Scriptures* (1972).

bibliography. The listing of books is of ancient origin. Lists of clay tablets have been found at Nineveh and elsewhere, the library at Alexandria had subject lists of its books. Modern bibliography began with the invention of printing and at first consisted of "trade" bibliographies, i.e., lists of the publications of important publishing houses, comparable to those in the present-day *Trade List Annual*, *Reference Catalogue of Current Literature* (British), and *Books in Print*. There have been efforts at universal bibliography, in 1545 at Zürich, Konrad von Gesner published his *Bibliotheca universalis*, in 1895 the International Institute of Bibliography was established at Brussels. There are also national bibliographies, such as the *Library of Congress Catalog* and the *British Museum Catalogue*, subject bibliographies, such as Sabin's *Dictionary of Books Relating to America*, and lists of the works of individual authors. Bibliographies of rare and old books include that of J. C. Brunet and *Book Prices Current*. The *Cumulative Book Index* is a monthly bibliography of books in the English language that cumulates annually. The *Cambridge Bibliography of English Literature* is useful for English publications, and the *Bibliographic Guide to the Study of the Literature of the U.S.A.*, by C. L. Gohdes, for American works. The *Bibliographical Index*, which is cumulative, and *World Bibliography of Bibliographies* are useful compilations. The term *bibliography* is also used to describe books as physical objects and their production history, and has been expanded to include nonprint media such as microfilm. Computers are currently used in the compilation of some bibliographies. See A. J. K. Esdaile, *Manual of Bibliography* (4th ed. 1967), Robert Downs, *Bibliography* (1967), E. W. Padwick, *Bibliographical Method* (1969), A. M. Robinson, *Systematic Bibliography* (3d ed. 1971), Philip Gaskell, *A New Introduction to Bibliography* (1972), Pearce Grove and Evelyn Clement, *Bibliographic Control of Nonprint Media* (1972).

Bibliothèque nationale (bèblèötèk' nāsýōnāl'), the great national library of France, in Paris, and one of the foremost libraries in Europe. It originated with the collections of writings made by early French kings, including Charlemagne. The collection of Charles V, placed in the tower of the old Louvre in the 14th cent., and a library belonging to the house of Orleans at Blois were brought together at Fontainebleau in the 16th cent. under Francis I. The collection was later transferred to Paris by Charles IX, and was expanded greatly under the supervision of Jean-Baptiste Colbert (17th cent.). Since 1537 the library has been the legal depository for all books published in France. It now has more than 7 million books and manuscripts, and an extensive accumulation of medals and coins, and maps and prints. The library is housed in a building erected from 1854 to 1875 in the Rue de Richelieu under the direction of Henri Labrousse, it was remodeled in 1932–39. There is also a branch at Versailles. The Bibliothèque nationale is a governmental archive, not a public library.

Bibracte (bibrāk'tè), former capital of the AEDUI, site atop Mont Beuvray, central France. There Caesar defeated (58 B.C.) the Helvetii (see GALIC WARS). Excavations on the site have revealed a Gallic town

Bibulus (Marcus Calpurnius Bibulus) (bīb'yōōlās), d 48 B C, Roman statesman. The colleague in the consulship with Julius CAESAR in 59 B C, he did everything in his power to block each move made by Caesar. A conservative republican, he was a strong partisan of Pompey. In 51 B C he was governor of Syria, and in 48 B C he died trying to halt Caesar in the Adriatic. His wife was Portia, daughter of Cato the Younger, she later married Brutus.

bicameral system, governmental system dividing the legislative function between two chambers, an "upper," such as the US Senate and the British House of Lords, and a "lower," such as the US House of Representatives and the British House of Commons. Although the term *bicameral* was coined by Jeremy Bentham as recently as 1832, division of the legislative branch of government according to function and composition is of long standing. The division of the English PARLIAMENT into separate houses of Lords and Commons in the 14th cent. may have arisen simply for the sake of convenience in transacting business, however, this division came to represent the historic cleavage of interest between nobles and commoners, with the balance of power, especially after the Glorious Revolution of 1688 and the gradual development of cabinet government in the 18th cent., shifting more and more to the commoners. The powers of the House of Lords were drastically reduced by the Parliament acts of 1911 and 1949, and though the house continues to debate and vote on bills, its function has become essentially advisory. The British colonies in North America gradually adopted the bicameral system, the upper chamber, whether elective or appointive, came to represent the colony as a whole, while delegates to the lower house were attached to particular constituencies. According to modern scholars, the adoption of the same system for the CONGRESS OF THE UNITED STATES reflected colonial practice, British example, and the widespread differences in property qualification for suffrage and office-holding purposes current at the time rather than the French philosophical influences once considered primary. In France some 18th-century theorists, such as Montesquieu, favored a bicameral legislature based on the British example, but the "natural rights" philosophers, such as Rousseau, opposed such a system. France experimented with various forms of legislature during the Revolutionary and Napoleonic periods but thereafter, despite numerous constitutional changes, retained a bicameral system. Where bicameral legislatures exist, the two chambers are based on different principles of representation in addition to possessing separate functions. After World War I the unicameral legislative system made headway in Eastern Europe, Latin America, and parts of the British dominions. See D. Schaffter, *The Bicameral System in Practice* (1929), J. A. Corry, *Elements of Democratic Government* (4th ed. rev. 1964), S. H. Beer, *Patterns of Government* (3d ed. 1973).

bicarbonate or hydrogen carbonate, chemical compound containing the bicarbonate radical, HCO_3^- . The most familiar of such compounds is SODIUM BICARBONATE (baking soda). See CARBONATE.

bicarbonate of soda. See SODIUM BICARBONATE.

biceps, any muscle having two heads, or fixed ends of attachment, notably the biceps brachii at the front of the upper arm. Originating in the shoulder

area, the heads of the biceps merge partway down the arm to form a rounded mass of tissue linked by a tendon to the radius, the smaller of the two forearm bones. When the biceps contracts, the tendon is pulled toward the heads, thus bending the arm at the elbow. For this reason the biceps is called a flexor. It works in coordination with the TRICEPS brachii, an extensor. The biceps also controls rotation of the forearm to a palm-up position, as in turning a doorknob. The size and solidity of the contracted biceps are a traditional measure of physical strength.

Bichat, Marie François Xavier (marē' fraNswa' zavvā' bēsha'), 1771-1802, French anatomist and physiologist. He studied the tissues, giving them that name and classifying them into 21 types, this work was the basis of modern histology. He wrote *Traité des membranes* (1800), *Recherches physiologiques sur la vie et sur la mort* (1800), *Traité d'anatomie descriptive* (1801-3, in 5 vol.), and *Anatomie générale* (1801).

bichir (bīch'ər), common name for African freshwater fishes as of the family Polypteridae, and particularly for those of the genus *Polypterus*. Bichirs are among the most primitive of the ray-finned fishes, or Actinopterygii, the dominant group of modern fishes. The long, narrow body of *Polypterus* is 2 to 3 ft (60-90 cm) long and is covered by thick, rhombic scales made of an enamellike substance called ganoin. Such scales were also present in the earliest ray-finned fishes, now extinct, and are quite different from those of other living fishes. The dorsal fin of the bichir is split into a row of small, saillike finlets that are erected when the animal is agitated. Like the sharks and the rays, it has a pair of spiracles. The bichir seems especially adapted to life in dry environments. Instead of the SWIM BLADDER of most ray-finned fishes, it has a pair of lungs, somewhat like those of the LUNGFISHES, which enables it to survive out of water for several hours. It also resembles the lungfishes in having a pair of external gills when newly hatched. The bichir is a bottom-dwelling fish, found in the Nile and in the rivers of W Africa. When these rivers overflow in late summer, it moves out to spawn in the flood marshes. It is sometimes caught as a food fish. In addition to the ten species of *Polypterus*, the bichir family includes the reed-fish, *Erpetochthys calabaricus*, similar in character and distribution, but with a longer, more eellike form. Bichirs are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Polypteriformes, family Polypteridae.

Bichon Frise (bēshōn' frēs), breed of small dog developed in France after World War I. It stands from 8 to 12 in. (20-30 cm) high at the shoulder and has a profuse, silky coat that is loosely curled. It is solid white or white with apricot, cream, or gray markings. A relative of the Maltese, the Bichon was first bred in the United States in the 1950s. It is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club. See DOG.

Bichiri (bīk'ri), father of SHEBA 3, but "son of Bichri" may stand for "descendants of BECHER 1." The "Berites," supporters of Sheba, are apparently to be understood as "Bichrites." 2 Sam. 20.

Bickerdyke, Mary Ann, 1817-1901, Union nurse in the American Civil War, b. Mary Ann Ball in Knox co., Ohio. Generally called Mother Bickerdyke, she served throughout the war in the West and was beloved by the enlisted men, whose rights she championed; she was also a favorite with generals Grant and Sherman. After the war she lobbied in Washington to secure pensions for Civil War nurses and veterans. See biographies by N. B. Baker (1952) and A. L. DeLeeuw (1973).

Bickerstaff, Isaac, pseudonym used by Jonathan Swift and later by Richard Steele in the *Tatler*.

Bickerstaffe, Isaac, c. 1735-c. 1812, English dramatist, b. Ireland. Included among his comedies and ballad operas are *The Maid of the Mill* (produced in 1765) and *The Padlock* (produced in 1768).

Bicocca, La (la bēkōk'ka), former village, Lombardy, N Italy, now part of Milan. There, in 1522, the vicomte de Lautrec, commanding a French army and Swiss mercenaries, was defeated by a combined Milanese, Spanish, and German force in the ITALIAN WARS.

bicycle, light, two-wheeled vehicle driven by pedals. The name *velocipede* is often given to early forms of the bicycle and to its predecessor, the dandy horse, a two-wheeled vehicle moved by the thrust of the rider's feet upon the ground. Probably the first practical dandy horse was the draisine, originated c. 1816 by Baron Karl Drais von Sauerbronn,

chief forester of the duchy of Baden, to facilitate his inspection tours. Introduced into England in 1818, it was slowly improved, and c. 1839 Kirkpatrick Mac-Millan, a Scottish blacksmith, developed a machine mechanically propelled by foot treadles and incorporating cranks, driving rods, and handle bars. The French inventor Ernest Michaux introduced in 1855 a heavy crank-driven bicycle. This was perfected c. 1865 by Pierre Lallement, whose velocipede, known as a "boneshaker," ran on iron-tired wooden rims, the front wheel larger than the rear. Major improvements followed rapidly and included a light, hollow steel frame, ball bearings, tangential metal spokes, and solid rubber tires. By the 1880s the front wheel attained a diameter up to 64 in. (163 cm). Although the larger the wheel, the greater the potential speed, the size was limited by the length of the rider's legs, and the speed by their strength. The safer tricycle, a three-wheeled vehicle similar in design to the bicycle, also attained a vogue in the 1880s, especially among women and short men. The safety bicycle, with wheels of approximately equal diameter and a sprocket-chain drive connecting the pedals with the rear wheels, was first manufactured at Coventry, England, c. 1885 by the English machinist James Starley, following the invention of the pneumatic tire in 1888 by the Scotsman John Dunlop, the safety bicycle superseded the high-wheel form. Additions to safety or comfort include the freewheel (rear wheel that turns freely when the pedals are stopped or rotated backward), the coaster brake, the hand brake, variable drive gear, and adjustable handle bars. In the 1880s and 90s cycling became a fad of major proportions in the United States and Europe. Bicycle clubs were formed, both sexes participated in rides into the country, often on tandem bicycles. The League of American Wheelmen, organized in 1880, was a leader in the agitation for good roads. Although cycling declined in the United States with the introduction of automobiles, it has recently become very popular again. In most of the world the bicycle is still a more important means of transportation than the automobile. The worldwide production of bicycles is between 35 million and 40 million yearly. See MOTORCYCLE. See Frederick Alderson, *Bicycling* (1972), E. A. Sloane, *The Complete Book of Bicycling* (1972), R. A. Smith, *A Social History of the Bicycle* (1972). The sport of bicycle racing is widely popular, and several international competitions are held annually. In Olympic competition, medals are awarded in seven cycling events. Internationally famed is the annual Tour de France (originated in 1903) with the world's best cyclists competing over a road course more than 2,500 mi. (4,000 km) long. Before World War II the six-day race, a professional event, was popular in the United States. Since World War II amateur events have become more common.

Bida (bēda'), town (1969 est. pop. 64,000), W central Nigeria. It is the trade center for a rice-growing region and is noted for its fiber, glass, and metal handicrafts. In the 19th cent. Bida was the capital of an emirate of the Muslim FULANI empire centered in SOKOTO. The town was captured in 1897 by forces under Sir George GOLDIE, head of the British-chartered Royal Niger Company.

Bidault, Georges (zhōrhz bēdō'), 1899-, French political leader. An influential columnist (1932-39), he was imprisoned (1940-41) in World War II and then joined the French underground, becoming its leader. A founder of the Mouvement Republicain Populaire (MRP), one of France's leading postwar parties, he was president of the provisional government (1946), premier (1949-50), and several times foreign minister. Although a strong supporter of Charles De Gaulle in 1958, Bidault opposed the Gaullist policy of Algerian independence and broke with the MRP. In 1962, announcing that he was going underground, he formed the National Council of Resistance within the terrorist Secret Army Organization (OAS), the French government accused Bidault of having become head of the OAS. In exile from 1962, Bidault lived in Brazil and then in Belgium before returning (1968) to France. See his autobiography (tr. 1967).

Biddeford (bīd'fərd), city (1970 pop. 19,983), York co., SW Maine, on the Saco River, inc. as a town 1718, as a city 1855. Samuel de Champlain, a French explorer, visited the area in 1605. The first permanent settlement was established in 1630. During the 17th cent. the town exported lumber and fish, and in 1840 the first cotton mill was built. Biddeford, which has an industrial park, manufactures blankets, linens, shoes, boys' clothing, and electrical appliances. Biddeford Pool is a resort at the mouth of the Saco River. St. Francis College is in the city.

Biceps of arm

Biddle, Clement, 1740-1814, American Revolutionary soldier, b. Philadelphia. Early in the war, he helped organize the "Quaker Blues," a company of volunteers. He later served as deputy quartermaster general of the Pennsylvania and New Jersey militia, commissary general of forage under Nathaniel Greene in the Carolina campaign, and quartermaster general of the Pennsylvania militia. After the war he was (1787-93) U.S. marshal in Pennsylvania, but he gained more note as an importing merchant of Philadelphia.

Biddle, Francis Beverley, 1886-1968, U.S. Attorney General (1941-45), b. Paris, France, of American parents. Secretary to Associate Justice O. W. Holmes (1912), he became a successful corporation lawyer. He served as National Labor Relations Board chairman (1934-35) and as appellate judge (1939-40) before succeeding Robert H. Jackson as Solicitor General (1940) and as Attorney General. Biddle was (1945-46) a U.S. judge for the trial of war criminals at Nuremberg. See his autobiographical *A Casual Past* (1961) and *In Brief Authority* (1962).

Biddle, George, 1885-1973, American painter and writer on art, b. Philadelphia. After studying abroad Biddle settled in the 1930s in Croton-on-Hudson, N.Y., where he devoted himself to paintings of social import. During World War II he served as chairman of the War Dept. Art Commission and later held important offices in several national artists' organizations. Biddle painted the frescoes for the Dept. of Justice Building, Washington, D.C., his major works include *Mother and Child* (Denver Art Mus.) and *Winter in Tortilla Flat* (Whitney Mus., New York City). He is the author of the autobiographical *An American Artist's Story* (1939), *Artist at War* (1944), *Yes and No of Contemporary Art* (1957), and *Tahitian Journals* (1968). See Massey Trotter, *Catalogue of the Lithographs of George Biddle* (1950).

Biddle, James, 1783-1848, U.S. naval officer and diplomat, b. Philadelphia. He became a midshipman in 1800. At the beginning of the War of 1812 he was first lieutenant on the *Wasp*, he later commanded the sloop *Hornet*. Sent out in the *Ontario* in 1817, he took formal possession of the Oregon country for the United States in 1818, helping to establish a claim that later was extremely important. Afterward he spent much time protecting U.S. shipping in South American waters when the difficult times of the new Latin American republics made the rights of neutrals hard to maintain. In 1846, James Biddle negotiated the first treaty between the United States and China.

Biddle, John, 1615-62, founder of English Unitarianism. From his examination of the Scriptures he lost belief in the doctrine of the Trinity and stated his conclusions in *Twelve Arguments Drawn Out of Scripture*. When the existence of this paper was made known to the magistrates in 1645, Biddle was imprisoned, as he was frequently thereafter. His *Twelve Arguments* was suppressed and burned publicly in 1647. Upon the publication of his *Two-fold Catechism* in 1654, he was tried for his life but received from Oliver Cromwell a sentence of banishment to the Scilly Islands. Returning in 1658, Biddle taught and preached until in 1662 he was again thrown into prison, where he died. His followers were called Biddelians, Socinians, or Unitarians. See biography by Joshua Toulmin (1789).

Biddle, Nicholas, 1750-78, American naval officer, b. Philadelphia. Biddle left the British navy in 1773. In the American Revolution he became captain in the patriot navy and daringly raided British shipping off the American coast. After receiving command (1777) of the ship *Randolph*, Biddle was killed and his ship destroyed in an encounter (1778) with the British warship *Yarmouth* off the coast of Barbados. See W. B. Clark, *Captain Dauntless* (1949).

Biddle, Nicholas, 1786-1844, American financier, b. Philadelphia. After holding important posts in the American legations in France and England, he returned to the United States in 1807 and became one of the leading lights of *Port-Folio*, a literary magazine, which he edited after 1812. He was also commissioned to write the history of the Lewis and Clark expedition, but turned over the job to Paul Allen, a Philadelphia journalist, when he was elected (1810) to the state house of representatives, where he served a single term. In 1819, President Monroe appointed him one of the government directors of the BANK OF THE UNITED STATES. He became its president in 1823, and his administration illustrated his belief in the necessity of a central banking institution to stabilize the currency and curb the in-

flationary tendencies of the era. He became the leading target of the Jacksonians in their war against the bank. After the bank failed of recharter, Biddle operated it as a private bank until it collapsed (1841) as an aftermath of the Panic of 1837. He was charged with fraud but was subsequently acquitted. Biddle's public correspondence dealing with national affairs (1817-44) was edited by Reginald McGrane (1919). See biography by T. P. Gowan (1959), study by G. R. Taylor (1949), Gray Hammond, *Banks and Politics in America* (1957, repr. 1967), R. V. Remini, *Andrew Jackson and the Bank War* (1967).

Bideford (bīd'afard), municipal borough (1971 pop. 11,766), Devonshire, SW England, on the Torridge estuary. Formerly a major seaport, it still maintains some foreign trade (timber is imported) and has a boatbuilding industry. Tourism and the manufacture of gloves and concrete products are other important industries. Bideford supplied ships used in the defeat of the Spanish Armada (1588) and was a port of embarkation for colonists going to America. It also participated in the colonial tobacco and salt-fish trade. A 24-arch stone bridge dating from the 15th cent. spans the Torridge estuary. Sir Richard Grenville, the naval commander, was born in Bideford.

Bidermann, Jakob (ya'kōp bē'darmān), 1578-1639, German Jesuit dramatist and poet. Based on saint and martyr legends, Bidermann's plays were among the finest artistic expressions of the Catholic Reformation in Germany. His chief work, *Cenodoxus* (1602), was a Faustian drama about mortality. Professor of rhetoric in Munich, later assistant to the Jesuit general in Rome, he also wrote *Belisar* (1607), *Marcarius* (1613), and *Himmelsglocklein* [heavenly bells] (1620), a collection of songs.

Bidkar, captain under Ahab and Jehu. 2 Kings 9:25.

Bidpai or **Bidpay** (both bīd'pī), supposed name of the author of the fables of the PANCHATANTRA. The name first appears in an Arabic version of these fables—hence they are called the fables of Bidpai. The word is probably Sanskrit, meaning "wise man" or "court scholar."

Biedermeier (bē'darmīar), name applied, at first in a joking spirit, to a period of culture and a style of furniture and decoration originating in Germany early in the 19th cent. It is believed to have been named for the worthy, bourgeois-minded "Papa Biedermeier," a humorous character featured in a series of verses by Ludwig Eichrodt, published in *Fliegende Blätter*. The Biedermeier period found expression in comfortable, homelike furnishings, simple in design and inexpensive in material, fitting the requirements of the German people in a time of little wealth following the Napoleonic Wars. Although the best Biedermeier furniture was produced between 1820 and 1830, the period is regarded as extending from 1816 to 1848. Later pieces were usually clumsy and tasteless. The designs were simplified forms of the French Empire and Directoire styles and of some 18th-century styles of England. Cabinets and other large pieces were severe in line and surface. Chairs and sofas show curved lines, frequently graceful, but sometimes exaggerated into swellings and contortions. Black lacquer was effectively substituted for the costly ebony of Empire pieces. Painted decorations reminiscent of peasant types were common.

Biel (bēl) or **Bienne** (byēn), city (1970 pop. 64,333), Bern canton, NW Switzerland, at the northeast end of the Lake of Biel. A watchmaking center, Biel also has manufactures of machinery, automobiles, and pianos. There is a 16th-century Gothic town hall and a late Gothic church. Both French and German are spoken. The Schwab museum has archaeological relics of lake dwellings found in the Lake of Biel, or Lake of Bienne (15 sq mi/39 sq km), at the foot of the Jura mts. The lake is connected with the Lake of Neuchâtel by the Zihl Canal. It contains the Isle of Saint-Pierre (now a peninsula), made famous by J. J. Rousseau.

Biel-. For some Russian names beginning thus, see BEL.

Bielefeld (bē'lafēlt), city (1970 pop. 168,937), North Rhine-Westphalia, N central West Germany. It has been noted since the 13th cent. for its handmade linens. Other manufactures include silks, sewing machines, bicycles, machinery, starch, clothing, and pharmaceuticals. Chartered in 1214, Bielefeld became a member of the Hanseatic League in 1270. In 1647 it passed to Brandenburg. It is the seat of a university founded in 1966.

Bieler, Manfred (man'frēt bē'lār), 1934-, East German dramatist and novelist. Among Bieler's plays,

written for radio, are *Die achte Trubsal* [the eighth misery] (1960), attacking anti-Semitism, *Die linke Wand* [the left wall] (1962), concerning the Mexican painter David Siqueiros, and *Nachtwache* [night watch] (1963), a portrait of contemporary times. The picaresque novel *Bonifaz oder der Matrose in der Flasche* (1963, tr. *The Sailor in the Bottle*, 1965) brought him international fame. His collection of stories, *Marchen und Zertungen* [fairy tales and newspapers], appeared in 1966.

Bielitz. see BIELSKO BIALA, Poland

Biella (byēl'la), city (1971 pop. 54,065), Piedmont, NW Italy. It is a major cotton and wool textile manufacturing center. Biella came under the Visconti of Milan in 1353 and under the house of Savoy in 1379. Of note are several palaces (15th-16th cent.), an early Romanesque baptistery (10th cent.), and a Renaissance cathedral.

Bielski, Martin, Pol. Marcin Bielski (mār'stēn byēl'skē), c. 1495-1575, Polish historian and poet. His history of Poland, the first historical work written in Polish, was completed by his son, Joachim Bielski.

Bielsko-Biała (byēl'skō bya'la), Ger. *Bielitz*, city (1970 pop. 105,601), S Poland, on the Biała River, a tributary of the Vistula. The city is a railway junction and has a noted woolen textile industry. Other manufactures include textile machinery, electrical equipment, and machine tools. It is also a tourist and winter sports center. Founded in the 13th cent., the city passed to Austria in 1772 and was returned to Poland in 1919. It was called Bielsko until 1950, when it joined the town of Biała, across the river, to form a single city.

Bienewitz, Peter: see APIANUS, PETRUS

Bien Hoa (bēēn' wā), city (1968 est. pop. 83,000), S South Vietnam, c. 20 mi (30 km) NE of Saigon. It is famous for its handmade pottery. In the city are saw mills and a rice-bag factory. There is a commercial airport. A large U.S. air base was established there during the Vietnam War.

Bienne, Switzerland. see BIEL

biennial, plant requiring two years to complete its life cycle, as distinguished from an annual or a perennial. In the first year a biennial usually produces a rosette of leaves (e.g., the cabbage) and a fleshy root, which acts as a food reserve over the winter. During the second year the plant produces flowers and seeds and, having exhausted its food reserve, then dies. Short-lived perennials (e.g., the hollyhock) are often treated as biennials. Some biennials will, like annuals, bloom in the same season if sown early, others reseed themselves or produce offsets, thus perpetuating the plant indefinitely so that it becomes essentially a perennial. There are very few true biennials. Most are crop plants, such as carrots and parsnips, which are harvested for their succulent roots at the end of their first growing season.

Bienville, Jean Baptiste le Moyne, sieur de (zhaN bātēs'tē la mwan syor də byāNvēl'), 1680-1768, colonizer and governor of Louisiana, b. Ville Marie (on the site of Montreal), Canada, son of Charles le Moyne, sieur de LONGUEUIL, and brother of Pierre le Moyne, sieur d'IBERVILLE. A midshipman in the royal navy, he served gallantly in Iberville's last expedition into the Hudson Bay region in 1697 and the next year accompanied Iberville's colonizing expedition to the mouth of the Mississippi. He was prominent in the preliminary explorations Iberville, upon his departure, left Bienville at the Biloxi settlement as second in command to the sieur de Sauvole, and in 1701, when Sauvole died, Bienville became the leader of the settlement. He transferred the colony to Mobile Bay in 1702 and founded Mobile in 1710. After Iberville's death in 1706, only Bienville's heroic efforts kept the settlement alive in the face of famine, Indian hostility, the jealousy of Spain and Canada, and the neglect of France. In 1712, when Louisiana became a monopoly of the French merchant Antoine Crozat, Bienville was superseded as governor by Cadillac, but he regained his position in 1717. The colony grew rapidly in the next few years. New Orleans, which Bienville founded in 1718, succeeded Biloxi as Louisiana's capital in 1722. In 1719 he twice captured Pensacola from the Spanish. Fearing insurrections of Negro slaves, first brought to the colony under his direction, Bienville promulgated (1724) the Code Noir. Its provisions, completely regulating slave life, were humane for the times, and the code remained in force until Louisiana became part of the United States. An unsuccessful campaign in 1723 against the Natchez, whom he had previously defeated (1716), led to his recall (1725). Unsuccessful in defending his administration, he was relieved of the governorship. Upon Louisiana's sub-

sequent decline, he was begged to return and was warmly received on his arrival in 1733. He led strenuous but indecisive expeditions (1736, 1739–40) against the Natchez and the Chickasaw. Worn out by his exertions, Bienville retired in 1743 and spent his remaining days in Paris. See biography by Grace King (1892).

Bié Plateau or **Bihé Plateau** (both *byě*), highland region, western section of the central plateau of Angola, SW Africa, alt. 5,000 to 6,000 ft (1,520–1,830 m). Its cool climate and ample rainfall made it a favored area for European settlement. Corn, sisal, peanuts, and coffee are raised there. It is linked to the sea by the Benguela Railway. Nova Lisboa and Silva Porto are the chief towns.

Bierce, Ambrose Gwinett, 1842–1914?, American satirist, journalist, and short-story writer, b. Meigs co., Ohio. After distinguished Civil War service, he turned to journalism. In San Francisco he wrote for the *News-Letter*, of which he became editor in 1868. He soon established a reputation as a satirical wit, and his squibs and epigrams were much quoted. In London, from 1872 to 1875, he wrote for the magazine *Fun* and finished three books, including *Cobwebs from an Empty Skull* (1874). After his return to San Francisco, he wrote for the *Argonaut*, edited the *Wasp* (1881–86), and was a columnist for Hearst's *Sunday Examiner* (1887–96), his writings in the *Examiner* made him the literary arbiter of the West Coast. Later he was Washington correspondent for the *American* and a contributor to *Cosmopolitan*. His collection of sardonic definitions, *The Cynic's Word Book* (1906), was retitled *The Devil's Dictionary* in 1911. The short stories of Bierce were collected in such volumes as *Tales of Soldiers and Civilians* (1891) and *Can Such Things Be?* (1893). He was highly praised for *The Monk and the Hangman's Daughter* (1892), which he adapted from a translation of a German story. Bierce's distinction lies in his distilled satire, in the crisp precision of his language, and in his realistically developed horror stories. Disillusionment and sadness pervaded the latter part of his life. In 1913 he went to Mexico, where all trace of him was lost. See his *Collected Works* (12 vol., 1909–12, repr. 1966), *Collected Writings* (selected by Clifton Fadiman, 1946), biography by R. O'Connor (1967), study by M. E. Grenander (1971).

Bierstadt, Albert (bēr'stat), 1830–1902, American painter of Western scenery, b. Germany. After traveling and sketching throughout the mountains of Europe, he returned to the United States. He then journeyed (1859) to the West with a trail-making expedition. His immense canvases of the Rocky Mts. and the Yosemite emphasized grandeur and drama, sometimes at the expense of clarity. His works were popular and commanded great prices during his lifetime. They include *The Rocky Mountains* (Metropolitan Mus.), *Indian Encampment*, *Shoshone Village* (N.Y. Public Lib.), *The Last of the Buffalo* (Corcoran Gall.), and *Discovery of the Hudson River and the Settlement of California* (Capitol, Washington, D.C.).

Bifrost: see ASGARD

bigamy (bī'gamē), crime of marrying during the continuance of a lawful marriage. Bigamy is not committed if a prior marriage has been terminated by a DIVORCE or a decree of NULLITY OF MARRIAGE. In the United States if a husband or wife is absent and unheard of for seven (or in some states five) years and not known to be alive, he is presumed dead, and remarriage by the other spouse is not bigamous. It is not necessarily a defense to a charge of bigamy that the offending party believed in good faith that he was divorced or that his previous marriage was not lawful. The U.S. Supreme Court ruled in 1878 that plurality of wives (polygamy), as originally permitted by the Mormon religion, violated criminal law and was not defensible as an exercise of religious liberty.

big bang theory. see COSMOLOGY

Big Ben, the bell in the Parliament tower (Westminster Palace), London, England. It was named for Sir Benjamin Hall, commissioner of works when the bell was installed in 1856. The name is often used to refer to the huge clock in the tower.

Big Bend National Park, 708,221 acres (286,627 hectares), W Texas, est. 1944. It is a triangle formed by the Rio Grande, which runs south, then north in a big bend and flows through deep canyons, notably the Santa Elena Canyon. The river, the desert plain, and the Chisos Mts. offer sharp contrasts in wilderness scenery, and the park has archaeological treasures, some petrified trees, vestiges of prehistoric Indian cultures, and rare forms of animal and plant life.

Big Black Mountain, peak, 4,145 ft (1,263 m) high, E Ky., in the Cumberland Mts., highest point in Kentucky.

Big Dipper, familiar configuration of stars visible in the constellation Ursa Major (see URSA MAJOR AND URSA MINOR).

Bigelow, John, 1817–1911, American editor, author, and diplomat, b. Malden, N.Y. In 1838 he was admitted to the New York bar. From 1848 to 1861 he shared with William Cullen BRYANT the ownership and editing of the New York *Evening Post*. His anti-slavery and free trade editorials were especially vigorous. In 1861 he was appointed consul general at Paris, and later (1865–66) he served as U.S. minister to France. He is given much credit for preventing French recognition of the Confederacy; he also treated with great skill the problems arising from Napoleon III's attempts to establish an independent state in Mexico. His *France and the Confederate Navy* (1888) is a valuable historical work. Bigelow found in Paris the original manuscript of Benjamin Franklin's *Autobiography*, which he edited and published in 1868. His other works include a life of Franklin (1874) and an edition of Franklin's complete works (10 vol., 1887–88). See his *Retrospections of an Active Life* (5 vol., 1909–13).
